- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Friday, 17 May 2019 9:25:02 AM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Tim Williams

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

### WATER QUALITY

During construction, dredging would create silt plumes that could adversely affect water quality in Smith Bay and will significantly compromise abalone health and productivity at Yumbah abalone farm.

Abalone health and productivity compromised

### FUEL, OIL & CHEMICAL SPILLS

The use of dredging plant and equipment may potentially result in spills of fuel, oil and other contaminants. Shipping contaminants could be discharged to the marine environment at Smith Bay. Leachate from woodchips and logs is likely to contain tannins and phenols and could enter groundwater or stormwater runoff.

Risk of contamination of marine and terrestrial environments

### AIR QUALITY

Dust will result from construction activities which will occur seven days a week for 15 months. Up to 730,000 tonnes of timber will be brought to the site each year, unloaded and stored before export. The dust is likely to include silica generated by construction activity on land, and wood dust released during loading of woodchips onto ships.

Dust produced from construction and stockpiling

## #POLLUTION&AMENITY

## #TRAFFIC&TRANSPORT

### ROAD SAFETY

The KIPT timber haulage fleet is expected to travel approximately 3.4 million kilometres per annum in the peak traffic year, and therefore may be expected (statistically) to be involved in approximately 3.2 accidents per annum

18.4% increase in road accidents

### TOURISTS

Tourists may be inexperienced in driving on unsealed roads, distracted by wildlife and the scenery, and in some cases not used to driving on the left side of the road. There are also growing numbers of tourist coaches, trail bike users and bicyclists.

32% Tourists dissatisfied with roads (TOMM 2016/17)

### IMPACT ON ROADS

The use of heavy vehicles on unsealed roads is likely to result in increased surface wear, including rutting, potholing and corrugations. Routine maintenance and upgrades of roads would be undertaken by DPTI and/or the Kangaroo Island Council.

Ratepayers to cover maintenance cost

Dear Minister,

**RE: Biodiversity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay based on the information provided on the reverse side of this card.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

### ROUTES

The increase in overall traffic is expected to be approximately 81 per cent on North Coast Road. KIPT operations will conflict with school buses picking up and dropping off children.

Traffic volumes increased

### TRUCK TYPE

It is KIPT's preference to use high productivity vehicles, specifically B-double and A-double vehicles. Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers.

Up to 200 Heavy vehicle trips per day

### FREQUENCY

Timber products from the various plantations would be transported 24-hours-a-day, seven-days-a-week from the plantations to the KI Seaport via the main road network. A single articulated truck would be expected to pass along the transport route every 22 minutes

A truck every 22 minutes

## #TRAFFIC&TRANSPORT

### MARINE PESTS

High risk pests include:  
European fan worm (*Sabella spallanzanii*)  
Vase tunicate (*Ciona intestinalis*)  
Aquarium weed (*Caulerpa taxifolia*)  
European green shore crab (*Carcinus maenas*)

Smith Bay is marine pest free

### SHIP BALLAST WATER

One of the more significant environmental issues associated with the proposal is the discharge of ships' ballast water. PIRSA has expressed concerns at the prospect of ballast water being taken up by bulk carriers at Port Adelaide and then being discharged within the waters of Smith Bay.

Up to 20 vessels per year releasing ballast

### BIOFOULING

Biofouling from international vessels is also a major pathway for the introduction of exotic pest species and aquatic diseases into Smith Bay waters. Biofouling can also translocate marine pests and diseases from one part of the Australian coastline to another.

Up to 40 tugs per year arriving from South Australian & Victorian ports

## #MARINESECURITY

Dust produced from construction and stockpiling

## #POLLUTION&AMENITY

### LIGHTING

The KI Seaport, as a 24-hour-a-day, seven-day-a-week operation, would need artificial lighting so that operations could be undertaken safely and efficiently. Lighting would disturb abalone which actively feed at night, reducing productivity. Night-long lighting would disturb nearby holiday accommodation business.

### AMENITY

The proposed development would reduce the landscape quality of Smith Bay, to a rating of 5, from the current 6.5. The changes to visual amenity would be noticeable and are considered significant for the local neighbours and distant residents who are on elevated land with views to Smith Bay.

### NOISE

Measured baseline noise levels are currently relatively low, particularly at night. The terrestrial noise impact assessment has predicted that night-time operational noise levels may exceed the Noise Environment Protection Policy criterion at nearby residences and the nearby aquaculture facility.

### FORESTRY ROTATIONS

Anticipated operations include harvesting 600,000 tonnes a year in the first rotation (the first 13 years of harvesting operations), and at least 500,000 tonnes a year for the second rotation (the following 12 years).

There is no planned reduction in trees for the next 25 years

### MULTI-USER PORT

Timber ships would be moored at the facility to load KIPT's timber products for 30-75 days a year, or approximately 20 per cent of the time available. This means there would be significant spare capacity at the facility for other users.

Risks and impacts associated with other users haven't been assessed

### INDUSTRIALISATION

Without significant modification, the port facility could accommodate a wide range of vessels and other uses. There is enough room on land to stockpile containerised freight.

Smith Bay could become an industrial area

## #INFRASTRUCTURE

### WATER QUALITY

During construction, dredging would create silt plumes that could adversely affect water quality in Smith Bay and will significantly compromise abalone health and productivity at Yumbah abalone farm.

Abalone health and productivity compromised

### FUEL, OIL & CHEMICAL SPILLS

The use of dredging plant and equipment may potentially result in spills of fuel, oil and other contaminants. Shipping contaminants could be discharged to the marine environment at Smith Bay. Leachate from woodchips and logs is likely to contain tannins and phenols and could enter groundwater or stormwater runoff.

Risk of contamination of marine and terrestrial environments

### AIR QUALITY

Dust will result from construction activities which will occur seven days a week for 15 months. Up to 730,000 tonnes of timber will be brought to the site each year, unloaded and stored before export. The dust is likely to include silica generated by construction activity on land, and wood dust released during loading of woodchips onto ships.

Dust produced from construction and stockpiling

### LIGHTING

The KI Seaport, as a 24-hour-a-day, seven-day-a-week operation, would need artificial lighting so that operations could be undertaken safely and efficiently. Lighting would disturb abalone which actively feed at night, reducing productivity. Night-long lighting would disturb nearby holiday accommodation business.

Lighting impacts established abalone and tourism businesses

### AMENITY

The proposed development would reduce the landscape quality of Smith Bay, to a rating of 5, from the current 6.5. The changes to visual amenity would be noticeable and are considered significant for the local neighbours and distant residents who are on elevated land with views to Smith Bay.

Landscape quality rating reduced by around 25%

### NOISE

Measured baseline noise levels are currently relatively low, particularly at night. The terrestrial noise impact assessment has predicted that night-time operational noise levels may exceed the Noise Environment Protection Policy criterion at nearby residences and the nearby aquaculture facility.

Noise levels may exceed the EPP Noise policy

### SEAGRASS LOSS

A principal marine ecological issue associated with the proposed development is the direct loss of seagrass and other marine communities as a result of dredging and wharf construction. The seagrasses *Posidonia sinuosa* and *Amphibolis* spp. are considered to be particularly important ecologically.

### NATIVE VEGETATION

A total of 2.93 ha of native vegetation would be cleared for the proposal including 0.48 ha of remnant Kangaroo Island narrow-leaf mallee. This will result in a loss of fauna habitat.

### DIE-BACK

Dieback remains a threat to remnant vegetation on the site. Phytophthora may be introduced through contaminated soil on vehicles, equipment and landscaping materials, including plants. The risk of introducing phytophthora would be greatest during the construction period.

Remnant vegetation under threat

## #POLLUTION&AMENITY

13 state-listed and 7 nationally listed species affected

hooded plovers affected

southern right whales

## #BIODIVERSITY

2.93 ha of native vegetation cleared

**Re: Smith Bay wharf proposal**

We were among the farmers who sold our properties to a forestry company back in the 1990s. For many of us there was little option with wool prices low and debt high!

Over the years, we have watched the forestry plantations being established and we have seen various companies come and go. Before Kangaroo Island Plantation Timbers came along, there seemed little hope of the trees being harvested, much less developed into a new industry for the Island.

However, over the past couple of years we have had a renewed sense of optimism that our former property would at last be able to contribute to the economy of Kangaroo Island and once again provide jobs, particularly for people living at the West End of the Island.

We believe the forestry industry has the potential to provide a much-needed economic boost for Kangaroo Island.

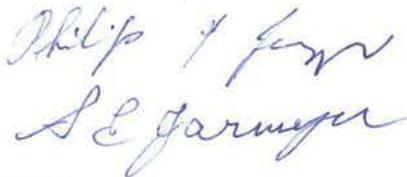

The forestry industry has had a dubious reputation here and it is understandable that people are sceptical about its potential. However, the only thing standing in the way of getting this industry started is a way to export the millions of tonnes of timber now ready to harvest.

The proposed development of a wharf at Smith Bay provides the best solution. Smith Bay meets all the criteria for development of an export facility – it is already an industrial site, it is an area of low population and low tourist visitation, and it is on the North Coast where shipping can berth safely and access export markets directly. The water is deep and the land is relatively flat.

I believe that the Environmental Impact Statement addresses all the concerns of the very few local residents and businesses.

The Island relies so much on seasonal business – both in tourism and in agriculture. The all-year-round forestry industry will bring much-needed, well-paying jobs.

Yours sincerely,

Phil and Suzanne Jarmyn

[Redacted]

7<sup>th</sup> May 2019

Dear Minister,

**RE: Kangaroo Island Plantation Timbers Seaport proposal - concerns of Matters of National Environment Significance**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

I **strongly believe** this development should not proceed at Smith Bay.

Before I provide my specific response to EIS guidelines I would like to ask: Why was this company privileged with Major Development Status for a proposal for Smith Bay, when it seems clear that there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates in the Smith Bay proposal but without destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these threatened marine mammals and their calves. Southern right whales are listed as endangered under the EPBC Act.
- The whales that call Smith Bay home for periods of the year are at risk from the noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will likely bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- I feel the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

21 MAY 2019

Dear Minister,

**Deep Water Port Facility, Smith Bay, Kangaroo Island**

I write to support the development of the above facility. As a long time resident of Kangaroo Island I can assure you without a doubt that this proposal is sorely needed on Kangaroo Island.

Several years ago forestry was encouraged and promoted on Kangaroo Island by previous Federal and state governments, and as a former councillor of Kangaroo Island Council, I supported the ideal as a way of securing long term industry and benefits to the Island's economy, and jobs for our population, particularly our youth, many of whom are forced to leave the Island in search of employment. As well as the employment opportunities envisaged, our infrastructure will also benefit greatly from the upgrades of roads which will occur and which will benefit our local population as well as our tourist industry.

I do believe that the impacts of this proposal have been thoroughly and scientifically investigated by KI Timber Plantations and pose no threat to other industries in place in the vicinity, although as with any new proposal there is bound to be opposition, based mainly I believe on perceived personal impacts rather than scientific facts.

There is no doubt that the plantations on Kangaroo Island have proved beneficial to the population of Kangaroo Island in the past, and are now ripe for providing much more benefit by way of harvesting and the sale of timber to say nothing of employment in road building, transport, and the actual

harvesting and ongoing development of this potentially huge and world wide industry.

I foresee great benefits for our population in the future and would urge you most emphatically to give enthusiastic and definite approval to the proposed development of Smith Bay deep sea port in keeping with the ideals of your government as promoters of business economic growth for our state.

Yours sincerely

Vivienne Willson, Wisanger, KI

**Date:** Friday, 17 May 2019 11:56:59 AM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Vanessa Brockway

**Date:** Friday, 17 May 2019 4:11:37 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kassidy Saville

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Courtney Thomas

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Susan Seymour

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

I spent 20 years of my life living in a district with forestry. This makes me extremely concerned about the roads on KI and logging trucks. These roads are not built for the wear and tear. They are not built for the combination of tourism and the logging industry. Quality of life will be severely affected by all using the roads, in addition to the danger. I am very concerned. Logging trucks despite all the regulations that monitor their industry, are heavy and unforgiving. I have seen too many disasters in my life. You only have to see what a logging truck does to a car once in your life to know that this is a potential disaster.

Dear Sir,

As a born and bred ki resident I would like to put forward some of my personal views. I grew up on a farm 5km from Parndana. Left after I finished my schooling then came back with my husband and brought the grocery shop in Parndana. Then with the population we had , both shops had thriving businesses . We then opened keilem, also there was room for two stock firms to survive.

Then in recent times I purchased the parndana hotel, which I ran for 10 years. I have watched our western end of the island struggle for a long time now, with all businesses struggling to find enough staff, and if you are lucky enough to find some there is no housing or daycare to meet peoples need. I have worked along side with the kicc to try to develop housing blocks to help our town survive.

The decline in families had also effected kingscote, so many businesses have closed over the last twenty years.

Kangaroo Island Plantation Timbers now has a real plan to start the forestry industry and this can only be good for our community by bringing jobs and families to live out here. It will benefit our businesses in town but also community groups, such as the Parndana Sports Club, Western Districts Sports Club, SA Ambulance Service, Western KI Lions, KI Community Club, and many others.

Parndana is a proud and resourceful community which has survived the past 20 years of depopulation. Imagine how vibrant our community could be with an injection of people and jobs such as forestry will bring?

We have heard many promises from forestry companies in the past and this has made some of us predictably skeptical but we now recognize this may be the last opportunity to create an industry from the trees planted so long ago. KIPT has produced an excellent EIS which addresses the matters of the port proposal at Smith Bay in great detail, as well as housing and roads.

They have pledged to support the KI Community Club in its plans to develop a new subdivision in Parndana to house forestry workers.

Please approve the port proposal for Smith Bay so that this community can finally benefit from the forestry industry which, to date, has promised so much and delivered so little.

Kind regards,

Cathy Duka

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Sunday, 19 May 2019 4:27:04 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Roger Moore

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Emma Rudge

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent. I am far from satisfied about the response to the bio security risks, especially from overseas shipping and the associated ballast and hull organisms/growths being brought into a pristine environment.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

James Kennedy

**Date:** Sunday, 19 May 2019 6:56:35 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport. As a former resident of South Australia I know all too well the magnificent environment that is Kangaroo Island. This must be protected. I idea of a "Seaport" does not belong at Smith Bay, home of dolphins, white bellied sea eagles, ancient corals and more we may be yet to discover.

I ask:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister:

The KIPT proposed export of plantation timber from KI presents an environmental effect of National Significance.

Recent research has shown that Australian Koala numbers are approaching a tipping point which, if passed, will lead to possible extinction.

Kangaroo Island holds almost 25% of the known population, a large percent of which live in the plantations which KIPT plan to remove.

Before any decision is made regarding timber exports the Government must address the issue of the possible extinction of Australia's icon which approval of this project may lead to.

Yours faithfully

  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Richard Baillieu

**From:** [Jane Baillieu](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 6:12:40 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jane Baillieu

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**RE: Proposed timber port Smith's Bay, Kangaroo Island**

Dear Mr Kleeman,

As a resident and business proprietor on Kangaroo Island of twenty one years I have witnessed the population decline and the economy languish over this period. We are unique being an island reliant on sea transport for freight on and off our home. An alternate port facility could see my extreme freight prices slashed with competition. The youth leave their homes in search of ongoing employment opportunities as we have few industries with fulltime positions. I believe the forestry industry is exactly what is needed.

I also believe the proposed site Smith Bay is the only viable location for the export facility on the island. The bay is very open with good water flows and would not in any way affect other business ventures or marine life in the vicinity. We hear the scare campaigns from ill informed interest groups all the time. Southern Ocean Lodge is a prime example and years later none of their scaremongering claims have been realised.

Kangaroo Island has so much timber some ready to harvest now with years more for the future. The fact is we need to realise the potential of this industry and start to export this abundant product now.

The EIS has been tabled and shows minimal effect on the environment but maximum effect for employment and economic activity. I urge you to approve the development so the island youth can start to envisage a more positive future.

Kind regards

*Joseph Tippett*

C/- Robert Kleeman, Unit Manager Policy and Strategic Assessment  
Department of Planning, Transport and Infrastructure  
GPO Box 1815, Adelaide SA 5000

May 20, 2019

Dear Minister,

**RE: Local infrastructure, roads and community impact of Kangaroo Island  
Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous Labor State Government deemed worthy of Major Project Status.

I have now had an opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent and to attend the Public Consultation Session held by the proponent in Adelaide on May 7, 2019.

**I strongly believe this development should not proceed at Smith Bay.**

More specific responses to EIS guidelines appear below, but unresolved questions remain:

- Why was a private entity privileged with Major Development Status for a deliberately destructive proposal for Smith Bay and the entire surrounding northern region of Kangaroo Island?
- Why was Major Development Status granted for a proposal by a private entity whose ongoing operations and profits are completely reliant on and will completely overwhelm local public road infrastructure at the expense and amenity of local government and residents?
- Why has the EIS not included a Distributional (Equity) Effects study regarding the extremely negative impact this development poses on the local Smith Bay and Northern Kangaroo Island residents?
- If the state government, past and present identifies the forestry industry as important to Kangaroo Island, why is this major piece of infrastructure not being planned publicly? Why is it not located within an identified regional freight route and located so far away from forest assets? Why is its execution not being planned for wider regional use and benefit?

Regarding the EIS, my major concerns relate to the potential destruction of Kangaroo Island's existing infrastructure. The existing road network, road safety for residents and visitors and the lifestyle, amenity and tourism industry will be heavily and negatively impacted by the large scale, out of context development proposed for Smith Bay. No number of offset programs, tree planting or camouflaged designs will be able disguise or remediate the damage that this proposal threatens.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the **22,000 heavy vehicle traffic** movements annually as proposed by Kangaroo Island Plantation Timbers.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- The public consultation sessions referred to grants that "council could access to upgrade roads that would be impacted by heavy vehicles". If council were able to access these grants or be responsible for the upkeep of unsealed roads Kangaroo Island residents **MUST** be given a greater say in this development and the council would need to be supportive of the proposal.
- Road grants for support of infrastructure are largely targeted at regional freight networks. The Smith Bay port is poorly placed to be a piece of regional infrastructure and thus should not warrant or attract regional freight route funding.
- Touted as being suitable for cruise ships, cruise ships would not want to bring their passengers into a pristine natural tourism destination via an industrial wood chipping storage site and pontoon the size of Adelaide Oval. (Source-public consultation Adelaide May 7, the pontoon is the length of Adelaide Oval and a BB truck would be able to do a u turn on the pontoon)
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. The EIS should address how many tourist and local traffic movements their trucks will pass on the 100km route to Smith Bay – the Stokes Bay Road which is very busy during peak tourist seasons. The KIPT EIS should clearly lay out the numbers and the risk to accident and injury combining tourist and very heavy freight vehicles.
- In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."
- If the Liberal State Government gives this poorly considered Labor government sponsored proposal a green light does it also expect a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

## **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island. However, the EIS fails to clearly set out the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and

how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.

- By comparison, two other much larger wood chipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Minister, I am a permanent resident of the Barossa Valley although my family has had a holiday property in neighbouring Emu Bay for over 30 years. Being from the Barossa, I remember when the Barossa Valley Floor Freight Route was instigated and when the Gomersal Road was sealed.

These were major pieces of infrastructure that certainly disadvantaged the residents who had previously lived on quiet unsealed roads. However, the residents were given some due consideration in the planning process around compensation and the noise reduction surfaces. The overall benefit to the greater Barossa region has been measurably high. The freight route has achieved better access to the Sturt highway for freight and general population, less heavy vehicles in the town and much better access for the Barossa's wine industry to port and overseas and interstate markets. Councils with a combined ratepayer base population of close to 40,000 are largely responsible for the freight route with some sections of roads in the route funded by the State Government.

In comparison, this proposal for the Smith Bay wharf and the related business operation is for a major piece of infrastructure that disadvantages many local islanders and does not provide a regional infrastructure benefit. **This is not a regional freight route.** There is no regional benefit. The major beneficiary of the Smith Bay port proposal can only be KIPT. This is a company who to their credit bought low cost assets and who is trying to develop them into a high return for their shareholders. This high return is dependent on an irreversible impost to Kangaroo Island residents, local government roads and infrastructure and resident and visitor safety and amenity. Just 4000 Kangaroo Island Council ratepayers should not be responsible for the upkeep and potential development of roads that benefit only one organisation, regardless of that organisation's contribution to the rate base. The previous Labor state government has done a great disservice to KI not only by granting this project Major Development status, but by instigating and encouraging a poorly planned forestry program that did not include a plan to get the timber off the island. I am supportive of a value adding industry being developed on the island to sustainably utilise an existing resource, such as planking with the timber shipped off the island using existing infrastructure at either Penneshaw, Ballast Head or Kingscote. I am not in support of a poorly thought out harvesting solution that delivers benefit only to the private entity and not to the community the entity's proposal is dividing.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal. I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully,  
Rebecca Reynolds

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Cassandra Johnson

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Alex Kobs

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Janice Atkins

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jodie Thomas

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sandra Thomson

Dear Robert,

I write in (strong) support of the proposed port development at Smith Bay, Kangaroo Island.

Briefly, my relevant background is that for the past 25 years, I have been employed on a full-time basis by Elders Ltd in Kingscote as their Real Estate Specialist. This position has enabled me to observe first hand both the land transactions, and the general economic activity on Kangaroo Island over an extended period.

Not unlike the majority of regional centres in this state, (and possibly even the country), Kangaroo Island has seen the consolidation of farming properties, to the extent that when I was here in the 70's, one family could make a living from 400 odd hectares of farming land. Now that figure is probably more like 1200 ha, with a corresponding drop in the numbers of labour units needed to run that enterprise. This factor is exacerbated by the increased use of very organised and efficient farm contracting services, the nett result is a significant drop in the work force required to operate the local farming businesses.

And this drop has a flow on effect to local schools, and other supply businesses in the urban centres over here.

Tourism is the Island's other major industry, but is highly seasonal, and the uptake of (more cost effective) "backpacker" employment by local tourism businesses has further eroded the resident population of a full time/permanent workforce.

Accordingly the possibility of another new industry creating 200 plus new full time equivalent positions locally represents an opportunity not to be missed – my forte is certainly not in working out the economic flow on effects as to what this might represent for the Island, but KIPT have put numbers forward in their various submissions, and to me it looks like a game changer in terms of what the Island could look like after a few years with an extended vibrant work force within the community.

The real estate market would benefit from the influx of permanent home owners. Currently 50 % of all rates notices issued by the Council are sent off Island, this (off Island ownership) has a flow on effect evidenced by slow clearance rates of property, and this in turn leads to the Island not being seen as a reliable place for the financial institutions to lend money, a further consequence is the higher deposit requirement of those institutions for Island property.

And finally, I would like to comment on the most vocal objector to this KIPT project, being the abalone farm located adjacent to the KIPT site, the KIPT site being of course purchased by the Company after (yet another) economic failure of an abalone farm, (adjacent to the objecting one).

My observations of their objections to the proposed port development have to this stage, relied heavily on discourse of an emotional nature, and in a small community such as ours, this can become very (unhealthily) divisive.

It is therefore imperative that the assessment panel strip away the emotion, and consider the facts, this may involve requesting substantiation of claims made by both sides.

In the course of my real estate profession I have over time developed relationships with the majority of the main businesses on the Island, the people in charge of the various attempts at land-based abalone production being amongst that group. It was a common thread of conversation that the major problems to the success of these operations were cited as the following –

- Inability to keep the temperature of the water constantly at the optimal temperature.
- Electricity costs, mainly for pumping.
- Variability of water quality coming into the farms, particularly in times of storms creating North to North-westerly swells, and stirring up the sea so that the incoming water was silted with sand.

And all of these reasons are in existence "pre-port"!

I cannot without further research quantify how many failed attempts there have been. According to their own press releases Yumbah seem to be making a go of it this time. However it would be remiss of the assessment panel to give any credibility to the Yumbah claims of permanent employment prospects, and profitability, without critical analysis of the production metrics of their Kangaroo Island site, on a stand-alone basis.

It is my opinion that even left to their own devices, the abalone farm (adjacent to the proposed port site) would eventually go the same way (as all previous attempts on the 2 sites), for the same reasons, totally independently of whether a port was operating or not. The cynic in me suggests that the more noise they make about how well they are going now, during the assessment process, then the more they stand to gain in terms of possible compensation, if/when the port goes ahead, and they decide to close their farm as a response.

It is worth noting that this company has recently won an approval for another \$80m farm east of Portland Bay.

In summary, it is my opinion Kangaroo Island currently possesses a major resource in its forestry assets. The only roadblock to harnessing that resource is the lack of a suitable port facility. The proposed site can fill that void for the forest's owners, and I would urge the panel to approve their application.

I am not a shareholder in KIPT.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Colin Hopkins', with a stylized flourish at the end.

Colin Hopkins

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Peter Kiprillis

The Hon Stephan Knoll, MP  
Minister for Planning  
**Attention:** Robert Kleeman  
Unit Manager, Policy & Development, Development Division  
Department of Planning, Transport and Infrastructure  
GPO Box 1815  
**ADELAIDE SA 5000**  
[majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**Re: Smith Bay Wharf, Kangaroo Island  
Draft Environmental Impact Statement**

The scope of the Draft EIS is to *assess the potential impacts associated with the construction and operation of offshore and onshore infrastructure at Smith Bay, including site access from North Coast Road.*

**Site Hazard:** The wood chip pile has not been identified as a potential spontaneous combustion hazard and thus the associated risks have not been assessed. There is no mention of thermal monitoring on site.

**Site Hazard:** During any wood chip pile fire, water run-off from on site fire-fighting storage or Middle River treated water (via standpipe) in case of action by CFS, may result in excessive leachate and threaten adjoining business viability.

**Site Hazard:** Resulting air pollutants, when created by a wood chip fire, and its effect on nearby tourist accommodation, has not been addressed.

**Site Hazard:** Leachate from the wood chip pile is defined as 'liquid that takes in substances from the material through which it passes, often making the liquid harmful or poisonous', DEIS page 603. Recognition of the threat that leachate presents is usually mitigated by diversion channels, construction of first-flush ponds, telescopic ship loaders and the use of closed conveyors but the only mitigation that is planned is mentioned in the Executive Summary on page 37, and is described as '*timber log and wood chip storage yards with bunding and impermeable base and all leachate draining to a lined retention basin to prevent any runoff or infiltration.*' Please clarify if this is the only intended mitigation measure.

**Site Hazard:** The wood chip loading conveyor should be covered to ensure air quality is not adversely affected, Executive Summary, page 38.

**Safety Hazard:** Road Network including North Coast Road: DEIS states that during the harvest a heavy vehicle will pass any point on KIPT's preferred transport route between 73 and 127 times over a 24 hour period (page 462) and the same scenario is reported as between 85 and 130 times (page 472) and yet in the Executive Summary on page 22 'a single articulated truck' would pass a particular place on the same route twice every 22 minutes (or once every eleven minutes).'

**Clarification Needed:** Refer to Table 21-3, Total Annual Trips column, DEIS page 462, where each trip represents two movements - loaded and empty. The *minimum* is rather than the 26,667 annual trips as stated but 53,334 movements. This equates to 146 movements per day or 6 per hour over a 24 hour period. And the *maximum* of 46,667 annual trips which is 93,334 movements equates to 255 movements per day or 10 per

hour. This is over a 12 month period not 'harvest'. So, for the harvest every 6 minutes a truck will past a particular point on the preferred route.

**Clarification Needed:** Noise mitigation seems to be limited to suggesting A Doubles replace B Doubles so fewer vehicle movements. Does this then negatively affect the transport safety factor? What are the statistics regarding road safety A Doubles versus B Doubles?

**Clarification Needed:** On page 476 under Noise, the word 'amenity' is used but in the glossary only visual amenity is mentioned. In the statement '...therefore, over the majority of the populated areas of the transport route, there is expected to be *no change in existing amenity*'. What does this statement mean?

**Clarification Needed:** DEIS claims 234 FTE jobs but only provides the following details: Plantation Management 10; Harvest Operations; Haulage 20; Seaport Operations; Stevedoring fly in specialists; and Corporate (page 447). Provide complete list of number/occupations so that your EFT claim is supported. Under 'Corporate' the jobs listed as examples will depend on KIPT Headquarters 'will be moved to KI' as claimed on page 442.

**Clarification Needed:** When the Blue Gum development was first proposed a major element in gaining approval was the claim there would be 230+ FTE jobs yet after initial clearing, spraying, fencing, and planting, it all came to a handful of short-term jobs. How can the figure of the 234 FTE jobs (160 on-island) be considered legitimate when only sketchy information is provided. Are regularly renewed short term contracts going to be used to boost statistical figures?

**Compliance:** What happens if KIPT is on-sold, or the Seaport and Forestry Operations are split and on-sold, would the new owners, Australian or foreign, be required to adhere to KIPT's assurances and stand by the claims made under the Draft Environmental Impact Statement? Either way, whether the operation remains in KIPT hands, or with new owners, who ensures compliance for all elements of the operation?

Yours sincerely,  
Sara Hourez  
0467 610 275

Please advise acknowledgement or receipt.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Re: Proposed timber port at Smith Bay, Kangaroo Island

I write to express my support for the proposed development of a seaport at Smith Bay on Kangaroo Island for the shipment of timber products.

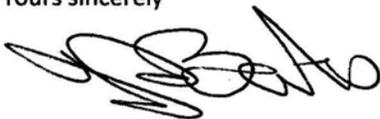

Over many years, the timber industry has been encouraged to develop on Kangaroo Island by both Federal and State Governments culminating in a significant proportion of our high rainfall agricultural land now under forestry. The forecast benefit to our small remote population has never been realised due to complex company structures, multiply ownership structures, recurring failure of companies and critically the absence of any resolution to a seaport for the export of the timber. The loss of productive land returning jobs and economic and social benefit has had a significant impact on the Island and our community well being. The languishing of this industry has been catastrophic for the Island, particularly the western end communities.

The significant effort and diligence of the Kangaroo Island Plantation Timber Company to seek solutions and to resolve the export issues must be commended. It was never going to be an easy task. I have attended public information sessions, and informed myself of their progress over the development of their proposal and am very supportive of their vision and the methods of implementation. The EIS has addressed the major concerns, and carefully sought to mitigate the negative impacts of such a development – as it must.

Development, particularly major development on Kangaroo Island always raises concerns within our community, as it should. We remain watchful of development that falls outside of our environmental and social values, and always seek to ensure they meet our stringent planning policy and expectations. I believe this development, through the EIS has fulfilled these requirements.

I strongly support the progress of this facility to the next stage and look forward to the enormous benefit the Island will gain. I applaud the diligence of the EIS, and the vision of KIPT to finally realise the benefits of this Industry promised so long ago.

Yours sincerely

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Belinda Peddie

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 10:57:28 AM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Taryn Thomas

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Luke Munro

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ratu Ralulu

**From:** [Brodie Williams](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 12:29:17 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Brodie Williams

**Date:** Monday, 20 May 2019 1:41:05 PM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

John Holman

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Justin Lewis

## Dept of Planning, Transport & Infrastructure

I wish to object to the establishment of a Deep Sea Port at Smith Bay on the North Coast of Kangaroo Island for the shipping of Woodchips & Logs .

Briefly my objections are :

(1) We have a world class Abalone Farm exporting to overseas countries & this business will face the real risk of having to close because of water pollution from the ships ,Logs & Woodchips plus the very real risk of bringing overseas diseases to a clean area..

There is no way that the proponents of this development can guarantee that the water & environment will remain unpolluted.

Yumbah employs 40 locals & has been in business at Smith Bay for 20 years. They have stated on a number of occasions that they want to increase the size of their operation but would not because of the possibility that this Port could shut down their Smith Bay operation.

Yumbah were encouraged by a Liberal Government 20 years ago to set their business up at Smith Bay to help take the pressure off the wild stocks. It would be ironical if a Liberal Government which encouraged the original development by Yumbah at Smith Bay ,were to be instrumental in closing it down by approving this Port at Smith Bay.

(2)Immediately across the road from this proposed development is the highly respected & successful Molly's Run Bed & breakfast.

In my opinion this business would have to close down because of dust,noise & risk to Tourists both domestic & International of accidents with logging trucks.

(3) Well documented over many years have been the regular visits to Smith Bay of the endangered Southern Right Whales with their Calves. Dolphins frequent the area & .Sea Eagles inhabit the Cliffs around Smith Bay.

Disturbances of the magnitude of Panamax type vessels within the area will cause these majestic species to move on & be lost to the area.

(4) Bio-Security is a very major concern with the risk of disease & exotic pests being brought in from overseas by these vessels either through the bilge discharge or unclean vessels.

Diseases could wipe out not only the Abalone Farm but also the Honey Industry & cause massive problems for our Livestock & grain industry.

(5) Smith Bay is a very shallow area & massive dredging will be required to allow Panamax type vessels to get into Smith Bay.

Dredging would no doubt destroy the recently discovered two metre high coral structure which is a rarity for the area & home for several different species of fish.

(5) Roads to Smith Bay are cause for concern because in their current state would not stand up to continual pounding by heavy trucks.

Major works would be required to widen & engineer them to a proper standard.

(6) New Forest the previous owners of the Blue Gums were planning a Port at the old Port at Ballast Head which is a much deeper port than the shallow Smith Bay. New Forest nationally who manage approx 1 million Hectares of Plantations around Australia have vastly more experience than KIPT who operate about 18,000 hectares. New Forest were going to employ about 60 people but KIPT say they are going to employ about 250 people. Why the discrepancy in employment Numbers – Is it because an inflated employment number will be more appealing to the Government ?

Thank you for considering my objection.

Yours Sincerely

Vic Lodge

Dear Minister

**RE: Employment concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the lack of employment opportunities for residents on Kangaroo Island.

**Employment**

- Kangaroo Island Plantation Timbers (KPT) states the seaport will create 140 new jobs.
- However, these jobs will not go to local workers, rather they will go to people recruited from the mainland. KPT has outlined no plans to assist in training local residents, instead taking the easy option of temporarily flying people in from Adelaide. These are not the actions of a company wanting to support the local economy of Kangaroo Island.
- KPT hypothesises funds from the State Government could be diverted for vocational training on Kangaroo Island. There are no indications of any concrete plans from the State Government to provide such funding.
- During the almost year-long construction phase, KPT proposes a transient workforce housed in short-term accommodation. This is an incredibly disruptive process for Kangaroo Island and in no way, supports employment for the permanent residents at Kangaroo Island.
- If the SA Government approves KPT's industrial Seaport proposal, jobs will be lost on the neighbouring abalone farm due to the two operations not being able to coexist. Further, more KI jobs will be lost on the island in tourism as the industry suffers from industrialisation of the area.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully,

Tom Hyde

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Tyson Brookhart

**From:** [Thomas Coote](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 3:38:26 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Thomas Coote

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.

Michelle Forster

Michelle Forster

Dear Minister,

**RE: Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

I have had a brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent of this development.

I **strongly believe** this development should not proceed at Smith Bay.

I am also unsure why was KI Plantation Timbers were given Major Development Status for a development that I strongly believe will be destructive for the Smith Bay area. I also believe there are other site that could have been carefully considered where these impacts may be avoided or managed to a greater degree, or in an area where previous industries have existed and therefore the impacts have already been felt.

With regard to the EIS, I have several areas of concern. In particular those areas relating to Biosecurity and Environmental Impact. It seems apparent that the proponent agrees impacts are inevitable as the result of its actions in Smith Bay, and there are I believe, significant risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years (which I also feel will be put at risk by this development).
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will cover the community costs its refuses to meet. I don not believe that our community has the capacity, nor should it be required to pick up such costs for a commercial, private development. While surveillance is necessary, and important, it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever. I can only image the impact this would have on this piece of coastline that is currently exotic pest free.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest (which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems), grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the

Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it currently hosts and supports be threatened in such a way. Further, nor should the local recreational fishers and community members who enjoy the current fishing environment be subjected to this either!

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests. Why should Smith Bay be put at risk, if this is a seemingly likely outcome (or even if it is a remote outcome).
- I do not understand how Smith Bay can possibly be protected from this inevitability, even with the most careful plans in place! I feel that the proponent has not adequately demonstrated that it can ENSURE the biosecurity of this precious place. It also seems that the proponent has little experience in marine environment management. I believe this place should be protected from such risks and that plans for this should be presented in a comprehensive manner and the community assured of a safe and secure outcome for biodiversity.
- I also firmly believe that the community and local ratepayers should NOT be having to wear any extended costs should these risks come to fruition. Our Council already struggles to maintain the assets it has under its current care and low rate-base.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- I am concerned that the public statements made by representatives of Kangaroo Island Plantation Timbers regarding the opinion that Ballast Head is steep and shallow – given that most of the residents know the reality of this situation is that Smiths Bay is shallower than Ballast Head, and notwithstanding that there is actually old seaport infrastructure at Ballast Head!
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore. I know this as my family and I have lived and fished in this area for over 20 years.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can “offset” by planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

With regard to the EIS, I am ALSO very concerned about the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC). I live nearby to this area, and the environment in one of the

things I care greatly about. I feel that there are several key considerations that need to be very carefully considered.

### **Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay. (As are the resident population of bottle-nosed dolphins that frequent this coastline.)
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this impact are inadequate at best and are presented in a careless manner. These factors MUST be considered.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- There are very few white bellied sea eagles left in the world, and with known nesting sites nearby I am not only concerned about the impact on them, I also know that in proposing a local development myself I had to give due consideration to this species as they are highly sensitive to new movements and developments – How can a development at this scale NOT have to provide the same regard – especially when the foot-print of this development is exponentially larger! Let alone the “at-sea” impacts of the foraging zone of this species.
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates of a variety of species.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.

- As referenced on page 44 of the proponent’s EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean’s revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay, as a local I know the value of this area.

I **implore** you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal, not only for the reasons outlined above that relate to the EIS but also for the broader community concern regarding the impact this proposed development will have on our community, our roads, our local council, and the questionable long-term sustainability of this industry on our Island. We have all been around long enough to see proposals such as this come and go, and we as residents are then left to foot the bill and clean up the mess – this is not acceptable – nor a risk I support being taken.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

*Helen Berden*

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

KI is a pristine wilderness site that I have had the privilege to visit. This proposal damages the businesses that already operate in a protected environment at KI such as seals and abalone.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?

- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Nina Ash

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 7:00:28 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

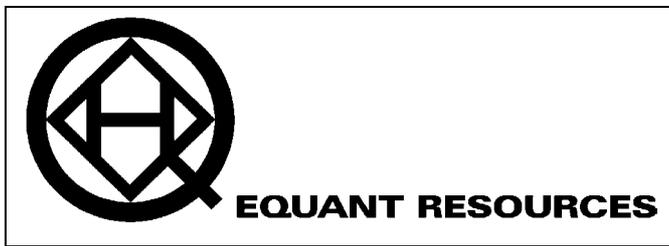

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Andrew Hendy

## **KANGAROO ISLAND PLANTATION TIMBERS – Letter of Support**

My professional experience and businesses are involved with evaluation and investment in the mining industry, both within Australia and Globally. I have been resident in South Australia for ~23 years having moved from expatriate business development roles in SE. Asia (Malaysia & Indonesia). I have no direct commercial interest in Kangaroo Island Plantation Timbers (KIPT) and consider my opinions independent and objectively-based.

My family and I have visited Kangaroo Island on several occasions and enjoyed its natural beauty, despite its remoteness, expensive logistics and limited amenities eg. ferry, hire car, dirt roads, accommodation etc. I'm used to such issues of less developed regions & countries, though proudly support investment by the mining industry to improve economic conditions and basic services, while deeply respecting environmental and community concerns.

During my 23 years in SA, I've watched, listened & learned with interest about "how business is done in SA", being largely impressed. ***The debate and process surrounding KIPT's Project is an important test case for SA in order to maintain a supportive investment environment.***

As such, I register my support for the KI Plantation Timbers project due to:

1. **Positive Economic Impact** – regional economy, employment, household income etc.
  2. **Resource Utilisation** – stranded plantation timber (locals want removed), future land use.
  3. **Infrastructure Upgrade** – roads & services, wharf @ Smith Bay (potential for multi-use)
  4. **Environmental Impacts\*** – quantified & understood (EIS), readily managed & regulated.
- \* Any increased silt and impacts on aquaculture should be monitored and can be mitigated.*

I appreciate your consideration to my letter of support for KIPT and their Environmental Impact Statement (EIS) as a basis for their project approvals.

Please call or email me to discuss any queries or for additional information / opinion.

Yours Sincerely,

***David Turvey***

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 8:09:41 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Vivian Kalas

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Peter Dow

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Stephen Fleming

**From:** [Jennifer Hoare](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Monday, 20 May 2019 9:17:58 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

Department of Planning, Transport and Infrastructure  
GPO Box 1815,  
ADELAIDE SA 5000

RE:  
KIPT Port Development, Smith Bay Kangaroo Island  
20/5/2019

Dear Minister

I am writing to support the KIPT Smith Bay development. I have been farming in south west Kangaroo Island for 52 years having started on a scrub block in 1967.

The land around me and the pristine environment of my farm means a lot to me.

Due to the downturn in commodity prices in 1999 - 2000 I saw the proposed blue gum plantation as an opportunity to diversify part of my farm. As a result of this I led a group of local landholders in support of the first plantation application to go before the elected members of the Kangaroo Island Council.

The Council considered the proposal put forward which included everything from establishment to harvesting and shipping.

The Kangaroo Island Council then voted unanimously in favour of the plantations being established.

Because Forestry is an approved land use the Kangaroo Island Council approved every application to change farmland to forestry.

K.I.P.T. now own this land and are ready to start harvesting, pending the establishment of the port at Smiths Bay.

K.I.P.T. and their plantation managers P.F.Olsen are both competent and professional operators and they intend for the community to share in the coming prosperity.

The future of the prosperity depends on your approval of Kangaroo Island Timber Plantation's Port Development Smith Bay.

Kind Regards,

Brian Morgan

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Monica Evans

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jowella Terrado

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Tuesday, 21 May 2019 6:52:18 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Nigel Gosse

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Isabella Plunkett-Gillan

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Cheryl Coles

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity and Environmental concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or

bag mussels. This exotic pest which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

## Effects on the neighbouring abalone farm

As you are no doubt aware there is a successful abalone farm only 400m from this proposed port, as an abalone farmer myself the consequences of dredging in proximity to such a farm are very likely to have disastrous consequences for the farm and these have

been detailed in our associations (AAGA) letter to yourself. This includes the effect of silt on the water quality and health of the abalone, the almost assured increase in bacterial levels that dredging would result in and the costs that would be imposed in trying to mitigate these effects.

Yumbah have been stalled in their investment to this site due to this proposal. Kangaroo Island is known as an island that has great local produce and caters to a burgeoning tourist trade both of which the sustainable production of abalone participates in.

The island has alternative and better (deeper) sites for a port and the company should be requested to explore these other avenues and not be granted permission to proceed in this location.

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Mark Gervis

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jeff Angel

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Brendan Finch

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Tuesday, 21 May 2019 9:51:25 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Heather Bourne

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Moira Lattanzio

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Bella Plunkett

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Montanna Schollick

**Date:** Tuesday, 21 May 2019 11:57:08 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Parker Rydon

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Natalie Hickman

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Wallace Law

- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Ros Morante [Ros.morante@gmail.com](mailto:Ros.morante@gmail.com)

Re Proposed Development – Smith Bay, Kangaroo Island

Proponent Kangaroo Island Plantation Timbers Pty Ltd (“KIPT”)

I am a Kangaroo Island resident, I have no financial interest in either KIPT or Yumbah Aquaculture.

I wish to express my concern at the proposal KIPT have put forward for operating a plantation timber industry on Kangaroo Island (“the Island”). This development will have a very harmful effect, both on the wildlife and on the amenity of the Island for residents and tourists. It will seriously detract from what the Island now offers Islanders and the many visitors on which it relies.

KIPT’s proposes to run large timber carrying trucks (A doubles or B doubles) on the Island’s roads continuously, day and night, every day of the year. The proposal suggests that up to 200 vehicles a day travelling across the Island through previously quiet rural areas, is an acceptable consequence of a plantation timber industry for the Island.

Road noise from these vehicles will create almost continuous noise pollution across a large portion of the Island as vehicles journey to and fro. Vehicle noise emissions will carry for many kilometers and although KIPT state that these are within legal Db levels, they fail to address the total area being affected.

The Island has a reputation for being a clean and relatively green environment and it would risk this reputation by having the presence of a large fleet of diesel belching trucks crisscrossing what seems to be about a third of the Island.

A large timber truck is expected to pass any given spot on KIPT’s proposed route from plantation to port every 11 minutes, that is, roughly six an hour, all the time. In calm conditions the engine noise will be clearly heard for approximately 2 minutes prior to arrival at any point and a further 2 minutes after passing. This equates to roughly 13 hours a day of road noise including throughout the night in previously quiet countryside. It is not just people living alongside these roads that will be affected as the noise radiates out in all directions for some distance, depending on weather conditions.

Interaction with local and tourist traffic is a concern, considering the size and nature of the trucks KIPT wish to employ and the inexperience of many of our overseas visitors using our roads. Road crashes cost money and ill will between parties as well as government funds when injuries occur.

Extensive road works will be required on some of those roads that KIPT wish to use to make them viable for heavy vehicle use (A doubles or B doubles). Widening of a number of smaller unsealed roads would be necessary and this in turn would require the destruction of the limited roadside vegetation that survives there. A further loss of wildlife corridors that continue to decline on our Island.

KIPT have indicated that road kill of native fauna should not be an issue in the area their trucks will travel, and quote figures to support this. What KIPT fail to address is the many hours of darkness

travelled by these same vehicles. Much of our wild life is nocturnal and forage at night. Locals and tourists are aware of the danger associated with nighttime travel on our roads and avoid doing so unless necessary. It is probable that road kill by KIPT vehicles will greatly increase the statistics to date. Fauna that could be affected would include kangaroos, tamar wallabies, koalas, bandicoots, echidnas, possums, owls and curlews to name a few.

Mitigation works suggested by KIPT to compensate for any fauna losses do not address the real issues of direct fauna destruction.

The Smith Bay proposal is a further assault on the beautiful environment we live in. Although not pristine in the true sense Smith Bay has shown itself to be a refuge for whales and their calves, a fact acknowledged by KIPT in their proposal. As numbers increase we could realistically expect numbers of whales visiting to also increase. A real tourist attraction. There is no guarantee however, that these iconic creatures will continue to grace our close coastline when confronted with the industrial works proposed.

There is so much wrong with this proposition that does not "fit" with the Kangaroo Island image. The loss of environment and amenity would be a serious backward step in our endeavour to promote Kangaroo Island as an environmentally sound destination. Added to this is the possibility that KIPT will wish to expand in years to come. Where would it stop???

Please do not approve this development.

**Date:** Tuesday, 21 May 2019 8:02:20 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jack Forster

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Chelsea Haebich

---

Dear Minister,

I write to you in order to express concern and lodge an objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island.

I am a local South Australian engineer by trade but I have a keen interest in the marine environment. I'm also a part-time scuba diver and marine life photographer. When I find time I conduct reef life surveys to contribute to citizen science.

In early 2018 I heard that there had been a seaport proposed for Smith Bay, and when I looked into how much research had been done on marine life, I couldn't find much at all. During 2018 and early this year, I had the opportunity to travel to Kangaroo Island's Smith Bay with AusOcean (a non-for-profit ocean research organisation) on multiple occasions. While there I assisted a fellow diver and marine biologist conduct some of the first reef life surveys of the area. The diversity is like nothing I have seen before, [here are some photos I took while diving there](#).

Perhaps most concerning is what is directly at the location of the proposed construction of the port. In order to get an idea of what will be most greatly effected by the proposed port, and also just in case the port does go ahead and the environment is permanently changed, I dived 7+ times at different depths along the proposed location for the port.

- From the shore until 4 meters deep, there are rocks covered in brown algae, home to many common species such as crayfish, abalone, zebra fish etc. (Note: this is the same type of environment in which I spotted protected western blue gropers 200 meters east and west of the port location).
- From 4 to 7 meters deep, there are sea grass beds (seagrass is listed as protected by the International Union for Conservation of Nature (IUCN)). At first they may not appear as much but if you spend some time there you will see that there are many species that live in the seagrasses. A particularly notable species I saw here is the spotted pipefish, the first I've ever seen. This species is super elusive and listed as protected by IUCN. Pipe-fish are notoriously hard to spot but it is likely that there are multiple protected species in this pristine environment (even according to the EIS). If the port goes ahead this protected pipe-fish it's environment and however many other species in the area will be crushed by the causeway.
- From a depth of 7 meters until 11 meters, there are rocky reefs teeming with life. There are countless colourful sponges and species of temperate coral, some that I have never seen before and I am yet to identify. There are ringed puffers that I have observed building nests out of colourful rhodoliths that they collect, a behaviour that has no documentation. I also spotted an octopus that I haven't been able to match to any scientific description yet. This type of environment was my favourite and if it were more known and accessible, I think it would be a top scuba diving destination for SA.
- From 11 meters and onward there is a sandy and grassy floor covered in scallops with frequent patches of rock that are hot spots for marine fauna. On one dive, I saw hundreds of fish under and around a rocky ledge, on another, I saw a rocky outcrop covered in a meter high algae forest with huge long-snout boar-fish and other fish

swimming between.

It really was special but by far the thing I was most amazed by was the abundance of the weedy seadragon, which is near threatened according to the IUCN red list, I saw them on multiple dives and counted at least 7. That is the most that I have ever seen. It would be such a shame if the proposal were to go ahead, that whole section which is home to the weedy sea-dragons would be completely destroyed by the dredging.

At different locations within Smith Bay, I saw more protected species of syngnathids, I saw 2 meter high mounds of coral which could be hugely effected by sediment from the proposed dredging, each dive we did was a different type of marine environment. From the shallow to the deep, there was red, green and brown algae forests, huge rocky ledges, seagrass meadows, rocky sponge and coral gardens filled with colour and life.

I have had the opportunity to review the EIS for the port and I must say I'm truly saddened to think this is a real proposal for the following reasons:

- Large protected seagrass beds will be destroyed by the causeway construction and dredging.
- Multiple protected species of pipefish will lose habitat and likely be killed by the causeway construction and dredging.
- Wonderful and unique rocky reefs with potentially new species will be destroyed by the construction of the causeway.
- Large numbers of weedy seadragons and their habitat will be dredged and destroyed.

On my reading, the EIS fails to adequately address many of these risks in sufficient detail, or provide adequate mitigation. There is so much diversity of flora and fauna at Smith Bay, there are numerous rare and protected species and there has been not nearly enough research done in the area. A port in this location would ruin a variety of unique environments that are unlike any other in SA and home to protected species. Surely there are other locations that would suit the needs of KIPT and do far less damage to Smith Bay's native flora and fauna.

I strongly believe this development should not proceed at Smith Bay and I urge you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its people and its environment.

Sincerely,

Trek Hopton.

This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Megan Lunn

**From:** [Graeme Gillan](#)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 22 May 2019 8:32:02 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Linda Flint

- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rena Friswell

21<sup>st</sup> May, 2019

To the Minister for Planning, Dept of Planning, Transport and Infrastructure, Adelaide

FORMAL OBJECTION TO KANGAROO ISLAND PLANTATION TIMBERS' PROPOSED SEAPORT AT SMITH BAY, KANGAROO ISLAND.

### Background

My name is Naomi Murton. I am a resident on Kangaroo Island who, along with my young family, will be directly negatively impacted by this proposed development. I assist my husband in managing a livestock property between Johncock Road and Tin Hut Road. I have an Applied Science Degree in Protected Area Management from the University of Queensland.

When the plantations were commenced many years ago there was significant damage to the Kangaroo Island's profitability and community structure. Many farming families sold to the plantations and left the area. Businesses, community groups, sporting clubs and of course agricultural profitability and the like were disadvantaged by this event. The best outcome for the Western end of Kangaroo Island would be to harvest and return much of the plantation land back to farmland.

Note that the current proposal does not have public license to proceed. The Kangaroo Island Council agrees with the residents that Smith Bay is not the location KPT should be proceeding with. Kangaroo Island Councillors 'questioned KPT's classification of its Seaport, its narrow approach to site selection and didn't buy the idea KPT's Seaport could co-exist with the neighbouring Yumbah Agricultural facility – an industry they believe fits well with the image of Kangaroo Island'. Kangaroo Island Council have no resources to extensively upgrade roads to make them safe for logging vehicles and other road users and have stated that they will not financially contribute to upgrades or upkeeps of these roads. So who will? This issue has not been addressed by KPT and cause for considerable concern.

One question that needs to be asked is why does KPT think the best use of the timber is to export using a seaport? Have they honestly considered all the alternatives with a progressive mindset? Alternatives such as keeping the timber on Kangaroo Island and using it for Biofuel, which, along with other renewable technologies, could see the Island self-sufficient 100% renewable and negate the need for the underground cable. This would significantly decrease ongoing energy costs. Keeping the timber on the island would negate the need for destruction of coastal / marine habitat. It would negate the huge ecological risks associated with such a venture. It would negate the economic loss to Yumbah and Tourism. It would negate opening up the North Coast of Kangaroo Island to the noise, pollution and danger of logging trucks and unsightly forestry activities that would destroy the 'clean, green' ambiance, peace and image of the area that would no longer be available to promote Tourism.

Questions need to be asked of KPT around the further use of the proposed seaport such as industrialisation creating a woodchip International export port and its likely sale to another entity and the negative implications for the Island should this come about, particularly in the event of an

International sale and the seaport being in the hands of a non-Australian entity (re lack of Customs, Illegal trade etc).

### EIS Criteria

#### COAST AND MARINE

- 46 listed threatened or listed migratory marine species have been recorded within 10klm of Smith Bay, including Southern right whale, Humpback whale, Blue whale, Australian sea-lion, Great White Shark, Loggerhead turtle, Leatherback turtle and Green turtle. RISK: Ship collisions, disruptions to normal behaviours, feeding patterns, etc.
- Dredging and wharf construction will result in the destruction of 10.2 hectares of mixed habitat including seagrasses *Posidonia sinuosa* and *Amphibolis* spp. considered ecologically particularly important.
- Operation of the seaport will negatively impact/change water flows, tidal movements, turbidity, seabed, sedimentary profiles and overall ecology of Smith Bay. RISK: the Abalone farm Yumbah. The tolerance of juvenile abalone (>15mm) is unknown. Should the abalone be intolerant to disturbance a significant industry and possible expansion in the future would be lost along with many jobs. Further future tourism opportunities to bring financial gain and job creation for the area would also be lost.

#### BIOSECURITY

- Currently no marine pests in Smith Bay. RISK: Introduction of marine pests through the release of ballast waters (up to 20 vessels per year), biofouling, and tugs from Port Adelaide that have *Caulerpa taxifolia*, European green shore crab and feral Pacific Oysters that could be infected with POMS (Pacific oyster mortality syndrome)
- Abalone diseases: Abalone viral ganglioneuritis, *Perkinsus olseni*. RISK: Both cause death in abalone potentially very harmful to Yumbah.
- Introduced land pests and nuisance species. RISK: Kangaroo Island has a lack of natural predators allowing introduced pests to quickly spread across the island.

#### ECONOMY

Although KPT claim that there will be positive impact for the economy of the island, there would be significant potential economic losses to current businesses and in the form of lost opportunities for other industries such as

- Research Tourism
- Eco-tourism
- Education
- Hospitality
- Agriculture (through not being able to ultimately return plantations back to farmland and through diminishing our clean/green marketing strategy)

RISK: Kangaroo Island is a world-class example of how the local economy can be linked to sustainable management of the natural environment. All current marine and terrestrial tourism and

eco-tourism businesses that operate in and around the North Coast will be economically affected through the loss of business. Why?

- Loss of visual amenity,
- Noise, dust and light pollution
- loss of marine and avian species people are paying to see (eg Bottlenose dolphin, Common dolphin, Australian sea-lion, Long-nosed fur seal, Humpback whales, Southern right whales, White-bellied sea-eagle, Peregrine falcon, Osprey etc)
- Dangerous travelling conditions (due to poor road quality and high use 24 hour per day large trucks) on the North Coast Road and Stokes Bay Road (in particular) which are high-use areas for tourists and eco-tourism operators. This has the potential to push tourists away from these areas or even tourists deciding not to come to Kangaroo Island at all.
- Loss of terrestrial species that tourists are coming to see due to high losses of species through road collision with trucks operating 24 hours per day
- *(note: it is ludicrous to believe that any resident or tourist on Kangaroo Island is going to be comfortable with logging trucks going past every 20 minutes or so PARTICULARLY at night!! - Just mandating that logging trucks, for whatever venture KPT decided to undertake NOT EVER travel after dark would be a huge step in the right direction. Mandating NO logging trucks after dark would also reduce the possibility of road accidents with locals or tourists and significantly reduce the outrageously high levels of inevitable nocturnal road kill)*

#### AIR QUALITY

The quality of air, particularly along the roads into Smith Bay and at the site will deteriorate. RISK: Yumbah will be directly affected due to the sensitive nature of Abalone growth.

#### ALTERNATIVE SITES

KPT owns the proposed site at Smiths Bay. But it also owns other sites which may be suitable for a development of this nature. The Kangaroo Island Community believe other sites or business options for KPT have not been considered to find an outcome that will achieve their economic outcomes without the damage to other economic ventures, tourism and the community.

#### COMMUNITY

As is with all development applications, job growth and the economic on-flow from that is usually over-estimated. I believe this is the case with this application. When the trees went in, 300 local KI jobs and all their families went with it. KPT are promising 160 jobs to return to Kangaroo Island, but only 20 of those will be for local residents. A much better outcome will be if the trees are harvested and then returned to farming land and community. I believe the economic benefit for the island, in both Agriculture and Tourism, would most definitely deliver much higher returns for the actual residents of Kangaroo Island, increase the rural population and have much greater on-flows for education and small business. Profits for KPT go off-island. Profits for Agriculture and Tourism (Apart from the Australian Walking Company which is a Tasmania company) go directly into the pockets of the local people, increasing overall prosperity for Islanders.

#### NATIVE FAUNA AND FLORA

There is absolutely no doubt that a huge risk exists for wildlife.

#### RISKS:

- Marine species that live or move through or feed in Smiths Bay will be impacted through increased risk of direct hits from sea vessels, noise, pollution and feeding and breeding disruption.
- Terrestrial species that live near any roads where trucks will be travelling will be heavily impacted through huge increases in mortality. This is a major issue considering that there are few remaining places in Australia that has wildlife in sustainable numbers. For example, KPT says their proposal will lead to the death of approximately 21 endangered Echidnas every year. This sort of reduction in numbers year after year will lead to population declines that may be unrecoverable.
- Kangaroo Island has an unusual and quite unique situation with regards to Koalas. There were once so many Koalas in Australia that between 1890 and 1927 8 million were shot for fur and sent to London. In a recent press release from the Australian Koala Foundation they estimate that only 80,000 Koalas remain and are locally extinct from much of their former range. It is possible that up to a third or more of those remaining Koalas live on Kangaroo Island and many within the plantations. RISK: Unless KPT develop and adopt a Koala Management Program where Koalas are not killed during the harvesting process is essential and so far has not been addressed.

#### TRAFFIC AND TRANSPORT

Living directly in the areas where trucks will be travelling and having young children I am desperately concerned about the safety of my family.

#### RISKS:

- KPT have said that the timber haulage fleet is expected to travel approximately 3.4 million kilometres per year and will therefore be expected (statistically) to be involved in approximately 3.2 accidents per year. AN ACCIDENT WITH A TIMBER TRUCK WILL INVOLVE DEATHS OF LOCALS/TOURISTS. This is of major anxiety to me knowing my children will be travelling with us or on buses and will be directly at risk. I am particularly outraged that trucks will be travelling all through the night.
- Many tourists are not dirt road savvy or come from overseas countries where they drive on the other side of the road. There is also a growing number of tourist coaches, trail bike users and cyclists on our roads. There is huge life-threatening risk with trucking and tourism operations trying to co-exist on dirt roads. The proposal of Smiths Bay puts tourists directly in the path of huge risk to their lives. KPT must consider sites that will have less frequency with tourist travel.

#### NOISE AND LIGHT

KPT are proposing a 24hour per day, 7 days a week operation that will obviously be very noisy and intrusive on nearby residents and both marine and terrestrial wildlife. It is predicted that night-time operational noise levels may exceed the Noise Environment Protection Policy criterion for both nearby residents and Yumbah. Another reason why this application should not be even considering trucking and operations after dark.

Furthermore the lighting that will be required to stay operational at night would nearly definitely negatively harm the productivity of the Abalone Farm Yumbah as the abalone actively feed at night.

Noise and lighting would also disturb visitors using holiday accommodation and would render the area void of any future tourism accommodation opportunities and economic benefits.

#### BUILT FORM AND DISPLAY

It is obvious that having commercial operations of this type would decrease the visual amenity of the area. Furthermore KPT have said

- There will be no public access to the beach
- No launching of boats via the public road
- No facilities or amenities on the site

#### OTHER

KPT have stated that operations of the woodchip facility and log business at its Industrial Seaport will operate at just 20% capacity and have not included in the EIS what the other uses will be for the Seaport so that their KPT shareholders are to get the types of returns they are promised. Until KPT can fully disclose their proposed business plan and include it in the EIS then the Smith Bay proposal must be rejected.

#### CONCLUSION

I fully understand that something must be done to harvest the plantations on Kangaroo Island. I fully appreciate that this will involve some disruption to the peaceful Agrarian and Tourist Island that we currently enjoy. **What I am asking is that the current proposal for Smiths Bay be rejected to allow a more thoughtful, thorough and considerate outcome to be reached. One that involves the input from Kangaroo Island residents to ensure that the level of disruption is kept to a minimum, is safer and has ultimate positive social, ecological and economic outcomes for Kangaroo Island.**

Thank you for taking the time to listen to my concerns. I look forward to the Proposal being rejected and for KPT to reconsider their options to ensure a WIN:WIN situation for all stakeholders, not just their shareholders.

Many thanks

Naomi Murton,

Bach Appl Science, Protected Area Management, UQ.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Michael Raj Santhiya

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sean Burke

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Brian Vanner

**Date:** Wednesday, 22 May 2019 12:05:01 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.

Dear Robert

If science proves that KIPT & Yumbah Abalone businesses can co-exist I support the proposed Smith Bay Port development.

I have lived on Kangaroo Island (KI) all my life. In all that time I have never seen emotion generated as is being generated re the Smith Bay proposed development by KIPT.

KIPT needs to harvest its forests. I don't believe anyone on KI would disagree. KIPT have property at Smith Bay which, as their research shows, is ideal for their port operation. I certainly don't want Yumbah Abalone to fail. If all the research that has been done shows they can co-exist then we accept that science.

There has been a lot of publicity regarding dolphin and whale issues. Is this just all emotion!! I have spoken to a local who works on one of the oil rigs off the West Australian coast and he stated they see whales rubbing themselves on the pylons of the rigs!! Have they adapted? - you would have to say Yes. There has also been much publicity regarding the dolphins in the Port River. I would say this is one of the busiest waterways in SA. Again the dolphins have adapted to humans there.

Much has been said about roads. Forestry has been on KI for many years with Blue gums for around 20 years. The rates and taxes on these forests have been paid for these 20 years with very little use of the road system. Shouldn't this be taken into consideration.

Silt has also been brought up as an issue. Again what does the science say? I suspect that with a good northerly blow that there would be a fair amount of silt stirred up.

I believe KIPT has spent a vast amount in research to cover all the issues involved.

KIPT will be creating employment with the employees paying taxes and the local businesses growing as a result.

One thing that has frustrated me is that I was the driving force behind KI Small Business and I tried hard to bring all the parties to the table. KIPT were more than happy to talk to Yumbah Abalone but Yumbah Abalone refused to talk. How can you solve any problems if one party won't agree to meet and discuss?

My support is with the Smith Bay Port Development if science shows the 2 businesses can co-exist.

Regards

Rodney Bell

Dear Mr Kleeman,

Re: Proposed timber port at Smith Bay, Kangaroo Island

I am an Adelaide resident with roots in rural South Australia. Spending my youth as part of a rural community has provided me with insight into the necessity of infrastructure and development for growth in such communities.

I have been following the proposal of the Kangaroo Island timber port facility and am hopeful of the positive change it could bring about if approved. Too often we see small communities become desolate when industries cease to operate in the area; jobs are lost, residents are forced to relocate to find employment, local businesses lose customers and there are no local opportunities for youth at school leaving age.

Kangaroo Island is feeling the effects of lack of industry and it is obvious that tourism is not enough to support growth. A 2015 report published by the Regional Australia Institute highlights a decline in employment of 3.4 percent over the period of 2001 to 2013, this is a drastic drop and would have catastrophic effects on the community of only 4,700 people if it were to continue. The institute report also explains that the work on offer on the island is largely part-time or seasonal. The company behind the proposed timber port, Kangaroo Island Plantation Timbers, seeks to address both of these issues with the jobs developed on completion of the timber port. On reading the latest quarterly activities report from company, 250 potential future jobs are estimated. This is no small opportunity for the community of Kangaroo Island.

The west side of Kangaroo Island would benefit in particular from the settlement of new employees brought to the island for work in the forestry industry and ancillary positions. A strong local industry coupled with a commitment to reduce the subdivision planning requirements would significantly bolster the population on this part of the island. This in turn would support the continuation of the local Parndana School, enabling children to complete their primary and secondary studies close to home. The fact that this school once hosted almost three times the number of students currently enrolled portrays a saddening decline in the community's population.

In summary Mr Kleeman, I would be devastated to see another rural Australian town crumble away as many have done so before. If we do not support new development in areas such as Kangaroo Island, the community cannot be sustained. We must support our smaller communities and foster growth and opportunity, to ensure a future for the next generation.

Yours sincerely,

Caroline Simpson  
Adelaide, SA

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Glenys Grundy

Dear Mr Kleeman,

**Re: Proposed timber port at Smith Bay, Kangaroo Island**

Kangaroo Island has struggled to develop its economy in recent decades. While tourism and farming have made substantial contributions over many years, they are seasonal industries, and constrained by the cost of freight and limited transport options.

Development of an export wharf facility at Smith Bay will finally provide much-needed alternative freight options for Kangaroo Island.

Independent economic analysis shows the forestry industry will create 234 FTE jobs, including 174 direct jobs. These are permanent jobs, not seasonal jobs like many of those in tourism and farming.

The forestry industry will add \$42 million a year to the Gross Regional Product of Kangaroo Island and an extra \$16 million in household income.

This injection of jobs, money and new residents into the Kangaroo Island economy will create critical mass for a number of businesses which are marginal at the moment. This includes those who might be directly involved in forestry, such as mechanics, fuel suppliers and trucking companies. It also includes every small business in the main street, which will benefit from increased turnover from those with permanent, well-paid jobs.

Forestry also offers a career pathway alternative for our young people, most of whom are now forced to leave the island in search of work, training and better opportunities.

Smith Bay is an ideal site for the proposed export facility. It is already an industrialized area with an aquaculture facility established - which has plans to grow. In fact, the proposed new timber facility is on the scarred site of a previous abalone farm.

Kangaroo Island Transfers provides a door to door passenger transfer service from Airport, Ferry, all Accommodation Houses, Holiday and Private Homes. We meet all scheduled daily flights and service all areas of Kangaroo Island. Kangaroo Island Transfers is reliant on a buoyant local economy. The KIPT project will provide significant opportunities for our business with transfers to and from the proposed site and the airport and ferry during construction and ongoing.

I urge you to approve the export facility development by Kangaroo Island Plantation Timbers, which will enable the establishment of the forestry business - a new, sustainable and profitable industry for Kangaroo Island.

Your sincerely,

*Peter Wyatt*

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 22 May 2019 2:05:53 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Stephen Mitchell

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated

turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

- The proponent's means to address this assault are inadequate at best and are presented in a careless manner.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Scott Henderson

Dear Mr Kleeman

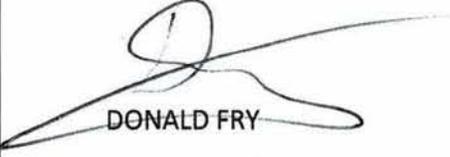

I am writing in support of the Smith Bay Wharf proposal as I believe it will be beneficial for the economic growth of the island and will create much needed jobs for the community.

I feel there is real need for an alternative freight option for the Island and believe the benefits of the wharf will far out way the disadvantages.

I am a builder based on the main land and have a holiday home in Emu Bay. I have done a lot of work on Kangaroo Island over the years and know only too well the expense involved in getting goods and materials transported to the island and how this cost has impacted on potential customers and business.

The Smith Bay Wharf I see as a positive project and a natural progression providing competition, economic growth, employment and tourism for the Island and I urge you to approve this proposal which will benefit so many and provide many opportunities for a very long time.

Yours faithfully

[REDACTED]

[REDACTED]

To the Honourable Stephen Knoll,MP  
Minister for planning  
ATTENTION: Robert Kleeman  
Unit Manager,Policy & Development, Development Division, Department of Planning,  
Transport and Infrastructure  
GPO Box 1815  
ADELAIDE SA 5000

I object to the construction of a deep sea port at Smiths Bay.

I have a parcel of land that is in close proximity to the proposed site and had planned on building our dream home on the property as well as earning an income from a low key tourist accommodation and various horticultural ventures.

I have given up this dream as I feel the port will have a negative impact on all of the above. Here are some dot points on why.

The port facilities will

- light up the sky at night detracting from the ambience
- have loud noise from the machinery and ships
- create a nasty smell from the machinery as well as the processed wood chips
- prevent access to the coast for myself as well as the accommodation visitors
- fishing from the coast no longer possible
- no longer able to launch a kyack or boat

The trucks will

- create excess noise
- stir up dust
- destroy the roads used to access the area.
- provide an ongoing safety hazard every time entering or exiting the property
- potentially destroy the vegetation along the roadside bordering my property due to road expansion required for the extra trucks.
- disturb or kill the wildlife that is a draw card for the tourist accommodation.

So please take this into consideration when deciding on the construction of the port.

Thanks Torran Welz

Sent from my Samsung Galaxy smartphone.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

# DEEP WATER PORT FACILITY

## Smith Bay, Kangaroo Island

### The Environmental Impact Statement (EIS) is currently on public consultation TELL US WHAT YOU THINK

All submissions will be made publicly available and will be included in the proponent's Response Document (that will be released for public information at a later date).

Name: MARGARET WELZ Address: [REDACTED]  
Telephone: [REDACTED] Email: [REDACTED]

#### Overall, what do you think about the proposed development?

I think this proposal will be disastrous for our Kangaroo Island on so many levels. It will change us from being a Nature Island with a pristine environment ~~to a unique environmental tourism destination~~ with an example globally that Australia has a policy of protecting the environment to a place not to visit, with logging trucks, sport marine reserves and a compromised biodiversity.

#### Environmental impacts / components

The risk of marine pests from discharging Ship Ballast water into Smiths Bay is too dangerous to risk. It will impact on the local abalone industry <sup>the marine environment</sup> and environmental tourism. Smiths Bay is a place famous for dolphins and whales and recent studies have shown that such a large port with day and night activities will potentially damage and displace marine life. The dredging alone will impact on our coastline. The loss of 10.2 ha of sea grass makes a mockery of educational planting of sea grass undertaken by our school students.

We are a small island with a small population (4000) We rely on fishing and tourism and farming. Such an industry with such a port threatens to destroy what is precious to us. The promise of jobs is not worth the environmental impacts that will come from allowing such a development. I urge you to reject this development which will impact heavily on Kangaroo Island. I will **OUR ROADS WILL BE DESTROYED WHO WILL PAY FOR THEM!?**

# DEEP WATER PORT FACILITY

Smith Bay, Kangaroo Island

**Economic impacts / components** Kangaroo Island is at risk of losing its status as a pristine Nature Island, globally recognized and playing an important role in protecting dwindling species numbers on the planet. As such areas shrink globally they become more important and economically of great rare significance. The risk of pollution, marine pests, will threaten this Kangaroo Island is not developed. It has a population of 4000. It is valuable and is becoming more economically so because we are protecting what is here. Local tourism enhance these experiences - Dolphin & whale watching, Abalone farming, wineries, country drives will be impacted by large trucks.

**Transport/Traffic impacts / components** The route from the plantation is long. There were more accessible port sites. Many will be impacted locally by noise, danger, dust of trucks huge trucks passing up to 200 per day A & B double vehicles. Living here our roads are mostly dirt. Drought and floods affect us all using roads. I cannot imagine how these trucks will impact on island life. The road near the proposed site curves up hill on a blind corner and there are such situations all along the route. Tourism and trucks don't mix. 2 major tourism areas - Emu Bay to Stokes Bay and the west end route to the Flinders National Park are impacted.

**Social impacts / components** The promise of jobs and economic growth for Kangaroo Island and SA are the drawcards. The social impacts on the rest of the community cannot be overstated. We are and identify ourselves as a Nature Island where the environment is more important than money which seems to be not understood by governments. We take pride in our economic developments - eco tourism at its best, good practice farming, sustainable fishing. All will be affected by this unsuitable huge development.

Written submissions commenting on the EIS are invited until 28 May 2019

**From:** [william.jackson](mailto:william.jackson)  
**To:** [DPTI:State Commission Assessment Panel](#)  
**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 22 May 2019 5:19:49 PM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully W.A.Jackson

Dear Minister,

**RE: Marine biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay based on the information provided on the reverse side of this card.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

# DEEP WATER PORT FACILITY

## Smith Bay, Kangaroo Island

### The Environmental Impact Statement (EIS) is currently on public consultation TELL US WHAT YOU THINK

All submissions will be made publicly available and will be included in the proponent's Response Document (that will be released for public information at a later date).

Name: MR. H. WEIZ.....Address: [REDACTED]

Telephone: [REDACTED].....Email: [REDACTED]

#### Overall, what do you think about the proposed development?

DESPITE WHAT THE DEVELOPERS SAY, I THINK THE PROPOSED DEVELOPMENT WILL HAVE AN ADVERSE EFFECT FOR KANGAROO ISLAND. I DO NOT BELIEVE THE NUMBER OF PROPOSED JOBS IS TRUE, GIVEN THAT THE IMPACT OF THE DEVELOPMENT DOES NOT TAKE INTO ACCOUNT THE NUMBER OF JOBS LOST DUE TO THE REDUCTION OF TOURIST NUMBERS DUE TO THE INCREASED NUMBER OF TRUCKS ALONG THE NORTH COAST WHICH WILL ADVERSELY AFFECT THE "NATURE" AND "WILDERNESS" ASPECT PROMOTED AS A DESTINATION FOR KANGAROO ISLAND

#### Do you have any specific comments on the following?

##### Environmental impacts / components

THE INCREASED TRUCK TRAFFIC, GENERATORS, STOCKPIPING OF TIMBER, NOISE AND DUST WILL DECREASE THE ATTRACTIVENESS OF THE NORTH COAST. THE DREDGING AND THE COMING AND GOING OF SHIPS WILL HAVE A DETRIMENTAL AFFECT ON THE WHOLE OF SMITHS BAY AND THE SURROUNDS. WILDLIFE WILL FLEE THE AREA DUE TO THE NOISE, DUST AND POLLUTION, WHO KNOW WHAT WILL COME INTO OUR WATERS FROM BULK WATER, BIOFOULING, AND RUBBISH.

#### Further information

Government of South Australia

Department of Planning,  
Transport and Infrastructure

# DEEP WATER PORT FACILITY

Smith Bay, Kangaroo Island

## Economic impacts / components

I DO NOT SEE ANY DIRECT ECONOMIC BENEFIT FOR THE ISLANDERS DESPITE WHAT THE DEVELOPERS SAY. WE HAVE AN EXAMPLE ON THE ISLAND WHERE JOBS FOR LOCALS WAS PROMISED BUT THOSE JOBS ARE NOW IN THE HANDS OF FOREIGN WORKERS. JOBS WILL BE LOST BY TOUR OPERATORS WHO WILL NO LONGER RISK THE TRUCK INFESTED NORTH COAST ROADS, TOURIST ACCOMMODATION WILL BE ADVERSELY AFFECTED ALONG THE PROPOSED ROUTE (WHO WANTS TO STAY IN A PLACE WITH TRUCKS ZOOMING BY) AND TOURISTS WILL NOT WANT TO GO TO THE NORTH COAST SO WILL SHORTEN THEIR STAY.

## Transport/Traffic impacts / components

I DO NOT WANT MY RATES GOING TO REPAIR, WIDEN OR OTHERWISE, ROADS THAT WILL BE DAMAGED BY THE TRUCK TRAFFIC. IF THE DEVELOPERS WANT TO DO USE THE ROADS THEY MUST MAINTAIN THEM. I DO NOT WANT MY RATES GOING TO SUPPORT A DEVELOPMENT THAT CAUSES MORE DAMAGE TO THE ROADS THAN IS CURRENTLY BEING EXPERIENCED. THE WIDENING OF THE ROADS, THE DUST AND NOISE FROM THE TRUCKS WILL HAVE AN ADVERSE EFFECT ON THE FLORA AND FAUNA THAT THE TOURISTS COME TO SEE.

## Social impacts / components

THE DEVELOPMENT WILL TAKE AWAY FROM IMAGE OF KANGAROO ISLAND THAT IS CURRENTLY BEING ADVERTISED. THE DEVELOPMENT MIGHT BE GOOD FOR THE DEVELOPERS BUT WILL BE DETRIMENTAL TO ALL OTHER ASPECTS OF KANGAROO ISLAND. INSTEAD OF JOBS, INCOME AND BENEFITS FOR ALL ISLANDERS THE SOLE BENEFICIARY OF THIS DEVELOPMENT IS THE GREEDY DEVELOPERS THEMSELVES. THEY DO NOT HAVE THE WELFARE OF THE ISLAND AT HEART BUT ARE ONLY CONCERNED WITH RIPPING THE ISLAND FOR THEIR OWN GREED.

Written submissions commenting on the EIS are invited until 28 May 2019

Dear Sir,

I wish to express my extreme disappointment that the development of a Port at Smith Bay has been given Major Development status, thus, taking the decision out of local hands.

While I was Mayor of the Kangaroo Island Council, forestry was an ongoing issue, with no easy answer as to its future.

The Council was always in favour of developing Ballast Head as an area where shipping could take place. Historically it was an area where Freight and agricultural products were landed and shipped away.

The roads leading to Ballast Head were department of Transport responsibility thus relieving the Council of huge maintenance costs to keep the roads in a safe and manageable condition.

When reviewing the Development Plan at that time Smith Bay was identified as an area of environmental importance that should be protected for future generations and for the sustainability of marine life.

To now have the considerations of the local community and Council completely overridden does not give confidence in our democratic system.

Furthermore, the proposed route from the forest to the port includes the Stokes Bay road, which is one of the most highly used tourist roads on the Island. The TOMM survey has highlighted this.

Tourism is a proven major industry for Kangaroo Island, and it is important to not only recognise this but to enhance the experience of visitors both local and overseas enjoy their time with us. Logging trucks competing with tourism and local traffic is an undesirable way to go.

Furthermore in 2003 I was appointed Presiding member of the KI Natural Resource Board and once again forestry was an ongoing issue with no easy resolution.

It is difficult to make such dramatic changes to the environment and to our local community when the proposed industry is a long way from being considered a financial success.

I Remain,

Yours Faithfully,

JANICE Kelly OAM

**Date:** Wednesday, 22 May 2019 5:27:29 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jo Earlam

**Date:** Wednesday, 22 May 2019 5:34:27 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Charles Allinson

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Eloise Fielke

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Rebecca Thompson

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Georgie Thomas

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Wednesday, 22 May 2019 7:27:18 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully,

Michael O'Malley

- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Stephanie Bartley

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Andrew Hunter

| 51 | SE2<br>22.6.2    | KIPT would assist government with understanding housing needs, where it can, and sees benefit to the company and the community in having a settled resident workforce, living and working permanently on Kangaroo Island.   | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | n/a                                 | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Particulars needed   |
| 52 | SE3<br>22.6.2    | There is also scope to increase the size of Parndana township through residential subdivision. The Kangaroo Island Community Club (based in Parndana) has specific plans to subdivide and release housing allotments created from the scrubland immediately to the west of the township between Smith Street and Rowland Hill Highway. KIPT has committed to provide a seed loan of up to \$100,000 to cover the initial project costs prior to the marketing and sale of housing lots. | <input type="checkbox"/>            | <input type="checkbox"/>            | n/a                                 | n/a                                 | <input type="checkbox"/> |  |

|    |               |   |   |   |   |   |   |                |
|----|---------------|---|---|---|---|---|---|----------------|
| 53 | SE4<br>22.6.2 | There is also potential for residential development on the western end of Kangaroo Island by re-establishing housing vacated during the farm consolidation and switch to forestry that occurred in the 1990s and 2000s. KIPT owns at least 30 potential residential allotments that could be created with a change to planning rules to allow the existing forestry estates to be subdivided. Thirty new homes would accommodate about 70 people. Every property has, at the very least, a house site with a dam, phone connection and electricity, some have habitable dwellings and others have dilapidated structures that could be replaced, or repaired and refurbished. | ✘ | ✘ | ☐ | ☐ | ☐ | Nil commitment |

Unit manager policy and strategic assessment  
Department of Planning Transport and Infrastructure  
GPO Box 1815  
Adelaide SA 5000

Dear Minister,

It beggars belief that the system we are involved with here, has facilitated the site chosen by the proponent (KIPT) apparently without independent assessment for either the need or best location for a Kangaroo Island multi user port facility by DPTI professional planners.

I have perused the DIES main document and several annexes and became frustrated with the obvious lack of professional project management principles in bringing this together.

Clearly, there are some major essentials missing from the proposal like power and water supply solutions or even serious assessment of other site options.

The choice of site is very, very questionable and there appears to be an almost intentional failure to adequately assess other site options and make serious efforts not to divulge the rationale that details of the process that led to the initial Smith Bay decision. In a similar vein the proponent's efforts to determine a functional transport route, or to acknowledge this is, so far, totally unresolved can only be seen as attempted deceit towards you and all stakeholders, particularly when this was clearly stipulated in the guidelines.

These significant factors prompted me to personally inspect the possible sites along the north coast of Kangaroo Island and I have 'kicked the dirt' by walking an extensive part of this coast with topographical and aerial photos in hand to note several options very close to shore in very deep water. Obviously very little disturbance of the coast would result in such a location and the transport route would be seriously reduced resulting in very significant capital (less transport rigs) and operational cost (less distance)

Considering the DIES itself has determined there is no demand for a multi user port that will accommodate any of the Handy, Handymax, and Panamax ships other than the proponent's stated requirements. Also, the specialised wharf set-up that the proponent is proposing is unlikely to facilitate other users at any future time. Note: whilst potential future users such as agriculture appear to have no formal position on this, my discussions with AgKI sources confirm the proponent's DIES indication of no demand.

There are many "not so minor" issues that I could address in this submission but that would take a document almost the size of the main report itself. So please, in addition to the key points above of Power, location and transport, let me take a shorthand critique of the promises made by the proponent by way of their Chapter 27 Explicit Commitments. See attached table.

When I initially considered these, they appeared anything but what is claimed - that is "Explicit Commitments". My view was that it was very difficult to categorise any of these proposals as specific or stated with particularity: they simply are not. Basically all these "Explicit Commitments" must be able to be understood by all as a key Project Brief criterion. It is precisely because this cannot be done that the DIES in its present form must be rejected.

Thank you for receiving this submission

| <p data-bbox="161 232 655 367"><b>2.3.3 PROJECT RATIONALE – EXPORT OF LOGS AND WOODCHIPS</b></p> <p data-bbox="161 389 735 560">As a consequence of the transaction, KIPT owns 86 per cent of the plantation forestry on Kangaroo Island. KIPT’s portfolio is now approximately 80 per cent hardwood and 20 per cent softwood.</p> <p data-bbox="161 577 715 712">KIPT’s original objective of building and operating a deep-water port and associated on-land facilities suitable for exporting both logs and woodchips remains unchanged,</p> <p data-bbox="161 730 651 797">The Smith Bay site remains the preferred location because:</p> <ul data-bbox="188 815 746 1989" style="list-style-type: none"> <li data-bbox="188 815 746 1397">• the additional transport costs incurred in moving timber products from the western end of Kangaroo Island to Ballast Head are significant; note that these include costs incurred by KIPT (such as greater capital outlays to acquire a larger vehicle fleet because of longer journey times, fuel, labour costs, and vehicle maintenance), by government (road upgrades and maintenance) and by the community, due to increased interaction with residents and tourists (see Chapter 3 – Project Alternatives) <b>Identical factors apply to Smith Bay relative to several deep water options close to the forests along the north Coast of KI</b></li> <li data-bbox="188 1420 746 1688">• the social and environmental impacts would be greater at Ballast Head, given the proximity of oyster farms in the in-water footprint, the nearby townships of American River and Island Beach, the environmentally sensitive Pelican Lagoon, and the extensive native vegetation on the site itself. <b>agreed!</b></li> <li data-bbox="188 1711 746 1989">• KIPT requires (and independent growers also need) a facility that can handle both logs and woodchips, and the topography and water depth at Ballast Head preclude this as a commercially feasible option. <b>The claim logs are an essential export requirements are a very dubious claim - refer costs opposite column.</b></li> </ul> | <p data-bbox="767 226 1465 405">A constant but unsubstantiated theme in the DEIS is that the island’s softwood must be exported as logs and the additional infrastructure needed for this precludes most otherwise acceptable port locations. But this reasoning has not been justified.</p> <p data-bbox="767 427 1465 685">I do not debate exporting the hardwood as chips and loading using a conveyor. Current literature indicates hardwood chips go 550kg/m3 (dry) and softwood 420kg/m3 dry. we have heard it is important to catch the rising price of hardwood (up by another 10% in 2018). But the double that rise in softwood chips is missing</p> <p data-bbox="767 703 1465 960">From Timberbiz 12 April 2018 "Latest data analysed for the Australian industry by market and trade consulting experts IndustryEdge shows average hardwood export prices were \$178.23/ bdmt, delivered on board the vessel in Australia (Free on board), while the price of softwood chips was \$174.75/bdmt.</p> <p data-bbox="767 978 1465 1158">Commenting on the prices, Tim Woods, managing director of IndustryEdge told Daily Timber News: “Softwood chip prices were up almost 21% in February. That is a direct result of recent price negotiations in Japan.”</p> <p data-bbox="767 1176 1465 1288">From Forest and Wood Products Australia 2019 "Latest reported prices appear to be at least 10% higher than those in play a year ago,"</p> <p data-bbox="767 1305 1465 1641">By comparison, premium pinus logs for lumber are fetching \$80/wet tonne equating (with 60% moisture) to \$200, compared to \$175 as chips (174.74/bdmt above) Most of KI pinus is not premium grade logs so at best we are looking at similar returns, although I suspect less for logs as more of the tree can be included if chipped. I would agree though that logs can be brought to market quicker not requiring the more complex ship loading infrastructure.</p> <p data-bbox="767 1659 1465 1917">To me the island needs a load-out wood chip conveyor at the western end and a 'general' multi user port in a separate new location in the eastern half of KI. We are going to rue any decision to bring significant numbers of logging trucks into the centre and eastern half as proposed in the DEIS by the proponent.</p> |

| DIES Statements (redacted + notations)_  | G Walkom - Comment/Concerns   |
|--|---|
| <p><b>2.6 EXPECTED CONSEQUENCES OF NOT PROCEEDING – THE ‘DO NOTHING’ OPTION</b></p> <p>At present, there is no feasible method of exporting plantation timber from Kangaroo Island. <b>true</b> The trees are mature and the customers are ready to receive the product. The proposed KI Seaport at Smith Bay is <b>very high risk</b></p> <p>In this instance, KIPT would finance the delivery of a piece of critical infrastructure using private capital - <b>appears a good offer.</b></p> <p>KIPT has <b>included a cursory investigation</b> of a series of alternative sites, as discussed in Chapter 3 – Project Alternatives. None of the alternatives are suited to exporting both logs and woodchips. A chips-only operation could be established at three of the alternative sites, however:</p> <ul style="list-style-type: none"> <li>• <b>it is not correct that</b> the inability to export logs would represent a material loss of value and income for KIPT and leave those independent growers who have 100 per cent pine facing financial hardship - <b>refer option to chip softwood opposite</b></li> <li>• the capital and operating costs at these other sites would be greater than at Smith Bay, with a material impact on the profitability of plantation forestry on Kangaroo Island. <b>Probably true for all sites east of Smith Bay, but this statement is unlikely to be true when all Triple Bottom Line costs are assessed for all options much nearer the forests.</b></li> </ul> | <p>Guideline 1.14 requires:<br/>(Provide) information on feasible alternatives including:</p> <ul style="list-style-type: none"> <li>• sufficient detail to make clear why any alternative is preferred to another (short, medium and long-term advantages and dis-advantages of each alternative are to be discussed)</li> </ul> <p><u>This surely has not been done and an objective judgement therefore cannot be made.</u></p> <p><b>Comparative Construction Costs.</b><br/>Capital Development Costs estimated by the D.E.I.S. for the three most suited sites for a Multi-User Port (Cape Dutton \$60m, Smith Bay \$35m and Point Morrison \$50m) indicate a significant additional cost for Cape Dutton above Smith Bay Capex, but the significantly shorter return transport distance gives a R.O.I. on additional investment of 4-5 years and a significant continuing additional margin thereafter. The shorter road length should additionally provide less upkeep costs, as well as less wildlife and road accident costs. To me, the more separation between logging trucks and normal road users (including tourists) the better. At the very least we must make significant effort to keep road trains, tourists and residents separated as much as possible. In general, The comparative construction costings are woefully inadequate. The draft guidelines have not been met, proper feasibility and costings need to be done, not for all sites but for those close to the forests.</p> |

### 3.4.1 KIPT's materials handling requirements

a small proportion of very inferior pine may be exported in the form of woodchips. Such decisions would be driven by market pricing at the time. Notwithstanding this, the freight task is a dual one, with the need to export chips and logs. Woodchips would be loaded onto ships via a conveyor, and logs would be loaded from trucks positioned on the berth within reach of the ship's cranes. This means an export facility designed to handle logs requires vehicular access to the berth face. **Whilst the coast nearby the plantations has been ruled out without the required guideline assessments, my personal site inspection indicates deep water very close to shore and hence there exists the prospect of placing the pontoon there without a jetty at all. Capex and Opex costs would additionally plummet from the significantly shorter transport legs.**

As 80 per cent of the plantation estate is eucalypt and most or all of this will be exported as chip, the export facility must be designed to handle woodchips. It is preferable that the facility can also handle logs because pine logs generally attract a price premium; the economic value of the plantation estates would be maximised if the export facility could handle both products. Moreover, several independent growers on the Island only grow pine trees and they too would require a wharf configuration that could handle their product.

If it is not feasible to build a facility that can handle both logs and woodchips (the preferred option), **the best alternative is to build a facility that can handle just chips. This would mean all plantation timber would be exported as woodchips**, which would lead to a loss in value for the pine.

**No-one should dictate to a business what economic decisions they must make, but the arguments put forth about the priority to export logs just does not stack up; refer prices compared in comment opposite.**

**A Chips only facility would have significant flexibility to optimise returns from market conditions:**

- **export softwood chips or**
- **export hardwood chips or**
- **leave for further growth**

<https://youtu.be/1179oFqf2gk>

This is an indication of just how basic the infrastructure needed appears to be with deep water.

Stop the video at 18 seconds to see the wharf and conveyor detail. Telescopic conveyor takes care of reaching all of ship's hold.

Stockpile well back from wharf 'somewhere'

### 3.8 CONCLUSION

The South Australian Government's long-standing objective of establishing a multi-user, multi-cargo facility on the Island requires a facility that can handle both logs and woodchips. The Smith Bay site offers the only cost-effective option to realise this objective. **This is misleading - it indicates that S.A.G requires chips and logs which is not correct.**

The process of selecting the best concept design for the in- water structures involved assessing three different variables: the built form of the approach leading to the berth face; the built form of the berth face itself; and the length of the approach, which determines the extent and location of the area to be dredged. Of the 12 options assessed, the combination of a causeway leading to a suspended deck with a floating pontoon berth would have the lowest construction and environmental impacts. **This is most unlikely to be correct. Smith Bay is shallow and must be dredged initially and on an ongoing (5-10year intervals) basis. Ref Table 4.6. Not included in the environmental assessment is the awful aesthetics of the rock structure itself which appears to additionally be a significant risk factor to Bay water characteristics - failure of rock armour in storm Ref Table 4.6 temperature, sand build-up and clean water movements, but that is not something I am qualified to debate.**

This original concept design for the in-water structures has been optimised to accommodate larger Panamax-size vessels and account for new information obtained in the EIS process derived from wave modelling, ship motion analysis, revised bathymetry and updated cost estimates. The revised concept includes a maximum causeway of 250 metres, and a suspended jetty structure of at least 170 metres, which form a minimum total approach distance of 420 metres. **If Smith Bay is approved, why not run the link-span type structure another 50m out and only use Handy and Handymax class vessels avoiding completely the need for dredging? Approval should not be given for such large vessels (Panamax) in such a shallow bay.**

#### 4.8.1 ELECTRICITY DEMAND AND SUPPLY

The expected peak electricity demand is approximately 400 kW, with an annual consumption of approximately 350 MWh.

The Smith Bay site is close to a source of mains electricity consisting of an 11 kVA three-phase line. There is sufficient capacity within the mains electricity system for the provision of electricity to the KI Seaport. **400kW is significant. There is scant information on this in particular if the reticulation authority SAPN has agreed to supply the proponent from this line?**

#### 4.8.2 WATER DEMAND AND SUPPLY

The facility would need water for uses including:

- dust suppression
- fire suppression (emergency)
- potable supplies for ablutions etc. series of tanks), with separate firewater storage as described in Section 4.5.6.

**Wrong Ref I suspect - 4.5.6 is Materials Handling**

**Has the spontaneous combustion of the wood chip stack been considered? If water is required to prevent this it likely this would be a significant water demand.**

**Date:** Wednesday, 22 May 2019 9:16:18 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Lorcan Higgins

- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Harry Wagstaff

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Gail Maddern

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Graeme Morley

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Sidney Sneddon

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it is abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

James Robert Ness

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Narna Makins

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jack Slykhuis

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Jack Talbot

Dear Minister,

**RE: Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

I have had a brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent of this development.

I **strongly believe** this development should not proceed at Smith Bay.

I am also unsure why KI Plantation Timbers were given Major Development Status for a development that I strongly believe will be destructive for the Smith Bay area. I also believe there are other sites that could have been carefully considered where these impacts may be avoided or managed to a greater degree, or in an area where previous industries have existed and therefore the impacts have already been felt.

With regard to the EIS, I have several areas of concern. In particular those areas relating to Biosecurity and Environmental Impact. It seems apparent that the proponent agrees impacts are inevitable as the result of its actions in Smith Bay, and there are I believe, significant risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years (which I also feel will be put at risk by this development).
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will cover the community costs it refuses to meet. I do not believe that our community has the capacity, nor should it be required to pick up such costs for a commercial, private development. While surveillance is necessary, and important, it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever. I can only imagine the impact this would have on this piece of coastline that is currently exotic pest free.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest (which can be introduced via ship ballast water, on vessel hulls or in internal seawater systems), grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the

Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it currently hosts and supports be threatened in such a way. Further, nor should the local recreational fishers and community members who enjoy the current fishing environment be subjected to this either!

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests. Why should Smith Bay be put at risk, if this is a seemingly likely outcome (or even if it is a remote outcome).
- I do not understand how Smith Bay can possibly be protected from this inevitability, even with the most careful plans in place! I feel that the proponent has not adequately demonstrated that it can ENSURE the biosecurity of this precious place. It also seems that the proponent has little experience in marine environment management. I believe this place should be protected from such risks and that plans for this should be presented in a comprehensive manner and the community assured of a safe and secure outcome for biodiversity.
- I also firmly believe that the community and local ratepayers should NOT be having to wear any extended costs should these risks come to fruition. Our Council already struggles to maintain the assets it has under its current care and low rate-base.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- I am concerned that the public statements made by representatives of Kangaroo Island Plantation Timbers regarding the opinion that Ballast Head is steep and shallow – given that most of the residents know the reality of this situation is that Smiths Bay is shallower than Ballast Head, and notwithstanding that there is actually old seaport infrastructure at Ballast Head!
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore. I know this as my family and I have lived and fished in this area for over 20 years.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can “offset” by planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

With regard to the EIS, I am ALSO very concerned about the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC). I live nearby to this area, and the environment in one of the

things I care greatly about. I feel that there are several key considerations that need to be very carefully considered.

### **Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay. (As are the resident population of bottle-nosed dolphins that frequent this coastline.)
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this impact are inadequate at best and are presented in a careless manner. These factors **MUST** be considered.
- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- There are very few white bellied sea eagles left in the world, and with known nesting sites nearby I am not only concerned about the impact on them, I also know that in proposing a local development myself I had to give due consideration to this species as they are highly sensitive to new movements and developments – How can a development at this scale **NOT** have to provide the same regard – especially when the foot-print of this development is exponentially larger! Let alone the “at-sea” impacts of the foraging zone of this species.
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates of a variety of species.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.

- As referenced on page 44 of the proponent’s EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean’s revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay, as a local I know the value of this area.

I **implore** you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal, not only for the reasons outlined above that relate to the EIS but also for the broader community concern regarding the impact this proposed development will have on our community, our roads, our local council, and the questionable long-term sustainability of this industry on our Island. We have all been around long enough to see proposals such as this come and go, and we as residents are then left to foot the bill and clean up the mess – this is not acceptable – nor a risk I support being taken.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

*Frank Berden*

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Beverley Bernhardt

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

William Bernhardt

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

**Date:** Thursday, 23 May 2019 9:01:02 AM

---

Dear Minister,

**RE: Local infrastructure concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this anywhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Kangaroo Island's road network and the community's trust in its local businesses.

**Traffic and Transport**

- Kangaroo Island's road network has limited carrying capacity and has not been developed to support the heavy vehicle traffic proposed by Kangaroo Island Plantation Timbers. It can barely cope with existing vehicles and their frequency.
- The company's EIS in support of its own proposal does not address or outline how it intends to fund the necessary road upgrades to better protect other users, or the maintenance of roads to support its Smith Bay infrastructure.
- It proposes heavy vehicles not used on Kangaroo Island's sub-standard roads, and without making any contribution to road safety or capacity, presents the Island with the certain threat of what has happened with log trucks in Glenelg Shire in Victoria.
- Kangaroo Island Plantation Timbers' land is mainly on the west of the island, more than 100 kilometres from Smith Bay and the sealed KI Ring Route. So why build this Seaport so far from its own plantations?
- Why replicate the horror of the Glenelg Shire, whose bitumen highways have been torn apart by B-doubles carrying logs to a chip mill at Portland? The Green Triangle's roads have been asked to support [535 heavy-vehicle movements a day](#).
- To maintain the current Kangaroo Island road network, an average of at least \$5 million will be required annually for the next decade.

In [response](#) to a Parliamentary question from Mark Parnell MLC, the Minister for Transport, Infrastructure and Local Government, Stephan Knoll, confirmed Kangaroo Island Plantation Timber's "...proposed freight routes would require upgrading to accommodate the freight task..." and that as "...the roads in question are local roads under the care and control of Kangaroo Island Council, there is no intention for the State Government to commit to a contribution towards the upgrade of local roads, should the development be approved..."

- Does this mean if your Government gives this proposal a green light – despite the guaranteed impact seen across the border in Victoria – it also expects a small community of Kangaroo Island ratepayers not just to live with this road trauma nightmare, but also to pay the costs of your decision?
- Degrading the road network so dramatically threatens the tourism industry (already at risk). It also constrains mobility for other industries (particularly primary producers) reliant on roads to trade, damages amenity across the island, and places the lives of every road user at greater risk.

### **Community**

- In its spruiking for a seaport at Smith Bay, Kangaroo Island Plantation Timbers has been fluid with the truth, not least in how it stacks up the apparent benefits for Kangaroo Island.
- The EIS suggests this proposal will create approximately 230 FTE jobs on the Island.
- That is, indeed, a bold claim, Minister. Especially since there is no picture of the long-term viability of these jobs, who will fill them, what skills will be required, how many will fly in/fly out, and how many will be imported. This will put under even greater pressure an already challenging housing, energy and public infrastructure supply.
- By comparison, two other much larger woodchipping facilities at the Port of Portland in Victoria and at Bunbury Fibre Exports in Bunbury, Western Australia employ less than 70 and 16 full time employees respectively.
- The entire workforce of OneFortyOne Plantations totals 64 FTE managing 80,000 hectares of Green Triangle plantations. Kangaroo Island Plantation Timbers manages 14,000 hectares. The company's claim of 230 FTE is, in the true sense of the word, incredible.

Thank you for taking the time to consider my objection to this proposal.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Lauren Doxey

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Tasnim Tahrin

## Summary:

1. Kangaroo Island's roads are not suitable for timber trucks.
2. Semitrailers, B-Doubles or A-Doubles will create a huge traffic hazard for locals and tourists.
3. Although KIPT say in their EIS that dust will just fall to the side of the road; that is just not correct. During dry times of the year dust from an approaching vehicle creates a huge dust cloud on the road making it very hard or impossible to see other traffic.
4. KIPT state that noise levels will not be any greater than at present. At present we do not have constant roaring of heavy vehicles going 24 hours a day 7 days a week. This noise pollution could easily cause people to have a mental breakdown after long exposure.
5. KIPT does not seem to consider that their huge volume of traffic will have any detrimental effect on wildlife, but the large increase of heavy vehicles travelling 24 hours a day 7 days a week certainly will impact on wildlife. Currently there is the occasional truck – not continuous heavy vehicle traffic especially at dawn and dusk.
6. KIPT acknowledge that road upgrades will be required for their trucks and they expect the Kangaroo Island Council and The Government to supply and pay for this.
7. KIPT recognise that when roads become impassable due to deterioration that they would have to use alternative routes. They will ruin the road network on Kangaroo Island and expect the authorities to repair their damage.
8. KIPT state that local residents would become familiar with their main route and may choose alternative routes and signage could be used to encourage tourists to avoid these routes. That will not be possible for many people or tourists who want to travel to tourist destinations, as the heavy vehicles will often be using all the routes available for them to travel.
9. KIPT expect property owners to noise proof their residences with double glazing, insulation, high fences, acoustic screening, etc. Who is going to pay for all or this? What about the poor pensioners who cannot afford to do any work on their property? How unfair is that? Because KIPT are going to make loud noises so they can make money, they expect the public to sound proof their residences. It is acoustically very difficult to protect against low frequency truck noise.
10. KIPT say they would prefer to use a defined transport route and high productive vehicles. However, they intend adopting an open plan network transport model to allow for uncertainties caused by weather and other road conditions. "Other road conditions" will be when they cause severe rutting and the roads become impassable because of all the heavy vehicle traffic. They will then use alternative routes and then destroy those roads too.
11. KIPT will take over most of the roads on Kangaroo Island and it will become like Russian roulette to travel on Kangaroo Island roads.
12. The Government needs to decide whether to allow the wreckage of Kangaroo Island's roads or allow tourism.

The Government needs to decide which is more important to them – the Tourism Industry or allowing an industry which is going to destroy the unsealed road network, take over the Island, ruin the Tourism Industry and destroy the life style of the local population (voters).

Kangaroo Island is promoted as a clean green place with lots of wildlife, a quiet place where there is not much traffic. Who will want to come to Kangaroo Island to view lots of squashed wildlife and put up with the noise of roaring semitrailers, A-Doubles or B-Doubles, 24 hours, 7 days a week?

KIPT intend running their heavy vehicles every 20 minutes 24 hours a day 7 days a week. They say their preferred route is Playford Highway, Stokes Bay Road, Bark Hut Road, McBride's Road and North Coast Road to Smith Bay. Bark Hut Road, McBride's Road and North Coast Road are all unsealed.

KIPT are also looking at running B-Doubles and A-Doubles. It will be a danger for other travellers along these unsealed roads. Many cars will suffer smashed windscreens from flying stones.

Allowing timber trucks to travel on Kangaroo Island's roads is going to wreck the roads, especially the unsealed roads. The volume of traffic proposed by KIPT will degrade and destroy the roads very quickly. KIPT expect the KI Council to repair these roads at council expense. This is so KIPT can make a huge profit. Their EIS states that locals will possibly use another route to avoid the timber trucks, but there is no way anyone based at Stokes Bay can avoid the timber trucks if travelling to either Kingscote or to the ferry.

I remember many years ago when timber trucks used to travel along Bark Hut Road. Bark Hut Road became almost unusable after the timber trucks had been travelling along it after only a few weeks and there was not the volume of traffic that KIPT is proposing.

Kangaroo Island roads will not cope with this amount of traffic.

Travelling along any unsealed roads used by KIPT is going to be a hazard for tourists and ordinary travellers, especially for cyclists, due to narrow roads, loose corrugated surfaces and DUST... Dust will drift across the side of the road blanketing anything nearby. During dry weather the dust will cause serious visibility problems caused by trucks.

What about the dust blowing over the properties from the semitrailers constantly travelling along these unsealed roads?

At certain times of the year there can be thick fog blanketing the road making it almost impossible to see any traffic approaching.

I read that the Government and the Kangaroo Island Council have said they are not going to provide funds to upgrade the unsealed roads for the timber trucks. These unsealed roads will become impassable to all traffic.

McBride's Road is unsuitable for A-Doubles and B-Doubles or even semitrailers without extensive upgrading. Therefore, the trucks will possibly travel along the North Coast Road and up Stokes Bay Road. This will cause noise pollution and a danger from heavy vehicle traffic to the newly upgraded Stokes Bay Caravan Park, The Rockpool Café, Table 88, Waves and Wildlife Cottages, Paul's Place, The Bush Garden and all the other tourist accommodation and people living at and near Stokes Bay.

People will not want to stay in ANY area where the trucks are roaring past 24 hours a day 7 days a week. Most tourists come to Kangaroo Island for peace and quiet, the wildlife and scenery.

What about the people who live along their route or any route the trucks intend to travel and those people within a 20 Km radius? The noise will be horrendous if trucks are going every few minutes 24 hours per day every day. **This is noise pollution.**

People move to Kangaroo Island for the peace and quiet not the constant noise of trucks roaring past 24 hours a day 7 days a week. It would be a nightmare to have roaring trucks even if it wasn't every few minutes 24 hours a day 7 days a week. Any property along the Stokes Bay Road will be affected by the heavy vehicles roaring up the hills. That is not fair on the local people and tourists staying there.

If the Government does approve KIPT's vehicles, then there must be a curfew at night and week-ends so the local people and tourists can have some respite for sleep and weekend recreation no matter where KIPT's port is situated.

What about the roads with that amount of traffic? I asked if KIPT intended to do any maintenance work on those roads and their answer was that it is a Council problem as they are public roads so Council has to maintain them.

If they are public roads, how are the public going to be able to travel along them if the trucks are roaring along in both directions every few minutes all day and night? There will be accidents and deaths!

What about the tourists? They won't want to travel along the roads with that amount of traffic. It is very difficult to pull over due to the build-up of loose dirt and rocks on the edges.

McBride's Road is often closed to traffic, especially in winter, due to road conditions. In the 2018 year it was closed for a large amount of the year. It is a narrow unsealed road and would be difficult for two semitrailers to pass going in opposite directions. KIPT expect Council to widen McBride's Road and do construction work on it so that their trucks can travel along it. Admittedly, they are looking to the SA Government for funding.

I asked what they would do if they couldn't use McBride's Road and was informed that they could use whatever public road they wished!

However they said that if McBride's Road **becomes** unsuitable to use, they will travel another route along public roads. That obviously will be North Coast Road to Stokes Bay and Stokes Bay Road to Playford Highway. It won't take them long to destroy these roads.

If there is that amount of KIPT traffic travelling along any unsealed roads, then they will become impassable for normal traffic. The roads will deteriorate quickly, so KIPT will find other routes (e.g. Rose Cottage Road and Springs Road – both also unsealed) and destroy those too, but they will still have to go through Stokes Bay.

KIPT had considered using Playford Highway, Ropers Road, Gap Road, North Coast Road to Smith Bay, but I understand that they believe that Kohinoor Hill is too steep for their vehicles. Ropers Road, Gap Road and North Coast Road are unsealed. One of the hills on Stokes Bay Road is also very steep.

With that amount of traffic on unsealed roads, what about the number of windscreens that will be broken? How are people to get to Kingscote to do their weekly shopping without risking their lives?

I travel frequently along North Coast Road and have had my windscreen broken once and hit several times by stones flying up from passing vehicles – and that's just from cars not large timber trucks.

North Coast Road, Stokes Bay Road and Playford Highway are school bus routes. This KIPT traffic could be a danger to children.

Why should KIPT be allowed to wreck the unsealed roads and expect Council to upgrade them, ruin the tourist industry and create noise pollution just so they can make money?

Unsealed roads should NEVER be used by semitrailers, B-doubles or A-doubles 24 hours a day 7 days per week by a private company who will profit at the expense of the Kangaroo Island Council, tourism and the local population.

There will be an absolute slaughter of wildlife, especially with the heavy vehicles travelling at night. This is not a good look for Kangaroo Island tourism. Most visitors wish to experience the wildlife. After a few years of the trucks there will be little wildlife left.

If the Government does go ahead with their approval, then there must be a curfew on night time travelling of these trucks. My suggestion is that the curfew be between 7 pm and 7 am and that the Government ban the use of these heavy vehicles on week-ends and public holidays.

Unfortunately, once KIPT is given permission to go ahead with their destruction of Kangaroo Island, then they will use any public road they like. It will not limit them to any particular route the government may believe they will travel along. Looking at their EIS it appears that they intend using a large network of roads all around Kangaroo Island, most of them unsealed.

I bet not too many politicians know how bad the unsealed road situation is on Kangaroo Island. How many have ever driven regularly on unsealed roads which are often slushy in winter or shrouded in blinding dust in summer months?

So what does the Government want; to keep a Tourism industry or allow the timber industry to destroy Kangaroo Island?

## Submission on the Smiths Bay Wharf Project

The MFA represents around 300 licence holders in the marine scale fishery. Our representatives have met twice with KIPT Peter Lockett regarding this development once in Adelaide at a WCFSA board meeting and with the two main affected fishers on Kangaroo Island. At both meetings concern was raised about various aspects of the project to which none to date have been answered.

1 The wharf and associated dredging will have a direct impact on two marine scale licences holders who target squid, snapper and whiting (mainly in winter) this has been compounded by a closure for whiting during May leaving a limited area of access adjacent to the coast.

1a. It is noted that the dredging footprint extends to sea with little angle east and west this doesn't seem consistent with a practical approach angle from a panax vessel so we believe that area of damage from propeller wash will extend outside of the proposed dredged area

1b. In April 2018 Peter Lockett met with the two main affected marine scale fisher one of which is based in the eastern Smiths bay averaging approx. 150 days a year. Both Fishers were quite familiar with the area in question having seen the survey work and darter collection buoys. Mr Lockett was advised that a wharf would have a direct impact on their income if it were to go ahead. He was asked did KIPT have policy to mitigate their losses? to which there has been no response.

2. Wharf, if a port was established, we would expect it to fit for purpose and able to cope with the environmental conditions that avail. There is doubt that a barge of the size proposed would maintain its positional integrity in what is exposed coast prone to heavy weather during winter. Where else in the world is this concept used in these conditions?

2a Causeway construction two questions what stops the spoil /fill washing away before it is armoured. at Emu Bay during the ramp upgrade they were unable contain mail fill in shallow water in an area less than 100 x100 metres now there are traces of limestone over 2 kl away on the eastern end of the beach.

2b material for the armoring when the breakwater at Penneshaw was reinforced all the stone was sourced from the mainland and trucked a few rocks at a time via Sealink. Dose KIPT understand the logistics of acquiring the quantity of material needed and getting it to sight.

#### Other concerns

Where and how will the vessels arriving at Smiths Bay be checked by quarantine / customs

Will the vessels be left unattended (no Tug) after berthing and have to leave the wharf unassisted?

#### Thoughts

KIPT has said it will be mitigating losses of seagrass by investing in habitat restoration in Nepean Bay this is yet to be proven successful and like it or not the contributing cause may never be address properly. The biodiversity at the proposed dredging sight isn't under the same stresses so you can't compare the two. It is doubtful that KIPT will retain the same ownership if a port is established. Where is guarantee that its corporate conscience is transferable when it comes to any mitigation issues.

#### Fishers loss

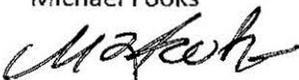

It is interesting that they were able to do a fatality estimate on echidnas yet failed to mention the impact on two fisherman's incomes perhaps to them it was acceptable like the echidnas. The fishing industry has been through the challenge of losing area and from experience it as not as simple as going just going somewhere else. This needs issue needs to be addressed.

#### Responsibility

The reasoning for mentioning the wharf constriction and pontoon for birthing was because a failure in the integrity of either would possibly see an unusable facility along with extensive clean-up bill. For example, the pontoon breaks free of it tethering and ends up on the Smiths Bay beach.

The fishing industry understands that there is a resource on Kangaroo island to be harvested and a port is part of the equation but in our view a more suitable alternative needs to be explored.

Dear Mr. Stephan Knoll,

I am writing an **objection** submission on behalf of the Kangaroo Island Wildlife Network, regarding the proposed Deep Seaport at Smith Bay.

Although our membership has varying views on the proposed development, we are all united on the issue of the inevitable increase in roadkill and road trauma involving wildlife.

- “ The number of echidnas likely to be killed by haulage trucks travelling from plantations to the KI Seaport and back is estimated at between six and 21 a year. The assessment concluded that there is potential for residual significant impact to the Kangaroo Island echidna and an offset under the EPBC Act is required.”(pages 44-45 Executive Summary KIPT EIS) ‘ Mitigation’ by funding the feral cat program on the Dudley Peninsula does not address road deaths of echidnas on the Western end of the Island. A study on echidnas on the western end of the Island is warranted to determine the real impact on echidnas where they are likely to be impacted, to develop a proper management plan.

**- Will KIPT do an appropriate study on echidnas before harvest begins and who will monitor the outcomes?**

- As a small group of volunteers dedicated to the rescue and rehabilitation of Kangaroo Island’s unique wildlife, we already struggle with the amount of injured and orphaned animals that require our attention. We work closely with DEW to manage call outs as effectively as we can, but it is a struggle for both organisations to do this efficiently and in a timely manner. The lack of volunteers available as well as the dispersal of the population is our biggest obstacle.

**- Does KIPT have a management plan for increased roadkill and road trauma victims from trucking activities?**

- The corner of Rose Cottage Road and the North Coast Road has identified known Glossy Black Habitat in the form of food trees (sheoak) and potential future nesting sites in older sugar gums. This corner is on two of the preferred trucking routes.

**- How does KIPT plan to minimise the disturbance to this *endangered* species on these particular proposed trucking routes?**

- The total number of recorded whale sightings from 2006 from multiple sources, is 67 of which 9 were Humpbacks, 3 were unconfirmed species, 53 were confirmed Southern Right Whales. Although only a hand full of our volunteers are trained in Marine Mammal Rescue, we are concerned with KIPT's accuracy of statistics regarding Whale numbers sited at Smith Bay. We are aware through personal experience and anecdotal evidence of the regularity of Dolphins migrating through Smith Bay regularly. We would be very disappointed if these animals are forced to move elsewhere due to higher traffic in the Bay, toxicity from multiple sources and any general disturbance caused by the change of use to the coastline at Smith Bay.
- We know Rosenberg's goanna is not listed on the EPBC, however, it is listed as vulnerable and Kangaroo Island is it's last stronghold. "Due to their attraction to carrion, the rate of Rosenberg's goanna deaths increase in line with the amount of traffic around the Island"(Natural Resources Kangaroo Island Website)

**- With increased carcasses on our roads, there will be increased activity from scavenger species, including the Rosenberg Goanna. How will KIPT manage this issue?**

- We understand that koalas are not addressed in KIPT's EIS, however we feel this is a major oversight in the government's requirements for the EIS. We believe the existence of large koala populations living in the plantation timber sites could alter the forestry management plan for harvest. If harvest becomes financially prohibitive because of koala densities in the plantations, KIPT could potentially abandon harvest. With no product or minimal product to move off Kangaroo Island, we would have a port with no purpose.

"There is extreme risk for koalas resident in blue gum plantations to be injured or killed during harvest operations. It is therefore important that appropriate measures are taken to manage this risk.

There is also likelihood that koala welfare maybe adversely affected as a result of their habitat ( blue gums) being harvested." ( Australian Blue gum Plantation's Koala Protection and Management Plan)

The movement by koalas from Plantation Timber into native vegetation is inevitable once harvest begins. Considering the estimated populations in both the plantation timber as well as the native vegetation, this is an ecological disaster in the making. Not only is there potential for thousands of koalas to starve to death but there will be an overall effect from over browsing by koalas on other native species who depend on this habitat to live and reproduce.

**- Is KIPT prepared for the cost of managing koalas in their Plantations and is there documentation to show this is a factor in their harvest plan budget?**

We look forward to our questions being addressed by KIPT in a timely manner.

Regards,

Kangaroo Island is the best known tourism destination in SA and the 4<sup>th</sup> most recognised tourism destination in Australia. It is world renowned for its rare wildlife and pristine habitats and is often called Australia's Galapagos. This recognition is based on the belief that "Remoteness and isolation has created a special environment....too good to spoil"

Tourism expenditure in SA in 2018 was \$6.8 billion.

The Smith Bay port development must be considered in this context. The impacts of any development are amplified in this "special environment". They are listed below.

### Traffic and Transport

- The massive increase in heavy vehicle volume resulting from the development will harm KI's reputation as Australia's Galapagos and will hurt the visitor economy. 40,000 (one way) 30 ton truck movements per year will tarnish the islands pristine reputation and will degrade the visitor experience.
- The EIS does not coherently explain the impact of massive changes in traffic volume. Will trucks run 12 hours per day or 24 hours per day and how many days per year? The dirt roads used by heavy vehicles will quickly become impassable. Road closures due to inundation are already common on KI. More details are needed on the impact of intensive heavy vehicle volume on roads and on plantation land that intersect the watersheds of the Southwest, Northwest, Harriet, Eleanor and Stun sail boom rivers (to name a few). These pristine watersheds are highly vulnerable. A detailed protection and remediation plan is required. ? Who will supervise and fund the protection of these watersheds?
- The harvest raises many questions. It will be delayed during times of extreme bushfire risk and by extreme weather. Will this result in surges in transport activity to meet the shipping schedule. Will it require alternate routes due to road closures?
- Harvest transport patterns will increase the volume of roadkill (see roadkill period below)
- The EIS does not explain what phytophthora hygiene measures will be practiced
- the EIS sets out theoretical daily heavy vehicle volumes on minor roads in table 3 of the Walbridge& Gilbert route assessment(W&G RA) . This theoretical assessment is superficial and inadequate because amongst other things it assumes that the minor roads will remain in a suitably good condition to remain passable in all-weather to a 30 ton vehicle after extremely heavy use. The KI Council cannot maintain the roads at present so how will they be able to handle this dramatic increase in volume. KI roads regularly become temporarily impassable at present due to storms etc usually flooding or trees down. Low lying areas and creek crossings become bottle necks. This will cause trucks to be diverted to the paved roads. The end result being that the South Coast Road (the major tourism corridor between Seal bay and Flinders

Chase) is at risk of receiving all the diverted traffic from Baxters Rd, Gosse Ritchie Rd, Church Rd and Mt Taylor Rd. To improve these roads to all weather condition suitable for 30 ton vehicles will require very major investment. For the W&G RA to be realistic a proposed bridge and road works budget should be included.

- The South Coast Road west of Gosse Richie Road is bordered on southern side by National Park, Conservation Park, and Hanson Bay Co land (an area that was heritage listed in the Register of the National Estate due to its wilderness quality and use as a wildlife corridor). It is also a major tourism corridor. High volume use of heavy vehicles in this area will gravely threaten the character and significance of this area due noise, light, air pollution particularly during the road kill period (definition below)
- Hanson Bay Co runs a tour business bordering the South Coast Road. The flagship product is a nocturnal tour that starts at sunset daily and was recommended by National Geographic. Heavy vehicle traffic will generate noise, light, air pollution which will severely threaten this business by degrading the environment. How many heavy trucks does it take to destroy the wilderness quality of a region?
- We estimate that less than 3% of traffic on the South Coast Road (west of Gosse Richie Rd) and West End Highway currently is after sunset. We recommend a roadkill period speed limit of 50-60 kph to our guests (usually in a rental car or a city car without roo bar). Increase in traffic (and especially the speed of traffic) during the roadkill period will have devastating consequences due to noise, light and air pollution and massive increase in roadkill and disruption to nocturnal wildlife patterns.
- Western KI is reknown for its pristine qualities. It is a dark sky region. It also has some of the worlds cleanest air and least developed land. If there is a massive increase in truck traffic especially during the roadkill period it will forever change this environment and erode these pristine qualities in the corridor of each road. The trucks require a curfew. The W&G RA report is disingenuous and downplays the impact of increased heavy vehicle traffic volumes. It is simply not valid to compare the Playford Highway to the Riddoch Highway. Table 4 Projected Road Network Traffic Volume Increases does not address the issues adequately especially considering that 3 of 5 the road sections border Flinders Chase National Park. What percentage of existing daily volume occurs during the roadkill period? What percentage of existing daily volume is tourism related? What percentage of existing daily volume is heavy vehicles? What percentage of the Forestry traffic will occur during the roadkill period? Tourists (especially those in rental cars) tend to drive much slower than average especially during the roadkill period. Until these questions and others are answered it is not possible to evaluate the impact of forestry traffic on Western KI. Driving heavy trucks all night at the speed limit would have an immeasurable impact on the ecology of western KI with rapid negative flow on effects on the visitor economy

Economy

- This development will have a very negative impact on KI's reputation as Australia's Galapagos. Will this have a flow on effect on all SA tourism? Many international visitors rank KI as the reason to visit SA. If KI's reputation is hurt then the SA tourism industry will be hurt as less international visitors will visit the state. A 5% drop in tourism spending would result in \$340 million drop in expenditure in SA.
- The EIS does not address tourism industry job losses. This development will add jobs in forestry and related industries but will it result in net job growth for KI? Will this development result in net job growth or net job losses for SA?

## Native Fauna

**The EIS makes no mention of the traffic impact on Rosenberg goannas.** Kangaroo Island is the last stronghold for Rosenberg's Goannas but the population is also declining here. On the mainland numbers have fallen so drastically they are now listed as vulnerable to threatened. **Harvest will negatively impact the goanna population.** The echidna is a matter of National environmental significance. We expect the goanna will soon be added to the EPBC list and therefore we request that an EPBC offset be added.

- "Due to their attraction to carrion, the rate of Rosenberg's goanna road deaths increase in line with the amount of traffic around the island – the summer holiday tourism season has previously seen more than 570 reported " (NRKI website) ie killed on the road. As tourists and NP staff are generally interested in goannas they would avoid them at all costs by slowing down to observe , photograph and protect them. Heavy vehicles with limited ability to maneuver , higher speeds and tight schedules to keep will likely not protect goannas the way tourists do.
- The EIS assertion that local and tourist traffic would remain the most significant cause of road kill is questionable, simplistic ,controversial and likely wrong.
- Road kill (mostly kangaroos, wallabies, birds and ferals) occurs predominantly between the period commencing 1 hour preceding sunset and 1 hour following dawn (**road kill period**). This means there are on average less than 9.5 safe driving hours per day for 6 months of the year. Tourists and tour operators generally avoid travelling during the road kill period. Assuming a 12 hour harvest transport day then approximately 25% of KIPT traffic would occur during the road kill period (on average during the 6 cooler months). If it is a 24 hour harvest day up to 66% of daily KIPT traffic would occur during the road kill period.
- Traffic poses a significant risk to goannas. Due to their attraction to roadkill and carrion, goanna road deaths increase when traffic increases and will likely grow exponentially when harvest starts.

## Echidna

- Traffic poses a significant risk to echidna. The EIS does not provide enough detail on the impact that harvest traffic will have on this species. We believe that the estimate of 6-21 deaths is too low and not well supported by analysis.

#### Koala

- While not covered by the scope of this EIS it is worth noting that there could be in excess of 5 koala per hectare in the KIPT plantations and the population can double every 3 years. There is no way to harvest the blue gums without seriously impacting/displacing the koala population. Given the koalas iconic status to international tourists and the fact that a number of plantations border the South Coast road tourist corridor KI's reputation and visitor economy is very vulnerable to negative publicity.

#### General Concerns

- KIPT is a very small public company with no track record. It is highly indebted and only \$4.3M cash on hand but bank debt of \$27.7 M at 31/12/18. It has negative net cash flow from operating activities of \$7 M for year ended 12/18. Due to the negative cash flow the long term viability of the proponent is uncertain.
- There is no guarantee that the company will ever be profitable. Revenue is planned to be derived from a cyclical commodity harvested in a high cost location subject to swings in price.
- Management is very highly incented to obtain development approval. After the development decision has been made KIPT is unlikely to remain in its current form. If Smith Bay port is not approved KIPT will shrink. If it is approved KIPT will likely be sold ( they already state they are Australia's only listed timberland company)
- KIPT proposes a vague EPBC environmental offset for impact on echidna. Given that KIPT is a highly indebted company with negative cashflow and uncertain prospects it may never be able to meet its offset obligations. Further given that the impacts of harvest traffic will start immediately better assurances are required to ensure the offsets are actually made.
- Using the following assumptions:

5 koala/ ha at 31/12/18

koala population can double every 3 years

harvest commences on 1/1/22

10-20 (low estimate-high) trees are set aside for each koala

750 trees / ha.

At harvest commencement (14- 27%) of the trees will not be available for harvest and just 3 years later 27-54% will need to be set aside to maintain Forest Stewardship council certification. This certification is very important to the owner and to KI's reputation.

If the development is approved there is a serious risk the proponent (or a new owner) will at a later date seek to loosen the conditions of approval or will simply not be capable of meeting commitments. During a downturn in the commodity price cycle or a period of strength in the A\$ the owner will find the project is at risk unless environmental standards are lowered. **This project is a Faustian bargain for SA. It is a tradeoff between KI's pristine environment (the primary driver of the states high yield tourism initiative ) and forestry.**

May 24, 2019

I have visited Kangaroo Island and stayed with my friend there. I always enjoy finding new experiences and places to visit.

One place I had never visited as a tourist was Smith Bay – because I had never heard of it. I went there recently to see what all the fuss was about over the new wharf that is planned to be built there.

It's not a great place to visit as a tourist. There is no sandy beach – just rocks. On the land, there is an abalone farm and all the native vegetation has been cleared for farming.

It's obviously not a place that people visit so I think it would be the perfect place for a wharf to export the timber from the Island.

I think the Island needs more people so they can have better offerings for tourists and businesses can stay open all year. Cutting down the timber will create lots of jobs, which will bring people to live there.

Yours truly,

Elyse Smith  
Coromandel Valley

## Submission regarding the proposed Kangaroo Island Plantation Timber port at Smith Bay

May 2019

Mitsui & Co. (Australia) Ltd. (Mitsui) welcomes the opportunity to make a submission regarding the proposed Kangaroo Island Plantation Timber Ltd (KIPT) port at Smith Bay.

The South Australian Government's rigorous assessment process, including the requisite Environmental Impact Statement (EIS) provides a valuable opportunity for constructive community, industry and regulatory consultation on the proposed development.

### **Mitsui in Australia**

Mitsui is a global trading and investment enterprise, and a long-term partner of Australia.

As Australia's fourth largest exporter with \$8 billion in total exports annually, we are helping deliver lasting benefits for the nation's future.

We have invested more than \$15 billion in Australia over the last decade alone, including in significant renewable power infrastructure in South Australia. We continue to work as a trusted partner with local businesses to identify new opportunities and create new trade flows that strengthen the national economy.

Mitsui is proud of our history in Australia and the work we do. Our investment in Australia extends to contributing to the community through activities outside our core business, specifically in the areas of international exchange, education, environment and sustainability.

### **Mitsui Bussan Woodchip Oceania**

Mitsui Bussan Woodchip Oceania Pty Ltd (MWO) is a wholly owned Australian based subsidiary of Mitsui & Co. Ltd.

Over several decades, MWO have heavily invested in Australia's forest products industry. MWO's involvement in the forest industry spans the entire supply chain - from planting seedlings, to processing timber, to delivering wood products to customers throughout Asia.

MWO is a valued partner in and trusted operator of sustainable forestry resources across Australia. These investments include timber plantations and processing and exporting operations in South Australia, Victoria and Western Australia.

### **MWO's partnership with KIPT**

MWO and KIPT have executed long-term offtake agreements for the timber products growing on Kangaroo Island (KI). The arrangement gives MWO exclusive access to a valuable resource during a period of anticipated scarcity, while giving KIPT the security of dealing with a highly regarded and reliable trader, marketer and offtake partner.

## Submission regarding the proposed Kangaroo Island Plantation Timber port at Smith Bay

May 2019

MWO is also the exclusive developer and operator of the proposed woodchip handling facility. Plans for the facility include infrastructure capable of receiving, screening, stockpiling, sampling, and loading woodchips into bulk vessels for export. MWO operates similar facilities at Bunbury, in Western Australia and in Portland, Victoria.

Through its ongoing investments and activities, MWO is a significant contributor to the local economies and communities of Portland, Myamyn, Collie and Bunbury, in addition to the benefits flowing to the wider regions. KIPT will work closely with MWO and draw on their extensive experience managing woodchip-handling facilities to ensure the operations are efficient, safe and integrated into the local KI community.

### **Environmental Impact Statement for the proposed port facility at Smith Bay**

KIPT has undertaken a comprehensive environmental assessment to define the EIS for the proposed wharf development. The EIS addresses the anticipated impacts of the development and demonstrates that the environmental effects will be minimal and manageable. Where necessary it proposes sensible and effective avoidance and mitigation measures.

The EIS also clearly identifies that the project and the development of the timber sector on KI will generate significant benefits for the island, the state and the nation through export earnings, government revenue and local employment and business opportunities.

The EIS clearly identifies the environmental, commercial and geographic advantages of Smith Bay over alternative locations that make it the best site for the development of a deep-water port that will be the cornerstone of an enduring, sustainable industry on the island.

### **Support for a sustainable Australian forest industry**

Mitsui and MWO are proud supporters of a sustainable Australian forest industry.

Sustainably produced wood and timber products offer a suite of benefits – being renewable, reusable, recyclable, and biodegradable. Sustainably managed forests and plantations absorb immense volumes of CO<sub>2</sub> every day, storing that carbon in our homes and household products.

KIPT have achieved Forest Stewardship Council (FSC) and Program for the Endorsement of Certification (PEFC) certification for the hardwood plantations growing on KI, making them among the most sustainably managed forests in the world.

23 May 2019

**Minister for Planning**

c/- Mr Robert Kleeman  
Unit Manager Policy and Strategic Assessment  
Department of Planning, Transport and Infrastructure  
GPO Box 1815  
ADELAIDE SA 5000

[majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**Letter of support  
Smith Bay Port**

As you know, Flinders Ports is South Australia's leading port operator, with seven ports located at Port Adelaide, Port Lincoln, Port Pirie, Thevenard (Ceduna), Port Giles, Wallaroo and Klein Point. It operates and provides services at other third-party ports in South Australia.

Flinders Ports has an MoU in place with Kangaroo Island Plantation Timber Ltd under which it is contemplated that our company will provide port compliance and operations services at the proposed KI Seaport at Smith Bay, subject to final contractual arrangements.

We welcome the Marshall Government's policy focus on the importance of infrastructure to the community of South Australia. We also endorse unsolicited proposals to build infrastructure on the understanding they will deliver social and economic benefits to the State. We believe the proposed KI Seaport aligns closely with Government's policies, as a missing piece of infrastructure for the community of Kangaroo Island.

As you are aware, the port's proponents have pledged to make the multi-user facility available for third party access on commercial terms. This presents opportunities for containerised freight, bulky commodity products such as the export of grains and livestock, and the importation of fuels and fertilisers, as well as berthing intermediate size passenger vessels, subject in each case to regulatory consent.

The KI Seaport project proponents have the funding and the construction contracts ready to start. We are informed KIPT has offtake agreements for 100% of the timber products (both its own and those of independent growers) to be sold on completion of the port. The KI Seaport does not depend on favourable movements in commodity prices, nor does it require government financial support.

Flinders Ports acknowledges its commercial relationship with the proponents. The benefits to the community are wider than our interests and we urge you to approve and support this development at the earliest opportunity, so that the benefits can begin to flow and so that a much-needed piece of missing infrastructure can be provided to unlock the bulk freight potential of Kangaroo Island.

While the reason for building the facility relates to timber, the benefits will flow much more widely once the KI Seaport is in place. This is the enabling effect of key infrastructure, as you know.

Flinders Ports stands ready to play its part, to ensure that the facility is operated efficiently and for the good of the State and the community.

Yours faithfully

24<sup>th</sup> May 2019

Hon. Stephan Knoll  
Minister for Planning  
C/- Robert Kleeman  
Department of Planning, Transport and Infrastructure  
GPO Box 1815, ADELAIDE, SA 5000

By email: [majordevadmin@sa.gov.au](mailto:majordevadmin@sa.gov.au)

Dear Minister,

**Kangaroo Island Plantation Timbers Ltd – Smith Bay Wharf**

I write in support of the Smith Bay multi user deep water wharf proposal, and in doing so declare my interest as non-executive chair of the proponent.

Please consider the following in the context of a) the National Good, b) Regional Jobs and c) Sustainable Industry.

a) The National Good

On 22<sup>nd</sup> February 2017 (shortly after KIPT's deep water wharf proposal was declared to be of State significance by Deputy Premier Hon John Rau SC MP) the Governor of The Reserve Bank of Australia, Dr Phillip Lowe, issued a plea for business to take the lead in investing for growth and infrastructure. At the time, the RBA was yet to realise its expectations that an increase in non-mining investment would occur, and the stock of infrastructure spending in Australia (relative to the size of the economy) was the lowest since the 1970s.

Dr Lowe suggested there are limits to monetary policy and also limits to government's ability to borrow. "Government may not need to borrow much money, it may facilitate risk takers to invest in assets."

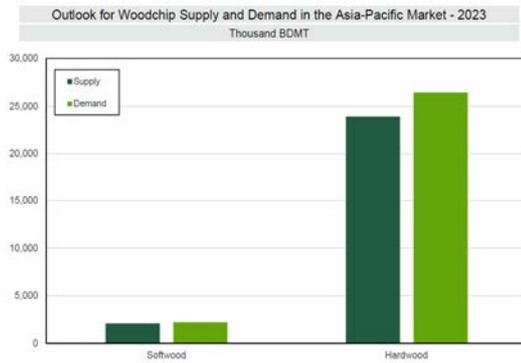

"We can't lift sustainable growth rates if the political class and business are taking actions that are lowering potential growth."

Dr Lowe's predecessor at the RBA, Glenn Stephens, called for "a confidence-boosting narrative from government alongside a pipeline of well-targeted infrastructure projects." To which well-respected economist Saul Eslake added "if that applies to regional and other areas outside of city CBDs that would be a good thing." Forestry, like farming, is a major contributor to regional economies, and is an important part of the social fabric of regional communities.

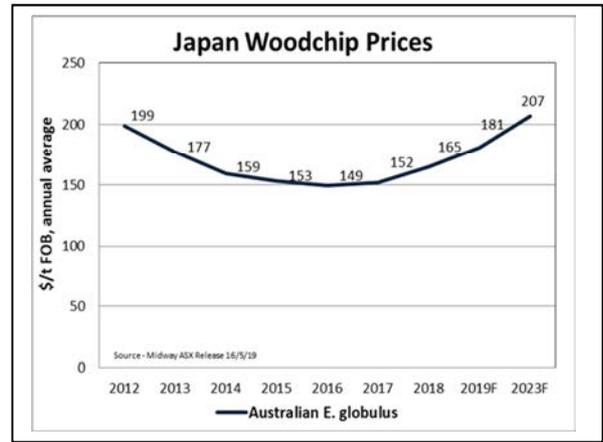

Economic and employment imperatives exist for timely approval of the proposed wharf.

## Asian demand to exceed supply for next five years

Source data: International Pulpwood Trade Review, RISI 2019

KIPT's offtake partner, Mitsui, is the 49% owner of the Portland facility, and is motivated to replace lower Green Triangle volumes with KIPT woodchips.

The combination of best-in-class growth rates and strong Asian demand will ensure the KIPT estate will be operated in perpetuity. The sustainable KI forestry industry will generate \$60mpa in export revenue, and involve direct costs of \$40mpa on KI and with mainland SA businesses.

KIPT has secured funding for the Smith Bay wharf, and does not require government financial support, other than assistance to the Kangaroo Island Council for roads.

Regarding implementation risk, I assure you of KIPT's (and our partners CBA and Mitsui) capacity to complete construction, employment, and exports on schedule.

Sensible infrastructure, especially that which earns export revenue, creates new permanent jobs, causes no damage to other industries, has a small environmental footprint, and features multi user import-export capabilities (as requested by government) transforms regional economies and acts as a buffer to future downturns by keeping the economy in robust health.

The Smith Bay proposal is compelling in every regard, and KIPT looks forward to an orderly, timely, evidence-based development assessment process and will meet its obligations fully and professionally at all times.

Please contact me should you seek further comment on any matters.

Yours faithfully,

Paul McKenzie  
Founder, Agrarian Management  
Chair, Kangaroo Island Plantation Timbers Ltd

**From:** [Klint White](#)

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Thursday, 23 May 2019 9:01:03 AM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Klint White

**Date:** Thursday, 23 May 2019 7:01:15 PM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Kiran Marfatia

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

**From:** [Kate Owen](#)  
**To:** [DPC:Premier](#)  
**Cc:** [Kate](#)  
**Subject:** Proposed port development at Smith Bay, Kangaroo Island  
**Date:** Friday, 24 May 2019 11:44:03 AM

---

**Dear Premier,**

### **Re the proposed development of a major port at Smith Bay on Kangaroo Island**

I am writing as a caring Australian, to express my deep concern and shame, that in the face of world-wide environmental concerns, a proposal like this is being seriously considered.

If you have been to Kangaroo Island in South Australia, you will know it is a precious and safe home for land and marine creatures alike. Right now, developers plan to build an enormous port in a virtually deserted bay where the endangered Southern Right Whales and other marine creatures raise their young. The entire bay will be irrevocably dredged and destroyed and the surviving whales will need to find another safe place in which to survive. The impacts on the whole North Coast will be massive. They will include toxicity being introduced to the marine environment, biosecurity issues with the introduction of pest species, noise impacts, vessel impacts including potential collisions with whales and water quality issues leading to anoxia and potentially deadly algal blooms etc etc.

This is happening too often on our planet.

I believe this particular development has a hidden agenda - that of on-selling a strategically placed port (only a few kilometres from Adelaide) to wealthy international interests. Why? Because it is simply not possible for the island's small, fledgeling timber industry to build or sustain a level of timber output commensurate with the scope of the port development planned. Wild claims about ensuing financial, employment and infrastructure benefits, are ludicrously inflated compared with the real results actually being achieved by well-established competitors. Used for the planned purpose, I believe the port will become a loss-making, costly white elephant and ultimately (or even soon) have to be sold. And then, of course, there WILL be money to be made!

Am I too cynical? Hmmm. Did I mention that the developers also own large tracts of adjoining land? Did I mention that they already own a port on the island that would be more than satisfactory for the scope of this timber industry, or that there have been other deep water sites proposed, closer to the timber plantations and which would not cause the environmental damage inherent in this proposal? It seems to me that there is a great deal of naked self-interest in this proposal, and that misrepresentations or denial of facts and statistics have been used to bolster its case!

However, even if you don't agree about the 'hidden' (and potentially very lucrative agenda here), please agree that it is essential for the future of all life on the planet, that we preserve unspoilt places like Smith Bay, and allow the earth's rare creatures to live cleanly and peaceably. Smith Bay is priceless - it should not be sold off for greed and short-term gain.

This proposal should not go ahead! Please use your influence in this matter.

Sincerely,

Kate Owen

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

michael chandler

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To “offset” its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is “the main factor threatening the echidna population”.
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed “offset”.
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Larry Podmore

**Date:** Thursday, 23 May 2019 11:55:17 AM

---

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Dear Minister,

**RE: Matters of National Environment Significance concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to the potential destruction of Smith Bay's native flora and fauna protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC).

**Environment Protection and Biodiversity Conservation Act 1999 - Matters of National Environment Significance**

- Smith Bay is fortunate to be regularly visited by southern right whales. Over recent years the shallow bay has emerged as a biologically important area for these [threatened](#) marine mammals and their calves.
- Southern right whales are listed as endangered under the EPBC mainly thanks to the impacts of commercial whaling.
- The whales that call Smith Bay home for large periods of the year are at grave risk from the inevitable debilitating noise, dredging and vessel disturbance, vessel strike, pollution, leachate and consequent toxicity the development of the Seaport will bring to the bay.
- Proposed dredging activities to gouge 100,000 cubic metres from the floor of Smith Bay, ongoing port operations and an inevitable future dredging program. This will have a significant impact on the marine environment by disturbing and smothering benthic biota and habitats, degrading water quality through elevated turbidity, bioavailability of pollutants and reducing dissolved oxygen in the water column.
- The proponent's means to address this assault are inadequate at best and are

presented in a careless manner.

- Smith Bay is host to a number of threatened and endangered species that will be impacted by this proposal, including white bellied sea eagles, southern brown bandicoots and echidnas.
- The construction of the proponent's Seaport and on-land infrastructure will force those that survive the construction phase, away from Smith Bay – to where?
- The operation of the Seaport - including B-double truck movements around the clock - will inevitably contribute to unacceptable mortality rates.
- Although South Australia's koalas are [not listed](#) in the EPBC, the proponent must reveal how it intends to simultaneously manage the local koala population while destroying its habitat.
- On my reading, the proponent's EIS fails to adequately address any of these risks in sufficient detail, or provide credible mitigation.

### **Native Vegetation and Fauna**

- The proponent admits its industrial facility at Smith Bay will result in a significant loss of seagrass in Smith Bay.
- It estimates - and on past record, we are certain underestimates – it will destroy 100,000 square metres (10 hectares!) of seagrass in the bay.
- Noise and light emissions from dredging will disrupt larger sea mammals such as southern right whales and dolphins, while future dredging, plus propeller wash and contamination from commercial shipping vessels, will prohibit regrowth.
- As referenced on page 44 of the proponent's EIS, the company insists its industrial operations will only result in the deaths of between six to 12 of endangered echidnas. Surely, any deliberate mortality of the endangered echidna should be considered unacceptable.
- To "offset" its dead echidnas, Kangaroo Island Plantation Timbers says it will assist with a feral cat eradication program which it claims is "the main factor threatening the echidna population".
- The Kangaroo Island echidna was recently listed as endangered under the EPBC, and therefore any added mortality risk to this endangered species should not be overlooked – regardless of the claimed "offset".
- Outside this EIS, in December 2018, AusOcean - a not-for-profit Australian Ocean Lab - conducted the first detailed underwater marine survey of Smith Bay.
- Kangaroo Island Plantation Timbers barely scratches the surface in its own survey to support its proposal, some of which was conducted without appropriate permits and should therefore be invalid in its documentation
- While the proponent not surprisingly found little to wonder at in Smith Bay, AusOcean made startling discoveries that should provide the template for your Government to re-assess the value in these waters.
- AusOcean's revelations included the discovery of an ancient two-metre-tall coral head and more than 10 new species of fish.
- I also draw your attention to the [National Geographic website](#), which identifies what is at stake if this Seaport goes ahead at Smith Bay

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Daina Anderson

**Subject:** Concerns about KPT's Seaport development at Smith Bay  
**Date:** Thursday, 23 May 2019 9:17:31 AM

---

Dear Minister,

**RE: Biosecurity concerns, Kangaroo Island Plantation Timbers Seaport proposal**

I write to lodge a formal objection to Kangaroo Island Plantation Timbers' proposed Seaport at Smith Bay on Kangaroo Island, which the previous State Government deemed worthy of Major Project Status.

After a very long wait, I have now had brief opportunity to review the Environmental Impact Statement (EIS) prepared by the proponent.

Following that, I strongly believe this development should not proceed at Smith Bay.

More specific responses to EIS guidelines appear below, but the unresolved question remains:

- Why was this company privileged with Major Development Status for a deliberately destructive proposal for Smith Bay, when it's abundantly clear there are multiple, more suitable site options available on Kangaroo Island – including a former industrial wharf the company already owns?

A proposal like this elsewhere on Kangaroo Island will deliver the same jobs and economic benefit as those it speculates for Smith Bay but without wholesale destruction of the marine and terrestrial environment, public infrastructure, social amenity and long-term sustainable businesses.

With regard to the EIS, my major concerns relate to biosecurity hazards the proponent agrees are inevitable as the result of its actions in Smith Bay, and the risks to Kangaroo Island's unique flora and fauna.

**Biosecurity**

- Historically on Kangaroo Island, exotic marine pests have only been found where there is major shipping infrastructure. This includes Kingscote Jetty, Kingscote Wharf, the Bay of Shoals anchorage, Christmas Cove and American River anchorage. These discoveries have been directly linked to vessel traffic from infected mainland ports.
- During a coast and marine survey conducted by Natural Resources Kangaroo Island in 2018, the Biosecurity Advisory Committee found Smith Bay to be exotic marine pest free, which is also testament to the tight biosecurity management regime of the onshore abalone farm that has operated in Smith Bay for more than 20 years.
- The KI Seaport proponent acknowledges it will create a major biosecurity risk and some form of surveillance will be needed. Kangaroo Island Plantation Timbers has committed to help fund such a program assuming, as it does with its entire proposal, that ratepayers and taxpayers will leap to cover the community costs its refuses to meet. While surveillance is necessary it does not remove the threat. Once Smith Bay has been contaminated with exotic marine pests, they are there forever.
- Since 1983, the waters around Adelaide have been contaminated with Asian date or bag mussels. This exotic pest which can be introduced via ship ballast water, on

vessel hulls or in internal seawater systems, grows quickly and smothers seabed life affecting the productivity of commercial fisheries and aquaculture. This is not to mention last year's [outbreak of Pacific Oyster Mortality Syndrome \(POMS\)](#) in the Port River. Smith Bay should not be exposed to these risks, nor should the operation of the successful, sustainable businesses it hosts and supports be threatened in such a way.

- Based on the Australian Government's [interactive map of marine pests in Australia](#), most major shipping ports in Australia have seen the introduction of exotic marine pests.
- It remains a mystery how Smith Bay can be protected from this inevitability by the actions of a proponent with no experience of marine environment management or infrastructure build of any sort, a cavalier attitude to biosecurity, and a belief that the rest of us – not it – will willingly wear the cost of its actions.

## Coast and Marine

- The KI Seaport proposal presents a massive assault on the marine and coastal environment of an isolated and relatively unspoilt part of Kangaroo Island's coastline.
- The Federal Government has already expressed concerns regarding the proposal and has delegated its authority under the Environment Protection and Biodiversity Conservation Act 1999 to the South Australian Government.
- We would expect the South Australian Government and its agencies to fully comply with these requirements, and to act in the interest of science and community expectations.
- In testimony to the Natural Resources Committee in the South Australian House of Assembly on 19 May 2017, Kangaroo Island Plantation Timbers Director Shauna Black described the existing former industrial wharf at Ballast Head, which the company owns as "...almost the opposite of Smith Bay in two crucial areas: it has steep land and shallow sea."
- The full Hansard account of Ms Black's patchy account is [here](#).
- It is ignorant at best for her, a resident of Kangaroo Island and chief spruiker for Kangaroo Island Plantation Timbers' outlandish plans, to claim Smith Bay is deep and Ballast Head is shallow.
- If Ms Black genuinely believes this, she has realistically never been to either site, let alone reviewed the available data.
- The proposal for a claimed deep-water Seaport for super-Panamax ships requires a depth of at least 15 metres to operate. Smith Bay is shallow, only reaching 10 metres depth some 350 metres from the shore.
- The volume of soil blasted and scraped from the seabed by the proponent's dredges is equivalent to filling 40 Olympic-size swimming pools, resulting in:
  - the loss of **at least** 100,000 square metres of seagrass – admitted by the proponent, which claims it can "offset" by simply planting some seagrass in another place (if only it were so simple)
  - sediment uplift into the water column
  - marine life mortality due to choking hazards, suffocation and red tide potential from disruption of toxic organisms in the sediment

The proponent is poorly-qualified to submit this proposal, and I trust it is not too late for that to be considered.

I implore you in your role as Minister for Planning, Transport and Infrastructure, to reject this proposal.

Thank you for taking the time to consider my objection to this proposal.

I trust your Government will act in the best interests of Kangaroo Island, its environment and its people.

Yours faithfully

Levi Hocking
