Thanks Ashleigh,

The text

Dear Panel Members,

Thankyou for the chance to share my worries about the tree canopy.

In the context of the planet heating up; the need for an increase, rather than a decrease, in the tree canopy seems evident to me.

In the five years that I have lived in Blackwood I have noticed that most blocks of land being developed/subdivided locally are cleared of all substantial vegetation. Indeed often all the grass goes as well. Can some of the trees/vegetation be saved?

If blocks are going to be smaller, and houses larger, there will be less room for trees. There is a limit to how many trees can be planted beside the road. How will the new Planning Code encourage an increased canopy?

Will the new code provide guidance about the type and size of tree that are the least risk from fire and storm, and provide the most canopy?

I understand that not all insurance policies cover storm damage from fallen trees/branches. Is this being addressed?

Regards,

Archie Mackillop
