- Amend

Your Feedback

The technical language used in this document while purporting to involve the general public is a huge barrier to this aspiration. The document lacks graphics and alternative visuals to support their proposals. We cannot engage with this document as it stands. This is a document for department to feel good about.

It would be nice for PlanSA to acknowledge the original owners of this land in its presentations and seek aboriginal input into their proposals in the general sense - if not the fine detail.
