**Q14** Please enter your general feedback here

All future planning, design and construction needs to be undertaken with climate change resilience in mind. All buildings must be designed for passive heating and cooling, water collection (and use- e.g. plumbing to the toilet/ bathroom rather than just garden), and cooling, greener spaces.

Without this, we will be putting too much pressure on the energy grid during heatwaves, resulting in potential energy shortages which will have serious consequences for the vulnerable (e.g. the elderly).
