---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Madi West

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Michael Richard Filkin

**Date:** Sunday, 31 March 2019 11:59:10 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ann Dunn

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ben Fairey

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

JAKE Velder

**From:** [Sarah O'Donnell](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Sunday, 31 March 2019 6:39:05 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sarah O'Donnell

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sam Florance

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dayna Florance

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

David Hooper

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Bridget Grimes

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

The Minister for Planning  
**ATT: Manager, Assessment Branch**  
Department of Planning, Transport and Infrastructure  
GPO Box 1815  
Adelaide SA 5001

Dear Minister,

**Re: KIPT Port at Smith Bay – Submission on Environmental Impact Statement (EIS)**

Andromeda Partners is a corporate advisory firm that specialises in Environmental, Sustainability and Governance issues. Please note our firm has never been engaged by Kangaroo Island Plantation Timbers Limited or any related party.

In our opinion, the EIS lodged by Kangaroo Island Plantation Timbers Limited, which has been recently released for public consultation sets a new standard for quality and thoroughness particularly around addressing and mitigating impacts on other businesses, as well as the extensive engagement with stakeholders throughout its preparation.

It has been over 25 months since the previous Minister for Planning declared that the proposal would be considered as a 'major development' pursuant to s.46(1) of the Development Act 1993. In light of the comprehensive EIS submitted, we believe that it is important that the South Australian government demonstrates to the business community that such projects are dealt with in an efficient and timely manner giving due regard to the impact that delays and uncertainty has on businesses' willingness to invest capital and resources in the state.

I wish to lodge our support for the wharf proposal for the reasons stated below:

- Delivering a key infrastructure project to Kangaroo Island, which could also be used in the event of a civil emergency;
- Creating long-term skilled jobs in a regional community;
- Generating substantial and sustainable economic growth;
- Diversifying South Australia's revenue sources, and in doing so generating considerable foreign exchange income; and
- Minimal impact on the environment and other businesses due to proposed management and mitigation.

The proposed utilisation of high productivity A-double trucks would halve the number of truck movements thereby substantially enhancing road safety and lessening the impact on the local community. This key initiative should be supported by the Minister.

I appreciate your consideration of this submission.

Yours sincerely,

John Hobson  
Partner

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Zayne Johnson

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Christina Wilson

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kay Calder

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

Minister

### **Deep Water Port Facility Smith Bay, Kangaroo Island**

We own a small farming property at Wisanger Hill on Kangaroo Island. The Island attracted us because of its magnificent landscapes, seascapes and wildlife. Having reviewed the planned Deep Water Port at Smith's Bay we are of the view that we will be marginally affected.

That said, our concerns relate to deficiencies and inadequacies in the Environmental Impact Statement in the following areas:

- BioSecurity;
- Transport and Infrastructure; and
- Impact on the endangered Southern Right Whale.

Dealing with each in turn:

#### **Biosecurity**

The EIS highlights that: *'All vessels would adhere to international and Commonwealth law protocols for complete ballast water exchange enroute, so ballast water taken on board in the high seas (which entails the least risk for biosecurity concerns) would be displaced within KI Seaport as ships were loaded'* (page 21) and *'movement of domestic ships into Smith Bay from Port Adelaide is considered to pose a higher biosecurity risk than international shipping and would be managed accordingly'* (page 46).

In our view this response is wholly inadequate in relation to the risks of exotic pest infiltration to the bay and disease potential within the Yumbah Abalone farm. It is our understanding that exchanging the ballast water does not remove the risk, and that the ballast tanks themselves harbour these organisms.

Kangaroo Island has 509km of coastline and we cannot understand why any proponent would select a location that risks contaminating a pest-free bay and one of the island's major export businesses.

## Transport

We have no particular issue with the studies conducted on the proposed route. However, the island has limited resources and we understand that road upgrades and maintenance would be a substantial cost for the economy which would not be borne by the proponent. In light of this, we can not understand why alternative transport routes and their cost impacts were not incorporated into the selection of the location for the port facility. Prima Facie, a route that maximised the use of existing sealed roads would minimise the overall economic costs of the project as well as those costs to be borne by the local community.

## Impact on the Southern Right Whale

With relation to whales, the EIS (page 44) concerns itself with piling noise during construction and whale strike risks from shipping.

Photographic evidence of Southern Right Whales in Smiths Bay is well documented, and we have heard credible accounts by local residents of an actual calving of a Southern Right Whale in Smiths Bay. From our reading, the breeding and calving habits of Southern Right Whales are little understood and witness accounts of such events are almost unheard of.

Southern Right Whales (*Eubalaena Australis*) are currently listed as endangered under the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 (the EPBC Act) Under the "Conservation Management Plan for the Southern Right Whale - A Recovery Plan under the Environment Protection and Biodiversity Conservation Act 1999 2011–2021" the long-term recovery objective is *'to minimise anthropogenic threats to allow the conservation status of the Southern Right Whale to improve so that it can be removed from the threatened species list under the EPBC Act'*.

In light of the role of Smiths Bay as a Southern Right Whale nursery, we consider that the EIS process is flawed for three key reasons:

- Anthropogenic threats are not limited to noise during construction or ship collisions
- The choice of Smiths Bay as a location does not minimise anthropogenic threats to the species
- In order to minimise anthropogenic threats, the proponents should have considered alternative locations.

As far as we can discern from the EIS, only superficial, retrospective evaluations of alternative locations have been carried out and, in any event, did not take the Southern Right Whale into consideration. As a result, this EIS places the State and Federal Environment Ministers at risk of failing to comply with or failing to enforce the EPBC Act and Southern Right Whale Recovery Plan. As a consequence, we have cc'd the affected ministers.

We support sustainable economic development for Kangaroo Island in words and deeds. An export facility for KIPT plantation potentially supports this objective, but not at the proposed location.

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 3 April 2019 6:01:37 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I am aware that by using the screed provided below as my objection, that it might appear as if I'm relying on the words of others. That would be true. The very fact that we have three strongly worded objections on the subjects of Biosecurity, Local Infrastructure and Matters of Natural Environmental Significance - suggests that there are many objections to this project going ahead on this site, and many of us who feel inadequate to voice those objections with clarity and skill. It does not make my objection any less fervent. I can assure you, I have read all three. I chose this one to submit. We do not need or want a seaport on Smith Bay for all the reasons listed.

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk

from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.

- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jane Harlow

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Casey Green

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

John Smedley

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Friday, 5 April 2019 5:14:12 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jordan Connell

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Caroline Davidson

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Alex McGorman

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Saturday, 6 April 2019 11:17:36 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Danielle Catlin

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Macarena Gonzalez

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rachael Gellard

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Lachlan McLeod

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sharon Sugars

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Julz Hansen

Dear Minister

**Re: Deep Water Port Facility, Smith Bay, Kangaroo Island**

I am writing in support of Kangaroo Island Plantation Timbers (KIPT) Environmental Impact Study (EIS) on the development of a deep-water port facility at Smith Bay on Kangaroo Island.

Forestry already contributes \$2.8 billion to the South Australian economy and employs around 130,000 people in the State. It is one of a small number of industries in which the State has a sustainable internationally-competitive advantage. The benefits of forestry flow overwhelmingly to the regions.

Today, it is hard to imagine what the Southeast of the State would be like without plantation forestry, which underpins the economy of the region and delivers prosperity to so many households.

Currently Kangaroo Island lacks a comparable industry while agriculture and tourism are both strong, they do not offer large numbers of well-paid year-round jobs. The result is that the Island has low household incomes compared to the rest of the State (which is itself below the National average) and that young people almost invariably move away to seek employment and to raise their families. This leaves the Island with an ageing population.

Most of the Island's timber plantations were established with the encouragement of federal, state and local government. Since that time, the trees have grown better than comparable plantations in the Southeast of the state.

Now, it is time for them to be harvested. The optimum location for a wharf has been identified. The project has been designed and financed. Timber sales agreements have been signed. Contractors are waiting to start work. All that is missing is the deep-water wharf needed to get things underway.

It is my assessment the project is worthy of support.

Yours sincerely,

A handwritten signature in blue ink, appearing to be 'I. Hampton', written in a cursive style.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Amanda Brooks

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jen McCulla

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

graham king

**From:** [Marian Burkart](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 15 April 2019 12:40:10 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Barry Smith

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Michelle Nimmo

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Nada Clark

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Chris Smith

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rhonda Lee

Dear Minister,

***RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal***

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

The purported economic benefits of the proposal are speculative if not whimsical. The notion for example that harvesting blue gums on Kangaroo Island can be profitable given the additional costs of transportation and infrastructure development, when other such ventures on the mainland ( in the south east of SA in particular) have been abject failures without these additional costs defies credibility.

In addition, the proposal fails to take account of the negative cost impacts it will have on KI's other industries, particularly tourism, organic farming, fishing and honey production.

The disruption and damage to be caused by construction and logging trucks on local road infrastructure is not costed in and will apparently left to the taxpayers of SA and residents of KI to absorb, not to mention the disruption it will cause to existing industries.

The destruction of sea grass is of concern for marine habitat but also for climate change mitigation. Recent reports indicate that preservation and promotion of sea grass and coastal marine environments is a crucial element in climate damage mitigation. This proposal is 180 degrees in the wrong direction.

There has been insufficient research into the impacts on habitat of a number of species as detailed below. Overall, the EIS is amateurish and not up to any sort of acceptable standard. Serious questions remain to be asked and answered by the State Government to protect the interests of SA taxpayers and the environment.

On my analysis this venture is doomed to fail purely on economic grounds and the end result will be a government bailout and irreversible ecological damage.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of

the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

### **Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Anne Russell

April 17, 2019

Re: KIPT's proposal for a wharf at Smith Bay

Dear Mr Kleeman

I am an independent tree grower on Kangaroo Island. Blue gums were planted on my property under a lease arrangement with Great Southern in the mid-2000s. For a few years I had lease payments from Great Southern and then Gunns Ltd before both companies went into administration.

Now I have trees on my property which are reaching maturity but I have not received lease payments for many years.

Last year Kangaroo Island Plantation Timbers offered a free assessment of my trees and their value and we met to discuss the future for my plantation. The company has said we can be part of their harvest and marketing plan if we choose.

I was very pleased to learn that Kangaroo Island Plantation Timbers was planning to build a wharf at Smith Bay through which my trees can be exported. The trees on my property are an important asset for myself and my family.

I urge you to approve this development. Smith Bay is an ideal site for the wharf given it is already an industrial site and that many other potential sites talked about locally are either in townships, marine parks or areas currently undisturbed by development.

Regarding the possible impact on the onshore aquaculture facility, I understand that the Environmental Impact Assessment addresses all areas of concern.

Yours sincerely,

  
WILLIAM ANDREW NOBLE

April 26, 2019

Dear Sir,

I have lived and run a business in Parndana for the past 19 years.

Many farmers in our West End community on Kangaroo Island saw an opportunity to leave their farms in the early 2000s when forestry was established here. Many of the farms were too small and the prices for wool were low.

The effect of this has been that our community has been reduced substantially in number, our school has had to downsize and many families left the area, economically effecting the whole Island and all business.

Kangaroo Island Plantation Timbers now has a real plan to start the forestry industry and this can only be good for our community by bringing jobs and families to live out here. It will benefit our businesses in town but also community groups, such as the Parndana Sports Club, Western Districts Sports Club, SA Ambulance Service, Western KI Lions, KI Community Club, and importantly the CFS, which all have suffered especially the ambulance and CFS of which rely on voluntary persons.

Parndana is a proud and resourceful community which has survived the past 20 years of depopulation. Imagine how vibrant our community could be with an injection of people and jobs such as forestry could bring.

We have heard many promises from forestry companies in the past and this has made some of us predictably skeptical but we recognize this would be the best opportunity for the economy of the Island, creating secure employment for 12 months of the year.

They have pledged to support the KI Community Club in its plans to develop a new subdivision in Parndana to create housing which is needed for the community as well as the forestry workers.

Please approve the port proposal for Smith Bay so that the Kangaroo Island community and South Australia can benefit from this forestry industry.

Kind regards,

Jane Peckover

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Elizabeth Campbell

**From:** [Hannah Foster](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 24 April 2019 10:27:35 AM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Hannah Foster

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

Stop killing the planet.

No amount of wealth is worth extinction of life at the rate the rich and greedy are killing everything.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

### **Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to

meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.

- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.
- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

David Woolley

Re: KIPT's proposal for a wharf at Smith Bay

Dear Mr Kleeman

I am an independent tree grower on Kangaroo Island. Blue gums were planted on my property under a lease arrangement with Great Southern in the mid-2000s. For a few years I had lease payments from Great Southern and then Gunns Ltd before both companies went into administration.

Now I have trees on my property which are reaching maturity but I have not received lease payments for many years.

Last year Kangaroo Island Plantation Timbers offered a free assessment of my trees and their value.

The company has said we can be part of their harvest and marketing plan if we choose.

I was very pleased to learn that Kangaroo Island Plantation Timbers was planning to build a wharf at Smith Bay through which my trees can be exported. The trees on my property are an important asset for myself and my family.

I urge you to approve this development. Smith Bay is an ideal site for the wharf given it is already an industrial site and that many other potential sites talked about locally are either in townships, marine parks or areas currently undisturbed by development.

Regarding the possible impact on the onshore aquaculture facility, I understand that the Environmental Impact Assessment addresses all areas of concern.

Yours sincerely,

Brian Noble.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Phil Calder

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 24 April 2019 6:59:33 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jan Hawes

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kate Stanton

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Thursday, 25 April 2019 8:59:06 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Re: Smith Bay development proposal by Kangaroo Island Plantation Timbers

Thank you for the opportunity to read and provide feedback on the Draft Environmental Impact Statement for the proposed Smith Bay Development. I am in favor of its approval.

The decision over 20 years ago with the approval of the then Kangaroo Island Council, to create a Forestry Industry on the Island to stimulate the economy, create employment and boost the population has yet to be realized. We have been waiting for this final piece to be implemented – building an export facility that does not interrupt our beautiful environment, impede tourism or have a negative impact on Agriculture.

The EIS addresses all these issues and finds the proposed development worthy of implementation.

Having spent my childhood growing up in Portland Victoria where the Port of Portland supports a vibrant export and wood chip holding facility, as well as Pivot (Fertilizer) and Alcoa, in the center of Portland's beautiful Harbor. I am at a loss to understand why there would be an opposition to the Smith Bay facility. It is on the North Coast, 30 kms or more from the main township, it is already an industrial site, it is an area of low population and low tourist visitation, and it is where shipping can berth safely and access export markets directly.

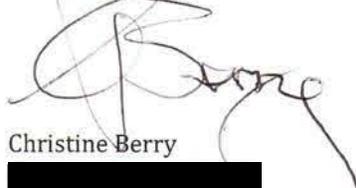

A larger population for any Rural community increases employment, boosts housing requirements, brings more children requiring and supporting our education system, more members for our sporting clubs, volunteering and service groups. Very much a win, win situation for Kangaroo Island.

Along with my family we own and run a farming operation on the Island. We have farmed here for over 64 years. We produce wool and grain off our property, and it is sold predominately to export. We are proud to be a part of this amazing Island with all that it offers Islanders and tourists.

Development of the Smith Bay site will enable the harvesting of 20 plus years of timber growth – how amazing it will be when that vision is realized, another major industry contributing to the economy of Kangaroo island.

I believe the Environmental Impact Statement addresses all the concerns of local residents and businesses and I am very much in favor of the Development of Smith Bay for an Export Facility.

Yours sincerely,

Christine Berry

Dear Mr Kleeman;

Re Smith Bay Port proposal Kangaroo Island.

I have been an Island Visitor with my Family for 48 years; during that time we have invested substantially in real estate and other diverse businesses on the Island.

In 1991 I produced the first commercial wine from Island grown grapes ; since then our Island produced wines have won many notable awards;

During the 90s i was active in assisting the wine industry establish itself on K.I. I conducted a wine Grape seminar in 1995 at Kingscote with Brian Croser as a Key speaker;

By 1997 others followed and the wine business on k.I. was under way. I Was made Patron of the Relevant Island wine group for a number of years thereafter.

I have an approved 116 room hotel planned for Kingscote on land owned by the family. A land development of 78 proposed lots underway at Emu Bay; stage 1 complete.

Have a cellar door as well as a number of tourist accommodation facilities in Kingscote.

**GENERAL OBSERVATIONS;**

Kangaroo Island is a struggling Regional part of South Australia ! many businesses fall short of being viable due to a lack of numbers;

Tourism is doing O.K.! but even in this sector it is patchy to say the least. Hopefully the establishment of The Cliffs Golf Course will boost Tourism, particularly during winter months.

The rural sector does well considering all of the difficulties; freight costs ; the elements; Again Patchy with good and bad seasons being an inherent part of farming.

A good number of businesses in Kingscote as well as Penneshaw are not viable ,with many owners taking on other part time work to sustain their existence.

Ref :- " Paradise Girt by Sea" 2011. State Economic Development Board.

**I SUPPORT THE SMITH BAY PORT PROPOSAL;**

**"BUT NOT AT THE EXPENSE OR DESTRUCTION OF THE EXISTING YUMBAH ABALONE BUSINESS!"**

Having browsed through the EIS submitted by the Proponent KIPT , I make the following comments.

The two activities can co - exist ; there may be minor compromises made from either party ; this is not unusual.

Smith Bay should not be exclusive to only one commercial activity now that the Abalone farm has established itself there.

The zoning of the area seems to be appropriate; The selection of this site was made after 11 other

sites were explored.

The coastal shore land at this site that would accommodate stock piling ,is virtually at sea level making it a very workable siting for movement of traffic and loading.

It is outside of the Marine Parks boundaries. The site is [not completely] to a degree away from the main Tourism trafficked areas.

The claim of driving away dolphins from surrounding areas through shipping traffic is not valid. The Port Adelaide river is alive with dolphins despite the shipping traffic.

Whales will not be effected; 12 vessels a year is proposed. Shipping traffic along the Investigator straight shipping course is far greater and has been for years.whales still visit there.

#### THE ECONOMIC BENEFITS and WHY I SUPPORT THE PROPOSAL.

It is envisaged that an additional 500 permanent residents would possibly settle on kangaroo Island ,made up from Families of workers at the port and harvesting sites.

The report “Paradise Girt by Sea” published by the State Government in 2011 clearly states the island struggles to achieve viable scale with the stagnant population numbers of 4500.

Is is estimated 200 well paid secure jobs will be created ; these 200 employees will be engaged and spread between the two locations;

This translates to \$40,000,000 being injected into the Islands annual economy. This will provide a badly needed boost to the Island.

There are thousands of hectares of trees waiting to be harvested; they are in need of being harvested; Once harvested they need to be sold and or processed and shipped off the Island to strong Asian Markets.

Wherever the Port is proposed there will be objections; Smith Bay already has a commercial activity in the Abalone farm. Let’s keep commerce confined to areas already being used for commercial activities.

Caj Amadio.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister

**Kangaroo Island Plantation Timbers – Proposed Smith Bay Deep-Water Wharf**

We write to you to express our support for the proposed Smith Bay Wharf.

There is a significant forest resource on Kangaroo Island and the proposed wharf will provide the means to realise the value of that resource for the benefit of the community and the government – both by way of employment and contributions to infrastructure, rates and taxes.

The alternative of not supporting this proposal will be that the valuable resource will go to waste and long-term create significant environmental problems.

We would be pleased to expand on this matter if you should so wish but we assume that you are conversant with the Economic Impact Statement.

Yours sincerely

TO Lebbon

[majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**Deep Water Port Facility, Smith Bay, Kangaroo Island**

We represent the Kangaroo Island Links project. We are looking to deliver a top-ranking championship golf course, associated villa complex and high end 140 room eco-tourism resort to Kangaroo Island. The multi user deep water port will assist in the delivery of our project.

A healthy Forestry, Agriculture and Tourism sector on Kangaroo Island will ensure year-round well-paid jobs and a thriving local community.

I note that the ASX had many listed timber companies on its boards in years gone by, all of which have gone under except for Kangaroo Island Timber. The success of this company can be seen by a recent \$10m equity raising.

There are challenges in delivering commercial projects to Kangaroo Island. We see this project assisting in the provision of more economical freight costs to and from the Island.

Not unlike our project the EIS has been rigorous and from my understanding the proposed port facility poses no threat to the environment.

For the reasons above we at Kangaroo Island Links support the deep-water port facility at Smith Bay.

Yours sincerely,

Jack Dahan  
Director  
Kangaroo Island Links Pty Ltd

Dear Minister Knoll

Re; Support for proposed Smith Bay Deep-Water Wharf

Axant Corporate Advisory writes in support of the Deep-Water Wharf at Smith Bay in Kangaroo Island.

Axant provides advices to a broad range of South Australian companies, including those in regional areas. One notable feature of regional areas is that there is often a single dominant industry, such as agriculture (as is the case with Kangaroo Island) or mining.

When these industries have a downturn, the entire economy is threatened. To build viable and prosperous regional communities, there needs to be spread of industries. Development of Kangaroo Island Plantation Timbers, which is predicated on the Smith Bay wharf, is estimated to produce 234 full time equivalent jobs on Kangaroo Island, and provides diversification of the economy from agriculture and tourism.

I ask that you approve the Smith Bay Deep-Water Wharf in order to allow the overall development of this important new sector to the Kangaroo Island economy, and to boost the overall population of Kangaroo Island.

A handwritten signature in blue ink, appearing to read "Geoff Thomas".

Regards

Geoff Thomas  
Principal  
Axant Corporate Advisory

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Elisabeth Rodda

ADELAIDE SA 5000

Dear Sir,

Re: Smith Bay Wharf

As a South Australian owned and operated business we strongly support the building of the proposed Smith Bay Wharf.

The Economic Impact of the project is significant for both the Kangaroo Island Community and for South Australia.

There is plantation resource ready to harvest and provide almost immediate benefits to Kangaroo Island and the State.

Tourism will also benefit from the opportunity for Cruise Ships to use the wharf facility. This will overcome the challenges provided by tendering passengers during inclement weather. Hence Kangaroo Island tourism operators miss out on the anticipated benefits from Cruise Ship passengers and could in future cause Cruise Ship operators to bypass this great tourist experience.

Yours faithfully

Re: KIPT's proposal for a wharf at Smith Bay

Dear Mr Kleeman

I am an independent tree grower on Kangaroo Island. Blue gums were planted on my property under a lease arrangement with Great Southern in the mid-2000s. For a few years I had lease payments from Great Southern and then Gunns Ltd before both companies went into administration.

Now I have trees on my property which are reaching maturity but I have not received lease payments for many years.

Last year Kangaroo Island Plantation Timbers offered a free assessment of my trees and their value and we met to discuss the future for my plantation. The company has said we can be part of their harvest and marketing plan if we choose.

I was very pleased to learn that Kangaroo Island Plantation Timbers was planning to build a wharf at Smith Bay through which my trees can be exported. The trees on my property are an important asset for myself and my family.

I urge you to approve this development. Smith Bay is an ideal site for the wharf given it is already an industrial site and that many other potential sites talked about locally are either in townships, marine parks or areas currently undisturbed by development.

Regarding the possible impact on the onshore aquaculture facility, I understand that the Environmental Impact Assessment addresses all areas of concern.

Yours sincerely,

*Barbara J Birks*

**From:** [Samantha Parr](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 29 April 2019 3:26:20 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**Re: Port Facility, Smith Bay, Kangaroo Island**

I strongly support the proposal. It's got all the hallmarks of a great project for Kangaroo Island and SA. There's a lot of wealth sitting on KI waiting to be harvested. The industry can provide jobs into the future, just what KI needs.

KIPT has strong leadership and good vision. They have identified the optimum location for a wharf and have the finance to pull it off.

I am satisfied that the project poses no threat to any other business or to the environment which is very important to me. It has strong green credentials.

This development seems to fit your Government's business growth policy. It should be supported and assisted.

Regards,

Ian

GPO Box 1815  
Adelaide SA 5000

Dear Sir,

**KIPT – PROPOSED JETTY AT SMITH BAY, KANGAROO ISLAND**

I write to express my support for Kangaroo Island Plantation Timbers' Smith Bay Jetty project.

Substantial net benefits will flow to Kangaroo Island and to the wider state of South Australia as a result of this project.

Just under four percent of Kangaroo Island has been planted to renewable timber. About two-thirds of this is native hardwoods, and one-third *Pinus Radiata*. Almost all of these plantations are located West of Parndana. The estimated value of harvestable timber is a completely renewable \$50 million per year, of which \$20 million per year will flow back as direct income to Kangaroo Island. That value is only realisable if a cost-effective way can be found to transport harvested timber off the island. Taking wood chips or timber in trucks across the length of the island for transport on Sealink ferries and further transport from there to a deep water jetty is not economically viable. Even if it were financially sustainable, wear on kangaroo Island's roads, and additional environmental and safety concerns, particularly during tourist season, make this an undesirable option. A deep water jetty in proximity to plantations is the only realistic option.

Once operational, KIPT will directly employ people in 140 full time equivalent positions in timber planting and maintenance, sawmill operation, transport, administration, jetty operation, etc. In addition a further 100 FTE positions will be created in direct support; contract and supply, etc. With family members, this is likely to lead to the addition of over 400 people to Kangaroo Island's population. This means additional rates income for Council, additional money spent in local businesses, additional students in local schools, possibly to the extent of Parndana school being able to offer classes up to Year Twelve again. In total, this project will produce an additional \$20 million income per year for Kangaroo Island.

A project which has the potential to bring such major and ongoing financial and social benefits to Kangaroo Island should not be rejected unless there are overwhelming, compelling, evidence-based reasons to do so.

Objections offered by detractors are neither compelling nor evidence-based.

*“Building a jetty on the pristine North coast will pollute the bay, harm tourism, and damage whales and dolphins!”*

There are four jetties along the “pristine” North coast already, and five boat ramps. One of those jetties, at Penneshaw, loads and unloads as many as six ships per day. These carry dangerous cargoes including pesticides, creosote treated logs and other building materials, fuels, and livestock. They travel several times per day directly across the migration path of whales and other marine wildlife. One more jetty loading twelve ships per year with a sustainable, organic, native product will have minimal impact on the environment.

Jetties are some of Kangaroo Island’s most loved and visited landmarks. Rarely do visitors leave the Island without photos of at least one of its jetties in phones or cameras. In addition, existing jetties provide valuable habitats for marine wildlife including corals and the endangered Leafy Sea Dragon. An additional jetty will have no negative impact on tourism, and may very well be positive, if the jetty is able to be used as a safe all-weather docking point by cruise ships and other operators.

*“An International Port is a Major Quarantine and Exotic Pest Risk!”*

Ships visiting the new seaport will drop ballast water in accordance with existing regulations, as do other overseas vessels visiting South Australia. Any overseas vessels berthing at the Smith Bay jetty will already have passed customs and quarantine inspection at Fremantle or Port Adelaide. This is a more rigorous process than applies to cruise ships which currently visit the island. Cruise liners visit the island in larger numbers than those planned to dock at Smith Bay, and are much larger vessels.

Unlike the proposed jetty, the existing abalone farm at Smith Bay is genuinely aesthetically unappealing, and is a significant environmental hazard.

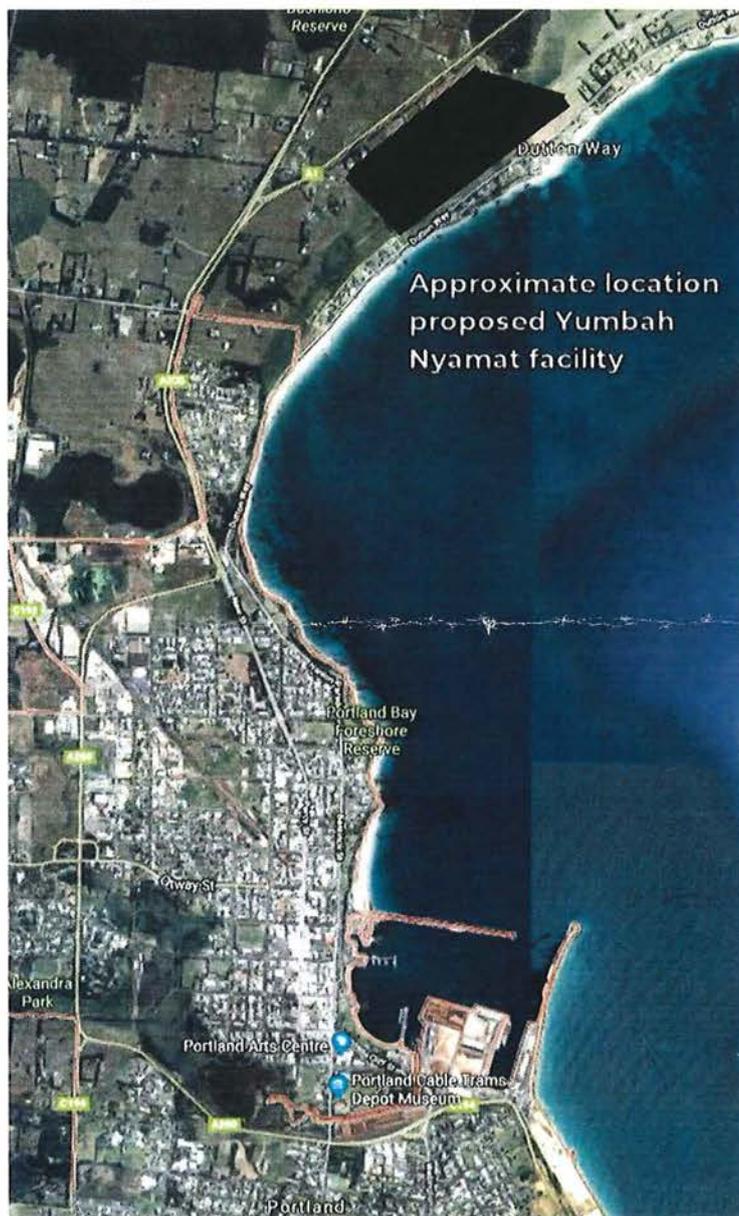

The World Wildlife Fund has raised a number of concerns about land-based abalone farming, including noise, odour and dust, high energy use, unsustainable kelp harvesting for food, or use of fish meal and algae in manufactured feed, the impact of waste disposal including the pumping of waste water directly into the ocean, including waste nutrients, chemicals, shell grit, faeces and sludge, and the risk of disease. Unlike some claimed objections to the proposed jetty, these are real, evidence-based concerns. An outbreak of Abalone Viral Ganglioneuritis, traced to a land-based abalone farm at Port Fairy owned by Southern Ocean Mariculture Pty Ltd, has devastated wild abalone along 1200 kilometres of the Victorian coast and continues to spread at a rate of about 5kms per month. An abalone farm in Santa Barbara, California, released *Candidatus Xenohalotis Californiensis* into the environment, causing devastation to native black abalone populations. That species is now listed as endangered.

Yumbah's Smith Bay abalone farm pumps some 200 megalitres of effluent into Smith Bay every day (approximately the same volume as the total sewage processing output of Adelaide City and surrounding areas), including half a tonne of untreated faeces.

By any common sense standard, further essential industrial or infrastructure development should take place where there is existing development, rather than in an untouched location. The proposed jetty will have minimal environmental impact compared with the existing abalone farm.

*“Aquaculture and Shipping are Incompatible!”*

This claim has been made repeatedly by supporters of the abalone farm. In reality, aquaculture operates comfortably and profitably in close proximity to shipping lanes and ports in Australia and around the world. China is the world's largest producer of farmed abalone, and much of its aquaculture takes place near major shipping lanes and population centres. Many Australian abalone farms and harvesting locations are in close proximity to ports; Port Philip Bay, Port Lincoln, Port Fairy, Narrawong – directly across the bay from Portland, to name just a few.

Yumbah, the operators of the Smith Bay abalone farm, are currently seeking final approvals for a new abalone farm in close proximity to the port facilities at Portland in Victoria. The new abalone farm will be approximately the same distance from ships berthing at Portland, as ships berthing at Smith Bay will be from Yumbah's existing farm there. See the attached satellite image.

Portland is a port an order of magnitude busier than the Smith Bay seaport will be. Despite busy port activity, the waters around Portland are clear and inviting. Dolphins are permanent residents, and Portland is known as Australia's whale watching capital. Both Southern Right whales and Blue whales make regular visits along their migration path. Portland's famous whale viewing platform is about 600m from the Port breakwater, and about half-way between the Port and Yumbah's proposed new site.

The only evidence-based objection to construction of the proposed jetty is that water quality may be affected during construction.

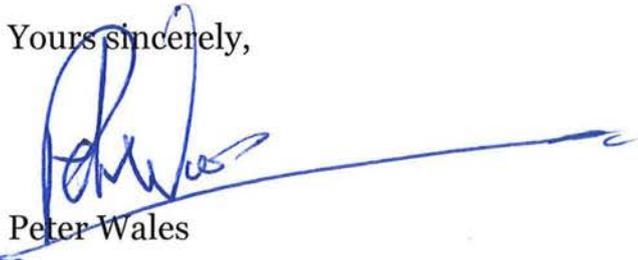

One of the advantages of the Smith Bay site is that it slopes down quickly into deeper water. The use of a floating pontoon will also reduce the need for disruption to the sea bed. Nonetheless, some dredging will need to take place, and large quantities of rocks will need to be placed to construct the jetty out of mostly natural materials.

Fortunately, a wide variety of mitigation procedures are available to minimise silt plumes. These include hydraulic dredging, use of a closed clamshell, ensuring there is no barge overflow, use of silt curtains, and dredging and construction only when tide or current is flowing away from critical areas. Other measures may be available to the abalone farm to alleviate any concerns it has about water quality during construction, including changes to filtration processes, moving or extending water intake locations, enhanced use of water storage and recycling, etc. KIPT has employed consultants to consider all available options, and has offered to meet with representatives of Yumbah (the owners of the abalone farm) to discuss these and other measures to ensure the abalone farm is able to continue to operate without interruption.

Objections offered to Kangaroo Island Plantation Timbers' Smith Bay Jetty proposal have no basis in real world evidence and experience, or in the case of temporary changes in water quality during construction, can be mitigated to ensure minimal environmental impact, and continued safe operation of the abalone farm.

The development of a jetty at Smith Bay offers substantial ongoing social and financial benefits to the residents of Kangaroo Island and should proceed.

Yours sincerely,

Peter Wales

Dear Sir

**Re: Kangaroo Island Plantation Timbers Ltd [KIPT]**

I am writing to you about the above Company's plans to construct a wharf at Smith Bay on Kangaroo Island.

At the outset I should state that I am an investor but I am not a shareholder in the Company and never have been a shareholder, but I have been following KIPT since it announced its plans for the wharf over three years ago.

I have studied the Economic Impact of the Proposed Smith Bay Deep -Water Wharf and strongly support the proposal for the following reasons:

1. The proposal provides the economic and logistical means to unlock a substantial resource of plantation timber ready to harvest on the island that would otherwise be stranded.
2. The project has a long economic lifespan from which real economic benefits will flow to Kangaroo Island firstly and then onto the State of SA
3. No State Government funds are called for and the project is financially risk free to the State.
4. The wharf project itself and subsequent operations of the Company in harvesting, transport and shipping of the plantation timber will leave only a light footprint on the environment.

There are a number of other obvious benefits that will flow directly from this investment and if you would like me to expand on these do not hesitate to contact me.

Yours sincerely

RB Mollison

Dear Mr Knoll

RE KANGAROO ISLAND PLANTATION TIMBERS APPLICATION

The Australian Hotels Association (SA Branch) sees infrastructure improvements on Kangaroo Island as critical to attracting more visitors and economic activity to one of the jewels in the crown of our National and International Tourism offer.

As such, we are keen to offer our support for the application of Kangaroo Island Plantation Timbers Ltd (ASX:KPT) to build a wharf at Smith Bay on the Northern side of the Island to enable direct export of blue gum log and woodchip to China and Japan.

The AHA (SA) understands this application will lead to 234 Full Time Equivalent jobs on Kangaroo Island, a \$42million increase in the State's GDP and most significantly an increase in population for Kangaroo Island of 300 people. Apart from supporting the local economy more broadly, this development allows for a greater economic resilience for the Island- a must for the confidence further development of tourism infrastructure.

The AHA (SA) is pleased to support this application. Should you require further clarification, please do not hesitate to contact me.

Yours Sincerely

A handwritten signature in blue ink, appearing to read 'DB', with a long horizontal line extending to the right.

April 24, 2019

Dear Sir,

We wish to write in support of the proposed KI Seaport at Smith Bay on Kangaroo Island.

We have visited the Island many times over the past 15 years and we are always delighted to visit new places and experience new restaurants etc. However, until a couple of years ago we had never heard of Smith Bay.

This past Easter we had an opportunity to visit Smith Bay and we stayed four nights at accommodation there.

The weather was beautiful and we did enjoy seeing wildlife and the sound of the crashing waves, even though the beach itself is not attractive as a destination. The best thing is that all of this will still be available after the KI Seaport is established! The company essentially proposes to build a jetty.

We have read the EIS document extensively and asked questions of the company representatives. We are satisfied that all concerns have been addressed and the development will bring prosperity to the Island community, which is in dire need of new industry and an increase in population. It is an ageing community and the Council surely needs more young, working ratepayers to support maintaining and improving the Island's infrastructure.

There are so many opportunities that could be realized with the KI Seaport in place. The company has prepared a most comprehensive EIS, which addresses not just the development itself but also roads and housing for workers, something we have never seen in another EIS.

It is also clear from the document that the land-based Yumbah abalone farm next door will not be impacted by the port's operation. It is best to keep industrial developments close to each other than take them to another untouched beach.

We urge you to approve this development as soon as possible so the forestry industry can start contributing to the Island economy. This is exactly the sort of development that SA needs.

Yours sincerely,

Two handwritten signatures in black ink. The first signature is cursive and appears to be "Celeste". The second signature is more stylized and appears to be "Colin".

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Maria Zazzo

- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dominique Chen

**Date:** Tuesday, 30 April 2019 8:24:06 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Chelsea Johnson

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Laura Newton

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Thursday, 2 May 2019 8:35:03 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Mr Kleeman,

I am an independent tree grower on Kangaroo Island. Pine trees were planted on my property several decades ago as a farming diversification crop. They have reached maturity but until now there has been no effective way to harvest and sell them.

When the Timber Creek mill operated there was some milling on the Island but the cost of freight from Kangaroo Island, in particular, has proved to be a barrier to establishing a thriving forestry and milling business for previous owners. It was disappointing to see the mill closed but I am very pleased there is an alternative option for my trees now.

Last year Kangaroo Island Plantation Timbers offered a free assessment of my trees and their value and we met to discuss the future for my plantation. The company has pledged that we can be part of their harvest and marketing plan if we choose.

I was very pleased to learn that Kangaroo Island Plantation Timbers was planning to build a wharf at Smith Bay through which my timber can be exported. The trees on my property are an important asset for myself and my family.

I urge you to approve the development of a wharf at Smith Bay. It is an ideal site for the wharf given it is already an industrial site and that many other potential sites talked about locally are either in townships or currently undisturbed by development.

Regarding the possible impact on the onshore aquaculture facility, I understand the Environmental Impact Assessment addresses all areas of concern.

Our Island needs this development so that all the land that is currently growing trees can be economically productive.

Yours sincerely,

Colin Borrell.

PS. My trees were planted 1975 - 1985 and I am really looking forward to be able to sell them. I agree the additional employment for the Island will be a real boost for the Island.

RECEIVED 3 MAY 2019

Re: Smith Bay development proposal by Kangaroo Island Plantation Timbers

As residents of Kangaroo Island we have witnessed the frustration of tourists who find many businesses closed during the winter months here, including restaurants and tourist attractions.

Of course, we understand people need time off from their business but many small business owners here say they cannot afford to hire a manager in order to take holidays.

So many businesses on the island struggle for lack of critical mass. A population boost would surely increase their turnover and allow them to open all year round.

I believe the forestry industry has the potential to provide that catalyst to stimulate the economy. If the population of the Island can increase by 400-500 people because of the 200+ jobs on offer, that will not only benefit small business here but will also provide more people for our sports, community and service groups, such as CFS.

The forestry industry has had a chequered past here and it is understandable that people are sceptical about its potential. However, the only thing standing in the way of getting this industry started is a way to export the millions of tonnes of timber now ready to harvest.

Export via Sealink is not possible – the cost is too high and the distance too great to transport timber to Port Adelaide. In any case, it is much better for Sealink to focus on what it does best – providing excellent service for tourists and local passengers.

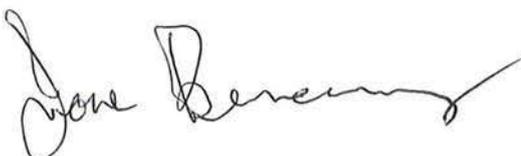

The proposed development of a wharf at Smith Bay provides the perfect solution. Smith Bay meets all the criteria for development of an export facility – it is already an industrial site, it is an area of low population and low tourist visitation, and it is on the North Coast where shipping can berth safely and access export markets directly.

I believe the Environmental Impact Statement addresses all the concerns of local residents and businesses.

The Island relies so much on seasonal business – both in tourism and in agriculture. The all-year-round forestry industry will bring much-needed, well-paying jobs and allow the hard-working tourism businesses on the Island to increase their margins and enjoy their annual winter break while their business keeps working.

Yours sincerely,

Jane Bucany

[majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**Deep Water Port Facility, Smith Bay, Kangaroo Island**

I write in support of this proposal. As a proud South Australian, I want to see our State grow and I want it to be a place where businesses with a sustainable competitive advantage are encouraged to invest and to prosper. Forestry is already a key contributor to South Australia's prosperity, and it appears, from all that I have read, that Kangaroo Island is one of the best places in Australia to grow plantation timber for export.

The trees have been planted with the encouragement of federal, state and local government but no level of government has made any provision or allowance for the fact that the tree crop needs to be monetised in order for the benefits to flow to the people of the Island, and the of the State more generally.

Now, KIPT, a public company, based in South Australia and using local expertise, has not only identified the optimum location for a wharf but has designed and financed the missing export infrastructure that would otherwise fall to government to deliver.

I have read the key sections of the EIS and am satisfied that the project poses no threat to any other business or to the environment. On this basis, it should not just be approved but given the enthusiastic support of government. Our state needs to be a place where private capital is harnessed, rather than bound up in years of red tape and bureaucratic inertia.

This development is emblematic of your government's policy in seeking and gaining office. It delivers a key piece of infrastructure in a regional area, establishes a new and sustainable source of jobs and exports ... and all at little or no cost to the public purse. No longer will young people be forced to leave the Island (and, quite often, the State) to gain well-paid year-round employment.

The project should be approved quickly and then supported with such road improvements as are needed to ensure that its benefits to the community can be maximised. Some level of objection is normal with any change on the Island, such as Southern Ocean Lodge or even the new Airport, but the whole state is now proud of these developments, as it will be with the KI Seaport at Smith Bay.

Yours sincerely,

Peter Bucany

Re: Smith Bay Deep-Water Wharf

Dear Minister Kroll

I am writing in support for the Smith Bay deep-water wharf proposed by Kangaroo Island Plantation Timbers. My name is Ian Robinson and I am the General Manager of SA Pine Pty Ltd a sawmilling and timber processing company based at Kuitpo in the Adelaide Hills and Monarto in the Mid Murray region.

While the economic impact assessment highlights many benefits for South Australia there are a couple of benefits that are more directly related to SA Pine.

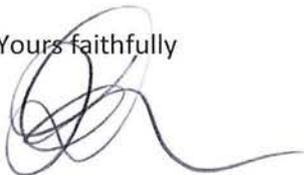

1. The demand for new dwellings will create supply opportunities
2. Potential for local Woodchip export currently being sent to Portland

Currently woodchip being produced by SA Pine is being transported to Portland for export, if this chip can be exported closer to home there are significant savings in freight costs to SA Pine

It should also be noted that SA Pine has looked at processing log from Kangaroo Island however it is not commercially viable due the cost to get it off the island and as a sawlog is of poor quality

Thank you for time and please do not hesitate to contact me if you have any questions

Yours faithfully

Ian Robinson

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ella Roesler

Dear Sir,

I write you in support of the KIPT proposed development at Smiths Bay.

Forestry has long been carried out on Kangaroo Island, but without success. Several years ago a modern saw milling facility was established at Parndarna, but failed dismally due to the quality of the pine logs and the prohibitive cost of production and freight to market.

The current proposal is taking these challenges into consideration by the provision of a sea port and chip loading facility.

The proposal to chip and export acknowledges that chipping is the only real option for the forested areas on Kangaroo Island because of the quality of the resource. The chipping operation will provide employment for a considerable number of Island residents, in harvesting chipping, freight and loading areas, as well as silver culture.

The economic benefits to Kangaroo Island are therefore considerable.

Yours faithfully

Garry V Tucker

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to you as a concerned resident living on one of the roads that have been submitted to be used for heavy traffic during the harvest of the blue gums in the Westend of the island.

I live on Church Road, at Gosse and our road is a terribly narrow dirt road, that doesn't get much attention with the local council already, it has narrow corners you wouldn't want to meet another car or bigger truck or Bdouble on, it also has multiple one laned bridges that would be extremely dangerous if you would have a truck on the other side.

I also manage a tourism business that is located on the west end highway of Karatta. I am strongly concerned that the tourists will be in danger, as much as the school children that reside here, with traffic passing by on our roads approx. every 22mins as described in the Environmental Impact Statement published by KI PLantation Timbers.

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it

intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.

- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.
- In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."
- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

## Community

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sabrina Davis

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Bruce Vass

**Date:** Friday, 3 May 2019 6:54:32 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Terri Emery

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Nicole Falkiner

**Date:** Friday, 3 May 2019 10:25:34 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sharon Tucker

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ivan Smith

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jamie Taylor

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Joy Mayberry

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Norman Tranter

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

Robert Kleeman,  
Unit manager policy and strategic assessment  
Planning and Development, Development Division  
Dept of Planning, Transport and Infrastructure  
GPO BOX 1825  
Adelaide SA 5000

Dear Mr Kleeman,

The economy of Kangaroo Island has a limited base to develop and grow from because its mainstays are restricted to mostly Tourism and Agriculture.

This limited economic base is further diminished by the nature of employment in tourism and agriculture which is mostly seasonal resulting in limited permanent employment options for its population.

Kangaroo Island's isolation contributes to its lagging economic performance due to additional cost of freight and limited transport options which makes it difficult for new industries to start and be competitive.

The proposed timber port development at Smith Bay will contribute to a diversification of Kangaroo Island's economy by adding Forestry to its economic base.

The forest industry will create a significant number of new jobs for Kangaroo Island and best of all these new jobs will be permanent jobs, contributing employment, money, new residents and associated social benefits to its community.

The proposed forestry industry creates a natural, sustainable, native and organic product which promotes an environmentally sustainable future for Kangaroo Island.

The Smith Bay location for the proposed port is the most practicable and least invasive of any of the explored options for various reasons including proximity to the forest plantations, flat adjacent land, an already industrialized, cleared and degraded area without significant impact on tourism or marine parks.

The impact of the proposed port on the marine environment will be minimal and preventative measures can add to its protection.

I have no hesitation in supporting the proposed port development at Smith Bay by KIPT for the economic, employment and social benefits of Kangaroo Island.

Harry Van Den Berg  

Disclosure: Harry Van Den Berg has no relevant financial relationships with KIPT, its directors or staff.

- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Tammy Williamson

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 6 May 2019 8:01:27 AM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Tanya Millar

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Joele Moodie

**From:** [David Wellman](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 6 May 2019 8:36:08 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

The risk of marine pests being brought into Smith's Bay by entering ships is too great. The damage can not be undone once the herpes virus and other maine pests enter Smith Bay. Remeber the pilchard die back by the herpes virus. It decimated the industry and fishing stocks that usually fed on Pilchards.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal,

that ratepayers and taxpayers will leap to cover the community costs it refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.

- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.
- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoiled part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for

that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Beth Davis

---

I totally object to the proposal by KIPT to ship blue gums out of Smiths Bay. The Marine Pests that could be introduced to Smith Bay, that has no Marine pests, has so much significance to the pristine waters and to the neighbouring Abalone Farm. The marine pests and possible introduction of the Herpes Virus is extremely hazardous. The pilchard population in Spencer Gulf acquired the herpes virus a few years ago which decimated the pilchard population with consequent loss of fish stocks reliant on feeding on pilchards.

I implore you as the governing body responsible for granting the approval for this project to consider the risk and cost of marine pests and viruses to the pristine waters of Smith's Bay. It is too late when the probability of introduction of these pests is very high

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

6 May 2019

Dear Minister,

The Conservation Council of South Australia (Conservation SA) welcomes the opportunity to make a response in relation to the Kangaroo Island Plantation Timbers (KPT) proposal to develop and build a deep-water Seaport and wood chipping facility at Smith Bay on the north coast of Kangaroo Island.

Conservation SA is an independent, non-profit and strictly non-party political peak body organisation representing more than 60 of South Australia's environment and conservation organisations. Conservation SA has been a strong advocate for the protection of nature and biodiversity, and the promotion and uptake of sustainable practices in South Australia since 1971.

In summary, we have serious concerns regarding this project. Including:

### **Biosecurity**

In 2018, Smith Bay was determined to be exotic marine pest free under the Biosecurity Advisory Committee's coast and marine program. Based on the Australian Government's interactive map of marine pests in Australia, most major shipping ports in Australia have seen the introduction of exotic marine pests. Marine pests pose a significant threat to marine biodiversity as well as Kangaroo Island's commercial fishing and aquaculture industries.

KPT has admitted its woodchip carriers and log vessels will present a biosecurity risk to Smith Bay and that "some form of surveillance is needed". They don't say who will take responsibility and bear the cost for this.

The introduction of exotic marine pests to Smith Bay via the seaport is a risk that cannot be adequately mitigated.

### **Coast and Marine: Impact on Marine life**

Dredging, construction and operation will reshape the sea floor, change tidal flows and cause the immediate loss of 100,000 square metres of seagrass – and anything dependent on it. Siltation and disturbance from dredging, along with propeller wash and the inevitable ballast and other contamination will dislodge and suffocate sea life; turbidity will reduce the ability of the Bay to support life.

Noise and light emissions will exclude larger sea life including Southern-right whales and dolphins. Smith Bay has regular visits from these whales, and over the years it has emerged as biologically important for these threatened marine mammals and their calves.

Southern right whales are listed as endangered under the *Commonwealth Environment Protection and Biodiversity Conservation Act 1999* with their own conservation management plan under the EPBC act. Smith Bay is emerging as a Biologically Important Area for this species. There is little possibility of the whales continuing to call Smith Bay home for large periods of the year.

The Victor Harbor and Kangaroo Island Dolphin Watch currently monitor dolphins in the coastal areas including Smith Bay. Dolphins have protection as a migratory species and travel through Smith Bay regularly between two important nursery sites, Dashwood Bay and North Cape.

The woodchips, and possible use of sprays with residual characteristics during their growth periods prior to harvest, will introduce toxicity into the adjacent marine environment. This would prove detrimental to cetaceans through bioaccumulation in their body tissues etc. leading to health and lifestyle issues at both an individual and population level.

Anthropogenic noise is an issue for cetaceans and could lead to them abandoning preferred habitat which is critical to their survival.

### **Lack of Social Licence**

There is significant and ongoing opposition to this proposal from members of the Kangaroo Island community, including from nature-based tourism operators who rely on natural marine and wildlife experiences on the North Coast.

The development of this Port will have a negative impact on the coastal marine environment and we are opposed to the development in its current location.

In addition, we have concerns about the impact of the growing koala population on the surrounding native vegetation if and when harvesting begins. Currently, there are estimated to be around 20-25K koalas who have habituated to the blue gum plantations managed by KPT. Should harvesting commence without adequate management there is a grave risk that koalas will enter and devastate neighbouring ecosystems.

Thank you for the opportunity to provide feedback. Please do not hesitate to contact me on [craig.wilkins@conservationsa.org.au](mailto:craig.wilkins@conservationsa.org.au) or (08) 8223 5155 should you require any further information.

Yours sincerely,

Craig Wilkins

Chief Executive

Re: Smith Deep-Water Wharf

Dear Minister Kroll

I would like to write in support for the Smith Bay deep water wharf project proposed by Kangaroo Island Plantation Timbers. My name is David McMurtrie and I am the operations Manager at SA Pine Pty Ltd we are a small plantation Milling company Based at both Monarto and Kuitpo in South Australia.

I see the benefits outlined in the economic impact will only enhance the market we work in eg. New dwellings which We would supply building materials for and the concept of loading export chip from this wharf instead of transporting to Portland Which would be a cost saving to our company.

We did have some interest as far as milling the Pine from that area but found it of poor quality and size plus the freight to get This product of the Island would not have been viable.

Also I see a boost of employment not only on the Island but to other company's involved in the infrastructure and ongoing projects.

Regards

David McMurtrie  
**Operations Manager**

7th May 2019

Dear Minister,

**Deep Water Port Facility, Smith Bay, Kangaroo Island**

I wish to write in response to the recent release of the EIS Report and supporting documentation. I believe that the goals of this project are sound and that it is very necessary for a port facility to be developed on Kangaroo Island and that Smith Bay is a logical and suitable site.

I was a member of the Kangaroo Island Natural Resources Board when the concept of productive blue gum forestry was first mooted for the island. As a board we discussed the impact of such an industry on the other agricultural industries and the community in the higher rainfall areas of Kangaroo Island. Whilst blue gums were not the preferred option for land use at the time for the NRM Board, the industry went ahead and our community has adapted to having this new industry. The trees have thrived and are now a very important resource for us now and into the future.

As this industry was supported by both local and federal government and was at the time seen as an investment industry, it was given priority over other traditional land uses. Now that the trees are reaching maturity, I believe that it is very important to make use of the resource and enable it to bring its intended value to the current land holders, the KI community and wider community. Over the past 20 years of growth, a large amount of rainfall, soil nutrients and other human resources have been used to grow these trees. They need to be harvested and the industry supported to maintain this as a viable land use, or we watch as the resource sits idle in the ground.

As humans we are now so reliant on fibre industries for our everyday life and Kangaroo Island can grow a much need resource for the world.

As a community we need to back the development of a port facility to utilize the trees, to provide an ongoing industry to Kangaroo Island and to provide ongoing employment within our community.

Yours Truly,

Jo Davidson

Kangaroo Island landholder and resident

Dear Minister,

We are small investors from regional SA who have taken a keen interest in KI Plantation Timbers. In fact, we bought shares in the company last year when we could see that the company was genuine about its plans to harvest and ship the substantial timber asset on the Island.

We are acquainted with one of the company's directors and we have been satisfied that unlike previously failed timber companies, KI Plantation Timbers has taken great care to ensure it can fulfil its obligations to the community of Kangaroo Island, which is naturally sceptical of forestry given its history there.

The major development process in this State is designed to assess projects objectively and take emotion out of the equation. In a small community like Kangaroo Island this is particularly important.

There has been a huge amount of mischievous misinformation from opponents of the project, when it is clear to objective observers that this project will bring so much good to the Island in terms of jobs and economic stimulus.

Smith Bay is not a unique Kangaroo Island location – most tourists, including ourselves, have never heard of it! The location is most suitable and the transport route keeps trucks off the main tourist roads.

We urge you to approve this project. The EIS is most thorough and shows conclusively that the Smith Bay wharf can co-exist with its neighbours in a zone which is already industrialized.

Yours sincerely

S Arruzola

Dear Minister,

We are small investors from regional SA who have taken a keen interest in KI Plantation Timbers. In fact, we bought shares in the company last year when we could see that the company was genuine about its plans to harvest and ship the substantial timber asset on the Island.

We are acquainted with one of the company's directors and we have been satisfied that unlike previously failed timber companies, KI Plantation Timbers has taken great care to ensure it can fulfil its obligations to the community of Kangaroo Island, which is naturally sceptical of forestry given its history there.

The major development process in this State is designed to assess projects objectively and take emotion out of the equation. In a small community like Kangaroo Island this is particularly important.

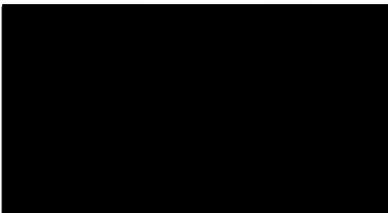

There has been a huge amount of mischievous misinformation from opponents of the project, when it is clear to objective observers that this project will bring so much good to the Island in terms of jobs and economic stimulus.

Smith Bay is not a unique Kangaroo Island location – most tourists, including ourselves, have never heard of it! The location is most suitable and the transport route keeps trucks off the main tourist roads.

We urge you to approve this project. The EIS is most thorough and shows conclusively that the Smith Bay wharf can co-exist with its neighbours in a zone which is already industrialized.

Yours sincerely

*E. Soper*

**Date:** Tuesday, 7 May 2019 2:55:34 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rosie Leaney

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Janine Warren

**Date:** Tuesday, 7 May 2019 5:26:11 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Monica McGee

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sally Gower

Dear Robert

**Re: Kangaroo Island Plantation Timber Port at Smith Bay**

I am a director of the proponent Kangaroo Island Plantation Timbers Limited (KIPT), but it is not in that capacity that I make this submission.

*Holdaway family interest in KI forestry*

With my family, I am also a tree grower on Kangaroo Island where we have 187.6 hectares of high pruned *Pinus radiata* on land leased from KIPT in Colemans Rd, Gosse. Our lease was entered into in 1999 with Treecorp Pty Ltd. After Treecorp's insolvency in 2005 we dealt with SFMA until they also became insolvent. RuralAus Ltd acquired the company and the lease in 2012. RuralAus became KIPT in 2013.

The investment my family has made at Gosse is substantial. Over the establishment period (1999-2001) we invested just over \$520,000. We have since spent a further \$977,000 on pruning and other management costs. Our lease costs to date have been around \$400,000. The total is just over \$1.8 million. We do not come from a 'monied stock' and so every dollar we invested on KI had to be earned (or borrowed and repaid).

When we commenced investing on Kangaroo Island we were told that 'trees grow well on KI' and that 'markets are available – or will emerge' in response to the priority Australian Governments had been placing on plantation forestry. We did our own due diligence – and had an understanding of how private investment in plantation forests works from our New Zealand background. It seemed like a reasonable 'bet' to make at the time of establishment.

When Treecorp became insolvent (in 2005) we had to reassess – as the majority of the pruning management expenditure had yet to be incurred. And were acutely aware that mid rotation forestry decision making is best viewed as binary ... that is either 'do it properly' or abandon the investment. This particularly applies to a more intensive crop like pruned *P. radiata*.

At that time other growers were (with government encouragement) planting substantial areas thereby confirming, in our minds, the suitability of KI for plantation forestry. Even as the MIS debacle broke from 2008 on it seemed clear that a resource would emerge that, one day, would be of sufficient value to readily justify investment in the infrastructure necessary to allow its exploitation.

It has been somewhat concerning to be told (regularly) over the last decade that ‘no tree on KI is worth anything’. However, in the end, it did not seem rational or sensible to us that a port costing in the tens of millions could not be built to harvest an (total) resource worth well into the hundreds of millions.

Working purely from publicly disclosed information (by KIPT or others) a competent analyst can work out that the fob<sup>1</sup> value of the trees currently available for harvest on KI might be in the region of \$750 million.

#### *Support for the Smith Bay Wharf proposal*

KIPT is now proposing to build the piece of infrastructure that will mean that trees my family has invested so much in can be realised ... not for some super profit ... but for about (or a bit less than) the modest return we might have looked for at the outset.

**We therefore support the KIPT proposal as a logical infrastructure response to substantial investment in plantation forestry on Kangaroo Island by various people – as encouraged by policy initiatives of successive South Australian and Australian governments<sup>2</sup>.**

#### *Interests of other independent growers*

The Holdaway family’s interest in the (say) \$750 million of first rotation value is very important to us and our financial future. But there are other parties (in addition to KIPT) who have a stake in this project.

There are 12 other private growers on KI who depend on an export port being established to harvest crops that are, in most cases, already mature or, in all cases, ready for harvest by 2025. We each face, essentially, a near binary outcome.

What Yumbah Aquaculture falsely claims about the Smith Bay Wharf ... that it means the destruction of their business ... is actually more true for independent timber growers who, in aggregate, have as much as \$50 million of net income at stake.

#### *Other matters*

Because I have been an investor in KIPT (since 2011) and a director (since 2015) I am aware of the time it has taken to bring forward and have considered for development approval a piece of infrastructure that has the capacity to be transformative for many more than just our family.

We are disappointed that government has allowed a limited number of opponents to frustrate and delay a process well beyond that necessary for a careful consideration of the merits of properly made arguments. Opponents’ adoption of obstructive<sup>3</sup> and unsavoury<sup>4</sup> tactics can be discouraged by government properly informing itself and rewarding or

---

<sup>1</sup> fob – free on board. That is the value at the Australian port of export.

<sup>2</sup> See section 2.2 of the Environmental Impact Statement.

<sup>3</sup> For example, having sought of the proponent a requirement to undertake certain tests on live abalone, Yumbah Aquaculture refused to make abalone available on any terms – and prevailed upon other aquaculture companies to also refuse to supply. KIPT’s advice throughout was that the work was, in any case, unnecessary as the issue said to be addressed by testing is already well settled in the scientific literature.

<sup>4</sup> Yumbah employees have maintained a Facebook Group (Save Smith Bay) that has published extravagant and inaccurate material about the project leading directly (or indirectly) to instances where KIPT directors and staff have been subject to abuse in social settings on KI.

discounting parties based on whether arguments are made in a responsible and reasonable manner.

We would not seek to deny any affected party the right to provide input, but we do think government has a responsibility to decide in the public interest rather than seek some sort of compromise between carefully made arguments with a strong core of Kangaroo Island / South Australian / Australian economic interest and misconceived objections on behalf of very few.

We thank you for the opportunity to make a submission. If you have any questions please contact Graham Holdaway on 0487 700 288 / [giholdaway@gmail.com](mailto:giholdaway@gmail.com) or John Cheong-Holdaway on 0431 394 500 / [j.cheongholdaway@gmail.com](mailto:j.cheongholdaway@gmail.com) .

Yours sincerely

A handwritten signature in black ink, appearing to read 'Graham Holdaway', written in a cursive style.

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 8 May 2019 1:09:55 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jayden Freitag

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Emily Rodriguez

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Denni Walters

**Date:** Thursday, 9 May 2019 9:22:04 AM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Re: Proposed timber port at Smith Bay, Kangaroo Island

Dear Mr Kleeman,

I write to you as a shareholder of Kangaroo Island Plantation Timbers Pty Limited, in support of the proposed timber port at Smith Bay, Kangaroo Island.

The reason my husband and I invested in Kangaroo Island Plantation Timbers is that we see the potential of a facility which is much needed within its industry, and which we believe will bring prosperity to the local community and shareholders alike. Managing director, John Sergeant, has indicated the project impact on the South Australian economy to be equal to that of 30 years growth, which I'm sure you will agree, is no mean feat.

Financial reports and ASX releases have instilled confidence in us in regards to the company's longevity and viability. December interim reports portray a company that is steadily progressing with its major development, increasing its employee base, and forming mutually beneficial relationships with third parties to reach an optimum project solution and establish trade contracts ensuring future income. Additional investment by professional investors further bolsters our belief that the future of the company is robust.

I understand that a major hurdle in the port's approval process is that of environmental concern. And I am proud that we are part of a nation that places the environment and social impact of development so highly. My husband and I are strongly eco-aware and will not invest in business which we feel would have a detrimental affect on our ecosystem. Hence, we have monitored the company's disclosures on environmental impact closely since prior to our initial investment, and feel the recently published EIS supports their claims that the wharf will protect the environment and water quality.

The proposed timber port is a strong and wholly beneficial development; when such an opportunity is presented, I feel we should grab on with both hands. I sincerely hope you feel the same.

Yours sincerely,

*Bella Esposito, KPT investor and resident of South Australia*

## **Re: Proposed timber port at Smith Bay, Kangaroo Island**

Dear Mr Kleeman,

I write to you in support of the proposed timber port at Smith Bay, Kangaroo Island. I run a small accounting business, Allinson Accounting Solutions (AAS), in the Adelaide CBD. Contracting Kangaroo Island Plantation Timbers (KIPT) as a client several years ago has not only supported my business financially but has enabled me to triple my staff.

The additional staff members were classified as unemployed prior to starting with AAS and hence the unemployment rate has already been reduced as a consequence of the wharf project.

Lowering our state's unemployment rate is vital to the economy, and the forestry industry directly facilitates this; independent economic analysis shows the industry will create jobs that are permanent, not seasonal, and KIPT's quarterly activities report indicates that the Seaport, once built, has the potential to unlock a further 250 full-time jobs.

I am in no doubt that the proposed timber port will fulfil its estimates of job creation. Hence, I urge you to approve the export facility development by Kangaroo Island Plantation Timbers, and support the growth of our state's economy.

Yours sincerely

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

May 9<sup>th</sup>, 2019

Dear Mr Kleeman,

I write to you regarding the proposed timber port at Smith Bay, Kangaroo Island.

I operate a small business ARK Project Management Pty Ltd, which provides professional project management services to the construction industry. Kangaroo Island Plantation Timbers engaged my business nearly 2 years ago to provide Project Management services.

This project will provide a substantial opportunity for ARK Project Management Pty Ltd as a small business to expand and develop its capacity and capability to support both this and future construction projects across the state of South Australia.

I provide my full support to this development. I am convinced that the Port Facility will allow many small business operators the opportunity to provide a whole range of services and expand their own interests whilst also supporting the growth of the forestry industry on Kangaroo Island.

This letter is to written to add support to approving the Port Facility being constructed at Smith Bay on Kangaroo Island.

Yours Sincerely

A handwritten signature in blue ink, appearing to read 'Andy Kitchin', with a long, sweeping underline.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Simon Kemp

**Date:** Friday, 10 May 2019 5:01:18 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.

**Date:** Friday, 10 May 2019 10:10:12 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

As a long-time friend of Australia, father of an Australian citizen and regular visitor to Kangaroo Island, I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

I strongly believe this development should not proceed at Smith Bay and wish to reiterate the following comments, which have been also submitted by many others and I totally adhere to the, However, there's something else I must mention. This development will tarnish Australian, SA and Kangaroo Island reputation as a major pristine destination for international tourism, which, as you are well aware, provides much higher - and widely distributed - revenues to this State and region. To allow a single industry of reduced importance to permanently damage Smith Bay and Kangaroo Island is a major act of irresponsibility.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith

Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

- The proponent's means to address this assault are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people, and also consider the opinion of those like me from abroad who love this region and want to continue promoting it as a major international destination, free from the horrors of ill-conceived infrastructure projects.

Yours faithfully

Jose Palazzo

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Christopher Smith

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rob Younger

**Date:** Sunday, 12 May 2019 10:15:07 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

***RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal***

As a fishing charter operator whom's business is to fish in and around Smith's Bay, i am going to be directly affected by this development should it go ahead.

Not only does it directly have an effect the fish in the area, it effects the king george whiting spawning area. To disrupt the habitat for the fish is an added blow to the fisheries. As a fisherman we are always told about the concern and management of local fish species. How can you allow such a development when us mere folk are given such strict rules to adhere to. The government is contradicting itself.

My clients no doubt do not want to see such a commercial monstrosity among what is meant to be a pristine environment.

The vessels coming and going will directly have an influence on the fishing. The fish will have a disturbed habitat and will be spooked.

I strongly appose this development as it is going to have a direct affect on my business.

Please do not consider and refuse and further action and/or development within the smiths bay area.

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

## Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### Native Vegetation and Fauna

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.

Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation

- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kirsty Russell

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Caroline Honner

## Proposed Development – Smith Bay, Kangaroo Island Plantation Timbers Pty Ltd (“KIPT”)

This development is all wrong for Kangaroo Island.

I am an Island resident, unconnected with either KIPT or Yambah Aquaculture. This development will do more harm than good, both in the effect on wildlife and on the amenity of the Island for residents and tourists. It will undercut existing industry because it will detract from what the Island now offers the many visitors on which it relies.

In particular, KIPT wants to put heavy vehicles on the Island’s roads continuously, day and night, every day of the year. The statement says that there will be two journeys per 22 minutes, that is, roughly six an hour, all the time. This will cause:

- (a) Noise. On the Island, you can hear a truck for several minutes as it approaches and recedes. This will create a backdrop of **almost continuous** noise day and night. How’s the serenity?
- (b) Roadkill. The EIS claims that this can be counterbalanced by funding work to increase wildlife numbers elsewhere. They don’t seem to realize how big the kill will be. Roadkill is already a problem but of course the risk is highest in dusk and dark conditions. Most tourists and Islanders use the roads in daylight hours. Locals, in particular, try to minimise driving at night because if you do much of it you will hit a roo and, at the least, damage your car.

If there are trucks running all night, every night, there will be a huge and disproportionate increase in roadkill. Kangaroos, endemic Tammar wallabies (unique to the Island and only active at night), possums, bandicoots, Rosenberg’s goannas, snakes, echidnas and bird populations will all suffer. Tourists will be confronted with the ugly results as they travel the Island, probably putting more load on the Council to remove the dead and broken creatures.

- (c) Pollution. The Island prides itself on its ‘clean and green’ reputation. Much of its tourism is eco-tourism. Food producers use the public perception of an unspoilt environment as a marketing advantage. Heavy vehicle exhaust at this level cuts right across this. The more we industrialize the Island, the less it will be the environmental gem it now is. In the long run, you will lose far more than you gain from this.
- (d) Road crashes. Many overseas tourists are unused to Australian country driving. They often make errors. (Sometimes they drive on the right, for example.) If we are to have an additional 140 or so heavy vehicle journeys per day on the Island, we can expect an increase in road crash injuries and deaths. The suffering will be borne by the victims and their families, but the cost will be borne, in great part, by South Australian government services.

And this is only the starting point. What if the industry grows and the vehicle numbers increase?

Please, just say No.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sue Merchant

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Letter of Support – Kangaroo Island Plantation Timbers  
Smith Bay Deep Water Port Development**

Dear Minister Knoll

I am aware that a new proposed deep-water port development at Smith Bay, Kangaroo Island, by Kangaroo Island Planation Timbers Ltd (KIPT) is in the public consultation period and submissions from the public are welcome.

My connection with Kangaroo Island is both a professional and personal one.

On a professional level I completed my Science Degree with Honours from the University of Adelaide with my thesis studying the rock sequence on the south coast of Kangaroo Island around the Vivonne Bay area. While this work goes back to 1990, this study period planted the seed for multiple trips to the island ever since.

On a personal level I have been returning to Kangaroo Island with a group of friends every 2 years for nearly 30 years. We do so because of the unique environment of Kangaroo Island and the feeling of “getting away from it all” when one crosses to the island on the ferry!

In addition, I am also the Managing Director of a mining company (Adelaide based Southern Gold Ltd) that is very aware of the importance of environmental stewardship and is a strong believer in responsible mine operations which seeks to advance development proposals in an intelligent manner balancing the needs of all stakeholders.

In this context I wish to provide my complete support to the proposed wharf development at Smith Bay by KIPT and the development of the timber industry on the island. I am a strong believer that industry and environment management can work hand in hand and indeed it is important to have a diversity of healthy industries that provide the broader support to communities managing their environment in a sustainable fashion.

I wish the proponents, KIPT, well.

Yours sincerely,

Simon Mitchell  
Managing Director

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

May 13<sup>th</sup>, 2019

Dear Mr Kleeman,

I write to you regarding the proposed timber port at Smith Bay, Kangaroo Island.

My family and I migrated to Australia from Venezuela eight years ago. I am now involved with the Australian timber industry in a professional capacity and would like to put my support behind the industry that has supported me.

Forestry contributes \$2.8 billion to the South Australian economy and employs around 18,000 people in the state. The majority of benefits of forestry flow to the specific timber regions, so it may seem to those in our capital cities to not be affecting growth and improving the economy outside of rural Australia; I am proof that the flow on effects of the industry are significant and palpable however. Because of timber, my family and I are proudly self-sufficient Australian citizens. We reside in our capital city, Adelaide and the income we create in turn puts money back into the economy, from shopping, to paying rates, to sending our child to a South Australian school.

My husband and I also both hold tertiary and post-graduate qualifications in multiple disciplines in the United States of America, Venezuela, and Australia; the timber industry has ensured that the skills we have brought here are utilised *within* South Australia and not lost to another state, or country.

As you can see from my case alone, the timber industry is growing our economy and providing prosperity within South Australia. Once the proposed port is completed, these benefits will only increase. Please ensure that this opportunity is not lost.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'Alazne Zubizarreta', with a stylized flourish at the end.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sue Severin

Department of Planning, Transport and Infrastructure  
GPO Box 1815, ADELAIDE SA 5000

[majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**RE: Deep Water Port Facility, Smith Bay, Kangaroo Island**

L V Dohnt & Co Pty Ltd (LVD) is a forestry contractor established in 1932 and based in South Australia, currently also working in Victoria, Esperance and Albany in Western Australia.

In 1991 LVD became involved with one of the first "infield whole tree" chipping systems designed to produce a high-quality softwood fibre for the export market. Since that time LVD expanded infield chipping to Western Australia and played a big part of the first hardwood fibre exports out of Albany in 2004 and Esperance in 2016.

To date we have delivered over 10 Million GMT of high-quality wood fibre to Portland, Albany and Esperance for export. In Western Australia the Ports of Albany and Esperance had not previously experienced the export of Woodfibre through their port and as such the local population raised concern about environmental damage and impact to local infrastructure.

After Discussions with Mr Ray Cosh, Manager of the Fibre terminal at Albany I am happy to report since 2005 there has not been an issue or complaint of an environmental issue but for a reversing beeper on a bulldozer from a local resident. This would not be a issue at Smiths Bay, for more details contact Ray Cosh 0447411835, email: [ray.cosh@pptalbany.com](mailto:ray.cosh@pptalbany.com)

Road infrastructure to handle the Fibre haulage would need serious consideration and upgrading, with the advanced notice of this project and the correct funding by all concerned, including 3 levels of government this should not hold up the start of this great opportunity for Kangaroo Island (KI).

From my experience with the green start-ups in Albany and Esperance the benefits to KI can not be understated, for example, Harvesting and Haulage would create

- Employment
  - Between 70 to 90 fully time positions
  - Traineeship
  - Apprenticeships
  - Upskilling of residents
  
- Housing
  - Increase in demand
  - Increase in pricing
  - Increase in new dwellings
  - Increase rate revenue
- Schools
  - Increase in students
- Local Business
  - Increase in retail demand
  - Increase in vehicle demand and support
- Local communities
  - Higher level of support in
    - Sporting Clubs
    - CFS Support
    - Tourism

While this is only a small sample of the benefits to KI from a harvesting contractor's input, however it represents in real terms millions of dollars injected into KI on an annual sustainable basis.

Another environmental benefits for the KI plantation timbers project, which naturally occurs with growing and well managed trees are,

- Carbon sequestration:
  - the ability of a plantation of trees to store carbon Dioxide.
- Viscose Rayon:
  - which is said to be the third most commonly used textile in the world, a sustainable alternative to cotton and polyester. The modern hardwood fibre pulp mills in China have the ability to change from a paper base to Viscose Rayon, depending on world demand.
- Worldwide demand for wood fibre:
  - There is fast becoming a higher demand for wood fibre than supply. Well managed timber plantations such as on KI will help meet that demand, thus reducing illegal logging and damaged to the environment in third world countries.

## Forest Stewardship Council

Before a forest owner or manager can certify their forest, they must meet the ten FSC principles for responsible forest management. These rules apply to all forest types and are in place to ensure environmentally appropriate, socially beneficial, and economically viable forest management. The FSC 10 principles are below.

### PRINCIPLE 1:

The Organization shall comply with all applicable laws, regulations and nationally-ratified international treaties, conventions and agreements.

### PRINCIPLE 2:

The Organization shall maintain or enhance the social and economic wellbeing of workers.

### PRINCIPLE 3:

The Organization shall identify and uphold Indigenous Peoples' legal and customary rights of ownership, use and management of land, territories and resources affected by management activities.

### PRINCIPLE 4:

The Organization shall contribute to maintaining or enhancing the social and economic wellbeing of local communities.

### PRINCIPLE 5:

The Organization shall efficiently manage the range of multiple products and services of the Management Unit to maintain or enhance long term economic viability and the range of environmental and social benefits.

### PRINCIPLE 6:

The Organization shall maintain, conserve and/or restore ecosystem services and environmental values of the Management Unit, and shall avoid, repair or mitigate negative environmental impacts.

### PRINCIPLE 7:

The Organization shall have a management plan consistent with its policies and objectives and proportionate to scale, intensity and risks of its management activities. The management plan shall be implemented and kept up to date based on monitoring information in order to promote adaptive management. The associated planning and procedural documentation shall be sufficient to guide staff, inform affected stakeholders and interested stakeholders and to justify management decisions.

### PRINCIPLE 8:

The Organization shall demonstrate that, progress towards achieving the management objectives, the impacts of management activities and the condition of the Management Unit, are monitored and evaluated proportionate to the scale, intensity and risk of management activities, in order to implement adaptive management.

PRINCIPLE 9:

The Organization shall maintain and/or enhance the High Conservation Values in the Management Unit through applying the precautionary approach.

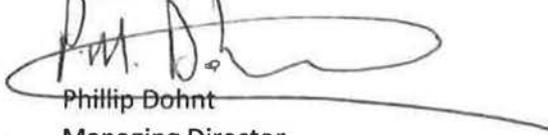

PRINCIPLE 10:

Management activities conducted by or for The Organization for the Management Unit shall be selected and implemented consistent with The Organization's economic, environmental and social policies and objectives and in compliance with the Principles and Criteria collectively.

While it is important, I declare a conflict of Interest in this letter of support, as I am keen for my company to become involved in such an important opportunity on KI, I do not believe it changes the fact and benefits to KI as I have outlined.

Please do not hesitate to contact me if you require clarification or more detail on the above

Yours Truly

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kevin Jones

Dear Minister Knoll

Re: Proposed Development of Smith Bay Wharf – Kangaroo Island Plantation Timbers Ltd

We write in support of the proposed development of the Smith Bay Wharf by Kangaroo Island Plantation Timbers Ltd.

While we have no commercial interest in the development, we believe this is an important positive development for South Australia in general, and for the Kangaroo Island community in particular.

The development, and the industry it provides infrastructure for, will create employment opportunities during construction, and importantly, in ongoing operation, and will reinforce the positive view that South Australia is a place where investment is welcome.

We look forward to the development's approval.

Kind Regards

Mick BILLING  
Director

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

David Vast

---

Minister for Planning - Minister Stephan Knoll,  
C/- Robert Kleeman  
Department of Planning ,Transport and Infrastructure.

I am writing in support of the proposal by KIPT to build a wharf at Smith Bay on the northern side of Kangaroo Island to enable direct export of blue gum log and woodchip to China and Japan.

From my tenure as Presiding Member of the State's then Development Assessment Commission 2008-2015 I am intimately aware of the potentially significant economic importance of the established blue gum plantings on KI, and I am also personally aware of the environmental importance of the features of Smith Bay and the surrounding localities.

I am familiar with the asserted positive economic impact of the proposed Smith Bay deep water wharf as detailed in the attached flyer which I also endorse.

I support the proposal and encourage the State to likewise support this proposal subject to appropriate environmental conditions which I am confident will allow the project to proceed.

Edward (Ted) Byrt  
Executive Director  
Byrt Corporate Advisory.

# ECONOMIC IMPACT OF THE PROPOSED SMITH BAY DEEP-WATER WHARF

## ECONOMIC IMPACT ASSESSMENT

The Adelaide-based economic consultancy, EconSearch, was commissioned to produce an independent analysis of the economic impact of the proposed Smith Bay deep-water wharf.

The economic impact can be summarised in three key numbers.

**Gross Regional Product (GRP)** measures the net contribution of an activity or industry to the regional economy. Broadly it is the sum of wages and salaries (paid to people who are employed) and profits to business owners.

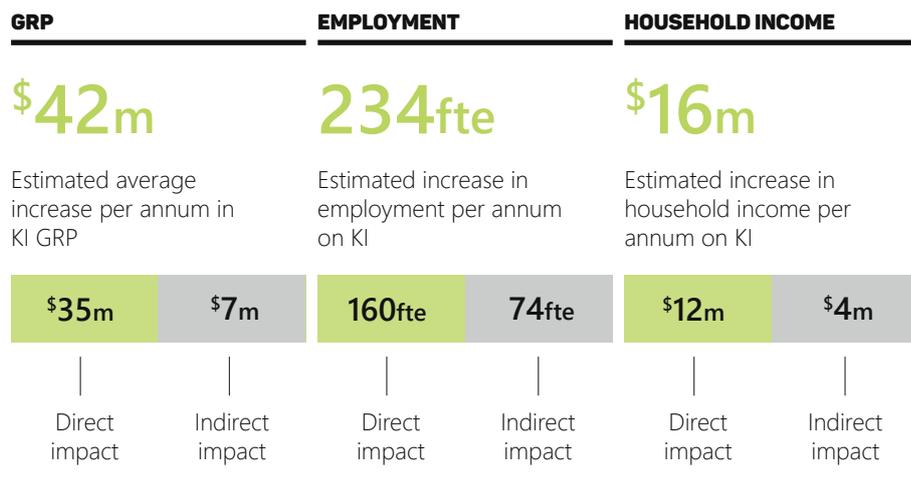

**Employment** which is the number of jobs created, measured as full-time equivalents (fte); two half-time jobs is equivalent to one full-time job.

**Household income** is the income earned by people employed by the project.

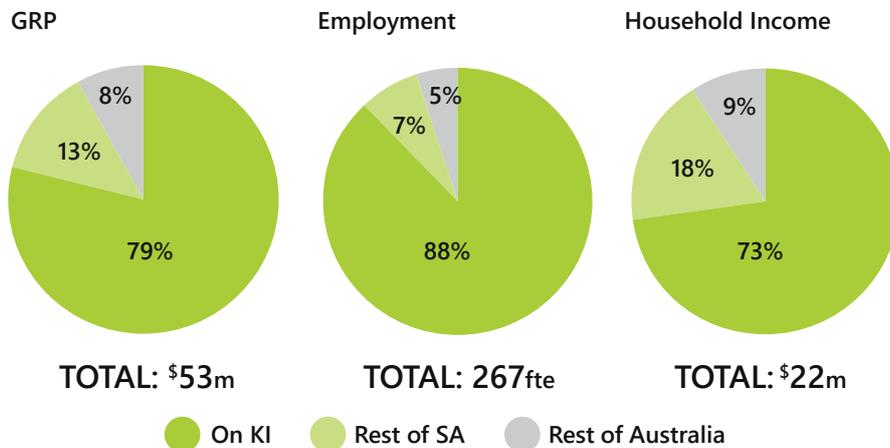

This fact sheet, produced by KIPT, summarises key findings from EconSearch's report *Economic Impact of the Smith Bay Wharf* (October 2017).

## IMPACT OF OPERATIONS –

# IMPACT OF CONSTRUCTION -

## ON KI

## TOTAL IMPACT OF CONSTRUCTION

# THE RESOURCE

**600,000**

Kangaroo Island Plantation Timbers (KIPT) owns 25,000ha on KI, of which approximately 15,000ha is plantation timber. There is approximately 4.0m tonnes of timber ready to harvest now. The first rotation will yield a sustained average annual harvest of 600,000 tonnes over a 14-year period, which equates to a 7% increase in Australia's timber exports. The second rotation, which grows from the existing root system, will take about 12 years to reach maturity.

**25%**

Western Kangaroo Island has a number of natural advantages, such as high rainfall and low rainfall variability, combined with mild summers and low evaporation rates, which means it is the best location in Australia to grow plantation timber. The rate at which trees grow is around 25% higher than the Green Triangle.

There is no commercially viable means of getting the timber off Kangaroo Island at present. KIPT proposes constructing a deep-water wharf at Smith Bay to export this timber to markets in North Asia. KIPT will fund the entire development, and is not asking for any government funds to build the facility.

## OTHER CONSIDERATIONS AND IMPACTS

**300 POPULATION GROWTH**

Unemployment on KI is low, and labour force participation rates are high. This means many of the jobs created by the Smith Bay project will be filled by people currently not living on KI. It is estimated that at least 60% of the total jobs (140fte) would be filled by people currently living off the island. These people are expected to move to KI, with their families. A conservative estimate of the increase in population on the Island is over 300 persons.

**100 NEW HOUSING DEMAND**

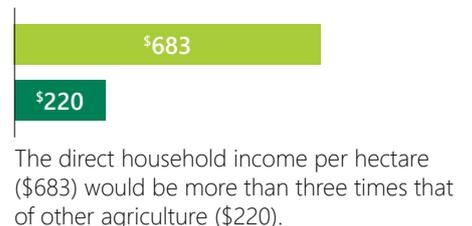

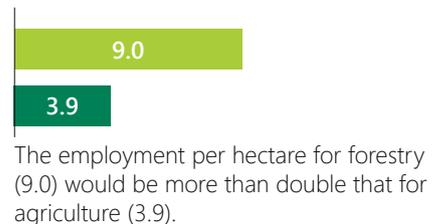

If the majority of households moving to the Island were (directly and indirectly) to create demand for new dwellings, there would likely be upward of 100 additional dwellings required to accommodate this increased population.

## ECONOMIC RESILIENCE

The development of plantation forestry broadens the economic base of the Island. Plantation forestry will not exacerbate the seasonality associated with tourism and agriculture, the other dominant activities on the Island.

## COMPARATIVE ECONOMIC CONTRIBUTION

A comparison of the existing contribution of agriculture, which is the largest industry sector on KI, shows the impact forestry will have on the KI economy.

Printed on paper that is 100% recycled and from well-managed forests certified by the Forest Stewardship Council.

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 13 May 2019 4:05:23 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Cherie Hill

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Unit Manager Policy and Strategic Assessment  
Department of Planning, Transport and Infrastructure  
GPO Box 1815, Adelaide 5000

Dear Sir

**Re Kangaroo Island Plantation Timbers Limited**

I am writing to confirm my support of the above named company's application to build a wharf at Smith Bay on the northern side of Kangaroo Island.

The economic and employment opportunities as a result of this project are substantial for the island.

Unfortunately today there is not enough money being invested in rural areas.

This is a welcomed change.

Yours sincerely

John Eastwood

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jennifer Tranter

Dear Minister,

Maritime Constructions is a South Australian marine construction and dredging contractor with over 50 years of experience in the field, starting as a small family business from Port Adelaide whom now employs over 130 staff. Kangaroo Island Plantation Timbers Pty Ltd (KIPT) has engaged Maritime Constructions (MC) for the Design and Construction of their Timber Bulk Load Out Facility at Smith Bay, Kangaroo Island. KIPT has engaged MC from the very beginning, with specific regard to the design and constructability advice of the facility.

KIPT's mandate from the outset was to develop a low impact wharf solution, with a specific focus on reducing dredging requirement/impact. In addition, the design also focused on the coastal processes, reducing construction time onsite and minimizing the actual seabed footprint.

With dredging only making up a small part of the overall construction cost, KIPT took the view that dredging efficiency and production could be sacrificed to incorporate whatever necessary dredging control measures were required to manage and minimize any environmental impacts; the "cost vs environmental impact" conflict was therefore circumvented by KIPT's early stated intent. This was a refreshing change compared with more typical proponents. It was also encouraging that the geotechnical properties of the shallow dredge layer did not have significant plume generating characteristics/properties.

MC has brought to bear its entire breadth of knowledge and experience to assist and support KIPT in devising a construction and dredging methodology that addresses the environmental issues that are commonly encountered with such projects. This premediated approach by KIPT was entirely focused on understanding how the Smith Bay harbour behaves and modelling the various dredging and construction regime options. By incorporating a floating wharf instead of a traditional piled wharf, enormous construction time was saved and pile driving and its associated impacts has been reduced by a factor of 10.

Maritime is extremely proud to have worked with KIPT to develop the project thus far and very pleased that KIPT have stayed true to their charter of utilizing local and South Australian businesses from inception through to construction and then operation.

Yours Faithfully,

Shane Fiedler  
CEO  
Maritime Constructions Pty Ltd

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Trish Mooney

To: Minister Knoll

RE: Smith Bay Deep – Water Wharf

Dear Mr Knoll I am writing this letter to you with my full support of building the Smith Bay Deep – Water Wharf on Kangaroo Island based on the Economic Impact Statement from Kangaroo Island Plantation Timbers.

I am a long time resident residing in the southern suburbs of Adelaide and have been an employee of the Timber Industry for the last 42 years.

In this time unfortunately I have seen far to often the southern parts of Adelaide/South Australia suffer through lack of real employment and the continual contraction of the Timber Industry.

For far to long unemployment has been a real issue in the south and I have personally experienced it with two of my 4 children having to leave this State for employment interstate due to lack of opportunity.

Based on the impact statement with 200 plus full time employees, 300 population growth, 100 new houses in demand and the economic contribution to the area I believe this will only be good for Kangaroos Island and South Australia.

The plantation timber can also only be good for us with the environment with carbon credits

I would like to give this my full support and would hope that you will also give this your full support and approve the Wharf based on the Impact Statement.

Yours Sincerely

Frank McDonald

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kathryn Lewis

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal **objection** to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- **Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?**

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

### **Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- **Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?**
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million

will be required annually for the next decade.

- In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved...."
- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision? This result would be completely unacceptable to me as a ratepayer of Kangaroo Island.
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### Community

- As a community member, I am spoke AT by KIPT, rather than asked my opinion, or better still, **what I could live with?**
- The community have been seen only as a risk to KIPT, rather than as an opportunity. They have failed to generate a social license for their activities.
- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

For the record, I am comfortable in their being a forestry industry on Kangaroo Island. I object to it having a seaport at Smith Bay, for which nobody has yet provided me with an argument as to

why this is the best location.

Yours faithfully,

Darren Keenan  
Resident, Ratepayer and Voter

**From:** [Dianne Morris](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Tuesday, 14 May 2019 1:29:29 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Subject:** K.I.P.T proposal for a deep water port on Kangaroo Island  
**Date:** Tuesday, 14 May 2019 2:50:40 PM

---

Dear Minister, I wish to express my concerns at the proposal of Kangaroo Island plantation timbers to build a deep water port at Smith Bay on Kangaroo Island. As a new resident of the Island [ 5 years ] I made my residence here because of the little disturbed environment. What attracted me to the Island is the same things that make the Island the crown jewels of South Australia's tourist industry. Tourists come to see the relatively untouched beauty, the wild life and an unpolluted environment. Heavy industry with large trucks on dirt roads and a bay ruined by a commercial port with all the associated infrastructure is not what tourists come to experience. With time and progress things do change but I have a great concern that industries such as this on the Island will "kill the goose that laid the golden egg "

Yours

A.B.Lynch

ADELAIDE SA 5001

Dear Minister

In my opinion, the proposed Smith Bay wharf would be a second-class wharf being a floating object that would be exposed to our north westerly gales and high tides and would break up.

Ballast Head was given to Plantation Timbers in the package to develop. It is a proven site.

Yours sincerely

Dudley Roberts

Planning and Development, Development Division  
Dept of Planning, Transport and Infrastructure  
GPO Box 1815  
Adelaide SA 5000

Dear Sir,

**RE: SMITH BAY DEVELOPMENT**

This is a letter of support for the KIPT proposed development at Smith Bay.

We have a great renewable resource in our blue gum plantation which under the proposal will provide much needed employment and revenue.

Smith Bay is the ideal place for a jetty.

Firstly, It is closer to the plantation than other existing jetties – which means that the trucks can go directly there without having to use routes that tourists or school buses use, therefore making it safer for everyone.

KIPT will also be paying for the improvement of roads they use which means better roads and infrastructure which taxpayers won't have to pay for.

Secondly, there is already an industry established at Smiths Bay, the abalone farm. In terms of the ambience and view The Abalone farm is already spread out in an unattractive way, so to have logs or wood chips stacked back from the water is not going to make much difference. In terms of environmental impact the abalone farm is flushing litres of waste water into the bay daily, if the marine environment has adjusted to this how can one ship a month make any significant impact?

Many people are worried about the jetty affecting the environment and the wildlife there. And while it may temporarily disrupt the environment, both marine and on land, the development should not have a lasting impact on the environment. There are many jetties around the Island, some with more traffic than Smith Bay will have and there has been little impact on the abundance of wildlife. In fact many people like walking out on jetties to observe the rich marine environment we have on KI.

People are saying put the jetty elsewhere. But where? Anywhere that is put forward will garner the same objections, the same dispute.

There seems to be a lot of emotional articles with people worrying about the leafy sea dragon and so forth. Objective studies suggest there is no reason for concern at all. And what about people? Our young people leave the Island because there is no work for them. Families are struggling. Domestic violence and drugs are a growing problem on our Island. We need industry for growth, to help break the cycle of unemployment and abuse of self and others.

K.I. desperately needs the employment and revenue coming in to develop more industry on the Island which will have a positive flow on for schools, businesses and council.

The EIS has demonstrated a responsible and balanced approach to the Plantation and to the Smith Bay development.

Nothing stays the same. The world around us is always changing. If this project was not to go ahead, there is no guarantee that the Smith Bay environment, in the water and on the land, will stay the same anyway.

Yours Sincerely,

A handwritten signature in cursive script that reads "Katherine Wales".

Katherine Wales

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ralph Ledergerber

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Date:** Wednesday, 15 May 2019 1:37:12 PM

---

14 May 2019

Dear Sir or Madam,

I am writing this email in strong support of the Kangaroo Island Plantation Timbers (KIPT) proposed export facility at Smith Bay on Kangaroo Island. I have been involved in the Australian plantation industry for the past 25 years and I have seen the industry from its beginnings to what is now a wonderful industry with considerable community, environmental and social benefits to many communities situated throughout Australia.

I have read the EIS and the associated development proposals for the KIPT proposed deep water port.

Plantation timber is globally described as a renewable resource, environmentally sound and a great substitute for the use of our wonderful native forests. I was very much a part of the initial establishment of the plantation industry in Australia and I was (and still am) a very big believer in the 'Right to Plant' and the 'Right to Harvest' all our commercially viable plantations.

To give an understanding of my past experiences, I was heavily involved in the development of the Albany Woodchip Project (Albany Western Australia) in the early 2000's and I remember very clearly the considerable public objection to the establishment of an export woodchip facility at the Port of Albany. There was (is today) a very large blue gum plantation estate established within the Albany catchment area that ultimately needed a route to market. Blue gum plantations are not native to Western Australia. I was one of the industry people responsible for the planning, design, costing and building of this wonderful Albany export facility.

I can remember hosting the public workshops / discussion and information sessions surrounding our industry and the proposed Albany woodchip export project. The clear message from this exercise (for me) was the general public being afraid of the unknown. An export woodchip facility was new and most people were scared of the unknown (particularly around trucks on roads). Not dissimilar to what KIPT are currently doing, we absolutely ensured that all FAQs were answered in a clear, responsible and respectful manner. Without going into more detail, the export facility was approved, built (on time and within budget) and has exported some 1 million tonnes of FSC certified woodchips per year since 2008 through the Port of Albany. I am very proud of this facility that operates today ensuring the ongoing employment and commercial benefits to the Albany community.

In 2013, I created a company called Southern Pacific Fibre which had a mandate to find a route to market for the 'stranded' Esperance (Western Australia) FSC certified blue gum plantation estate (50,000 ha's). This scenario was not dissimilar to the Albany Woodchip Project in that it was new and unknown situation for the local community, causing some angst amongst the locals and therefore requiring a similar approach in appeasing all the community concerns. I remember clearly at the time when I addressed the local government meeting and one of the councillors stated (and I quote) ' John, why are you wasting your time, money and energy on this project when you have no chance of gaining the appropriate approvals and therefore will not be building this export facility'. Hence to say, after going through all the appropriate channels the facility was built (within all approvals, time and budget) and is now operating to its full capacity. Whilst I am not involved in the Esperance Woodchip Project any more, 2019 will see approximately 500,000 tonnes of woodchips exported from the Port of Esperance.

These two projects (Albany and Esperance) are certainly environmentally friendly (as per approved environmental guidelines), economically sound, user friendly with significant employers and economic contributors to both communities. After years of operating, there is certainly no negative comment or impact on the communities as a result of these facilities.

Based on what I know and the experiences gained, I would implore you to give serious consideration to approving KIPT's proposal as the outcomes and benefits to the Kangaroo Island community would be significant and not dissimilar to the two examples that I have explained above.

I would be very happy to explain my comments in person if deemed appropriate.

Kind Regards

John Ipsen

**Subject:** **OBJECTION To Proposed Timber Mill AND " Wharf" at SMITH BAY, KANGAROO ISLAND. SA.**

To The Hon. Leon Bignell MP, State Member for Lawson.,  
Dear Sir,

I am writing with a sense of deep urgency, to **STRONGLY OBJECT** to the proposal by Kangaroo Island Timber Plantations , know as KIPT.....who want to build a Timber Mill AND a "Wharf" at SMITH BAY , KANGAROO ISLAND.

Note KIPT'S proposal has been lodged with the EIS .AND KIPT ALSO ALREADY OWN AN ALTERNATIVE SITE./WHARF FACILITY.

OUR Island is considered to be a a retreat , a get away from it all , back to nature (we actively respect and preserve the landscape AND the wildlife , as well as the pristine seas around our island.) ..... A destination for holiday makers AND Tourists.

It is a Bee sanctuary , with adjacent Marine Parks, pure grains, livestock , vineyards , crèche businesses catering to the tourist .....and because it is an island....

Access is only by air to our airport , and via Sealink ....the ferry.

Not only will the so called "wharf" .....be a grotesque blot on our Smith Bay.....!!!!

So will the proposed timber mill be. !!!!!

Re the gigantic and ugly wharf....

Our Bay, Smith Bay, IS A SHALLOW BAY. ( KIPT want to dredge our Bay.....destroying our seabed grasses and wonderful sea creatures. Whales , with their calves, come and spend time in our Bay. There are Dolphins a many.... and also recently discovered CORAL !)

Our Bay is side by side with Emu Bay. The Bay also is popular for family swimming ....or taking out the dingy or small boat.....and the surfer at times. We all will be at risk from the bilge water that ships from foreign countries bring into our Bay.

Kangaroo Island is NOTED for its PRISTINE WATERS.

OUR Roads are narrow, dirt /gravel and only just support our existing traffic.

We run a very high risk of many fatalities , given the state of our roads, size of Kipts' trucks, and projected frequency.

Re the proposed Timber Mill.....

They , KIPT , say there are "only 2 HOMES in the area.

Well , ACTUALLY, there are 13 Homes in the area. I live in one , along with my husband.

OUR son , wife and young children also live on the same property...2 different homes. JUST on our block alone.

We are all engaged in farming , and our property is located VERY close by.....as the crow flies,

Perhaps one and a half kilometres.....would be the distance from the wood mill and OUR HOME/S. The property to the west of us ( and closer to the mill again) supports 2 Homes...

One of which is a farm stay for tourists to our island. Directly Across the road from us, is another 2 Homes.... very close to the waters of Smith Bay. On the headland itself, are another 2 homes.

There are other homes also.

We are VERY CONCERNED for the health and well being of ALL the EXISTING RESIDENTS OF SMITH BAY.

NOISE..... DAY AND NIGHT.

LIGHTING .....INVADING OUR HOMES AT NIGHT.

DUST POLLUTION.....IN THE AIR , ON OUR WASHING, IN OUR HOMES.

FIRE HAZARD, .....THE WOOD CHIP PILE.

OUR ROADS.....UNSAFE.

CONTAMINATION OF THE BAY.

ILLEGAL ENTRY TO ISLAND.

POWER.....WE ALL STRUGGLE TO HAVE ENOUGH NOW.....

WATER.....where does KIPT PROPOSE TO GET IT FROM ???????

(Someone mentioned damming up Smith Creek..... but that would be illegal )

ASSUMPTION, BY KIPT, .....Appears to be THAT they will get what "they "want ..... no matter what.

And, no one else matters.

ON ALL LEVELS, .....THIS application should Not be passed.

HOMES EFFECTED.....A significant NUMBER Of LONG ESTABLISHED HOMES , THE WELL BEING AND HEALTH OF THE RESIDENTS OF SMITH BAY....BY ERECTING A TIMBER MILL.

DAMAGE TO THE BAY ITSELF, LOSS OF SEA LIFE, CONTAMINANTS ETC INTRODUCED., BY ALLOWING THEIR PROPOSED "Wharf"

EFFECT ON TOURISM.....LOSS OF NATURAL BEAUTY OF OUR SEASCAPE.

ROADS.....DAMAGE TO EXISTING ROADS. RATEPAYERS OR GOVERNMENTS SHOULD NOT HAVE TO PAY THE BILL FOR UPGRADING ROADS FOR KIPT.

DAMAGE TO THEIR PROPOSED NEIGHBOUR, SMITH BAY ABALONE.

PLEASE HELP US PRESERVE WHAT WE HAVE.

Thankyou for reading , and giving urgent consideration to our very real problem.

We do so hope you are able to bring about a definitive NO TO KIPT 'S Application, through the relevant government channels

Yours Faithfully,  
Karin Florance ....for WA & KF Florance.

To Whom it May Concern,  
Foreword.

Kangaroo Island is known as a TOURIST Destination....a QUIET and Peaceful Get Away From it All Place to go. It is predominantly Agriculture....cropping, sheep etc, Vineyards, Lavender Farms, Home of the Ligurian Bees. With Tourism .....bringing onto the Island many visitors Nation wide, and Internationally, each Year. The ISLAND promotes and protects NATURE (so many species of wildlife including Bird Life) and Vegetation, along with its COASTAL Waters That add to its appeal....which in turn, supports our AMAZING MARINE LIFE, as well. The ISLAND is a dedicated area and as such, very PRECIOUS. SMITH BAY has been identified as PRISTINE, with CORAL, Abundant sealife, DOLPHINS and WHALES coming in each year ....resting for many weeks at a time with their young. We seek to preserve this BAY, AND the Natural Beauty of This Coastline. (Which means NO seaports/jetty /Wharf.) Also, the erection of "any" timber mill will make an ugly blot on this area....and bring all the consequences of.

The SOUTH AUSTRALIAN GOVERNMENT'S, along with The KANGAROO ISLAND COUNCIL'S forward DEVELOPMENT PLANS.....  
STATE.....

SA GOV.....Page 47, Re enforce Island as preferred tourist destination. Protect, enhance, and promote. eg, Coastal Landscape and Marine Environment.

Key words were ...any industrial development to be .....WELL SITED.

IT also went on to say....that any proposed industrial development not encroach on existing business nor residents.

Also.....Page 49, any such proposed industrial development had to have an efficient road network and not impose on other freight movements.

With regards forestry, Page 45.... Encourage forestry in SUSTAINABLE locations, MAKING USE OF EXISTING ROAD TRANSPORT.

ALSO ON PAGE 49, says that any FUTURE PORT be LOCATED at Ballast Head. (Yes, Ballast Head, NOT Smith Bay.)

Paul Holloway, State Minister for Tourism said in 2011,

It was IMPORTANT to protect not only the vegetation environment, but to preserve and protect the COASTLINE environment, along with the MARINE environment....as well as water resources.

Protecting the SCENIC LANDSCAPE was deemed to be of Great Importance.

On Page 28,

He said important to protect people, property and environment....and on Page 28,

Prevent an over commitment of water resources, in particular, to forestry. On page 30, once again said....the COASTAL SCENES OF KANGAROO ISLAND ARE ITS APPEAL. (Losing the appeal, will damage Tourism). So, the ugly proposed KIPT "seaport" WILL forever DAMAGE AND SPOIL THE AREA KNOWN AS SMITH BAY. Recalling also, as it does immediately adjoin Emu Bay....Both Bays are noted for recreational FISHING, YACHTING AND SWIMMING. ALSO, the Public currently have access to this Beach. Erecting any seaport would remove existing rights.

On page 35,

Developers are to AVOID adverse impacts on landscapes ....so that means selecting sites that don't interfere with the visual aspect of BOTH Land and Sea.

Page 43, Encourages primary production.....

BOTH State and KI Council agree that development should go where there is existing infrastructure. So that means good roads in place, power, water etc.....

BOTH also agree that effects of light spillage, air pollution, noise pollution, traffic, safety of public, tourism, residents, other businesses MUST be considered.

Too, NOT every site, IS a good site. So this is where getting an appropriate site for KIPT comes in.

Please consider. Not only is Smith Bay the WRONG SITE.

BUT AS ALREADY AFOREMENTIONED, BALLAST HEAD IS THE PREFERRED SITE.

The timber plantation is nowhere near Smith Bay. Our roads are narrow, dirt roads.

BUT, if KIPT use Ballast Head....they will have a high percentage of bitumen Road already in place....to transport their wood. Now, cost saving and practical as well.

Any perceived go ahead for KIPT , should NOT BE ALLOWED HERE AT SMITH BAY.  
THERE ARE MANY GROUNDS ON WHICH TO DENY THEIR APPLICATION....AS LISTED ABOVE.  
BOTH STATE AND LOCAL COUNCIL AGREE .....OUR SCENIC COASTAL LANDSCAPE. AND OUR  
VISUAL BEAUTY MUST BE PRESERVED. ALONG WITH OUR MARINE LIFE AND WILDLIFE ETC.  
THINKING ALSO OF THE MAGNIFICENT BIRD LIFE. TOO, SAFETY ON OUR ROADS.

PLEASE SAY NO TO THIS APPLICATION BY KIPT, IT WILL CONTRAVENE EXISTING  
DEVELOPMENT PLANS FOR KANGAROO ISLAND.

YOURS FAITHFULLY,  
Karin Florance , Kangaroo Island. SA.

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 15 May 2019 3:41:28 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

**Firstly, I would like to acknowledge that my submission is mostly a form letter because it covers my concerns in a very articulate and well written manner, so I see no reason to re-write it. But please know that I wholeheartedly concur with the points raised below and object to Smith Bay being turned into a port for the reasons stated below, on the grounds of risks to KI's biosecurity.**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

### **Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has

committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.

- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.
- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment
  - The fragile marine ecosystems that support the array of marine life, including

seafood and aquaculture species cannot afford to be damaged to the extent that a port at Smith Bay would thrust upon it. We need to protect the places that remain undamaged by human interference so that we can maintain those healthy parts of our ecosystem and allow them to carry on supporting us.

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Cristel Chambers

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ethan Herron

**From:** [Rick](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Re Proposed Wharf at Smith Bay, Kangaroo Island  
**Date:** Wednesday, 15 May 2019 3:52:45 PM

---

Hi,

I would like to submit my support for the KI wharf proposal by Kangaroo Island Plantation Timbers to build a wharf at Smith Bay. I believe that the EIS addresses all the possible concerns raised about the wharf and that they are either mitigated in the design, or proved to be unsubstantiated claims. The economic, social and environmental benefits of the project are enormous.

I believe it will be a transformative project for Kangaroo Island in terms of social benefits, over 200 jobs is a massive injection into a struggling economy, the flow on effect will create many more jobs and the benefits to the tourism industry will also create more jobs and capital inflow to the community. Infrastructure across the island will also benefit, roads will be improved, access, shopping, education, training, sport, recreation and community events will all benefit from the extra economic activity.

The environmental impacts are very significant, the carbon benefit alone probably justifies the project. Then there is the benefit for old growth native forests, with the resultant lessening of pressure to log them by opening up a resource of plantation timber the size of the resource on Kangaroo Island.

As a visitor a number of times over the years and with a number of friends who live on the island, I believe this may be the single most important environmental, social and economic impact on the island in it's history and I wish to fully support the EIS and the building of the wharf at Smith Bay,

Regards,

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Joanne Mew

**RE: KIPT Port Development, Smith Bay Kangaroo Island**

Dear Minister,

As a born & bred Kangaroo Island resident I wish to take this opportunity to show my support for Kangaroo Island Plantation Timber's Smith Bay development proposal. My family first came to the Island in the 1880's & have been involved in primary production here since that time, giving me a very strong connection to the land & community.

Plantation forestry to me is an ideal fit to the island's economy, environment & lifestyle. Making a living on Kangaroo island can be tough at times, I have left to work on the mainland on a few occasions due to the severe seasonality of work. At the time of the plantation establishment program getting into full swing, I ran my own business in QLD & after much deliberation sold up to return home to work in the forestry industry. I made this choice because I believed that this new industry was just what KI needed to provide a sustainable future for a large percentage of its residents. The industry has had its issues since then, I went from being a preferred contractor with a thriving business to almost broke when the managed investment schemes fell over, but I have continued my connection because I believe in the future of plantation forestry.

During the plantation development phase, the requirement for a bulk port facility was made very obvious, with the public being kept well informed of these plans by the then plantation management company. Smith Bay to me makes a lot of sense as a port location, it is a very industrial site at present, well away from the main tourist attractions & townships.

There will always be opposition from nearby businesses & individuals no matter where the facility is proposed to be situated & I do understand that they may have concerns. When it comes to the crunch, there is no option, there needs to be a wharf & Smith bay is the best choice.

From my experience working in agriculture, mining, construction, & forestry, KIPT along with their plantation manager PF Olsen are the most environmentally conscious, compliant & responsible operators I have dealt with. This makes me feel very confident that this sort of practice will be continued with any development of Smith Bay. KIPT are also neighbours to our family farm & recently we were both severely effected by a major bush fire. The cooperation & support offered by the company during the recovery stage was second to none, they proved to be great neighbours in a time of crisis.

My support for the Smith Bay development is not taken lightly. I am currently employed in an earthmoving business, along with being involved with the tourism industry & have a strong interest in conservation & sustainability. So obviously with these values in mind have put a lot of consideration into my continued support for plantation forestry.

I urge you to support KIPT & their plans for Smith Bay & the future of Kangaroo Island. Please feel free to contact me for more information if you wish.

Kind Regards  
Scott Morgan

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ben Pink

Minister Knoll,  
C/- Robert Kleeman  
Unit Manager Policy and Strategic Assessment  
Department of Planning ,Transport and Infrastructure  
GPO Box 1815, ADELAIDE SA 5000

Dear Robert,

I write to you to express my personal support for the infrastructure works proposed by Kangaroo Island Plantation Timbers Ltd.

There are various regulatory reviews that are in progress and I fully acknowledge that the environment must be protected.

I also recognise that without a strong economic base, a strong business sector, that the local community will be less robust, less resilient and less prosperous. This is particularly true for relatively isolated communities such as on Kangaroo Island. Without responsible and significant economic development, the community can become more reliant on Government for continued support.

Yours sincerely

Minister for Planning,  
c/- Robert Kleeman  
Unit Manager Policy and Strategic Assessment  
Department of Planning, Transport and Infrastructure  
GPO Box 1815, Adelaide. SA 5000

Dear Minister Kleeman,

**The Smith Bay Wharf Proposal is a critical development which is crucial to the economic sustainability for Kangaroo Island.**

Kangaroo Island has struggled for years to attract enough interest and investment to provide an ongoing economic viability for our existing and future population. Without **sensible and viable Projects like this one**, the economy of the Island continues to decline and as a result, the population growth is also declining.

Currently, the majority of our young job seekers have no choice but to leave the Island in search of employment.

We strongly advise the full support of this wharf development to enable Kangaroo Island Plantation Timbers to provide the **desperately needed and sustainable job opportunities**. This will also have a 'flow-on' effect with many other affiliated jobs and opportunities as well as providing a much needed boost in the business investments on the Island.

It is disappointing to have seen over the years, the number of viable Projects which have been abandoned due to the lack of foresight from a small minority. We need this Project, along with all of the other major Projects which are going through the same process, to be approved and supported urgently.

**South Australia, and Regional areas in particular, urgently need more sustainable jobs and this is a perfect opportunity to show that we are not a 'backward' state, but a vibrant and progressive one.**

We first moved to the Island more than 20 years ago, investing heavily in building up and trying to run a small tourism business which has been a real struggle due to the lack of support and economic backup of new business, generating additional interest in our Island. It should also be noted that we do not have any interests, financial or otherwise, in this Project.

One of the biggest economic factors for Kangaroo Island is the cost of freight and limited

transport options.

The Smith Bay Wharf development will alleviate these problems as well as **providing a huge financial boost to the whole Island economy by way of jobs and alternative freight options.**

**Your urgent approval and support for the Smith Bay Wharf Proposal is requested, as this is a once in a lifetime opportunity for Kangaroo Island which we cannot ignore.**

Yours sincerely,  
Art and Marg Hay

**Subject:** Deep Water Port Facility, Smith Bay, Kangaroo Island  
**Date:** Thursday, 16 May 2019 1:38:58 PM

---

Dear Minister,

**Deep Water Port Facility, Smith Bay, Kangaroo Island**

I write in support of this proposal. I want Australia to be a place where businesses with a sustainable competitive advantage are encouraged to invest and to prosper.

Kangaroo Island is one of the best places in Australia to grow plantation timber for export. Construction of the port facility will open up huge benefits for the people of Kangaroo Island and show that South Australia is open for investors. It will result in a fantastic new export business. If it were not approved it would be a significant setback to investors who want to invest in sustainable projects.

For some time, I have been following Kangaroo Island Plantation Timbers Limited's progress in developing a business to harvest the timber assets on Kangaroo Island. I was so impressed by the company and this sustainable project, I decided to become a shareholder.

I have read the key sections of the EIS and am satisfied that the project poses no threat to any other business or to the environment. On this basis, it should not just be approved but given the enthusiastic support of government.

This development is emblematic of your government's policy in seeking and gaining office. It delivers a key piece of infrastructure in a regional area, establishes a new and sustainable source of jobs and exports ... and all at little or no cost to the public purse.

The project should be approved quickly and then supported with such road improvements as are needed to ensure that its benefits to the community can be maximised. Some level of objection is normal with any change on the Island, such as Southern Ocean Lodge or even the new Airport, but the whole state is now proud of these developments, as it will be with the KI Seaport at Smith Bay.

Yours sincerely,

John Boardman

**From:** [Taylor Witkin](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** KI Seaport Letter of Support  
**Date:** Thursday, 16 May 2019 2:39:14 PM

---

I am writing to support the development of the KI Seaport at Smith Bay.

The misinformation and scare-mongering that has occurred on Facebook over this issue is appalling but I am confident that you will rely on only accurate information in your assessment and not the nonsense I have seen.

I spent several of my teenage years on Kangaroo Island in the early 2000s and in fact attended a party at the proposed site of the new wharf. It was an abalone farm then, which later went broke.

Recently I visited the site again and it is still badly scarred from that failed venture. A working port operation would be a great improvement! Plus, it is in an already industrial site with the abalone farm next door. I would not want to see an untouched site like Cape Dutton or similar used for a port operation.

It is understandable that people will have concerns about a major development but I think Southern Ocean Lodge provides a good example. It has been a good thing for Kangaroo Island despite some people protesting against it.

The Environmental Impact Statement for the port at Smith Bay addresses all of the concerns I have seen raised on Facebook. If only people would read the EIS instead of spreading misinformation.

Approving the wharf at Smith Bay will provide jobs on Kangaroo Island so that young people like me might be able to stay, with a good career path.

Also, the bluegums were planted with good intentions and they should be harvested so that the Island might benefit from that investment so long ago. I understand from the EIS that is the best and most feasible site for a port. I can't wait to see it operating.

Kind regards,

Taylor Witkin,

Redwood Park, SA

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jenny Nagorcka

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Thursday, 16 May 2019 6:17:53 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sharlene Noble

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Robyn White

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dr Ned Kinnear

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Friday, 17 May 2019 2:22:20 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
