Part 3 - Overlays > Gas and Liquid Petroleum Pipelines Overlay

- Support
- Oppose
- Amend

Your Feedback

As a highly respected and highly experienced independent leader of pipeline risk assessments nationally, I strongly support the proposed changes as a critical and important step in ensure the safety of people living and working around pipelines and associated facilities. It is very important that any high pressure gas or liquid pipeline assets are properly respected and managed for the entirety of their working life whilst also guaranteeing the long term availability of the gas or liquid being transported (until such time as we no longer as a community need the use of gas or oil products). The highly dangerous nature of these products cannot be overstated and the conspicuous and detailed treatment of any threats must be paramount. These changes greatly assist with the safety management process and supports the pipeline licensee in meeting the risk management requirements under the national pipeline design operation and maintenance code (AS2885)

Part 3 - Overlays > Gas and Liquid Petroleum Pipelines (Facilities) Overlay
