ENGAGEMENT REPORT

Section 73(7) of the *Planning, Development and Infrastructure Act 2016*

Miscellaneous Technical Enhancement Code Amendment

By the State Planning Commission

STATE
PLANNING
COMMISSION

Government of South Australia

Department for Trade
and Investment

1	PURPOSE	1
2	INTRODUCTION	1
3	ENGAGEMENT APPROACH	2
3.1	Engagement Activities	2
3.2	Mandatory Requirements	7
4.	EVALUATION OF ENGAGEMENT	7
4.1	Performance Indicators for Evaluation	7
4.2	Summary of the evaluation of the engagement against the Charter Principles	8
5	ENGAGEMENT OUTCOMES	10
5.1	Feedback Received	10
	<i>Enquiries</i>	10
	<i>Written submissions</i>	10
	<i>Key issues</i>	10
5.2	Summary of submissions, Response and Recommendations	10
	<i>Rules of Interpretation (2.3.1)</i>	10
	Application of Spatial Policy Relevant to the Site of the Development (2.3.1.1)	12
	Spatial maintenance updates – comprising minor or operational amendments (2.3.1.2)	13
	<i>Part 2 – Zones and Sub Zones (2.3.2)</i>	14
	Conservation Zone - land division - PO 2.1 – Policy (2.3.2.1)	14
	Conservation Zone - land division – DTS/DPF 2.1 – Policy (2.3.2.2)	14
	Master Planned Zones – Site Dimensions and Land Division – Policy Review (2.3.2.3)	15
	Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages (2.3.2.4)	15
	Rural Zone – Detached Dwelling – Linkages (2.3.2.5)	16
	Rural Zone – Land Division / Boundary Realignment – Linkages (2.3.2.6)	17
	Urban Corridor Zones – Primary Road Corridor – Policy Review (2.3.2.7)	17
	Urban Corridor Zones – Side Boundary Setback – Policy Review (2.3.2.8)	18
	Restricted Development Classification – Table 4 (2.3.2.9)	19
	Industry listed as a restricted development classification (2.3.2.9.1)	20
	Land Division within the Limited Land Division Overlay (2.3.2.9.2)	21
	Dwelling within the Limited Dwelling Overlay (2.3.2.9.3)	22
	Dwellings within the Employment (Bulk Handling) Zone (2.3.2.9.4)	23
	Dwelling and Land Division within the Deferred Urban Zone (2.3.2.9.5)	23
	Employment Zone – Various land uses (2.3.2.9.6)	24
	Dwellings within the Rural Intensive Enterprise Zone (2.3.2.9.7)	24
	Land Division and Dwellings with the Rural Shack Settlement Zone (2.3.2.9.8)	25
	Significant Interface Management Overlay triggering a restricted development classification (2.3.2.9.9)	26
	Hills Face Zone – Various land uses (2.3.2.9.10)	26
	Notification Tables – Table 5 – Procedural Matters (PM) (2.3.2.10)	28
	Notification Tables – Minor Development (2.3.2.10.1)	29
	Notification Tables – Errors and Inconsistencies (2.3.2.10.2)	30
	Notification Tables – Frost Fans (2.3.2.10.3)	31
	Notification Tables – Building on railway land (2.3.2.10.4)	32
	Notification Tables – Demolition (2.3.2.10.5)	32
	Building Height – TNV and context – Policy refinement (2.3.2.11)	34
	Building Height, Building Wall Setback and Wall Height – Policy Review (2.3.2.12)	34
	Building Walls and Dwelling Walls – Policy Review (2.3.2.13)	37
	Common and Minor Development – Overlay Relevance – Assessment Pathways (2.3.2.14)	40
	Detached Dwellings in Master Planned Zones as an Accepted Development Pathway (2.3.2.15)	45

OFFICIAL

Detached Dwellings - Medium and High-Rise Development – Policy Relevance (2.3.2.16)	46
Discrete vs Discreet - Garages & Carports - Policy Review (2.3.2.17)	47
Discrete vs Discreet - Garages & Carports – Linkages (2.3.2.18)	47
Dwelling Alterations and Building Additions/Alterations – Assessment Pathways (2.3.2.19)	48
Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages (2.3.2.20)	50
Interface Height – Multiple Zones: Policy and TNV – Policy Review (2.3.2.21)	50
Land Division – Site Contamination – Policy Relevance and Linkage (2.3.2.22)	51
Non-Residential Outbuildings – New Policy and Assessment Pathways (2.3.2.23)	52
Outbuildings - Accepted Development Criteria (2.3.2.24)	53
Pool Fencing – Accepted Development Pathway (2.3.2.25)	54
Primary Street Setback – Use of Building Line (2.3.2.26)	55
Replacement Building – Overlay Exclusions: Coastal Flooding Overlay (2.3.2.27)	57
Tourist Accommodation – Total Floor Area – Rural Zones (2.3.2.28)	58
Part 3 – Overlays (2.3.3)	59
Affordable Housing Overlay – Referral Trigger (2.3.3.1)	59
Coastal Areas Overlay – Policy Intent (2.3.3.2)	61
Design Overlay – Referral – Referral Trigger (2.3.3.3)	62
Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 - Linkages (2.3.3.4)	63
Heritage Adjacency Overlay – Referral (2.3.3.5)	64
Key Outback and Rural Routes Overlay - Policy consistency with other Transport Overlays (2.3.3.6)	65
Major Urban Transport Routes Overlay - Revised policy and referral triggers (2.3.3.7)	66
Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent (2.3.3.8)	67
Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent (2.3.3.9)	68
Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral (2.3.3.10)	69
Prescribed Surface Water Area Overlay – Terminology (2.3.3.11)	70
Prescribed Water Resources Area Overlay – Referral (2.3.3.12)	71
Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation (2.3.3.13)	72
River Murray Flood Plain Protection Area Overlay – Outbuildings - Policy intent (2.3.3.14)	73
River Murray Flood Plain Protection Area Overlay – Outbuildings – Linkage (2.3.3.15)	74
River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy (2.3.3.16)	75
River Murray Flood Plain Protection Area Overlay – Referrals (2.3.3.17)	76
River Murray Tributaries Protection Area Overlay – Policy intent (2.3.3.18)	80
River Murray Tributaries Protection Area Overlay – Referrals (2.3.3.19)	80
State Significant Native Vegetation Areas Overlay - Referral Trigger (2.3.3.20)	82
Traffic Generating Development Overlay – Referral (2.3.3.21)	82
Urban Transport Routes Overlay - Revised policy and referral triggers (2.3.3.22)	83
Part 4 – General Development Policies (2.3.4)	85
Aquaculture – General Development Policies – Policy Review (2.3.4.1)	85
Carport and Outbuilding – Internal Parking Dimensions – Linkages (2.3.4.2)	86
Commercial Forestry - Forestry General Development Policies – Policy Review (2.3.4.3)	87
Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways (2.3.4.4)	89
Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance (2.3.4.5)	91
Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review (2.3.4.6)	92
Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review (2.3.4.7)	93
Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review (2.3.4.8)	94
Housing Renewal General Development Policies - Policy Review (2.3.4.9)	97
Land Division – General Development Policies – Policy Review (2.3.4.10)	97
Land Division – General Development Policies – Linkages (2.3.4.11)	97
Transport, Access and Parking – General Development Policy – Fences – Linkages (2.3.4.12)	98
Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review (2.3.4.13)	99

Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation (2.3.4.14).....	99
Part 5 – Specified matters and areas identified under the Act and Regulations (2.3.5)	100
Part 6 – Index of Technical and Numeric Variations (2.3.6)	101
Part 7 – Land Use Definitions (2.3.7)	101

<i>Results and evaluation of designated entity’s engagement</i>	3
Attachment 2 – Copy of Submissions Received	4

1 Purpose

This report has been prepared by the State Planning Commission (the Commission), being the Designated Entity, for consideration by the Minister for Planning (the Minister) in adopting the Miscellaneous Technical Enhancement Code Amendment (the Code Amendment).

The report details the engagement that has been undertaken, the outcomes of the engagement including a summary of the feedback made, the response to the feedback and the proposed changes to the Code Amendment. In addition, the report evaluates the effectiveness of the engagement and whether the principles of the Community Engagement Charter have been achieved. Any changes to the engagement plan during the process are also outlined.

2 Introduction

The Code Amendment was an opportunity to make technical changes to improve the performance, interpretation, and consistency of the Planning and Design Code (the Code), informed by the experience of planning practitioners and other users of the Code who have provided valuable feedback during its first year of operation.

The Commission has been monitoring and reviewing the Code and its performance to identify any areas where amendments may be required to ensure intended outcomes are better achieved. For the most part, it is considered the Code has been working well and the intent of the policy is generally being achieved. However, in the interest of ongoing improvements it is acknowledged that regular updates to particular policies and their effect on procedures is necessary in certain instances to ensure the appropriate outcomes and intent are being met and that the process is straightforward and efficient for users.

The Code Amendment focuses on:

- Technical matters
- Policy clarity and interpretation
- Consistency with drafting principles
- System efficiency and procedural matters.

It aims to improve the following key areas of the Code:

- Public notification tables
- Assessment pathways
- Overlays and referrals
- Definitions
- Restricted development
- Policy terminology
- Policy expansion
- Rules of Interpretation
- Character and heritage identification
- Classification tables / linkages.

It is important to emphasise that the Code Amendment focuses primarily on issues of a technical and/or operational nature. It is not intended to make substantial changes in policy positions which would affect underlying policy intent and outcomes. Items that seek to alter policy intent will require separate investigations and need to be progressed through another code amendment process.

Support preparing the Code Amendment, undertaking the engagement and preparing this report has been provided by Planning and Land Use Services staff from the Department for Trade and Investment (the Department).

3 Engagement Approach

The process for amending a designated instrument (including the process to amend the Code) is set out in the *Planning, Development and Infrastructure Act 2016* (the Act) which requires public engagement about the proposed changes to take place in accordance with the Community Engagement Charter through the preparation of engagement plan (the Engagement Plan). The purpose of this engagement was to:

- communicate and engage with regular users of the Code and other interested stakeholders about the Code Amendment in a timely and respectful manner
- provide public information about what the proposed Code Amendment seeks to achieve and its proposed changes
- define the parameters of the public consultation so that people know why feedback is being sought and how it will be used
- provide opportunities for discussion, information provision and feedback that are most convenient to stakeholders, thereby increasing the likelihood and quality of participation, and building trust and rapport
- allow sufficient time for stakeholders to receive, consider and respond to information provided
- respond to stakeholder questions and concerns during consultation
- capture and consider stakeholder feedback in the final drafting of the Code Amendment.

The engagement plan was peer reviewed by a third party prior to the commencement of engagement activities. There was no variation to the approved engagement plan during the consultation period.

3.1 Engagement Activities

Previous engagement

In July and August 2021, the Commission initiated a 'call for issues' to assist in informing the scope of the Code Amendment. This process called upon planning and development professionals, along with the public, to provide feedback on technical elements which should be addressed through the Code Amendment. A total of 42 written submissions were received by the Commission through this process.

The Department also held a workshop with planning staff from several councils to discuss key technical areas where the Code could be improved. In addition, technical issues reported via the PlanSA Service Desk were collated.

All submissions and issues raised by stakeholders were reviewed and form the basis of the changes proposed in the Code Amendment. While some of the submissions were outside the scope of the Code Amendment, they form a good basis for further investigations and a separate code amendment process.

Pre-consultation engagement

In April 2022, during the drafting and refining of the Code Amendment, and prior to commencing formal public consultation, planning staff from the Department held three workshops with key stakeholders to seek early feedback on some of the significant changes proposed in the draft Code Amendment. The workshops also provided an opportunity to 'close the loop' on issues identified during 2021's 'call for issues'.

Registration for workshops was through an expression of interest and the Department sought to ensure that there was representation at each workshop from both industry and council. The workshops were focused on the following key areas:

- Notifications tables
- Assessment pathways (new pathways policy and streamlining existing pathways for minor/common development)
- Policy refinement and definitions

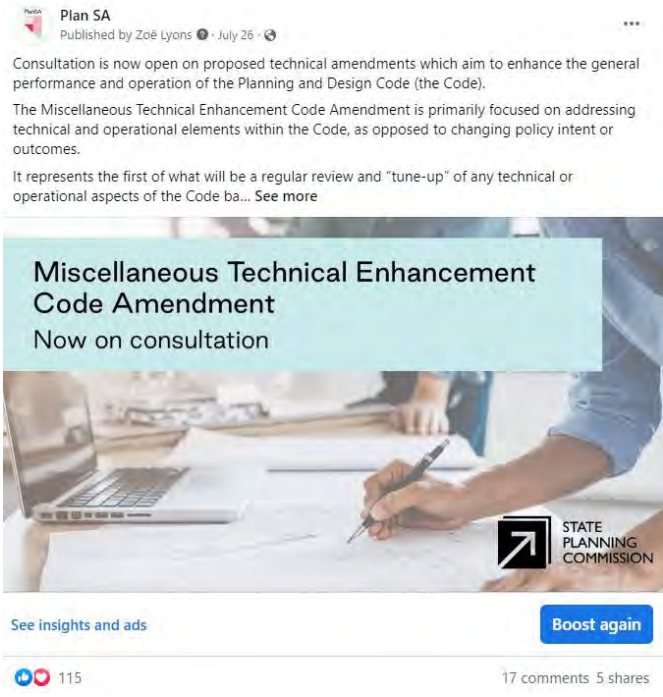

Workshop participants were generally supportive of most of the key changes proposed in the draft amendment and provided valuable feedback on how they could be improved.

Consultation activities during public consultation – 25 July 2022 to 23 September 2022

The following engagement activities were undertaken during the consultation period.

Consultation launch activities

Activity	Description and Target Audience
<p><u>Plan SA portal updated</u> with all key information</p>	<p>The PlanSA portal was updated with a banner on the homepage advertising the consultation, and provided the following information on the dedicated Code Amendment page:</p> <ul style="list-style-type: none"> • overview of the Code Amendment • the Code Amendment document • a fact sheet outlining the key changes in the Code Amendment with references to help people navigate the Code Amendment document • a set of 'frequently asked questions' about the Code Amendment • a link to the PlanSA Eventbrite page to register for one of the community information sessions • a submission form to provide feedback • contact details for all enquiries.
<p><u>Letter to key stakeholders</u></p>	<p>A personalised letter from the Commission was emailed to all key stakeholders, which provided an overview of the Code Amendment and invited feedback during consultation.</p>

Activity	Description and Target Audience
<p><u>Invitation to a private briefing on the Code Amendment to key stakeholders</u></p>	<p>The following stakeholders were provided with an invitation to join the PLUS Code Amendment team for a one-hour online ‘industry leaders briefing’ on the Code Amendment:</p> <ul style="list-style-type: none"> • South Australian planning industry peak body heads • South Australian local council leaders (CEO, Mayors and Elected Members) • Local Government Association representatives <p>In addition, the Chair of the Commission offered a private briefing with himself and PLUS staff members to representatives of Community Alliance SA.</p> <p>An invitation to a two-hour ‘practitioner’s briefing’ was also emailed to the 2,000 council and industry planning contacts who are registered with the PlanSA’s practitioner database.</p>
<p><u>Social Media</u></p>	<p>A social media campaign was used to promote the consultation. The campaign consisted of three posts scheduled across the 8-week consultation period promoting the community information sessions and the closing date for feedback.</p> <p>Each post was replicated across PlanSA Facebook, PlanSA Twitter and the Commission’s LinkedIn page.</p> <p>Paid advertising was utilised to boost” the PlanSA Facebook posts across the State.</p>  <p>The screenshot shows a Facebook post from Plan SA, published by Zoë Lyons on July 26. The post text reads: "Consultation is now open on proposed technical amendments which aim to enhance the general performance and operation of the Planning and Design Code (the Code). The Miscellaneous Technical Enhancement Code Amendment is primarily focused on addressing technical and operational elements within the Code, as opposed to changing policy intent or outcomes. It represents the first of what will be a regular review and "tune-up" of any technical or operational aspects of the Code ba... See more". Below the text is a graphic with the title "Miscellaneous Technical Enhancement Code Amendment Now on consultation" and the State Planning Commission logo. At the bottom of the post, there is a "Boost again" button and engagement statistics showing 115 reactions, 17 comments, and 5 shares.</p>

Activity	Description and Target Audience
<p><u>Print Advertising</u></p>	<p>An advertisement about the consultation was placed in the Sunday Mail on Sunday 7 August.</p>  <p>Have your say on technical improvements to the Planning and Design Code</p> <p>Consultation is now open on the Miscellaneous Technical Enhancement Code Amendment which aims to improve the general performance and operation of the South Australia's Planning and Design Code.</p> <p>The Code Amendment addresses technical and operational aspects of the Code, based on feedback from users following its first year of operation.</p> <p>Public consultation on the draft Code Amendment is open until 23 September 2022.</p> <p>Further information about this Code Amendment, including details on how to provide feedback and how to register to attend one of the online public information sessions, can be found on the PlanSA website: plan.sa.gov.au/en/mte</p>
<p><u>'Planning Ahead' article</u></p>	<p>An article was placed in the August edition of 'Planning Ahead', the PLUS monthly newsletter which has a subscriber base of just over 2,000 council, industry, and community contacts</p>

Stakeholder briefings on the Code Amendment

The following stakeholder briefings occurred. Each briefing was led by the PLUS Code Amendment team and was opened by a member of the Commission.

Activity	Description & Target Audience
<p>3 August 2022 - Planning practitioners briefing</p>	<p>This two-hour online briefing was attended by approximately 189 planning practitioners. A copy of the PowerPoint presentation was provided to participants.</p>
<p>9 August 2022 – Planning industry peak body leaders briefing</p>	<p>This one-hour online briefing was attended by 11 planning industry peak body leaders. A copy of the PowerPoint presentation was provided to participants.</p>
<p>10 August 2022 - Council leaders briefing</p>	<p>This one-hour online briefing was attended by 35 South Australian local council leaders – a mix of CEOs, Mayors, Elected Members and staff. It was also attended by a representative from the Local Government Association. A copy of the PowerPoint presentation was provided to participants.</p>
<p>10 August and 23 August - Briefings to Community Alliance SA representatives</p>	<p>These meetings were attended by two representatives from Community Alliance SA along with two PLUS staff and the Chair of the Commission.</p>

Activity	Description & Target Audience
August to September 2022 – tailored briefings as required	The PLUS Code Amendment team provided briefings at the regular PlanSA User and PlanSA Policy forums, as well as to the Local Government Assessment Manager forum and the Mount Lofty Ranges Planners meeting at their request.

Public information sessions on the Code Amendment

The following public information sessions occurred. Each briefing was led by PLUS Code Amendment team staff.

Despite promotion across all PlanSA channels, the low turn-out to these community information sessions indicates that - as might be expected - the broad and technical nature of the Code Amendment was of more interest to planning industry members than the wider South Australian community.

Activity	Description & Target Audience
16 August 2022 – Public information session #1	Attended by three people. A copy of the PowerPoint presentation was provided to participants.
18 August 2022 – Public information session #2	Attended by nine people. A copy of the PowerPoint presentation was provided to participants.

Availability of consultation materials

The Code Amendment document, fact sheet and frequently asked questions were made available:

- in hardcopy at the Planning and Land Use Services public reception area - Level 5, 50 Flinders Street, Adelaide
- electronically on the Plan SA website: plan.sa.gov.au/en/code_amendments.

Email and telephone enquiries

The following PlanSA contact details were provided throughout the consultation period. Both stakeholders and the broader public were invited to make contact if they had enquiries or wished to set up a meeting to discuss the Code Amendment.

- Phone: 1800 752 664
- Email: plansa@sa.gov.au

Media Coverage

There was no media coverage of the Code Amendment.

3.2 Mandatory Requirements

The following relevant mandatory engagement requirements relating to amending the Code (as prescribed in the Community Engagement Charter) were met:

1. Notice and consultation with council/s
2. Notice and consultation with the Local Government Association

4. Evaluation of Engagement

The engagement process for the Code Amendment was evaluated to ensure the principles of the Community Engagement Charter (the Charter) were met.

4.1 Performance Indicators for Evaluation

The minimum mandatory performance indicators were used to evaluate the engagement and gauge how successful the engagement was in meeting the Charter's principles.

Evaluation of Engagement by Community Members

The minimum mandatory performance indicators required an evaluation of responses from members of the community on the engagement. This includes an evaluation of whether (or to what extent) community members felt:

1. That the engagement **genuinely sought** their input to help shape the proposed Code Amendment.
2. **Confident their views were heard** during the engagement.
3. They were given an adequate **opportunity to be heard**.
4. They were given **sufficient information** so they could take an informed view.
5. **Informed** about why they were being asked for their view, and the way it would be considered.

This evaluation was conducted via an online survey emailed to those who either lodged a submission or attended information sessions during the consultation period. The survey was delivered to approximately 300 email addresses. A total of 42 people responded and completed the survey. The results of the evaluation are contained in Attachment 2 to this report.

Evaluation of Engagement by the Designated Entity

A further evaluation of the engagement process is required to be undertaken by (or on behalf of) the Designated Entity about whether (or to what extent) the engagement:

1. **Occurred early enough** for feedback to genuinely influence the planning policy, strategy or scheme.
2. **Contributed to the substance** of the final draft Code Amendment.
3. **Reached those identified** as communities or stakeholders of interest.
4. **Provided feedback to community** about the outcomes of the engagement.
5. Was **reviewed throughout** the process and **improvements put in place** or recommended for future engagement.

This evaluation was undertaken by the PLUS Communications and Engagement team on behalf of the Designated Entity.

4.2 Summary of the evaluation of the engagement against the Charter Principles

The following is a summary of the evaluation of the engagement against the five principles of the Charter. The full results of the evaluation can be found in Attachment 2.

(1) Engagement is genuine

People had faith and confidence in the engagement process

All communications about the Code Amendment emphasised that the proposed changes were not final, and that feedback was important in helping to shape how it would be finalised and implemented, if approved.

The survey results show that the majority of respondents (over 66%) either somewhat or strongly agreed that the consultation was genuine.

Evaluation statement	Strongly disagree	Somewhat Disagree	Neither agree nor disagree	Somewhat Agree	Strongly agree	Number of responses
I feel that my input was genuinely sought to help determine if the proposed Code Amendment was suitable for adoption, or if changes should be made	2.38%	7.14%	22.81%	38.10%	28.57%	42

(2) Engagement is inclusive and respectful

Affected and interested people had the opportunity to participate and be heard

The team strove to ensure that all interested parties had the time and opportunity to participate in the consultation process. Particular attention was given to providing local council and planning industry leaders and planning practitioners with private briefings and the opportunity to speak directly with the Code Amendment team about the proposed changes.

The survey results show that the majority of respondents (over 69%) either somewhat or strongly agreed that that they had adequate opportunity to be heard and to provide feedback.

Evaluation statement	Strongly disagree	Somewhat Disagree	Neither agree nor disagree	Somewhat Agree	Strongly agree	Number of responses
I was given adequate opportunity to be heard and to provide feedback on the Code Amendment	0.0%	7.14%	23.81%	45.24%	23.81%	42

(3) Engagement is fit for purpose

People were clear about the proposed change and how it would affect them

The communications included a fact sheet which outlined the key proposed changes with references to help navigate the Code Amendment document. The briefings and information sessions were designed to offer further explanation of the proposed changes and to provide time for questions.

The survey results show that majority of respondents (over 76%) either somewhat or strongly agreed that they were given sufficient information about the Code Amendment.

Evaluation statement	Strongly disagree	Somewhat Disagree	Neither agree nor disagree	Somewhat Agree	Strongly agree	Number of responses
I was given sufficient information to provide informed feedback on the Code Amendment	2.38%	16.67%	4.76%	45.24%	30.95%	42

(4) Engagement is informed and transparent

All relevant information was made available, and people could access it

People understood how their views would be considered in relation to finalising the Code Amendment

All communications emphasised that stakeholder feedback was important and would help inform how the proposed changes in the Code Amendment would be finalised and implemented, if approved.

The survey results indicate that majority of respondents (over 76%) either somewhat or strongly agreed that they were informed about why feedback was being sought and how it would be used.

Evaluation statement	Strongly disagree	Somewhat Disagree	Neither agree nor disagree	Somewhat Agree	Strongly agree	Number of responses
I was informed about why I was being asked for my feedback on the Code Amendment, and how my feedback would be used.	0.00%	11.90%	11.90%	52.38%	23.81%	42

(5) Engagement processes are reviewed and improved

The engagement was reviewed, and improvements recommended

The engagement plan was peer reviewed by a third party prior to commencing consultation. No changes were made to the engagement plan during consultation.

A post-consultation survey was conducted at the conclusion of the consultation period. Following the survey, the PLUS Code Amendment and engagement team discussed the feedback received about the engagement process during consultation and as part of the post-consultation survey.

One key piece of critical feedback noted by the team was that the Code Amendment proposed too many changes which made it hard for some people to have time to provide adequate feedback. The team have noted this feedback and will be considering how to better organise, format and reduce lengthy technical amendments in the future.

5 Engagement Outcomes

5.1 Feedback Received

Enquiries

A total of 15 enquiries were received through the PlanSA service desk, the majority of which were from council planning staff.

Written submissions

A total of 65 written submission were received. See Attachment 2.

Key issues

A wide range of feedback was received through all engagement activities in relation to the various changes proposed by the Code Amendment. Key areas of feedback related to:

- restricted development classifications
- assessment pathways
- building height definition / change of policy
- primary street setback policy
- public notification
- clarity and interpretation of policies.

5.2 Summary of submissions, Response and Recommendations

The following section provides a summary of the submissions received and the Commission's responses and recommendations in relation to the final Code Amendment for approval.

Rules of Interpretation (2.3.1)

The Code Amendment reviewed Part 1 – Rules of Interpretation specifically in relation to the application of spatial policy relevant to the site of a development, as well as spatial maintenance updates comprising minor or operational amendments. Specific feedback related to the proposed changes are discussed in 2.3.1.1 and 2.3.1.2 respectively.

Feedback:

General feedback on Part 1 – Rules of Interpretation sought clarification to ensure that a Designated Performance Feature (DPF) is only one way that a Performance Outcome (PO) can be satisfied in a Performance Assessment. Feedback also sought clarification on what constitutes a minor variation with respect to a deemed-to-satisfy assessment, with a further suggestion that limitations be applied to the number of minor variations which can be allowed.

Response:

Designated Performance Features

DPFs provide guidance about what is generally considered to satisfy the corresponding POs but do not derogate from the discretion of a relevant authority to determine that the outcome is met in another way.

While a DPF generally satisfies the relevant PO, this may not always be the case. Section 107 of the PDI Act establishes that performance assessed development will be assessed on its merits against the Code. Accordingly, the role of the relevant authority in a performance assessment is to consider all relevant policies on balance and determine whether the development warrants consent.

Parkins v Adelaide Hills Council Assessment Manager [2022] SAERDC 12, delivered by a Commissioner of the Environment, Resources and Development Court on 1 August 2022 made several important comments about the use of DPFs in a performance assessment, including:

1. A DPF is ‘advisory’ and is one way that a PO is satisfied. [74]
2. Although the Rules of Interpretation are silent on the issue of a ‘quantum departure’ from a DPF, ‘they do provide that a DPF does not derogate from the need to assess development on its merits against all relevant policies’. [75]
3. Departure from the terms of a DPF is not, of itself, grounds for refusal, although it is something that cannot be completely ignored. If nothing else, it will be a flag to the relevant authority to ensure that, by way of alternative, or the specific circumstances of the matter, the PO is met. [76]

Given the above determination, it is considered that the Rules of Interpretation regarding this matter are sufficiently clear that adherence to a DPF should not outweigh consideration of how a development proposal may satisfy all relevant POs. No further action will be taken at this juncture.

Minor Variations

Section 106(2) of the Act states: *If a relevant authority is satisfied that development is deemed-to-satisfy development except for 1 or more minor variations, the relevant authority must assess it as being deemed-to-satisfy.* Whilst the Act does not impose any limitation on the number of minor variations which may be allowable, it does allow that conditions be placed on the approval of a deemed-to-satisfy development to address any minor variation to make it consistent with the deemed-to-satisfy requirement.

In this way, the Code functions in the same way as the ‘Residential Code’ i.e., Schedule 4 Complying Development under the former Development Regulations 2008, which included “development that is assessed as being a minor variation from such a form” as those development types described in the Regulations.

Given the above, it is considered that the suggestion to place a limit on the number of minor variations which may be allowable for a deemed-to-satisfy development would require a more targeted review and is outside the scope of the Code Amendment.

Recommendation:

No changes recommended.

Application of Spatial Policy Relevant to the Site of the Development (2.3.1.1)

The Code Amendment reviewed Part 1 – Rules of Interpretation specifically in relation to the application of spatially based policy (zones, subzones and overlays) in circumstances where a zone, subzone or overlay only partly covers the site of a development. The Code Amendment proposed that the Rules of Interpretation be changed to include explanation and rules on how to determine relevant policy when a spatial layer applies to only part of a site that is the subject of a development application.

Feedback:

The proposed amendment was well supported. Clarification was however sought on whether this change would affect the application of some clauses of Schedule 4 of the Planning, Development and Infrastructure (General) Regulations 2017 (the Regulations) which refer to zones, subzones or overlays identified under the Code for the purposes of that paragraph.

Specifically, feedback queried how the proposed amendment would affect fencing which is exempt from requiring approval provided it is not located within the Hazards (Flooding) Overlay within the Code. Guidance was also sought on how to process development applications where the development site is affected by two different zones, particularly with respect to the category of development and public notification requirements.

Further feedback suggested that there is a need to review zone boundaries and the spatial application of subzones, overlays and Technical and Numeric Variations (TNVs) to adequately reflect the intent of the application of each and the policies contained within.

[Clarification: a wider review of the boundaries of various spatial layers and the intent of policies contained within is outside the scope of the Code Amendment.](#)

Response:

Feedback noted that currently, pursuant to schedule 4 of the Regulations, if a portion of a property is in a designated flood overlay, the fence will require approval even if the fence is located on a portion of the site not within the overlay.

Schedule 4 (1)(d) excludes fences from the definition of development other than:

(i) a fence in—

(A) a designated flood zone, subzone or overlay identified under the Planning and Design Code for the purposes of this subparagraph;

Part 5 of the Code identifies specifies areas as 'designated flood zone, subzone or overlay' for the purposes of clause 3(1) of the Regulations – Interpretation as the following:

- Coastal Areas Overlay
- Hazards (Flooding) Overlay
- River Murray Flood Plain Protection Area Overlay

Neither the Regulations, nor Part 5 of the Code stipulate that an exclusion under schedule 4 does not apply if only a *portion of the property* is affected by the overlay.

As such, the amendment is not changing how the Regulations, or indeed the Code should be applied in respect to policy provisions which are spatially based. Rather, the amendment is seeking to provide clarity in response to a property-based search of the Code via the 'What policies apply to an address' or 'What policies apply to a development at an address' Line of Enquiry Tools, which identifies all spatial layers which exist at the identified address. But does not determine what layers apply the location of the *development site* at an address. That is the role of the relevant authority.

The South Australian Property and Planning Atlas (SAPPA) ultimately defines the spatial extent and boundaries of zones, subzones and overlays established by the Code, and should be relied upon to

determine whether a policy of a zone, subzone or overlay would be applicable to the site of a development.

Recommendation:

No change recommended.

Spatial maintenance updates – comprising minor or operational amendments (2.3.1.2)

The Code Amendment proposed changes to Part 1 – Rules of Interpretation specifically in relation to minor or operational amendments to the Code’s spatial layers made on a regular basis to maintain a correct relationship between them and land parcels. The proposed changes would create a mechanism whereby changes to spatial layers are able to occur, without formal procedures, where the spatial application of the boundary of a zone, subzone or overlay is directly aligned or linked with the cadastre (being a parcel boundary or some other point or position within a parcel) and the cadastre is amended by the Surveyor-General.

Feedback:

Generally, the changes were supported. Other comments included:

- concern about the potential for this mechanism to be used for more significant adjustments to spatial layers, overlays in particular the need for these changes to be kept on record to inform users of the planning system
- queries whether this mechanism be extended to the spatial maintenance of other overlays which are not reliant upon changes to cadastre, but are changed by other factors such as:
 - adjustments to the Local Heritage Place Overlay where demolition approval of a Local Heritage Place has been granted and undertaken
 - adjustments to Bushfire or Flood Hazard Overlays as urban expansion changes risk levels through vegetation clearance or mitigation works
 - the application of the Advertising Near Signalised Intersections Overlay to sites where a new signalised intersection has been installed.

Response:

To provide greater clarity surrounding the specific overlays to which this mechanism will apply, and visibility of the rules which govern when and how specific overlays may be adjusted, it is proposed to make further amendments to Part 1 – Rules of Interpretation in response to feedback received.

The proposed changes will include a policy mechanism which relates to section 71 of the Act. This section enables a designated instrument to provide that:

A designated instrument may –

(e) other than in the case of a regional plan, provide that any matter or thing is to be determined, dispensed with or regulated according to the discretion of the Minister, the Commission, the Chief Executive or any other specified body or person.

Using this provision, it is proposed to incorporate material in the Rules of Interpretation which enables the Code to provide that the Minister may alter the spatial application of certain overlays in accordance with certain circumstances to be set out in the Code. The proposed changes will also include detail of the process by which these changes may be enacted, specifically that notification of such changes is incorporated into SAPPA, provided on the SA Planning Portal, and a recorded of in Part 13 – Table of Amendments of the Code.

It is considered that this proposal will increase the responsiveness of the Code and associated spatial layers in SAPPA to changes on the ground resulting from updated survey and cadastral data, as well as in certain specified circumstances, such as changes to signalised intersections, State maintained roads, and changes to heritage places that would affect heritage adjacency policy.

It is considered that for certain overlays where a more substantial change is required than the types of changes outlined above, amendments should continue to be made under section 76 of the Act (for the specific removal of errors, inconsistencies, or irrelevant material from the Code and SAPPA, including the addition or removal of a heritage place), or section 73 of the Act, where specific proponent-led code amendments are required to be undertaken in accordance with the Community Engagement Charter.

Recommendation:

AMEND Part 1- Rules of Interpretation to provide greater clarity regarding the specific overlays to be amended via routine maintenance updates to spatial layers under section 71 of the Act and the specific circumstances for which such updates would occur.

Part 2 – Zones and Sub Zones (2.3.2)

Conservation Zone - land division - PO 2.1 – Policy (2.3.2.1)

The amendment proposed to clarify that land division should avoid creating additional allotments with frontage to the coast or River Murray.

Feedback:

Support was received for this amendment with clarification sought as to whether ‘direct property access to waterfront areas’ is limited to parcels that abut the river’s edge or includes parcels that are separated by a public reserve (i.e., Crown land) and/or a public road.

Response:

It is considered appropriate to provide clarity through refinement of the policy that land division shouldn’t increase access to waterfront areas even for those areas separated by a public reserve (i.e., Crown land).

Recommendation:

AMEND PO 2.1 within the Conservation Zone to provide clarity that land division avoids an increase in direct property access to waterfront areas (including access via a public reserve).

Conservation Zone - land division – DTS/DPF 2.1 – Policy (2.3.2.2)

This amendment proposes to provide clarity for boundary realignments that they do not result in any additional allotments with frontage or direct access to the coast or the River Murray.

Feedback:

Support was received for this amendment with further clarification sought as to whether ‘direct property access to waterfront areas’ is limited to parcels that abut the river’s edge or includes parcels that are separated by a public reserve (i.e., Crown land) and/or a public road.

Response:

Further clarity should be provided through refinement of the policy that land division shouldn't increase access to waterfront areas even for those areas separated by a public reserve (i.e., Crown land).

Recommendation:

AMEND DTS/DPF 2.1 within the Conservation Zone to provide clarity that land division avoids an increase in direct property access to waterfront areas (including access via a public reserve)

Master Planned Zones – Site Dimensions and Land Division – Policy Review (2.3.2.3)

This amendment proposed changes to PO 11.3 of the Master Planned Township Zone and Master Planned Neighbourhood Zone to include a reference to Concept Plans to ensure consistency between concept plan policy within these zones and the Master Planned Renewal Zone.

Feedback:

Limited feedback was received on this, which was generally supportive of the proposed change. However, it was argued that there is insufficient definition of what constitutes a concept plan, as well as limited guidance on how to make an assessment against a concept plan where one is relevant to the site of a proposed development. It was further suggested that master plans be given statutory recognition through the inclusion of a relevant definition in Part 8 – Administrative Terms and Definitions.

Response:

The *Guide to the Planning and Design Code* provides an overview of the role of concept plans, as well as the circumstances where it may be appropriate for the Code to include a concept plan, including where:

- policy and zoning tools available in the Code cannot adequately address the development outcomes envisaged in the concept plan
- the subject concept plan has an active policy role in the future staging of development and provision of infrastructure.

Given the range of matters that are addressed by various concept plans within the Code (including provision of infrastructure, transition of building height, staging of subdivisions), as well as the varying scale at which concept plans are shown (from single allotments to entire townships), it is considered that should further guidance on the application and use of concept plans be required, it may be appropriate to provide this through updates to the *Guide to the Planning and Design Code* rather than through an amendment to the Code itself.

There are benefits in recognising master plans in the Code, however this needs to be considered against the range of tools and mechanisms already available in the planning system. It is a matter outside of the scope of the Code Amendment.

Recommendation:

No changes recommended.

Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages (2.3.2.4)

The amendment proposed a change to the applicable policies for performance assessed detached dwellings within the Rural Zone, to ensure that those provisions of the Interface Between Land Uses General Development Policies related to interface with rural activities, being PO 9.1-9.7 of the module, can be called up during assessment.

Feedback:

The proposed change was well supported and included a suggestion to replicate it in the Productive Rural Landscape Zone, given the level of similarity in the range of development types that are envisaged within it and the Rural Zone.

A further suggestion involved the similar application of Interface Between Land Uses General Development Policies to deemed-to-satisfy horticulture within the Productive Rural Landscape Zone as a related but separate issue.

Response:

Detached Dwellings

Due to the similarity between development types which are envisaged in both the Rural Zone and Productive Rural Landscape Zones, and the identified need for residential development within rural-type zones to address matters relating to the interface between rural and residential activities, it is considered appropriate to also apply PO 9.1-9.7 of the Interface Between Land Uses General Development Policies to a performance assessed detached dwelling within the Productive Rural Landscape Zone.

Horticulture

The deemed-to-satisfy pathway for horticulture within the Productive Rural Landscape Zone currently calls up the Interface between Land Uses [Activities Generating Noise or Vibration] DTS/DPF 4.1. It is noted that the other relevant provisions of this policy module which are linked to performance assessed horticulture within Table 3 of the zone, being PO 1.2, 4.2, 5.1, 9.1 and 9.6, do not contain associated DTS/DPF provisions and as such are not suitable for inclusion within the deemed-to-satisfy pathway. It is considered that should additional policy content be required to address matters of interface with rural activities for development within the deemed-to-satisfy assessment pathway, this would be more appropriately addressed via a separate code amendment to enable robust policy discussion on the matter in a targeted way. As such, no further change is recommended on this matter at this stage.

Recommendation:

ADD the following policy linkages for performance assessed detached dwelling in Table 3 of the Productive Rural Landscape Zone, including associated DTS/DPF provisions:

- Interface between Land Uses [Interface with Rural Activities]: PO 9.1, PO 9.2, PO 9.3, PO 9.4, PO 9.5, PO 9.6, PO 9.7

Rural Zone – Detached Dwelling – Linkages (2.3.2.5)

The amendment proposed a change to the applicable policies for performance assessed detached dwellings within the Rural Zone to prevent irrelevant provisions related to dwelling additions, rather than dwellings, being returned.

Feedback:

The proposed change was well supported.

Response:

N/A

Recommendation:

No changes recommended.

Rural Zone – Land Division / Boundary Realignment – Linkages (2.3.2.6)

The amendment proposed a change to the applicable policies for performance assessed land division within the Rural Zone to ensure that PO 11.3 of the zone is called up in assessment.

Feedback:

The proposed change was well supported. Feedback suggested that there needs to be sufficient policy to assess boundary realignments within the Rural Zone, notwithstanding the existence of the Environment and Food Production Areas (EFPA). There was also, a request for the inclusion of a Deemed-to-Satisfy / Designated Performance Feature (DTS/DPF) provision linked to PO 11.2 to recognise that where boundary realignments are proposed in Rural Zones, a minimum allotment size TNV for the more sensitive use should apply. Further feedback suggested that a similar review be undertaken for land division within the Productive Rural Landscape Zone.

Response:

Given that DTS/DPF 11.1 includes a minimum site area TNV for land division, including boundary realignments, it is considered unnecessary to also include a similar DTS/DPF provision and TNV linked to PO11.2. Furthermore, as PO 11.2 relates to the division of land for the purposes of facilitating a more intensive use of the land, it is considered that this should be assessed on merit against the PO, rather than through a DPF provision, noting that a DPF is only one way that a PO may be satisfied.

Regarding a similar review occurring for the Productive Rural Landscape Zone, there are no specific provisions identified for performance assessed land division within table 3 of the zone. As such, a land division within this zone would require performance assessment against all relevant provisions of the Code. Given the potential policy implications of programming in a specific pathway for land division within this zone, it is considered that such a review may be better suited to a more targeted code amendment with a specific focus on Rural Zone policy. As such, no further change is recommended at this stage.

Recommendation:

No changes recommended.

Urban Corridor Zones – Primary Road Corridor – Policy Review (2.3.2.7)

The amendment proposed to ensure the consistent use of terminology for ‘primary road’, ‘primary road corridor’, ‘primary road / public transport corridor’ across the Urban Corridor suite of zones by referring to ‘primary road corridor (i.e., a State maintained road)’.

Feedback:

There was a general level of support for the intent of the amendment. However, concerns were expressed, in relation to changes in development potential and unintended consequences of this change in terminology. These are summarised below:

- what happens with roads that are considered ‘primary road corridors’ but are council maintained. From this amendment it is not clear if the same policies can then be applied to council maintained roads within these zones
- a variety of policies would be affected by the proposed wording change and these should not be exclusive to development sites with frontages to State maintained roads
- a broader review of terminology in the Urban Corridor Zones is needed to provide greater consistency in the policy wording, other than where there is an intentional difference in policy terminology

- important setback and interface policies should not be removed from rezoned local streets. Minor roads need to retain TVN setbacks to protect them from inappropriate developments
- why is policy orienting some development towards the primary corridor rather than the quieter side street, which may suit shops and cafes.
- there should be more clear direction for properties within corridor zones which do not face a State maintained road, particularly as this relates to building envelope and setbacks
- additional policy may be required to ensure that local roads are still appropriately responded to and that development positively contributes to secondary frontages and lower order roads when being used as a primary frontage or a secondary frontage.

Response:

The proposed amendment was to provide clarity in the intent and interpretation of similar terms used within the suite of Urban Corridor Zones. It is acknowledged that the proposed amendments may have the potential to have unintended consequences for primary roads within zones which are not a State maintained.

It is considered that refinement in policy is required to address this issue. Given that applications using this policy will have a performance assessed pathway (rather than deemed-to-satisfy) it is reasonable to provide clarity/demonstrate that primary road corridors are typically State maintained (by instead using the term 'for example' over 'i.e.'). As such, the policy should not be limited to just this type of road and additional wording should be included to allow for a road which shares similar attributes to a State maintained road to also be considered a 'primary road corridor' and/or 'public road'.

A further review of the policies has identified that current wording within these zones refers to 'primary road corridor' when the intent of the policy is more so about the 'primary street frontage'. It is considered reasonable to amend the wording to provide clarity and ensure a consistent application and interpretation of policy when the intent is for a primary street frontage regardless of whether it is a primary corridor.

Whilst it is acknowledged that additional policy to address roads/streets which would not be considered a primary road corridor may be useful, this is considered outside the scope of this amendment. The Commission will continue to monitor development in these urban corridor areas and may look to respond accordingly through future policy amendments.

Recommendation:

AMEND the terminology across the Urban Corridor suite of zones by referring to 'primary road corridor (e.g., a State maintained road or a road with similar attributes)' except where mentioned in the following instruction below.

AMEND the term 'primary road corridor' to 'primary street frontage' in the following:

- Urban Corridor (Boulevard) Zone – PO 1.3, PO 1.5, DTS/DPF 1.5, PO 2.4
- Urban Corridor (Business) Zone – PO 1.4, PO 1.5, DTS/DPF 1.5, PO 2.3
- Urban Corridor (Living) Zone – PO 2.2, PO 6.2
- Urban Corridor (Main Street) Zone – DTS/DPF 1.3.

Urban Corridor Zones – Side Boundary Setback – Policy Review (2.3.2.8)

This amendment addressed a lack of synchronisation between the PO and the DTS/DPF in these zones to bring the PO into greater alignment with the overall intent on the zone.

Feedback:

There was a general level of support for this with some commentary and feedback received below:

- The change aligns with intended outcomes and the change in character sought.

- the reference to established character should be retained
- support for correcting inconsistencies between the PO and DPF, provided there are adequate policies applicable in Table 3 in relation to access to internal light and ventilation for neighbours and future property occupants of the development.
- side setbacks should be 3m above a 2-storey podium height to enable windows compliant with BCA for Class 2 Construction rather than blank walls (with murals) as is currently happening
- clarification/definition is needed as to what comprises the 'front part' or 'street facing elements', and what comprises those 'behind the street facing elements'.

Response:

The amendment sought to align the intent of the corresponding PO and DPF given they had been seeking different outcomes and the PO is seeking an outcome that is inconsistent with the overall intent of the zone. Any further change to policy position or inclusion of policy is outside the scope of this amendment. The Commission will continue to monitor development in these Urban Corridor areas and may look to respond accordingly through future policy amendments.

In terms of additional definitions to assist in policy interpretation within the urban corridor zones, the Commission considers that additional definitions and administrative terms should only be included in the Code where they support the policy intent. The Commission is also of the view that ordinary and common meanings have a place in policy interpretation, and that a separate definition should only be applied where the ordinary meaning of a term does not work with the policy intent. It is considered that the ordinary meaning and commonly understand context of these terms is sufficient to interpret the policy outcomes.

The Commission considers that there are adequate policies within Table 3 of the zones in relation to the amenity for residents. The policies within Part 4 - General Development Policies, in particular Design in Urban Areas - Residential Development - Medium and High Rise (including serviced apartments) provides sufficient guidance for residential amenity in multi-level buildings.

Recommendation:

No changes recommended.

Restricted Development Classification – Table 4 (2.3.2.9)

The amendment proposed to establish the following new principles to assist in determining what classes of development should be listed as a 'restricted' form of development:

- **Principle 1:** Warrants assessment by the Commission to consider the strategic implications and impacts.
For example, large-scale out-of-centre retail warrants State assessment as it may have a broader impact on the form and pattern of development across a region and could disrupt the role of activity centres in providing equitable and convenient access to shopping, administrative, cultural, entertainment and other facilities.
- **Principle 2:** Requires detailed investigations and assessment beyond that provided through a performance assessed pathway, and may require consideration of other documents outside of the Code.
For example, special industry has the potential to endanger or detrimentally affect the health of people and property and would therefore benefit from a more detailed assessment process.

A review of every Table 4 – Restricted Development Classification across all zones was undertaken to align the current listing of restricted land uses with these two principles.

Feedback:

There was positive feedback on the principles.

There were numerous comments on ensuring sufficient policy within the Code was present to make a performance assessment for those classes of development removed from the restricted classification.

It was suggested that zones should identify inappropriate forms of development to guide the relevant authority and applicants (like that of the previous non-complying list in Development Plans). The below lists the general comments received on the restricted development classification:

- ensure there is sufficient/appropriate policy that can be used for development types removed from restricted classification
- concerns about the removal of third party appeal rights for these land uses removed from restricted classification
- general support for the Council Assessment Panel / Assessment Manager being the relevant authority
- request for additional wording to guide the relevant authority and the proponent on the appropriateness of land uses not listed within zones, subzones or overlays. The Code is silent on development that is not envisaged, which poses difficulties when developments are subject of refusal, dispute or appeal the decision.
- No support for the removal of 'discouraged or inappropriate' development, as it relies on the judgment of the relevant authority
- request that restricted development should be subject to third party appeal rights as the State Commission Assessment Panel (SCAP) has often approved development that does not satisfy planning rules. Therefore, the Environment Resource and Development Court should be the ultimate decider not SCAP.
- Questions about how restricted development operates under the Code and Act with suggestions that all land use remain restricted until the review of the Code and Act are completed by the expert panel

Feedback relating to specific restricted classifications as part of the Code Amendment is discussed under their relevant section.

Response:

The restricted development classification is a procedural trigger applied under the Code to development that typically requires a more rigorous planning assessment by the Commission. The classification does not indicate whether a development is suitable: this determination is made based on the applicable policy (e.g., the DOs, POs and DTS/DPF criteria) or outcomes of an assessment.

The Code has been drafted in a manner which speaks to the types of development that are envisaged, not what is discouraged or inappropriate. The Commission considers that having a list of 'inappropriate' forms of development within zones is not required and is inconsistent with the principles of the Code.

It is acknowledged that Council Assessment Panels and Assessment Managers have the appropriate skills, qualifications and local knowledge to undertake an assessment of this nature.

Recommendation:

No changes recommended.

Industry listed as a restricted development classification (2.3.2.9.1)

Industry (with the exclusion of Light Industry) is listed as a restricted class of development in the majority of activity centre and employment type zones (except for the Strategic Employment Zone).

In all these zones, Special Industry is to remain as a restricted form of development. With other forms of industry (General or Light Industry) being removed as restricted development as they can be more appropriately assessed on their merits against the relevant Code policies.

Feedback:

There was a general level of support that some of these zones did not require industry being a restricted class of development and that special industry should be kept as restricted. However, a mixed level of support was received about which zones should have industry removed from the restricted classification. There were some concerns when an industry is within a more sensitive and/or lower intensity setting/zoning, for example a Township Zone. Comments include:

- supported for the Code's Interface between Land Uses policies under Part 4 General Development Policies being applied through the assessment pathways to assess against potential impacts to adjacent and more sensitive land uses
- support for employment type zones only. Not activity centres and/or townships
- broad agreement with the removal of industry from restricted however a floor area (m2) restricted trigger for 'industry' may assist in managing larger scale typically industrial or heavier industry land uses
- support as it allows councils to more effectively determine whether an application is for industry or light industry, with these decisions often pending specific expert consultant reports.

Response:

In zones where industry has been removed from being listed as a restricted class of development it is not proposed to establish any new assessment pathway (be that deemed-to-satisfy, or performance assessed) for any form of industry. This means that a relevant authority will have the whole of the Code, inclusive of any/all sections within Part 4 General Development Policies, to assess against an application for industry/general industry.

There are existing performance assessed pathways for light industry within these zones: Employment Zone, Strategic Innovation Zone, Suburban Business zone and Township Zone. No further changes are proposed for these pathways.

Additionally, the Desired Outcome (DO) and POs in each of these listed zones is considered to provide sufficient guidance to the envisaged land uses along with the scale of development anticipated for that zone. The intent and policy within these zones and the Code more broadly, would provide for the necessary direction to assess against any inappropriate form or scale of industry within an activity centre or township zone.

Recommendation:

No changes recommended.

Land Division within the Limited Land Division Overlay (2.3.2.9.2)

Given the specific overlay policy, land division does not warrant the additional requirements of a restricted pathway in zones where the Limited Land Division Overlay is applicable. The amendment removes the restricted classification when the overlay applies.

Feedback:

A mix of views was received in relation to this section of the Code Amendment. There was support for the proposed change as the intent and policy within the overlay provides clear assessment outcomes. Alternatively, it was suggested that the amendment is at odds with the principles and should remain as restricted given the State level interest in protecting key primary productive areas. Comments included:

- acceptance of the amendment noting that the intent of the Code is that the overlay policy will prevail over all other policies
- support for the amendment as the policy provides clear guidance to support or refuse a proposal.
- not supported

- the approach is considered to be strategically misaligned. The restricted pathway provides a better procedural framework to deal with these applications and it sends a strong message about protecting primary production land across the State.

Response:

The Limited Land Division Overlay spatially applies in the Code where historically land division, creating an additional allotment was discouraged. The areas affected by the overlay range from watershed areas and water protection areas to primary production land and township fringes. While the areas to which this overlay applies may be disconnected, there is an underlying intent for a policy response to the additional development expectations formed when a new allotment is created. Those concerns (e.g., potential environmental impacts on water supply areas; support for local character, impacts on infrastructure demand; and preservation of long-term opportunities for agricultural production) differ between areas. The Code provides a clear policy intent for no additional allotments where this overlay is spatially applied.

The Commission acknowledges the feedback received on this and the cumulative impacts of fragmentation of these strategic areas and importance of productive lands. It considers that it is important to provide for a consistent assessment approach along with consideration of the strategic implications and impacts that land division has in the Productive Rural Landscape Zone and Rural Zone when the Limited Land Division Overlay applies.

Recommendation:

AMEND by retaining land division when the Limited Land Division Overlay within Table 4 – Restricted Development Classification in the Productive Rural Landscape Zone and Rural Zone.

Dwelling within the Limited Dwelling Overlay (2.3.2.9.3)

Given the specific overlay policy, it is considered that a dwelling within the Limited Dwelling Overlay does not warrant the additional requirements of a restricted pathway, nor does it meet the new principles for application of this assessment pathway.

Feedback:

A mix of views was received in relation to this amendment. Most of the submissions were in support but some considered further refinement still necessary. Comments included:

- should be retained as restricted but support and agree with change to the reference of 'additional dwelling' to 'no new dwelling'
- the amendment is supported as the policy provides clear guidance to support or refuse the proposal.
- welcome that local assessment managers and assessment panels will be the relevant authority
- potential that new amendment to PO1.1 is now more confusing and inconsistent? – 'new' is often used to refer to a replacement building (common meaning), probably more so now that 'replacement' which has a more confined definition of replacing a same building already demolished within 3 years.

Response:

The Commission considers that the policy intent of the Limited Dwelling Overlay is clear for a relevant authority to make an appropriate decision for a dwelling and that it does not meet either principle to warrant restricted development classification.

The Commission does agree that a further refinement to policy could be beneficial.

Recommendation:

AMEND PO1.1 of the Limited Dwelling Overlay to replace the wording 'of a new dwelling' with 'of a dwelling'.

Dwellings within the Employment (Bulk Handling) Zone (2.3.2.9.4)

The amendment proposed to remove dwelling from the restricted development classification within the Employment (Bulk Handling) Zone. A review of all zones, in particular similar employment type zones, has found that the Employment (Bulk Handling) Zone is the only employment type zone which has dwelling listed as restricted.

Feedback:

A mix of views was received, including:

- this amendment is not supported as there are very limited circumstances when a dwelling could be proposed without a non-residential use. The assessment policy is not strong enough to enable this development type to be removed from the restricted classification
- this change to the restricted classification is supported.

Response:

The Commission considers that the policy intent of the Employment (Bulk Handling) Zone is clear with the types of land uses anticipated for this zone. Any application for a dwelling within this zone would not have any supportive policy and would be opposite to the clear DO of the zone.

Recommendation:

No changes recommended.

Dwelling and Land Division within the Deferred Urban Zone (2.3.2.9.5)

The amendment proposed to remove dwelling and land division from the restricted development classification within the Deferred Urban Zone. With the addition of policy guiding the appropriateness of a dwelling along with existing land division policy there is sufficient policy to undertake a performance assessment.

Feedback:

There was a general level of support with this amendment although some opposed the removal of the restricted classification. There was also some commentary on the proposed additional policy for a dwelling and that further refinement to policy could be required. Other comments included:

- a welcome that local assessment managers and assessment panels will be the relevant authority
- no support for the change of pathway but agreement with the introduction of new policy to guide dwellings in the Deferred Urban Zone
- support but would prefer a pathway to be able to give an early refusal to land divisions within the Deferred Urban Zone. However, the new PO 2.3 should assist with this.
- support but not for more than one dwelling on a site within the Deferred Urban Zone (noting the amendment states dwellings not dwelling). Question whether this is an error or there is expectation of more than one dwelling

Response:

The Commission considers that the policy intent of Deferred Urban Zone is clear with the types of land uses and form anticipated for this zone. It also confirms that neither a dwelling nor land division within this

zone meets the principles to warrant a restricted development classification. Should an application for a dwelling or land division within this zone occur, the policy is clear for the relevant authority to make a performance assessment against.

The Commission is mindful of feedback received on references to 'dwellings' in policy, however it is noted that this is a consistent approach across similar zones. While the PO and DTS/DPF refer to 'dwellings' it is considered that the intent of the policy, particularly the proposed DTS/DPF 2.3, makes it clear that only one dwelling is anticipated per allotment.

Recommendation:

No changes recommended.

Employment Zone – Various land uses (2.3.2.9.6)

The amendment proposed to remove the below land uses from the restricted development classification within the Employment Zone:

- waste reception, storage, treatment or disposal
- wrecking yard.

Feedback:

A mix of views was received in relation to this with an overall general level of support. Feedback raised the need to ensure sufficient policy is within the Code to assess against these land uses. Comments included:

- supports for removing 'waste reception, storage, treatment or disposal' to support the effective implementation of the Beverage Container Deposit Scheme
- need to ensure that there is sufficient policy to assess the impact of waste reception, storage, treatment or disposal or wrecking yards proposals. How will the impacts of industry on land uses outside of the notification area be dealt with?

Response:

It is not proposed to establish any new assessment pathways (be that deemed-to-satisfy, or performance assessed) for these types of land uses. This means that a relevant authority will have the whole of the Code, inclusive of any/all sections within Part 4 General Development Policies, to assess against an application for waste reception, storage, treatment or disposal or a wrecking yard. Further, these land uses within this zone do not match the principles established by the Commission to warrant a restricted development classification.

Additionally, the DO and POs of the Employment Zone is considered to provide sufficient guidance to the envisaged land uses along with the scale of development anticipated. The intent and policy within this zone, and the Code more broadly, would provide for the necessary direction to assess against any inappropriate form or scale of a development.

Recommendation:

No changes recommended.

Dwellings within the Rural Intensive Enterprise Zone (2.3.2.9.7)

The amendment proposed removing dwelling from the restricted development classification within the Rural Intensive Enterprise Zone. Given the clear policy direction provided by the zone, a dwelling is not considered

to warrant a restricted development classification and therefore a requirement for a detailed investigation and assessment.

Feedback:

There was support for the proposed changes.

Response:

N/A

Recommendation:

No changes recommended.

Land Division and Dwellings with the Rural Shack Settlement Zone (2.3.2.9.8)

The amendment proposed removing dwelling and land division from the restricted development classification within the Rural Shack Settlement Zone as the policy direction is clear for the relevant authority to undertake a performance assessment. Similarly, the zone also provides policy to guide land division including the circumstances where new allotments are considered appropriate (i.e., in instances where a TNV applies).

Feedback:

There was strong opposition to this amendment with most of the feedback received indicating that land division should be retained as restricted in this zone. Additionally, feedback indicated that should land division change to a performance assessment (rather than restricted) then the existing policy is not strong enough and intensification through the creation of allotments could occur in inappropriate locations.

There was a mixed response for dwellings to remain restricted with multiple submission not having concerns with this approach. Comments included:

- support for the removal of dwellings but land division should remain as restricted
- not supportive of the removal of land division from the restricted development table as land within these zones often has significant conservation values or is subject to risk from hazards
- this amendment is not supported. The more appropriate solution would be to amend the current restricted criteria to include the following:
 - *Detached Dwelling – that will not result in more than one dwelling on an allotment or lease site.*
- limited land division policies exist to assess a proposal within this zone, which should remain as the status quo
- the land division policy needs to be expanded and more TNV's applied if this form of development is to be removed from the restricted table in this zone.

Response:

Dwellings

The feedback received for the removal of dwellings as restricted was either supportive of this change or neutral.

The Commission considers there is sufficient policy to guide this form of development. Noting the restricted classification was for more than one dwelling on an allotment and the zone always anticipated a dwelling.

Land division

The feedback provided on land division is acknowledged. It is still considered that this form of development does not meet the principles and does not require the restricted development classification

within the Rural Shack Settlement Zone. This is in part noting that there are some locations where land division may be applicable, given there is a TNV which guides the appropriateness of such an application. Although, it is accepted and reasonable to provide a stronger policy direction for locations in which a TNV is not present and land division is not anticipated or could have adverse impacts should intensification occur. This policy refinement would bring in the current exclusion causes of the restricted classification into the PO to guide land division.

Recommendation:

AMEND PO 4.1 to provide clearer guidance as to when land division is appropriate.

Significant Interface Management Overlay triggering a restricted development classification (2.3.2.9.9)

This amendment proposed to clarify that land division for a sensitive use / receiver should not be undertaken when the Significant Interface Management Overlay is applicable. Additionally, it is proposed refining the land division policy trigger in Table 4 – Restricted Development Classification within the Rural Zone to refer to ‘sensitive use / receiver’ rather than for ‘residential’ purposes.

Feedback:

There was mixed feedback on this proposed amendment. Most was supportive of the changes in the policy wording to provide clarification for sensitive use / receiver. Opposition focused on not making certain classes of development restricted when this overlay applies. Comments included:

- make land division within the overlay (creating additional allotments in Port Adelaide Enfield) a restricted development
- work with state agencies to conduct a hazard risk study for the Lefevre Peninsula
- pursue a separate code amendment to review the Significant Interface Management Overlay’s boundaries and policy framework
- support for 350m setback from the sewerage ponds.

Response:

The Commission acknowledges the feedback and the desire for land division to be restricted where it currently applies within the Lefevre Peninsula and considered the refinement in policy will further assist and provide guidance to the relevant authority for the assessment of land division and inappropriate development proposals.

It is considered that a policy position change would be better undertaken and more appropriate via a separate code amendment to review the Significant Interface Management Overlay’s boundaries and policy framework for the Lefevre Peninsula along with specific and targeted community engagement.

Recommendation:

No changes recommended.

Hills Face Zone – Various land uses (2.3.2.9.10)

The amendment proposed to remove excavation, filling, and land division (for boundary realignments) from the restricted development classification within the Hills Face Zone; refine the policy for excavation and filling; and create additional policy to guide when land division, specifically boundary realignment, may be appropriate.

Feedback:

The proposed amendments were generally supported on the basis that there would be appropriate policy to assess an application of that nature. Comments included:

- clarification on the potential of conflicting policy is needed
- the wording of policy must be strong enough to ensure appropriate outcomes
- currently State assessed developments can use the entirety of the Code, as such the policies need to be strengthened in zones.
- need to include policies that address the management of the balance of the land such that the impacts of earthworks can be reasonably managed / mitigated e.g., through the appropriate siting and design of the built form / design, inclusion of landscaping / plantings and minimising / isolating the location of earthworks, screening or other improvements.
- the use of the realignment for purposes such as maintaining vegetation could result in very small allotments meeting DPFs
- a definition of natural ground level is required. The definition needs to consider the impact of previous site works undertaken and how they have impacted the original ground levels and the impacts of land that is built up on one side of boundary and excavated on the other side.
- excavation and filling should remain restricted in the Hills Face Zone as should land division. Large cut and fill to create a level surface to suit a standard project house or other development damages the appearance of the Adelaide Hills.
- policy has potential inconsistencies with excavation and filling policy within the Design in Urban Areas (Part 4 – General Development Policies)
- there is suitable policy guidance and some minor exception can be acceptable.
- support boundary realignment as performance assessed

Response:

Feedback queried if there was an inconsistency between the zoning policy and Design in Urban Areas Part 4 General Development Policies for excavation and filling. While there is a difference in the allowance for excavation, it is considered reasonable. This difference arises from an existing position and this amendment does not propose to change it. In terms of the assessment of an application, a performance assessment would be able use both policies to determine the appropriateness of a proposal which includes excavation/filling, noting that a zone policy prevails over a general development policy in the Rules of Interpretation hierarchy.

The Commission has recently been reviewing interpretation of natural ground level following the outcomes of some development applications and feedback received from stakeholders. From this, the Commission considers at this stage the most appropriate way to manage this is through a practice guideline which will detail the difference between natural ground level and a modified site. Whilst the creation of additional definitions within the Code for natural ground level or existing ground level have also been discussed, it was considered that this approach requires a more comprehensive review of height controls within the Code.

It is not proposed to establish any new assessment pathways (deemed-to-satisfy or performance assessed) for the land uses being removed from the restricted pathway. This means that a relevant authority will have the whole of the Code, inclusive of any/all sections within Part 4 General Development Policies, to assess an application for these uses. The Commission considers there are sufficient policies within the zone and general development policies to appropriately consider aspects such as siting and design of built form / design, landscaping, and minimising / isolating the location of earthworks forms of screening or other improvements.

Recommendation:

No changes recommended.

Notification Tables – Table 5 – Procedural Matters (PM) (2.3.2.10)

These proposed amendments to notification tables focused on the following matters:

- excluding minor development from notification
- correcting errors and inconsistencies
- consideration of whether frost fans and building on railway land should be notified
- variation to the demolition clauses to include partial demolition of a heritage place as requiring notification and amendments
- amendments to clarify that demolition includes partial demolitions and changes to allow a relevant authority to determine not to notify if a building is of no heritage value or not in keeping with features of identified heritage value.

Some of the more generalised comments around public notification outside of these sections included:

- notification should occur as much as possible
- there could be two types of notifications, including elevated notification with 3rd party appeal rights for substantial departures or major developments
- dwellings in rural zones should be notified given their potential to cause land use impacts
- the public notification trigger is difficult for relevant authority and applicants to interpret particularly where adherence to separate DTS/DPF is required
- clarification is required on whether notification provisions apply only to new builds, rather than a change of use within an existing building (which perhaps does not satisfy the exception criteria).

Response:

During the development of the Code the Commission established a series of principles to establish what forms of development warrant exemption from notification. The main principle used to populate public notification tables (Table 5) set out that accepted, deemed-to-satisfy, and types of development envisaged in the zone, should be exempt from notification other than where acceptable standards of built form or intensity are exceeded or where development is likely to result in substantial impact on amenity of adjacent dwellings on land in another zone.

The second principle set the former Development Regulations as a benchmark for forms of development that shouldn't be subject to notification (formally known as Category 1 development).

The third principle arose from feedback received through Phase 2 and 3 of the Code which identified a desire to notify developments where boundary walls exceed maximum length and height standards in neighbourhood-type zones.

The fourth principle was also developed in response to feedback on Phase 3 and identified that notification should occur for heritage buildings proposed to be demolished.

The Code Amendment has been developed with these principles in mind.

Matters that seek to make substantial change to an overall policy position are typically considered outside the scope of the Code Amendment unless specifically identified in the initiation documentation and require separate consideration.

Suggested changes to the scheme of public notification (e.g., creating two types of notification, with appeal rights) lie with the Act and are similarly outside the control of the Code Amendment.

Recommendation:

No changes recommended.

Notification Tables – Minor Development (2.3.2.10.1)

The amendment sought to make various changes to notification tables to address concerns from council planners and accredited professionals about having to notify minor development applications (and the resourcing required to do so) which 'trip' into a performance assessed pathway under the Code. The changes include:

- inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B (of the notification table) is minor in nature, in which case the application will not require notification
- exclude minor forms of development (such as carport, deck, fence, retaining wall, outbuilding, pergola, verandah, swimming pool, shade sail etc) from public notification, unconditionally.

Feedback:

A mix of views was received in relation to this section of the Code Amendment although there was a general sense of support for the intent. Feedback was generally focused towards the 'minor variation' clause as well as the desire/need to notify in certain circumstances such as in historic areas, areas of streetscape importance or built areas where larger structures are proposed near allotment boundaries. Comments included:

- allow the relevant authority to use minor variations provides much needed flexibility
- a definition of minor variation that states nominated values related to allowable tolerances, e.g., a 5% variance value as a limit, is needed
- procedural matters should be clear and not subjective in the minor variation clause
- the DAP system should be enhanced to more easily allow a relevant authority to document what departures are considered minor and the rationale for decisions (in place of separate file note)
- a practice direction or similar to support the interpretation of what constitutes a 'minor variation' is needed
- policies relating to ancillary structures needs strengthening
- Decks/ fences/ retaining walls/ outbuildings etc. that are on residential boundaries and over a certain height should be notified
- retaining walls should be triggered on height rather than length
- retaining walls and earthworks that exceed prescribed minimums should be notified in the Hill Face Zone
- public notification based on building length or height should trigger notification to 'adjoining' landowners only, rather than adjacent landowners
- notification of minor development could be limited to immediately abutting properties
- some of the built form items listed could be of significant size and cause considerable impacts on neighbouring properties and their residents
- recommend consideration of a maximum size (area, height and/or volume) below which notification is not required
- consider adding earthworks as exempt from notification with 9m³ volume trigger.

Response:

Minor variation clause

The minor variation clause provides flexibility to deal with those situations in planning where the variation is trivial. An example of this would be a dwelling wall proposed to be built on an allotment boundary that exceeds the notification trigger of 11.5m by 100mm. The relevant authority can consider this variation in the context of the site, determine whether it is minor and, if so, not notify.

Importantly, the relevant authority is still required to assess the merits of the proposal against the relevant policies of the Code and the use of the minor variation clause is at the discretion of the relevant authority.

The process of determining a minor variation would be the same as that currently performed by relevant authorities in respect to minor variations for deemed-to-satisfy developments. The process of documenting decision the making in respect to public notification would also be the same.

The suggestion about enhancing the ePlanning system to document minor departures is noted and will be passed on to the development team at PlanSA.

The Commission is also working on a draft practice direction / guideline on the topic of minor variations for deemed-to-satisfy applications. It is proposed that minor variations in the context of notification exception clauses also be considered amongst this work.

Minor development

Excluding minor development from notification was based on feedback received through the Parliamentary Scrutiny process at the end of Phase 3 of the Code's implementation but couldn't be dealt with at that time. There was concern about the amount of notification being carried out in respect to minor developments that weren't subject to notification under the former system.

The intent of the amendments is to minimise unnecessary resource burden on councils and empower capably skilled decision makers by realigning notification practices with the benchmark set for minor developments under the former Development Regulations.

The Commission is of the view that there is sufficient policy in the Code (as there was in former Development Plans) to make sound assessment decisions in relation to these development types. Where there are gaps, such as in the case of decks, policies are proposed to be added as part of the Code Amendment.

Relevant authorities also have the ability under clause 1 of the notification tables to determine that a development is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development. This can be used for those classes of development not specifically identified in the table of notification exemptions.

Notification extent

Points raised about the extent of notification required (e.g., owners / occupiers within 60m of the development site) for developments that impact only on abutting neighbours is noted and understood. The extent of notification, however, is governed by the scheme of notification set out in the Act and is therefore outside the scope of amendments that can be made under the Code Amendment. This issue will be raised with the expert panel.

Recommendation:

No changes recommended.

Notification Tables – Errors and Inconsistencies (2.3.2.10.2)

The amendment aimed to correct a small number of identified errors, inconsistencies and repetition within and between zone public notification tables, including:

- reference to 'storey' instead of the correct term 'building level'
- duplication of light industry, warehouse and store in the Rural Shack Settlement Zone
- inconsistency between building on boundary policies and notification triggers
- inconsistency between notification tables regarding the exemption of 'land division' from notification
- inconsistency in the rural zones regarding the requirement to place public notices on the development site
- technical and typographical errors.

Feedback:

Generally, the changes proposed to correct errors and inconsistencies in the notification tables were supported, however there were concerns:

- removal of land division from public notification is not supported in the Hills Face Zone.
- there are problems with not placing a sign on land for Rural / Productive Rural Landscape Zone given that uses within these zones can have impacts well beyond the 60m notification area which is the distance applied for personal notification letters
- uncertainty whether land division should be exempt from public notification in the Conservation Zone as the creation of smaller parcels of land is something that the public traditionally comment on
- land division should not be exempt from notification in the Rural Shack Settlement Zone as the purpose of this zone is to limit further development in areas subject to coastal hazard risk
- there should be some delineation of what triggers notifications, but they should not necessarily be consistent between zones.

Response:

Land division

The intent of this change was to correct an inconsistency in the Code regarding the exemption of land division from public notification. In most instances (47 zones out of 65), 'land division' is exempt without exception. This amendment is seeking correct this inconsistency by exempting land division from public notification in the remaining 18 zones.

There is no consistent pattern as to why these zones don't exempt 'land division' from public notification when zones of a similar nature do. The Commission therefore remains satisfied that the amendment will ensure a consistent approach to notification.

Assessment and approval processes will remain for land division, where appropriate policies are available to address matters of siting, design and impact. Similar applies to future land use applications on divided land. Any broader change to land division notification procedures would need to be the subject of separate review and is outside the scope of the Code Amendment.

Placement of Public Notices

The decision not to require the placement of public notices on rural and remote zones was made by the Commission as part of the implementation of Phase 2 of the Code. The Productive Rural Landscape Zone was introduced in Phase 3 but was inadvertently missed in terms of the 'placement of notices' exemption. The Code Amendment is seeking to address this error. The consensus, based on feedback received in Phases 2 and 3, was that the placement of notification signs on land in rural areas is not practical.

Recommendation:

No changes recommended.

Notification Tables – Frost Fans (2.3.2.10.3)

The amendment reviewed the option of excluding frost fans from public notification but concluded for a range of reasons not to depart from the current position under which frost fans are required to be publicly notified.

Feedback:

The recommendation of the Commission was well supported with general agreement that frost fans can impact on the amenity of nearby residents and therefore warrant some form of public notification.

It was further recommended that a defined performance assessment pathway be developed for frost fans to assess this development type more effectively.

Response:

Allocating 'frost fans' to a specific assessment pathway requires further investigation as there are many variables that come into play when considering their impact on nearby sensitive receivers. It is therefore proposed to leave this for a future code amendment, perhaps one that is targeted towards rural land uses.

Recommendation:

No changes recommended.

Notification Tables – Building on railway land (2.3.2.10.4)

The amendment looked at the use 'building on railway land' and investigated why it was excluded from public notification given its potential impacts on amenity. The amendment proposed that the 'building on railway land' exemption from public notification be pared back to align with the former Development Regulations.

Feedback:

The proposed amendment was well supported. Clarification was sought on why building for the purposes of railway activities is not included in the Community Facilities Zone.

Response:

The exemption of 'building for the purposes of railway activities' was based on Clause 6(1)© of Schedule 9 of the former Development Regulations, which identified the following as not requiring public notification©(r) *the construction of a building for the purposes of, or a change in use to, railway activities in an industrial or commercial zone, or in a Public Purpose or Service Depot zone, as delineated in the relevant Development Plan*

The Code Amendment sought to maintain consistency with the zones identified in this clause (e.g., zones of an industrial or commercial nature). The Community Facilities Zone does not meet these criteria.

Recommendation:

No changes recommended.

Notification Tables – Demolition (2.3.2.10.5)

The amendment sought to clarify that demolition include partial demolitions with respect to public notification. It also reviewed the need to notify the demolition of buildings in the State Heritage Place Overlay and Historic Area Overlay where these buildings are of no heritage value nor in keeping with features of identified heritage value.

Feedback:

Feedback on this topic varied.

There was some level of support for the amendment, but yet there was also widespread concern about relying on opinions in relation to determining procedural matters, particularly when there are differences in opinions, e.g., applicants, heritage advisor and assessment managers. Other comments included:

- the amendment needs rewording for ease of navigation by the public
- why the amendment is needed if zone doesn't contain State Heritage Areas / Historic Areas

- clarity is needed about how heritage advice will be provided at the right time to support decision making and how long this will take
- concern that the clause could be misinterpreted with unintended outcomes
- the wording may inadvertently capture newly listed local heritage places
- demolition should not be excluded from notification as large numbers of historically important buildings are not listed within the Code.
- Advice is needed o' why 'partial demolition' of a State Heritage Place or Local Heritage Place requires public notification. Development within the Capital City Zone that includes partial demolition is captured as needing consultation when this is triggered, whereas under Development Plans, it was not notified.

Response:

The Commission acknowledges that the exception clause relating to demolition is protracted and could benefit from some adjustments to improve navigation. Adding a definition for 'excluded building' is considered the best way to improve and shorten the policy expression.

Concerns that the exception clause might be misinterpreted and inadvertently capture Local Heritage Places (as an example) are noted. It is not the intent of the amendment that this occurs. It is proposed that this issue be rectified by adding within the new definition a note that 'excluded buildings' do not include buildings that are specifically listed in Part 11 of the Code as a Local Heritage Place or a State Heritage Place in the South Australian Heritage Register.

Overall, this policy amendment provides important flexibility for demolitions in the Historic Area Overlay or State Heritage Areas where the building (or part thereof) is not of heritage value or consistent with the area's features of heritage importance. The current provisions are currently capturing outbuildings and other similar ancillary structures which is not the intent of the clause.

Importantly, a decision by the relevant authority to notify/not notify does not need to be made at the verification stage. This allows time to seek any necessary information to determine whether a building is of heritage value.

Again, the use of this clause is at the discretion of the relevant authority and assessment and an approval process remains for the demolition of State Heritage Places, Local Heritage Places and buildings in the Historic Area Overlay.

Recommendation:

CREATE new administrative definition for 'excluded building' to:

- support the refinement of the exception clause relating to demolition in public notification tables
- ensure that the policy clause does not inadvertently undo the intent to notify applications that involve the demolition of State and/or Local Heritage Places.

'excluded building means, for the purposes of Table 5 – Procedural Matters (PM) – Notification, a building, structure or landscape feature (or part thereof) that is:

- (a) *in an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building, structure or landscape feature (or part thereof) does not contribute to the buildings or features of identified heritage value within the State Heritage Area*
or
- (b) *in a Historic Area Overlay and the building (or part thereof):*
 - i. *is an ancillary building*
or
 - ii. *in the opinion of the relevant authority, does not demonstrate the historic characteristics as expressed in the Historic Area Statement.*

but does not include a building, structure or landscape feature (or part thereof) that is specifically listed in Part 11 of the Code as a Local Heritage Place or a State Heritage Place in the South Australian Heritage Register.'

AMEND the exception clauses relating to demolition in the public notification tables to improve and shorten expression through the use of the new defined term 'excluded building'.

Building Height – TNV and context – Policy refinement (2.3.2.11)

This amendment proposed refining policy for performance assessed developments across a variety of zones, by replacing ambiguous terms relative to height with more direct language. This change would promote consistency and create clarity regarding contextual circumstances.

Feedback:

Numerous submissions highlighted their support for the proposed changes and considered the amendments will provide clarity. Some however, expressed concern that the amendments would enable development to exceed the desirable building height.

Concern extended to examples where building height policy is seeking development that complements rather than is consistent with the existing character. There was a view that development should be consistent with the prevailing character to prevent height creep from abutting zones.

In some instances, it was argued that building height policy was originally developed through robust public consultation and implemented under the previous system and the proposed policy would undermine this work as it provides inadequate guidance relative to building height, creating a policy environment which may permit undesirable development outcomes.

Response:

Consistent versus complementary

A key goal of the Code was to consolidate the State's planning rules into one consistent policy set. In standardising zoning, the PO regarding building height is consistent across a zone, however the TNV can vary within a zone.

In selecting the term 'consistent' or 'complementary' the zone intent and DO is important. For example, it is desirable in some zones to have development that is consistent with the existing building heights, whereas for some areas a new and emerging character is being developed which is compatible with rather than consistent with the heights characterising the locality.

For this reason, it is appropriate to use these different policy phrases in different circumstances.

The use of these terms has been reviewed in this context and their application is considered appropriate and in line with the zone's broader intent.

Recommendation:

No changes recommended.

Building Height, Building Wall Setback and Wall Height – Policy Review (2.3.2.12)

This amendment sought to rectify the following matters:

- inconsistent use of 'south-facing' terminology
- ambiguity regarding rear and side boundary setbacks within neighbourhood-type zones
- building height and wall height inconsistencies in terms of where they should be measured from

In doing so it sought to align, where possible, with the former Development Regulations.

Feedback:

Mixed views were received on the amendments but there was a general sense of support towards those amendments relating to 'south-facing' terminology and improving the clarity of rear and side setback policy.

The primary area of contention was in relation to changing the 'building height' measurement point from 'the lower of finished or natural ground level' to the 'top of footings' in 'Residential Code' areas¹, despite this being the policy under the former system. Below is a summary of feedback received:

- measuring wall height from the top of the footing doesn't capture the true impact of a building wall or structure height
- the policy doesn't facilitate assessment of footing depth and impact
- concerns about building height being measured from the top of the footings when up to 1m of fill can occur for a deemed-to-satisfy development
- even on flatter sites, the additional height that footings can be above natural ground level can result in the wall having a substantial impact on adjacent properties
- various suburbs covered by 'Residential Code' zones are undulating and have relatively steep slopes – characteristics similar to the Hills Neighbourhood Zone
- the sloping nature of the land within Mount Barker's Master Planned Neighbourhood Zone does not support changing the measurement point from natural ground level to the top of footings
- ancillary buildings maintaining a wall height measured from natural ground level rather than the footings is supported
- wall height should be measured from natural ground or include a measurement for maximum footing height
- why is an ancillary building treated differently from a dwelling (e.g., two different measurement points) although it will have similar impacts on neighbouring properties?
- the building height definition is not appropriate where split-level homes work with the lie of the land
- consideration should be given to the inclusion of diagrams to assist with interpretation of the definition of building height particularly relating to the measurement of the vertical distance between the lower of natural or finished ground level
- the Neighbourhood Zone has been excluded from the list of zones which previously had Residential Code
- what is the measurement point specified by the applicable policy of the Code?
- typographical errors in the amendment instructions.

Response:

Building height measurement point

Whilst the proposed building height policy amendment for Residential Code areas comes from an established benchmark, the Commission acknowledges that the current Code policy framework does provide a cap on overall building height without it being artificially lifted with fill or by using deeper footings.

For now, the Commission is recommending that the measurement point for building height in Residential Code zones revert to the lower of natural or finished ground level as originally introduced by the Code.

¹ Are zones to which the former Residential Code policies under the former Development Regulations 2008 typically applied. Under the Code they are the General Neighbourhood Zone, Housing Diversity Neighbourhood Zone, Master Planned Neighbourhood Zone, Master Planned Renewal Zone, Master Planned Township Zone, Suburban Neighbourhood Zone, Urban Renewal Neighbourhood Zone and the Waterfront Neighbourhood Zone.

Current building height policies/TNVs in the Code provide sufficient tolerances for some fill and footing depth without compromising building design when building height is measured from ground level.

Note: This change will affect only the 8 Residential Code zones as all other zones in the Code have 'lower of natural or finished ground level' as the measurement point for building height.

The Commission will consider undertaking a separate piece of work to explore the relationship of building height vs wall height/post height the use of 'top of footings' as a measurement point and influencing matters such as retaining walls and trivial setbacks to avoid policy/notification triggers.

Wall height - measurement point for ancillary buildings

Feedback generally supported wall heights for ancillary buildings being measured from 'natural ground level'. This is proposed to be retained by the Commission.

Note: The Master Planned Township Zone and Master Planned Renewal Zone policy already had the measurement point for 'wall height' as 'natural ground level' and therefore will not need amending.

Building height, wall height and post height definitions

The changes to the definitions for building height and wall height (and new post height definition) are needed to provide the flexibility for Code policies to stipulate a different measurement point than that expressed in the definition. Where a policy in the Code expresses a measurement point that is different to the definition, the measurement point in the policy will prevail.

For example, the current definition for 'wall height' takes its measurement point from the 'top of the footings', however the policies for ancillary buildings state that it be taken from 'natural ground level'. With the proposed changes to definitions, the policy will now prevail to avoid any confusion – i.e., the measurement point will be taken from 'natural ground level' for ancillary buildings.

Split level homes / natural ground level / diagrams

Feedback is acknowledged regarding building height policy not being ideal where split level homes are proposed to work with the lie of topography. Currently the Commission is working on developing a practice guideline on 'natural ground level' and how it should be interpreted in the context of development and its relationship with finished ground level. Diagrams to assist with policy interpretation are proposed and it is hoped to have it ready for release in conjunction with the approval of the Code Amendment.

Recommendation:

AMEND building height policy in the following zones so that it is measured from the lower of natural or finished ground level:

- General Neighbourhood
- Housing Diversity Neighbourhood
- Master Planned Neighbourhood
- Master Planned Renewal
- Master Planned Township
- Suburban Neighbourhood
- Urban Renewal Neighbourhood
- Waterfront Neighbourhood

CORRECT policy numbering errors within the amendment instructions as needed.

Building Walls and Dwelling Walls – Policy Review (2.3.2.13)

Inconsistent wording in relation to walls for buildings and dwellings was identified in the Code. To capture all forms of land uses and provide consistency in terminology. The amendment proposed that ‘*dwelling walls*’ be amended to ‘*building walls*’, except in instances where the policy is specific to residential buildings only.

Feedback:

Feedback received was generally supportive of the proposal.

Some submissions sought clarification and/or amendments to the proposed policies as follows:

- why do the proposed policies relating to rear setbacks exclude ‘ancillary buildings and structures’ which would then enable them to be built on the boundary?
- do ‘walls’ relates to an alfresco under the main roof of a building or other open type structures which use posts rather than walls
- the amendments should be extended to similar policies which exist in the Business Neighbourhood Zone, in addition to the other suite of Neighbourhood Zones.
- consideration should be given to whether separate setback policies are needed which require greater setbacks for group dwellings and residential flat buildings
- instead of using the term ‘building’, the policies could use the phrase ‘buildings and/or built structures’ or ‘building and/or built forms’
- what constitutes an ‘ancillary building’ as it is not defined in the Code definitions?
- will the subject policy change capture all building types expected in a zone?
- will the Masterplanned Neighbourhood Zone policy changes enable non-residential uses to be allowed up to 3 storeys where they were not previously envisaged at that height?
- there are insufficient policies in the Neighbourhood Zone governing non-residential ancillary buildings, given 10.1 speaks only to residential ancillary buildings
- buildings on a boundary should be performance assessed rather than deemed-to-satisfy in certain zones
- existing Code rear setback distances in some zones are too small to provide meaningful and usable areas of open space and distances between buildings
- additional side and rear setback policies are needed to capture the siting of residential buildings that may not orientate to the front of the site.

Response:**Ancillary buildings and structures**

In relation to queries raised about why ancillary buildings and structures were excluded from policies relating to rear and side setbacks, it is noted that the policy change was intended to broaden the setback policy about the primary building on the land to other non-residential land uses (e.g., a pre-school) instead of just to dwellings. The policy change was not intended to broaden this to ancillary buildings and structures which may be proposed in addition to the primary building. This was intentional as it is often appropriate for ancillary buildings and structures (e.g., domestic sheds and other similar structures) to be built on the boundary. Additionally, there are other policies which guide assessment of such ancillary buildings.

Open structures

In relation to the query regarding whether policies for ‘walls’ also includes open structures such as an alfresco under the main roof, it is considered that the common meaning of wall applies being “an upright work or structure of stone, brick or similar material, serving for enclosure, division, support, protection etc., as one of the upright enclosing sides of a building or a room” (Macquarie Dictionary). Accordingly, the policies do not apply to open sided structures unless specifically stated so in the Code.

Business Neighbourhood Zone and Master Planned Renewal Zone

It is agreed to apply the same corrections to the relevant policies in the Business Neighbourhood Zone (in addition to those already proposed in all other Neighbourhood Zones). It is however considered that establishing new setback policies for group dwellings and residential flat buildings is out of the scope of post consultation changes to the Code Amendment.

The Commission has also identified that the same amendment should be applied to the Master Planned Renewal Zone as this zone is being added to the list of Neighbourhood-type zones.

Buildings / Structures

A submission suggested that instead of using the term 'building' that the policies could use the phrase 'buildings and/or built structures' or 'building and/or built forms', however this is not considered necessary as the PDI Act definitions set out that 'structure' which is subject to the Building Code provisions is included within the definition of 'building'.

Ancillary

Part 8 of the Code states that:

a term not defined in the following table will have its ordinary meaning unless the term is defined in the Planning, Development and Infrastructure Act 2016 or its Regulations (or any relevant practice direction or practice guideline issued by the State Planning Commission) in which case that meaning will apply.

The term 'ancillary' is commonly used throughout the Act, Regulations and Code with the Macquarie Dictionary defining it:

(a) 1. accessory; auxiliary. 2. An accessory, subsidiary or helping thing or person".

Relevant authorities use appropriate judgement on a case-by-case basis when determining the nature and elements of an application in this respect. This would equally apply to buildings ancillary to a dwelling as it would to another land use with a primary building on a site (e.g., a pre-school building could have an outbuilding which is considered ancillary).

Master Planned Neighbourhood Zone

In relation to broadening policies to all buildings instead of only residential buildings in the Master Planned Neighbourhood Zone it is considered that this will enable more control over appropriate height and setback outcomes as non-residential buildings did not previously have sufficient policy guiding these outcomes. The policies are considered complimentary to the Emerging Activity Centre Subzone policies.

Non-residential ancillary buildings

It is considered that there is sufficient zone and other policies (e.g., General Development Policies) to guide an assessment of non-residential ancillary buildings when such applications arise.

Building on boundaries

It is considered outside of the scope of the Code Amendment to make buildings on boundaries performance assessed instead of deemed- to-satisfy in certain zones (particularly post consultation).

Retaining walls and fences

A suggestion that a 3m height threshold could be reinstated into the Code for retaining walls and fences on boundaries to warrant notification is acknowledged. It is however considered that accredited relevant authorities are appropriately skilled to determine potential planning impacts of such structures without requiring public notification.

Setbacks

It is considered outside of the scope of the Code Amendment to increase the rear setback minimum dimensions in certain zones (particularly post consultation).

The suggestion for additional side and rear setback policies to capture the siting of certain residential buildings which may not orientate to the front of the site, is also considered outside the scope of the Code Amendment (particularly post consultation) and is sufficiently catered for in how a relevant authority can interpret policies in the Code more generally to address the specifics of applications on a case-by-case basis.

Recommendation:

AMEND the following policies of the Business Neighbourhood Zone as set out below:

PO 3.4, amend by replacing the words:

'~~Dwelling boundary walls~~ are limited in height and length to manage visual and overshadowing impacts on adjoining properties.'

With:

'Walls on boundaries are limited in height and length to manage visual and overshadowing impacts on adjoining properties.'

DTS/DPF 3.4, amend by replacing the words:

'Except where the ~~dwelling~~ is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b) below.'

With:

'Except where the building is a dwelling and is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b) below.'

PO 3.6(a), amend by replacing the words:

'(a) separation between ~~dwelling~~s in a way that complements the established character of the locality'

With:

'(a) separation between buildings in a way that complements the established character of the locality'

PO 3.7(a), amend by replacing the words:

'(a) separation between ~~dwelling~~s in a way that complements the established character of the locality'

With:

'(a) separation between buildings in a way that complements the established character of the locality'

AMEND the following policies of the Master Planned Renewal Zone as set out below:

DTS/DPF 7.1, amend by replacing the words:

'~~Dwelling~~-walls are set back consistent with a building envelope plan, or where none exists at least 900mm from the boundary of the allotment with the secondary street frontage.'

With:

'Building walls (except for ancillary buildings and structures) are set back consistent with a building envelope plan, or where none exists at least 900mm from the boundary of the allotment with the secondary street frontage.'

DTS/DPF 8.1, amend by replacing the words:

'Dwelling walls on side boundaries are consistent with a building envelope plan, or satisfy (a) or (b):...'

With:

'Building walls (except for ancillary buildings and structures) on side boundaries are consistent with a building envelope plan, or satisfy (a) or (b):....'

PO 9.1(a) and PO 10.1(a), amend by replacing the words

'separation between ~~dwelling~~s'

With:

'separation between buildings'

Drafting Note: blue text = new text, red-strikethrough = delete text.

Common and Minor Development – Overlay Relevance – Assessment Pathways (2.3.2.14)

The amendment proposed a review of the applicability of overlays to common development types such as dwellings, sheds, carports, and verandahs to simplify assessment pathways for standard and high frequency applications while at the same time ensuring that an overlay's policy outcomes are applied to a development where they are relevant. This review largely related to the application of overlays as a means of excluding certain development types from accepted and deemed-to-satisfy assessment pathways in area where these overlays apply.

Feedback:

The review of overlay exclusions which apply to various accepted and deemed-to-satisfy development types was generally supported, with several respondents indicating that the removal of overlay exclusions to avoid development being unnecessarily tripped into a performance assessed pathway is a positive move, whilst further feedback was received in relation to the appropriateness of exclusions for minor development types within certain overlays. The detail of this more specific feedback is discussed below.

Coastal Areas Overlay

Feedback suggested that the Coastal Areas Overlay should be retained as an overlay exclusion within the Rural Shack Settlement Zone, Coastal Waters and Offshore Island Zone and Open Space Zone, in addition to the Conservation Zone, for ancillary development including carports, outbuildings, verandahs, fences, retaining walls and swimming pools.

Future Road Widening Overlay and Future Local Road Widening Overlay

Mixed feedback was received in relation to the presence of this overlay as an exclusion to various forms of accepted development, with some suggesting that it is unnecessary for ancillary and minor development, and others suggesting these exclusions should remain. It was also noted that the mapping of various road widening plans could be more clearly differentiated in SAPPa to provide additional clarity and consistency for users of the system.

Clarification:

Changes to the mapping of road widening requirements in relation to the Future Road Widening Overlay rely on updates to the Metropolitan Adelaide Road Widening Plan (MARWP) prepared by the Commissioner of

Highways. In relation to the Future Local Road Widening Overlay, this mapping is based on road widening requirements for non-State maintained roads which were transitioned to the Code from previous Development Plans. Given the above, it is considered that any amendments to the mapping of road widening matters require further investigations with both Local and State Governments, and as such will not be considered for the Code Amendment.

Hazards (Flooding – General) Overlay

Feedback queried whether the Hazards (Flooding – General) Overlay should also be applied to Land Division.

Clarification:

The provisions of the Hazards (Flooding – General) Overlay relate solely to the siting and design of buildings to ensure that flood risks are minimised and do not relate to the creation of allotments. For this reason, it is not applicable to Land Division.

Historic Area Overlay – Accepted Development - Swimming Pools and Spa Pools

The removal of the exclusion for a swimming pool or spa pool from the accepted development pathway where located within the Historic Area Overlay was supported, with one submission questioning whether this exclusion should remain for an above ground pool, where this may be visible from the street, i.e., in the case of a side yard on a corner allotment.

Noise and Air Emissions Overlay

Feedback from one agency suggested that the Noise and Air Emissions Overlay should be applied to deemed-to-satisfy land division, ancillary accommodation and dwelling additions.

Scenic Quality Overlay

Feedback from one council opposed the removal of the Scenic Quality Overlay exclusion for deemed-to-satisfy ancillary accommodation and suggested that this exclusion should be expanded to deemed-to-satisfy land division, dwelling additions and outbuildings as the overlay seeks to ensure that development complements the natural and rural character of the locality.

Regulated and Significant Tree Overlay

Feedback suggested that the Significant Tree Overlay should be applied as an overlay exclusion to various accepted and deemed-to-satisfy development types.

Clarification:

The Regulated and Significant Tree Overlay contains policy which relates to the retaining of, or prevention of damage to Regulated and Significant Trees, including where this may occur as an outcome of a land division application. Tree-damaging activity is a class of development within the Code which requires assessment against the provisions of this overlay as a separate element of an assessment process. As such, the provisions of this overlay are not applied to development types other than Tree-Damaging Activity and Land Division.

Traffic Generating Development Overlay

Feedback suggested the removal of the Traffic Generating Development Overlay as an exclusion from the deemed-to-satisfy assessment pathway for land division within the General Neighbourhood Zone as all POs within the overlay contain relevant DTS/DPF provisions which, in the case of a land division, would be exceeded only if the proposal contained 50 or more additional allotments.

Water Resources Overlay

Feedback queried the removal of the Water Resources Overlay for deemed-to-satisfy detached, semi-detached and row dwellings, suggesting that the provisions of this overlay are relevant to the development of new dwellings to ensure that existing water courses are protected.

One submission suggested that the provisions of the overlay are important at both the land division and development stage for dwellings within the Master Planned Neighbourhood Zone as much of the land is currently undeveloped and retains natural creek lines. Another submission noted that the Hills Neighbourhood Zone does not include a deemed-to-satisfy pathway for detached, semi-detached or row dwellings, and as such, the proposed change would not affect assessment pathways within this zone. The third submission sought clarification that neighbourhood-type zones does not include the Urban Corridor (Business) Zone, given that the proposal seeks to remove the Water Resources Overlay as a deemed-to-satisfy exclusion for a range of development types.

[Clarification: Part 8 – Administrative Terms and Definitions includes a definition of “Neighbourhood-type Zone” which does not include the Urban Corridor \(Business\) Zone.](#)

Partial Demolition

Further investigations by PLUS identified that in some instances overlay exclusions have been unnecessarily applied to Partial Demolition within Table 1 – Accepted Development of the General Neighbourhood Zone, including:

- Coastal Areas
- Future Road Widening
- Hazards (Acid Sulfate Soils)
- Hazards (Flooding)
- River Murray Flood Plain Protection Area
- Significant Landscape Protection

It is considered that these exclusions are erroneous and serve no purpose in the assessment of a proposal to demolish a structure.

Response:

Minor Variations

Section 106(2) of the Act states:

If a relevant authority is satisfied that development is deemed-to-satisfy development except for 1 or more minor variations, the relevant authority must assess it as being deemed-to-satisfy.

Whilst the Act does not impose any limit on the number of minor variations which may be allowable, it does enable conditions to be placed on the approval of a deemed-to-satisfy development to address any minor variation to make it consistent with the deemed-to-satisfy requirement.

In this way, the Code functions in the same way as the Residential Code i.e., Schedule 4 Complying Development under the former Development Regulations, which included *development that is assessed as being a minor variation from such a form* as those development types described in the Regulations.

Given the above, it is considered that the suggestion to place a limit on the number of minor variations which may be allowable for a deemed-to-satisfy development would require a more targeted review, and as such is outside the scope of the Code Amendment.

Coastal Areas Overlay

Given that the Coastal Waters and Offshore Islands Zone, Rural Shack Settlement Zone and Open Space Zone are usually located in environmentally sensitive areas, and that the Coastal Areas Overlay often also

applies to these areas to manage environmental impacts, it is considered reasonable to retain the current overlay exclusions for these zones

NOTE: Some feedback queried whether the removal of overlay exclusions for fences and retaining walls within the accepted development pathway would result in additional policy being added to the requirements for these development types in Table 1 – Accepted Development Classification to make up for any short-fall. Given the changes to these development types largely relate to the proposed removal of the Coastal Areas Overlay as an exclusion for these development types and that it is recommended that in response to feedback received that the current exclusions remain in place, it is considered unnecessary to make any further changes in relation to this matter.

Future Road Widening Overlay and Future Local Road Widening Overlay

Given that no change was initially proposed in relation to overlay exclusions related to either the Future Road Widening Overlay or Future Local Road Widening Overlay, and that feedback received in relation to these overlays was evenly split in terms of support for and against such overlay exclusions to apply, no change is recommended in relation to this matter.

Historic Area Overlay – Accepted Development - Swimming Pools and Spa Pools

Given this proposed change was largely supported, or otherwise received little feedback to suggest otherwise, no further change is recommended in relation to this matter.

Noise and Air Emissions Overlay

Feedback from one agency suggested that the Noise and Air Emissions Overlay should be applied to deemed-to-satisfy land division, ancillary accommodation and dwelling additions. Given that the policy provisions of the Noise and Air Emissions Overlay relate to the design and siting of sensitive receivers, rather than the creation of allotments for such development types, it is not considered appropriate to apply policy provisions of the overlay to deemed-to-satisfy land division. Similarly, given that in most zones, the deemed-to-satisfy pathway for land division does not allow for the creation of additional allotments, only, the realignment of allotment boundaries, it is not considered necessary to exclude land division from the deemed-to-satisfy pathway where such development is proposed within this overlay.

Regarding ancillary accommodation and dwelling additions, given that both of these development types depend on the existence of a primary dwelling on the allotment, it is not considered appropriate to exclude these development types by virtue of being located within the overlay.

A further review of deemed-to-satisfy pathways throughout the Code has shown that in some cases the Noise and Air Emissions Overlay is not applied to detached, semi-detached and row dwellings as either an overlay exclusion, or as relevant policy provisions to be assessed against.

As this contains DTS/DPF provisions that would be relevant to the assessment of these dwellings, it is considered appropriate to insert reference to these specified overlay provisions in Column 5 – Overlays in all zones where these development types are listed in of Table 2 – Deemed-to-Satisfy Development Classification. It is further considered appropriate to insert reference to these specified overlay provisions in Column 5 – Overlays in all zones where these development types are listed in of Table 3 – Applicable Policies for Performance Assessed Development.

Regulated and Significant Tree Overlay

The Regulated and Significant Tree Overlay contains policy which relates to the retaining of, or prevention of damage to regulated and significant trees. Tree-damaging activity is a class of development within the Code which requires assessment against the provisions of this overlay as a separate element of an assessment process. As such, it is considered that the provisions of this overlay do not need to be applied to common and minor development types. One exception to this recommendation relates to the deemed-to-satisfy assessment pathway for a land division within the General Neighbourhood Zone as, unlike other zones, this pathway allows for the creation of up to 5 additional allotments not just to the realignment of

boundaries. As such, it is considered appropriate to insert reference to these specified overlay provisions relating to land division in Column 5 – Overlays of Table 2 – Deemed-to-Satisfy Development Classification in the General Neighbourhood Zone.

Scenic Quality Overlay

Whilst feedback suggested that land division could result in visual impacts related to the removal of vegetation or extensive earthworks through a subsequent application for development, the deemed-to-satisfy pathway for land division in most zones is available only where it involves the realignment of boundaries to reflect an existing approval for residential development or where proposed in conjunction with a deemed-to-satisfy dwelling. As such, it is considered unnecessary to apply an exclusion for deemed-to-satisfy land division within this overlay as dwellings themselves are excluded from the deemed-to-satisfy assessment pathway when located within the Scenic Quality Overlay. No change is recommended on this matter.

Regarding ancillary accommodation, dwelling additions and outbuildings, all three of these development types draw upon provisions from within the relevant zone and the General Development Policies which address matters related to building height, site area and setbacks, as well as the retention of private open space and soft landscaping. In the case of dwelling additions and outbuildings, there is currently no exclusion from the deemed-to-satisfy assessment pathway. Rather, DTS/DPF 4.1 of the Scenic Quality Overlay is applied to address matters related to excavation and filling, including ensuring that any scree slopes are landscaped. Given the similar policy requirements for these development types, it is considered appropriate to remove the overlay exclusion for deemed-to-satisfy ancillary accommodation, whilst also applying DTS/DPF 4.1 of the Scenic Quality Overlay to this development type to ensure matters relating to excavation and filling are addressed. It is considered appropriate to apply DTS/DPF 4.1 of the Scenic Quality Overlay to deemed-to-satisfy ancillary accommodation to facilitate a consistent approach to development within this assessment pathway.

Traffic Generating Development Overlay

Given that DTS/DPF 2.3 of the General Neighbourhood Zone only allows land division proposing up to 5 additional allotments, the threshold for the Traffic Generating Development Overlay would never be exceeded within the deemed-to-satisfy assessment pathway. As such, it is considered reasonable to remove the Traffic Generating Development Overlay as an exclusion from the deemed-to-satisfy assessment pathway for land division within the General Neighbourhood Zone.

Water Resources Overlay

DTS/DPF 1.5 of the Water Resources Overlay requires that a 20 metre buffer from the top of the existing banks of a watercourse is incorporated to reduce impacts of development on natural flow paths or the quality of water within a watercourse. It is considered appropriate to apply DTS/DPF 1.5 of the Water Resources Overlay to deemed-to-satisfy detached, semi-detached and row dwellings in zones where this overlay exclusion is removed.

Clarification:

Where a zone does not currently include an accepted or deemed-to-satisfy assessment pathway for a specified development type, no action will be taken in relation to the addition or removal of an overlay exclusion, or associated policy provisions, as such changes would have no effect. The purpose of this amendment is to refine existing assessment pathways rather than add new pathways for development types within a zone.

Partial Demolition

It is recommended that the following overlay exclusion be removed from Column 1 of Table 1 – Accepted Development in the row for partial demolition within the General Neighbourhood Zone:

- Coastal Areas
- Future Road Widening
- Hazards (Acid Sulfate Soils)
- Hazards (Flooding)
- River Murray Flood Plain Protection Area
- Significant Landscape Protection.

Recommendation:

AMEND column 1 of Table 1- Accepted Development Classification and Table 2 – Deemed-to-Satisfy Development Classification of the affected zones to ensure overlay exclusions are appropriately applied to specified development types.

AMEND column 5 of Table 2 – Deemed-to-Satisfy Development Classification to apply specified DTS/DPF provisions to deemed-to- development types in affected zones.

AMEND column 5 of Table 3 – Applicable Policies for Performance Assessed Development to make specific reference to the POs of the Noise and Air Emissions Overlay for detached dwellings, semi-detached dwellings and row dwellings.

Detached Dwellings in Master Planned Zones as an Accepted Development Pathway (2.3.2.15)

This amendment reviewed the accepted development pathway for detached dwellings within the Master Planned Zones and proposed removing unnecessary overlay exclusions for overlays which would have already been considered via the approval process for a Building Envelope Plan.

Feedback:

The amendment was well supported. Only two points of feedback were received, one of which suggested that the same amendment should be applied to semi-detached and row dwellings within the accepted development pathway of the Master Planned Renewal Zone.

The other feedback queried how amendments can be made to the accepted pathway for dwellings when it is unknown how the Bushfire Overlay Code Amendment will affect these forms of development.

Response:

The Master Planned Renewal Zone contains an accepted development pathway for both semi-detached and row dwellings which contains similar requirements to the pathway for detached dwellings, which requires, among other things, that the dwelling be designed in accordance with an approved Building Envelope Plan for the site. Given this, it is considered appropriate to also apply the amendments to the accepted development pathway for these dwelling types in the Master Planned Renewal Zone.

Regarding the removal of exclusions for the Hazards (Bushfire) Overlays from the accepted development pathway, the process for developing a Building Envelope Plan requires consideration of all overlays relevant to the site and ought not be approved in instances where an overlay issue cannot be readily addressed. As such, the removal of these overlays from the list of exclusions will not detract from changes to the policy or spatial application of these overlays via the Bushfire Overlay Code Amendment, as the requirements of these overlays will still need to be considered during the approval process for the Building Envelope Plan. No further change is recommended in relation to this matter.

Recommendation:

AMEND Table 1 – Accepted Development Classification of the Master Planned Renewal Zone to enable the return of the accepted development assessment pathway for semi-detached and row dwellings where a Building Envelope Plan applies except for where the following overlays apply:

- Character Area Overlay
- Heritage Adjacency Overlay
- Historic Area Overlay
- Local Heritage Place Overlay
- State Heritage Area Overlay
- State Heritage Place Overlay.

Detached Dwellings - Medium and High-Rise Development – Policy Relevance (2.3.2.16)

This amendment reviewed assessment pathways for all dwelling types within zones where three storey development (and above) is contemplated to ensure that policy provisions relating to medium and high-rise development is applied.

Feedback:

Feedback was generally supportive of the amendments; however, it was noted that the proposed changes did not capture all provisions within the Design in Urban Areas General Development Policies relating to medium and high-rise development. Specifically, it was noted that those provisions relating to requirements for landscaping, water sustainable urban design, and waste collection.

Other feedback suggested that because of the General Neighbourhood Zone and Suburban Neighbourhood Zone generally contemplate low-rise development, the provisions related to medium and high-rise development should not apply.

Response:

The proposed amendment includes provisions from Design in Urban Areas [Residential Development - Medium and High Rise (including serviced apartments)]: PO and DTS/DPF 26.1 – 30.1 inclusive. The amendment did not include those provisions from Design in Urban Areas [All Development - Medium and High Rise, which are currently applied to other forms of development where heights are anticipated above three levels, such as Residential Flat Buildings. It is considered that these additional provisions are appropriate to apply to all dwelling types in the identified zones to ensure that matters relating to external appearance, landscaping, water sensitive urban design and overlooking can be appropriately assessed.

Regarding the application of these policy provisions to various forms of dwellings within the Suburban Neighbourhood Zone, this zone incorporates TNVs for building height, which can allow up to three storeys depending on location. Conversely, the General Neighbourhood Zone does not include a TNV for building height, but rather has a fixed building height limit of 2 building levels and 9 metres in DTS/DPF 4.1, and the corresponding PO requires that buildings contribute to a low-rise suburban character.

The presence of provisions from the General Development Policies related to medium and high-rise development in a zone, or a portion of a zone which typically contemplates low rise development does not derogate from the need to assess the development against the building height policies of the zone. In line with the hierarchy of policies in Part 1 – Rules of interpretation, a zone policy will prevail over a General Development Policy.

As such, the presence of these policy provisions will fill a gap where a three-storey development is proposed within a zone that typically contemplates two-storey development and for which the relevant authority may believe such a proposal may have merit in that particular circumstance, thus allowing the relevant authority to draw on these provisions to make a proper assessment against all relevant policies of the Code. In the absence of such policies being specifically applied, the relevant authority is unable to draw in additional provisions to make an assessment and therefore certain matters related to medium-rise

development could not be addressed. Conversely, where a development is proposed that is less than three storeys – i.e., it is *low rise* – then provisions related to medium and high-rise development would not be applicable.

Section 102 of the *Planning Development and Infrastructure Act 2016* provides the following in relation to this matter:

102—Matters against which development must be assessed

1. *Subject to this Act, a development is an approved development if, and only if, a relevant authority has assessed the development against, and granted a consent in respect of, each of the following matters (insofar as they are relevant to the particular development):*
 - a. —
 - i. *the relevant provisions of the Planning Rules;*

As such, it is considered appropriate to include these provisions within the affected zones.

Recommendation:

AMEND assessment pathways for all dwelling types within zones where three storey development (and above) is contemplated to ensure that Design in Urban Areas [All Development - Medium and High Rise] policy provisions are applied.

Discrete vs Discreet- Garages & Carports - Policy Review (2.3.2.17)

This amendment sought to amend PO 10.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone to use the word “discreet” (instead of discrete) to ensure that carports and garages do not dominate the appearance of the associated dwelling when viewed from the street.

The proposed changes were supported, with no additional feedback provided.

Response:

N/A

Recommendation:

No changes recommended.

Discrete vs Discreet - Garages & Carports – Linkages (2.3.2.18)

This amendment looked to remove a duplication of policy related to carports and outbuildings within the Established Neighbourhood Zone and Township Neighbourhood Zone, namely that PO and DTS/DPF 10.1 of the zones, need not be applied to a carport or garage, given it duplicates policy that applies to these development types as part of the zone’s ancillary buildings and structures policy.

Feedback:

Feedback on this amendment was well supported as it was considered that PO and DTS/DPF 11.1 would adequately take matters of streetscape appearance into account, whilst ensuring that the development would not detract from the buildings on the site or on neighbouring properties. However, some suggested that PO and DTS/DPF10.1 should be retained in assessment pathways for carports and outbuildings due to the need to consider streetscape impacts, which was believed to not be addressed adequately by PO 11.1.

Response:

PO 10.1 and 11.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone read as follows:

PO 10.1

Garages and carports are designed and sited to be discrete and not dominate the appearance of the associated dwelling when viewed from the street.

PO 11.1

Residential ancillary buildings and structures are sited and designed to not detract from the streetscape or appearance of buildings on the site or neighbouring properties.

Whilst some feedback suggested that the removal of PO 10.1 would eliminate the consideration of impacts on the streetscape or the associated dwelling, it is considered that PO 11.1 goes further than this to ensure that a carport or outbuilding will not detract from the streetscape, the associated dwelling and any other building on the site or buildings on neighbouring properties. Given this, a carport or outbuilding that a relevant authority considers as ‘dominating the appearance of the associated dwelling’ as per PO 10.1, would equally be seen to ‘detract from the appearance of buildings on the site’ under PO 11.1. Furthermore, whilst dominance would suggest matters of bulk and scale, ‘detracting from the appearance of’ could relate to any number of factors that may impact upon the appearance of buildings on site or the streetscape. It is considered that PO 11.1 adequately addresses the matters raised above and that no further action is required.

Recommendation:

No changes recommended.

Dwelling Alterations and Building Additions/Alterations – Assessment Pathways (2.3.2.19)

The amendment sought to create an accepted development pathway for building alterations where the development does not increase the total floor area and does not exceed the wall height and/or overall building height of the building. The proposed pathway would include exemptions for State Heritage Places or Areas and Local Heritage Places.

A further amendment was proposed to update the introductory text for Table 1 – Accepted Development Classification, Table 2 – Deemed-to-Satisfy Development Classification and Table 3 – Applicable Policies for Performance Assessed Development to clarify that alterations and additions must be assessed against the same provision as the existing development category unless alterations and/or additions are listed as a separate class of development.

Feedback:

Feedback on the proposed amendment was mixed, with several respondents supporting the change, whilst others opposed the amendment or suggested further improvements. Specific feedback is discussed below:

Building Height

Feedback suggested amending the criteria to ensure part b) is separated so that a proposal does not exceed the existing wall height of the existing building nor the overall building height.

Materials

Feedback expressed concern that that this change may have an unintended consequence of undoing any negotiation by planning staff to achieve best outcomes in terms of materials/colours/appearance of building by facilitating accepted development pathway to alter buildings, and that it may lead to use of cheaper and less desirable finishes. It was suggested that this outcome would be unlikely to eventuate if the accepted

pathway applies only to an existing building and can't be applied to approved buildings and therefore be changed prior to completion of the development.

Privacy Treatments

Concern was raised that the new pathway could allow approved privacy treatments of upper-level windows, such as screening or opaque glazing, to be removed

Encroachment

Further feedback expressed concern that there are no provisions in place to prevent public space encroachment e.g., verandahs, balconies, canopies, etc., nor are there any no provisions that consider the built form and character policies of the zone or subzone.

Historic Area Overlay

Feedback was provided regarding the wording of the assessment pathway as it related to alterations within the Historic Area Overlay, which included:

Where located within the Historic Area Overlay, there will be no external alterations made to a building façade visible from a street

The respondent expressed concern that this wording could allow substantial changes to the sides of the building to occur in a way which would detrimentally affect the historic value of the building, such as the total replacement of side walls beyond the façade. It was further suggested that representative buildings be specifically mentioned within the criteria.

Response:

Building Height

To provide clarity regarding the use of this assessment pathway, it is considered appropriate to separate the criteria relating to exceedance of wall height and overall building height under part b) to provide clarity that both criteria need to be met.

Materials

The proposed change provides an accepted development pathway for alterations to a building where specified criteria are met. For this pathway to apply, a building must first exist in order for an alteration to the building to be made. An alteration to an 'approved' building (i.e., one which is not yet constructed) would be a variation to an authorisation under Section 128 of the Act, which also includes the alteration of a condition imposed with respect to the development authorisation. No change is recommended in relation to this matter.

Privacy Treatments

To mitigate issues relating to overlooking of neighbouring properties, it is considered appropriate to amend the assessment pathway to ensure that previously approved privacy treatments are not altered via this pathway.

Encroachment

Regarding concerns that there are no provisions in place to prevent public space encroachment e.g., verandahs, balconies, canopies, etc., the construction of such additions to a building would require assessment against the relevant provisions of the Code, as they typically fall within the definition of development under the Act. Where they do not fall under the definition of development; by virtue of meeting an exclusion under Schedule 4 of the Act, they would not be subjected to assessment irrespective of whether or not the Code contains a specific pathway for building alterations. Where an alteration would be considered to meet the requirements of the accepted development pathway, it would

still be subject to an assessment under the Building Rules. No further change is recommended in this regard.

Historic Area Overlay

Regarding building alterations within the Historic Area Overlay, it is considered that the historic value of buildings may not necessarily be limited to the building's façade but may also include roofing materials, etc. As such, it is considered appropriate to amend the criteria to ensure that an alteration will not include any alteration to the external appearance of a building that is visible from the public realm where located within the Historic Area Overlay.

Further, it is considered that since the majority of representative buildings identified within the State are contained within the Historic Area Overlay, it is not necessary to make specific reference to representative buildings within the criteria. No change is recommended in relation to this matter.

Recommendation:

AMEND Table 1 – Accepted Development Classification to ensure that part 1(b) relating to exceedance of wall height and building height are listed as separate criteria.

AMEND Table 1 – Accepted Development Classification to require that where located within the Historic Area Overlay, there will be no alterations to the external appearance of the building where visible from the public realm

AMEND Table 1 – Accepted Development Classification to ensure that building alterations do not involve the removal or alteration of a previously approved privacy treatment.

Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages (2.3.2.20)

This amendment proposed changes to the applicable policies for deemed-to-satisfy development classification for horticulture within the Productive Rural Landscape Zone, Rural Zone and Rural Horticulture Zone and changes to the applicable policies for performance assessed development for horticulture within the Productive Rural Landscape Zone, Resource Extraction Zone, Rural Zone, and Rural Horticulture Zone to ensure the relevant overlay policy provisions related to horticulture are called up in an assessment.

Feedback:

The proposed change was well supported. No specific feedback was received on this matter.

Response:

N/A

Recommendation:

No changes recommended.

Interface Height – Multiple Zones: Policy and TNV – Policy Review (2.3.2.21)

The amendment proposed to refine policy relating to interface height across multiple zones, specifically identifying and excluding various building treatments on street boundaries. It also sought to apply additional policy relative to interface height for certain classes of development in specific zones. These changes recognise street boundaries as a less sensitive receiver, whilst safeguarding residential development from undesirable impacts when adjacent particular zones.

Feedback:

The proposed amendments were largely supported, noting various submissions sought policy to be nuanced in a manner which recognises narrower streets. This was based on the notion that not all streets/roads are equal, and development can have a significant and negative impact on adjacent receivers where the distance between the two is small/narrow. This was considered particularly pertinent in historic streetscapes, with impacts upon heritage listed buildings flagged as a matter of ongoing importance.

Furthermore, the list of land uses under PO 3.3 and 3.8 were highlighted to need additional consideration.

Response:

The interface policy was drafted to address overshadowing for residential development or to address massing. The subject policy specifically references allotments used for residential purposes which, by default, eliminates street boundaries. As a result, the policy was refined to strengthen the link between abutting allotments rather than the road, noting a width of 6.5 metres has also been specified in part 6.6 to capture narrow roads and laneways.

Classes of Development

Upon review of the Township Main Street Zone and its envisaged land uses, it was deemed appropriate that Table 3 of PO 3.8 be expanded to include advertisement and community facility within the list of development classes. Both have the potential to create impacts similar to the land uses originally listed via the consultation process, warranting their inclusion.

Recommendation:

AMEND the following note (a) applying to relevant interface height TNV diagram(s)/figure(s) in Part 6.6 by replacing the following:

~~a. 45 degree plane measured from a height of 3 metres above natural ground level at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a southern boundary or a street boundary)~~

With:

a. 45 degree plane measured from a height of 3 metres above natural ground level at the boundary of the allotment where abutting a residential use, or where the allotment is separated by a road less than 6.5 metres in width measured from the residential allotment boundary, within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a southern boundary)

AMEND Table 3 – Applicable Policies for Performance Assessed Development in the Township Main Street Zone by applying the following additional classes of development:

Advertisement

Community facility

Drafting Note: blue text = new text, red-strikethrough = delete text.

Land Division – Site Contamination – Policy Relevance and Linkage (2.3.2.22)

The amendment proposed changes to the PO 1.1 of the site contamination general development policies performance assessed development for land division within all applicable zones to ensure that site contamination matters are appropriately addressed.

Feedback:

The proposed change was well supported, and no specific feedback was received.

Response:

N/A

Recommendation:

No changes recommended.

Non-Residential Outbuildings – New Policy and Assessment Pathways (2.3.2.23)

The amendment proposed to introduce policy and an assessment pathway to guide the development of non-residential ancillary structures and buildings in all zones where policy for ancillary buildings and structures policy applies. Changes were also proposed to the Design and Design in Urban Areas General Development Policy modules.

Feedback:

The proposed update was largely supported. There were suggestions that the policy could be refined to ensure ancillary structures are subordinate to the primary land use and do not include non-residential uses on residential sites. Additional policy was also suggested to address vehicle access, character and materials.

Requests were received to exclude the policy and assessment pathway from particular zones, including:

- Capital City Zone
- City Mainstreet Zone
- Community Facilities Zone
- Business Neighbourhood Zone
- Adelaide Park Lands Zone.

It was also requested that the policies and assessment pathways be added to the Township Zone.

A request was made to create policy linkages to ensure native vegetation is not removed and to prevent septic tanks and Community Wastewater Management Systems (CWMS) connections from being built over. Some councils were also concerned that non-residential buildings and structures could be built on residential allotments.

Response:

The purpose of these changes is to provide a streamlined pathway for minor structures that are ancillary and subordinate to the existing non-residential land use (for example a shed associated with a church). The proposed provisions provide requirements that ensure these developments are minor in nature.

Zoning

There is no DTS pathway within the Adelaide Park Lands Zone given the sensitive nature of the Adelaide Park Lands as an area of national significance. Given that in all other cases, the policy has only been applied to areas that contained the Ancillary Buildings and Structure Policy, these refinements are proposed to consistently apply.

Septic/CWMS

It is the Commission's intent to ensure that outbuildings have the appropriate policy in place to prevent septic tanks and CWMS connections from being built over (General Development Policies - Infrastructure

and Renewable Energy Facilities: DTS/DPF 12.2). This provision should currently be linked to outbuildings within all applicable zones.

Non-Residential Ancillary Uses

It is proposed to reword the PO to improve policy expression and to clarify that the policy applies to non-residential ancillary buildings that are associated with non-residential development. While this is implied using the term ‘ancillary’, which suggests it is related to a residential use if on a residential allotment, the wording could be made more explicit to reassure the community and councils about the intended outcome.

Native vegetation

It is appropriate to apply policies from the Native Vegetation Overlay to non-residential outbuildings which have a deemed-to-satisfy pathway.

Recommendation:

AMEND proposed PO X.3 by replacing:

~~‘Non-residential ancillary structures and buildings do not detract from the streetscape or appearance of buildings on the site or neighbouring properties.’~~

With:

‘Buildings and structures that are ancillary to an existing non-residential use do not detract from the streetscape character, appearance of buildings on the site of the development, or the amenity of neighbouring properties.’

AMEND clause (a) of proposed DTS/DPF X.3 to refer to non-residential ancillary buildings that are ancillary and subordinate to an existing non-residential use i.e.,

‘(a) are ancillary and subordinate to an existing non-residential use on the same site’

AMEND Table 2 – Deemed-to-Satisfy to apply Native Vegetation Overlay DTS 1.1 in the Classification Criteria.

Drafting Note: blue text = new text, red strikethrough = delete text.

Outbuildings - Accepted Development Criteria (2.3.2.24)

The amendment proposed to correct a duplication of criteria relating to the term outbuilding in the Accepted Development Table (Table 1) of several neighbourhood-type zones.

Feedback:

The amendments were well supported, although one submission was not clear why the policy was being removed.

Response:

The criteria referred to in this amendment is written twice in relation to ‘outbuilding’. Only the duplicate is proposed to be removed.

Recommendation:

No changes recommended.

Pool Fencing – Accepted Development Pathway (2.3.2.25)

The amendment sought to changes the accepted pathway for a swimming pool or spa pool across all relevant zones to include swimming pool safety features so that the pathway considers the prerequisite for an associated safety fence.

Feedback:

This amendment was well supported, with some feedback suggesting further clarification that swimming pool safety features includes pool fencing, and further refinement for instances where a boundary fence forms part of the swimming pool safety features. Feedback also noted that fencing is development within the Historic Area Overlay, and that this should be considered.

Other feedback suggested that in areas where excavation is classified as development in accordance with Schedule 3(1) of the Regulations, there should be an exemption for swimming pools to allow excavation associated with the installation of the pool under the accepted pathway.

Feedback also suggested a review of all references to swimming pool or spa pool within the Code to include in the reference 'and associated swimming pool safety features' as appropriate.

Clarification: Section 3 – Interpretation of the Planning, Development and Infrastructure Act 2016 defines swimming pool safety features as follows:

Swimming pool safety features - means a fence, barrier or other structure or equipment prescribed by the regulations for the purposes of this definition.

As such, it is considered unnecessary to specify that a swimming pool safety feature includes a fence.

Response:

Whilst Table 1 – Accepted Development Classification currently states that the minimum boundary setback for a swimming pool or spa pool should be not less than 1 metre, it is considered appropriate to clarify that this relates to the swimming pool or spa pool itself and does not relate to an associate safety feature i.e., a fence or barrier, as in some circumstances the boundary fence may form part of the associated safety features.

It is noted that fences are development within the Historic Area Overlay and therefore would require assessment, however, whilst a boundary fence may form part of the safety features associated with a swimming pool or spa pool, it is considered that any swimming pool safety features comprising fences which are internal to the site should not be subjected to performance assessment.

Regarding the suggestion of an exemption for swimming pools to allow excavation associated with the installation of the pool under the accepted pathway in areas where excavation and filling of land is development under Schedule 3(1) of the Regulations, it is considered that given excavation and filling may also be required in order to install associated safety features, and that depending on the proposed location of such features, these may be located at some distance from the pool itself, there is a potential for earthworks to extend well beyond the boundary of the pool. As such, it is not recommended that such an exception be incorporated into the accepted pathway for pools.

Recommendation:

AMEND Table 1 Accepted Development Classification – Swimming pool or spa pool and associated swimming pool safety features to clarify that the minimum setback from boundary fences does not apply to the location of a swimming pool safety feature.

AMEND references to 'swimming pool or spa pool' within the Code to include 'and associated swimming pool safety features' as appropriate.

Primary Street Setback – Use of Building Line (2.3.2.26)

The amendment sought to address concerns relating to the current definition and policy application of the term 'building line', including potentially undesirable outcomes resulting from its misapplication.

Changes to the definition are set out in section 2.3.8.2 of the Code Amendment and comprise the removal of the 1.5m projection allowance.

Feedback:

The policy adjustments were generally well supported. For the most part, comments focussed more on the street setbacks policies that are in the operational Code, to which this amendment is not seeking to make wholesale change. Feedback included:

- the 1m dispensation allowed in some zones can over time mean that dwellings could eventually be built to setbacks that are progressively closer and closer to street boundaries
- why hasn't the 1m allowance been applied to some zones?
- there is a need for the policy expression to align across zones
- the use of character is important to give detail to the policy and should be retained
- stronger policy is recommended for Historic Area and Character Area Overlays where the proposed policy change could result in negative streetscape outcomes, including corner sites, to ensure development adequate addresses both street frontages
- reference to 'primary street setback' criteria for development in the rural context is problematic due to the way buildings typically orientate to take advantage of views and landscape features etc., with limited relationship to the street
- how do you determine which part of the adjacent buildings to take the measurements from when they have multi frontages?
- agree to the first change regarding bay windows exclusions but do not agree to other changes regarding placement of houses and building lines
- what about battle-axe allotments?
- does the primary street setback of the dwelling affect the proposed new dwelling(s)?
- there are too many situations where a technical DTS front setback may be zero or extremely low, 5m should be the absolute minimum for DTS, regardless of adjoining buildings
- potential issues where the only abutting building is on a corner site as the resulting setback would be minimal (i.e., 1.0m)

Response:

Policy position change

The intent of this policy adjustment was to improve clarity of interpretation, not to make wholesale changes to policy position.

Matters such as disparities between zones of similar nature and requests for stronger policy in historic and character areas are noted but are beyond the scope of the Code Amendment and would need to be investigated separately.

In terms of Code policy hierarchy, overlay policy sits above all. Therefore, in the case of the Historic Area Overlay (and similar for the Character Area Overlay) the following policy would take precedence over the setbacks that are expressed at the zone or subzone level:

PO 2.4

Development is consistent with the prevailing front and side boundary setback pattern in the historic area.

Corner sites

The point raised about reduced setbacks where a proposed dwelling site sits between a vacant block and a corner site containing a building is noted. Example from submission below:

A review of Code setback policies identifies that such a situation would require a greater setback. For example, in the General Neighbourhood Zone, a 5.0m setback would be required. It was not the intention of the Commission to make alterations to the current policy position and as such this will be corrected as part of the revised amendment instructions for the Code Amendment.

Existing building measurement point

The proposed table of setbacks explains in note (a) the way the setback of an existing building is determined:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback

In other words, it is to be measured from the wall that is closest to the street boundary, not just the front wall that is closest to the site of the proposed dwelling.

Township Zone

It has been identified that the Township Zone contains similar primary street setback policy expression to that of the Rural Settlement Zone. Whilst DTS/DPF 2.3 of the Township Zone currently does not use the term ‘building line’ and therefore reads correctly, the Commission is of the view that it should still share the new ‘table’ format. It is therefore proposed to include amendment instructions to convert DTS/DPF 2.3 of the Township Zone into a table format as part of the final amendment.

Recommendation:

AMEND primary street setback policy for the affected zones to reinstate policy for scenarios where a dwelling site sits between a vacant block and a corner site containing a building.

Example – General Neighbourhood Zone

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites minus 1m
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed	The setback of the existing building on the abutting-site minus 1m

building and the existing building is not on a corner site.	
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building and the existing building is on a corner site.	(b) Where the existing building shares the same primary street frontage – the setback of the existing building minus 1m (c) Where the existing building has a different primary street frontage - 5m
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	5m

Drafting Note: blue text = new text, red-strikethrough = delete text.

AMEND DTS/DPF 2.3 of the Township Zone to be consistent with the new table format for primary street setback policy.

Replacement Building – Overlay Exclusions: Coastal Flooding Overlay (2.3.2.27)

The amendment sought to change assessment pathways to exclude deemed-to-satisfy replacement buildings where they are located within the Coastal Flooding Overlay to prevent authorisation of proposed buildings below the standard sea flood risk level and sea level rise allowance.

Feedback:

This amendment was well supported, with only one piece of additional feedback which suggested that the Hazards (Flooding – General) Overlay should also be added to the list of overlay exclusions for a deemed-to-satisfy replacement building.

Response:

The Commission recognises that there are several buildings in hazard risk areas, some of which have existed for a considerable period of time and that they, as a result of natural processes and the effects of climate change, may now be more vulnerable than when they were originally developed.

The matter of replacement buildings in areas of hazard was raised with the Commission during the preparation of the Phase Three (Urban Areas) Code Amendment, where it was considered appropriate that where a building is to be replaced in a known hazard risk area, such as where coastal processes occur or an area subject to medium to high bushfire risk, an assessment of that risk should be undertaken rather than an automatic approval being granted that may result in risk to property and life.

Given that the Hazards (Flooding – General) Overlay addresses areas of known flood risk in a comparable way to the Coastal Flooding Overlay, it is considered appropriate to exclude replacement buildings from the deemed-to-satisfy assessment pathway where located within the overlay to ensure that known flood hazard risks may be considered via an assessment against relevant policy provisions.

Recommendation:

AMEND assessment pathways to exclude deemed-to-satisfy replacement buildings where they are located within the Hazards (Flooding - General) Overlay.

Tourist Accommodation – Total Floor Area – Rural Zones (2.3.2.28)

The amendment sought to change DTS/DPF 6.3 in both the Rural Zone and Productive Rural Landscape Zone to clarify the total floor area limitation for tourist accommodation to reinforce the intent of PO 6.3 that small-scale, ancillary tourist accommodation, sited in a manner which is sensitive to the core purpose of the zone (i.e., agricultural pursuits) is supported.

The amendment acknowledged concerns raised in the engagement report for the Phase Three (Urban Areas) release of the Code that the current drafting DTS/DPF 6.3 in the Rural Zone and Productive Rural Landscape Zone could be open to interpretation as to whether the total floor area should be applied per building or across multiple new buildings forming a single integrated tourist accommodation facility.

Feedback

While the proposed amendment was generally supported, there were suggestions for further changes, including:

- introducing more policy in the PO 6.3 around the scale of tourist accommodation in rural zones
- suggesting the term 'facility' insert (c) of DTS/DPF 6.3 is ambiguous and may require further refinement or deletion
- refinement of the proposed amended wording in DTS/DPF 6.3 to ensure that floor areas for existing buildings and new buildings are not counted separately will reinforce the intent for small-scale. The amended policy appears to allow for tourist accommodation within an existing building of 150m² in addition to a new building with a total floor area of 100m².
- Conversely, there was some suggestion that the total floor area of 100m² should not relate to the cumulative tourist accommodation facility but only to a single building. It is considered that PO 6.3 can adequately address multiple buildings forming a single integrated tourist facility.

Response:

The aim of the amendment was to address the possible interpretation of DTS/DPF 6.3 of the Rural Zone and Productive Rural Landscape Zone applying individually to multiple buildings (i.e., each individual building within an integrated tourist accommodation facility could be up to 100m² without triggering the policy) rather than to the cumulative floor area.

The Commission considers that enabling multiple buildings for the purposes of tourist accommodation of up to 100m² each could lead to the possibility of tourist accommodation of a scale that exceeds the intention of PO 6.3 to remain supplementary/ancillary to the core purpose of the respective zones for agricultural pursuits. It is therefore entirely appropriate that the floor area limitations relate to the cumulative total for a tourist accommodation facility for the purposes of the deemed-to-satisfy criteria.

In this regard, it is noted that there was some minor inconsistency in the proposed wording of DTS/DPF 6.3 clause (b)(ii) in the Code Amendment, whereby the words 'a total floor area' were omitted in the Productive Rural Landscape Zone. This will be corrected to ensure consistency in approach across the two zones.

Scale

Regarding suggestions that PO 6.3 should be further amended to include policy around the scale of tourist accommodation facilities, the following has been suggested:

Tourist accommodation is associated with the primary use of the land for primary production or primary production related value adding industry to enhance and provide authentic visitor experiences, and is of a scale that is ancillary to the primary use of the land and maintains the existing pleasant rural character.

To this end, it is noted that PO 6.4 in the Rural Zone and Productive Rural Landscape Zone provides this guidance in respect to the scale of tourist accommodation provided in new buildings, as follows:

PO 6.4

Tourist accommodation proposed in a new building or buildings are sited, designed and of a scale that maintains a pleasant rural character and amenity.

The related DTS/DPF 6.4 provides further guidance on appropriate setbacks and building heights to ensure buildings remain unobtrusive and maintain rural character and amenity. It is therefore not considered necessary or appropriate to expand PO 6.3 to duplicate this policy.

Existing buildings versus new buildings

With regard to concerns that the amended DTS/DPF criteria appears to allow for tourist accommodation within an existing building of 150m² in addition to a new building with a total floor area of 100m², it is considered appropriate to include an 'or' at the end of subclause (i) and before subclause (ii) in DTS/DPF 6.3 to clarify the intent for one scenario or the other, to ensure an appropriate small-scale. The term 'and' should also be applied following subclause (ii) to further reinforce this intent and clarify that each of the parent clauses (a) to (c) must be met.

Terminology – 'facility'

With regard to use of the term facility, this term is used throughout the Code in respect to a wide range of land uses (e.g., research facility, training facility, roadside service centre facility, parking facility, leisure and entertainment facility, emergency services facility, child care facility, health care facility), often without an associated land use definition in Part 7 of the Code. The term has also been used in respect to workers' accommodation in the Productive Rural Landscape Zone (DTS/DPF 9.1).

The ordinary meaning of a 'facility' is a place, building, amenity (or piece of equipment) provided for a particular purpose or activity and, on that basis, is considered appropriate in DTS/DPF 6.3 in respect to a facility for the purposes of tourist accommodation. This will be consistent with a range of land uses throughout the Code, although the word tourist accommodation is recommended to be included before the word facility in clause (c) to improve interpretation in this context.

Recommendation:

AMEND DTS/DPF 6.3 of the Rural Zone and Productive Rural Landscape Zone to:

- (a) include an 'or' at the end of subclause (i) and before subclause (ii) in DTS/DPF 6.3 to clarify the intent for one scenario or the other to ensure tourist accommodation maintains an appropriate small-scale and aligns with the intent of PO 6.3.
- (b) include the word 'and' at the end of subclause (ii) and before clause (c) to further reinforce this intent
- (c) include the word 'tourist accommodation' before the word 'facility' in clause (c) to improve interpretation of policy.

AMEND DTS/DPF 6.3 clause (b)(ii) of the Productive Rural Landscape Zone to refer to a total floor area in respect to an existing building to ensure a consistent approach across this zone and the Rural Zone in respect to tourist accommodation.

Part 3 – Overlays (2.3.3)***Affordable Housing Overlay – Referral Trigger (2.3.3.1)***

The amendment proposed to address two issues identified by the South Australian Housing Authority in relation to the Procedural Matters (PM) – Referrals section of the Affordable Housing Overlay:

- unnecessary referral of development applications by the South Australian Housing Authority to itself as the agency responsible for the provision of referral advice

- confusion regarding when an application should be referred.

Feedback:

A range of feedback was received on this matter, however, there was support for the South Australian Housing Authority to not have to refer its applications to itself. Those that raised concerns were generally of the view that the suggested changes to the referral trigger may discourage the provision of affordable housing by private developers. Feedback included:

- amendment drafting is very unclear
- referral criteria as proposed appears to require a referral only where the development is already proposing affordable housing and therefore doesn't capture developments where the applicant has not proposed to include affordable housing
- could the criteria require a referral for any development with 20 or more dwellings to allow the South Australian Housing Authority to provide advice or direction regarding the provision of affordable housing in the development?
- the South Australian Housing Authority should not be excluded from the referral trigger.

Some submissions provided revised wording for the consideration of the Commission.

Response:

The Commission acknowledges the feedback received about broadening the referral to capture all proposals within the Affordable Housing Overlay that involve 20 or more residential allotments and/or dwellings.

The policy of the Affordable Housing Overlay is to support the inclusion of affordable housing as part of larger residential developments and provides incentives for developers to take up this option. Where a proposal falls within the Affordable Housing Overlay, the relevant authority and the applicant can negotiate to include affordable housing as part of the application. This is done through assessment of the proposal against the Overlay's Assessment Provisions including:

Affordable Housing Overlay

PO 1.1

Development comprising 20 or more dwellings / allotments incorporates affordable housing.

PO 1.2

Development comprising 20 or more dwellings or residential allotments provides housing suited to a range of incomes including households with low to moderate incomes.

There may be circumstances where the relevant authority and the developer consider alternative solutions or have a preference to locate affordable housing outside of the proposed development site in – areas that benefit from being closer to shops and services and nodes of public transport. Referral is therefore not always needed.

Further, the South Australian Housing Authority only has direction on the conditions required to secure the provision of dwellings or allotments for affordable housing. It doesn't have the power to direct the inclusion of affordable housing as part of a development.

The Commission therefore remains of the view that the referral trigger should continue to apply only to proposals that are intending to include affordable housing consistent with the current referral arrangements.

Some rewording of the referral trigger is warranted to improve clarity in terms of:

- explaining under what circumstances 'affordable housing' is being proposed

- reducing the wording in the referral trigger by inserting a new administration definition for 'excluded land division'.

Recommendation:

CREATE new administrative definition for 'excluded land division' as follows to support the refinement of the referral trigger in the Affordable Housing Overlay:

***excluded land division** means, for the purposes of Affordable Housing Overlay – Procedural Matters (PM) – Referrals, land division that reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016.*

AMEND the referral trigger to read as follows:

*Except where the applicant for the development is the South Australian Housing Authority (or an agent acting on behalf of the South Australian Housing Authority), residential development or land division (other than **an excluded land division that reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016**):*

- that comprises 20 or more dwellings or residential allotments and **is described in the application documentation as the development is** intending to provide affordable housing or*
- that is described in the application documentation as intending to provide affordable housing and **where** the applicant is seeking to access one or more of the planning concessions outlined in the Affordable Housing Overlay DTS 3.1, 3.2 or 4.1 or*
- that is described in the application documentation as **intending to include including** affordable housing of any number of dwellings or residential allotments.*

Drafting Note: blue text = new text, red-strikethrough = delete text.

Coastal Areas Overlay – Policy Intent (2.3.3.2)

The amendment sought to undertake some specific policy improvements within the Coastal Areas Overlay to clarify intended outcomes and ensure greater consistency between POs and DTS/DPF.

Feedback:

Feedback received in submissions were mainly supportive of the proposed changes.

The Coast Protection Board (CPB) / Department for Environment and Water (DEW) did identify an issue in relation to DTS/DPF 2.2 of the Coastal Areas Overlay, however amendments to this policy were not proposed in the draft for consultation. Their view is that DTS/DPF 2.2 does not adequately cater for the 1m sea level rise which is set out in the corresponding PO 2.2. It was also pointed out that the criteria only addresses short-term flooding risk (i.e., minimum finished ground and floor levels via the TNVs). The submission proposed wording amendments that say, in addition to the TNV values, a development should also demonstrate that there are practical measures available to protect the development against an additional sea level rise of 0.7 m by the year 2100.

Response:

The matter raised in the submission from CPB/DEW about ensuring DPF 2.2 is consistent with the corresponding PO 2.2 is acknowledged as an oversight.

This is particularly as the wording at the very bottom of DPF 2.2 in the Code does include such a provision (but only where no TNV value is returned for a site) stating:

In instances where no value is specified (i.e., there is a blank field):

- a) *finished ground levels allow for sea level rise by being raised 0.3m or more above the standard sea flood risk level*
- b) *finished floor levels are 0.55m or more above the standard sea flood risk level*
- c) *practical measures can be implemented to provide future protection against an additional sea level rise of 0.7m plus an allowance to accommodate 100 years of land subsidence.*

Notwithstanding the apparent omission in the current policy framework, as the consultation draft of the Code Amendment did not propose any changes to this particular policy, it is considered inappropriate to undertake such a change to the Code Amendment post consultation. The Commission and the Department will however investigate addressing this matter through a future amendment process.

Recommendation:

No changes recommended.

Design Overlay – Referral – Referral Trigger (2.3.3.3)

The amendment proposed to change the referral trigger in the overlay to give the relevant authority the discretion to refer a variation to the Government Architect (or Associate Government Architect) should they consider it warranted.

Feedback:

Feedback received in submissions was generally supportive of the proposed changes to the referral trigger in the overlay. Other comments include

- the need to strengthen the referral trigger ensuring that all variation applications be referred to the Government Architect to ensure the original design quality and intent of a previously assessed design is maintained
- where an amendment to an approved proposal that has been subject to design review is proposed, it needs to be reviewed by a registered architect for design impact
- a new Practice Direction to guide the circumstances that may warrant a re-referral
- relevant authorities should err on the side of caution when considering whether to refer a variation application
- One submission suggested stronger provisions or penalties in the planning system relating to amendments or variations to approved buildings after the original authorisation is given including not completing landscaping or changing apartment plans after sale.
- an incorrect word in the proposed new referral wording.

Response:

The suggestion for a new Practice Direction to guide referrals to the Government Architect for variation applications is noted, as is the suggestion to err on the side of caution when authorities are using their discretion to determine these issues. However, it is considered that assessment managers have the skills and experience to determine whether a variation application to a previously authorised design could potentially result in adverse or significant changes compared to the original design. It is noted that assessment managers must be approved under the State's Accreditation Scheme for Relevant Authorities and that they are required to undertake ongoing professional development (including building and urban design related training).

It is further noted that in cases where a decision to refer a variation is not clear, an assessment manager could undertake informal discussions with the Government Architect or its support staff to help determine

whether a variation application warrants a referral (similar to what often happens with potential referrals to the State Heritage Branch).

Overall, the amendment strengthens provisions in relation to ensuring design changes via variation applications are appropriately referred where warranted, which currently is not the case. It is considered that the amendment sufficiently addresses this matter.

In relation to a submission seeking the introduction for penalties for developers not adhering to approved plans during/after construction, it is considered that appropriate compliance and enforcement provisions exist in the planning legislation on this matter.

Recommendation:

AMEND the wording in the proposed new referral criteria p(b) from:

(d) *(b) given development authorisation under the Planning, ~~Design~~ and Infrastructure Act 2016 or Development A993*

to:

(e) *(b) given development authorisation under the Planning, Development and Infrastructure Act 2016 or Development Act 1993*

Drafting Note: blue text = new text, red strikethrough = delete text.

Hazards (Flooding) Overlay – PO 3.5 a–d DTS/DPF 3.5 - Linkages (2.3.3.4)

The amendment sought to change policy linkages to ensure a consistent approach for the application of PO and DTS/DPF 3.5 of the Hazards (Flooding) Overlay to various development types.

Feedback:

Feedback from one respondent suggested amendments to DTS/DPF 3.5(e) should specifically mention garages as a type of building requiring a finished floor level that is at least 300mm above the height of a 1% AEP flood event.

Clarification: DTS/DPF 3.5(e) references 'buildings', which would include garages by default, as per the definition of 'building' provided by the *Planning, Development and Infrastructure Act, 2016*:

***building** means a building or structure or a portion of a building or structure (including any fixtures or fittings which are subject to the provisions of the Building Code), whether temporary or permanent, moveable or immovable [...]*

However, this is only one option to meet the DTS/DPF provision, as a carport or outbuilding with at least two open sides would satisfy DTS/DPF 3.5(c).

Further feedback suggested that DTS/DPF 2.1 of the Hazards (Flooding – General) Overlay be amended to make specific reference to storage or garages.

Clarification: PO 2.1 of this overlay requires that development is sited, designed and constructed to prevent the entry of floodwaters *where the entry of flood waters is likely to result in undue damage to or compromise ongoing activities within buildings*. It is considered that as this overlay applies to areas of general flood risk, rather than high risk which is addressed by the Hazards (Flooding) Overlay, and that ongoing activities within a garage or outbuilding will typically not be compromised on an ongoing basis, that it is unnecessary to include outbuildings within the DTS/DPF provision.

Response:

N/A

Recommendation:

No changes recommended.

Heritage Adjacency Overlay – Referral (2.3.3.5)

The amendment proposed changing the referral trigger in the overlay to clarify that the relevant authority should be tasked with determining whether a proposed development may materially affect the context of a State Heritage Place and should be referred to the Heritage Minister, as existed under previous legislation.

Feedback:

Feedback received in submissions (particularly from councils) was generally supportive of the proposed changes, however some suggested that additional guidance should be built into the referral trigger wording and/or an associated practice direction be created to provide better guidance on determining whether a development may materially affect the context of a State Heritage Place.

Some submissions (including from the State Heritage Branch) were opposed to the proposed change to the referral trigger as they believe that relevant planning authorities may not have the appropriate expertise to determine whether a development may materially affect the context of a State Heritage Place. It was further suggested that the extent of the overlay mapping should define any development being referred (i.e., if a development is proposed within the mapped area of the overlay). An alternative referral trigger wording was proposed, which would require the relevant authority to consult with the Heritage Minister before determining whether a formal referral is required.

Another submission recommended that the relevant authority who determines whether a referral is required should be:

- the Australian Government in accordance with the *Environment Protection and Biodiversity Conservation Act 1999*, when the development is associated with a National Heritage Place
- the council's local heritage advisor, where this service is provided and the development is associated with a Local Heritage Place.

Response:

Under the former planning system, the relevant planning authority was empowered with the responsibility to determine if a development proposal would materially affect the context of a State Heritage Place, albeit sometimes based on informal discussions with heritage officers from the State Heritage Branch. This was generally considered to work well in practice however the wording of the referral trigger was not carried over into the Code.

The overlay mapping introduced with the Code now assists in defining the 'limits' of the area in which such a consideration needs to occur. In the old system relevant authorities may have undertaken referrals which were unnecessary as they were too far from a State Heritage Place to 'materially affect the context' of a place but were referred anyway out of an abundance of caution or misunderstanding. The new overlay now addresses that issue in that any development located outside of the mapped area does not require referral.

It is however considered that some discretion should still be provided to a relevant authority as many forms of development can be innocuous and not materially affect the context of an adjacent State Heritage

Place. An example may be a small verandah to be built to the rear of a dwelling which is located next door to a State Heritage Place.

It is further noted that an Accreditation Scheme now exists which requires relevant authorities (in this case Assessment Managers) to have appropriate skills and experience and to attend ongoing professional development. This provides an extra layer of protection (compared to the previous planning system) that appropriate judgement calls will be made when determining referrals for development adjacent State Heritage Places. Informal discussions with State Heritage Branch officers can still occur for situations where there is a higher level of doubt on undertaking a referral.

Recommendation:

No changes recommended.

Key Outback and Rural Routes Overlay - Policy consistency with other Transport Overlays (2.3.3.6)

The amendment proposed a range of policy changes and additional policies to align with the updated Urban Transport Overlay framework.

Feedback:

Submissions were generally supportive of the proposed amendments.

One submission suggested also duplicating a policy from the overlay into the Transport, Access and Parking General Development Policies in order to address mud and debris issues from non-residential uses on council roads.

The Department for Infrastructure and Transport (DIT) raised some minor points of clarification to improve interpretation and clarity in the proposed DTS/DPF policies in the overlay.

One submission disagreed with all the proposed changes as being merely 'technical' and require more rigorous analysis to fit better within the Expert Panel Review's Terms of Reference. It further noted that the impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated.

Response:

Whilst the suggestion to duplicate an overlay policy to the Transport, Access and Parking General Development Policies of the Code is acknowledged, it is considered outside of the scope of the Code Amendment (post consultation) to undertake changes to a General Development Policies that weren't part of the consultation version, and which would have a policy implication for assessment.

The minor updates to wording of certain DTS/DPF policies in the overlay, as suggested by the DIT are supported.

In relation to the submission which opposed the extent of policy change occurring to the overlay and the potential impacts on communities, it is considered that the proposed amendments appropriate in terms of providing greater clarity and bringing into the Code existing best practice standards that the DIT already utilises in assessing applications referred to it. In this respect the proposed changes are considered technical and provide more clarity and certainty to processes that already occur.

A wording error was identified in the new part (c) of DTS/DPF 7.1 that requires correction to reflect the true intent of the new policy.

Recommendation:

AMEND DTS/DPF 4.1(a) from:

'where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network ~~and outside the tangent point shown in the following diagram:~~'

to:

'where a development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network (not being a Controlled Access Road) and is located outside of the bold lines shown in the following diagram:'

AMEND the introductory text in DTS/DPF 5.1 from:

'An access point satisfies ~~(a) or ((b) and (c)):~~'

to:

'An access point satisfies (a) and (c) or (b) and (c)'

AMEND DTS/DPF 7.1 so that it reads:

'Development does not:

- (a) decrease the capacity of an existing drainage point*
- (b) restrict or prevent the flow of stormwater to an existing drainage point and system*
- (c) ~~prevent~~ result in access points becoming stormwater flow paths directly onto the road.*

Drafting Note: blue text = new text, red strikethrough = delete text.

Major Urban Transport Routes Overlay - Revised policy and referral triggers (2.3.3.7)

The amendment sought to make several changes to the overlay to provide greater policy clarity and interpretation:

Feedback:

Submissions were generally supportive of the proposed amendments with some minor suggested wording changes and numbering corrections being raised.

One submission was concerned about the wording of a new policy inadvertently allowing for access points to be established too close to the tangent point of a corner with a Controlled Access Road.

A submission from the DIT raised some minor points of clarification to improve interpretation and clarity in the proposed DTS/DPF policies in the overlay.

One submission disagreed with all the proposed changes as being merely 'technical' and require more rigorous analysis to fit better within the Expert Panel Review's Terms of Reference. It further noted that the impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated.

Response:

The Commission has decided to decline some of the suggested slight wording changes as the wording in the Code Amendment is considered to provide appropriate clarity. Others are supported as requiring correction

Issues raised regarding new policy inadvertently allowing for access points to be established too close to the tangent point of a corner with a Controlled Access Road, are acknowledged and requires correction in the Code Amendment.

In relation to the submission which opposed the extent of policy change occurring to the overlay and the potential impacts on communities, it is considered that the proposed amendments are appropriate in terms of providing greater clarity and bringing into the Code existing best practice standards that the DIT already utilises in assessing applications referred to it. In this respect the proposed changes are considered technical and provide more clarity and certainty to processes that already occur.

A wording error was identified in the new part (c) of DTS/DPF 7.1 that requires correction to reflect the true intent of the new policy.

Recommendation:

AMEND the error in the numbering in DTS/DPF 4.1 from ~~(a)~~ to (b) and subsequently (b) to (c).

AMEND DTS/DPF 4.1 (a) from:

'where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network ~~and outside the tangent point shown in the following diagram:~~'

to:

'where a development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network (not being a Controlled Access Road) and is located outside of the bold lines shown in the following diagram:'

AMEND the introductory text in DTS/DPF 5.1 from:

'An access point satisfies ~~(a) or ((b) and (c)):~~'

to:

'An access point satisfies (a) and (c) or (b) and (c)'

AMEND DTS/DPF 7.1 so that it reads:

'Development does not:

- (a) *decrease the capacity of an existing drainage point*
- (b) *restrict or prevent the flow of stormwater to an existing drainage point and system*
- (c) *prevent result in access points becoming stormwater flow paths directly onto the road.*

Drafting Note: blue text = new text, red-strikethrough = delete text.

Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent (2.3.3.8)

The amendment proposed changes to the PO 2.1 of the Assessment Provisions (AP) in the Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay to remove unnecessary word duplication in respect to water quality.

Feedback:

The proposed change was supported, and no was received on this matter.

Response:

N/A

Recommendation:

No changes recommended.

Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent (2.3.3.9)

The amendment recognised that existing DTS/DPF 2.3 in the Assessment Provisions of the Mount Lofty Ranges Supply Catchment (Area 2) Overlay is overly technical as it was intended to address management of winery wastewater within the catchment, whereas the associated PO 2.3 is intended to apply to a broader range of land uses beyond wineries.

The amendments also recognised that DTS/DPF 2.3 is not specifically called up in respect to any deemed-to-satisfy assessment pathway in rural-type zones given the industrial nature of wineries (and consequent need for more rigorous assessment), and that PO 2.3 is called up for a range of other performance assessed developments and activities in rural-type zones that may generate trade or industrial wastewater within the catchment. This includes agricultural buildings, aquaculture, breweries and cideries, industry, shops, tourist accommodation, and stores or warehouses.

The proposed amendments also acknowledged that wineries and distilleries processing more than 50 tonnes of grapes or other produce per year within the Mount Lofty Ranges Watershed Area trigger a referral to the EPA under Part 9 of the Code and must be licenced by the EPA and implement an environmental monitoring program. As part of these referrals, the EPA consider a range of technical matters to mitigate potential environmental impacts associated with these facilities (including wastewater management), requiring limited further assessment by the relevant authority beyond the EPA's expert assessment.

Feedback

The proposed amendment to DTS/DPF 2.3 was generally well supported. However, there was some suggestion that the proposed wording could be amended to align with terminology used in current SA public health regulations.

There was also a suggestion that previous policies in the former Barossa Council Development Plan specific to wineries and beverage production could be applied in the Rural and Productive Rural Landscape Zones or be included in a new General Development Policies applicable to these land uses.

Response:

Regarding suggestions to include previous Development Plan policy specifically relating to wineries and beverage production in rural-type zones or the general policies in the Code, a comprehensive suite of policies are included in the Code's General Beverage Production in Rural Areas policies to ensure the mitigation of potential amenity and environmental impacts of value-adding beverage production facilities such as wineries, distilleries, cideries and breweries.

Relevant policies are also included in the Rural Zone, Productive Rural Landscape Zone and Rural Horticulture Zone as well as within relevant overlays such as the Mount Lofty Ranges Water Supply Catchment Overlays and River Murray Flood Plain Protection and Water Protection Area Overlays. These policies were introduced following a review of former Development Plan policies and the former SA Planning Policy Library in respect to these uses and are considered adequate to appropriately address impacts relating to these uses in rural areas.

With respect to wastewater systems and proposed terminology in DTS/DPF 2.3, the *South Australian Public Health (Wastewater) Regulations 2013* refer to both an 'on-site wastewater system' or a 'community wastewater management system'. Under the Regulations and as defined in the Administrative Terms and Definitions in Part 8 of the Code, an on-site wastewater system also includes where the

wastewater collected and managed contains food or beverage waste or other trade waste and may include an aerated wastewater treatment system. On-site wastewater systems may also (but are not required to) be connected to a community wastewater management system or to SA Water sewerage infrastructure.

Given that DTS/DPF 2.3 is intended to address a range of developments and activities that may generate trade or industrial wastewater within the catchment and that involve on-site treatment and disposal of wastewater, it is considered appropriate to further amend the policy to also refer to an 'on-site wastewater' system to better align with terminology used in the SA Public Health (Wastewater) Regulations.

Recommendation:

AMEND DTS/DPF 2.3 (b) to also refer to an 'on-site' wastewater to better align with terminology used in the SA Public Health (Wastewater) Regulations.

Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral (2.3.3.10)

The amendment sought to refine the wording of the referral triggers contained in the Procedural Matters (PM) Table of the Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays to capture scenarios where any combination of a second habitable building in the form of a dwelling, tourist accommodation or workers' accommodation is proposed on the same allotment within the Mount Lofty Ranges Water Protection Area.

The amendment also sought to remove unintended referrals for developments that will not result in concurrent occupation of two habitable dwellings, tourist accommodation or workers accommodation on the same allotment.

Feedback

The proposed amendment was well supported; however, there was a suggestion that reference be made to 'decommissioning' after use of the word demolition.

It was queried whether the EPA agrees with the removal of referrals for developments that will not result in concurrent occupation of two habitable dwellings, tourist accommodation or workers accommodation on the same allotment, and whether a referral should still occur in these circumstances.

Response:

Regarding the suggestion to include the word decommissioning within the exceptions under each scenario, it is noted that the proposed amendment already includes reference to both the existing buildings being demolished and the existing on-site wastewater system being proposed to be decommissioned in order to be exempt from referral. Therefore, no further amendment is considered necessary.

In relation to the query as to whether the EPA (as the referral body) supports removal of unintended referrals, the EPA has indicated its support for the proposed amendment and wording in its feedback on the Code Amendment.

Recommendation:

No changes recommended.

Prescribed Surface Water Area Overlay – Terminology (2.3.3.11)

The amendment sought to amend terminology in relation to referral triggers in the Prescribed Surface Water Areas Overlay through use of the words ‘in addition to’ in respect to any water allocation that has already been granted under the *Landscape South Australia Act 2019* to ensure consistency of terminology across the various Prescribed Water Overlays.

Feedback

The proposed amendment was well supported.

While not directly related to the overlay, it was suggested that similar terminology should be included in referral triggers in the Murray-Darling Basin Overlay, given its similar aims in respect to the taking of water in addition to any allocation granted.

Further, while generally outside this issue of referral triggers, DEW suggested some further amendments to policies in the Prescribed Surface Water Overlay. These included:

- amendments to the DOs to clarify that the overlay relates to surface water only (i.e., DO 1 currently refers to water ‘resource’ areas and ‘water courses’)
- adjustments to wording in PO 1.2 to be clearer and consistent with wording in the other Prescribed Water Overlays

Response:

There is merit in amending similar triggers in the Murray-Darling Basin Overlay to align with the various Prescribed Water Overlays. Notably, and similar to the aims of the various Prescribed Water Overlays in respect to prescribed water areas, the Murray-Darling Basin Overlay aims to protect the Murray Darling Basin by ensuring activities involving the taking of water are done in a sustainable manner.

In relation to wording changes proposed to DO 1, DEW suggested the following to clarify that the overlay is intended to apply to surface water only:

DO 1 Sustainable water use in prescribed surface water areas that maintains the health and natural flow paths of surface water

While this is outside the issue of referrals addressed in this amendment, the amended wording is considered appropriate to improve policy clarity and reach of the overlay.

In relation to suggestions to adjust wording in PO 1.2 to better align with policy wording used in the other Prescribed Water Overlays, DEW has suggested that the words ‘have a lawful, sustainable and reliable water supply...’ in PO 1.2 be replaced with ‘has a lawful, sustainable and reliable water supply...’. Again, while this amendment is outside the issue of referrals addressed in the Code Amendment, the wording is considered appropriate to improve policy clarity and ensure consistency across the various Prescribed Water Overlays.

Recommendation:

AMEND DO 1 of the Prescribed Surface Water Areas Overlay to clarify that the overlay is intended to apply to surface water only.

AMEND PO 1.2 to replace the word “have” with ‘has’ in respect to development having a lawful, sustainable, and reliable water supply to ensure consistent terminology across the various Prescribed Water Overlays.

AMEND the referral trigger in the Procedural Matters (PM) Referrals table within the Murray-Darling Basin Overlay to use the term ‘in addition to’ in respect to any water allocation that has already been granted

under the *Landscape South Australia Act 2019* to ensure consistency of terminology with the various Prescribed Water Overlays.

Prescribed Water Resources Area Overlay – Referral (2.3.3.12)

The amendment sought to correct an error in the Procedural Matters (PM) – Referrals table within the Prescribed Water Resources Overlay, whereby the overlay does not currently include an exemption for developments that have already been granted access to water as is provided in the other prescribed water overlays.

The amendment proposed a referral exemption for the following classes of development and activities where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken, thereby removing the need for unnecessary referrals in respect to water:

- horticulture
- activities requiring irrigation
- aquaculture
- industry
- intensive animal husbandry
- commercial forestry.

Feedback

The proposed amendment was well supported.

However, one submission noted that the amendment will now place the onus on the assessment authority to determine if a current approved water allocation exists and whether it has the capacity to service the new development. Clarification was also sought in respect to situations where the applicant is unable to quantify whether additional water may be required above their current allocation to service their proposed development.

Further, while generally outside this issue of referral triggers, DEW suggested some further amendments to policies in the Prescribed Water Resources Overlay, including:

- amendments to DO 1 to clarify that the overlay relates to the combination of all three water resources (surface water, watercourses and wells), not just surface water
- amendments to the wording of PO 1.1 to clarify that the policy should apply to prescribed water resource areas (not 'prescribed surface water' areas).

Response:

Under the former Development Regulations, water referrals were made to the relevant Minister or body when the development would be taking water from a prescribed water source in addition to any allocation that had already been granted under legislation. This required the relevant authority to determine whether a referral would be required as part of the development assessment process.

To make such a determination, the relevant authority must therefore seek the relevant information from the applicant in respect to the estimated water allocation requirements for the proposed development and details of any existing water allocation granted under legislation to make this determination. In some cases, the relevant authority may informally confer with the relevant body responsible for administering the *Landscape South Australia Act 2019* to assist in his determination.

This requirement has carried over into the new system in the referral triggers in the Prescribed Surface Water Areas Overlay, Prescribed Watercourses Overlay and Prescribed Wells Area Overlay in respect to certain classes of development and activities,. Therefore, with respect to assessment procedures, the relevant authority must continue to determine (as was the case under the previous system) whether a

referral would be required for proposals for certain classes of development lodged within the Prescribed Water Overlays. However, the same requirement was not carried over to the Prescribed Water Resources Area Overlay. This is considered an error which is proposed to be corrected by the Code Amendment.

In relation to suggestions to refine wording in DO 1 and PO 1.1 to clarify that the overlay applies to the combination of all three water resources (i.e., not just surface water), DEW has specifically suggested the following amendments:

***DO 1** Sustainable water use in prescribed water resource areas maintains the health and natural flow paths of surface water, watercourses and wells.*

PO 1.1

All development, but in particular development involving any of the following: [(a) to (f)] ...has a lawful, sustainable and reliable water supply that does not place undue strain on water resources in prescribed water resource areas.

While these amendments are outside the issue of referrals addressed in the Code Amendment, the proposed amended wording is considered appropriate to improve policy clarity and reach of the overlay.

Recommendation:

AMEND the wording of DO 1 and PO 1.1 in the Prescribed Water Resources Area Overlay to clarify the intent of the overlay to apply to all three water resources (surface water, watercourses and wells), not just surface water.

Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation (2.3.3.13)

The amendment sought to improve access to and visibility of ‘Representative Buildings’ in the Character Area Overlay and the Historic Area Overlay. It proposed that this be achieved by amending the Historic Area Overlay and Character Area Overlay spatial mapping to show ‘Representative Buildings’ similar to the way they are displayed in the ‘Planning Reference’ section of SAPP. A.

Feedback:

The proposed amendment was well supported; however, significant feedback was received in relation to other related matters, including:

- the need for further work (including identification through the line of enquiry tool) and clearer policy around the role and purpose of Representative Buildings
- the omission of Representative Buildings from Form 1 enquiries is of some concern as this information is then not passed onto prospective property buyers and can prove problematic
- there are not enough ‘Representative Buildings’ identified and councils should be supported in adding more
- Historic Area Overlays should also include prescriptive development rules to ensure that any new buildings built in an historic area are built to a similar height and scale of the heritage buildings in the vicinity and street.
- ceiling heights should be prescribed, as this is the most consistent parameter of historic houses.

Response:

The scope of this amendment was limited to making ‘Representative Buildings’ more visible in the Code. As such, suggested changes to policy (or the inclusion of additional policy) in the Historic Area Overlay requires separate investigation before consideration as to whether a further code amendment is needed.

The Commission notes that the Government, as part of its review of the Planning System, has committed to providing increased guidance and support for elevating more Character Areas to Historic Areas to provide greater demolition control.

Other proposals initiated by the Government include providing a pathway for councils to review and update character and historic area statements to identify gaps and to address the community's desire to better protect character streetscapes.

Line of Enquiry / Form 1 Searches

Feedback regarding the line of enquiry system and Form 1 searches is acknowledged but requires additional resources and investment into the ePlanning system. These amendments are therefore beyond the scope of the Code Amendment.

Identification of more 'Representative Buildings'

Options are available in the new planning system for councils to undertake code amendments to investigate and identify new 'Representative Buildings' that demonstrate the historic characteristics expressed by Historic Area Statements. Through this process the merits of each new building are assessed with input from the community before being confirmed in the Code as a 'Representative Building'.

Recommendation:

No changes recommended.

River Murray Flood Plain Protection Area Overlay – Outbuildings - Policy intent (2.3.3.14)

The amendment sought to change DTS/DPF 5.4(a) of the overlay to reinforce the position that roller doors, removable panels and the like are located at opposing ends or sides (depending on whichever elevations face the direction of the river flow) to enable the flow through of flood waters, aligning with the referral trigger to the Minister responsible for administration of the *River Murray Act 2003* in the overlay.

Feedback:

The proposed amendment was well supported.

DEW also suggested that the same requirements that apply to domestic outbuildings in the overlay should also apply to agricultural buildings.

Response:

With respect to agricultural buildings, DEW has advised that many areas within a rural-type zone in the Code are within the 1956 floodplain and/or the 1% AEP (annual exceedance probability) and are therefore captured by the River Murray Flood Plain Protection Area Overlay. Consequently, applications for agricultural buildings in these areas can be, and have in the past been, lodged and referred. It is also common for these structures to be proposed with only one side incorporating an openable element, which can impede floodwaters and fluctuating pool levels.

It is also noted that the referral trigger in the overlay refers to construction of an agricultural building and an outbuilding. An agricultural building is also separately defined from an outbuilding in Part 7 of the Code as follows:

Means a building used wholly or partly for purposes associated with farming, commercial forestry, intensive animal husbandry, dairying or horticulture, or to support the operations of that use, but does not include frost fans or a building used wholly or partly for any of the following:

- *the processing or packaging of commodities*
- *the housing of animals for the purposes of intensive animal husbandry*
- *the purposes of a dairy.*

It is therefore considered appropriate to further amend PO 5.4 and the corresponding DTS/DPF 5.4 to also capture agricultural buildings in addition to outbuildings. This will also ensure better alignment with the referral trigger in the Procedural Matters (PM) – Referrals table in the overlay.

Recommendation:

AMEND PO 5.4 and DTS/DPF 5.4 of the River Murray Flood Plain Protection Area Overlay to include ‘agricultural buildings’ in addition to outbuildings to ensure that these structures are designed and sited to not impede floodwaters and fluctuating pool levels in a flood event.

AMEND Table 2 – Deemed-to-Satisfy Development Classification to call up amended DTS/DPF 5.4 of the River Murray Flood Plain Protection Area Overlay in respect to an agricultural building in the following zones:

- Rural Zone
- Rural Living Zone
- Rural Horticulture Zone
- Rural Intensive Enterprise Zone
- Productive Rural Landscape Zone

AMEND Table 3 – Applicable Policies for Performance Assessed Development to call up amended PO 5.4 of the River Murray Flood Plain Protection Area Overlay in respect to an agricultural building in the following zones:

- Rural Zone
- Rural Horticulture Zone
- Rural Intensive Enterprise Zone
- Productive Rural Landscape Zone

River Murray Flood Plain Protection Area Overlay – Outbuildings – Linkage (2.3.3.15)

This amendment sought to change the performance assessed pathway for outbuildings to provide guidance on the management of visual dominance of these structures from the waterfront by adding PO 4.2 of the River Murray Flood Plain Protection Area Overlay.

Feedback:

This amendment was well supported, with only one piece of additional comment which requested that PO 4.2 should be given a corresponding DTS/DPF criteria specifying that outbuildings and agricultural buildings clad in sheet metal are pre-colour treated or painted in a non-reflective colour. It was suggested that since the existing PO 4.1 relates to all buildings and structures, whilst DTS/DPF 4.1(e) is specific to outbuildings and agricultural buildings, that DTS/DPF 4.1(e) should instead become DTS/DPF 4.2, and that PO 4.2 should be amended to refer to agricultural buildings.

Response:

Given that PO 4.2 relates specifically to outbuildings and PO 4.1 contains an associated DTS/DPF provision which addresses both outbuildings and agricultural buildings, the suggested amendments are considered reasonable as a means of providing greater clarity regarding which policy provisions relate to outbuildings and agricultural buildings, as opposed to all other buildings and structures. It is considered

that PO and DTS/DPF 4.2 be amended accordingly, and that the assessment pathways for agricultural buildings should be consequently.

Recommendation:

AMEND PO 4.2 and DTS/DPF 4.2 of the River Murray Flood Plain Protection Area Overlay to provide greater clarity for the assessment of outbuildings and agricultural buildings and make subsequent changes to DTS/DPF 4.1 of the overlay to reflect this.

AMEND column 5 of Table 3 – Applicable Policies for Performance Assessed Development to make specific reference to the PO 4.2 of the River Murray Flood Plain Protection Area Overlay for performance assessed agricultural buildings.

River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy (2.3.3.16)

The amendment sought to introduce a new PO in the River Murray Flood Plain Protection Area Overlay that recognises the need for development to have a lawful, sustainable and reliable water supply that does not place undue strain on water resources and the River Murray, in addition to existing policies that aim to protect life and property against risk of flooding.

The proposed policy complements similar policy in the related River Murray Tributaries Protection Area Overlay and focuses on particular land uses, including aquaculture, commercial forestry, horticulture, industry, intensive animal husbandry and other activities requiring irrigation.

Feedback

The proposed amendment was generally supported.

DEW suggested that horse keeping should be listed as a particular land use within the new policy given that it is also listed in the Procedural Matters (PM) – Referrals table of the overlay.

DEW also suggested that the DTS/DPF criteria that applies against similar POs in the various Prescribed Water Overlays should be applied in respect to the new PO 1.1 in the River Murray Flood Plain Protection Area Overlay. It was further suggested that this could similarly be extended to the existing PO 1.2 in the related River Murray Tributaries Protection Area Overlay and PO 1.1 in the related Murray-Darling Basin Overlay, which would also align with the exception criteria in the respective Procedural Matters tables in these overlays.

There was also a suggestion that the term ‘undue strain’ may be subject to interpretation and may warrant further explanation in the Code.

Response:

The inclusion of horse keeping within the list of particular land uses to which PO 1.1 should be applied, is appropriate given that horse keeping is specifically included as a particular class of development that may trigger a referral in the overlay, along with the other land uses and activities listed in proposed new PO 1.1.

Regarding suggestions by DEW to apply similar DTS/DPF criteria against the proposed new PO 1.1 in the River Murray Flood Plain Protection Overlay that exist within the various Prescribed Water Overlays (i.e., regarding having sufficient water capacity or does not involve taking water), it is noted that the Prescribed Water Overlays include the following DTS/DPF provision:

DTS/DPF X

Development satisfies either of the following:

(a) *the applicant has a current water licence in which sufficient spare capacity exists to accommodate the water needs of the proposed use*

or

(b) *the proposal does not involve the taking of water for which a licence would be required under the Landscape South Australia Act 2019.*

As the relevant referral body in respect to the Prescribed Water and River Murray Overlays and water licensing body, the Department's recommendations to include the above DTS/DPF criteria against the relevant POs across the various River Murray Overlays is considered appropriate. This will also ensure greater consistency with the Prescribed Water Overlays.

In relation to interpretation of the term 'undue strain', the Code does not currently provide any administrative definition for this term. Notably, a term not defined in Part 8 – Administrative Terms and Definitions of the Code will be taken to have its ordinary meaning, which in this case would be excessive, unwarranted or unsustainable pressure on water resources and the River Murray. Use of this term within the relevant PO is also qualified with respect to the need for a 'lawful' water supply (i.e., licence) to take water and its intent is therefore considered clear in the context of this policy.

Recommendation:

AMEND proposed new PO 1.1 of the River Murray Flood Plain Protection Area Overlay to also list 'horse keeping' as a particular land use to ensure consistency with the classes of development that trigger referrals in the Procedural Matters (PM) – Referrals table of the overlay.

AMEND proposed new DTS/DPF 1.1 in the Assessment Provisions (AP) of the River Murray Flood Plain Protection Area Overlay to include similar DTS/DPF criteria to the commensurate PO policies contained in the Prescribed Water Overlays with respect to development having sufficient water capacity or not involving the taking of water.

AMEND existing DTS/DPF 1.2 in the Assessment Provisions (AP) of the related River Murray Tributaries Protection Area Overlay and existing DTS/DPF 1.1 in the Assessment Provisions (AP) of the related Murray-Darling Basin Overlay to include similar DTS/DPF criteria to the commensurate PO policies contained in the Prescribed Water Overlays with respect to development having sufficient water capacity or not involving the taking of water.

River Murray Flood Plain Protection Area Overlay – Referrals (2.3.3.17)

The amendment sought to change referral triggers in the River Murray Flood Plain Protection Area Overlay to include additional exceptions for dwellings (or alterations or extension of an existing dwelling) and outbuildings that meet certain criteria; elevated shacks within the Rural Shack Settlement Zone; and transportable dwellings/cabins within a caravan or tourist park. This is intended to remove unnecessary referrals to the Minister for the River Murray.

The amendment also recognised that there has been a substantial increase in the number of referrals to the Minister for the River Murray since the full introduction of the Code, which is not practical, and that referrals for some development types are not needed where there is already a lawful water allocation that can service the proposed development.

Feedback

While the amendment was generally supported, DEW suggested some further policy refinements to address issues in the application of the proposed amendments to referral triggers. These are discussed under key headings below:

Agricultural buildings

The inclusion of agricultural buildings within the exception criteria originally intended for domestic outbuildings may be onerous and may not assist in reducing referrals or unnecessary referrals. A separate exception should therefore be included for agricultural buildings, given that they may typically need to be much larger than the existing 150m² and proposed 250m² threshold and may not necessarily be associated with an ancillary dwelling.

It was also recommended that this separate exception should be partially consistent with the *River Murray Act 'Exemption from Requirement to Refer' Gazette Notice 19 May 2005 p1290-1291* which applied under the former Development Regulations 2008, requiring farm buildings to have a 200m setback from the river and to avoid referrals of agricultural buildings within zones that have DTS/DPF criteria with specific size thresholds above 250m².

Outbuildings

The corresponding exception criteria in the former Development Regulations 2008 required all four subsections (i.e., A to D) to be met in respect to outbuildings in order to be exempt from needing a referral. The existing and proposed exception criteria in the Code in respect to outbuildings does not include the word 'and' after each clause and may require amendment.

It was also recommended that existing Part C (proposed as Part D in the Code Amendment) be amended to include wording consistent with the proposed wording for DTS/DPF 5.4 in the overlay (section 2.3.3.14 above) about multiple openings.

DEW also noted that while the exception criteria for outbuildings from the former Development Regulations 2008 that sought to avoid the construction of an outbuilding between a dwelling and the river (i.e. mainly in 'shack areas' but also any property adjoining the river) have transitioned to the Code and overlay (i.e. clause (j)(iii) part D), there are circumstances where a proposed building that meets parts A to C can still trigger a referral by virtue of the backyard of the property being closer to the river than the ancillary dwelling (part D), despite there being other neighbouring properties located between the river and this backyard. While it is understood that this may not be a frequent occurrence, the Commission considers this matter warrants further investigation and discussion with the Department outside of the Code Amendment.

Elevated dwellings

Consistent with the amendments proposed to DTS/DPF 5.4 of the overlay as part of the Code Amendment (section 2.3.3.14), which clarifies that outbuildings and agricultural buildings should incorporate openings on opposite sides (i.e., to facilitate more efficiently the flow of potential floodwaters), a similar amendment should be made to DTS/DPF 5.3 with regard to the undercroft areas of elevated dwellings. It should also be reflected in the Procedural Matters (PM) – Referrals table with respect to elevated dwellings within the Rural Shack Settlement Zone.

While not related to referrals, there was also a suggestion that PO 5.3 and DTS/DPF 5.3 be reviewed to consider allowing a greater amount of the undercroft areas of elevated dwellings to be enclosed (i.e., beyond the 15m² limit in the current policy for wet areas) to allow for storage and the like, as in former Development Plan policy. Similarly, there was some suggestion that additional policy be considered for inclusion in the Code (and potentially within the overlay) that limits the size of additions to single storey dwellings in some shack settlements, aligning with former Development Plan policy. These issues would, however, require significant further investigation and engagement and are beyond the scope of changes proposed by the Code Amendment in relation to referrals.

Terminology

Use of the term 'canals' in existing PO 4.3 of the overlay without reference to the River Murray is considered unclear, with suggestions to include specific reference to the River Murray to extend the intent of this policy to achieve a consistent character along the main river channel.

Other matters

DEW also identified an issue in respect to unnecessary referrals regarding excavating or filling of land within the overlay that are outside the 1956 flood plain. This is primarily due to the Regulations under the Act not referring to areas delineated or shown to be subject to inundation (which was the case under the former Development Regulations 2008), meaning that referrals for development involving only earthworks are triggered anywhere within the overlay by virtue of 'Flood Plain' being in the overlay title. While the Commission considers this matter warrants further investigation and discussion with the Department, it is beyond the scope of the Code Amendment.

Further, there was also a suggestion from a local authority that the floor area trigger for an outbuilding referral in the overlay should be consistent with the floor area parameter for outbuildings envisaged in the Rural Shack Settlement Zone.

A further suggestion was also made that the Minister for the River Murray should be regularly updated (e.g., annually) on the number and types of developments that are impacting on the River Murray.

Response:

Recommended changes from DEW are discussed under key headings below:

Agricultural buildings

The recommendation to include a separate exception for agricultural buildings (i.e., as distinct from outbuildings) is supported, noting that they may typically need to be much larger than the thresholds proposed in the exception criteria of the Procedural Matters (PM) – Referrals table in the overlay and may not necessarily be associated with an ancillary dwelling.

The suggestion to further amend the exceptions to avoid referrals of agricultural buildings within Zones that have DTS/DPF criteria with specific size thresholds above 250m² is also supported, noting that the Rural Zone and Rural Intensive Enterprise Zone both include DTS/DPF floor area criteria envisaging larger agricultural buildings up to 500m², while the Productive Rural Landscape Zone includes similar DTS/DPF floor area criteria envisaging agricultural buildings up to 350m².

Other rural-type zones such as the Rural Horticulture Zone include DTS/DPF floor area criteria envisaging smaller-scale agricultural buildings up to 200m², while zones such as the Rural Living Zone and Rural Neighbourhood Zone include DTS/DPF floor area criteria for small-scale non-residential and/or ancillary buildings up to 100m² or up to between 100-120m². The Rural Settlement Zone and Rural Shack Zone also both envisage ancillary buildings up to 60m², although there are no DTS/DPF floor area criteria for agricultural buildings in these zones either. The Rural Aquaculture Zone also does not include DTS/DPF floor area criteria for agricultural buildings but contemplates outbuildings up to 120m².

The suggestion to include a requirement for agricultural buildings to be setback at least 200m from the River Murray, based on the previous exemption that applied to farm buildings under the former Development Regulations 2008, is also supported to apply consistency in respect to former requirements and development on the ground. It is further noted that the land use definition for an agricultural building in Part 7 of the Code includes a range of farm buildings, including farm, horticultural, hay, implement and pump sheds, and silos.

Outbuildings

The suggestion that Parts A to E under (d)(iii) of the exceptions in the Procedural Matters (PM) – Referral table of the overlay should each be followed by an 'and' is noted, recognising that the corresponding exception criteria in the former Development Regulations 2008 required all four subsections (i.e., A to D) to be met in respect to outbuildings in order to be exempt from needing a referral. While 'and' is implied where consecutive subclauses are used in policies, writing conventions used in the Code identify that subclauses should use 'and' where all parts are collectively necessary and should be used after each subclause to ensure there is no doubt in the referral triggers, as existed under the former Development Regulations.

The suggestion that Part C (proposed as Part D in the amendment) should be changed to include wording consistent with the proposed wording for DTS/DPF 5.4 in the overlay about structures having multiple openings is supported to ensure greater consistency between the assessment provisions and referral triggers.

In relation to the suggestion that the floor area referral trigger for an outbuilding in the overlay should be consistent with the floor area parameter for outbuildings envisaged in the Rural Shack Settlement Zone (and in the context of feedback from DEW in relation to agricultural buildings above), the floor area trigger in the overlay was increased from the previous referral trigger in the former Development Regulations 2008 (previously 60m² floor area) to reduce unnecessary referrals for minor structures which can be appropriately assessed by local authorities. The referral trigger proposed in the Code Amendment of 150m² for outbuildings in the overlay is therefore considered appropriate.

Elevated dwellings

The suggestion to amend DTS/DPF 5.3 about undercroft areas of elevated buildings to be consistent with changes and wording proposed in the Code Amendment for DTS/DPF 5.4 (i.e., clarifying that outbuildings and agricultural buildings should incorporate openings on opposite sides to facilitate more efficiently the flow of potential floodwaters) is supported.

The suggestion to also include similar wording in the proposed exception criteria in the Procedural Matters (PM) – Referrals table in the overlay with respect to elevated dwellings within the Rural Shack Settlement Zone is also supported to provide consistency with amendments to DTS/DPF 5.3.

Terminology – ‘canals’

The suggestion to include specific reference to the River Murray (in addition to ‘canals’) in existing PO 4.3 to clarify and extend the intent of this policy to achieve a consistent character along the main river channel is supported.

Updates to the Minister for the River Murray

In relation to the suggestion that the Minister for the River Murray should be regularly updated on the number and types of developments that are impacting on the River Murray, the Commission understands that DEW issues a weekly River Murray Flow Report that contains information about water levels, flow rates and barrage operations as well as any navigation issues and construction activities. Regular monitoring reports are provided by SA Water and the Murray-Darling Basin Authority.

With regard to development occurring within the overlay in South Australia, new reporting services provided under the ePlanning system are available and being further developed to allow registered authorities to generate a range of reports in respect to development applications to assist with monitoring and reporting across Code areas.

Recommendation:

AMEND the exception criteria in the Procedural Matters (PM) – Referrals table of the River Murray Flood Plain Protection Area Overlay to:

- (a) include a separate exception for agricultural buildings (as distinct from outbuildings) that includes a more tailored range of floor area thresholds to recognise zones where larger agricultural buildings may be contemplated and a requirement for agricultural buildings to be setback at least 200m from the River Murray based on the previous exemption that applied to farm buildings under the former Development Regulations 2008 to ensure some consistency in approach and avoid unnecessary referrals of agricultural buildings within zones that contain DTS/DPF criteria with specific size thresholds above 250m²

- (b) include the word 'and' after Part C and before Part D in clause (d)(iii) in respect to outbuildings to clarify/reinforce that all four amended Parts (i.e., A-D) are to be met in order to be exempt from needing a referral
- (c) include wording in part (d)(iii) D with regard to structures having multiple openings that is consistent with the proposed wording for DTS/DPF 5.4 in the overlay to ensure greater consistency between the assessment provisions and referral triggers

AMEND existing DTS/DPF 5.3 of the River Murray Flood Plain Protection Area Overlay about the undercroft of elevated buildings to be consistent with proposed amendments to DTS/DPF 5.4 clarifying that buildings should incorporate openings on opposite sides to facilitate the flow of potential flood waters more efficiently.

AMEND part (d)(vii) of the exception criteria in the Procedural Matters (PM) – Referral table of the River Murray Flood Plain Protection Area Overlay in relation to referral of elevated dwellings within the Rural Shack Settlement Zone to reflect the proposed amended wording to DTS/DPF 5.3 above to ensure consistency.

AMEND existing PO 4.3 of the River Murray Flood Plain Protection Area Overlay to include a reference to development being setback from the River Murray and canals to provide clarity and extend the intent of this policy to seek a consistent character along the main river channel.

River Murray Tributaries Protection Area Overlay – Policy intent (2.3.3.18)

This amendment proposed changes to PO 1.2 within the River Murray Tributaries Protection Area Overlay to expand the range of prescribed water resources areas where undue strain on watercourses should not occur from the listed classes of development to promote sustainable water use and conservation of the riverine environment.

Feedback:

The proposed change was well supported. No specific feedback was received on this matter.

Response:

N/A

Recommendation:

No changes recommended.

River Murray Tributaries Protection Area Overlay – Referrals (2.3.3.19)

This amendment sought to change the referral triggers in the River Murray Tributaries Protection Area Overlay to remove the need for unnecessary referrals to the Minister for the River Murray for certain classes of development where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken.

The amendment aimed to address similar referral issues raised in respect to the River Murray Flood Plain Protection Area Overlay in section 2.3.3.17.

Feedback

The proposed amendment was generally well supported.

However, similar to feedback received in relation to proposed changes to referral triggers in the Prescribed Water Resources Overlay (section 2.3.3.12), one submission noted that the amendment will now place the onus on the relevant assessment authority to determine if a current approved water allocation exists and whether it has the capacity to service the new development. Clarification was also sought in respect to situations where the applicant is unable to quantify whether additional water may be required above their current allocation to service the development.

Further, similar to feedback received in response to referrals in the River Murray Flood Plain Protection Area Overlay (section 2.3.3.17 above), there was a suggestion that the Minister for the River Murray should be regularly updated (e.g., annually) on the number and types of developments that are impacting on the River Murray.

In respect to issues 2.3.3.19 and 2.3.3.17, DEW also noted that the spatial application of the related Murray-Darling Basin Overlay takes in the entirety of both the River Murray Flood Plain Protection Area Overlay and the River Murray Tributaries Protection Area Overlay, which creates potential for and has resulted in duplication in referrals to the Minister for the same development (i.e., where the taking of prescribed water for a specified activity is proposed).

- While this warrants further consideration it would require significant further investigation and engagement and is beyond the scope of changes proposed by the Code Amendment.

Response:

In relation to suggestions that the amendment will place greater onus on the relevant assessment authority to determine if a current approved water allocation exists and whether it has the capacity to service the new development, the former Development Regulations 2008 required that water referrals were made to the relevant Minister or body when the development would be taking water in addition to any allocation that had already been granted under legislation from a prescribed water source. This required the relevant authority to determine whether a referral would be required as part of the development assessment process.

This referral requirement has carried over into the new system and is included in the referral triggers in the Prescribed Water Overlays (except for the Prescribed Water Resources Area Overlay, which is an error that is proposed to be corrected by the Code Amendment). The amendment therefore proposes to also include this referral trigger similarly in the River Murray Flood Plain Protection Area Overlay and the River Murray Tributaries Protection Area Overlay in respect to certain land uses and activities to provide consistency in respect to the River Murray as a significant Prescribed Watercourse.

Therefore, with respect to assessment procedures, the relevant authority must continue to determine (as was the case under the previous system) whether a referral would be required for proposals for certain classes of development lodged within the Prescribed Water Overlays (and now including the River Murray Overlays). The relevant authority must therefore seek information from the applicant in respect to the estimated water allocation requirements for the proposed development and details of any existing water allocation granted under legislation to make this determination. In some cases, the relevant authority may informally confer with the relevant body responsible for administering the *Landscape South Australia Act 2019* to assist in this determination.

In relation to the further suggestion that the Minister for the River Murray is regularly updated on the number and types of developments that are impacting on the River Murray, and as discussed in section 2.3.3.17 above, the Commission understands that DEW issues a weekly River Murray Flow Report that contains information about water levels, flow rates and barrage operations as well as any navigation issues and construction activities. Regular monitoring reports are provided by SA Water and the Murray-Darling Basin Authority.

With regard to development occurring within the overlay in South Australia, new reporting services provided under the ePlanning system are available and being further developed to allow registered

authorities to generate a range of reports in respect to development applications to assist with monitoring and reporting across Code areas.

Recommendation:

No change is recommended.

State Significant–Native Vegetation Areas Overlay - Referral Trigger (2.3.3.20)

The amendment sought to change the Procedural Matters (PM) – Referrals table in the State Significant Native Vegetation Overlay to require that where clearance is categorised as a ‘Level 1 clearance’ in an accredited consultant’s report, referral to the Native Vegetation Council is not required.

The amendment also acknowledged that the overlay provides a deemed-to-satisfy pathway for development where an application is accompanied by a report prepared in accordance with Regulation 18(2)(a) of the Native Vegetation Regulations 2017 that confirms that the clearance is categorised as ‘Level 1 clearance’.

Feedback

The proposed amendment was well supported.

However, there was one suggestion that more resources will now be required to assist the relevant assessment authority to confirm what constitutes a ‘Level 1 clearance’.

Response:

Development applications that involve the clearance of native vegetation, must be accompanied by a report prepared by an accredited consultant which contains a risk-based assessment determining the level of clearance proposed based on assessment criteria prescribed by the Native Vegetation Council. Notably, the report also assigns a level of clearance (ranging from Levels 1 to 4) to the proposal and this information is used by the relevant planning authority to determine whether a referral to the Native Vegetation Council is required.

Recommendation:

No change is recommended.

Traffic Generating Development Overlay – Referral (2.3.3.21)

The amendment sought to change the referral for ‘land division creating in excess of 50 allotments’ to ensure that a development referred under the new clause does not end up being referred twice for the same reasons.

Feedback:

Submissions were generally supportive of the proposed amendments.

One submission suggested that relevant policies should refer to ‘egress’ on to State maintained roads as well as ‘access’. Another submission queried the logic and structure of the existing policy framework in the overlay and the repetitive nature of the DTS criteria for multiple POs.

Response:

The minor updates to wording of certain DTS/DPF policies to include 'egress' as well as 'access' on to State maintained roads is declined as other transport referrals in the Code consistently just use the term 'access'.

Although queries were raised regarding the logic and intent of the existing overlay policies and referral trigger, it is considered that the overlay has been drafted correctly in terms of overall intent which is generally to capture a referral to the Commissioner of Highways for significant traffic generating type development on local roads within 250 metres of an Urban Transport Route or a Major Urban Transport Route. It is noted that even if all DTS criteria in the overlay are met for a development accessing a state-maintained road, a referral for a new access point may still be required under separate Transport Overlays.

–

Urban Transport Routes Overlay - Revised policy and referral triggers (2.3.3.22)

This amendment sought to make several changes to the overlay to provide greater policy clarity and interpretation and:

- streamline assessment pathways and reduce unnecessary referrals, in particular for small scale developments that have negligible or minor road network implications
- provide greater opportunities for relevant authorities to assess more common or minor forms of development
- better align policies with legislative requirements and responsibilities
- provide simpler policy criteria that better reflects practice
- reflect formal and informal feedback from industry as part of the Code's implementation.

Feedback:

Submissions were generally supportive of the proposed amendments.

Some minor suggested wording changes and numbering corrections were raised.

One submission raised concern about the wording of a new policy inadvertently allowing for access points to be established too close to the tangent point of a corner with a Controlled Access Road.

A submission from DIT raised some minor points of clarification to improve interpretation and clarity in the proposed DTS/DPF policies in the overlay.

One submission disagreed with all the proposed changes as being merely 'technical' and that they require more rigorous analysis to fit better within the Expert Panel Review's Terms of Reference. It further noted that the impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated.

Another submission raised concerns about the amendments relating to a change of use from residential to shop/office in that such uses can still generate significant traffic movements even where the floor area is under 250m². Queries were also made on the other exemptions (listed in (i)-(v)) whether these were because an assessment is assumed to have been previously made.

Response:

The Commission has declined some wording changes as the wording in the amendment is considered to provide appropriate clarity. Others are supported as requiring correction.

Issues raised regarding new policy inadvertently allowing for access points to be established too close to the tangent point of a corner with a Controlled Access Road are acknowledged and agreed that it requires correction in the Code Amendment.

In relation to the submission which opposed the extent of policy change occurring to the overlay and the potential impacts on communities, it is considered that the proposed amendments to the overlay are appropriate in terms of providing greater clarity and bringing into the Code existing best practice standards that the DIT already utilises in assessing applications referred to it. In this respect the proposed changes are technical and provide more clarity and certainty to processes that already occur.

In relation to the submission which raised concern about proposed amendments relating to a change of use from residential to shop/office as well as querying other exemptions for change of use combinations, it is noted that all the proposed change of use situations are considered to raise negligible (and in some cases less) traffic movements or potential impacts to State-maintained roads. It is considered that the criteria should also be read in conjunction with other relevant DTS criteria that will apply to applications, with the total combination of such criteria ensuring safe and convenient vehicle movements should occur.

A wording error was identified in the new part (c) of DTS/DPF 7.1 that requires correction to reflect the intent of the new policy.

Recommendation:

AMEND the error in the numbering in DTS/DPF 3.1 so that it starts at (a) instead of (d)

AMEND the error in the numbering in DTS/DPF 4.1 so that it starts at (a) instead of (b)

AMEND DTS/DPF 4.1(a) from:

'where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network ~~and outside the tangent point shown in the following diagram:~~

to:

'where a development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network (not being a Controlled Access Road) and is located outside of the bold lines shown in the following diagram:

AMEND the introductory text in DTS/DPF 5.1 from:

'An access point satisfies ~~(a) or ((b) and (c)):~~

to:

'An access point satisfies (a) and (c) or (b) and (c)

AMEND DTS/DPF 7.1 so that it reads:

'Development does not:

- (a) decrease the capacity of an existing drainage point*
- (b) restrict or prevent the flow of stormwater to an existing drainage point and system*
- (c) ~~prevent~~ result in access points becoming stormwater flow paths directly onto the road.*

Drafting Note: blue text = new text, red-strikethrough = delete text.

Part 4 – General Development Policies (2.3.4)

Aquaculture – General Development Policies – Policy Review (2.3.4.1)

Th is amendment sought to update policies so that technical matters which are best dealt with through the licensing assessment process under the Aquaculture Act 2001 are not unnecessarily duplicated within a planning assessment. A DTS/DPF criteria is proposed to apply to various (but not all) POs in the General Development Policies, enabling a policy to be 'closed off' if the development already has approval for an aquaculture lease and/or licence (as applicable) granted under the Aquaculture Act 2001.

In addition, a range of other POs often considered to be superfluous to most standard marine aquaculture applications, are proposed to have a corresponding DTS/DPF to be able to easily close off that PO from an assessment if it is not relevant.

Feedback:

A detailed submission from Primary Industry and Regions SA (PIRSA) was received which was supportive of the majority of the proposed amendments. Additional POs were requested to be subject to the above-mentioned DTS/DPF criteria relating to where an aquaculture lease/licence has already been granted. This request included certain POs in other modules such as the Coastal Waters and Offshore Islands Zone, Coastal Areas Overlay and Marine Parks (Managed Use) Overlay.

Other suggestions were made for certain POs to be deleted or moved into other modules to apply more broadly to other land uses and not just to aquaculture developments.

A submission was received from the Coast Protection Board (CPB) opposing certain POs being subject to a DTS/DPF to 'close if off' if the application is already subject to a lease or licence approval. The Board stated that it has a statutory obligation to consider aquaculture developments referred to it in terms of a range of expert assessment matters such as coastal biodiversity, threatened species, migratory species, coastal hazards and coastal processes. It considers that such matters are not replicated via lease or licence applications under the *Aquaculture Act 2001*.

Response:

DTS/DPF Criteria

It is considered appropriate to remove the proposal in the amendment to apply a DTS/DPF criteria to POs 1.2, 2.1, 2.6, 2.10 and 4.1. These policies cover matters which the CPB may assess in a development application referral (with power of Direction) and as such should be left open to a performance assessment under the planning application and CPB referral.

EPA Consultation

A request to introduce EPA consultation via a proposed new DTS/DPF criteria for PO 2.3 is considered out of the scope of that allowed for in a DTS criteria (which need to be clear and not require further consultation or assessment).

Deletion and movement of policy

The request to delete or move into other modules, existing policies relating to:

- access, launching and maintenance facilities
- onshore storage, cooling and processing facilities

is not supported as it is possible that some aquaculture development applications (albeit rare) may include such features. It is also considered outside the scope of the Code Amendment to apply these policies to other land uses by moving them out of the Aquaculture General Development Policies and into other modules.

The request to delete PO 4.2 is not supported, given the importance of this matter being fundamental to the nature of an application. It is considered appropriate for an aquaculture development application to be subject to confirmation that structures will be removable or relocatable as part of the planning assessment.

Setbacks

The request to amend the setback distance in PO 2.10 from 1000m to 50m (to match forestry development) is not supported as marine aquaculture is considered to have potential different impacts to forestry (and the other proposed DTS criteria enables a lesser distance to be considered through the licensing process regardless).

Policy duplication

Other commentary regarding potential duplication of policies in the Aquaculture General Development Policies and other Code modules such as the Coastal Waters and Offshore Islands Zone or Coastal Areas Overlay are not supported. Whilst policies in other modules can sometimes duplicate similar assessment matters, they are also intended to apply to a broader range of land uses, not just aquaculture development. It is further noted that where any duplication or inconsistency may exist in other modules, appropriate weighting would be applied in an assessment to those which are most relevant to an aquaculture proposal (being those within the Aquaculture General Development Policies).

Recommendation:

DELETE the proposed new DTS/DPF criteria where it relates to POs 1.2, 2.1, 2.6, 2.10 and 4.1 of the Aquaculture General Development Policies.

Carport and Outbuilding – Internal Parking Dimensions – Linkages (2.3.4.2)

This amendment proposed to add Design in Urban Areas PO 23.1 or Design PO 19.1 (depending on zone) to deemed-to-satisfy and performance assessed pathways for carports and outbuildings to provide guidance on the assessment of internal dimensions for enclosed parking spaces.

Feedback:

This amendment was well supported. The little feedback received suggested that the minimum dimensions outlined by the DTS/DPF provisions are insufficient for larger common vehicles, and that these should be increased to ensure convenient and practical use of garages. It was further suggested that within historic areas, double garages on allotments of 15m or less should be stated as being inappropriate, with double garages sited to the rear of driveways or only on wider blocks greater than 18m and sited more than 6m behind the front facade.

Feedback also noted that the amendment instructions on consultation incorrectly referenced PO 19.1 of the Design in Urban Areas General Development Policies, as opposed to PO 19.1 of the Design General Development Policies in relation to carports and outbuildings. Similarly, it was identified that the amendment instructions should have referred to PO 23.1 of the Design in Urban Areas General Development Policies as opposed to DTS/DPF 23.1 as it relates to performance assessed carports and outbuildings.

Response:

The suggestions to increase the internal dimensions of carports and outbuildings to accommodate larger common vehicles, and to review requirements for these structures in relation to historic areas are noted. However, it is considered that these will require further investigation and consultation to inform any amendments and would need to be considered as part of a future code amendment. No further action is recommended at this time.

It is acknowledged that amendment instructions incorrectly identified PO19.1 of the Design in Urban Areas General Development Policies. In relation to amendments to Table 3 – Applicable Policies for Performance Assessed Development, the amendment should refer to the linking of PO 23.1 of the Design in Urban Areas General Development Policies to performance assessed carports and outbuildings, rather than DTS/DPF 23.1, to ensure consistency with other recommendations.

Recommendation:

AMEND instructions to clarify existing recommendations regarding:

- linking of PO 19.1 of the Design General Development Policies to performance assessed carports and outbuildings in Table 3 of specified zones
- linking of PO 23.1 of the Design in Urban Areas General Development Policies to performance assessed carports and outbuildings of–specified zones

Commercial Forestry - Forestry General Development Policies – Policy Review (2.3.4.3)

This amendment sought to address a small number of matters relating to commercial forestry policy, including:

- the status of commercial forestry as an anticipated use in the Rural Zone and the Productive Rural Landscape Zone
- planning judgements on scenic quality impacts
- setback policies.

Feedback:

The policy amendments were well supported although some clarification was sought on a couple of matters.

In relation to Forestry – General Development Policy PO 1.1, the PIRSA noted that forestry is the only development to have a specific scenic quality policy and that other developments appear to be managed through the Scenic Quality Overlay. By comparison, windfarms are specifically excluded from PO policies addressing visual impact. PIRSA contends that forestry should be managed in a similar way.

PIRSA also raised concern with the additional detail proposed to be added to Forestry – General Development Policy PO 1.4, in particular part (a) which they felt would be prejudicial towards forestry as the risk of fire originating from a plantation would be similar to the risk of fire originating from native vegetation. Clarification was also sought on when the 50m set back distance prescribed here applies and when the Native Vegetation Overlay / State Significant Native Vegetation Areas 500m set back applies.

One submission opposed the addition of 'commercial forestry' in the list of 'envisaged' uses (DTS/DPF 1.1) of the Rural and Productive Rural Landscape Zone as they felt that this would introduce a new use to these areas where it hasn't been before in terms of former Development Plan policies.

Response:

Scenic quality policies

Whilst the comparison with windfarms and the role of the Scenic Quality Overlay in assessment is noted, the Commission maintains its original position that commercial forestry may have impacts on the scenic qualities of a locality and that those impacts will evolve over the life of the development. Not all areas of scenic value are captured within the Scenic Quality Overlay and as such it remains necessary for the relevant authority to make an assessment on merit within the context of an individual development, its location and the assessment provisions of the relevant zone, subzone, overlays and Forestry General Development Policies.

Setback policy conflict / additional matters added to PO 1.4 Forestry – General Development Policy

The concerns of the PIRSA are noted in respect to the potential conflict between the setback policies of the Forestry – General Development Policies and the Native Vegetation Overlay:

Forestry – General Development Policies

PO 1.4 (as amended by the Code Amendment)

Commercial forestry plantations are separated from reserves gazetted under the National Parks and Wildlife Act 1972 and/or Wilderness Protection Act 1992 to minimise ~~fire risk and potential for weed infestation~~ potential impacts arising from:

- a) the spread of fires from the plantation into adjacent reserves
- b) the spread of pest plants and phytophthora
- c) the spread of non-indigenous plants species
- d) excessive nutrient loading of the soil or loading arising from surface water runoff
- e) soil compaction
- f) chemical spray drift.

DTS/DPF 1.4

Commercial forestry plantations and operations associated with their establishment, management and harvesting are set back 50m or more from a reserve gazetted under the National Parks and Wildlife Act 1972 and/or Wilderness Protection Act 1992.

Native Vegetation Overlay

PO 1.3

Intensive animal husbandry and agricultural activities are sited, set back and designed to minimise impacts on native vegetation, including impacts on native vegetation in an adjacent State Significant Native Vegetation Area, from:

- a) the spread of pest plants and phytophthora
- b) the spread of non-indigenous plants species
- c) excessive nutrient loading of the soil or loading arising from surface water runoff
- d) soil compaction
- e) chemical spray drift.

DTS/DPF 1.3

Development within 500 metres of a boundary of a State Significant Native Vegetation Area does not involve any of the following:

- a) horticulture
- b) intensive animal husbandry
- c) dairy
- d) commercial forestry
- e) aquaculture.

The State Significant Native Vegetation Area referred to in PO 1.3, DTS/DPF 1.3 applies to areas identified by DEW as having significant stands of native vegetation including selected reserves, national parks and heritage agreements. Mapping of the State Significant Native Vegetation Area Overlay also includes a 50-metre buffer area to capture development near these areas.

As commercial forestry is a performance assessed type of development (restricted in the Kangaroo Island Subzone) and PO 1.3 of the Native Vegetation Overlay provides a mechanism to address most of the issues proposed to be added to PO 1.4 of the Forestry – General Development Policies, PO 1.4, DTS/DPF 1.4 it is considered superfluous and can be deleted. Impact of fire spread from commercial forestry plantations will be added to PO 1.3 of the Native Vegetation Overlay.

The following note proposed to be added to DTS/DPF 3.1 of the Forestry – General Development Policies will be amended to reflect the above change and to align with current industry practice that allows for fire breaks and access tracks to be included within setback / buffer requirements:

'Note: The firebreak distances prescribed above may be included within the setback distance required for the purposes of DTS/DPF 1.3 and/or DTS/DPF 1.4.'

Addition of 'commercial forestry' in the list of 'envisaged' uses

The proposal to add 'commercial forestry' to the list of 'envisaged' uses (DTS/DPF 1.1) of the Rural and Productive Rural Landscape Zone reflects previous policy.

Whilst there may have been some areas with bespoke, local addition, policies in some of the former Development Plans, adding 'commercial forestry' as an 'envisaged' use in zones that contemplate rural and agricultural activities is not considered unreasonable. Concerns about introducing a new land use, preserving scenic rural landscapes, native vegetation clearance and enhancement can be addressed by other policies including the Forestry – General Development Policies as well as those contained in the environmental overlay suite such as the Scenic Quality Overlay, Significant Landscape Protection Overlay and Native Vegetation Overlay.

Recommendation:

DELETE PO 1.4, DTS/DPF 1.4 from the Forestry – General Development Policies.

AMEND PO 1.3 of the Native Vegetation Overlay to read:

PO 1.3

Intensive animal husbandry, commercial forestry and agricultural activities are sited, set back and designed to minimise impacts on native vegetation, including impacts on native vegetation in an adjacent State Significant Native Vegetation Area, from:

- (a) in the case of commercial forestry, the spread of fires from a plantation*
- (b) the spread of pest plants and phytophthora*
- (c) the spread of non-indigenous plants species*
- (d) excessive nutrient loading of the soil or loading arising from surface water runoff*
- (e) soil compaction*
- (f) chemical spray drift.*

AMEND the note that is proposed to be added to the bottom of DTS/DPF 3.1 of the Forestry – General Development Policies to read:

~~*'Note: The firebreak distances prescribed above may be included within the setback distance required for the purposes of DTS/DPF 1.3 and/or DTS/DPF 1.4.'*~~

'Note: Firebreaks prescribed above (as well as access tracks) may be included within the setback buffer distances prescribed by other policies of the Code.'

Drafting Note: blue text = new text, red-strikethrough = delete text.

Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways (2.3.4.4)

This amendment proposed to create additional policy within the Design, and Design in Urban Areas module specific to decks to include assessment provisions that address overlooking. The amendment also proposed to create a deemed-to-satisfy and performance assessed pathway for decks in neighbourhood-type, residential employment, rural and recreation type zones linking the proposed new decks policy with overlay applicability and relevant General Development policies reflecting comparable development types such as a verandah.

Feedback:

Feedback for the inclusion of a deemed-to-satisfy pathway for decks was generally in support, however there was a range of comments suggesting ways in which the proposed policy provisions relating to decks could be strengthened to minimise possible impacts relating to overlooking, bulk/scale, deck height and the provision of soft landscaping.

Floor levels

It was suggested that further refinement to the policy is needed to address and/or clarify that when attached to the dwelling, the deck has a finished floor level consistent with the finished ground floor level of the dwelling, rather than a second floor. It was also suggested that a maximum height limit above natural ground level be considered for sloping sites where a large deck, although consistent with the ground floor level of the dwelling, may be significantly higher than natural ground level where the allotment slopes away from the dwelling.

Privacy screening

It was suggested that decks with multiple floor levels but forming one structure, should not be treated as one deck for the purposes of assessing outer perimeter screening, but rather, each floor level should be considered separately. It was further suggested that the transparency of materials for the screen needs to be considered to ensure that no direct or unreasonable overlooking occurs.

One submission suggested that maintaining the effective height of a boundary fence should form part of the DTS/DPF requirements, meaning that the height of the fence should be increased proportionate to the height of the deck.

Clarification: Given that in most instances, the construction or alteration of a standard residential fence up to 2.1m in height is not development, it is considered unreasonable to expect that a proposal to construct a deck should also force an applicant to seek approval for an increase in fence height that would be above the standard. Furthermore, an increase in fence height may also have amenity impacts on adjoining properties. As such, it is considered that matters of overlooking and privacy should be managed through privacy screening of the deck itself, and not through alterations to fences. No further action will be taken on this matter.

Size restriction of decks

Feedback from one respondent queried the proposed floor area cap on deemed-to-satisfy non-residential decks given that residential decks are often quite large, whilst another suggested that floor area criteria similar to those for outbuildings should be included to guide appropriate forms of deck development in a residential setting.

Soft landscaping

Feedback suggested that there needs to be consistency in how soft landscaping requirements are reflected across DTS/DPF provisions.

Response:

Floor levels

It is considered reasonable to clarify that when attached to the dwelling, a deck has a finished floor level consistent with the finished ground floor level of the dwelling, rather than a second floor, to minimise impacts related to overlooking.

Whilst the amendment did not propose a maximum finished floor height above natural ground level, it is considered to include such measures to ensure that decks on sloping sites do not have unreasonable amenity impacts on neighbouring sites.

Privacy Screening

It is considered appropriate to provide additional guidance on the provision of the transparency of privacy screening for decks by aligning policies related to the screening of decks with provisions in the Code which speak to the screening of balconies and terraces, and to clarify that on stepped or multi-level decks, screening is required for each section where the finished floor level exceeds 500mm above natural ground level.

To align with overlooking policies elsewhere in the Code, the Commission is of the view that the proposed policy PO X.2 be amended to reference 'direct overlooking' which is now defined.

Size restriction of decks

Although residential decks are often larger than the 25m² limit allowable by the DTS/DPF provision for non-residential decks, it is considered appropriate to contain this floor area limit as it is more likely that a deck associated with non-residential uses will have amenity impacts, or potential impacts related to light and noise on neighbouring properties, depending on the non-residential use to which it is ancillary.

Regarding applying a similar floor area limit on residential decks, currently a deck which is no greater than 500mm above ground level, and 900mm away from the boundary of an allotment has no floor area limit and is excluded from the definition of development under the Act, meaning that no assessment is needed. It is considered unnecessary to place floor area limits on a deemed-to-satisfy deck associated with a dwelling given that there is less likelihood of impacts related to light and noise, and that matters of overlooking can be addressed through policy relating to the addition of privacy screening.

Soft landscaping

It is considered appropriate to align policy provisions relating to the retention of soft landscaping with those changes to soft landscaping policies in section 2.3.4.6.

Recommendation:

AMEND DTS/DPF X.1 to include a maximum finished floor level of 1 metre above natural ground level, and to clarify that consistency with the finished floor level of a dwelling relates to the ground floor level of that dwelling.

AMEND PO X.2 to reference 'direct overlooking'.

AMEND DTS/DPF X.2 to provide guidance on transparency of privacy screening that is consistent with the requirements for balconies and terraces under DTS/DPF 10.1 of the Design in Urban Areas General Development Policies.

AMEND DTS/DPF X.2 to align policy provisions relating to the retention of soft landscaping with those changes to soft landscaping policies in section 2.3.4.6.

Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance (2.3.4.5)

This amendment proposed to adjust the wording of Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3 to be consistent with equivalent provisions within the Design in Urban Areas module. It also proposed to remove linkages to Transport, Access and Parking PO 3.6 and associated DTS/DPF for various dwelling types and student accommodation in all zones where they apply in Table 3 – Applicable Policies for Performance Assessed Development to remove conflicting policy from this pathway.

Feedback:

This change was generally supported with a range of comments provided.

One submission suggested that DTS/DPF 19.3 should be amended to refer to driveways and access points on sites with a frontage to a public road of 10m or less having a width between 3.0 and 3.2 metres when measured *at the kerb*, rather than at the property boundary.

Another submission considered that 3.5m should be the benchmark width of driveway instead of 3.0m to 3.2m at the front property boundary to allow for more orderly vehicle movement from garages less than 7m from the street.

Other feedback suggested that reference to *domestic* waste collection be removed from the PO, instead only referring to *waste collection*, whilst also referring to maximising land available for pedestrian movements.

Further feedback suggested inclusion of a reference to having a minimum 0.5m (preference 1.0m) wide upright kerbing between crossover driveways to provide a pedestrian haven.

Response:

Regarding the suggestion to change the point of measurement from the property boundary to the kerb, it is not considered necessary to alter the PO as matters relating to the design and construction of access points and driveway crossovers on public land i.e., between the property boundary and the kerb, are managed via Section 221 of the *Local Government Act 1999*. Similarly, the suggestion to require upright kerbing between crossovers relates to the construction of an access point on public land, and therefore should be addressed via Section 221 of the *Local Government Act 1999*, as requirements for kerb design may differ between Local Government Areas.

Regarding the suggestion to increase the minimum width of the driveway from between 3.0 and 3.2 metres, to 3.5 metres, it is considered that such a change is outside the scope of this amendment, as it would require further investigation and consultation'. No action is suggested at this time.

Regarding the suggested removal of reference to domestic waste, given that the PO is contained within the Design General Development Policies under the heading 'All Residential Development', it is not considered necessary to adjust the PO.

It is considered appropriate to include a reference to pedestrian movements in PO 19.3 and to make subsequent amendments to PO 23.3 of the Design in Urban Areas General Development Policies to ensure consistency of application between the two policy modules.

Recommendation:

AMEND Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3 to include reference to pedestrian movements.

AMEND Design i– Urban Areas [Residential Development - Low Rise [Car parking, access and manoeuvrability]]: PO 23.3 to include reference to pedestrian movements–

Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review (2.3.4.6)

This amendment sought to amend Design in Urban Areas DTS/DPF19.1 and DTS/DPF 22.1 to be consistent in wording and explicitly state that common property is to be included in soft landscaping calculations.

Feedback:

Feedback on this change was mixed, with some respondents expressing support, including additional suggestions for improvement, while others opposed the change. Feedback in opposition suggested that the effect of this policy amendment is that some dwellings in a group dwelling or residential flat building, wherever there is common property, could have little or no direct access to soft landscaping which could lead to poor amenity and urban heat outcomes. It was suggested that this should be reconciled with refinement to DPF 22.1(a) such that where the average site area of the dwellings on the site is <150m², then 15% of the

total site should be soft landscaping as 10% soft landscaping across the total site is insufficient to offset this level of density / infill.

Other feedback suggested amending the soft landscaping thresholds within the table at DTS/DPF 19.1(k)(i), which currently reads 201-450, to be consistent with other bands within the table to ensure that an allotment with a site area between 200m² and 201m² is not unintentionally excluded by the provision.

It was also suggested that additional clarification is needed regarding the nature of plantings i.e., that soft landscaping uses indigenous plants or a comparable substance and that there needs to be greater consistency in how soft landscaping requirements are reflected across DTS/DPF provisions.

Response:

The proposed amendment sought ensure consistency between DTS/DPF 19.1 and DTS/DPF 22.1 of the Design in Urban Area Module. With that in mind, it is considered appropriate to amend the threshold in DTS/DPF 19.1(k) to provide further clarity regarding the minimum percentage of soft landscaping to be provided for allotments with a site area between 200m² and 450m².

Feedback regarding direct access to soft landscaping for group dwellings and residential flat buildings and impacts on amenity is noted, however it is acknowledged that in the case of these housing types, direct access may not always be possible, particularly in the case of an upper-level dwelling within a residential flat building. Regarding urban heat outcomes, it is considered that the location and amount of soft landscaping provided for a development will determine how these outcomes are managed.

In relation to requests for the percentage of required soft landscaping to be increased, it is noted that this would need further investigation and consultation to determine the appropriate amount of soft landscaping and the type/substance of vegetation to be provided. This may be undertaken as part of a future amendment, and as such no further change on this matter is recommended at this time.

It should also be noted that in the case of group dwellings and residential flat buildings, these dwelling types will require assessment against relevant POs through the performance assessed pathway, as no deemed-to-satisfy pathway exists in most zones. As such, a relevant authority will have discretion to determine whether the relevant PO is met, noting that a DPF provision illustrates only one way that an outcome may generally be achieved.

Recommendation:

AMEND DTS/DPF 19.1(k) and DTS/DPF 22.1(a) to provide further clarity regarding the minimum percentage of soft landscaping to be provided for allotments with a site area between 200m² – 450m².

Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review (2.3.4.7)

This amendment sought to refine policy in the Design and Design in Urban Areas General Development policy modules to ensure driveways are perpendicular with the street boundary. This update seeks to avoid the creation of angled driveways which can generate negative flow on effects to traffic and driver frustration.

Feedback:

The proposed update was largely supported. Some feedback received from the community sought to prevent double garages and dual driveways in character areas where homes have single driveway access.

It was proposed that DTS/DPF 23.5 be refined to further align with ‘Australia Standard Parking Facilities Part 1: Off-street car parking’ AS2890.1:2044 and provide more detailed guidance regarding driveway gradients to minimise the potential for vehicle damage.

Response:

The concept of policy preserving single driveway access in residential character areas is outside the scope of the Code Amendment. In historic areas and character areas, the historic statements or character statements describe the attributes of an area that are important. Councils could investigate this issue through future reviews.

The changes to DTS 19.5 are supported to provide greater certainty for the design of driveways and to ensure policies are consistent with Australian Standards.

Recommendation:

AMEND Part 4 – DTS/DPF 19.5(a) of the Design General Development Policies and DTS/DPF 23.5(a) of the Design in Urban Areas General Development Policies by replacing the following:

~~(a) the gradient from the place of access on allotment boundary to the finished floor level at the front of the garage or carport is not steeper than 1:4 on average~~

With

(a) *The gradient of the driveway does not exceed a grade of 1 in 4 and includes transitions to ensure a maximum grade change of 12.5% (1 in 8) for summit changes, and 15% (1 in 6.7) for sag changes, in accordance with AS 2890.1:2004 to prevent vehicles bottoming or scraping*

Drafting Note: blue text = new text, red-strikethrough – delete text.

Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review (2.3.4.8)

This amendment sought to introduce a suite of policies into the Transport, Access and Parking General Development Policy Module in relation to Heavy Vehicle Parking to minimise impacts associated with Heavy Vehicle Parking on local amenity.

Feedback:

The proposed change was well supported, with various suggestions seeking further refinement. These covered various matters including better wording, impacts associated with screening, a desire to see permitted times adjusted to reflect zoning, further guidance around noise, concerns relative to minor maintenance, and opportunity for greater alignment with Australian Standards.

Response:Ownership

The challenge with managing heavy vehicles in the planning system is that most of the issues are operational. For example, if the landowner allowed the vehicle to be driven by a person that was not a resident of a dwelling, it would be almost impossible for the council to enforce it and has limited effect on the development impact. As a result, PO11.1 and DTS/DPS 11.1 is proposed to be deleted.

Zoning/Hours of Operation

The correlation between zoning and hours of operation was flagged to require specific consideration as what is appropriate in a rural area may not be appropriate in an urban setting. The proposed DTS/DPF policy implies this land use would largely occur in rural and rural living zones, due to minimum site areas under DTS/DPF 11.2. This will be reinforced to specifically exclude neighbourhood-type zones (other than

Rural Living Zones). This is anticipated to also alleviate concerns related to entry/exit hours, as DTS/DPF criteria would not be applicable if the site is in a neighbourhood-type zone.

Maintenance

Maintenance of vehicles is an operational matter which is not defined as development under the Regulations. Policies guiding maintenance have therefore been removed from DTS/DPF 11.2.

Idling

Noise associated with trucks warming up or cooling down via idling was flagged as a common matter which Local Government receive complaints about. As a result, policy was introduced to limit this activity to five minutes. The time a vehicle idles on site is not however a planning assessment matter that can be guided by a point-in-time assessment but an operational matter that can be addressed through a range of environmental legislation. It is therefore recommended it be deleted from DTS/DPF 11.2.

Screening

Creating a focus on screening parked vehicles has the potential to create inadvertent impacts on amenity and streetscapes. This can be a result of people erecting lengths of fencing, which can be particularly out of character in Rural and Rural Living Zones. As a result, the policy has been amended to allow for a range of design solutions including screening, being sited behind buildings, landscaping or similar, to obscure views from adjoining properties and public roads.

Recommendation:

AMEND Part 4 – The Transport, Access and Parking General Development Policy Module by amending PO 11.1, DTS/DPF 11.2 and PO 11.4 as follows:

<i>Heavy Vehicle Parking</i>	
<i>PO 11.1</i> <i>Heavy vehicle parking only occurs on the same allotment as a dwelling and the vehicle is only owned and operated by a resident of the dwelling.</i>	<i>DPF/DTS 11.1</i> <i>None are applicable</i>
<i>PO 11.2</i> <i>Heavy vehicle parking and access is designed and sited so that the activity does not result in nuisance to adjoining neighbours as a result of dust, fumes, vibration, odour or potentially hazardous loads.</i>	<i>DTS/DPF 11.2</i> <i>Heavy vehicle parking occurs in accordance with the following:</i> <i>(a) the site is not located within a Neighbourhood-type Zone (except a Rural Living Zone)</i> <i>(b) the site is a minimum of 0.4 ha</i> <i>(c) where the site is 2 ha or more, no more than 2 vehicles exceeding 3,000 kilograms each (and trailers) are to be parked on the allotment at any time</i> <i>(d) where the site is between 0.4 ha and 2 ha, only one vehicle exceeding 3,000 kilograms (and</i>

	<p>one trailer) are to be parking on the allotment at any time (e) other than minor maintenance, no maintenance of the vehicle will occur on-site (f) the vehicle parking area achieves the following setbacks: (i) Behind the building line or 30m, whichever is greater (ii) 20m from the secondary street if it is a State Maintained Road (iii) 10m from the secondary street if it is a local road (iv) 10m from side and rear boundaries (g) parking and access areas (including internal driveways) should be sealed or have a surface that can be treated and maintained to minimise dust and mud nuisance (h) does not include refrigerated trailers or vehicles (i) vehicles only enter and exit the property in accordance with the following hours: (i) Monday to Saturday 6:00am and 9:30pm (ii) Sunday and public holidays between 9:30 am and 7:00 pm (j) the handling or trans-shipment of freight is not carried out on the property.</p>
<p>PO 11.3 Heavy vehicle parking is designed to enable vehicles to enter and exit a site safely and without creating a hazard to pedestrians and other vehicular traffic.</p>	<p>/DTS/DPF 11.3 Heavy vehicles: (a) can enter and exit the site in a forward direction; and (b) operate within the statutory mass and dimension limited for General Access Vehicles (as prescribed by the National Heavy Vehicle Regulator).</p>
<p>PO 11.4 Heavy vehicle parking is screened from views from adjoining properties and the public roads by existing buildings and landscaping.</p>	<p>DTS/DPF 11.4 None are applicable</p>

Drafting Note: blue text = new text, red-strikethrough = delete text.

Housing Renewal General Development Policies - Policy Review (2.3.4.9)

This amendment proposed to include an interpretation note to confirm that Housing Renewal – General Development Policies are applicable only to Housing Trust / community housing proposals.

Feedback:

The amendments were well supported.

Response:

N/A

Recommendation:

No changes recommended.

Land Division – General Development Policies – Policy Review (2.3.4.10)

This amendment reviewed policy provisions within the Land Division General Development Policies to remove duplication.

Feedback:

The proposed changes were well supported. Two submissions suggested additional amendments to PO 10.1 of the Land Division General Development Policies. These included a request to reduce the number of allotments referenced by the policy below the 20 allotment threshold to which the provision currently applies, and a slight revision of wording to ensure that development ‘does not impact downstream stormwater systems’, rather than ‘does not increase the peak flows in downstream systems’ as some older areas now undergoing infill development meaning the amount of impervious land is increasing and may exceed the capacity of the local stormwater network.

Response:

Regarding the suggested revision of wording from ‘does not increase the peak flows in downstream systems’ to ‘does not impact downstream stormwater systems’, it is considered that to simply state that land division ‘does not impact’ downstream systems without providing clarification may relate to a range of factors, including capacity, peak flow or other matters and is therefore not appropriate.

Given the support for the amendment as proposed, and that only one submission raised this issue, any future consideration of this matter should involve a more in-depth investigation of the level, and details of the potential impacts which should be considered. Similarly, it is considered that a reduction in the number of allotments referenced by the policy below the current 10 allotment threshold should be supported by further investigation. No further changes are recommended at this stage.

Recommendation:

No changes recommended.

Land Division – General Development Policies – Linkages (2.3.4.11)

This amendment reviewed assessment pathways with the aim of ensuring the Land Division General Development Policies to the performance assessed pathway for land division had a consistent approach to the application of policy provisions.

Feedback:

The proposed changes were supported, with no additional feedback provided.

Response:

N/A

Recommendation:

No change recommended.

Transport, Access and Parking – General Development Policy – Fences – Linkages (2.3.4.12)

This amendment sought to apply relevant policy provisions from the Transport, Access and Parking General Development Policy module to the performance assessed pathway for fences to address matters relating to preservation of sightlines

Feedback:

The proposed changes were well supported, with additional feedback provided from two respondents. One queried whether DTS/DPF 10.1 of the Transport, Access and Parking General Development Policies would also be applied to the performance assessed pathway for fences, as it was suggested that the diagram in this DTS/DPF provision incorrectly refers to a 4.5m corner cut-off, where a cut-off of 6m is required.

Clarification: DTS/DPF 10.1 of the Transport, Access and Parking General Development Policies requires that no development involving building work is undertaken within a 4.5m cut-off area. This contrasts with other provisions i.e., DTS/DPF 3.5 of the module which require that the creation of a new access point does not occur within 6m from the tangent point of an intersection of two or more roads. As such, there is no conflict between the diagram at DTS/DPF 10.1 and the requirements of DTS/DPF 3.5, as these distances relate to different matters.

Furthermore, where references to POs are made within Table 3 – Applicable Policies for Performance Assessed Development, any associated Designated Performance Feature will automatically apply, as outlined in the preamble to Table 3 in each Zone.

The other feedback queried whether the intent of PO 10.1 of the Transport, Access and Parking General Development Policies is to prevent development altogether (within the corner cut-off), or merely to regulate it. It was suggested by the respondent that if the former is the case, then the provision should be applied to performance assessed land division.

Clarification: DTS PO 10.1 of the Transport, Access and Parking General Development Policies requires that development is located and designed to ensure drivers can safely turn into and out of public road junctions, with the corresponding DTS/DPF provision relating to development involving building work not being located within the corner cut-off. Neither the PO or DTS/DPF prevent the location of any development from occurring within the corner cut-off, but merely require that any development proposed is located and designed appropriately, with the DTS/DPF illustrating one way of meeting this provision i.e., that no development involving building work be undertaken within the area. Given this, it is not considered necessary to apply this PO to performance assessed land division.

Response:

N/A

Recommendation:

No changes recommended.

Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review (2.3.4.13)

This amendment sought to change the Transport, Access and Parking Table 1 to position all land use classes on the 'class of development' column and all 'sub-classes' within the 'car parking rate' column, as well as to amend Transport, Access and Parking Table 2 to update references to the Urban Neighbourhood Zone and add specific car parking rates for the Urban Neighbourhood Zone within Bowden.

Feedback:

The proposed changes were generally supported.

Feedback relating to parking rates for Caravan and Tourist Parks suggested that a higher rate be applied for a park with over 100 sites. In relation to dwellings, it was suggested that a dwelling with four or more bedrooms requires a higher parking rate and queried why rear-loaded row dwellings require a lower parking rate than dwellings where access is from the primary street.

Regarding parking rates in the Urban Neighbourhood Zone at Bowden, it was suggested that the rate should remain at 3 per 100m² regardless of the associated floor level, as it was highlighted that areas of Bowden experience considerable parking shortfall and council has received numerous concerns about a lack of parking under earlier approvals.

Response:

As the aim of the amendment was to provide greater clarity in interpretation of car parking tables and in the case of the Urban Neighbourhood Zone at Bowden, to include specific rates which were present in the former City of Charles Sturt Development Plan it is not considered appropriate to make any further changes on relation to this matter as part of the Code Amendment. Any reconsideration of parking rates for various development types would require further investigation and consultation, and as such, it is not recommended to make any further change at this stage.

Recommendation:

No changes recommended.

Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation (2.3.4.14)

This amendment sought to change Transport, Access and Parking DTS/DPF 5.1 to provide clarity on when each car parking rate is applicable, as well as to create a definition for a High Frequency Public Transit Area to be included in Transport, Access and Parking Table 2.

Feedback:

The proposed changes were supported.

Feedback suggested further guidance is needed on how to apply the minimum and maximum car parking rates specified by Table 2 – Off-Street Car Parking Requirements. It was also queried whether the intent of the parking rates was to signify that the relevant DPF is met when the minimum car parking rate has been provided, and the maximum car parking rate is specified to prevent an over-supply of car parking, or alternatively that the relevant authority can set a required car parking provision from within that range.

Clarification: Much like other circumstances where minimum and maximum values are applied to policy, for example via building height TNVs, these values represent, in the case of deemed-to-satisfy development, the acceptable range which would satisfy the DTS provision, and for performance assessed development, the range specified by the table in accordance with a DPF which would generally serve to satisfy the relevant PO. It is not the intent that a relevant authority would necessarily seek to prescribe a rate somewhere within the range, however, as per Part 1 - Rules of Interpretation, the DPF represents only one way of satisfying a PO and does not derogate from the relevant authority's discretion to make an assessment on balance when considered against all relevant policies. As such, no change is considered necessary.

Concern was also expressed that payment into a car parking fund may not necessarily address the issue of where to park cars in areas where there is already a shortage of parking spaces. The feedback noted that this matter would require further investigation and consultation and would need to occur as part of a separate amendment process.

Response:

N/A

Recommendation:

No changes recommended.

Part 5 – Specified matters and areas identified under the Act and Regulations (2.3.5)

There are no proposed changes to Part 5 of the Code as part of the Code Amendment.

Feedback:

While no changes were proposed in the Code Amendment a couple of suggested amendments / issues for consideration were raised in relation to Part 5 of the Code.

In relation to Table 2 of Part 5, which specifies matters that can be reserved for later assessment, it was suggested that this list be broadened to include matters of site contamination, stormwater, wastewater disposal, landscaping, native vegetation clearance and final materials and finished.

Issues were raised regarding the 'designated area' prescribed in Part 5 of the Code for the purposes of Clause 3 of Schedule 3 of the Regulations. This clause relates to excavation/filling in areas of potential flood hazard and if the conditions are not met becomes a form of 'development' requiring assessment. Clarification was sought why this clause doesn't have a volume threshold like other similar clauses in the Schedule 9 of the Regulations.

Response:

Reserved matters

The suggested listing of additional reserved matters is noted; however, it is considered that such an amendment would require further investigation and should be subject to further consultation with practitioners and the community to ensure that the impacts are fully understood.

This will be considered as part of a future code amendment.

Clause 3 of Schedule 3 to the Planning, Development and Infrastructure (General) Regulations 2017

This clause was carried over into the Regulations from Schedule 2 of the former Development Regulations 2008 – Additional acts and activities constituting development:

3. *Any excavating or filling (or excavation and filling) of land, or the forming of a levee or mound, in a Watercourse Zone, Watercourse Policy Area, Flood Zone, Flood Policy Area or Flood Plain delineated by the relevant Development Plan, or in any other zone or area shown as being subject to flooding or inundation in the relevant Development Plan, but not including the excavation or filling (or excavating and filling) of land—*

In developing the Code consideration was given to what areas Clause 3 should apply. Recent enquiries have suggested that the inclusion of the Coastal Areas Overlay (for coastal flooding reasons) as one such area is too broad, particularly without the threshold allowance of 9m³.

The Commission understands the concern but is mindful of the need to ensure that areas impacted by flooding and drainage pathways are not affected by inappropriate excavation and/or filling. Whether or not a change to the Regulations is needed or alteration to the designated areas in Part 5 is required need more detailed consideration and would be better addressed through a separate code amendment or the Flooding Hazards Mapping Update Code Amendment by the Chief Executive.

Recommendation:

No changes recommended.

Part 6 – Index of Technical and Numeric Variations (2.3.6)

There are no proposed Code changes to Part 6 of the Code as part of the Code Amendment.

Feedback:

Some feedback was received in relation to Part 6, but it principally related to the issue of interface height policy/diagrams. Refer to 'Interface Height – Multiple Zones: Policy and TNV – Policy Review (2.3.2.21).

Response:

N/A

Recommendation:

No changes recommended.

Part 7 – Land Use Definitions (2.3.7)

This amendment proposed improvements to the Land Use Definitions to provide greater clarity in their interpretation and relationship with policy.

Feedback:

A range of additional feedback which typically related to the inclusion of additional definition of various topics and their appropriate assessment policies was received. Topics included:

- campground and provide appropriate policy to against
- multiple dwelling or boarding house and insert additional policies for assessment
- trade training facility
- winery - suggested that common meaning remains open to misrepresentation.
- special events
- distillery
- brewery
- boundary build
- adult entertainment premises and adult products and services premises

- land uses referred to in the Strategic Employment Zone should have a definition under Part 7 of the Code

Other comments were that:

- it is unclear if the 'part of building inclusions' will complicate the land use assessment in cases where the main land use is something and also has an office component.
- there are many instances where part of a building is used as an alternative land use, however, does not trigger a change of land use.

Feedback relating to specific definitions will be discussed under the relevant section below.

Response:

The Commission takes a cautious approach to the creation of land use definitions and considers that additional definitions should be included only where they clearly support policy intent. The Commission is also of the view that ordinary and common meanings have a place in policy interpretation and that separate definitions should be applied only where the ordinary meaning does not support policy intent. It is for this reason that no further definitions are proposed to be added to the Code at this stage, except for adult entertainment premises, and adult products and services premises which are to be included as part of this amendment.

Adult entertainment premises and adult products and services premises

It is considered reasonable to include new definitions for adult entertainment premises and adult products and services premises. Refer to—section: Adult Entertainment Premises - New Definition (2.3.7.13) – New Section – for further discussion.

Part of a building

Refer to section Office – Amend (2.3.7.6) for further discussion on 'part of a building'.

Recommendation:

No changes recommended.

Ancillary Accommodation – Amend (2.3.7.1)

This amendment sought to clarify the interpretation of 'utilities' within the ancillary accommodation definition, as well as to consider further refinements to provide additional information about the outcomes sought by this land use.

Feedback:

Mixed feedback was received in relation to this proposed change. Whilst there was support for providing additional clarification of this definition, concerns were raised that this amendment could potentially limit certain types of ancillary accommodation where a separate utility connection could be beneficial. Some feedback also sought further clarity regarding what exactly constitutes ancillary accommodation. Comments include:

- a greater level of clarity is still required. Applicants are seeking to construct buildings with all the elements of a dwelling and to call them ancillary accommodation or other forms of development (studio), but not a dwelling
- amending the term ancillary accommodation to refer to residence that is not self-contained and does not have separate connections to utilities and services such as sewerage, wastewater and waste control systems is supported

- a definition of a self-contained residence is needed
- often ancillary accommodation proposals share the same facilities as the dwelling. Sometimes a separate waste control system, due to complications with changes or connecting to the existing system, or reluctance to install a singular larger system, is reasonable. Therefore, it would be better if incorporated into the policy and left as an assessment consideration, rather than being in the definition
- clarification around shared services is supported; however self-contained is subjective and should be defined
- recommend greater clarity be provided in the distinction between ‘ancillary accommodation’, ‘outbuilding’ and ‘dwelling addition’ for freestanding ‘rumpus room’ or ‘studio’ style buildings.

Response:

The Commission acknowledges comment regarding the provision of separate services or utilities and the potential impacts that this may have on applications. Concerns regarding instances where the provision of a separate waste control system could potentially make a proposal no longer ancillary accommodation (which it otherwise would have been) and therefore an undefined use are noted. However, it is considered that this may have already been the case with the current definition given it also required that ancillary accommodation share the same utilities as the primary dwelling. This amendment sought to clarify what is meant by utilities to respond to stakeholder feedback. The additional details and specifics within the definition does not change what the original intent and context of the definition, being that ancillary accommodation ‘shares the same utilities of the existing dwelling.

Where a proposal for ancillary accommodation includes a separate waste control system, and the relevant authority considers that the proposal would therefore not meet the definition of ancillary accommodation. The proposal would be considered an undefined use and therefore default to an ‘all other Code assessed’ performance assessed pathway. In such circumstances, the relevant authority would be able to determine which Code provisions are relevant to the proposal. This does not derogate from the relevant authority’s discretion to use the policies assigned to ancillary accommodation as a guide, along with any other relevant policies they see fit.

The current definition already excludes a dwelling from being considered ancillary accommodation. A dwelling is defined as a building or part of a building used as a self-contained residence. The proposed additional dot point (b) emphasis this point. It is considered that the definition of dwelling / self-contained residence is understood in a planning context along with case law to guide what this land use entails.

At this stage, the Commission considers that there is sufficient detail in definition to appropriately determine that a land use as ancillary accommodation. However, for applications which describe this land use as something else, it is up to the relevant authority to determine the nature of development during the verification stage, regardless of how the applicant describes it.

Recommendation:

No changes recommended.

Caravan and Tourist Park – Amend (2.3.7.2)

This amendment sought to clarify that the land use term ‘Caravan and Tourist Park’ is considered a form of ‘Tourist Accommodation’ as it had been suggested that there was ambiguity and may be causing some uncertainty when assessing these forms of development.

Feedback:

There was a general level of support for the amendment. Concerns were raised that including caravan and tourist park as a form of tourist accommodation could result in this form of development in inappropriate locations or areas not envisaged (for example the Rural Zone). Comments include:

- support in principle but clarification needed for the term 'campground'
- could result in unintended consequences, such as proposals for caravan parks in rural areas, as they will be able to be assessed as a form of tourist accommodation. If it is to be included then perhaps additional policy is required to control scale, bushfire requirements and access.

Response:

In terms of additional policy required to control scale, bushfire requirements and access. It is considered that the policy is already within the Code. The scale and form of a tourist accommodation will be guided by policy within the zone. While policy relating to bushfire requirement and access would sit within the relevant bushfire overlay should they spatially apply to the site of the application.

The Code does not currently contain a definition for campground as the Commission considers that the common understood meaning is sufficient. However, it will continue to monitor and take note on any feedback regarding this to inform future amendments.

Recommendation:

No changes recommended.

Commercial Forestry – Amend (2.3.7.3)

The amendment proposed to make a slight refinement to the definition to align with some of the feedback received and to assist in achieving the intent sought by the definition.

Feedback:

There was support for the proposed changes to the definition as they were considered reasonable and provided the clarification needed.

Response:

N/A

Recommendation:

No changes recommended.

Educational Establishment – Amend (2.3.7.4)

The amendment proposed to move away from the term 'establishment' to a more contemporary term for describing this land use and terminology more consistent with other definitions.

Feedback:

There was support for the proposed for updating the terminology from 'establishment' to 'facility'.

Response:

N/A

Recommendation:

No changes recommended.

Indoor Recreation Facility – Amend (2.3.7.5)

The amendment proposed to provide clarity relating to the interpretation and potential limitations of this definition by just referring to ‘a building’.

Feedback:

There was support for the proposed changes to the definition as they were considered reasonable and provided the clarification needed.

Response:

N/A

Recommendation:

No changes recommended.

Office – Amend (2.3.7.6)

The amendment proposed to provide clarity relating to the interpretation and potential limitations of this definition by just referring to ‘a building’.

Feedback:

There was support for the proposed changes to the definition as they were considered reasonable and provided the clarification needed.

One submission questioned whether the inclusion of the words ‘part of a building’ will complicate the land use assessment in cases where the main land use includes an office component. It was noted that there are many instances where a part of a building is used as an alternative land use, however, this does not trigger a change of land use.

Response:

The Commission considers that this amendment provides clarity in the intent of the definition. Rather than relying upon users needing to refer to Section 3 – Interpretations of the PDI Act, where a *‘building means a building or structure or a portion of a building or structure’*.

In terms of a certain class of development having an associated ‘office’, it is considered that regardless of this amendment, per Section 3, an office could already have been part of a building depending on the size, scale and nature of the office component. Should the relevant authority consider the office component to be ancillary and/or subordinate to the existing or proposed land use, the office would not trigger a change of land use.

Recommendation:

No changes recommended.

Pre-school – Amend (2.3.7.7)

This amendment proposed to change the term ‘pre-school’ to ‘child care facility’ to incorporate the intent of the definition and the land uses listed within it. The use of the term facility would assist to acknowledge that it is more than just a ‘pre-school’ or ‘child care centre’, which both have a commonly understood meaning and type of operation.

Feedback:

There was support for the proposed changes to the definition as they were considered reasonable and provided the clarification needed. One issue that arose is how the difference in car parking rates is present in Transport, Access and Parking Table 1 – General Off-Street Car Parking Requirements, as there are currently different rates for a child care centre and pre-school.

Response:

There was support for this proposed change in terminology and no further refinement required.

In terms of the commentary around difference in car parking rates for different forms of child care facilities. It is not uncommon to have different parking rates for different development types within the same definition given they may function slightly differently, i.e., a child care centre versus other forms of child care facilities more generally. Also, other definitions with the Code have multiple rates, for example an educational facility has different rates for a primary school compared with a secondary school.

However, this is not related to the definition of child care facilities as such, rather a policy consideration, thus it is not proposed to change car parking rates generally as part of this amendment.

Recommendation:

No changes recommended.

Renewable Energy Facility – Policy Refinement (2.3.7.8)

The amendment proposed to amend the restricted table within the Conservation, Rural and Hills Face Zone to add the exclusion of domestic use for solar photovoltaic panels (roof or ground mounted) and battery storage facilities.

Feedback:

There was support for amending the restricted table rather than the definition, but further clarity was sought on the use of the term domestic use.

Response:

When initially considering the amendment, the Commission did consider the use of the term domestic use and how this may be interpreted and whether a definition or further clarification was needed. One approach considered would be to clarify the size/scale of what is ‘domestic use’. However, this may not always be useful as the scale and size of a renewable energy facility may vary and still be of ‘domestic scale’ depending on the existing or proposed land use. It is for the relevant authority to determine if the proposal is for domestic use, which can be fact and degree and dependent on site-specific details. For this reason, no further refinement to the policy or the term domestic use is proposed at this time. The Commission will, however, continue to monitor how the term is being applied at the assessment level.

Recommendation:

No changes recommended.

Tourist Accommodation – Amend (2.3.7.9)

The amendment proposed to provide greater clarification around what is meant by this form of development and whether it should also incorporate other associated ancillary elements.

Feedback:

There was support for this amendment as it provides clarity in what this land use incorporates. Comments include:

- supported except for the inclusion of caravan and tourist park
- supported and agrees that this level of clarification is appropriate.

Response:

Refer to section on Caravan and Tourist Park – Amend (2.3.7.2) for further discussion on this inclusion into the Tourist Accommodation definition.

Recommendation:

No changes recommended.

Workers Accommodation – Amend (2.3.7.10)

This amendment proposes to provide greater clarification and a consistent approach to the assessment of workers' accommodation.

Feedback:

There was a general level of support for this amendment. Feedback included:

- supported but would like to remove 'or similar'
- supported as the inclusion of the term 'or similar' will support planners to ensure developments that are similar to, but not exactly prescribed, have the same development requirements as those prescribed
- additional assessment provisions are needed to assess workers' accommodation in the Rural Zone.
- a PO should be developed that considers the siting/location of workers accommodation in relation to the land that provides the employment opportunities.

Response:

With respect to the feedback wanting to keep the term 'or similar', it is considered that the amendment also made within part (c) by starting the list with 'including' does not limit other such seasonally intensive rural activities from meeting the definition of workers accommodation but provides a guide to these forms of workers accommodation.

The purpose of this amendment was to provide clarity in the definition and expand the types of seasonal activities. Any further change to the policy relating to this definition within the Rural Zone or any other zones is out the scope of this amendment.

Recommendation:

No changes recommended.

Heavy Vehicle Parking – New Definition (2.3.7.11)

The amendment proposed to include a definition for Heavy Vehicle Parking. The absence of a definition could result in the proposed policy for heavy vehicle parking (as part of the Code Amendment – see Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review (2.3.4.8)) being applied incorrectly or to areas not intended by the policy.

Feedback:

There was support for the inclusion of the definition to support the new policy added to the Code with some commentary seeking further clarity on the definition regarding the parking of caravans.

Response:

With respect to the concerns raised about parking of a caravan on the property potentially being caught up in this definition. It is considered that this is clarified— within the Regulations specifically, Schedule 4 - Exclusions from definition of development—general:

(5)(2)(f) - The parking of a caravan or motor-home of any weight on land used for residential purposes by a person who is an occupant of a dwelling situated on that land;

Recommendation:

No changes recommended.

Function Venue – New Definition (2.3.7.12)

The amendment proposed to include a definition for function venue following a review of the ordinary meaning of this term. It is considered the Code could benefit by creating a new definition for function venue to provide clarity in policy interpretation and assessment pathways.

Feedback:

There was support for this new definition to be included within the Code. Some of the feedback received sought further clarification if the definition were to include 'one off' type functions as the current drafting does leave it open for an interpretation for this. Comments include:

- various different land uses may be used to host events, conferences etc. from time to time as an ancillary activity to the ordinary use. To avoid confusion, the definition should be amended to: 'Premises primarily or regularly used for the hosting of events'
- querying whether the plural nature of the definition is deliberate which would reasonably afford one-off functions as an ancillary activity to the primary use. This definition does not appear to capture a one-off large-scale event (i.e., music concert).

Response:

Feedback wanting clarification as to whether the intent of the definition is to capture one off or time-to-time functions is noted and it is considered that a refinement to the proposed definition is required. The suggestion to include the word 'primarily' is appropriate as it is not the intent of the definition to capture one-off or ancillary activities to main land use. Also, by including the term 'primarily', this would keep terminology similar within the definitions of the Code, with 'shop' and 'service trade premises' describing the definition with 'premises used primarily....'.

Recommendation:

AMEND definition to include the word 'primarily' to provide clarification on the intent of the definition and related policy.

Adult Entertainment Premises – New Definition (2.3.7.13) – New Section

The amendment proposed to include a definition for adult entertainment premises into the Code. **This is a post consultation amendment.**

Feedback:

There was feedback received that the Code should have a definition for adult entertainment premises akin to the definition within the revoked Adelaide (City) Development Plan.

Response:

The Commission acknowledges the merits of the request for this definition to be included into the Code as this is a land use for which some relevant authorities (in particular, the City of Adelaide) receive applications. Without the definition in the Code, it has been indicated there is now an increased uncertainty of designation of the class of development for applications which can result in an undefined/ inconsistency of language used for this type of land use. This is particularly noted in cases where an existing approval exists for a licensed premises, but the use of such premises for adult entertainment will not necessarily trigger a change of use.

As part of this amendment, the Commission does not propose to include any additional policies or assessment pathways associated with this land use definition.

The definition description has been guided by the previous wording within the revoked Adelaide (City) Development Plan. In addition, clarification provided that the definition does not include / fall within the land use term 'personal or domestic services establishment' / 'shop'.

The Commission further recommends that an accompanying definition for 'adult products and services premises' based on the definition contained within the Adelaide (City) Development Plan be included within the Code to provide similar guidance in relation to a change of use from an existing shop to a premises that sells adult products and services.

Recommendation:

CREATE a new definition for adult entertainment premises.

CREATE a new definition for adult products and services premises.

AMEND the definition for 'shop' and 'personal or domestic services establishment' to exclude the two new definitions.

Part 8 – Administrative Terms and Definitions (2.3.8)

This amendment proposed to make improvements to administrative definitions to provide greater clarity in interpretation and the relationship with policy.

Feedback:

Feedback received on administrative terms and definitions, other than those specific to a proposed amendment, was for the inclusion of additional terms to be included into Code. Comments included:

- suggest that 'neighbourhood-type zones' be amend to either add Business Neighbourhood Zone to the definition or changing the name of the Zone to 'Business Zone'.
- include Township Zone to address inconsistency with the *Guide to the Planning and Design Code*
- concerns with the definition of primary street (frontage) - what is the primary street for a corner site with a corner cut-off? What about a site with one road frontage that wraps around part of the site? Which boundary is the primary street (frontage)?
- habitable room - recommends a new definition for designated corridor/hallways be included
- a definition for 'minor in nature' – in particular in reference to State Heritage Place Overlay
- code lacks the need to demonstrate the building are connected (like party walls on plan of division, etc), hard to define a dwelling as semi-detached.

Feedback relating to specific administrative terms or definitions as part of the Code Amendment will be discussed under their relevant section below.

Response:

The Commission takes a cautious approach to definitions and considers that additional definitions and administrative terms should only be included in the Code where they clearly support the policy intent. Also, the Commission is of the view that ordinary and common meanings have a place in policy interpretation and that a separate definition should only be applied where the ordinary meaning does not work with the policy intent. It is for this reason, other than those already added, no other terms or definition at this stage are to be added to the Code as part of the Code Amendment.

It is considered reasonable to amend Neighbourhood-type Zone. Refer to section: Neighbourhood-type Zone - Amend (2.3.8.9) – New Section – for further discussion.

Recommendation:

No changes recommended.

Building Height – Amend (2.3.8.1)

The amendment proposed to alter the definition for 'building height' to include the option for the measurement point to be taken from a point specified by the policy in which the term is used, rather than from the measurement point specified in the definition.

Feedback:

There was a general level of support with most comments concerning the definition relating to the use of and interaction with policy on where the measurement for height is to be taken from. Feedback included:

- preference is to use natural ground level alone to be the relevant reference for measuring purposes. This definition does not appear to consider a dwelling built on stumps or posts, or if there has been any fill put on the site
- amendment is supported; however, it is recommended that additional words be inserted to provide a clearer interpretation outcome. A corresponding diagram for measuring the building height on a sloping site would further strengthen clarity of the definition
- the Code should refer to 'ceiling heights' and this should be added into the definition
- definition does not work on sloping land, particularly if the building is split level, as it can result in a height that does not reflect that the building has been designed to reduce impacts and could result in the building requiring public notification when it has minimal impact beyond the site
- building height should be the preferred measure over wall height and used consistently across Zones.

Response:

The points raised and the policy response are set out in the section *Building Height, Building Wall Setback and Wall Height – Policy Review (2.3.2.12)*.

Recommendation:

No changes recommended.

Building Line – Amend (2.3.8.2)

This amendment sought to address concerns relating to the current definition and policy application of the term ‘building line’, including potentially undesirable outcomes resulting from its misapplication. Changes to primary street setback policy are set out in section 2.3.2.26 of the Code Amendment and comprise amendments to consider the revised definition set out in this section (2.3.8.2).

Amendments to the ‘building line’ definition comprise the removal of the 1.5m projection allowance, which will be moved to policy instead.

Feedback:

There was general level of support for the revised definition. Most feedback was towards the policy adjustments discussed in section 2.3.2.26 of the Code Amendment. The following feedback was specific to the definition:

- will it only be for ancillary structures and not dwellings?
- it would be more appropriate for the building line to be drawn parallel to the road boundary at the closest point of the dwelling/structure to the road boundary (or several parallel lines relating to the relevant setbacks at each end of the dwelling)
- proposed changes may allow protrusions (some major) to not to be considered as the building line. This could result in porches /porticos/verandahs protruding considerably further forward than the current 1.5m restriction.

Response:

The building line definition will now only be used for the purpose of delineating the front of an existing dwelling for policy that requires ancillary structures such as carports and outbuildings to be set back behind the existing dwelling’s building line.

The 1.5m protrusion allowance was added to the ‘building line’ definition as part of the development of the Code based on the thought that the term would be used for new dwellings. This however caused issue with policy interpretation and as a result the Code Amendment is seeking to return to the original application/definition for ‘building line’.

Whilst the 1.5m protrusion allowance has been removed from the definition it will remain part of Code policy for new dwellings by instead forming part of the interpretation notes beneath each of the zone primary street setback tables:

- (a) *any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table*

Recommendation:

No changes recommended.

Wall Height – Amend (2.3.8.3)

The amendment proposed to alter the definition for 'wall height' to include the option for the measurement point to be taken from a point specified by the policy in which the term is used, rather than from the measurement point specified in the definition.

Feedback:

- supported in principle but policy correction/clarification required in public notification tables
- 'wall height' as a definition should be measured from the lower of natural or finished ground levels. This would also provide consistency with the 'building height' definition
- preference is to use natural ground level alone to be the relevant reference for measuring purposes. This definition does not appear to consider a dwelling built on stumps or posts, or if there has been any fill put on the site
- the code needs to clarify if the retaining wall is considered to be the footings of the wall. Alternative reference to the 'footings' being a consistent floor height any adjoining structure or natural ground level would provide further guidance.

Response:

The points raised and the policy response are set out in the section *Building Height, Building Wall Setback and Wall Height – Policy Review (2.3.2.12)*.

Recommendation:

No changes recommended.

Catalyst Site – New Definition (2.3.8.4)

The amendment proposed to create a new definition in the Code for 'catalyst site'.

Feedback:

Feedback included:

- support for the new definition
- should there be greater explanation of what a catalyst site is rather than just a site area?
- the term 'catalyst site' and description should be removed from the Code
- the provisions are so vague and ambiguous they should be removed
- the solution is to clarify and stipulate the provisions and meaning. Strongly urge the Commission to remove catalyst sites from the Code completely.

Response:

This amendment does not seek to change existing policy intent. Rather, it defines the term 'catalyst site' to assist with clear and consistent interpretation of the term when used within the Code.

Removing the term 'catalyst site' from the Code would be a policy change and outside the scope of the Code Amendment.

Recommendation:

No changes recommended.

Direct Overlooking – New Definition (2.3.8.5)

The amendment proposed to include the term 'direct overlooking' into the Code to provide clarity on the distance and/or angle to which overlooking was 'direct' and the policy needs to be taken into consideration in an assessment.

Feedback:

There was a mixed response for this proposed definition. There was broad support for the definition of direct overlooking to be within the Code to assist in consistent interpretation, however, some feedback questioned the distance to which it was considered 'direct' and if a greater distance should be applied. Comments include:

- supported - however it will be difficult to apply in areas where distant views are anticipated such as within coastal areas. Additional policy would assist to allow for the application of distant view considerations
- 15 metres is not a useful definition of direct overlooking and is generally not supported by community expectations. At 15 metres, it is considered that detail can be made out that would be detrimental to the amenity of neighbouring private open space and an owner's right to enjoyment
- although we support the introduction of a definition for direct overlooking, we feel the 15m as proposed is insufficient as overlooking of POS / habitable windows could still occur from this distance. Recommend the definition is amended to provide a distance in the order of 30m
- a sectional diagram would assist with clarification of the distance and/or angle to which overlooking is 'direct'
- direct overlooking from upper level habitable areas should restrict views within a horizontal distance of 15 metres to adjacent windows and 30 metres to outdoor areas beyond a 30 degree angle from the plane of the wall
- direct overlooking new definition should be amended to increase the new included distance, and have sloping land more explicitly recognised
- concerns that overlooking from a deck is only captured by the associated PO. This should be reference in DTS/DPF criteria as well to ensure deemed-to-satisfy development addresses overlooking from decks.

Response:

The Commission acknowledges the feedback received on the proposed distance to which overlooking is considered direct. It understands that what a person considers direct overlooking can be subjective in terms of what a reasonable distance might be. The approach the Commission has taken with a 15 metres radius is considered a conservative approach and one which reflects some of the previous policy positions with the revoked Development Plans (acknowledging not all). It should be noted that at 15 metres as a measurement for direct overlooking, South Australia has one of the more generous distances when compared with other State's policy and interpretation of direct. The Code proposes '15 metres measured from the centre line of the overlooking window and not less than 45-degree angle'. While interstate examples range from a radius of between 7.5 metres and 9 metres with a 45-degree angle.

Also, the 15-metre requirement aligns with the distance requirements already within policy, see Design DTS 10.2 (b)(i), which is part of a deemed-to-satisfy pathway. It would then be contradictory policy to then have a different distance in the corresponding PO 10.2.

In terms of additional diagrams, it is considered that this stage the illustrations proposed in Column C are sufficient to interpret the intent of the definition.

Given this is a new definition into the Code, this definition and interaction with the policy will continually be monitored and assess feedback received to see if any further refinement is required in future amendments.

Policies specific to decks to be addressed in Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways (2.3.4.4).

Recommendation:

No changes recommended.

High Frequency Public Transit Area – New Definition (2.3.8.6)

The amendment proposed to include a definition for ‘high frequency public transit area’ to help simplify the table of car parking rates relating to ‘designated areas’. See *Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation (2.3.4.14)* for further detail.

Feedback:

The new definition was well supported. One of the submissions further recommended that these areas and designated areas be spatially applied in SAPP.

Response:

The suggested spatial enhancements are noted but are outside of the scope of the Code Amendment.

Recommendation:

No changes recommended.

Post Height – New Definition (2.3.8.7)

The amendment proposed to create a new definition in the Code for ‘post height’ to complement the existing definition for ‘wall height’.

Feedback:

The inclusion of a definition for ‘post height’ was well supported. A small number suggested that the measurement point should be taken from natural ground level.

Response:

The policy response to the topic of post/wall height measurement points is discussed above in the section relating to *Building Height, Building Wall Setback and Wall Height – Policy Review (2.3.2.12)*.

Recommendation:

No changes recommended.

Gross Density - Delete (2.3.8.8)

The amendment proposed to delete the definition of ‘gross density’.

Feedback:

Feedback supported this amendment as the term was not used in Code policies anyway. The small number opposed recommended that the definition be retained as a useful point of reference for comparison against net density and for when it is referenced in broader strategy and policy considerations.

Response:

Definitions act as a slave to policy. As the term 'gross density' is not used in Code policy it does not need to be defined and should be removed.

Recommendation:

No changes recommended.

Neighbourhood-type Zone - Amend (2.3.8.9) – New Section

The amendment proposed to include Township Zone, Master Planned Renewal Zone and Business Neighbourhood Zone within the term of Neighbourhood-type Zone. **This is a post consultation amendment.**

Feedback:

There was feedback received on the term Neighbourhood-type zone. 'Neighbourhood type' is repeatedly referenced in the Code and submissions felt that not all plausible zones had been included into this administrative term. Comments include:

- Business Neighbourhood Zone - suggest either adding this zone to the definition or changing the name of the Business Neighbourhood Zone to e.g., Business Zone only
- Include Township Zone to address inconsistency with the *Guide to the Planning and Design Code*

Response:

The Commission considered that the two suggestion zones, being the Township Zone, Master Planned Renewal Zone and the Business Neighbourhood Zone, are reasonable to include these into the term of 'Neighbourhood-type Zone'. In reviewing other zones within the Code, it is reasonable to also include the Master Planned Renewal Zone (nothing, the two other master planned type zones are listed. Given that the DOs and POs of these zones envisage land uses akin to the other listed zones and would benefit from the policy related to Neighbourhood-type Zone also being applied.

Recommendation:

AMEND the term Neighbourhood-Type Zone within Part 8 - Administrative Terms and Definitions to include Business Neighbourhood Zone, Master Planned Renewal Zone and Township Zone

Part 9 – Referrals (2.3.9)

Environment Protection Authority Referrals - Review of Interpretation and Referral Triggers (2.3.9.1)

With respect to Part 9 of the Code (which relates to land use specific referrals) the Code Amendment sought to:

- include an interpretation note for Part 9.1 of the Code to provide greater clarity when referrals under this section area required
- in relation site contamination – land division, remove class 3 activity as needing to be referred as well as reference to the SAPPAs as the source of truth for ground water prohibition areas

Feedback:

The recommendation of the Commission was well supported. The Environment Protection Authority reaffirmed the need to make amendments to Item 9A, Clause 3 of Schedule 9 to the Regulations prior to the proposed changes to Part 9 occurring.

Response:

Changes to the Regulations are noted and will occur to support the amendment.

Recommendation:

No changes recommended.

Part 10 – Significant Trees (2.3.10)

There are no proposed changes to Part 10 of the Code as part of the Code Amendment.

Feedback:

Despite no changes being proposed, a couple of points were raised about regulated and significant trees. Noting that the overlay policy is not appropriately linked, and relevant authorities are unable to assess the impacts of a proposed development on regulated or significant trees unless tree damaging activity is selected as an element.

Response:

The verification and assessment process requires the relevant authority to consider whether a development may result in tree-damaging activity. If so, then tree damaging activity would be an element of the development proposal and will require assessment against the applicable policies for performance assessment. This is to be raised with PlanSA to if any improvements to the DAP system can be made in relation to this matter.

Recommendation:

No changes recommended.

Part 11 – Local Heritage Places (2.3.11)

Listing of State Heritage Places (2.3.11.1)

To improve visibility of State Heritage Place details in the Code and to compliment the State Heritage Places Overlay, this a proposed to include the list of current State Heritage Places in Part 11. Changes to Part 1 – Rules of Interpretation are also proposed to explain that where there is a discrepancy between the Code's list of:

- State Heritage Places and the South Australian Heritage Register, the Register will prevail
- Local Heritage Places and the South Australian Heritage Register, the Code will prevail.

Feedback:

The inclusion of State Heritage Place details into Part 11 of the Code was well supported. There was a suggestion that this could be further refined to include a list of the Representative Buildings.

At times there have been instances where the Code has been incorrect, for a variety of reasons, and that if the Code were to prevail in these instances, this could have an impact on the ability to apply the Local Heritage Overlay policies.

There was also preference for referring to the South Australian Heritage Register (the Heritage Register) in the Code via a link to the Heritage Register.

Response:

The Act governs the listing and removal of Local Heritage Places under the Code. The Code is therefore the source of truth in respect to Local Heritage Place listings. Similarly, the Heritage Register is the source of truth for State Heritage Places being governed by the *Heritage Places Act 1993*. Whilst there are, at times, inconsistencies between the Heritage Register and heritage listings in the Code, it is not possible to step outside the function established by the respective the head powers.

It remains necessary to articulate that where there is a discrepancy between the Code's list of State Heritage Places and the Heritage Register, the Heritage Register will prevail. Conversely, a discrepancy between the Code's Local Heritage Places listing and the South Australian Heritage Register, the Code will prevail.

The suggestion to include a link in the Code to the Heritage Register for the purposes of confirming accurate details in relation to State Heritage Places has merit and is already proposed in respect to the suggested additions to Part 1 of the Code. As a further improvement, a similar link should be added before the proposed list of State Heritage Places in Part 11.

Recommendation:

AMEND the amendment instructions to include a 'hyperlink' to the South Australian Heritage Register (<https://www.environment.sa.gov.au/topics/heritage/sa-heritageregister>) prior to the proposed table of State Heritage Places in Part 11 of the Code.

Part 12 – Concept Plans (2.3.12)

There are no proposed Code changes to Part 12 of the Code as part of the Code Amendment.

Feedback:

No specific feedback received.

Response:

N/A

Recommendation:

No changes recommended.

Part 13 – Table of Amendments (2.3.13)

There are no proposed Code changes to Part 12 of the Code as part of the Code Amendment.

Feedback:

No specific feedback received.

Response:

N/A

Recommendation:

No changes recommended.

6 Summary of recommended changes

Recommended changes to the consultation version of the Code Amendment are detailed within Section 5.3 above. Key changes to the consultation version include:

Rules of Interpretation

- Providing further clarification regarding the nature of recurring spatial maintenance updates, including the spatial layers which may be updated and the circumstances for which such updates would take place be included in Part 1 – Rules of Interpretation.

Public Notification

- Inclusion of a new administrative definition for ‘excluded building’ to support the refinement of the exception clause relating to demolition in public notification tables and ensure that the policy clause does not inadvertently undo the intent to notify applications that involve the demolition of State and/or Local Heritage Places.

Building Height Measurement Point

- Maintaining the current position of the operational Code i.e., that building height is measured from the lower of finished or natural ground level.

Restricted Development

- Reinstate land division as a restricted form of development in the Productive Rural Landscape Zone and Rural Zone where the Limited Land Division Overlay applies.
- Refinements to policy within the Rural Shack Settlement Zone to make clear the limited circumstances in which a land division may be considered appropriate within the zone.

Assessment Pathways: Decks

- Further policy refinements to the proposed policy provisions for decks to address floor height, retention of soft landscaping, and height and nature of privacy screening treatments.

Overlay Relevance: Minor Development Types

- Removal or addition of overlays from the list of exclusions for particular development types where requested by feedback and considered appropriate.
- Reinstating current overlay exclusions for particular developments where located within the Coastal Areas Overlay to minimise the impact of development in sensitive areas.
- Application of relevant policies from certain overlays to a development type where an exclusion has been removed to ensure that the matters addressed by the overlay are taken into consideration.

Definitions: Adult Entertainment Premises and Adult Products and Services Premises

- Inclusion of a Land Use Definition for ‘Adult Entertainment Premises’ and ‘Adult Products and Services Premises’ to ensure that where an existing approval exists for a Licensed Premises or shop, the use of such premises for adult entertainment or the sale of adult products will trigger a change of use.

Dear Mr Holden

Miscellaneous and Technical Enhancement Code Amendment – City of Tea Tree Gully Submission

Thank you for the opportunity to provide feedback on the Miscellaneous and Technical Enhancement Code Amendment released for public consultation from 25 July 2022 to 23 September 2022.

At its meeting on 13 September 2022, Council considered the proposed Code Amendment and its effects on the City of Tea Tree Gully. At that meeting Council endorsed the attached submission which outlines concerns identified with the Code Amendment, as well as potential scope for further amendment, which is submitted for your consideration.

It is noted that the proposed amendments to the Planning and Design Code are largely welcomed, and are anticipated to improve the day-to-day operation of the Code. In particular, the following are considered to address concerns which have been previously raised by Council staff:

- Improvement to linkages and classification tables
- Changes to public notification requirements for minor structures
- Updated Rules of Interpretation
- Improved assessment pathways for minor development
- Clarification regarding referral triggers by Overlays
- Improved assessment pathways for minor development affected by state-significant Overlays
- New policy for assessment of decks and building alterations/additions.

Council commends the State Planning Commission for its inaugural review of the Planning and Design Code, acknowledging the large body of work which has been undertaken to date. Further, the commitment to continuously review and improve the technical operation of the Code is welcomed.

Should you have any questions regarding the content of Council's submission, please do not hesitate to contact Jessica Lewig, Strategic Urban Planner, on [redacted] or via email [redacted]

Yours sincerely

A handwritten signature in black ink, appearing to read "Ryan McMahon", with a stylized flourish at the end.

Chief Executive Officer

CTTG Miscellaneous and Technical Enhancements Code Amendment - Submission

Ref#	Relevant Zone / Overlay / General Policy / development type	Issue
1	Desired Character Statements	The removal of Desired Character Statements from planning policy is one of the biggest losses in the transition to the Code. These statements helped to define the historic and current character of an area, provided key guidance for future development and assisted councils in the development assessment process. The former Development Plan also provided greater specificity and a more relevant strategic framework to support both the existing and future development of these areas, which stemmed from extensive community consultation and council investment over many years
2	Representative Buildings	Representative Buildings should be identified in the Code. It is noted that the Code Amendment seeks to change the layer on SAPPA (South Australian Planning and Property Atlas) which identifies a property is a Representative Building is through a layer in SAPPA. Confirmation that the Line of Enquiry tool in the Online Code will identify whether a property is a Representative Buildings.
3	Design quality and environmental performance (general)	The policies contained within 'Design in Urban Areas' General Development module in relation to design, landscaping, water sensitive design and environmental performance, should apply to all dwellings to provide a higher level of amenity and environmental protection for future residents. Within the deemed to satisfy assessment pathways, these policies only apply to a limited number of dwelling types. Additionally, Interface Between Land Uses policies should be included for Deemed to Satisfy applications. Currently these policies are only called up in a Performance Assessment.
4	Swimming Pools and associated safety features	Welcome the accepted pathway. Recommend clarification that 'safety features' includes pool fencing.
5	Ancillary Accommodation	Assessment provisions have not been provided for: additional car parking, privacy, levels, stormwater, one per site, and Private Open Space has been reduced. Additionally, there are concerns that the updated definition of 'Ancillary accommodation' does not clearly define the meaning of 'self-contained residence'.

6	Significant/Regulated tree overlay	Regulated and Significant Trees Overlay policy not appropriately linked. Unable to assess the impact of a proposed development on Regulated or Significant trees unless 'Tree Damaging Activity' is selected as an element of development.
7	Carports	Often do not trigger driveway provisions of the Code. Policy relating to the location of carports in front of doorways to dwellings is not linked appropriately.
8	Battleaxe development in the HDN Zone	Performance Outcome (PO) 31.4 and Deemed-to-Satisfy/Designated Performance Feature (DTS/DPF) 31.4 have contradictory wording PO 31.4 - Battleaxe development is appropriately sited and designed to respond to the existing neighbourhood context. DTS/DPF 31.4 - Dwelling sites/allotments are not in the form of a battleaxe arrangement.
9	Overlooking from benched levels	The Code is lacking policy addressing privacy from ground level dwellings, which are raised above natural ground level or sit substantially higher than a neighbour's yard. Whilst amendments are proposed to the definition of 'direct overlooking' there are still concerns as these provisions do not address overlooking from benched levels
10	Definitions – Semi-detached dwellings	The Code lacks the need to demonstrate the buildings are connected (like party walls on plan of division, etc.). Hard to define a dwelling as semi-detached without title information.
11	Urban Activity Centre Zone	A verandah has no assessment pathway within the zone. Whilst changes to linkages are proposed in neighbourhood-type zones, there remains a lack of policy for ancillary structures within this Zone.
12	Heat loading / energy efficiency policies	Recommend additional policy(ies) regarding head loading, particularly light-coloured roofs and materials, including for South Australian Housing Authority/community housing developments.
13	Urban Tree Canopy and Stormwater Management Overlay	Urban Tree Canopy and Stormwater Management Overlays don't apply to mixed use zones or commercial zones, and don't apply to commercial developments. Recommend amendments to where and when these overlays apply and/or improve sustainability policies which apply to mixed use zones and commercial developments.
14	Site coverage	Recommend amending the site coverage policies so that a dwelling proposed without covered outdoor area has a reduced site coverage policy to allow for any future covered outdoor area to go up to the standard site coverage policy.

15	Domestic storage	The Code should include domestic storage provisions (such as minimum cubic metres) for dwellings on small sites (potentially <300sqm).
16	Internal dimensions of garages	Design in Urban Areas DTS/DFP 23.1 - The internal dimensions of garages should be both longer and wider than the Australian Standards, to ensure the garage can accommodate popular makes and models of vehicle, the opening of internal doors and some storage space in the event no other dedicated storage areas are required.
17	Hazards (Flooding – Evidence Required) Overlay	DTS/DPF 1.1 - 300mm above top of kerb. Promotes poor outcomes on the low side of the street in areas where they may not actually be flood risk (evidence required). It also unnecessarily knocks a lot of minor development being deemed-to-satisfy, and therefore has to be performance-assessed. It is noted that the Commission is undertaking a State-wide Hazards (Flooding) Code Amendment.
18	Building height – changes to definitions	Concerns that the proposed building height measurement from top of footings (rather than from natural ground level) may result in increased footing sizes which may have detrimental impacts on neighbouring properties.
19	Building alterations/additions assessment pathways	Provide a Deemed-to-Satisfy pathway for roofing change from Colourbond to tiled and vice versa, noting that a Building Rules Assessment will be required.
20	Primary setback definition changes	Concerns that the proposed change will allow protrusions (even major protrusions) to not be considered as the building line. This may result in porches/porticos/verandahs protruding considerably further forward than the current 1.5m restriction. Recommendation that a minimum front setback may be necessary in the instances where an existing secondary frontage can be considered to contribute to the minimum front setback requirement.
21	Definition of ‘direct overlooking’	Recommend that the definition include reference to ‘upper level windows’ in line with existing policy Concerns they overlooking from a deck is only captured by the associated Performance Outcome *i.e. under a Performance Assessment). This should be referenced in the DTS/DPF criteria as well to ensure Deemed to Satisfy development addresses overlooking from decks.

Dear State Planning Commission

Submission – Miscellaneous Technical Enhancement Code Amendment

I refer to the above Code Amendment that has been released for consultation. The City of Port Adelaide Enfield has reviewed the amendment and provides its technical comments in the enclosed submission. In addition, the submission includes further policy suggestions for the Planning and Design Code.

As a general comment, Council appreciates the Commission's intent for ongoing review and improvement of the Planning and Design Code, to ensure it remains up-to-date and easier to interpret. As evidence of this, the document's numerous references to pre-consultation feedback and workshops with planning practitioners is acknowledged.

Council supports many of the policy and procedural adjustments that are proposed by the amendment. As one example, new discretionary powers for Councils (regarding notification of minor developments) are appreciated as a practical improvement to the planning system.

However, as noted in its past submissions on the Code, its past correspondence to the Commission, and its discussions with departmental staff, Council reiterates its concern with the Code Amendment's treatment of the *Significant Interface Management Overlay*. It is acknowledged that the overlay applies to several Councils across the state, and there may be practical reasons for a single policy approach (from a state perspective). From a local perspective, the amendment's proposal (a slight wording change) is considered to be an insufficient policy response to the issues previously raised by Council. Further detail on this is given in the attachment.

Thank you for the invitation to make a submission. If you require further information or would like to discuss this matter, please contact Michael Kobas, Urban Planner on telephone or email

Yours sincerely

Steve Hooper
Manager Development Services

Technical Submission – Miscellaneous Technical Enhancement Code Amendment

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
2.3.2.9.9	Significant Interface Management Overlay	<p>The proposed inclusion of additional wording (relating to land division) is not opposed <i>per se</i>, but it does not address the broader issues raised by Council regarding (1) the Lefevre Peninsula’s industrial hazard risk, (2) the practicality of the Overlay’s wording, and (3) the way it has been treated by applicants.</p> <p>Port Adelaide Enfield’s experience with the Overlay was recently demonstrated in its August 2022 Council Assessment Panel meeting, whereby:</p> <ul style="list-style-type: none"> • An application was lodged for a residential land division in Osborne (to divide 1 allotment into 3) • The proposal was deemed to be not seriously at variance with the Code • The Overlay policy sought, among other things, that <i>“Intensification of sensitive uses and / or sensitive receivers is not undertaken to avoid increasing resident... exposure to potential adverse hazards or emissions unless... it can be demonstrated that the site of the proposed development is not unreasonably impacted by the hazard... from a relevant source...”</i> • The applicant commissioned a consultant report in support of the land division • In Council’s assessment of the consultant’s report, <i>“the [consultant’s] study concluded that considerable time would be required to conduct a proper interrogation of publicly available data and therefore the author concluded that Council should accept the assumption that local, state and federal government would have acted if there were actually hazards in the locality and that in fact there must not be any unreasonable hazards, as Council permits existing residential and community land uses to continue.”</i> • The application was refused, as it <i>“does not satisfactorily address the Significant Interface Management Overlay, Desired Outcome 1 and Performance Outcome 1.1 in that it has been not sufficiently demonstrated that the hazards from nearby industrial</i> 	<ul style="list-style-type: none"> • Make land division within the overlay (creating additional allotments in Port Adelaide Enfield) a Restricted Development • Work with state agencies to conduct a hazard risk study for the Lefevre Peninsula • Pursue a separate Code Amendment to review the Significant Interface Management overlay’s boundaries and policy framework

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
		<p><i>land uses have ceased or been reduced to a level to no longer unreasonably impact the subject site."</i></p> <p>Empirically, it appears that the technical data required for a satisfactory hazard risk assessment is not readily available to applicants or their consultants. If this lack of availability does not change, applicants will be unable to meet the Overlay's policy requirements, and Council may be compelled to refuse future land division applications that seek to create additional allotments.</p> <p>While the intent of the overlay is noted, the practical difficulty of the policy wording (in its current form) is difficult to resolve. In this context, Council reiterates the need for a hazard risk study to be undertaken for the Lefevre Peninsula. In its 2013 report, Recommendation 5 of the <i>Parliamentary Select Committee: Land Uses on Lefevre Peninsula</i> was that <i>"...relevant state agencies conduct a hazard risk study of the Port Adelaide Enfield Council's Restricted Residential Policy Area 14 [now the Significant Interface Management overlay]"</i>.</p> <p>If a study were conducted, its outcomes could properly inform any changes to the overlay's policies and boundaries. This would allow future land division applicants to 'know where they stand' in terms of hazard risk.</p> <p>According to its 2016 response tabled in Parliament, the State Government of the day declined to pursue such a hazard study, and noted, among other things, the pending introduction of the <i>Planning, Development and Infrastructure Act</i>, and the anticipated establishment of the Planning and Design Code.</p> <p>Now in 2022, the Act and the Code are established, but in Council's view, they are yet to address the broader planning issue of industrial hazard risk and assessment.</p>	

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
		<p>Returning to the Code Amendment, page 29 outlined some principles to help the Commission determine when a given development should be classed as Restricted. Principle 2 suggests an opportunity may exist for an application that:</p> <p><i>“Requires detailed investigations and assessment beyond that provided through a performance assessed pathway, and may require consideration of other documents outside of the Code.”</i></p> <p>On the face of it, land divisions (when required to make a hazard risk assessment) would seem consistent with this principle. In addition, it is noted that the Code Amendment seeks special industry to become a Restricted Development in certain zones. While not all industries on the Lefevre Peninsula (at risk of generating hazards) would meet the legal definition of a special industry, their offsite impacts (in the event of a hazard) may have greater consequences than a special industry.</p>	
2.3.3.4	Hazards (Flooding) overlay	<p>It is proposed to change some policy linkages for the Hazards (Flooding) Overlay, to ensure better flood management (and consistent treatment) for various ancillary residential development types. This change has not been applied to garages, however.</p> <p>Under the former planning system, Council dealt with applications where the finished floor level of a garage (forming part of the main dwelling structure) was noticeably lower than the finished floor level of the dwelling. In these cases, some developers argued that since the garage was not ‘habitable’, a lower finished floor level was acceptable. However, in the event of flooding (and flooded garages), residents will almost certainly raise complaints with Council (instead of the developer) and expect Council to resolve it. As a physical solution (years after construction) could be impractical, this suggests that the policy guidance for finished floor levels (of garages) should be more direct.</p>	<p>Amend DTS/DPF 3.5(e) to read:</p> <p><i>“Buildings comprise one of the following...a building (including any garage) with a finished floor level that is at least 300mm above the height of a 1% AEP flood event”</i></p>
2.3.3.4	Hazards (Flooding) overlay	<p>Regarding DTS/DPF 3.5(d), the expression of <i>“Buildings comprise one of the following...any post construction with open sides”</i> is not entirely clear.</p>	<p>Reword the policy to express its intent more clearly</p>

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
		This wording could be read as referring to a post (i.e. a pole), although posts <i>per se</i> might not be relevant to flooding. Alternatively, it could be read as referring to a point in time (i.e. post-construction).	
2.3.3.4	Hazards (Flooding) overlay	<p>It is noted that the overlay lacks the following reference (which appears in the Hazards (Flooding – General) overlay):</p> <p><i>“Habitable buildings, commercial and industrial buildings, and buildings used for animal keeping incorporate a finished ground and floor level not less than... [relevant TNV cited] ... In instances where no finished floor level value is specified, a building incorporates a finished floor level at least 300mm above the height of a 1% AEP flood event.”</i></p> <p>The last sentence (referring to 300mm above a 1% AEP flood event) is considered appropriate to add to this overlay as well.</p>	Include a DTS/DPF requirement to the Hazards (Flooding) Overlay, of 300mm above a 1% AEP flood level event (for land that does not have a floor level TNV)
2.3.3.4	Hazards (Flooding) overlay	Existing DTS/DPF 2.1 could benefit from a wording change that makes specific reference to garaging or storage.	Reword DTS/DPF 2.1 to: <i>“Habitable buildings, commercial and industrial buildings, and buildings used for animal keeping, storage, or garages incorporate a finished ground and floor level not less than...”</i>
2.3.3.7	Major Urban Transport Routes overlay	The inclusion of a diagram (guiding the location of access points for sites with 1-6 dwelling units) is supported. However, the removal of the existing policy reference to a 6-metre tangent point distance is not supported. If the policy wording is silent on a distance, applicants may argue that a smaller distance is acceptable.	For proposed DTS/DPF 4.1(a), retain the reference to <i>“...a minimum of 6.0m from the tangent point...”</i>
2.3.4.5	Design overlay	It is suggested that the accompanying DTS/DPF 19.3 is amended to set the driveway measurement point from the boundary of the site, rather than the kerb. In Council’s experience, a measurement point from the kerb has required additional driveway flaring (to ensure there is sufficient space for vehicle manoeuvring). It is understood that the current PLUS/DIT project on crossovers is also considering this broader issue.	Amend DTS/DPF 19.3 to read <i>“Driveways and access points on sites with a frontage to a public road of 10m or less have a width between 3.0 and 3.2 metres measured at the kerb</i>

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
			<i>and are the only access point provided on the site."</i>
2.3.4.7	Driveway and crossover gradients	It is noted that the gradients in clause (a) may conflict with the gradients specified in Australian Standard 2890.1:2004. It is also noted that Australian Standard 2890.2 stipulates additional requirements for commercial vehicles, but it is unclear if the policy provides dedicated guidance for such vehicles.	Amend DTS/DPF 23.5(a) to read <i>"The gradient of the driveway does not exceed a maximum grade of 1 in 4 and includes transitions to ensure a maximum grade change of 12.5% (1 in 8) for summit changes, and 15% (1 in 6.7) for sag changes, in accordance with AS 2890.1:2004 to prevent vehicles bottoming or scraping"</i>
2.3.4.8	Heavy vehicle parking – definition	<p>The introduction of a definition for heavy vehicle parking is supported in principle. As noted in the Code Amendment, the planning issues with heavy vehicles include manoeuvrability, parking, offsite nuisance, and the like. On this basis, the weight of the vehicle <i>per se</i> is not the apparent issue, although it serves as a clear definition.</p> <p>A related question is whether vehicular dimensions could serve as a better definition. Put another way, it is unclear if the definition should also refer to small/medium/heavy rigid vehicles and articulated vehicles. If adopted, these terms would also ensure a tighter connection with Australian Standard 2890.2, which never refers to vehicle weights.</p>	Consider whether the larger vehicle types listed in Australian Standard 2890.2 (e.g. SRV and HRV) should also be mentioned in the definition
2.3.4.10	Land division and peak flows	As written, the policy assumes that the pre-development peak discharge rates for a given location are adequately managed by its local stormwater network. This assumption may be reasonable in more recent developments/estates (which have often assumed a higher percentage of impervious land in their modelling), but older developments (of 20 years or more) have often assumed a lower percentage of impervious land, given their historically lower densities. With some older areas now undergoing infill development, the amount of impervious land is increasing, and may exceed the capacity of the local stormwater network.	Amend PO 10.1 to read <i>"Land division creating 20 or more non-residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure that the development does</i>

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
		<p>This scenario could then be compounded by the local network being unable to accommodate the stormwater flows generated by the upstream developments.</p> <p>As a result, the Code may need to be more proactive in encouraging upstream developments to help prevent downstream flooding risk – as opposed to merely not increasing pre-development peak flow rates of the (upstream) network in question.</p>	<p><i>not impact downstream stormwater systems”</i></p>
2.3.4.12	Transport, Access and Parking	<p>The introduction of additional policy for corner cut-offs is supported. However, it is not entirely clear if the intent of the new PO 10.1 is to prevent development altogether (within the corner cut-off), or merely to regulate it. If it is the former, consideration should be given to transferring this PO to the Land Division General Development Policy, which in effect could help facilitate the transfer of such land to Council at the land division stage (enabling tighter control at the post-development stage).</p>	<ul style="list-style-type: none"> Consider whether PO 10.1 should be added to the Land Division General Development Policy
2.3.8	Direct overlooking	<p>The insertion of a definition/diagrams for ‘direct overlooking’ is supported in principle. However:</p> <ul style="list-style-type: none"> It is unclear why a distance of 15 metres was chosen. Overlooking complaints made to Councils can exceed this distance. It is unclear why an angle of 45 degrees (from windows) was chosen. Overlooking would still appear possible from a wider angle, especially from wide windows. From a neighbour’s perspective, it may appear that the Council only ‘cares’ about overlooking within an arbitrary angle. The diagrams for balcony overlooking imply a narrower overlooking angle than the policy’s wording (which seems to apply to any angle). There is a possibility that applicants will argue the diagram’s (more specific) angles trump the (more open) wording. Ideally the diagram and wording would not have such a discrepancy. 	<ul style="list-style-type: none"> Consider a deeper overlooking distance than 15 metres Increase the diagram’s 45-degree angle (in the absence of explicit justification) For balconies, consider a tighter consistency between the diagram’s angles and the policy’s wording

Section	Policy issue	Proposed Policy and Comment	Suggested amendment
2.3.8	Wall height	<p>The adjustment to the definition of ‘wall height’ is noted. However:</p> <ul style="list-style-type: none"> • It is not entirely clear if the definition applies to walls with windows, or walls with gable ends or parapets. • The top of footings (the suggested starting point for measurement) may not be at or near ground level in all cases • It is not entirely clear how such measurements would be applied to exposed slabs on sloping sites. <p>In some cases, a wall of up to 3 metres will meet the provisions of the Code, but the continuous vertical element may be higher (when incorporating exposed slabs, retaining walls, and the like). It is unclear if the Code Amendment has catered for this scenario.</p>	<ol style="list-style-type: none"> 1. Confirm if the definition provides clear guidance for the following scenarios: <ul style="list-style-type: none"> • Walls with windows • Walls with gable ends or parapets • Footings that may not be at ground level • Exposed slabs on sloping sites 2. Consider an amended definition, being the distance directly between the existing or proposed finished surface level (whichever is lowest) to the highest relative point, including all continuous vertical elements (such as footings and gable ends).
N/A	Terminology	<p>It is noted that the Code Amendment (and Part 7 of the Code) makes no reference to the term ‘multiple dwelling’. As Council still receives applications for multiple dwellings on occasion, there is considered to be value in reinstating the term, noting that it existed in the <i>Development Regulations 2008</i>.</p>	<p>Add a definition for ‘multiple dwelling’ to Part 7 of the Code</p>
N/A	Part 5 – Coastal areas	<p>Part 5 of the Code lists <i>Specified Matters and Areas Identified Under the Planning, Development and Infrastructure (General) Regulations 2017</i>.</p> <p>Table 1 includes a row that for the excavation/filling of land in the Coastal Areas Overlay (per Schedule 3, Clause 3(1) of the Regulations). Unlike other clauses in Schedule 3, clause 3 has no volume threshold. This implies that excavation/filling of any volume is development (apart from the exceptions listed in the subclauses). It is unclear if the clause’s silence (on thresholds) was intentional.</p>	<p>Confirm if this clause should include an explicit volume trigger for excavation/filling in the Coastal Areas overlay. (This may require a Regulation change.)</p>

To whom it may concern,

Please find attached the City of Salisbury submission.

Note that this is an Administration submission as endorsement isn't available until after the closing period.

Please also note that the Council Caretaker period has restricted Council consideration of this matter, and has potentially fettered responses from Councils.

It is possible that the City of Salisbury Council will have amendments to the Administrative submission , and if so, will be provided after the meeting.

It is expected that receipt of these later comments will still occur and be taken into account.

Thank you

Peter Jansen

Code Amendment Team
Planning and Land Use Services
Department for Trade and Investment
GPO Box 1815
ADELAIDE SA 5001

Dear Sirs

Re: Miscellaneous Technical Enhancement Code Amendment - Submission by City of Salisbury

Thank you for the opportunity to make comments on the Code Amendment.

I can advise that the City of Salisbury supports the detailed policy changes identified in the Code Amendment, noting the extent of changes to matters such as public notification exclusions and errors, the building height policy guidance and terminology, removal of minor development that is not intended to be affected by Overlays, changes to the portal inquiry system, the Affordable Housing Overlay referral trigger change, the update to the Major Urban Transport Routes Overlay to reflect the Austroads Guide to Road Design, the additional policy of assessment of decks and screening, the inclusion of Heavy Vehicle Parking policy and definition, and the changes to the Land Use Definitions and Administrative Terms.

Due to the specific nature of the items identified in the Code Amendment, Council will be making a separate submission on matters of interest to the *Expert Panel Implementation Review of the Planning, Development and Infrastructure Act and Planning and Design Code*.

The City of Salisbury supports the continued review of the Planning and Design Code in order to improve development assessment policy, and wishes you well in this endeavour.

I advise that this submission has been made by the Administration, as Council endorsement does not occur until after the submission due date. Should any changes be required as a result of Council consideration, an updated submission will be provided.

Should you consider a need to discuss the matter, please contact Peter Jansen on

Yours faithfully

Michelle English

PlanSA,

Submission Details

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: Council

Given name: City of Marion

Family name: City of Marion

Organisation: City of Marion

Email address:

Phone number:

My overall view is: I am impartial about the Code Amendment

Comments: Council has a number of comments/queries in regards to the Code Amendment. Attached is a marked up version of 'Attachment A - Amendment Instructions', containing Council's comments alongside the relevant criteria the subject of change within the Amendment. The document has been edited so that only the criteria being commented on is included. The document is in word version and should be opened in 'Track Changes - Simple Markup' so that Council comments can be easily read. Some comments may require to be opened further by pressing on a little arrow on the bottom right hand side, to provide additional detail.

ATTACHMENT A – PROPOSED CODE POLICY – AMENDMENT INSTRUCTIONS

Note:

Changes proposed by the Code Amendment are outlined as follows:

- Proposed Code changes are in *italics*
- Deletion shown by red text with strikethrough e.g. ~~remove text~~
- Amendments to sections shown by green text with underline e.g. add text.

2.3.2.7 Urban Corridor Zones – Primary Road Corridor – Policy Review

Within the Urban Corridor (Boulevard) Zone, Urban Corridor (Business) Zone, Urban Corridor (Main Street) Zone, and Urban Corridor (Living) Zone, replace reference to:

“primary road”, “primary road corridor”, “primary road / public transport corridor” with

“primary road corridor (i.e. a State maintained road)”

2.3.2.8 Urban Corridor Zones – Side Boundary Setback – Policy Review

Within the Urban Corridor (Living) Zone PO 2.4, Urban Corridor (Business) Zone PO 2.6 and Urban Corridor (Boulevard) Zone PO 2.6 replace the following words:

Buildings set back from side boundaries (other than street and zone boundaries) to provide separation between buildings in a way that complements the established character of the locality and enables access to natural sunlight and ventilation for neighbouring buildings.

With

Buildings are:

- (a) sited on side boundaries for parts of the building located towards the front part of the allotment to achieve a continuity of street façade to the street*
- (b) setback from side boundaries for parts of the building located behind the street facing elements, to enable building separation to provide access to natural ventilation and sunlight.*

2.3.2.9 Restricted Development Classification – Table 4

Within the Limited Dwelling Overlay, amend PO 1.1 with the following:

<i>PO 1.1 Development does not result in the establishment of <u>a new dwelling</u> an additional dwelling.</i>	<i>DTS/DPF 1.1 A new dwelling replaces an existing dwelling within the same allotment.</i>
--	--

Within the Hills Face Zone, amend PO 3.1 and DTS/DPF 3.1 with the following:

OFFICIAL

<p>PO 3.1 Excavation and/or filling of land outside townships and urban areas is:</p> <ul style="list-style-type: none"> a) kept to a minimum so as to preserve the natural form of the land and native vegetation b) only undertaken in order to reduce the visual impact of buildings, including structures, or in order to construct water storage facilities for use on the allotment. c) <u>directly required for the portion of a building that is fully underground, an underground dwelling, pool, underground tank, cellar, pipeline or waste disposal and treatment system.</u> 	<p>DTS/DPF 3.1 The depth of earthworks does not exceed:</p> <ul style="list-style-type: none"> a) in the case of excavation, 2m <u>below natural ground level.</u> b) in the case of filling of land, 1m <u>above natural ground level.</u>
--	---

<p><i>Filling</i></p>	<p><i>Any of the following:</i></p> <ul style="list-style-type: none"> a) filling where the height of fill is less than 1m above natural ground level b) filling that is directly required for an underground dwelling, underground tank, or cellar.
<p>Horticulture involving olive growing</p>	
<p>Special Industry Industry</p>	<p>Light Industry</p>
<p>Intensive animal husbandry</p>	
<p>Land division</p>	<p><u>land division that is a boundary realignment</u></p>
<p>Landfill</p>	
<p>Prescribed mining operations</p>	

OFFICIAL

Renewable energy facility	<p>Solar photovoltaic panels (roof mounted)</p> <p><u>Any of the following:</u></p> <p>(a) <u>solar photovoltaic panels (roof or ground mounted).</u></p> <p>(b) <u>Battery Storage Facility</u></p> <p><u>For Domestic use (i.e. principally used to supply and/or store electricity to the existing use of land)</u></p>
Residential flat building	
Telecommunications facility	
Transport depot	
Waste reception, storage, treatment or disposal	
Wrecking yard	

2.3.2.10 Notification Tables

Within every list zone below, amend Table 5 – Procedural Matters (PM) Notification as described below:

Affected Zone	Amendment
All Zones	<p>In Part 2 – Zones and Subzones – in relation to ‘Table 5 – Procedural Matters (PM) – Notification’ insert the following text immediately after the last paragraph of the ‘Interpretation’ section:</p> <p><u>‘A relevant authority may determine that a variation to 1 or more corresponding exclusions prescribed in Column B is minor in nature and does not require notification.’</u></p>

2.3.2.11 Building Height – TNV and context – Policy refinement

Within the Urban Neighbourhood Zone, amend PO 2.2 as follows:

Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer; ~~and otherwise or~~ positively responds to the local context including the site's frontage, depth, and adjacent primary street width.

Within the Urban Corridor (Boulevard) Zone PO 3.1, Urban Corridor (Business) Zone PO 3.1, Urban Corridor (Living) Zone PO 3.1 and Urban Corridor (Main Street) Zone PO 3.1, amend as follows:

Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer ~~and otherwise or~~ positively responds to the local context including the site's frontage, depth, and adjacent primary corridor or street width.

Within the Housing Diversity Neighbourhood Zone, amend PO 3.1 as follows:

Building height is consistent with the form expressed in any relevant Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and is otherwise or is generally low rise, or complements the height of nearby buildings.

2.3.2.12 Building Height, Building Wall Setback and Wall Height – Policy Review

Part 8 – Administrative Terms and Definitions

Within Part 8 – Administrative Terms and Definitions, amend 'Building height' in (Column A) by replacing the definition (in Column B) with the following:

Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

(a) flues connected to a sewerage system

OFFICIAL

- (b) telecommunications facility tower or monopole
- (c) electricity pole or tower (d) or any similar structure

Within Part 8 – Administrative Terms and Definitions, amend ‘Wall height’ in (Column A) by replacing the definition (in Column B) with the following:

Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) ~~but excluding~~ noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land

Within Part 8 – Administrative Terms and Definitions, amend by inserting (in alphabetical order) the following new term and definition for ‘Post height’:

Term (Column A)	Definition (Column B)	Illustrations Column C
<u>Post height</u>	<i><u>Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land</u></i>	

General Neighbourhood Zone

Within the General Neighbourhood Zone amend DTS/DPF 4.1 by replacing the following words:

Building height (excluding garages, carports and outbuildings) no greater than:

- (a) 2 building levels and 9m and
- (b) wall height that is no greater than 7m except in the case of a gable end.

OFFICIAL

With:

Building height (excluding garages, carports and outbuildings) measured from the top of the footings no greater than 2 building levels and 9m and wall height that is no greater than 7m (not including a gable end).

Within the General Neighbourhood Zone amend DTS/DPF 7.1(b)(i) by replacing the words

'(i) exceed 3m in height from the top of footings'

With

'(i) exceed 3m in wall height'

Within the General Neighbourhood Zone amend DTS/DPF8.1 by replacing the following:

Other than walls located on a side boundary, building walls are set back from side boundaries:

- (a) at least 900mm where the wall height is up to 3m*
- (b) other than for a wall facing a southern side boundary, at least 900mm plus
1/3 of the wall height above 3m
and*
- (c) at least 1900mm plus 1/3 of the wall height above 3m for walls facing a southern side boundary.*

With:

Other than walls located on a side boundary, building walls are set back from side boundaries in accordance with the following:

- (a) where the wall height does not exceed 3m - at least 900mm*
- (b) for a wall that is not south facing and the wall height exceeds 3m - at least 900mm from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings*
- (c) for a wall that is south facing and the wall height exceeds 3m - at least 1.9m from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings.*

Within the General Neighbourhood Zone amend DTS/DPF 11.1(h) by replacing the words

'(h) have a wall height or post height not exceeding 3m (and not including a gable end)'

With

'(h) have a wall height or post height not exceeding 3m above natural ground level (and not including a gable end)'.

Hills Neighbourhood Zone

Within the Hills Neighbourhood Zone amend DTS/DPF 8.1 by replacing the words:

Building walls not sited on side boundaries set back from the side boundary at least:

- (a) *on sites with a site gradient greater than 1-in-8:*
 - (i) *Other than a wall facing a southern boundary, 1900mm*
 - (ii) *For walls facing a southern boundary, at least 1900mm plus 1/3 of the wall height above 3m measured from the top of the footings*
- (b) *on sites with a site gradient less than 1-in-8, and other than walls located on a side boundary:*
 - (i) *at least 900mm where the wall is up to 3m measured from the top of the footings*
 - (ii) *other than for a wall facing a southern side boundary, at least 900mm plus 1/3 of the wall height above 3m measured from the top of the footings*
 - (iii) *for walls facing a southern side boundary, at least 1900mm plus 1/3 of the wall height above 3m measured from the top of the footings.*

With:

Building walls not sited on side boundaries set back from the side boundary in accordance with the following:

- (a) *on sites with a site gradient greater than 1-in-8:*
 - (i) *at least 1900mm*
 - (ii) *for a wall that is south facing and the wall height exceeds 3m measured from the lower of natural or finished ground level - at least 1.9m from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the lower of natural or finished ground level.*
- (b) *on sites with a site gradient less than 1-in-8:*
 - (i) *where the wall height does not exceed 3m measured from the lower of natural or finished ground level - at least 900mm*
 - (ii) *for a wall that is not south facing and the wall height exceeds 3m measured from the lower of natural or finished ground level - at least 900mm from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the lower of natural or finished ground level*
 - (iii) *for a wall that is south facing and the wall height exceeds 3m measured from the lower of natural or finished ground level - at least 1.9m from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the lower of natural or finished ground level.*

Housing Diversity Neighbourhood Zone

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 3.1 by replacing the words

'Building height (excluding garages, carports and outbuildings) is no greater than.'

With

'Building height (excluding garages, carports and outbuildings) measured from the top of the footings is no greater than.'

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 3.1(b) by replacing the words

'(b) in all other cases (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)) - 2 building levels up to a maximum height of 9m.'

With

'(b) in all other cases (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)) - 2 building levels up to a maximum height of 9m measured from the top of the footings.'

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 6.1(b)(i) by replacing the words

'(i) exceed 3m in height from the top of footings'

With

'(i) exceed 3m in wall height'.

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 7.1 by replacing the words:

Other than walls located on a side boundary, building walls are set back from side boundaries:

- (a) at least 900mm for a wall height less than 3m*
- (b) at least 900mm plus 1/3 of the wall height above 3m.*

With:

Other than walls located on a side boundary, building walls are set back from side boundaries in accordance with the following:

- (a) where the wall height does not exceed 3m - at least 900mm*
- (b) where the wall height exceeds 3m - at least 900mm from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings.*

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 10.1(h) by replacing the words

'(h) have a wall height or post height not exceeding 3m (and not including a gable end)'

With

OFFICIAL

'(h) have a wall height or post height not exceeding 3m above natural ground level (and not including a gable end).'

Master Planned Neighbourhood Zone

Within the Master Planned Neighbourhood Zone amend DTS/DPF 9.1 replacing the following words:

Building walls not sited on side boundaries set back from side boundaries consistent with a building envelope plan, or are set back:

- (a) 900mm for a wall height less than 3m and*
- (b) 900mm plus 1/3 of the wall height above 3m.*

With:

Building walls not sited on side boundaries are set back from side boundaries consistent with a building envelope plan, or are set back in accordance with the following:

- (a) where the wall height does not exceed 3m - at least 900mm*
- (b) where the wall height exceeds 3m - at least 900mm from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings.*

Within the Master Planned Neighbourhood Zone amend DTS/DPF 17.1(h) by replacing the words

'(h) have a wall height or post height not exceeding 3m (and not including a gable end).'

With

'(h) have a wall height or post height not exceeding 3m above natural ground level (and not including a gable end).'

Suburban Neighbourhood Zone

Within the Suburban Neighbourhood Zone amend DTS/DPF 7.1(b)(i) by replacing the words

'(i) exceed 3m in height from the top of footings'

With

'(i) exceed 3m in wall height'.

Within the Suburban Neighbourhood Zone amend DTS/DPF 8.1 by replacing the following words:

Other than walls located on a side boundaries, building walls are set back from side boundaries:

- (a) at least 900mm where the wall is up to 3m measured from the top of the footings*
- (b) other than for a wall facing a southern side boundary, at least 900mm plus 1/3 of the wall height above 3m*

OFFICIAL

- (c) *at least 1.9m plus 1/3 of the wall height above 3m for walls facing a southern side boundary.*

With:

Other than walls located on a side boundary, building walls are set back from side boundaries in accordance with the following:

- (a) *where the wall height does not exceed 3m - at least 900mm*
(b) *for a wall that is not south facing and the wall height exceeds 3m - at least 900mm from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings*
(c) *for a wall that is south facing and the wall height exceeds 3m - at least 1.9m from the boundary of the site plus a distance of 1/3 of the extent to which the height of the wall exceeds 3m from the top of the footings.*

Within the Suburban Neighbourhood Zone amend DTS/DPF 11.1(h) by replacing the words

'(h) have a wall height or post height not exceeding 3m (and not including a gable end)'

With

'(h) have a wall height or post height not exceeding 3m above natural ground level (and not including a gable end).'

2.3.2.13 Building Walls and Dwelling Walls – Policy Review

Established Neighbourhood Zone

Within the Established Neighbourhood Zone, amend DTS/DPF 7.1(b) by replacing the words

'(b) where no side boundary setback value is returned in (a) above, and except where the dwelling is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (i) or (ii) below:'

With

'(b) where no side boundary setback value is returned in (a) above, and except where the building is a dwelling and is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (i) or (ii) below:'

Within the Established Neighbourhood Zone amend PO 9.1(a) by replacing the words

OFFICIAL

'(a) separation between dwellings in a way that complements the established character of the locality'

With

*'(a) separation between **buildings** in a way that complements the established character of the locality'.*

General Neighbourhood Zone

Within the General Neighbourhood Zone, amend DTS/DPF 9.1 by replacing the words:

'Dwelling walls are set back from the rear boundary at least:

- (a) if the size of the site is less than 301m²—*
 - (i) 3m in relation to the ground floor of the dwelling*
 - (ii) 5m in relation to any other building level of the dwelling*
- (b) if the size of the site is 301m² or more—*
 - (i) 4m in relation to the ground floor of the dwelling*
 - (ii) 6m in relation to any other building level of the dwelling.'*

With:

*'**Building walls (excluding ancillary buildings and structures)** are set back from the rear boundary at least:*

- (a) if the size of the site is less than 301m²—*
 - (i) 3m in relation to the ground floor of the building*
 - (ii) 5m in relation to any other building level of the building*
- (b) if the size of the site is 301m² or more—*
 - (i) 4m in relation to the ground floor of the building*
 - (ii) 6m in relation to any other building level of the building.'*

(i)

Hills Neighbourhood Zone

Within the Hills Neighbourhood Zone, amend DTS/DPF 7.1 by replacing the words

'Except where the dwelling is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b) below:'

With

OFFICIAL

'Except where the building is a dwelling and is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b) below.'

Within the Hills Neighbourhood Zone amend PO 8.1(a) by replacing the words

'separation between dwellings in a way that complements the established character of the locality' with

'separation between buildings in a way that complements the established character of the locality'.

Within the Hills Neighbourhood Zone amend PO 9.1(a) by replacing the words

'separation between dwellings in a way that complements the established character of the locality' with

'separation between buildings in a way that complements the established character of the locality'.

Housing Diversity Neighbourhood Zone

Within the Housing Diversity Neighbourhood Zone amend DTS/DPF 8.1 by replacing the words:

'Dwelling walls are set back from the rear boundary at least:

- (a) 3m for the first building level or 0m where the rear boundary abuts a laneway*
- (b) 5m for any second building level*
- (c) 5m plus any increase in wall height over 7m for buildings of 3 building levels and above.'*

With:

'Building walls (excluding ancillary buildings and structures) are set back from the rear boundary at least:

- (a) 3m for the first building level or 0m where the rear boundary abuts a laneway*
- (b) 5m for any second building level*
- (c) 5m plus any increase in wall height over 7m for buildings of 3 building levels and above.'*

Neighbourhood Zone

Within the Neighbourhood Zone, amend DTS/DPF 9.1 by replacing the words:

'Dwelling walls are set back from the rear boundary at least:

- (c) if the size of the site is less than 301m²—*
 - (i) 3m in relation to the ground floor of the dwelling*
 - (ii) 5m in relation to any second building level of the dwelling*
 - (iii) 5m plus an additional 1m setback added for every 1m height increase above a wall height of 7m.*
- (d) if the size of the site is 301m² or more—*
 - (i) 3m in relation to the ground floor of the dwelling*
 - (ii) 5m in relation to any second building level of the dwelling*
 - (iii) 5m plus an additional 1m setback added for every 1m height increase above a wall height of 7m.'*

With:

'Building walls (excluding ancillary buildings and structures) are set back from the rear boundary at least:

- (a) if the size of the site is less than 301m²—*
 - (i) 3m in relation to the ground floor of the building*
 - (ii) 5m in relation to any second building level of the building*
 - (iii) 5m plus an additional 1m setback added for every 1m height increase above a wall height of 7m.*
- (b) if the size of the site is 301m² or more—*
 - (i) 3m in relation to the ground floor of the building*
 - (ii) 5m in relation to any second building level of the building*
 - (iii) 5m plus an additional 1m setback added for every 1m height increase above a wall height of 7m.'*

Suburban Neighbourhood Zone

Within the Suburban Neighbourhood Zone amend DTS/DPF 9.1 by replacing the words:

'Dwelling walls are set back from the rear boundary at least:

OFFICIAL

- (a) if the size of the site is less than 301 square metres—
 - (i) 3m in relation to the ground floor of the dwelling
 - (ii) 5m in relation to any other building level of the dwelling
- (b) if the size of the site is 301 square metres or more—
 - (i) 4m in relation to the ground floor of the dwelling
 - (ii) 6m in relation to any other building level of the dwelling.’

With:

‘Building walls (excluding ancillary buildings and structures) are set back from the rear boundary at least:

- (a) if the size of the site is less than 301 square metres—
 - (i) 3m in relation to the ground floor of the building
 - (ii) 5m in relation to any other building level of the building
- (b) if the size of the site is 301 square metres or more—
 - (i) 4m in relation to the ground floor of the building
 - (ii) 6m in relation to any other building level of the building.’

2.3.2.14 Common and Minor Development – Overlay Relevance – Assessment Pathways

Within Table 2 – Deemed-to-Satisfy Development Classification, **insert** reference to specified Overlays in Column 5 – Class of Development in the rows beginning with the following Classes of Development wherever they appear in the identified Zones:

Development Type	Overlays	Zones
Detached Dwelling Row Dwelling Semi-detached Dwelling	Traffic Generating Development Overlay: DTS/DPF 1.1, 1.2, 1.3	All
	Water Protection Area Overlay: DTS/DPF 5.1, 5.2	
	Gas and Liquid Petroleum Pipelines Overlay: DTS/DPF 1.1	
	Gas and Liquid Petroleum Pipelines (Facilities) Overlay: DTS/DPF 1.1	

2.3.2.21 Interface Height – Multiple Zones: Policy and TNV – Policy Review

Within the Community Facilities Zone DTS/DPF 2.3, Employment Zone DTS/DPF 3.7, Local Activity Centre Zone DTS/DPF 3.3, Recreation Zone DTS/DPF 3.2, Strategic Employment Zone DTS/DPF 4.2, Suburban Business Zone DTS/DPF 3.3, Suburban Main Street Zone DTS/DPF 3.3, Township Activity Centre Zone DTS/DPF 3.4, Township Main Street Zone DTS/DPF 3.3, Urban Activity Centre Zone DTS/DPF 3.3, replace the diagram with the following

2.3.2.23 Non Residential Outbuildings – New Policy and Assessment Pathways

Within all relevant zones where ancillary buildings and structures policy currently exist, as well as within the Design, and Design in Urban Areas General Development Policies, insert the following Performance Outcome (PO) and DTS/DPF relative to Ancillary Buildings and Structures:

PO X.3

Non-residential ancillary structures and buildings do not detract from the streetscape or appearance of buildings on the site or neighbouring properties. DTS/DPF X.3

Non-residential ancillary buildings and structures:

- (a) are ancillary and subordinate to an existing use on the same site*
- (b) have a floor area not exceeding the following:*

OFFICIAL

<i>Allotment size</i>	<i>Floor Area</i>
<i><500</i>	<i>60m²</i>
<i>>501</i>	<i>80m²</i>

(c) are not constructed, added to or altered so that any part is situated:

i. in front of any part of the building line of the main building to which it is ancillary or

ii. within 900mm of a boundary of the allotment with a secondary street (if the land has boundaries on two or more roads) (d) in the case of a garage or carport, the garage or carport:

i. is set back at least 5.5m from the boundary of the primary street

(e) if situated on a boundary (not being a boundary with a primary street or secondary street), do not exceed a length of 11.5m unless:

i. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary and

ii. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent

2.3.2.25 Pool Fencing – Accepted Development Pathway

Within each of the following zones, amend Table 1 Accepted Development Classification by replace ‘Swimming pool or spa pool’ with ‘Swimming pool or spa pool and associated Swimming Pool Safety Features’:

-

2.3.2.26 Primary Street Setback – Use of Building Line

Within each of the following zones, amend the identified DTS/DPF X.X by replace with the following:

Business Neighbourhood Zone – DTS/DPF 3.2

OFFICIAL

<p>PO 3.2 Buildings are set back from primary street boundaries consistent with the existing streetscape.</p>	<p>DTS/DPF 3.2 Buildings setback from the primary street boundary in accordance with the following table:</p>				
	<table border="1"> <thead> <tr> <th data-bbox="667 280 1010 347">Development Context</th> <th data-bbox="1010 280 1366 347">Minimum setback</th> </tr> </thead> <tbody> <tr> <td data-bbox="667 347 1010 593"> <p><i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i></p> </td> <td data-bbox="1010 347 1366 593"> <p><i>The average setback of the existing buildings</i></p> </td> </tr> </tbody> </table>	Development Context	Minimum setback	<p><i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>The average setback of the existing buildings</i></p>
	Development Context	Minimum setback			
	<p><i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>The average setback of the existing buildings</i></p>			
	<table border="1"> <tbody> <tr> <td data-bbox="667 593 1010 907"> <p><i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i></p> </td> <td data-bbox="1010 593 1366 907"> <p><i>The setback of the existing building on the abutting site</i></p> </td> </tr> </tbody> </table>	<p><i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>The setback of the existing building on the abutting site</i></p>		
<p><i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>The setback of the existing building on the abutting site</i></p>				
<table border="1"> <tbody> <tr> <td data-bbox="667 907 1010 1220"> <p><i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i></p> </td> <td data-bbox="1010 907 1366 1220"> <p><i>5m</i></p> </td> </tr> </tbody> </table>	<p><i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>5m</i></p>			
<p><i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i></p>	<p><i>5m</i></p>				
<p><i>For the purposes of DTS/DPF 3.2:</i></p> <p><i>(a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback</i></p> <p><i>(b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table</i></p>					

PO 5.1
Buildings are setback from primary street boundaries to contribute to the existing/emerging pattern of street setbacks in the streetscape.

DTS/DPF 5.1

Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
<i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>The average setback of the existing buildings on the abutting sites minus 1m</i>
<i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i>	<i>The setback of the existing building on the abutting site minus 1m</i>
<i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>5m</i>

For the purposes of **DTS/DPF 5.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

PO 5.1
Buildings are set back from primary street boundaries consistent with the existing streetscape.

DTS/DPF 5.1
Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
<i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>The average setback of the existing buildings on the abutting sites</i>
<i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i>	<i>The setback of the existing building on the abutting site</i>
<i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>8m</i>

For the purposes of DTS/DPF 5.1:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback*
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table*

2.3.3 Part 3 – Overlays

2.3.3.3 Design Overlay – Referral

Within the Design Overlay, amend the Procedural Matters (PM) table by replace the following words in the Class of Development / Activity column:

'Except where the development comprises a variation to an application that has previously:

- (a) been referred to the Government Architect or Associate Government Architect or*
- (b) been given development authorisation under the Planning, Design and Infrastructure Act 2016 or Development Act 1993'*

with the following:

Except where the development comprises a variation to an application that has either been:

- (a) previously been referred to the Government Architect or Associate Government Architect or*
- (b) ~~been~~ given development authorisation under the Planning, **Design** and Infrastructure Act 2016 or Development Act 1993 and*
- (c) the variation to that application is, in the opinion of the relevant authority, minor in nature or would not warrant a referral when considering the purpose of the referral*

2.3.3.7 Major Urban Transport Routes Overlay - Revised policy and referral triggers

Within the Major Urban Transport Routes Overlay, amend DTS/DPF 7.1 to the following:

DTS/DPF 7.1

Development does not:

- (a) decrease the capacity of an existing drainage point*
- (b) restrict or prevent the flow of stormwater to an existing drainage point and system*
- (c) prevent access points becoming stormwater flow paths direct onto the road.*

2.3.3.21 Traffic Generating Development Overlay – Referral

Within the Traffic Generating Overlay, amend DTS/DPF 1.1, DTS/DPF 1.2 and DTS/DPF 1.3 to the following

DTS/DPF 1.1

Access is obtained directly from a State Maintained Road where it involves any of the following types of development:

- a) building, or buildings, containing in excess of 50 dwellings*
- b) land division creating 50 or more additional allotments*
- c) commercial development with a gross floor area of 10,000m² or more*
- d) retail development with a gross floor area of 2,000m² or more*
- e) a warehouse or transport depot with a gross leasable floor area of 8,000m² or more*
- f) industry with a gross floor area of 20,000m² or more*
- g) educational facilities with a capacity of 250 students or more.*

DTS/DPF 1.2

Access is obtained directly from a State Maintained Road where it involves any of the following types of development:

- a) building, or buildings, containing in excess of 50 dwellings*
- b) land division creating 50 or more additional allotments*
- c) commercial development with a gross floor area of 10,000m² or more*
- d) retail development with a gross floor area of 2,000m² or more*
- e) a warehouse or transport depot with a gross leasable floor area of 8,000m² or more*
- f) industry with a gross floor area of 20,000m² or more*
- g) educational facilities with a capacity of 250 students or more.*

DTS/DPF 1.3

Access is obtained directly from a State Maintained Road where it involves any of the following types of development:

- a) building, or buildings, containing in excess of 50 dwellings*
- b) land division creating 50 or more additional allotments*
- c) commercial development with a gross floor area of 10,000m² or more*
- d) retail development with a gross floor area of 2,000m² or more*
- e) a warehouse or transport depot with a gross leasable floor area of 8,000m² or more*

OFFICIAL

- f) *industry with a gross floor area of 20,000m² or more*
- g) *educational facilities with a capacity of 250 students or more.*

Within the Traffic Generating Overlay, amend the Procedural Matters (PM) – Referrals table by replacing Class of Development / Activity:

Except where all of the relevant deemed-to-satisfy criteria are met, any of the following classes of development that are proposed within 250m of a State Maintained Road:

- a. *land division creating 50 or more additional allotments*
- b. *commercial development with a gross floor area of 10,000m² or more*
- c. *retail development with a gross floor area of 2,000m² or more*
- d. *a warehouse or transport depot with a gross leasable floor area of 8,000m² or more*
- e. *industry with a gross floor area of 20,000m² or more*
- f. *educational facilities with a capacity of 250 students or more.*

With the following:

Except where all of the relevant deemed-to-satisfy criteria are met, any of the following classes of development that are proposed within 250m of a State Maintained Road:

- a. *except where a proposed development has previously been referred under clause (b) - a building, or buildings, containing in excess of 50 dwellings*
- b. *except where a proposed development has previously been referred under clause (a) - land division creating 50 or more additional allotments*
- c. *commercial development with a gross floor area of 10,000m² or more*
- d. *retail development with a gross floor area of 2,000m² or more*
- e. *a warehouse or transport depot with a gross leasable floor area of 8,000m² or more*
- f. *industry with a gross floor area of 20,000m² or more*
- g. *educational facilities with a capacity of 250 students or more.*

2.3.3.22 Urban Transport Routes Overlay - Revised policy and referral triggers

Within the Urban Transport Routes Overlay, amend DTS/DPF 1.1(b)(i) to the following:

DTS/DPF 1.1(b)(i)

~~(+)~~ *it will not result in more than one access point servicing the development site*

OFFICIAL

Within the Urban Transport Routes Overlay, amend DTS/DPF 3.1 to the following:

DTS/DPF 3.1

An existing access point satisfies (a), (b) or (c):

(a) *it will not service, or is not intended to service, more than 6 dwellings*

(b) *it is not located on a Controlled Access Road and will not service development that will result in a larger class of vehicle expected to access the site using the existing access*

(c) it is not located on a Controlled Access Road and development constitutes:

(i) a change of use between an office <500m² gross leasable floor area and a consulting room <500m² gross leasable floor area or vice versa

(ii) a change in use from a shop to an office, consulting room or personal or domestic services establishment

(iii) a change of use from a consulting room or office <250m² gross leasable floor area to shop <250m² gross leasable floor area

(iv) a change of use from a shop <500m² gross leasable floor area to a warehouse <500m² gross leasable floor area

(v) an office or consulting room with a <500m² gross leasable floor area

(vi) a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with <250m² gross leasable floor area.

Within the Urban Transport Routes Overlay, amend DTS/DPF 4.1 to the following:

DTS/DPF 4.1

A new access point satisfies (a), (b) or (c):

(a) *where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network and outside the tangent point shown in the following diagram:*

OFFICIAL

NOTE:

The points marked X_1 and X are respectively at the median end on a divided road and at the intersection of the main road centre-line and the extensions of the side road property lines shown as dotted lines, on an undivided road. On a divided road, dimension $Y-Y$ extends to Point Y_1 .

(b) where the development site is intended to serve between 1 and 6 dwellings ~~and access from a local road (being a road that is not a State Maintained Road) is not available~~, the new access:

- (vi) is not located on a Controlled Access Road
- (vii) is not located on a section of road affected by double barrier lines
- (viii) will be on a road with a speed environment of 70km/h or less
- (ix) is located outside of the bold lines on the diagram shown in the diagram following part (a)
- (x) is located a minimum of 6m from a median opening or pedestrian crossing

(c) where DTS/DPF 4.1 part (a) and (b) do not apply and access from an alternative local road at least 25m from the State Maintained Road is not available, and the access is not located on a Controlled Access Road, the new access is separated in accordance with the following:

Within the Urban Transport Routes Overlay, amend DTS/DPF 7.1 to the following:

DTS/DPF 7.1

Development does not:

- (a) decrease the capacity of an existing drainage point
- (b) restrict or prevent the flow of stormwater to an existing drainage point and system
- (c) prevent access points becoming stormwater flow paths direct onto the road.

2.3.4 Part 4 – General Development Policies

2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways

Within Part 4 – General Development Policies – Design, and Design in Urban Areas insert the following Performance Outcome (PO) and DTS/DPF:

<p>POX.1</p> <p><i>Decks are designed and sited to:</i></p> <p><i>complement the associated building form</i></p> <p><i>minimise impacts on the streetscape through siting behind the building line of the principal building (unless on a significant lotment or open space)</i></p> <p><i>(a) minimise cut and fill and overall massing when viewed from adjacent land.</i></p>	<p>DTS/DPF X.1 Decks:</p> <p><i>(a) where ancillary to a dwelling:</i></p> <p><i>(i) are not constructed, added to or altered so that any part is situated:</i></p> <p><i>A. in front of any part of the building line of the dwelling to which it is ancillary or</i></p> <p><i>B. within 900mm of a boundary of the allotment with a secondary street (if the land has boundaries on two or more roads)</i></p> <p><i>(ii) are set back at least 900mm from side or rear allotment boundaries</i></p> <p><i>(iii) when attached to the dwelling, has a finished floor level consistent with the finished floor level of the dwelling</i></p> <p><i>(iv) where associated with a residential use, retains a total area of soft landscaping in accordance with (A) or (B), whichever is less:</i></p> <p><i>A. a total area is determined by the following table:</i></p>
<p>Dwelling site area (or in the case of residential flat building or group dwelling(s), average site area) (m²)</p>	<p>Minimum percentage of site</p>
<p><150</p>	<p>10%</p>

OFFICIAL

	<table border="1"> <tr> <td>150-200</td> <td>15%</td> </tr> <tr> <td>201-450</td> <td>20%</td> </tr> </table>	150-200	15%	201-450	20%
150-200	15%				
201-450	20%				
	<table border="1"> <tr> <td>>450</td> <td>25%</td> </tr> </table> <p style="text-align: center;"><i>B. the amount of existing soft landscaping prior to the development occurring.</i></p> <p><i>(b) where in association with a nonresidential use:</i></p> <p><i>(i) are set back at least 2 metres from the boundary of an allotment used for residential purposes.</i></p> <p><i>(ii) are set back at least 2 metres from a public road.</i></p> <p><i>(iii) have a floor area not exceeding 25m².</i></p>	>450	25%		
>450	25%				
<p>POX.2</p> <p><i>Decks are designed and sited to minimise overlooking of habitable rooms and private open spaces of adjoining residential uses in neighbourhood-type zones through suitable floor levels, screening and siting taking into account the slope of the subject land, existing vegetation on the subject land, and fencing</i></p>	<p>DTS/DPFX.2</p> <p><i>Decks with a finished floor level 500mm or more above natural ground level facing side or rear boundaries shared with a residential use in a neighbourhood-type zone incorporate screening permanently fixed to the outer edge of the deck not less than 1.5 m above the finished floor level.</i></p>				
<p>POX.3</p> <p><i>Decks used for outdoor dining, entertainment or other commercial uses provide carparking in accordance with the primary use of the deck.</i></p>	<p>DTS/DPF X.3</p> <p><i>Decks used for commercial purposes do not result in less on-site car parking for the primary use of the subject land than specified in Transport, Access and Parking Table 1 - General Off-Street Car Parking Requirements or Table 2 - Off-Street Car Parking Requirements in Designated Areas.</i></p>				

Table 2 – Deemed-to-Satisfy Development Classification

OFFICIAL

Within the above listed 'Applicable Zones', amend Table 2 – Deemed-to Satisfy Development Classification by inserting Deck and associated polices per the below:

<i>Class of Development</i>	<i>Zone</i>	<i>General Development Policies</i>	<i>Subzone</i>	<i>Overlay</i>
------------------------------------	--------------------	--	-----------------------	-----------------------

OFFICIAL

<p>Deck Except where any of the following apply:</p> <ul style="list-style-type: none"> • Coastal Areas Overlay • Historic Area Overlay • Local Heritage Place Overlay • Significant Landscape Protection Overlay • State Heritage Area Overlay • State Heritage Place Overlay 	<p>Land Use and Intensity (pertinent zone policies) Ancillary Structure and Building (pertinent zone policies)</p>	<p><u>Design - Insert new DTS/DPF X.1, DTS/DPF X.2 and X.3 contained in Recommendation 1.</u></p> <p><u>Or</u></p> <p><u>Design in Urban Areas - Insert new DTS/DPF X.1, DTS/DPF X.2 and X.3 contained in Recommendation 1.</u></p> <p>Clearance from Overhead Powerlines DTS/DPF 1.1</p> <p><u>Design [All development [Earthworks and sloping land] DTS/DPF 8.1</u></p> <p><u>Or</u></p> <p><u>Design in Urban Areas [All development [Earthworks and sloping land] DTS/DPF 8.1</u></p> <p>Infrastructure and Renewable Energy Facilities [Wastewater Services] DTS/DPF 12.2</p>	<p>Nil.</p>	<p>Character Preservation District Overlay [Earthworks] DTS/DPF 4.1</p> <p>Future Local Road Widening Overlay [Future Road Widening] DTS/DPF 1.1</p> <p>Native Vegetation Overlay [Environmental Protection] DTS/DPF 1.1</p> <p>Scenic Quality Overlay [Earthworks] DTS/DPF 4.1</p> <p>State Significant Native Vegetation Areas Overlay [Environmental Protection] DTS/DPF 1.1</p>
--	--	--	-------------	---

2.3.4.6 Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review

Within the General Development Policies – Design in Urban Areas, amend DTS/DPF 19.1(k) to the following:

“DTS/DPF19.1 (k)

retains a total area of soft landscaping for the entire development site, including any common property, with a minimum dimension of 700mm in accordance with (i) or (ii), whichever is less:

(i) a total area as determined by the following table:

<i>Dwelling Site area (or in the case of residential flat building or group dwelling(s), average site area) (m2)</i>	<i>Minimum percentage of site</i>
<i><150</i>	<i>10%</i>
<i>150-20</i>	<i>15%</i>
<i>201-450</i>	<i>20%</i>
<i>>450</i>	<i>25%</i>

Within the General Development Policies – Design in Urban Areas, amend DTS/DPF 22.1(a) to the following:

a total area as determined by the following table:

with

“a total area for the entire development site, including any common property, as determined by the following table:

<i>Dwelling Site area (or in the case of residential flat building or group dwelling(s), average site area) (m2)</i>	<i>Minimum percentage of site</i>
<i><150</i>	<i>10%</i>
<i>150-20</i>	<i>15%</i>
<i>201-450</i>	<i>20%</i>
<i>>450</i>	<i>25%</i>

2.3.4.8 Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review

Within Part 4 – General Development Policies, amend the Transport, Access and Parking Module by inserting (at the end of the module) the following Performance Outcomes (PO), DPF/DTS (Designated Performance Feature / Deemed-To-Satisfy) and heading:

OFFICIAL

<i>Heavy Vehicle Parking</i>	
<p>PO 11.1 <i>Heavy vehicle parking only occurs on the same allotment as a dwelling and the vehicle is only owned and operated by a resident of the dwelling.</i></p>	<p>DPF/DTS 11.1 <i>None are applicable</i></p>
<p>PO 11.2 <i>Heavy vehicle parking and access is designed and sited so that the activity does not result in nuisance to adjoining neighbours as a result of dust, fumes, vibration, odour or potentially hazardous loads.</i></p>	<p>DPF/DTS 11.2 <i>Heavy vehicle parking occurs in accordance with the following:</i></p> <ul style="list-style-type: none"> <i>(a) the site is a minimum of 0.4 ha</i> <i>(b) where the site is 2 ha or more, no more than 2 vehicles exceeding 3,000 kilograms each (and trailers) are to be parked on the allotment at any time</i> <i>(c) where the site is between 0.4 ha and 2 ha, only one vehicle exceeding 3,000 kilograms (and one trailer) are to be parking on the allotment at any time</i> <i>(d) other than minor maintenance, no maintenance of the vehicle will occur on-site</i> <i>(e) the vehicle parking area achieves the following setbacks:</i> <ul style="list-style-type: none"> <i>(i) Behind the building line or 30m, whichever is greater</i> <i>(ii) 20m from the secondary street if it is a State Maintained Road</i> <i>(iii) 10m from the secondary street if it is a local road</i> <i>(iv) 10m from side and rear boundaries</i> <i>(f) parking and access areas (including internal driveways) should be sealed or have a surface that can be treated and maintained to minimise dust and mud nuisance</i> <i>(g) does not include refrigerated trailers or vehicles</i> <i>(h) vehicles only enter and exit the property in accordance with the following hours:</i>

OFFICIAL

	<p>(i) Monday to Saturday 6:00am and 9:30pm</p> <p>(ii) Sunday and public holidays between 9:30 am and 7:00 pm</p> <p>(i) the handling or trans-shipment of freight is not carried out on the property</p>
<p>PO 11.3 Heavy vehicle parking ensures that vehicles can enter and exit a site safely and without creating a hazard to pedestrians and other vehicular traffic.</p>	<p>DPF/DTS 11.3 Heavy vehicles:</p> <p>(a) can enter and exit the site in a forward direction; and</p> <p>(b) operate within the statutory mass and dimension limited for General Access Vehicles (as prescribed by the National Heavy Vehicle Regulator).</p>
<p>PO 11.4 Heavy vehicle parking is screened from views from adjoining properties and the public roads by existing buildings and landscaping.</p>	<p>DPF/DTS 11.4 None are applicable</p>

2.3.4.12 Transport, Access and Parking General Development Policy – Fences – Linkages

Within the below listed 'Applicable Zones', Table 3 – Applicable Policies for Performance Assessed Development for Fence by including the following linkages:

General Development Policies – [Transport, Access & Parking \[Sightlines\] PO 2.2](#)

General Development Policies – [Transport, Access & Parking \[Corner CutOffs\] PO 10.1](#)

Applicable Zones

**2.3.4.13 Transport, Access and Parking – General Development Policy
– Car Parking Rates Table – Review**

Within Part 4 – General Development Policies – Transport, Access and Parking amend Table 1 – General Off-Street Parking Requirements by replacing the table with the following

Class of Development	Car Parking Rate (unless varied by Table 2 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type
Residential Development	
<i>Detached dwelling</i>	<i>Dwelling with 1 bedroom (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i> <i>Dwelling with 2 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i>
<i>Group Dwelling</i>	<i>Dwelling with 1 or 2 bedrooms (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i> <i>Dwelling with 3 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i> <i>0.33 spaces per dwelling for visitor parking where development involves 3 or more dwellings.</i>
<i>Residential Flat Building</i>	<i>Dwelling with 1 or 2 bedrooms (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i> <i>Dwelling with 3 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i> <i>0.33 spaces per dwelling for visitor parking where development involves 3 or more dwellings.</i>
<i>Row Dwelling where vehicle access is from the primary street</i>	<i>Dwelling with 1 bedroom (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i> <i>Dwelling with 2 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i>

OFFICIAL

<p><i>Row Dwelling where vehicle access is not from the primary street (i.e. rearloaded)</i></p>	<p><i>Dwelling with 1 or 2 bedrooms (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i></p> <p><i>Dwelling with 3 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i></p>
<p><i>Semi-Detached Dwelling</i></p>	<p><i>Dwelling with 1 bedroom (including rooms capable of being used as a bedroom) - 1 space per dwelling.</i></p> <p><i>Dwelling with 2 or more bedrooms (including rooms capable of being used as a bedroom) - 2 spaces per dwelling, 1 of which is to be covered.</i></p>

2.3.8 Part 8 – Administrative Terms and Definitions

In Part 8 - Administrative Terms and Definitions, update the Administrative Terms and Definitions Table as follows:

<p><i>Term (Column A)</i></p>	<p><i>Definition (Column B)</i></p>	<p><i>Illustrations (Column C)</i></p>
<p><i>Building height</i></p>	<p><i>Means the maximum vertical distance between the lower of the natural or finished ground level <u>or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency)</u> at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition,</i></p>	

OFFICIAL

	<p>building does not include any of the following:</p> <ul style="list-style-type: none"> (e) flues connected to a sewerage system (f) telecommunications facility tower or monopole (g) electricity pole or tower (h) or any similar structure. 	
<p>Building line</p>	<p>In relation to a building on a site, means a line drawn parallel to the wall or of the building closest to the boundary of the site that faces the primary street (and any existing projection from <u>that wall of</u> the building such as a verandah, porch, balcony, awning or bay window is not to be taken to form part of the building for the purposes of determining the relevant wall of the building. provided that the projection is not more than 1.5m).</p>	
<p><u>Catalyst site</u></p>	<p><u>Means a site greater than 1500m², which may include one or more allotments.</u></p>	
<p><u>Direct overlooking</u></p>	<p><u>In relation to direct overlooking from a window, is limited to an area that falls within a horizontal distance of 15 metres measured from the centre line of the overlooking window and not less than 45 degree angle from the plane of the wall containing the overlooking window.</u></p> <p><u>In relation to direct overlooking from a deck, balcony or terrace, is limited to an area that falls within a horizontal distance of 15m measured from any point of the overlooking deck, balcony or terrace.</u></p>	<p><u>Overlooking window</u></p>

		<p><u>Overlooking deck,</u></p>  <p><u>balcony or terrace</u></p> 
<p><u>Post height</u></p>	<p><u>Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land.</u></p>	
<p><u>Wall height</u></p>	<p><u>Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) but excluding noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land.</u></p>

Good afternoon

Please find attached the City of Onkaparinga's submission in relation to Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission.

Should you require further information or clarification, please do not hesitate to contact Craig Jones, Development Policy Planner on [redacted] or via email on [redacted]

Could you please confirm receipt of the attached submission.

Kind regards

Katrina French
Acting Mayor Liaison Officer (Acting)
Civic Events and EM Liaison Officer

Mr Craig Holden
Chair
State Planning Commission
C/ - Code Amendment Team, Planning and Land Use Services
Department for Trade and Investment

via email: plansasubmissions@sa.gov.au

Dear Mr Holden

Submission – Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission

Thank you for the opportunity to provide comment on the Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission, which was considered by Council at its meeting held on 20 September 2022.

We understand that this Code Amendment represents the first of what will be a regular review and tune-up of technical and/or operational aspects of the Code based on stakeholder feedback.

Whilst we have focused our response to the matters within scope of the Code Amendment as contained in the attachment to this letter, on review of the Code Amendment against previous matters we have raised regarding the structure and operation of the Code, we believe there remains a number of outstanding issues as follows:

- **Minor variations**

We seek greater clarification on minor variations. Without direction of what constitutes a “minor variation” this creates uncertainty and is open to interpretation and can prove difficult to defend a refusal of any variation. The Rules of Interpretation refers to variations that “generally meet” the corresponding Performance Outcome (PO). These terms are not defined and potentially introduce inconsistency when consideration of ‘minor’ is at the assessor’s discretion during assessment.

We have further concern regarding the number of times that a variation can be undertaken where a Deemed to Satisfy (DTS) pathway is followed. This lack of clarity creates a system where a series of minor variations could be applied where ultimately the development application fails short in every DTS criteria. There does not appear to be a disincentive to prevent this occurring. In addition, repeated requests and review against the originally approved plans for relatively minor issues is time consuming for assessment practitioners and can ultimately alter the initial application to a point a new development should be warranted.

We request consideration be given to the number of times a variation can occur under the DTS pathway before a performance assessed pathway should be applied.

- Notification

We generally support the proposed refinement to Table 5 – Procedural Matters (PM) – Notification in Part 2 – Zones and Subzones that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed is minor in nature (meaning there is little to no impact) and therefore the application would not require notification. That said, noting there may be more than one variation allowed, we question whether some limitations should be applied to avoid misrepresentation and misinterpretation.

We note the other side to notification in the Code, is that the PDI Act has entirely removed the third-party appeal rights of representors. This is of a significant concern to us as community involvement in the planning process is paramount. This change does not meet community expectations and has created additional angst in response to development occurring throughout our council area. Council staff are now providing a greater mediation role between parties, particularly after a decision has been made, leading to increased requests for review either through complaints via Elected Members or pending a judicial review.

The impending review of the current planning system should involve a comprehensive focus on the loss of local community voices and participation in planning.

- Definitions

We note a number of definitions were not transitioned or introduced into the Code and the continued lack of definitions of 'winery', 'multiple dwelling' and 'glamping' is problematic for assessment.

- Winery

We note the Code introduced an in-policy term 'beverage production facilities' to cover such uses as wineries, distilleries, cideries and breweries, however this is without any further definition under Part 7 Land Use Definitions.

We have concerns how beverage production facilities is defined as it would seem that it can comprise any of 'fermentation, distillation, manufacturing, storage, packaging and bottling activities...' (as per Part 4 - General Development Policies Beverage Production in Rural Areas PO 1.3).

Although storage, packaging and bottling activities could be a component(s) or ancillary operation(s) to a winery (or distilleries, cideries and breweries), they should not be considered as a standalone activity as beverage production facilities (particularly in a Rural zone) in comparison to the primary front end activity i.e. the processing of the raw material.

We have been advised that the 'common' or 'ordinary' meaning of 'winery' would be sufficient however noting the above, it remains open to misrepresentation. We request greater clarity and certainty around this through the application of appropriate definitions.

- Multiple dwelling

We have noted the removal of this definition from the Code based more on the tenure of the building rather than the land use itself. However, applications comprising accommodation for greater than five persons when combined with physical and internal works within a building are still common. Despite displaying some characteristics of a large family living in the same dwelling, the building is occupied in a different way to a family group of otherwise related persons, often resulting in impacts to nearby residential properties in terms of a lack of on-site car parking, waste and insufficient open space.

As an example, we have received an application where there are 10 bedrooms which are proposed to be lockable and a tenancy agreement/lease will be required. We question the need for public notification and possible change in the nature of building classification and associated fire safety issues. As this cannot be categorised as 'student accommodation', there is no definition provided for 'boarding house', nor can it be considered akin to a typical residential dwelling by way of its operation, we recommend further review of this omission and consideration of a new definition for 'shared residential accommodation'.

- Deemed to Satisfy minimum criteria

We are concerned it is now considered that the 'minimums' provided for in DTS have less weight than under the former Development Plan and due to the generic and non-prescriptive nature of the Performance Outcomes, variation in assessment prevails. An example of our concern is, if the PO is assumed to be satisfied, then minimum allotment sizes specified in a DTS provision do not need to be met.

With an emphasis on performance outcomes, there is a reduced emphasis on achieving DTS parameters which has become problematic during assessment. The failure to meet a DTS/DPF leaves assessment open to interpretation and increased subjectivity which can be confusing for the community.

- Hazards (Bushfire - Medium Risk) and Hazards (Bushfire – High Risk)

We reiterate our concerns regarding the conflict with the provisions of the Ministerial Building Standard Requirements MBS 008 – Designated Bushfire Prone Areas – Additional Requirements.

We remain concerned that in the creation of new allotments applicants are not considering dwelling design and siting and configuration on the allotment and location of water storage tanks to meet building compliance with MBS 008 concerning setbacks from boundaries for access to water supply/storage tanks and fittings noting this is significantly impacted by allotment size and width, which is determined at land division stage.

We note the impending Bushfire Code Amendment and will seek that the hazard overlays be appropriately placed and identify these issues.

We understand that a broader review is to be conducted by an external expert panel on the *Planning, Development and Infrastructure Act 2016* and the Planning and Design Code (in addition to the legislated review of the 30 Year Plan for Greater Adelaide Update 2017) as it relates to infill policy, trees, character, heritage and car parking. We are pleased to see this review aligns to the following additional matters we have previously identified, including:

- Tree Protection

We consider urban greening and the retention of tree canopy cover a priority to help address climate change impacts. Council will continue to advocate for increased levels of tree protection, retention and management of significant, regulated and mature trees, and importantly where consideration is given to the economic value of trees. This consideration would treat the tree as an asset for councils and the community.

Policy capturing the economic value of trees is used interstate and upheld in the court system with calculation of a tree's amenity value using a range of criteria including its life expectancy, size, rarity, importance in the landscape and presence of other trees. Adoption of a similar system could ensure that trees are valued as important community assets and we welcome the same approach through the Planning and Design Code.

- Character

We remain concerned with the removal of Desired Character Statements as one of the biggest losses in the transition to the Code. These statements helped to define the historic and/or current character of an area and provided key guidance for future development with greater specificity. Desired Character Statements were created from extensive community consultation and council investment over many years.

The lack of forward-facing policies will inevitably result in a loss of vision for our local areas, which will ultimately affect the character and amenity noting character cannot be limited to just one individual element or feature in isolation. The interrelationship between the various elements of an area and interaction with the landscape creates a 'sense of place' and these features differ from one area to the next and should be referenced and embedded in the Code.

- Heritage

We have previously expressed concern that policy lacks specific design guidance to consider the true local context and built form character which varies between areas not being captured in the Historic Area Statements. We continue to have concern with the lack of forward-facing criteria in Historic Area Statements for new development to be assessed against, rather than merely listing the existing character elements.

We continue to support both the introduction of the Character and Historic Area Overlay Design Advisory Guidelines and the Style Identification Advisory Guidelines to assist an assessment concerning distinct character value. We note however both documents only perform as guides or planning 'tools' with no legislative status, given that they do not form an integral part of the Code. Both documents also rely solely on the voluntary responsibility of the applicant to undertake a detailed 'Contextual Design Analysis' notwithstanding the benefits it may offer in the preliminary stages of an application. It is considered that if these guidelines are important, then this should be reflected by their incorporation into the Code.

One area of outstanding concern is demolition of local heritage places. We note it must be proven that the building is 'irredeemably beyond repair' yet the Code policy simply refers to an unacceptable risk to public or private safety and uninhabitable and beyond repair. We believe that to determine if a structure is 'irredeemably beyond repair', there should be a mandatory requirement for a Heritage Impact Assessment or an economic viability report for justification.

We also note the issue of wilful neglect as a means to attaining demolition approval still occurs and should be strongly discouraged. A review of the penalties applied in this situation to act as a deterrent should form part of the broader Act and Code review.

We look forward to the upcoming opportunities to provide further detailed comments on matters that respond to our Council and community who are calling for us to continue our commitment to respond to the impacts of climate change by reducing emissions and building community resilience. A strong response to climate change and focus on sustainability is key to maintaining liveability in our city, managing risks and reducing future costs.

Should you have any questions or wish to discuss the matters raised above further, please do not hesitate to contact Craig Jones, Development Policy Planner on _____ or _____

Yours sincerely

Simon McMahon
Acting Mayor

Attachment 1

CITY OF ONKAPARINGA COMMENTS

Council's Development Policy team, Planning team, Building and Development Compliance team and Technical Services team (where relevant) have reviewed the Code Amendment and provide the following comments.

Note: Zones, Overlays and other matters not applied or relevant to the City of Onkaparinga have not been listed and no comment provided.

2.3.1 PART 1 – RULES OF INTERPRETATION

2.3.1.1 Application of Spatial Policy Relevant to the Site of the Development	
Comment	We support this amendment in principle to apply the policies relevant to the spatial location of a development. That said, we consider there needs to be some strengthening in how the 'Interface between Land Uses' in Part 4 – General Development Policies are called up.

2.3.1.2 Spatial maintenance updates – comprising minor or operational amendments	
Comment	We support this amendment in principle subject to the work only being undertaken by the Surveyor-General and for routine minor or operational cadastral changes.

2.3.2 PART 2 – ZONES AND SUB ZONES

2.3.2.1 Conservation Zone - land division - PO 2.1 – Policy	
Comment	We support this amendment.

2.3.2.3 Master Planned Zones – Site Dimensions and Land Division – Policy Review	
Comment	<p>We support this amendment in principle but note a Concept Plan's purpose is not to show allotments / sites. In addition, a Master Plan is not a statutory document, so we further question why reference is made to this.</p> <p>For PO 11.3 to have any real effect, we consider further work is required on outlining what can be shown in a Concept Plan and likewise, giving statutory recognition (or definition in Part 7 or 8) to 'Master Plan'.</p>

2.3.2.4 Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages	
Comment	We support this amendment.

2.3.2.5 Rural Zone – Detached Dwelling – Linkages	
Comment	We support this amendment.

2.3.2.6 Rural Zone – Land Division / Boundary Realignment - Linkages	
Comment	We support this amendment.

2.3.2.9 Restricted Development Classification – Table 4	
<p>We have fundamental issues with this part of the Code Amendment and more so how restricted development operates under the Code and Act.</p> <p>We note the Commission's position to the difference in how non-complying and restricted development are assessed, with the Code drafted to speak to the types of development that are envisaged, not what is discouraged or inappropriate. The reliance of the system on the Code being silent on development that is not envisaged or desired poses significant difficulties in the defence of developments that are the subject of refusal, dispute or appeal.</p> <p>We recognise that no policy or set of policies can ever address all possible scenarios that may arise. We accept that at times that there must be exception to the intent of any policy or set of policies.</p> <p>That said, we consider the Code needs to contain greater guidance providing support to the defence of sound refusals or to guide undesirable proposals in the face of the inevitable exceptions to the rule argument. We suggest wording to the effect of '<i>kinds of development not envisaged or desired for a zone, subzone or overlay should generally not be approved unless it is overwhelmingly shown to benefit the public interest or definitively supports the desired outcomes.</i>' That would at least place some onus on proponents to demonstrate that the public interest would be served by a development.</p> <p>Noting the Code Amendment commentary "Council Assessment Panels and Managers have the appropriate skills, qualifications and local knowledge to undertake an assessment of this nature", however maintaining land uses as restricted development rather than performance assessed is a very much second best option to our above desired change.</p> <p>We suggest land uses should remain as restricted until the review of the Code and Act are completed by the Expert Planning Panel.</p>	

2.3.2.9.1. Industry listed as a restricted development classification

Comment	<p>We support the amendment for the Employment Zone.</p> <p>We do not support the amendment to remove 'Industry' from the restricted development classification in the following zones</p> <ul style="list-style-type: none"> • Suburban Business Zone • Local Activity Centre Zone • Suburban Activity Centre Zone • Suburban Main Street Zone • Township Zone, and • Urban Activity Centre Zone.
---------	--

2.3.2.9.2. Land Division within the Limited Land Division Overlay	
Comment	<p>We accept this amendment to some extent noting the intent of the Code is that the Overlay will prevail over all other policies.</p> <p>However, without support of reference to the kinds of development not envisaged or desired for a zone, subzone or area should generally not be approved unless it is overwhelmingly shown to benefit the public interest or definitively supports the desired outcomes, the Code poses significant difficulties in the defence of developments that are the subject of refusal, dispute or appeal.</p>
2.3.2.9.5. Dwelling and Land Division within the Deferred Urban Zone	
Comment	<p>We accept this amendment to some extent however we do not support more than one 'dwelling' on a site within our Deferred Urban Zone. Noting the amendment has 'dwellings' not 'dwelling' we question whether this is an error or there is expectation of more than one dwelling on a site?</p>
2.3.2.9.6. Employment Zone – Various land uses	
Comment	<p>We support this amendment.</p>
2.3.2.9.10. Hills Face Zone – Various land uses	
Comment	<p>We support the amendment for 'Excavation' and 'Filling' noting there is suitable policy guidance and some minor exception can be acceptable.</p> <p>We support boundary realignment as Performance Assessed noting this is consistent with the Development Regulations 2008 (ceased) Part 4(17)(6)(c) which prescribed that a Statement of Effect for non-complying development involving a boundary realignment was not required.</p>
2.3.2.10.1. Notification Tables – Minor Development	
Comment	<p>We support this amendment.</p>
2.3.2.10.2. Notification Tables – Errors and Inconsistencies	
Comment	<p>We support boundary realignment being removed from Table 5 - Procedural Matters (PM) – Notification. We note this would be consistent with the approach under Schedule 9 of the Development Regulations 2008 (ceased) which made non-complying boundary realignments, a Category 1 form of development.</p> <p>We do not support the removal of Land Division from Table 5 - Procedural Matters (PM) – Notification of the Hills Face Zone.</p> <p>Land Division is listed in Table 4 of the zone as currently a restricted form of development in the Hills Face Zone and is publicly notified. The application of restricted status reflects the importance of a policy that significantly constrains development of a kind that has the potential to increase population, activity levels, demands on natural resources or contamination of resources natural character of this area of elevated terrain.</p>

	<p>The community, particularly those who reside within or close to it, are familiar with its character and function and the policies that are intended to protect it. They are guided by them and rely upon them. In these circumstances, notification of development that may be contrary to those policies is of community interest is warranted and assists in maintaining community interest, limited participation and engenders some degree of confidence in the planning system.</p> <p>Removal from the requirement to publicly notify is another step that removes community participation and confidence in the planning system.</p>
--	--

2.3.2.10.3. Notification Tables – Frost Fans

Comment	We support this amendment.
---------	----------------------------

2.3.2.10.4. Notification Tables – Building on railway land / Temporary public service depot

Comment	We support this amendment.
---------	----------------------------

2.3.2.10.5. Notification Tables – Demolition

Comment	We support this amendment.
---------	----------------------------

2.3.2.11 Building Height – TNV and context – Policy refinement

Comment	We support this amendment.
---------	----------------------------

2.3.2.12 Building Height, Building Wall Setback and Wall Height – Policy Review

Part 8 – Administrative Terms and Definitions

Comment	We support this amendment.
---------	----------------------------

2.3.2.13 Building Walls and Dwelling Walls – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.2.14 Common and Minor Development – Overlay Relevance – Assessment Pathways

Comment	We support this amendment in principle however we have concerns in relation to the open number of 'minor variations' that can be applied as previously mentioned.
---------	---

2.3.2.15 Detached Dwellings in Master Planned Zones as an Accepted Development Pathway

Comment	We support this amendment.
---------	----------------------------

2.3.2.16 Detached Dwellings - Medium and High Rise Development – Policy Relevance	
Comment	We support this amendment.
2.3.2.17 Discrete vs Discreet - Garages & Carports - Policy Review	
Comment	We support this amendment.
2.3.2.18 Discrete vs Discreet - Garages & Carports - Linkages	
Comment	We support this amendment.
2.3.2.19 Dwelling Alterations and Building Additions/Alterations – Assessment Pathways	
Table 1 – Accepted Development Classification	
Comment	We support this amendment.
Table 2 – Deemed-to-Satisfy Development Classification	
Comment	We support this amendment.
Table 3 – Applicable Policies for Performance Assessed Development	
Comment	We support this amendment.
2.3.2.20 Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages	
Comment	We support this amendment.
2.3.2.21 Interface Height – Multiple Zones: Policy and TNV – Policy Review	
Comment	We support this amendment.
2.3.2.22 Land Division – Site Contamination – Policy Relevance and Linkage	
Comment	We support this amendment.
2.3.2.23 Non Residential Outbuildings – New Policy and Assessment Pathways	
Comment	We support this amendment.
2.3.2.24 Outbuildings - Accepted Development Criteria	

Comment	We support this amendment.
---------	----------------------------

2.3.2.25 Pool Fencing – Accepted Development Pathway

Comment	We support this amendment in principle however noting fencing can be development (a fence in the Historic Area Overlay) and seek further refinement to where the swimming pool barrier is also a boundary fence.
---------	--

2.3.2.26 Primary Street Setback – Use of Building Line

Comment	We support this amendment.
---------	----------------------------

2.3.2.27 Replacement Building – Overlay Exclusions: Coastal Flooding Overlay

Comment	We support this amendment.
---------	----------------------------

2.3.2.28 Tourist Accommodation – Total Floor Area – Rural Zones

Comment	We support this amendment.
---------	----------------------------

2.3.3 PART 3 – OVERLAYS

2.3.3.1 Affordable Housing Overlay – Referral Trigger

Comment	We support this amendment in principle however the drafting of the revised section has become difficult to read; as such we suggest further refinement to adjust the ease of reading.
---------	---

2.3.3.2 Coastal Areas Overlay – Policy Intent

Comment	We support this amendment.
---------	----------------------------

2.3.3.4 Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.3.5 Heritage Adjacency Overlay - Referral

Comment	We support this amendment.
---------	----------------------------

2.3.3.7 Major Urban Transport Routes Overlay - Revised policy and referral triggers

Comment	We support this amendment noting that council would still assess any new driveway location against the requirements and recommendations of Australian Standard AS 2890.1 Off Street parking which indicates all new access points (including domestic driveways) should be located 6m away from the tangent point unless the property would be otherwise denied an access.
---------	--

2.3.3.8 Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent	
Comment	We support this amendment.

2.3.3.9 Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent	
Comment	<p>We support this amendment however we note in the proposed DTS/DPF 2.3 (a) the wording should be altered as per below to reflect the same terminology as the South Australian Public Health (Wastewater) Regulations 2013. In addition, it should also capture where there is an 'onsite wastewater management system'.</p> <p><i>from</i></p> <p>(a) a sewer or community wastewater management system with sufficient hydraulic and treatment capacity to accept the inflow</p> <p><i>to</i></p> <p>(a) a sewer or an <u>onsite wastewater management system</u> or community wastewater management <u>scheme</u> with sufficient hydraulic and treatment capacity to accept the inflow</p>

2.3.3.10 Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral	
Comment	We support this amendment.

2.3.3.11 Prescribed Surface Water Area Overlay - Terminology	
Comment	We support this amendment.

2.3.3.12 Prescribed Water Resources Area Overlay – Referral	
Comment	We support this amendment.

2.3.3.13 Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation	
Comment	<p>We support this amendment.</p> <p>On a technical issue, the omission of this information on Form 1s is of some concern given this information is then not passed onto prospective property buyers. By not indicating that a 'representative building' exists on the Title does not alert</p>

	prospective purchasers of a property's historical significance and this can prove problematic.
--	--

2.3.3.18 River Murray Tributaries Protection Area Overlay - Policy intent	
Comment	We support this amendment.

2.3.3.19 River Murray Tributaries Protection Area Overlay - Referrals	
Comment	We support this amendment.

2.3.3.20 State Significant Native Vegetation Areas Overlay - Referral Trigger	
Comment	We support this amendment.

2.3.3.21 Traffic Generating Development Overlay – Referral	
Comment	We support this amendment.

2.3.3.22 Urban Transport Routes Overlay - Revised policy and referral triggers	
Comment	We support this amendment noting that council would still assess any new driveway location against the requirements and recommendations of Australian Standard AS 2890.1 Off Street parking which indicates all new access points (including domestic driveways) should be located 6m away from the tangent point unless the property would be otherwise denied an access.

2.3.4 PART 4 – GENERAL DEVELOPMENT POLICIES

2.3.4.1 Aquaculture – General Development Policies – Policy Review	
Comment	We support this amendment.

2.3.4.2 Carport and Outbuilding – Internal Parking Dimensions – Linkages	
Comment	We support this amendment.

2.3.4.3 Commercial Forestry – Forestry General Development Policies – Policy Review	
Comment	We support this amendment.

2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways	
Comment	<p>We support this amendment in principle however noting in DTS/DPF X.1 Decks:</p> <p><i>(a) where ancillary to a dwelling;</i></p> <p><i>(iii) when attached to the dwelling, has a finished floor level consistent with the finished floor level of the dwelling</i></p> <p>We consider further refinement to the policy is needed to address and/or clarify that it is from the 'ground' floor level (single storey, not second storey).</p> <p>We also seek further criteria where a deck is sited on sloping land and is elevated above the natural ground level at a greater height than the associated dwelling as this can result in a substantial and imposing built form. Likewise, a floor area criteria (similar to an outbuilding) should be included to guide appropriate forms of deck development in a residential setting.</p> <p>In addition, we note that in a high bushfire area, the CFS require that decks are enclosed underneath, which can be further visually imposing.</p> <p>We also suggest that in all Zone Table 5 - Procedural Matters (PM) – Notification that there should be criteria where decks exceeding DTS/DPFs trigger the need for notification.</p>

2.3.4.5 Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance	
Comment	We support this amendment.

2.3.4.6 Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review	
Comment	We support this amendment.

2.3.4.7 Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review	
Comment	We support this amendment.

2.3.4.8 Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review	
Comment	We support this amendment.

2.3.4.10 Land Division – General Development Policies – Policy Review	
Comment	We support this amendment.

2.3.4.11 Land Division – General Development Policies – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.4.12 Transport, Access and Parking General Development Policy – Fences – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.4.13 Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.14 Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation

Comment	We support this amendment.
---------	----------------------------

2.3.5 PART 5 – SPECIFIED MATTERS AND AREAS IDENTIFIED UNDER THE ACT AND REGULATIONS

We note there are no proposed Code changes to Part 5.

2.3.6 PART 6 – INDEX OF TECHNICAL AND NUMERIC VARIATIONS

We note there are no proposed Code changes to Part 6.

2.3.7 PART 7 – LAND USE DEFINITIONS**2.3.7.1 Ancillary Accommodation – Amend**

Comment	We support this amendment.
---------	----------------------------

2.3.7.2. Caravan and Tourist Park – Amend

Comment	<p>We support this amendment in principle, but we seek further clarification on the definition of 'campground' (noting it is excluded from column B).</p> <p>Using the common definition, we note a campground is defined as 'a place where people on holiday can put up their tents, park their caravan etc, often with toilets, water etc.</p> <p>We note that many caravan and tourist parks also provide spaces for tents; as such we question why campground is excluded and/or does not have a definition within the Code.</p>
---------	--

2.3.7.3. Commercial Forestry – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.4. Educational Establishment – Amend	
Comment	We support this amendment.
2.3.7.5. Indoor Recreation Facility – Amend	
Comment	We support this amendment.
2.3.7.6. Office – Amend	
Comment	We support this amendment.
2.3.7.7. Pre-school – Amend	
Comment	We support this amendment.
2.3.7.8. Renewable Energy Facility – Policy Refinement	
Comment	We support this amendment in principle but are seeking further clarification on the meaning of 'For domestic use (i.e. principally used to supply and/or store electricity to the existing use of land) noting the zones listed will include non-residential land uses - will domestic use include 'all' lawfully approved uses on the subject site?
2.3.7.9. Tourist Accommodation – Amend	
Comment	We support this amendment.
2.3.7.10. Workers Accommodation – Amend	
Comment	We support this amendment.
2.3.7.11. Heavy Vehicle Parking – New Definition	
Comment	We support this amendment.
2.3.7.12. Function Venue – New Definition	
Comment	We support this amendment.
2.3.8 Part 8 – Administrative Terms and Definitions	
2.3.8.1. Building Height – Amend	
Comment	We support this amendment.

2.3.8.2. Building Line – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.8.3. Wall Height – Amend

Comment	<p>We support this amendment in principle but zone DTS/DPF building and wall height correlation to Table 5 - Procedural Matters (PM) – Notification requires further consideration.</p> <p>For example, in the General Neighbourhood Zone, Building Height DTS/DPF 4.1: Building height (excluding garages, carports and outbuildings) no greater than:</p> <ul style="list-style-type: none"> • 2 building levels and 9m, and • wall height that is no greater than <u>7m</u> except in the case of a gable end. <p>Table 5 - Procedural Matters (PM) – Notification Exceptions (Column B)</p> <p>Except development that:</p> <ul style="list-style-type: none"> • does not satisfy General Neighbourhood Zone DTS/DPF 4.1, or • involves a building wall (or structure) that is proposed to be situated on (or abut) an allotment boundary <p>(b) the <u>height of the proposed wall</u> (or post height) exceeds <u>3m</u> measured from the <u>top of footings</u></p> <p>We note that a wall less than 3m in height, but on top of a 1.4m retaining wall presents less than the building height of 7m however it would result in a total development height of 4.4m on the boundary, however this does not appear to trigger the need for notification.</p> <p>We consider the Code needs to clarify if the retaining wall is or is not considered the footings of the wall. Alternative reference to the 'footings' being a consistent floor height any adjoining structure or natural ground level would provide some guidance.</p>
---------	---

2.3.8.5. Direct Overlooking – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.6. High Frequency Public Transit Area – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.7. Post Height – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.8. Gross Density - Delete

Comment	We support this amendment.
---------	----------------------------

2.3.9 PART 9 – REFERRALS**2.3.9.1 Environment Protection Authority Referrals**

Comment	We support this amendment.
---------	----------------------------

2.3.10 PART 10 – SIGNIFICANT TREES

We note there are no proposed Code changes to Part 10.

2.3.11 PART 11 – LOCAL HERITAGE PLACES**2.3.11.1 Listing of State Heritage Place**

Comment	We support this amendment.
---------	----------------------------

2.3.12 PART 12 – CONCEPT PLANS

We note there are no proposed Code changes to Part 12.

Dear Sir/Madam,

Please find below a detailed response on behalf of Mid Murray Council to the Miscellaneous Technical Enhancement Code Amendment (MTECA), which is currently on public consultation until 23 September 2022.

As part of our review, we have identified the amendments which we believe will directly affect our Council area, and have provided commentary as to whether the Council support, oppose or support with recommended alterations to the Code Amendment (opposition or recommended alterations can be found in red in the 'comments' column of the table).

In addition to the changes outlined in the MTECA consultation document, we have identified other issues with the Planning and Design Code, which we believe can be resolved as part of this Amendment.

These recommendations are included in the 'recommended additional minor amendments' heading of the table below.

If you have any questions in respect to our submission, please feel free to contact me at the Cambrai office on _____ or via email at postbox@mid-murray.sa.gov.au.

Yours faithfully,

A handwritten signature in black ink, appearing to read 'Jake McVicar', is positioned above the printed name.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<u>RULES OF INTERPRETATION</u>		
<p><u>Application of Spatial Policy Relevant to the site of the Development</u></p> <p>The Code currently does not have an interpretation around when a zone, subzone, or overlay only partly covers an allotment.</p>	<p>The following to be inserted in Part 1 of the Code:</p> <p><i>Application of Spatially Based Policies and Rules</i></p> <p><i>Where a zone, subzone, overlay or technical and numeric variation (TNV) does not spatially apply to the whole of a site that is the subject of the development application, the spatially based rules of the zone (including assessment pathway exclusions), subzone, overlay or TNV are only applicable to the portion of the site to which the zone, subzone, overlay or TNV spatially covers. Reference to the South Australian Property and Planning Atlas of the SA planning database will be made to determine whether a zone, subzone, overlay or TNV is relevant to the site of the proposed development application.</i></p>	<p>This amendment is supported.</p>
<p><u>Spatial maintenance updates – comprising minor or operational amendments</u></p> <p>Version updates are regularly made, generally comprising of minor or operational amendments to the spatial layers.</p>	<p>The following to be inserted in Part 1 of the Code:</p> <p><i>Cadastral updates</i></p> <p><i>The zones, subzones and overlays of the Code are referenced to the cadastral boundaries shown in SAPP. In the majority of cases a zone, subzone or overlay boundary is directly aligned with a cadastral boundary. In the case of roads the zone, subzone or overlay boundaries are often aligned with the centreline of that road.</i></p> <p><i>When cadastral boundaries are resurveyed and amended by the Surveyor-General there are often boundaries that are, as a result, found to be</i></p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>incorrectly spatially located and as a result of the re-survey, are represented in SAPPA in a different geographic location.</i></p> <p><i>Where the spatial application of the boundary of a zone, subzone or overlay is directly aligned or linked with the cadastre (being a parcel boundary or some other point or position within a parcel) and the cadastre is amended by the Surveyor-General resulting in the movement of a cadastral boundary, the spatial application of the boundary of the zone, subzone or overlay will also move proportionate with the amended cadastre. This ensures that the existing approved spatial application of the boundary of the zone, subzone or overlay with the cadastre is maintained.</i></p>	
<u>ZONES</u>		
<p><u>Conservation Zone</u></p> <p>Amendment to PO 2.1 of the Zone, as it does not currently clarify that land division should avoid creating additional allotments with frontage to the coast or River Murray to capture conservation areas that do not directly abut waterfront areas.</p>	<p>AMEND – PO 2.1 to the following:</p> <p>Land division supports the management or improvement of the natural environment including avoiding:</p> <ul style="list-style-type: none"> a) further fragmentation of land that may reduce effective management of the environment b) parcel arrangements that increase direct property access to waterfront areas c) additional allotments with frontage to the coast or River Murray. 	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p><u>Conservation Zone</u></p> <p>Land division policy within the Conservation Zone does not currently recognise the location of the zone adjacent the River Murray nor the policy intent to limit land division that results in parcel arrangements that increase direct property access to waterfront areas.</p>	<p>AMEND - DTS/DPF 2.1(b) as follows:</p> <p>b) for a boundary realignment that does not result in any additional allotments with frontage or direct access to the coast or River Murray and will satisfy one of the following:</p>	<p>This amendment is supported.</p>
<p><u>Rural Zone</u></p> <p>Policy provisions relating to matters of interface between sensitive receivers and rural land uses are not being called up for Performance Assessed detached dwellings the Rural Zone, and therefore are not available to a relevant authority for a development's assessment.</p>	<p>ADD - the following policy linkages for Performance Assessed Detached Dwelling in Table 3 of the Rural Zone, including associated DTS/DPF provisions:</p> <ul style="list-style-type: none"> • Interface between Land Uses [Interface with Rural Activities]: PO 9.1, PO 9.2, PO 9.3, PO 9.4, PO 9.5, PO 9.6, PO 9.7 	<p>This amendment is supported as it provides for a detailed assessment against provisions relating to interface impacts.</p>
<p><u>Rural Zone</u></p> <p>Additional policy guidance is required for the assessment of Land Divisions, including Boundary Realignments within the Rural Zone</p>	<p>ADD - PO 11.3 and DPF 11.3 in the policies applicable to a Boundary Realignment proposal.</p>	<p>This amendment is supported as it provides more detailed assessment provisions for boundary realignment proposal.</p>
<u>RESTRICTED DEVELOPMENT</u>		
<p><u>Industry</u></p> <p>Industry currently listed as Restricted within the following Zones, with the only exception being Light Industry:</p> <ul style="list-style-type: none"> • Employment Zone 	<p>AMEND – this restricted trigger to include special industry as opposed to Industry</p>	<p>This amendment is supported as it allows Council to more effectively determine whether a DA is for Industry or Light Industry, with these decisions often pending specific expert consultant reports.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<ul style="list-style-type: none"> • Township Zone • Township Activity Centre Zone • Township Activity Centre Zone 		
<p><u>Land Division within the Limited Land Division Overlay</u></p> <p>It is considered that the policy which generally applies to land division in the Code provides adequate direction to a relevant authority for assessment purposes.</p>	<p>REMOVE - land division when the Limited Land Division Overlay applies in Table 4 – Restricted Development Classification in the Productive Rural Landscape Zone, Rural Zone, and Rural Horticulture Zone.</p>	<p>This amendment is supported as the policy provide clear guidance to support or refusal proposal.</p>
<p><u>Dwelling within the Limited Dwelling Overlay</u></p> <p>The policy which generally applies to dwellings in the Code provides adequate direction to a relevant authority for assessment of a dwelling application.</p>	<p>REMOVE - dwelling when the Limited Dwelling Overlay applies from Table 4 – Restricted Development Classification in the Rural Zone and Rural Horticulture Zone</p> <p>AMEND - PO 1.1 of the Limited Dwelling Overlay to the following to make it clear that no new dwellings are envisaged:</p> <p><i>PO 1.1 - Development does not result in the establishment of a new dwelling</i></p>	<p>This amendment is supported as the policy provide clear guidance to support or refusal proposal.</p>
<p><u>Dwellings within the Employment (Bulk Handling) Zone</u></p> <p>A dwelling other than when it is ancillary to a non-residential land use (and where it will not result in more than one dwelling on an allotment)</p>	<p>REMOVE - dwelling from Table 4 – Restricted Development Classification in the Employment (Bulk Handling) Zone</p>	<p>This amendment is not supported, as there is very limited circumstances when a dwelling could be proposed without a non-residential use. We feel that the assessment policy is not strong enough to enable this development type to be removed from the Restricted Classification.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
is given a restricted development classification in this zone.		
<p><u>Dwelling and Land Division within the Deferred Urban Zone</u></p> <p>Within the Deferred Urban Zone, only development that will not result in more than one dwelling on an allotment are permitted. Land division is also restricted in the zone except for land division that does not create additional allotments other than for the purpose of providing public infrastructure. Neither of these two land uses is considered to warrant a restricted development classification or detailed investigation and assessment.</p>	<p>REMOVE - dwelling and land division from Table – 4 Restricted Development Classification within the Deferred Urban Zone</p> <p>CREATE - new PO 2.3 to provide guidance for a dwelling within the Deferred Urban Zone:</p> <p>PO 3.1 Land division is limited to that which:</p> <ul style="list-style-type: none"> a) corrects anomalies in the placement of allotment boundaries with respect to the location of existing buildings or structures or b) enables the provision of public infrastructure. <p>DTS/DPF 3.1 Land division for any of the following:</p> <ul style="list-style-type: none"> a) the alteration of allotment boundaries, where no additional allotments are created b) the purpose of providing public infrastructure. 	<p>This amendment is supported as it enables Council to effectively assess proposal which seek to resolve minor anomalies or provide for the provision of infrastructure.</p>
<p><u>Employment Zone – Removal of Various Land Uses from Restricted Classification</u></p> <p>The following two land uses are proposed to be removed from the restricted development classification listing:</p>	<p>REMOVE - the following listed land uses from Table 4 – Restricted Development Classification in the Employment Zone –</p> <ul style="list-style-type: none"> • Waste reception, storage, treatment or disposal; and • Wrecking yard 	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<ul style="list-style-type: none"> Waste reception, storage, treatment or disposal Wrecking yard 		
<p><u>Land Division and Dwellings within the Rural Shack Settlement Zone</u></p> <p>Within the Rural Shack Settlement Zone, a dwelling is currently restricted other than a detached dwelling that will not result in more than one dwelling on an allotment. Land division is also restricted in the zone except for land division that creates an allotment for an existing dwelling, is for the purpose of creating a public road or reserve or is for a minor boundary realignment to remove a minor anomaly.</p>	<p>REMOVE - dwelling and land division from the restricted table in Rural Shack Settlement Zone</p>	<p>This amendment is not supported. We believe the more appropriate solution would be to amend the current Restricted Criteria to the following:</p> <p>Detached Dwelling (Exclusion) – that will not result in more than one dwelling on an allotment <u>or lease site</u>.</p> <p>Furthermore, limited land division policies exist to assess a proposal within this Zone, so we feel that this should remain as the status quo.</p>
NOTIFICATION TABLES		
<p><u>Notification Tables – Minor Development</u></p> <p>Currently public notification requirements often trip relatively minor applications into a performance assessed pathway under the Code. This creates additional work for planning authorities over and above notifications that occurred under the former development system under the Development Act 1993.</p>	<p>AMEND - the interpretation section of each zone public notification table (Table 5) together with Part 1 – Rules of Interpretation by inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is minor in nature, in which case the application will not require notification.</p> <p>AMEND - each zone public notification table (Table 5) so that the following minor forms of development are not subject to public notification (or subjected to notification exception criteria in Column B):</p>	<p>This amendment is supported as it limits the need to notify minor forms of development</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<ul style="list-style-type: none"> • Air handling unit, air conditioning system or exhaust fan • Carport • Deck • Fence • Outbuilding • Pergola • Private bushfire shelter • Retaining wall • Shade sail • Solar photovoltaic panels (roof mounted) • Swimming pools or spa pool • Verandah • Water tank. 	
<p><u>Notification of small scale developments</u></p> <p>Public notification tables currently notify smaller developments (ie. outbuilding, fence, retaining wall, etc.) where they exceed height or length on a boundary.</p>	<p>AMEND public notification tables removing the need for notification for small scale developments</p>	<p>This amendment is supported.</p>
<p><u>Rural Shack Settlement Zone – Light Industry, Warehouse, Store</u></p> <p>Within the Rural Shack Settlement Zone, Item 2 of the public notification table excludes the</p>	<p>Item 4 of the same table refers to the same form of development. On review, Item 4 was established when it was determined that like land uses would be provided with their own 'row' in the notification</p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>following form of development from public notification:</p> <p><i>Any development involving any of the following (or of any combination of any of the following): ...</i></p> <p><i>(h) light industry, warehouse or store (or any combination thereof) where the total floor area of the buildings plus any outdoor space used for any of these uses is less than 80m²</i></p>	<p>table where the same 'exception' criteria were to be applied (in this instance a maximum 80m² combined total floor area before public notification is triggered).</p> <p>Reference to light industry, warehouse and store in Item 2 of the public notification table is therefore an error and should be removed.</p>	
<p><u>Land Division</u></p> <p>There is an inconsistency in the zone public notification tables regarding the exemption of 'land division' from public notification. In most instances (47 zones out of 65) 'land division' is exempt without exception (e.g. no exception criteria has been applied in Column B).</p>	<p>Exempt the land division within the following Zones from requiring notification:</p> <ul style="list-style-type: none"> • Conservation Zone • Employment (Bulk Handling) Zone • Infrastructure Zone • Infrastructure (Airfield) Zone • Rural Shack Settlement Zone 	<p>This amendment is supported, as regardless of whether land division is envisaged, it does not warrant notification.</p>
<p><u>Additional notification trigger in Township Zone</u></p> <p>Currently proposed developments are not notified where they involve building a wall on an allotment boundary that exceeds 3 metres in height or 11.5 metres in length.</p>	<p>AMEND public notification table to include the following for Clause 2, 3 and 4:</p> <p><i>3. involves a building wall (or structure) that is proposed to be situated on (or abut) an allotment boundary (not being a boundary with a primary street or secondary street or an excluded boundary) and:</i></p> <p><i>(a) the length of the proposed wall (or structure) exceeds 11.5m (other than where the proposed wall abuts an existing wall or</i></p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>structure of greater length on the adjoining allotment)</i></p> <p><i>or</i></p> <p><i>the height of the proposed wall (or post height) exceeds 3m measured from the top of footings (other than where the proposed wall (or post) abuts an existing wall or structure of greater height on the adjoining allotment).</i></p>	
<p><u>Frost Fans</u></p> <p>Frost fans were raised by one Council as a land use activity that was being unnecessarily bogged down by notification red tape.</p>	<p>No changes are recommended as Frost Fans are a common source of complaint</p>	<p>Support the approach to not amend the notification aspect, however recommend that a defined performance assessment pathway be developed so as to more effectively assess this development type.</p>
<u>ASSESSMENT POLICY LINKAGES</u>		
<p><u>Interface Height</u></p> <p>Within the Township Main Street Zone and Recreation Zone the only policy relating to interface height is the building envelope.</p>	<p>CREATE PO 3.8 in Township Main Street Zone and PO 3.3 in Recreation Zone which states:</p> <p><i>Buildings on an allotment fronting a road that is not a State Maintained road, and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</i></p>	<p>This amendment is supported.</p>
<p><u>Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages</u></p>	<p>REMOVE - Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay from the list of Overlay exclusions for Deemed-to-Satisfy</p>	<p>This amendment is supported, as it creates consistency between the Overlay requirements.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>Certain overlay policy provisions are not being called up for Horticulture even though they are specifically related to this development type.</p>	<p>Horticulture where it appears in Table 2 of all relevant Zones.</p> <p>ADD - the following Overlay DTS/DPF provisions to the Deemed-to-Satisfy pathway for Horticulture where it appears in Table 2 of Zones:</p> <ul style="list-style-type: none"> • Prescribed Surface Water Areas Overlay DTS/DPF 1.2 • Prescribed Wells Area Overlay DTS/DPF 1.1 ADD PO1.1 of the Murray-Darling Basin Overlay to the Performance Assessed pathway for Horticulture where it appears in Table 3 of Zones. 	
<p><u>Land Division – Site Contamination – Policy Relevance and Linkage</u></p> <p>Part 9.1 of the Code (Referral Body: Environment Protection Authority) specifies that a referral is required for Performance Assessed Land Division in certain circumstances, however, the policy provisions of the Site Contamination General Development Policies are not linked to this development type.</p>	<p>ADD - PO and DTS/DPF 1.1 of the Site Contamination General Development Policies to any Performance Assessed Land Division to ensure that site contamination matters are appropriately addressed.</p>	<p>This amendment is supported.</p>
<p><u>Non-Residential Outbuildings – New Policy and Assessment Pathways</u></p> <p>While assessment pathways for outbuildings currently exist, relevant policies are typically related to residential outbuildings. As such, non-residential outbuildings will often default to Performance Assessed where they are not</p>	<p>CREATE - an additional performance outcome in all applicable zones for Ancillary Structures and Buildings not specifically in association with a dwelling.</p> <p>ADD - new policy provisions to existing pathways for outbuildings, carports and verandahs to allow for</p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
ancillary to a dwelling (e.g., a shed for a church or a school in a neighbourhood-type zone).	assessment of these development types where not in association with a dwelling.	
<p><u>Pool Fencing – Accepted Development Pathway</u></p> <p>Although an Accepted Pathway exists for a swimming pool or spa pool, at present this does not consider the prerequisite for an associated safety fence. As a result, there is no way to achieve an Accepted Development Pathway for a swimming pool as the associated safety fence must be performance assessed.</p>	<p>AMEND – The Accepted Pathway for ‘Swimming pool or spa pool’ across pertinent zones to include ‘and Swimming Pool Safety Features’.</p>	<p>This amendment is supported.</p>
<p><u>Tourist accommodation – total floor area</u></p> <p>Policy interpretation was unclear as whether the DPF was to apply per building or across multiple new buildings forming a single integrated tourist accommodation facility.</p>	<p>AMEND DTS/DPF 6.3(b) of the Rural Zone and Productive Rural Landscape Zone to the following:</p> <p><i>(b) in relation to the area used for accommodation: where in a new building, or buildings, does not exceed a cumulative total floor area of 100sqm</i></p>	<p>We agree that the DPF should be clearer, however the total floor area of 100sqm should not relate to the cumulative tourist accommodation facility but only to a single building. We believe the PO can adequately deal with multiple buildings forming a single integrated tourist accommodation facility.</p>
<u>OVERLAYS</u>		
<p><u>River Murray Flood Plain Protection Area Overlay – Outbuildings – Policy Intent</u></p> <p>DTS/DPF 5.4(a) of the River Murray Flood Plain Protection Area Overlay does not currently make it clear that roller doors, removable panels and the like should be located at ‘opposing’ ends or</p>	<p>AMEND - DTS/DPF 5.4(a) to clarify that roller doors, removable panels and the like should be located at opposing ends or sides to enable the flow through of flood waters, and to align with the wording used in part (j)(iii)(C) of the ‘Procedural Matters (PM) – Referrals’ table.</p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
sides to enable the flow through of flood waters in a flood event		
<p><u>River Murray Flood Plain Protection Area Overlay – Outbuildings – Linkage</u></p> <p>PO 4.2 of the River Murray Flood Plain Protection Area Overlay does not currently apply to Performance Assessed Outbuildings, even though the provision itself is specifically related to this form of development.</p>	<p>ADD - PO 4.2 of the River Murray Flood Plain Protection Area Overlay to the Performance Assessed pathway for Outbuildings to ensure provide guidance on the management of visual dominance of these structures from the waterfront.</p>	<p>This amendment is supported.</p>
<p><u>River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy</u></p> <p>Need for new policy in the River Murray Flood Plain Protection Area Overlay that recognises the need for development to have a lawful, sustainable and reliable water supply that does not place undue strain on water resources and the River Murray in addition to existing policies that aim to protect life and property against risk of flooding.</p>	<p>CREATE - a new Performance Outcome in the River Murray Flood Plain Protection Area Overlay that specifically requires that development has a lawful, sustainable and reliable water supply that does not place undue strain on water resources in prescribed water areas to complement policies in the River Murray Tributaries Protection Area Overlay and various Prescribed Water Overlays.</p> <p>AMEND Table 3 – Applicable Policies for Performance Assessment Development for a range of rural and employment type zones to call up the new Performance Outcome in the assessment of particular performance assessed land uses and activities located in the River Murray Flood Plain Protection Area Overlay.</p>	<p>This amendment is supported.</p>
<p><u>River Murray Flood Plain Protection Area Overlay – Referrals</u></p> <p>The Department for Environment and Water has identified an increase in the number of referrals</p>	<p>AMEND - the referral triggers to include the following relevant additional exceptions:</p> <ul style="list-style-type: none"> i. <i>is the construction of an agricultural building, enclosed shed, garage or similar outbuilding:</i> 	<p>This amendment is supported, however it is suggested that the outbuilding floor area parameter for a RM referral be consistent with</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>received by the Minister for the River Murray since the full introduction of the Code, which is not practical.</p>	<ul style="list-style-type: none"> • <i>that is ancillary to an existing building;</i> • <i>where the enclosed shed, garage or similar outbuilding will not have a total floor area of more than 150m²;</i> • <i>where the agricultural building will not have a floor area of more than 250m²;</i> • <i>that is located outside the 1956 River Murray Flood Plain or will have on opposite sides either removable panels or at least 2 doors so as not to impede flood waters;</i> • <i>that will not be located closer to the River Murray than the building to which it is ancillary.</i> <p><i>ii. is the construction of a dwelling (or the alteration or extension of an existing dwelling) that is located outside the 1956 River Murray Floodplain and not closer than 100m to the River Murray; or</i></p> <p><i>iii. is the construction of an elevated dwelling that is located within the Rural Shack Settlement Zone and has an open undercroft area or an undercroft area –</i></p> <ul style="list-style-type: none"> <i>A. that when enclosed, is enclosed using roller doors, removable panels or other material that can be easily opened or removed during times of flood</i> <i>B. that is not a habitable room</i> <i>C. that will have enclosed areas for a toilet, shower or laundry facilities not exceeding a combined maximum floor area of 15m²; or</i> <p><i>iv. is the construction of a transportable dwelling or cabin, or a removable annexe, within an existing caravan or tourist park.</i></p> <p>AMEND - the referral triggers to also remove the need for referral to the Minister for the River Murray for certain classes of development where a lawful water allocation already exists that can service the</p>	<p>the floor area parameter envisaged within the Rural Shack Settlement Zone.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	new development, and where no additional water is required to be taken.	
<p><u>River Murray Tributaries Protection Area Overlay – Policy intent</u></p> <p>The Department for Environment and Water has identified that PO 1.2 in the Assessment Provisions of the River Murray Tributaries Protection Area Overlay appears to be limited to surface water while the listed classes of development and activities in the performance outcome are also likely to use prescribed underground and watercourse water resources.</p>	<p>AMEND - PO 1.2 to expand the range of prescribed water resources areas where undue strain on watercourses should not occur from the listed classes of development.</p>	<p>This amendment is supported.</p>
<p><u>River Murray Tributaries Protection Area Overlay – Referrals</u></p> <p>Referral to the Minister for the River Murray for certain classes of development within the River Murray Tributaries Protection Area Overlay is considered unnecessary where there is already a lawful water allocation that can service the new development, and where no additional water allocation is required.</p>	<p>AMEND - the referral triggers to remove the need for referral to the Minister for the River Murray for certain classes of development where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken</p>	<p>This amendment is supported.</p>
<p><u>Key Outback and Rural Routes Overlay</u></p> <p>Changes are primarily proposed to align with similar changes in this Amendment in respect to the related Urban Transport Routes Overlay and Major Urban Transport Routes Overlay, to ensure consistency across the various transport</p>	<p>AMEND - PO 3.1 and DTS/DPF 3.1 under a new heading 'Access – Location (Spacing) – Existing Access Points' include a new part (c)(iv) to address a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with</p>	<p>The proposed amendments to this Overlay are supported as they bring consistency with the other Transport Overlays. The new policy 8.1 is useful for proposed developments located in road reserve.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
overlays in the Code and reflect contemporary requirements and standards:	<p>AMEND - PO 7.1 and DTS/DPF 7.1 to include the addition of a new part (c) that ensures development does not prevent access points becoming stormwater flow paths directly onto roads.</p> <p>CREATE - a new PO 8.1 and DTS/DPF 8.1 under a new heading 'Building on Road Reserves' to address encroachment of buildings or structures that may encroach onto, above or below road reserves.</p>	
<p><u>State Significant Native Vegetation Overlay</u></p> <p>DTS/DPF 1.1(b) in the Assessment Provisions (AP) of the State Significant Native Vegetation Overlay currently provides a Deemed-to-Satisfy pathway for development where an application is accompanied by a report prepared in accordance with Regulation 18(2)(a) of the Native Vegetation Regulations 2017 that confirms that the clearance is categorised as 'Level 1 clearance'. Notwithstanding this, a referral to the Native Vegetation Council is currently triggered in the overlay for all classes of development (other than land divisions) that involve a Level 1 clearance, which is counter to the Deemed-to-Satisfy pathway.</p>	<p>AMEND - the Procedural Matters (PM) – Referrals in the State Significant Native Vegetation Overlay to require that where the clearance is categorised as a 'Level 1 clearance' in an accredited consultant's report, referral is not required to the Native Vegetation Council.</p>	This amendment is supported.
<p><u>Prescribed Water Resources Area Overlay</u></p> <p>An error exists in the Procedural Matters (PM) – Referrals table within the Prescribed Water Resources Overlay, whereby the overlay does not include an exemption for developments that</p>	<p>AMEND - the referral triggers to remove the need for referral to the Chief Executive of the Department of the Minister responsible for the administration of the Landscape South Australia Act 2019 for certain classes of development where a lawful water</p>	This amendment is supported.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
have already been granted access to water as is provided in the various other Prescribed Water Overlays in the Code.	allocation already exists that can service the new development and where no additional water is required to be taken, ensuring consistency across the various Prescribed Water Overlays in the Code.	
<u>GENERAL DEVELOPMENT POLICIES</u>		
<p><u>Carport and Outbuilding – Design Module</u></p> <p>Policy provisions from the Design in Urban Areas and Design General Development Policies relating to garage dominance and the internal dimensions of enclosed parking spaces do not currently apply to applications for carports or garages which are not under the main roof of a dwelling.</p>	<p>ADD - Design in Urban Areas PO 23.1 or Design PO 19.1 (depending on Zone) to Deemed-to-Satisfy and Performance Assessed pathways for Carports and Outbuildings in to provide guidance for the assessment of internal dimensions for enclosed parking spaces.</p> <p><i>PO 19.1 - Enclosed parking spaces are of a size and dimensions to be functional, accessible and convenient.</i></p>	<p>This amendment is supported, as it encourages better design outcomes for Garages and Carports.</p>
<p><u>Decks</u></p> <p>Proposals for decks are deemed development under the circumstances set out in Schedule 4 of the Planning, Development and Infrastructure (General) Regulations 2017 and currently require assessment against Code.</p>	<p>CREATE - additional policy within the Design, and Design in Urban Areas module specific to decks to include assessment provisions that address overlooking.</p> <p>CREATE - a deemed-to-satisfy and performance assessed pathway for decks in neighbourhood-type, residential employment, rural and recreation type zones linking the proposed new decks policy, with overlay applicability and relevant General Development policies reflecting comparable development types such as a verandah.</p>	<p>This amendment is supported.</p>
<p><u>Design – Driveways and Access Points</u></p>	<p>AMEND - PO 19.3 - Driveways and access points are located and designed to facilitate safe access</p>	<p>This amendment is supported as it refines the policy relating to Driveways and access points.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>Feedback has identified that policy provisions related to driveways and access points have been applied inconsistently across some zones</p>	<p>and egress while maximising land available for street tree planting, domestic waste collection, landscaped street frontages and on street parking.</p>	
<p><u>Heavy Vehicle Parking</u></p> <p>Parking of a vehicle exceeding 3000 kg is classified as development under the PDI Act. However, no formal definition or assessment policy exists.</p>	<p>CREATE - a new land use definition for heavy vehicle parking (refer to the definitions section of this Code Amendment for further details)</p> <p>CREATE - the following policies:</p> <p>PO 11.1 - Heavy vehicle parking only occurs on the same allotment as a dwelling and the vehicle is only owned and operated by a resident of the dwelling.</p> <p>PO 11.2 - Heavy vehicle parking and access is designed and sited so that the activity does not result in nuisance to adjoining neighbours as a result of dust, fumes, vibration, odour or potentially hazardous loads.</p> <p>DPF/DTS 11.2 - Heavy vehicle parking occurs in accordance with the following:</p> <ol style="list-style-type: none"> a) the site is a minimum of 0.4 ha. b) where the site is 2 ha or more, no more than 2 vehicles exceeding 3,000 kilograms each (and trailers) are to be parked on the allotment at any time. c) where the site is between 0.4 ha and 2 ha, only one vehicle exceeding 3,000 kilograms (and one trailer) are to be parking on the allotment at any time. d) other than minor maintenance, no maintenance of the vehicle will occur on-site. e) the vehicle parking area achieves the following setbacks: <ol style="list-style-type: none"> I. Behind the building line or 30m, whichever is greater; II. 20m from the secondary street if it is a State Maintained Road; III. 10m from the secondary street if it is a local road; IV. 10m from side and rear boundaries; 	<p>This amendment is supported as it will effectively assist in assessing heavy vehicle proposals. The policies include sufficient grounds for support or refusal.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p>f) parking and access areas (including internal driveways) should be sealed or have a surface that can be treated and maintained to minimise dust and mud nuisance.</p> <p>g) does not include refrigerated trailers or vehicles.</p> <p>h) vehicles only enter and exit the property in accordance with the following hours:</p> <ul style="list-style-type: none"> i. Monday to Saturday 6:00am and 9:30pm; ii. Sunday and public holidays between 9:30 am and 7:00 pm; <p>i) the handling or trans-shipment of freight is not carried out on the property.</p> <p>PO 11.3 Heavy vehicle parking ensures that vehicles can enter and exit a site safely and without creating a hazard to pedestrians and other vehicular traffic.</p> <p>DPF/DTS 11.3 - Heavy vehicles:</p> <ul style="list-style-type: none"> a) can enter and exit the site in a forward direction; and b) operate within the statutory mass and dimension limited for General Access Vehicles (as prescribed by the National Heavy Vehicle Regulator). <p>PO 11.4 - Heavy vehicle parking is screened from views from adjoining properties and the public roads by existing buildings and landscaping.</p>	
<p><u>Land Division – Policy Linkages</u></p> <p>It has been identified that not all the policy provisions from the Land Division general Development Policies are linked to Performance Assessed Land Divisions within zones.</p> <p>Specifically:</p> <p><i>Design and Layout: PO 2.8: Land division is designed to preserve existing vegetation of</i></p>	<p>ADD - PO 2.8 and PO 3.11 of the Land Division General Development Policies to the Performance Assessed pathway for “Land Division” in all zones to ensure a consistent approach to the application of policy provisions from this module.</p>	<p>This amendment is supported as it further expands the assessment criteria for land division proposals.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p><i>value including native vegetation and regulated and significant trees.</i></p> <p><i>Roads and Access: PO 3.11: Local streets are designed to create low-speed environments that are safe for cyclists and pedestrians.</i></p>		
<p><u>Transport, Access and Parking – Fence Policy - Sightlines</u></p> <p>The policy provisions currently applied to a Performance Assessed Fence in various zones do not address matters related to preservation of sightlines between vehicles and pedestrians where fences are located adjacent to driveways or corner sites.</p>	<p>APPLY - relevant policy provisions from the Transport, Access and Parking General Development Policy module to Performance Assessed Fences to address matters relating to preservation of sightlines:</p> <p>PO 10.1 - Development is located and designed to ensure drivers can safely turn into and out of public road junctions.</p> <p>PO 2.2 - Walls, fencing and landscaping adjacent to driveways and corner sites are designed to provide adequate sightlines between vehicles and pedestrians.</p>	<p>This amendment is supported as it enables more effective assessment criteria for fencing.</p>
<u>LAND USE DEFINITIONS</u>		
<p>Ancillary Accommodation</p>	<p>AMEND - to include:</p> <p>Means accommodation that:</p> <ul style="list-style-type: none"> a) is located on the same allotment as an existing dwelling; and b) is not a self-contained residence; and c) contains no more than 2 bedrooms or rooms or areas capable of being used as a bedroom; and 	<p>This amendment to the definition I supported, as it makes it very clear as to what criteria need to be satisfied.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	d) is subordinate to and <i>does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling</i>	
Commercial Forestry	<p>AMEND - to include:</p> <p>Means the practice of planting <i>and managing plantation forests</i> that are intended to be harvested for wood products or other commercial purposes, including through the commercial exploitation of the carbon absorption capacity of the forest.</p> <p><i>Definition now excludes horticulture, cropping, and farming.</i></p>	This amendment is supported.
Educational establishment	<p>AMEND - to include:</p> <p>Change definition to Educational <i>Facility</i>:</p> <p>Means a primary school, secondary school, reception to year 12 school, college, university or technical institute, and includes an associated <i>child care facility</i> or institution for the care and maintenance of children.</p>	This amendment is supported.
Heavy Vehicle Parking (no definition)	<p>CREATE definition for heavy vehicle parking:</p> <p><i>Means the parking of any vehicle exceeding 3 000 kg in weight (including the weight of any attached trailer) on land used for residential purposes.</i></p>	This amendment is supported.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
Indoor recreation facility	<p>AMEND - to include:</p> <p>Means a building or part of a building designed or adapted primarily for recreation or fitness pursuits.</p>	This amendment is supported.
Office	<p>AMEND - to include:</p> <p>Means a building or part of a building used for administration or the practice of a profession, but does not include a consulting room or premises where materials are stored for sale or manufacture.</p>	This amendment is supported.
Pre-school	<p>AMEND - definition to Child care facility:</p> <p>Means a place primarily for the care or instruction of children of less than primary school age, children with special needs or out-of-school-hours care (including vacation care) and not resident on the site.</p> <p>Definition includes a pre-school.</p>	This amendment is supported.
Tourist accommodation	<p>AMEND - to include:</p> <p>Means premises in which temporary or short-term accommodation is provided to travellers on a commercial basis. This use may also include:</p> <ul style="list-style-type: none"> a) onsite services and facilities primarily for the use by guests; b) facilities for the management of the accommodation. 	This amendment is supported as it more broadly captures associated elements of accommodation facilities.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	This definition now includes a Caravan and Tourist Park but excludes a residential park.	
Worker's accommodation	<p>AMEND - to include:</p> <p>Means premises used to accommodate workers on a temporary basis while they carry out employment:</p> <ul style="list-style-type: none"> a) on the same site as the workers' accommodation; or b) in mining or petroleum extraction; or c) in seasonally intensive rural activities including fruit picking, pruning, animal shearing, meat processing, bulk handling or freight handling; or d) in the construction of essential infrastructure. 	This amendment is supported.
Function venue (no definition)	<p>CREATE - Definition for Function Centre:</p> <p>Means premises used for the hosting of events, conferences, conventions, receptions or functions.</p>	Support the inclusion of this new definition.
<u>ADMINISTRATIVE DEFINITIONS</u>		
Building Height	<p>AMEND to include:</p> <p><i>Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof</i></p>	<p>This amendment is supported; however, it is recommended that the following additional words (shown in red), be inserted to provide a clearer interpretation outcome:</p> <p><i>Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the</i></p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p>height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like.</p> <p>For the purposes of this definition, building does not include any of the following:</p> <ul style="list-style-type: none"> (a) flues connected to a sewerage system (b) telecommunications facility tower or monopole (c) electricity pole or tower (d) or any similar structure 	<p>applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point on the same vertical plane, ignoring any antenna, aerial, chimney, flagpole or the like. <p>Post height (new definition)</p>	<p>CREATE definition for post height:</p> <p><i>Means the height of the post measured from the top of its footings of a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land.</i></p>	<p>Support this amendment.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<u>REFERRALS</u>		
<p><u>EPA Referrals</u></p> <p>Under the Development Regulations 2008 (now ceased), schedule 8 required a referral to the Environment Protection Authority (EPA): Development that involves, or is for the purposes of, an activity specified in Schedule 22 (including, where an activity is only relevant when a threshold level of capacity is reached, development with the capacity or potential to operate above the threshold level, and an alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level).</p> <p>The EPA has noted that the inclusion of Class 3 activities for referrals appears to be an administrative error as these activities were not identified in any consultation version of the Code. Further adding to this, is that the referral trigger for Site Contamination – Change in the use of land to a more sensitive use only refers to class 1 and class 2 activities with no requirements for a class 3 activity.</p>	<p>The proposed solutions to these issues are as follows:</p> <p>CREATE - an interpretation noted for Part 9.1 of the Code to confirm when referrals are required:</p> <p><i>For the purposes of item 9 of the table in clause 3 of schedule 9 of the Planning Development and Infrastructure (General) Regulations 2017, development that involves, or is for the purposes of, an activity specified in the table below, requires a referral to the Environment Protection Authority, including:</i></p> <ul style="list-style-type: none"> • <i>development that reaches a threshold specified in the table below;</i> • <i>development with the capacity or potential to operate above the threshold level specified in the table below; or</i> • <i>an alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level specified in the table below.</i> <p><i>The above does not apply for the purposes of items 9A and 9AB of the table in clause 3 of schedule 9 of the Planning Development and Infrastructure (General) Regulations 2017, which relate to site contamination and land division.</i></p> <p>AMEND - the Class of Development / Activity Site Contamination – Land Division Class to removed class 3 activity needing to be referred and inclusion of the reference to South Australian Property and Planning Atlas.</p>	<p>This amendment are supported as they enable referrals for the expansion of existing facilities which have a major environmental significance.</p> <p>The removal of class 3 is an appropriate deletion from the site contamination referral criteria.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<u>RECOMMENDED ADDITIONAL MINOR AMENDMENTS</u>		
<p><u>Agricultural Building – Definition</u></p> <p>Current definition does not require the agricultural building to be located on the same site/land as the associated land use.</p>	<p>AMEND - to include:</p> <p>Means a building used wholly or partly for purposes associated with farming, commercial forestry, intensive animal husbandry, dairying or horticulture land use, or to support the operations of that lawful use of the land, but does not include frost fans or a building used wholly or partly for any of the following:</p> <p>the processing or packaging of commodities</p> <p>the housing of animals for the purposes of intensive animal husbandry</p> <p>the purposes of a dairy.</p>	<p>The amendment ensures that a proposed agricultural building be associated with a lawful land use.</p>
<p><u>Definition of Waste – Administrative</u></p> <p>The definition of waste within Part 8 of the Planning and Design Code defers to the <i>Environment Protection Act 1993</i>.</p> <p>The definition is prescribed by section 4 of this Act and also has exclusions, which are not readily apparent and cannot be readily confirmed by the Environment Protection Authority when a relevant authority is determining the nature of development. The EPA has already received at least two enquiries attempting to confirm whether a use falls within the definition of waste.</p>	<p>ADD - the definition of waste to Part 8 of the Planning and Design Code (i.e. copy and paste the definition of waste within section 4(1) of the above Act)</p>	<p>This Amendment would negate the relevant authority having to consider the exclusions to the definition within section 4(2) of the EPA Act</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p><u>Design General Module – Policy Gap</u></p> <p>There is no policy within the Design or Design in Urban Areas General Development Policies (GDPs) that relate to the external materials and finishes of low-rise dwellings.</p> <p>This has resulted in an influx of ‘shed houses’ in areas which have an established character, such as Coffin Bay, as there are no applicable policies allowing us to consider the materiality and external appearance of the dwelling.</p>	<p>CREATE - new policies to the Design GDPs that apply to dwellings and dwelling additions within neighbourhood type zones which guide external materials and design.</p> <p>These policies could be adapted from Design in Urban Areas PO and DTS/DPF 12.5 and 12.6 which apply to medium-high rise development.</p>	<p>This amendment would result in better design outcomes and provide stronger policy to refuse poorly designed buildings.</p>
<p><u>Earthworks in Conservation Zone</u></p> <p>Land within the Conservation Zone is commonly within the Coastal Areas Overlay. Earthworks exceeding 9 cubic metres are development within this Overlay and it is common for earthworks to exceed 9 cubic metres.</p> <p>There are no exclusions for earthworks within Table 5 of the Zone and accordingly, an assessment to determine whether the earthworks are ‘minor in nature’ is required for each development application including earthworks.</p>	<p>ADD - the following exclusion to Table 5 of the Conservation Zone:</p> <p>Class of development (Column A): Earthworks</p> <p>Exceptions (Column B): Except any of the following:</p> <ol style="list-style-type: none"> 1. Earthworks that exceed a depth of 1 metre 2. Earthworks that are situated within a Hazards (Flooding) Overlay or River Murray Flood Plain Protection Area Overlay 	<p>This amendment would negate a proposal which includes earthworks exceeding 9 cubic metre requiring public notification. It is noted that a wastewater disposal system often requires more than 9 cubic metres of earthworks.</p>
<p><u>Placement of Notices - Exemptions for Performance Assessed Development within the Conservation Zone</u></p> <p>Nearly the entire coast of the Eyre Peninsula is within the Conservation Zone, with some exceptions to this within coastal townships. Outside of townships, the Zone boundary typically dissects allotments which are partially</p>	<p>ADD - the following exemption for both performance assessed and restricted development to Table 5 of the Conservation Zone:</p> <p>Pursuant to regulation 47(6)(c) of the <i>Planning, Development and Infrastructure (General) Regulations 2017</i>, the requirement to place a notice on the relevant land under section 107(3)(a)(ii)/ 110(2)(a)(iv) [delete irrelevant section] of the</p>	<p>This amendment would negate the need for a sign on the land within the Conservation Zone.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>within the Conservation Zone and partially within the Rural Zone. Generally speaking, the road frontage is within the Rural Zone and the coastal interface is within the Conservation Zone.</p> <p>The following exemption for the placement of notices applies in the Rural Zone:</p> <p><i>Pursuant to regulation 47(6)(c) of the Planning, Development and Infrastructure (General) Regulations 2017, the requirement to place a notice on the relevant land under section 107(3)(a)(ii) of the Planning, Development and Infrastructure Act 2016 does not apply in the Rural Zone.</i></p> <p>The above exemption does not apply within the Conservation Zone. Therefore, it is common for a development to be situated within the Conservation Zone, require notification and the sign is placed on the road frontage in accordance with Practice Direction 3, which is usually within the Rural Zone. This results in an inconsistent 'notification practice' within the Rural Zone.</p>	<p><i>Planning, Development and Infrastructure Act 2016 does not apply to development where the entire public road frontage of the relevant land is within the Rural Zone.</i></p>	
<p><u>Rural Living Zone - Side and Rear Setbacks</u></p> <p>The Planning and Design Code applies large side and rear setbacks for dwellings (20 metres) and no side and rear setbacks for ancillary structures such as outbuildings.</p> <p>The setbacks for dwellings are difficult to achieve and the lack of setbacks for outbuildings is resulting in outbuildings being sited in a</p>	<p>REPLACE Rural Living Zone DTS/DPF 2.1(a) with the following:</p> <p>a) <i>are setback as follows:</i></p> <ul style="list-style-type: none"> i. <i>for allotments with an area of 1ha or more:</i> <ul style="list-style-type: none"> A. <i>20m from the primary street and rear boundaries</i> B. <i>10m from side and secondary street boundaries</i> ii. <i>for allotments with an area less than 1ha:</i> 	<p>These amendments would reinforce more appropriate setback patterns within the Rural Living Zone.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>manner that is inconsistent with a rural character and amenity.</p>	<p>A. 20m from the primary street and rear boundaries B. 5m from side and secondary street boundaries</p> <p>ADD the following to Rural Living Zone DTS/DPF 2.5: <i>Have a 5m setback to side and rear allotment boundaries</i></p>	
<p><u>Township Activity Centre Zone - Low-impact structures</u></p> <p>Many township centres include existing dwellings.</p> <p>The Township Activity Centre Zone does not exclude outbuildings and carports from public notification.</p>	<p>ADD - outbuildings and carports to '3' of Table 5 within the Township Activity Centre Zone.</p>	<p>This amendment would resolve minor structure having to be all code assessed.</p>
<p><u>Water Front Neighbourhood Zone – Policy Gap</u></p> <p>No direction for river front development such as pontoons, moorings, jetties and other river associated development. Lack of environmental policies in regard to the river.</p>	<p>ADD - River Murray Flood Plain Protection Area Overlay to sites within the Waterfront Neighbourhood Zone.</p>	<p>This amendment would result in better development outcomes.</p>
<p><u>Rural Shack Settlement Zone – Policy Gap</u></p> <p>No limit on number of outbuildings on an allotment, which is inconsistent with what is expected in the Rural Living Zone and Rural Zones, Zones which typically comprise of much larger allotments.</p>	<p>ADD - Designated Performance Features limit the number of outbuildings allowed on an allotment within this Zone.</p>	<p>This amendment would assist Council in minimising overdevelopment of Shack sites.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p><u>Internal Alterations and Additions – Accepted Development</u></p> <p>Accepted development pathway doesn't take into account the flood plain issues.</p> <p>The current pathway allows for internal walls on the ground level and other internal alterations which are generally not appropriate in the flood plain to have a pathway for approval without any assessment.</p>	<p>Request alteration to the <i>Planning, Development and Infrastructure (General) Regulations 2017</i> to include River Murray flood plain concerns into the exemption.</p>	<p>This amendment would enable Council to assess development in a floodplain.</p>
<p><u>Contaminated Lands Hierarchy – Sensitive Uses</u></p> <p>Change of use applications require significant site investigations, even when the land is obviously not contaminated.</p>	<p>Suggest an update to Practice Direction 14 to increase development types exempt from requiring a PSI (ie. Good morning.

Thank you for the opportunity to comment on the Miscellaneous Technical Enhancement Code Amendment.

Please find attached a submission on behalf of the City of Burnside for your consideration.

Should you have any questions or comments in relation to the attached submission, you are invited to contact Magnus Heinrich on

Carly Walker | Strategy Officer / Policy Planner

Dear Sir/Madam

Submission on the Miscellaneous Technical Enhancement Code Amendment

Reference is made to the Miscellaneous Technical Enhancement Code Amendment (MTE Code Amendment), which commenced public consultation on 25 July 2022. The following comments are provided for your consideration.

The City of Burnside would like to start by expressing our support for some aspects of the Technical Enhancement Code Amendment. For instance, mapping Representative Buildings goes some way to providing greater clarity to prospective purchasers and planning practitioners on which buildings exhibit traditional building character. The inclusion of Swimming Pools and Swimming Pool Safety Barriers within the Deemed-to-Satisfy pathway, particularly within the Historic Area Overlay, are also welcome changes that will reduce the burden of assessment posed by the current system.

Notwithstanding the above points, the amendments to the Code detailed below are of concern to the City of Burnside and are tabled for your consideration.

- A. 2.3.2.11 – Amendment to the performance outcomes relating to height for the Urban Corridor (Living) Zone, Urban Corridor (Boulevard) Zone and the Community Facilities Zone

The building heights afforded by the existing TNV's contained within the Urban Corridor (Living) Zone, the Urban Corridor (Boulevard) Zone and the Community Facilities Zone are on the limit of what is appropriate within the context of their respective localities. By replacing the word 'and' with 'or' and removing the word 'otherwise' within the height performance outcomes, an applicant is able to build a case to bypass the effect of the TNV, in order to achieve a greater height. Combined with a lack of clear and robust policy guidance controlling maximum heights, the resulting performance outcomes lack certainty and are likely to result in undesirable height outcomes in the future developments.

Suggested amendment: In the absence of structural changes to the overall content of the provisions, performance outcomes 3.1 (Urban Corridor Living and Boulevard Zone) and 2.1

(Community Facilities Zone) should remain unchanged from the form expressed in the existing Planning and Design Code.

B. 2.3.2.9 - General Industry removed from the Restricted Assessment Pathway

The removal of Industry (General Industry) from the Restricted Assessment pathway and replacement with Special Industry Zone in the Local Activity Centre Zone, Suburban Business Zone, Suburban Activity Centre Zone and Strategic Innovation Zone is concerning. General Industry land uses involve storage and manufacturing, distribution, processing, testing, servicing, repairs and salvage, which inherently are associated with a broad range of amenity impacts.

By substituting Industry for Special Industry, General Industry uses will fall within a performance assessed pathway, which carries with it a variety of consequences. Firstly, it sends a message to potential applicants that this class of development has merit within the applicable Zone. As the strength of the performance outcomes pertaining to land use are not as robust as they should be in these Zones, it may be difficult to refuse inappropriate uses.

Many existing centres in Burnside are surrounded by residential uses where the introduction of General Industry uses would attract noisy, smelly and potentially contaminating type uses in greater volumes. The motivations for the proposed pathway change are questioned, as it seems that it is driven by a desire to redistribute the assessment pathway away from the SCAP, rather than to achieve sound planning outcomes.

Allowing General Industry uses to permeate into activity centres will prevent them from becoming vibrant mixed-use hubs, which is an overarching policy direction sought for underperforming centres. Whilst some Light Industry type uses may be appropriate in limited instances, widespread General Industry should not be encouraged.

We further question why General Industry and Special Industry uses have not been included into the Restricted Development pathway for the full suite of Neighbourhood-type Zones including the Established Neighbourhood Zone, General Neighbourhood Zone, Suburban Neighbourhood Zone, Hills Neighbourhood Zone and the Housing Diversity Neighbourhood Zone. Desired Outcomes for these Zones specifically speak against uses that would compromise residential amenity such as General Industry, which should be enough justification to include it within and Impact Assessable pathway.

Suggested amendment: Add General Industry to the Restricted Development Pathway within the Local Activity Centre Zone, Suburban Business Zone, Suburban Activity Centre Zone, Strategic Innovation Zones, Established Neighbourhood Zone, General Neighbourhood Zone, Suburban Neighbourhood Zone, Hills Neighbourhood Zone and the Housing Diversity Neighbourhood Zone.

C. 2.3.2.10 - Procedural Matters – ‘Minor’

Reference is made to the addition of a “minor clause” within Part 2, Table 5 – Procedural Matters – across all Zones and Subzones. In the absence of a practice direction or consistent guideline, we oppose the inclusion of the following clause within the procedural matters section: ‘a relevant authority may determine that a variation to 1 or more corresponding exclusions prescribed in Column B is minor in nature and does not require notification.’

Allowing for discretion in determining whether public notification is required increases the uncertainty in an assessment process. It also increases the burden of decision making

required by the Relevant Authority and their delegates, which takes up valuable time in a time-restricted assessment process. From a resource perspective, the risk of judicial challenge increases, along with the pressure on Council resources.

Suggested amendment: To provide greater clarity, remove the proposed minor clause contained in Table 5 - Procedural Matters across all Zones.

D. 2.3.2.10 - Demolition and Partial Demolition of a Dwelling in the Established Neighbourhood and other Zones

Column B, Table 5 – Notification Tables in the Procedural Matters section of the Established Neighbourhood Zone (and a variety of other zones) outlines the following revised exclusion clause:

Except any of the following:

- 1. the demolition (or partial demolition) of a State or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated)*
- 2. the demolition (or partial demolition) of a building in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated).’*

There are two fundamental issues with this clause. Firstly, the use of the words “except any of the following” and lack of punctuation, allows the person interpreting the provision to choose which clause they wish to apply. For example, a person could argue that a Bungalow listed as a Local Heritage Place and located in a Historic Area Overlay would not require public notification as it may not be in keeping with the historic attributes identified in the Historic Area Statement applicable to the area.

Secondly, the use of the clause “...or where the relevant authority believes that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated) requires that a character assessment is carried out during the verification process. There are several reasons why this is not appropriate, for instance it adds additional complexity to the verification process, which is already a time-consuming exercise. It also extends a level of discretion to the Relevant Authority which is not desired and will result in additional resource demands (i.e. heritage advice) at the beginning of the application process. In instances where a demolition application has been approved without public notification being undertaken, the public’s trust in Council may be eroded and inadvertently may lead to more challenges in the Environment, Resource and Development Court.

Suggested amendment: Replace the words “Except any of the following” with “except where:” and use semi-colons after each phrase. Amend the public notification tables for all Zones to remove the words “...or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated.”

E. 2.3.2.9 – Restricted Development Classification - Boundary Realignment in the Hills Face Zone

DTS/DPF 14.2(c) in the Hills Face Zone is not considered to be strong enough to prevent new boundaries intersecting existing stands of trees. The effect of this provision is further

complicated by PO 2.1 of the Hazard (Bushfire – High Risk) Overlay that seeks to ensure that structures, including fences, are clear of vegetation cover. Where a boundary intersects an existing stand of trees, this provision is likely to trump DTS/DPF 14.2 (Hills Face Zone) which may be used to justify the removal of stands of remnant vegetation and habitat. The further loss of mature canopy must be avoided if we are to adapt to a warming climate.

Suggested amendment: Amend DTS/DPF 14.2(c) to prevent realigned boundaries from intersecting stands of existing vegetation.

F.2.3.2.12 – Building Height, Building Wall Height of the Suburban Neighbourhood Zone/General Neighbourhood Zone vs Established Neighbourhood Zone/ Hills Neighbourhood Zone

The Suburban Neighbourhood Zone and General Neighbourhood Zones occupy the largest extent of the Burnside local government area. The proposed return to the “Residential Code” days, where the building height and boundary walls are measured from the top of footings, instead of the lower of natural or finished ground level is a backward step. With an allowable height Technical Numerical Variation (TNV) of 9m, and up to 1m of fill/retaining permitted without approval, a combined height of 10m above natural ground level will become the normal scale of dwellings across the Council area.

There are several consequences of this policy change. Firstly, dwellings up to 10m above natural ground level (inclusive of fill) will be assessed by external accredited consultants as part of a deemed-to-satisfy pathway without consideration of the effects on adjoining amenity. Secondly, it avoids public notification for dwellings with a building height between 9m and 10m as measured above the pre-development ground level. Finally, it may result in increased overlooking from the first-floor level, where there isn’t a requirement to screen the view under existing Code Policy. As many of the affected suburbs are undulating, there is a public expectation that planning assessments of a large house will require a careful assessment of the visual and shadow impacts. Such a change is unlikely to be well received by the community.

A careful balance needs to be struck between streamlining assessments and managing bulk and scale; this Council is of the view that time savings should not be made at the cost of the amenity of our suburbs.

Suggested amendment: Amend the Building Height and Wall Height Administrative Definitions, found within Part 8, including the associated DTS/DPF within all Zones, to consistently reference a measurement above lower of natural ground level or finished ground level.

G. 2.3.2.16 - Detached Dwellings - Medium and High-Rise Development – Policy Relevance

The connection of the Performance Outcomes nominated in the Code Amendment package are not supported in the Suburban Neighbourhood Zone or the General Neighbourhood Zone. These Zones seek “low-rise” suburban character, which is defined as “...up to and including two building levels.” What relevance do Medium and High-Rise provisions have in an area that seeks a maximum of two building levels? Provisions relating to common areas in a community title arrangement, such as Performance Outcome 30.1 (Design in Urban Areas), also have no relevance to detached dwellings.

If the design outcomes sought by some of these provisions is desired for two storey detached dwellings, then, where directly relevant, they are added to the Residential Development - Low Rise section as contained in the General Policy module: Design in Urban Areas.

Suggested amendment: Remove the connection of the following performance outcomes to a detached dwelling in the General Neighbourhood Zone and Suburban Neighbourhood Zone: PO [Outlook and Visual Privacy] PO 26.1, PO 26.2; [Private Open Space] PO 27.1; [Residential amenity in multi-level buildings] PO 28.1, PO 28.2, PO 28.3, PO 28.4, PO 28.5, PO 28.6, PO 28.7; [Dwelling Configuration] PO 29.1, PO 29.2; [Common Areas] PO 30.1.

H. 2.3.2.26 – Primary Street Setback – Use of Building Line

For instances where there is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building, DTS/DPF 3.2 (Business Neighbourhood Zone) and DTS/DPF 5.1 (Established Neighbourhood Zone) seeks that a building is setback “the average setback of existing buildings.” We question why “abutting or adjoining” has not been included like the other zones. Whilst a minor omission, it could lead to misunderstanding on where the front setback is taken from.

Suggested amendment: That DTS/DPF 3.2 (Business Neighbourhood Zone) and DTS/DPF 5.1 (Established Neighbourhood Zone) are amended to: “The average setback of existing buildings on abutting sites.”

I. 2.3.4.4 – Decks – Assessment Pathways and Screening

In response to an existing policy gap, the Code Amendment seeks to assign decks (greater than 500mm) to a Deemed-to-Satisfy pathway where located outside of the Local Heritage Place Overlay, State Heritage Place Overlays and Historic Area Overlay. The criteria within this provision further seeks privacy screening to a minimum of 1.5m above finished floor level, without any guidance on the extent of transparency, nor any guidance on the extent of screening along the exposed side and rear edges.

Unscreened decks can have the greatest impact on residential amenity and should be subject to a performance assessed pathway where a judgement can be made about the extent of transparency being achieved, with the application of a condition controlling the timing of installation (i.e. prior to commencement of use). Without this level of scrutiny, overlooking complaints are expected to increase, along with an increased compliance burden.

Suggested amendment: Remove decks from the Deemed-to-Satisfy Pathway and assign to a Performance Assessed Pathway. Furthermore, amend the relevant DTS/DPF criteria in line with the following:

“Decks with a finished floor level 500mm or more above natural ground level facing side or rear boundaries shared with a residential use in a neighbourhood-type zone incorporate screening permanently fixed to all outer edges of the deck:

- (i) not less than 1.5m above the finished floor level; and*
- (ii) not less than 25% transparency.*

A diagram should also be provided that shows an acceptable outcome for screening.

J. 2.3.8 – Part 8 – Administrative Definition of Direct Overlooking

This change seeks to re-introduce a definition of direct overlooking, previously found in the South Australian Design Guidelines, which states:

“In relation to direct overlooking from a window, is limited to an area that falls within a horizontal distance of 15 metres measured from the centre line of the overlooking window and not less than 45-degree angle from the plane of the wall containing the overlooking window.”

“In relation to direct overlooking from a deck, balcony or terrace, is limited to an area that falls within a horizontal distance of 15m measured from any point of the overlooking deck, balcony or terrace.”

When read in conjunction with performance outcomes 10.1 and 10.2 (Design) and 10.1, 10.2 and 16.1 (Design in Urban Areas), the effect of these definitions places a focus on the application of privacy screening only where a habitable room window or private open space area of an adjoining residential use is located within 15m of a proposed upper level window or deck. By not extending the remit of these definitions beyond the 15m distance, there is a general acceptance that direct overlooking does not occur beyond a 15m separation and therefore does not require screening. This is not the case and this policy is unlikely to be widely accepted by most residents across Burnside and therefore not supported.

It is unfortunate that the scope of PO 10.1/10.2 and DTS/DPF 10.1/10.2 (Design and Design in Urban Areas) has not been broadened to look at direct overlooking within the context of sloping sites. Any significant filling of land, as envisaged by the change to the definition of building height and wall height, is likely to have a potential impact on adjoining properties, particularly with respect to overlooking from ground level windows and entertainment areas, as well as upper level windows. Many residential areas across Burnside are located on undulating sites which, due to the increased finished floor level, will overlook adjoining dwellings.

Suggested amendment: Either remove the definition of direct overlooking or seek to amend the definition of direct overlooking to ensure that the separation between the deck/habitable room window and open space/habitable room window is extended to 30m between the points of overlooking. An additional provision is also requested in General Module (Design or Design in Urban Areas) that seeks to limit the extent of overlooking from ground level windows/decks on sloping sites.

K. Previous policy concerns

The City of Burnside would like to take this opportunity to reiterate a policy concern that was raised during the transition to the Phase Three Planning and Design Code, that has not been addressed.

The loss of public notification for Shops, Offices and Consulting Rooms in the General Neighbourhood Zone, Suburban Neighbourhood Zones, Established Neighbourhood Zone and Hills Neighbourhood Zones is still a concern. Regardless of the floor space, Shops, Offices and Consulting rooms will have some level of impact on surrounding residential uses, which can range from increased vehicle and delivery movements, hours of operation, noise and odours. There is a reasonable expectation amongst the public that a non-residential use in a residential area should be subject to public notification, regardless of the floor space proposed.

Suggested amendment: Amend the Public Notification Tables for the General Neighbourhood Zone, Suburban Neighbourhood Zone, Established Neighbourhood Zone

and Hills Neighbourhood Zone to ensure that Shops, Offices and Consulting rooms (irrespective of floor space) are subject to public notification.

L. General Observations about the Planning and Design Code since its introduction

Finally, we wish to bring your attention to the following two areas of policy that require attention.

PO 8.1 (Neighbourhood Zones) seeks that side setbacks are managed to ensure that adjoining neighbours are afforded *(b) access to natural light and ventilation*. This outcome appears to conflict with PO 3.1 (Interface between land uses), which seeks that overshadowing of habitable room windows of adjacent residential land in a neighbourhood-type zone is minimised to maintain access to direct winter sunlight.

A two storey dwelling on an east-west orientated site is unlikely to cast shadow that will afford the neighbour “access to direct winter sunlight.” However, when measured against PO 8.1 (Neighbourhood Zones) it is more likely that the adjoining neighbour will be afforded access to ‘natural light.’ The intention of policy in this area requires refinement to ensure that the outcomes sought are consistent, as well as realistic and achievable.

Currently, there is a lack of clarity in the Planning and Design Code around whether two storey Ancillary Accommodation is envisaged within a Neighbourhood-type zone and, where a two-level building is proposed, what type of privacy screening needs to be achieved. The above matters should be addressed in any future Technical Code Amendments to be pursued.

If you would like any further information in relation to the City of Burnside’s submission, please contact Magnus Heinrich, Group Manager City Development and Safety, on Ph. 8366 4200 or email

Yours sincerely

Dear Commission

**CITY OF UNLEY RESPONSE
MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT**

The City of Unley appreciates the opportunity to contribute to the Miscellaneous Technical Enhancement Planning & Design Code Amendment.

It is appreciated that the Amendment is a broad collection of technical enhancements across all elements of the Code. However, the scale of the documents (Amendment 268 pages and Attachment A 282 pages – total of 550 pages) is overwhelming, even though a structure and index links was provided.

The scale and presentation of documents limits clear, digestible and genuine engagement with practitioners, let alone the public, in accord with the aims of the Community Engagement Charter. More focussed and confined themes may have helped.

While purported to be minor technical enhancements and clarifications, some of the innocuous changes pose significant policy implications.

It is trusted that the submissions when received will be consolidated, analysed and meaningful responses and justification provided to all the issues and commentary raised, to allow for full disclosure of reasoning of any changes.

The Commission has indicated that the Code has been working well and the update to policy and procedures is simply to clarify intent and help efficiency. However, it is evident there are poor planning process and development design outcomes that require more careful and comprehensive refinement. A number of additional refinements that were suggested in 2021 have not been addressed.

The Expert Panel Planning System Implementation Review will afford an opportunity for a broader and deeper analysis to address more comprehensive issues around poor design and process outcomes

Regarding areas where issues of concern have been canvassed in the Miscellaneous Technical Enhancement Planning & Design Code Amendment, the following further comments are provided on the review outcomes and proposals:

State Heritage Buildings – include list in Code

The inclusion of a list of State Heritage Places in the Code is positive.

Representative Buildings - only partly identified

The improvement to identify Representative Buildings in a spatial Overlay and in turn include in Section 7 Statements is positive for property purchasers and the public.

However, only limited areas of the Historic Area Overlay have Representative Buildings mapped while other areas are not mapped. While it is purported the policies equally apply for Representative Buildings, mapped or not, a difference in status can be argued and where not mapped will not be readily identifiable.

A process should be facilitated, and if necessary, a Code Amendment, to complete comprehensive mapping of all Representative Buildings to provide the clear identification of the historic status of such buildings in all cases.

Urban Corridor Zones – Primary Road Corridor and Building Envelope

Clarification of the reference to 'primary corridor (i.e. a State Maintained Road)' as a consistent reference is helpful.

However, not all Urban Corridor Zone properties face a State Maintained Road. In the case of frontage to a different 'primary road', eg Rose terrace Wayville, there is no comparable or specific policy to address the building envelope arrangement and setbacks etc to this alternative primary frontage.

This clarification should be included in definition or in the Zone policy.

Public Notification

The clarifications to technical interpretation are positive.

However, there are still fundamental issues that arise with the proposed approach:

- criteria should be as clear, consistent and unequivocal as possible to avoid opinion open to judgement, inconsistency and challenge, eg demolition of elements 'not in keeping with heritage value or historic attributes', 'minor variations' from policy criteria (length, height) for individual elements. While it can be beneficial to reduce unwarranted notification it does pose risk of what's 'minor';

- public notification process clarified to limit notification to those affected adjacent property owners/occupiers and relevant to the subject element and that comment is only applicable for that element, and not others;
- a more tailored notification be considered, eg previous Category 2A approach, for limited policy variations to specific elements of development, eg boundary wall;
- current informal public notification may suit majority of variation from policy, but for more serious deviation and major development it should attract an elevated level of notification with 3rd party appeal rights, eg previous Category 3 approach. This would allow for appropriate natural justice, interrogation and reasoning for decisions on non-envisaged development, more substantial departures from design policy, major development and where inherent impacts. The proposed reduction in Restricted development, and its 3rd party appeals rights, reinforces this need with that type of more substantial policy departure under performance assessment.

The lack of reasonable public notification and exclusion of reasonable rights of other parties leads to alienation of neighbours, complaints, extensive investigations and time to respond. Reasonable scope of public notification would largely address problems of awareness and cases of warranted opportunity for a say.

Restricted Development Reduction

It has been proposed that various land uses are removed from the Restricted pathway and include in the Performance Assessment pathway.

For example, in neighbourhood Zones all industry except light industry was Restricted. It is proposed the broader range of all industrial (except special industry with noxious emissions), not be Restricted development in Neighbourhood Zones. Also Wrecking Yard and Waste reception, storage treatment or disposal are to be removed from Restricted in Employment Zones (eg Goodwood Road (north) and South Road (south)).

It is unclear whether there is sufficient general policy to properly guide performance assessment and avoid unintended and/or negative outcomes for these changes. The proposals have not been sufficiently justified.

Further, such a change makes an indication of more options than may be reasonable and can lead to a considerable investment of an applicants', and planning authority's, energy, resources and time on dubious proposals.

Also, the usual public notification and 3rd party appeal rights are removed.

Urban Corridor Boulevard/Living Zones – Side Setbacks

The original Development Plan desired character for these zones, and the translated Performance Outcome (PO), sought buildings with notable side separation to complement the boulevard, living amenity and landscape setting desired character intent.

The Designated Performance Feature (DPF) in the Urban Corridor Boulevard/Living Zones allowed development to be 'boundary to boundary' for all levels, for the first 18 metres from the street. Boundary to boundary development at the street will not achieve separation between buildings in a way that complements the desired character and zone intent for a landscape setting and living amenity.

The PO should not be changed, other than to reflect what the desired character is, and the incorrect DPF translation should be changed to reflect that PO. The current DPF seems in reverse to the intent and if a practical compromise was being sought the side setback should apply from the first 18 metres from the street to maintain the effect of visual separation in the streetscape.

Urban Corridor Living Zone – Policies which apply to detached dwellings

Redress of policies for detached dwellings that might be more than 2 storey is positive.

Design in Urban Areas – Soft Landscaping

The clarification that 'soft landscaping' is a percentage of the 'whole development site' to address multiple dwelling scenarios is positive.

The percentage and amount of space around buildings remains low and requires further specific design review.

Further, what constitutes 'soft landscaping' in terms of nature of plants and desired quality is unclear. Previous such policy for landscaping clarified need to include indigenous trees, shrubs and groundcovers and be of comparable substance to development. Rather it seems an area simply available for landscaping is enough.

Additional policy should be included to clarify what type and scale of planting the soft landscaping should comprise.

Fencing

Inclusion of Transport, Access & Parking [Sightlines] for intersection corners is positive.

Accepted Building Alterations

Building alterations being 'Accepted' when of "no real consequence" is a subjective determination and broadening this scope is inappropriate. Could lead to change of floor area and not keeping building footprint, and substantial level of external elevation and materials changes. Only minor indiscernible changes should be 'Accepted'.

Both pose implications upon the nature of a building and its design quality which are important to streetscapes in corridors, main streets and historic areas.

Broadening opportunity for 'Accepted' changes is not considered warranted, but clearer description for what might be minor and indiscernible extent of changes would be helpful.

Future Road Widening Overlay

The affected sites within the Overlay on SAPPA appear inconsistent or not shown correctly with only reference to portions of Unley Road, King William Road, Goodwood Road, Greenhill Road, Glen Osmond Road and areas surrounding the train / tram network.

Further, to satisfy the primary policy intent a development must be located outside the 6m Consent Area, C Type Requirement or the Strip Requirement of the Metropolitan Adelaide Road Widening Plan. SAPPA needs to introduce a drop-down box that differentiates between these road widening matters and provides clarification as to their meaning and finding the Metropolitan Adelaide Road Widening Plan.

Land Use Definitions

Ancillary Dwelling

Clarification that an Ancillary Dwelling is to share the same allotment as the associated dwelling, is not self-contained and does not have separate connection to utilities and services makes the nature and form of the accommodation clearer.

However, self-contained is a subjective term and an apparent conflict arises in that generally such development, eg a 'granny flat', is self-contained in that they have a bedroom, living area, kitchen and bathroom.

The concept of 'self-contained' in this context should be defined.

Administrative Definitions

Direct Overlooking

New definition of 'direct overlooking' be confined to a viewshed of 15 metres and 45 degrees. A very confined and limited protected area for mitigation of views.

Open and direct views reach well beyond these limits.

The prior Unley Development Plan made reference to 15 metres for windows but 30 metres for private open space areas and an angle of 30 degrees.

If necessary to alter current performance assessment that can be tailored to the context, a more reasonable and effective definition than an arbitrary measurement should be considered.

Low rise dwelling properties that are back-to-back with typical back yards would be beyond 15 metres and leave wide open views.

Multi-storey medium/high rise development needs more nuanced treatment to orientate and mitigate unreasonable views from high vantage points.

Arbitrary distance quantification is not appropriate, effective or fair.

Building Height and Wall Height/Post Height

Technical Clarification of definitions is beneficial.

Wall Height/Post Height reflects height from top of supporting footings to underside of eaves.

Building Height reflects height from adjacent ground level to top of roof, excluding antenna, aerial, chimney, flagpole or the like.

In policy terms Building Height should be preferred as this better reflects the true height, presentation and impacts beyond the subject site. Various approaches are used within general policy and different zone policy for heights of development leading to different scenarios and outcomes.

Building Height should be the preferred measure and used consistently across zones and policy to appropriately quantify suitable development scale in the context of adjoining sites, neighbours and locality.

Outstanding Issues

A suite of issues for enhancement were raised in 2021 regarding the proposed Miscellaneous Technical Enhancement Planning & Design Code Amendment. Copy attached. While some have been canvassed some remain outstanding. For example:

- Historic Area Overlay – Character Statements and policy refinement;
- Established Neighbourhood Zone – Policy and design improvement;
- Housing Diversity Neighbourhood Zone – Detached Dwelling Hammerhead Site Area clarification, like the General Neighbourhood Zone;
- Outbuildings - policy for atypical two-storey outbuildings design and impact issues, like guidance for other built forms;
- Site Coverage – more nuanced policy with limit for dwelling to allow for later covered outdoor areas and reconcile current penalty when included;

- Urban Corridor Zones – the building envelope policy reference to a boundary shared with a residential property in a Neighbourhood Zone rather than a zone boundary compromises the well-considered and orderly and proper long-established demarcation between respective zones and can lead to compounding intrusion and impacts into Neighbourhood Zones;
- The Building Envelope should be applied from the designated zone boundary. Non-Urban Corridor Zones - Building Interface Envelope Policy should be consistent 300 and applied to all zones for development over 3 storey;
- Hazards (Flooding) Overlays –floor levels for all buildings need to be addressed and policy refined;
- Urban Tree Canopy and Stormwater Management Overlays - limited zone and commercial developments application should be made more universal;
- Design in Urban Areas, Façade Treatment - improved policy and design;
- Design in Urban Areas, Stormwater and WSUD – inconsistent water quality criteria and specific limits to outflows for all forms of development;
- Design in Urban Areas, Internal Garage Dimensions (and Storage) - AS 2890 - 2004 outdated with dimensions insufficient for current typical range of car sizes and preferences. Additional adequate separate storage areas are required to help keep the available garage spaces free for vehicles.
- Heat loading / energy efficiency – lack of effective yet simple policy;
- Transport Access and Parking, Off-Street Bicycle Parking Requirements – inconsistent application of bicycle parking rates;
- Car stacking / car parking policies – lack of policy when becoming more common in larger or more valuable developments;
- Design in Urban Areas, Waste - policy lacking, inconsistent and outdated to address orderly and practical management and servicing of sites.
- A definition for a 'deck' and similar raised paved area is required. The nature of materials in regard to consequences is immaterial. Clarify and afford consistency in relation to impacts for raised finished levels and changes more than 1.0 metre above natural or existing ground level;
- Privacy from ground level – building floor levels, site fill, paving and decks can often be raised well above ground level and present privacy impacts;
- The Deep Soil policy aims to support trees with development. The typical reasonable assumption would be 'deep soil' means natural ground. A simple but clear definition is required: eg *Natural ground soft landscape area, with no impeding building structure or feature above or below, to sustain growth of required canopy trees*. Intent is being compromised by use of garden planter areas over concrete ground floors which lack appropriate substance and ongoing quality of soil for sustaining required mature trees and providing opportunity for infiltration of water.

Conclusion

The Expert Panel Planning System Implementation Review will afford an opportunity for a broader and deeper analysis to address more comprehensive issues around poor design and process outcomes.

COUNCIL RESPONSE - MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

It is trusted that these comments will be given further consideration and the issues that have been raised addressed by review of the nature and implications of the proposed amendments.

If there are any queries, or opportunity to contribute to further enhancement of policy, please contact Mr David Brown, Principal Policy Planner on _____ or _____

Yours sincerely

Peter Tsokas

Miscellaneous Technical Enhancements Code Amendment

Suggested Issues

The information below is a summary of currently identified anomalies and enhancements identified by Unley during the initial operation of the Code. They arise from practitioner experience and are provided on a practitioner level. They are not formally endorsed by Council and may necessarily reflect the final position, or all, of Councils ultimate concerns.

The Local Government Association (LGA) and Eastern Region Alliance of Councils (ERA) submissions have also been supported at the practitioner level and canvass these and further issues.

Overlays

Historic Area Overlay

In the Historic Statements expression is inconsistent between different Statements, eg maximum building height uses different policy wording, even when the same outcome is anticipated.

Drafting of Statements were completed before the policy suite being finalised compromising content and expression.

Policy vague, without priority and lacking in guidance (eg 'complementary', 'reasonable' etc) for good design outcomes reflecting context, patterns and main dwelling setting. . In particular there is a lack of clarity about two storey dwellings and the subservient presence of associated elements, eg carport, garage, ensuite etc The DPF requiring second storey elements to be more than 45 degrees back from the front building line does not apply to new dwellings only additions – should be the same.

Typical rear yard swimming Pools, outbuildings and other structures are always Performance Assessed, even though meet usual criteria and of no consequence. While in back yard and behind original building they could be DTS.

Representative Buildings - only partly identified

Only limited areas have Representative Buildings mapped (not listed) and other areas not. The policies in the Historic Area Overlay should specifically refer to Representative Buildings to provide a clear purpose and role of these buildings, whether identified or not. There may be a future opportunity to consider technical amendment to map all Representative Buildings and provide clarity for all users (owners, applicants and assessors) on the status of buildings.

The lack of ready identification for users of the system, and for Section 7's – if not individual buildings then at least that the site is in the Overlay and the implications of this – needs to be addressed to provide upfront clarity for purchasers and developers.

Currently the only way of determining whether a property is a Representative Building or in the Overlay is through a layer in SAPPA which is not appreciated or easily found by members of the public. The Line of Enquiry tool in the Online Code should identify whether a property is a Representative Building or in Overlay.

Urban Tree Canopy & Stormwater Management Overlays

Urban Tree Canopy and Stormwater Management Overlays don't apply to mixed use zones or commercial zones, and don't apply to commercial developments in Neighbourhood Zones.

Application should be universal to all zones and forms of development with improved and tailored sustainability policies for respective residential, mixed use and commercial developments.

General policy in likes of Design in Urban Areas across a range of development types and uses is inconsistent, incomprehensive and unrefined.

See attached.

Hazards (Flooding) Overlays

Replacement buildings are Deemed-to-Satisfy in many zones however there are no requirements in relation to Flooding-General Overlay. There could be FFL implications for these buildings so it is recommended that the Overlay policies are applied to Replacement Buildings in Table 2.

Policy needs refinement to three layers, high, medium and low risk, where simpler tailored practical policy could be maintained, and particularly in the case of low risk a suitable DTS criteria. Top of Kerb is not necessarily a good guide and its usually more about free-board of floor to ground level to address low overland water flows.

Determining heights relative to AEP levels relies on data not often readily available to applicants or assessors, particularly for simpler development.

Zones

Neighbourhood

Established Neighbourhood Zone PO/DPF 7.1

The wording of the PO anticipates boundary development, whereas the DPF anticipates boundary development only in some circumstances. It should be reworded to be clearer established settings should be maintained and boundary development limited, and not adjacent to street frontages, but clarify when and in what circumstances boundary development should occur.

Housing Diversity Neighbourhood Zone – Detached Hammerhead Site Area

The HDN zone TNV contains minimum site areas for a range of dwelling types but does not provide a separate site area for detached dwellings in a hammerhead configuration or clarify that any driveway handle is not included in the minimum site area. By contrast, the General Neighbourhood Zone does provide policy specific to hammerhead dwellings. Specifying a minimum site area for hammerhead dwellings ensure the allotment is practical and functional.

Outbuildings

There is a lack of any policy linkages for two-storey outbuildings, built form, setbacks, overlooking, overshadowing etc issues that need consistent similar guidance to other built forms.

Public Notification

Dwelling additions that exceed height are notified when they simply match the existing roof height and from and should avoid notification.

Notification for 'on boundary' should be defined to include structures within a certain distance, eg 600mm, of boundary to prevent the situation arising where a 100mm setback avoids notification but not the implications.

Fencing

Table 3 in some (all?) neighbourhood zones only list 2 GDP policies as being applicable to fences: Clearance from Overhead Powerlines PO 1.1 & DiUA [All Development [Fences and Walls]] PO 9.1.

The following policy should be added: GDP> Transport, Access & Parking [Sightlines] PO 2.2 so that vehicle sightlines can be considered as part of fence assessments

Site Coverage

Recommend amending the site coverage policies so that a dwelling proposed *without* covered outdoor area has a reduced site coverage policy to allow for any future covered outdoor area to go up to the standard site coverage policy.

Non-Residential

Urban Corridor Boulevard/Living Zones – Side Setbacks

The PO seeks buildings which provide separation in a way that complements the established character of the locality. The DPF allows dwellings to be 'boundary to boundary' for all levels, for the first 18m from the street. Boundary to boundary development at the street will not achieve 'separation between buildings in a way that complements the established character' or zone / policy nature / intent. The DPF doesn't reflect the PO.

See attached.

Urban Corridor Living Zone – Policies which apply to detached dwellings

Table 3 only prescribes 'Low Rise' (up to two storey development) policies for detached dwellings so there aren't the correct policies applicable for 3 storey detached dwellings, a potential common form of development.

Urban Corridor Zones – Building Interface Envelope (DPF 4.1 & 4.2)

The building envelope policy in Urban Corridor Zones was amended in the final version of the Code such that it now only applies to a boundary shared with a residential property in a Neighbourhood zone. Fails to address where the development site is separated by a local road or laneway and low-rise frontage should be respected.

The qualitative interface policy refers to 'primary corridor (i.e. a State Maintained Road)'. It is assumed that 'primary corridor' should be taken to be a State Maintained Road (in which case the policy would benefit from clarification) however now all Urban Corridor properties face a State Maintained Road.

Non-Urban Corridor Zones - Building Interface Envelope Policy

The Building Envelope policy in Urban Corridor Zones was amended prior to implementation to allow a TNV to determine whether a 30° or 45° envelope applied, however the Building Envelope policy which is applied on other zones has remained at 45°. It is not considered appropriate for a more enabling policy to apply outside of the Urban Corridor Zones

Change of use between consult room, office and shop (excluding higher intensity forms, eg restaurant/café) is hampered by respective car parking criteria. With an established situation there often is a current shortfall of parking, but these interchangeable lane uses (shop excluding higher intensity forms, eg restaurant/café) is generally of no undue consequence to parking situation.

General Policy

Design in Urban Areas – Façade Treatment (DPF 20.2)

The policy seeks a range of façade treatments to improve streetscape outcomes. The wording of the policy could be clearer, particularly in distinguishing between 'Building Wall' and 'Building Line'.

Design in Urban Areas – Soft Landscaping (DPF 22.1)

The policy requires a minimum percentage of the 'site' to be soft landscaping, however for multi dwelling sites it's not clear whether the minimum percentage of the *site* is calculated using the 'whole development site', 'site exclusive to each dwelling exclusive of common areas' or 'average site area'.

Design in Urban Areas – Stormwater and WSUD (DPF 36.1 and 42.1)

The policy for managing stormwater on-site for volume and quality is lacking scope and direction, and any DPF/DTS. There is much reference material to address this.

Further, the water quality criteria from General Policy for Design should be equally applicable in Design in Urban Areas.

Quantity of discharge from sites should be clear and pragmatic and together with range of policy for not increasing outflow and overloading systems and downstream areas, a simple coefficient for all development (which flood modelling is premised on) should be adopted, eg less than 0.4. This would make outcomes equal and consistent for all properties and not related to what current existing (above or below) site cover and discharge rate may be.

Design in Urban Areas – Internal Garage Dimensions (DPF 23.1)

The minimum internal garage dimensions (5.4m x 5.4m for double garage) are in practice insufficient to cater for current typical range of car sizes.

Further, insufficient room is provided for personal access and less ambulant people around vehicles and should be increased.

Critical Waste Bin Storage areas and adequate movement paths to the street, and General Storage and adequate access paths, should be additional to internal area of garages and parking of vehicles.

Design in Urban Areas – Driveways (DPF 23.5(b))

The policy intends to ensure driveways are angled for safe and convenient vehicle access, however clearer and practical wording is required.

Privacy from ground level

The Code is lacking policy addressing privacy from ground level dwellings which are raised above natural ground level or sit substantially higher than a neighbour's yard.

Heat loading / energy efficiency policies

Recommend additional policy(ies) regarding heat loading, particularly light-coloured roofs and materials

Transport Access and Parking - Table 3 – Off-Street Bicycle Parking Requirements

The bicycle parking rates for RFB and residential component of a multi-storey building are only provided for City of Adelaide.

Bicycle parking rates for these uses are equally applicable outside the CoA.

Car stacking / car parking policies

Becoming more common in larger or more valuable developments whereby additional policies regarding their application and use in developments should be addressed.

Design in Urban Areas – Waste (DPF 23.5(b))

The policy is convoluted, lacking and inconsistent across development types and does not adequately address orderly or practical management and servicing of waste relative to intensity of development and site context.

There is a limit regarding individual dwellings intensity and contemporary multiple Mobile Garbage Bins (MGB) servicing from street, eg number dwellings/bins and/or available street frontage less crossovers, trees, poles etc and on-street truck capacity.

Beyond a defined limit of space communal systems are then required. For example, for intermediate scale development may be possible to use larger shared on-site bins but still collected from the street where there is sufficient verge space. Where there is not sufficient space or for larger scale and intensive development, there should be on-site storage and collection (ie truck forward in and forward out).

A comprehensive review and analysis of the methodology for contemporary waste management should be undertaken and effective criteria established for the range of development scenarios waste management requirements, eg based upon the *Zero Waste South Australian Better Practice Guide Waste Management in Residential or Mixed Use Developments 2014* and Local Government, private operators and consultants contemporary understanding of waste servicing, traffic management and development good design.

The three-bin system explored in this analysis in 2014 is now out of date with many now adopting a 4 bin system which affects bin numbers, storage areas and weekly collection visits.

Subject: Public Consultation submission for Miscellaneous Technical Enhancement Code Amendment
Date: Friday, 23 September 2022 11:10:06 AM

PlanSA,

Submission Details

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: Council

Given name: Peter

Family name: Jansen

Organisation: City of Salisbury

Email address:

Phone number:

My overall view is: I support the Code Amendment

Comments: This is a supplemental submission on behalf of the City of Salisbury Development Services team who wish to comment on two matters not identified in the written submission of Council. 1. Direct Overlooking new definition should be amended to increase the new included distance, and have sloping land more explicitly recognised. 2. Public Infrastructure and Transport Overlay amendment - as it applies to Future Local Road Widening Ancillary Development. It is considered that Ancillary Accommodation and Dwelling Extensions, and Carports/Outbuildings /Verandahs/Retaining Walls./Swimming Pools must be changed to a YES applicability to the Overlay. Costs associated with the instances of the relocation or demolition of the structures should a local road widening be required should trigger an assessment by an Authority so that a determination can be made of future implications. The non inclusion will result in Councils incurring unnecessary costs when dealing with local road widening requirements.

23 September 2022

Mr Craig Holden
State Planning Commission
Via: PlanSA Portal

Dear Mr Holden,

RE: Miscellaneous Technical Enhancement Code Amendment

Thank you for the opportunity to provide comment on the Miscellaneous Technical Enhancement Code Amendment (MTE Code Amendment). The following provides an overview of the City of West Torrens's Administration's submission with more detailed commentary attached.

This is the first of many MTE Code Amendments and in the spirit of providing constructive feedback it should be noted that in addition to the large volume of documentation, it was also in a cumbersome format which is not user friendly. Therefore, to support non-specialists and community members to better engage with the Code Amendment process, it would be useful for consideration to be given to how the presentation of information can be improved for future Code Amendments, particularly of this nature. As an example, Council specific information could be provided, and/or the amendments displayed through the line of enquiry tool to enable a non-specialist to navigate the potential impacts of the changes and facilitate submissions.

Of note, some of the amendments were not necessarily viewed by the Administration as being of a technical and operational nature, but likely to change outcomes and/or policy intent. Some amendments appear to have far greater implications than intimated by the overview of the Code Amendment and warrant further investigation, consideration and targeted/easily understood consultation i.e.:

- changes from restricted development pathway to performance assessed pathway
- referral trigger for the Affordable Housing Overlay and implications for attaining affordable housing by private developers
- changes proposed to the Rules of Interpretation (with particular reference to the Aircraft Noise Overlay)
- changes to public notification should be further investigated and more widely consulted with community
- Amendments that impact streetscape such as building line and setback.

The Administration does not support changes that have the potential to change policy intent or introduce unnecessary risk to developers, stakeholders and relevant authorities, such as changes to rules of interpretation that may affect the application of the ANE Overlay (item 2.3.1.1), removal of the Water Resources Overlay to enable DTS pathway for dwellings in Neighborhood-type Zones (item 2.3.2.14) or changes policy for example building heights in a variety of Zones including the Urban Corridor Zones (item 2.3.2.11).

If you require any additional information or clarification, please contact Sue Curran, Manager
Strategy and Business on or

Yours sincerely

What is Proposed in the Code Amendment (City of West Torrens)

2.3.1 Part 1 – Rules of Interpretation

2.3.1.1 Application of Spatial Policy Relevant to the Site of the Development

Issue

Feedback received has raised questions about the application of spatially based policy (zones, subzones and overlays) in circumstances where a zone, subzone or overlay only partly covers the site of a development.

Proposed Code Change

AMEND Part 1 – Rules of Interpretation to include explanation and rules on how to determine relevant policy when a spatial layer only applies to part of a site that is the subject of a development application.

'Application of Spatially Based Policies and Rules

Where a zone, subzone, overlay or technical and numeric variation (TNV) does not spatially apply to the whole of a site that is the subject of the development application, the spatially based rules of the zone (including assessment pathway exclusions), subzone, overlay or TNV are only applicable to the portion of the site to which the zone, subzone, overlay or TNV spatially covers. Reference to the South Australian Property and Planning Atlas of the SA planning database will be made to determine whether a zone, subzone, overlay or TNV is relevant to the site of the proposed development application.'

Comment

Clarity to interpretation in theory is supported, but the Administration query the impact of more complex overlays that intersect a property and how the rules of interpretation are to be applied.

Suggest careful consideration be exercised around where this amendment may not be suited such as the implications of this change to the Aircraft Noise Exposure Overlay, which does not follow property boundaries as evident in image one below and depending on the ANEF level can produce different development outcomes:

Image One: Aircraft Noise Exposure Overlay intersecting through allotments

Suggest that there is a need to review Zone boundaries and the spatial application of subzones, overlays and TNV to adequately reflect the intent of the application of each and the policies contained within. Could further consider not capturing in Rules of Interpretation but rather identify in overlay or TNV where this type of interpretation is relevant.

2.3.1.2 Spatial Maintenance Updates – Comprising Minor or Operational amendments

Issue

Updates comprising minor or operational amendments to the spatial layers of the Code contained within the SA planning database are made on a regular basis in order to maintain a correct relationship between spatial layers and land parcels.

Proposed Code Change

AMEND Part 1 – Rules of Interpretation to include explanation and rules on how spatial layers are updated in order to maintain correct relationships with cadastre or roads.

Comment

Query whether these changes will be recorded somewhere to ensure if any queries about the change, information can be easily found and understood.

2.3.2 Part 2 – Zones and Sub Zones

Zone Specific

Conservation Zone – land division – PO 2.1 – Policy Review

Conservation Zone – land division – DTS/DPF 2.1 – Policy Review

Master Planned Zones – Site Dimensions and Land Division – Policy Review

Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages

Rural Zone – Detached Dwelling – Linkages

Rural Zone – Land Division / Boundary Realignment – Linkages

2.3.2.7 Urban Corridor Zones – Primary Road Corridor – Policy Review

Issue

Different terminology is currently used to describe the primary corridor – for example primary corridor (i.e. a State maintained road) and primary road corridor.

Proposed Code Change

AMEND policy to ensure consistent use of terminology across the Urban Corridor suite of zones by referring to “primary road corridor (i.e. a State maintained road)”

Comment

Through the transition to the Code reference to State maintained roads was added to identify which road is a primary frontage, and therefore avoid any confusion or anomaly that could otherwise lead to local roads being considered as a primary road.

In the policy, where the terms primary corridor and primary road corridor are used or similar terms, they are intended to mean the same.

Reference to a State maintained road should be consistent instead of multiple terms is supported.

Additional policy may be required to ensure that local roads are still appropriately responded to and that development positively contributes to secondary frontages and lower order roads when being used as a primary frontage or a secondary frontage. For example, Urban Corridor (Boulevard) PO 1.3 and DTS/DPF 1.3 (below) only provides consideration to the primary road corridor and soon to be amended to reflect State maintained road and would benefit from identifying that the development positively contribute to the secondary frontage or frontages to lower order roads. Noting that interface policy only is called up when opposite a Neighbourhood type zone.

<p>PO1.3 Dwellings developed in conjunction with non-residential uses that positively contribute to making the public realm of the primary road corridor, open space frontage and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places.</p>	<p>DTS/DPF 1.3 Dwellings in mixed use buildings to be located at the upper floor levels of buildings.</p>
--	---

Examples of where Urban Corridor (Main Street) exists over allotments where there is no state maintained road frontage, see below 6 Ebor Rd, Mile End

Image Two: 6 Ebor Ave, Mile End

Lastly, the Administration recommend a broader review of terminology in the Urban Corridor Zones to provide greater consistency in the policy wording.

2.3.2.8 Urban Corridor Zones – Side Boundary Setback – Policy Review

Issue

The Urban Corridors Zones are intended to allow for increased density and activity along key corridors and transport routes. Despite such policy existing prior to the Code, many of the areas in these zones are still in a period of ‘transition’ and do not have an established character.

As a result, the policy contained within these zones needs to balance the desire for urban renewal and the existing built form.

One of the policies that creates confusion in this regard is the Urban Corridor (Living) Zone Performance Outcome (PO) 2.4 and the Designated Performance Feature (DPF) 2.4, noting that:

- The PO anticipates that side setbacks complement the established character; and
- The DPF has no regard to established character and prescribes setbacks of 0 to 2 metres, relative to the building height and proximity to the primary street frontage.

Accordingly, the PO and DPF are seeking different outcomes and the PO is seeking an outcome that is inconsistent with the overall intent of the Zone.

Proposed Code Change

AMEND Urban Corridor (Boulevard) Zone PO 2.6, Urban Corridor (Business) Zone PO 2.6 and Urban Corridor (Living) Zone PO 2.4 to clarify that building from boundary to boundary towards the front of the allotment is envisaged.

Comment

They do have an established character, however the character anticipated by the policy isn't yet advanced 'on-the-ground' and is in a state of transition. There appears to be a gap in providing guidance for Code users on what is a suitable separation to enable access to natural ventilation and sunlight for the parts of the building not sited towards the front part of the allotment. Seek guidance on what is suitable separation particularly when building envelope policy is not called up for an assessment.

2.3.2.9 Restricted Development Classification – Table 4

Industry listed as a restricted development classification

Issue

Review of Industry being listed as restricted development across all applicable zones to align with the new principles

Proposed Code Change

AMEND Table – 4 Restricted Development Classification within the following zones that have Industry listed (with the exclusion of Light Industry) and replace it with Special Industry as a restricted class of development.

Class of Development	Exclusions
Special Industry Industry	Light Industry

- Employment Zone
- Strategic Innovation Zone
- Suburban Business Zone
- Capital City Zone
- City Main Street Zone
- Local Activity Centre Zone
- Suburban Activity Centre Zone
- Suburban Main Street Zone
- Township Zone
- Township Activity Centre Zone
- Township Activity Centre Zone
- Urban Activity Centre Zone

Note: that Special Industry is not a Restricted Class of Development when located in the Gillman Subzone, National Naval Shipbuilding Subzone or the Significant Industry Subzone of the Strategic Employment Zone. This is to remain.

Comment

Suggest general industry should be captured in the restricted development table failing that there should be more policy to enable decision making.

Are there enough provisions for an assessment to be undertaken (appears to rely predominately on general interface provisions)? Are there enough provisions for refusal? Restricted development versus a performance assessed assessment have significant differences (touched on further in item 2.3.2.9.6.)

Confirmation that should this change occur, that the assessment would be *All other Code assessed*, enabling the relevant authority to call up all relevant policy within the Code to the assessment and public notification.

Land Division within the Limited Land Division Overlay

Dwelling within the Limited Dwelling Overlay

Dwellings within the Employment (Bulk Handling) Zone

Dwelling and Land Division within the Deferred Urban Zone

2.3.2.9.6 Employment Zone – Various land uses

Issue

Review of the restricted classification of all land uses within the Employment Zone to align with the new principles.

Proposed Code Change

REMOVE the following listed land uses from Table 4 – Restricted Development Classification in the Employment Zone

- Industry,
- Waste reception, storage, treatment or disposal; and
- Wrecking yard

Comment

What zone envisages these development types? Noting the new planning system does not have a non-complying process equivalent. There appears to a gap in the process that enables the relevant authority for a performance assessed application of a type of development that is not envisaged or restricted to not proceed with an assessment. Suggest a similar process as that outlined in Practice Direction 4- Restricted and Impact Assessed Development for other relevant authorities for select types of development.

Currently restricted development is assessed by the Commission if it resolves to proceed to assessment of the development. There are clear procedures in place as per Practice Direction 4- Restricted and Impact Assessed Development.

The previous zone that was replaced by the Employment Zone (WT Commercial Zone) which listed General Industry as a non-complying use is now proposed through this amendment to be performance assessed. Suggest the Department review and test assessment policy for the above uses before removing from restricted development.

Suggest that these Employment Zone changes not be implemented until further consideration of a process for other relevant authorities to deem whether the proposed development demonstrates the following and considered suitable for an assessment:

- social, economic or environmental benefit to the current or future community; and
- the development responds to a demonstrated need or demand for the proposed land use in the locality.

Dwellings within the Rural Intensive Enterprise Zone

Land Division and Dwellings with the Rural Shack Settlement Zone

Significant Interface Management Overlay triggering a restricted development classification

Hills Face Zone – Various land uses

2.3.2.10 Notification Tables – Table 5 – Procedural Matters (PM)

2.3.2.10.1 Notification Tables – Minor Development

Issue

Concerns were raised by council planners and accredited professionals about public notification requirements to adjoining landowners for relatively minor applications which 'trip' into a performance assessed pathway under the Code. This creates additional work for planning authorities over and above notifications that occurred under the former development system under the *Development Act 1993*. This appears partly due to structural differences between the former and new development systems in how the notification requirements are prescribed.

Proposed Code Change

AMEND the interpretation section of each zone public notification table (Table 5) together with Part 1 – Rules of Interpretation by inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is minor in nature, in which case the application will not require notification.

AMEND each zone public notification table (Table 5) so that the following minor forms of development are not subject to public notification (or subjected to notification exception criteria in Column B):

- Air handling unit, air conditioning system or exhaust fan
- Carport
- Deck
- Fence
- Outbuilding
- Pergola
- Private bushfire shelter
- Retaining wall
- Shade sail
- Solar photovoltaic panels (roof mounted)
- Swimming pools or spa pool
- Verandah
- Water tank.

Comment

Supportive of the change to all zone as below:

A relevant authority may determine that a variation to 1 or more corresponding exclusions prescribed in Column B is minor in nature and does not require notification.'

There is merit in reconsidering a two tiered system for public notification. The 'who' gets notified needs to be considered rather than a blanket 'adjacent land'- some instances it may be appropriate to notify more or less properties to reflect level of impact the proposed development may have. There appears to be instances on smaller allotments with more minor development types that there is an over notification, while on larger allotments with development that is likely to have impacts felt more broadly than the 60 metres is not adequate.

2.3.2.10.2 Notification Tables – Errors and Inconsistencies

Issue

To correct identified errors, inconsistencies and repetition that exists within and between zone public notification tables.

Proposed Code Change

AMEND each zone public notification table (Table 5) by correcting any identified errors or notable inconsistencies between zone notification tables of similar theme (e.g., rural zones, neighbourhood zones, activity centre zones which should generally be consistent in the classes of development listed as not requiring notification in Column A and the exception criteria applied [Column B]). Specifically address:

- incorrect reference to ‘storey’ instead of the defined term ‘building level’ in the exception criteria applying to development undertaken by the South Australian Housing Trust (SAHT).
- ~~duplication of light industry, warehouse and store in the public notification table of the Rural Shack Settlement Zone~~
- inconsistency between notification triggers and on-boundary development policy within zones
- inconsistency across zones in relation to the exclusion of land division from public notification
- ~~inconsistency between the Productive Rural Landscape Zone and other rural zones in relation to the placement of public notification notices~~
- technical and/or typographical errors.

Comment

This amendment appears to improve:

- consistency in reference to building level in lieu of use of reference to storeys.
- consistency in triggers and on-boundary development policy within zones.
- consistency across zones in relation to the exclusion of land division from public notification.

No further comment is provided.

Notification Tables – Frost Fans

2.3.2.10.4 Notification Tables – Building on railway land / Temporary public service depot

Issue

Questions have been raised as to why ‘building on railway land’ is listed as a class of development that is not subject to public notification given that it could take any form and nuisance impacts are unknown.

Proposed Code Change

AMEND all zone public notification tables (Table 5) except that applying to the Remote Areas Zone and Coastal Waters and Offshore Island Zone, by deleting ‘building work on railway land’ wherever it occurs. AMEND all zone public notification tables (Table 5) except that applying to the Commonwealth Facilities Zone, to include the following additional class of development and corresponding exception:

Class of Development (Column A)	Exceptions (Column B)
1. Railway line	Except where located outside of a rail corridor or rail reserve.

AMEND the public notification tables (Table 5) of the following zones:

- Employment Zone

- Employment (Bulk Handling) Zone
- Employment (Enterprise) Zone
- Infrastructure Zone
- Strategic Employment Zone

to include the following additional class of development and corresponding exception:

Class of Development (Column A)	Exceptions (Column B)
1. Building for the purposes of railway activities	None specified

Comment

The proposal appears to provide exemptions from public notification be pared back to align with the former Development Regulations.

No comment is provided.

2.3.2.10.5 Notification Tables – Demolition

Issue

Some participants questioned whether the exception applying to ‘demolition’ includes partial demolition, and requested a review of the need to notify demolition of buildings in Historic Areas.

Proposed Code Change

AMEND the exception clause in Column B of the notification table as it applies to ‘demolition’ to also reference ‘partial demolition’.

AMEND the exception clause in Column B of the notification table as it applies to ‘demolition’ to provide a relevant authority with the ability to determine that a building is not of heritage value and therefore does not require public notification.

Comment

Support inclusion of partial demolition.

The discretionary element is concerning, with the onus on the person undertaking assessment, which adds a layer of complexity. Public notification tables need to provide certainty to applicants, relevant authorities and the community. They should not be open to disagreement between the relevant authority and applicant to demonstrate whether the building is in keeping with the historical attributes. Suggest that it may be better to retain the status quo and for relevant authorities to rely on Item 1 of the public notification tables as a means of not undertaking notification.

2.3.2.10.6 Notification Tables – Examples

Issues – Policy, Pathways and Linkages

2.3.2.11 Building Height – TNV and context – Policy refinement

Issue

Most zones include a policy guiding building heights, some of which require a development to satisfy two outcomes: a building height specified in a Technical and Numeric Variation (TNV) and a positive response to the local context. Other zones require the achievement of only one of these outcomes. Zones that require a development to achieve both building height outcomes may unnecessarily constrain development to align with the existing context, rather than facilitating urban renewal and

increased density anticipated by taller building heights. It is also likely to result in inconsistent application of the same policy.

Proposed Code Change

AMEND the following Performance Outcomes to ensure that they only require development to meet one of two building height outcomes:

- Urban Neighbourhood Zone PO 2.2
- Urban Corridor (Boulevard) Zone PO 3.1
- Urban Corridor (Business) Zone PO 3.1
- Urban Corridor (Living) Zone PO 3.1
- Urban Corridor (Main Street) Zone PO 3.1
- Housing Diversity Neighbourhood Zone PO 3.12
- Local Activity Centre Zone PO 3.1
- Suburban Activity Centre Zone PO 3.1
- Employment Zone PO 3.3
- Township Activity Centre Zone PO 3.2
- Township Main Street Zone PO 3.1
- Urban Activity Centre Zone PO 3.1
- Suburban Main Street Zone PO 3.1

AMEND the following Performance Outcomes to ensure consistent terminology is used for Technical and Numeric Variations:

- Strategic Innovation Zone PO 3.1
- Capital City Zone PO 4.1
- City Main Street Zone PO 3.1
- Community Facilities Zone PO 2.1

Comment

The TNV heights for the Urban Corridor Zones were carefully selected as part of the DPA and were considered the maximum appropriate height on an area or site-by-site basis.

This policy amendment could easily be interpreted as permitting a building height to exceed the TNV, where it is considered that the development ‘positively responds’ to the context and site conditions etc. This qualitative policy provides no certainty for surrounding property occupants and could in fact undermine the criteria outlined in the other ‘bonus height’ policies. For example, a development could reference a nearby development which met the required criteria and benefited from significant development sites policy and use this as justification for their development responding to the local context.

This policy amendment is not supported.

2.3.2.12 Building Height, Building Wall Setback and Wall Height – Policy Review

Issue

South facing terminology inconsistencies

Following implementation of Phase 3 of the Code feedback was received that there is inconsistent wording in relation to the term ‘south facing’ which is defined in Part 8 of the Code as:

In relation to building orientation, a side wall is south facing if the wall is orientated anywhere between E20°N/W20°S and E30°S/W30°N.

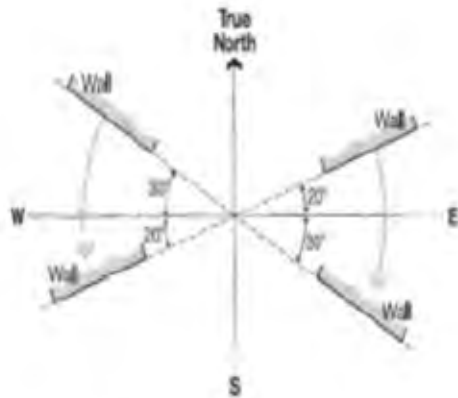

Figure 1: Part 8 example of South facing walls.

Use of the words ‘wall facing a southern boundary’ (which is not defined) has been used in some sections of the Code rather than the defined ‘south facing’ terminology above.

Wall height measurement inconsistencies

Similarly, inconsistent wording throughout the Code has been identified between the defined term ‘wall height’ with Part 8 of the Code (Administrative Terms & Definitions) defining ‘wall height’ as:

Means the height of the wall measured from the top of its footings but excluding any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land.

However, the phrase ‘wall height measured from the lower of natural or finished ground level’ has been identified throughout the Code.

Other inconsistencies such as ‘wall height measured from the top of the footings’ have also been identified.

The reference to wall height being measured from the top of the footings is doubling up reference to ‘top of the footings’ as the defined term in Part 8 of the Code which outlines that ‘wall height’ is to be measured from the top of its footings.’

Building height measurement inconsistencies

Whilst the definition of ‘wall height’ in Part 8 of the Code is taken from ‘the top of its footings’, Part 8 of the Code defines ‘building height’ as:

Means the maximum vertical distance between the lower of the natural or finished ground level at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system*
- (b) telecommunications facility tower or monopole*
- (c) electricity pole or tower*
- (d) or any similar structure.*

Feedback has been raised about why the measurement point is different between wall height and building height.

Side and rear setback confusion

There has also been some confusion regarding the interpretation of wall setbacks policies from side and rear boundaries particularly within the neighbourhood-type zones, with the typical DTS/DPF standard wording being transferred from the former Residential Code wording as follows:

General Neighbourhood Zone – DTS/DPF 8.1

Other than walls located on a side boundary, building walls are set back from side boundaries:

(a) at least 900mm where the wall height is up to 3m

(b) other than for a wall facing a southern side boundary, at least 900mm plus 1/3 of the wall height above 3m

and

(c) at least 1900mm plus 1/3 of the wall height above 3m for walls facing a southern side boundary.

General Neighbourhood Zone – DTS/DPF 9.1

(a) Dwelling walls are set back from the rear boundary at least:

if the size of the site is less than 301m²—

(i) 3m in relation to the ground floor of the dwelling

(ii) 5m in relation to any other building level of the dwelling

(b) if the size of the site is 301m² or more—

(i) 4m in relation to the ground floor of the dwelling

(ii) 6m in relation to any other building level of the dwelling.

Proposed Code Change

AMEND the definitions for ‘wall height’ and ‘building height’ in Part 8 – Administrative Terms and Definitions to include the option for the measurement point to be taken from a point specified by the policy in which the term is used, rather than from the measurement point specified in the definition.

CREATE a definition for ‘post height’ in Part 8 – Administrative Terms and Definitions with its meaning to take the same (or similar) form to ‘wall height’ (as amended above).

AMEND policy that references ‘wall facing a southern boundary’ (or similar) to refer instead to ‘south facing’ throughout the Code.

AMEND policy that references ‘wall height above top of footings’ (or similar) to refer simply to ‘wall height.’

AMEND ‘building height’ DTS/DPF policy (but not for ancillary buildings or structures) in the following zones so that the measurement is taken from ‘the top of footings’, consistent with the former

Residential Code policy for complying dwellings:

- General Neighbourhood
- Housing Diversity Neighbourhood
- Master Planned Neighbourhood
- Master Planned Renewal
- Master Planned Township
- Suburban Neighbourhood
- Urban Renewal Neighbourhood
- Waterfront Neighbourhood

AMEND ‘wall height’ and ‘post height’ DTS/DPF policy for ‘ancillary buildings and structures’ in the following zones so that the measurement is taken from ‘natural ground level’, consistent with the former Residential Code policy for complying outbuildings, carports and verandahs.

- General Neighbourhood
- Housing Diversity Neighbourhood
- Master Planned Neighbourhood
- Suburban Neighbourhood
- Urban Renewal Neighbourhood
- Waterfront Neighbourhood

AMEND side building wall setback DTS/DPF policy for all neighbourhood-type zones to ensure consistency across zones, improve clarity of policy and consistency with Residential Code policy expression and application.

Comment

Proposal appears to bring consistency in terms with reliance on definitions, rather than replicate the definition within policy which at times appears to create confusion.

Concern remains where measured from top of footings, particularly when considering that there may be fill up to 1.0m in height, creating an overall building height of an additional metre on top of the wall height.

2.3.2.13 Building Walls and Dwelling Walls – Policy Review

Issue

Feedback has identified that there is inconsistent wording within the ‘Housing Diversity Neighbourhood Zone’ rear boundary setback and side boundary setback provisions between ‘*dwelling walls*’ and ‘*boundary walls*’. Concern has been raised that use of the term ‘*dwelling walls*’ does not capture non-residential built form that is also envisaged within the Zone.

A similar issue has been identified within the Master Planned Neighbourhood and Township Zones where the term ‘residential buildings’ has been used rather than ‘buildings’ for the DTS/DPF for building height. Concern has been raised that the use of the word ‘residential’ will not capture non-residential built form such as ‘pre-schools’ and ‘consulting rooms’ which are also envisaged land uses within the zones.

Proposed Code Change

AMEND reference from ‘*dwelling walls*’ to ‘*building walls*’ for all side and rear setback provisions (excluding ancillary buildings and structures) within Neighbourhood Type Zones except where the policy is specific to residential buildings.

Comment

Can see the need to capture non-residential buildings within side and rear setback policy but raise impact of change on non-traditional types of dwellings (as an example residential flat buildings) that may orientate the front of the dwelling not in alignment with the site. Suggest additional policy is formulated to capture appropriate siting in these instances or a PO that can push these scenarios into a performance assessed pathway to ensure that siting is optimal not only for setbacks but POS, car parking etc. but manage impacts of built form on adjoining properties

2.3.2.14 Common and Minor Development – Overlay Relevance – Assessment Pathways

Issue

Overlays are, in some cases, preventing a DTS or accepted development pathway and/or applying additional policies where it is unnecessary to do so. This adds complexity, cost and time to the assessment process with no overall community benefit.

Proposed Code Change

It is recommended that overlay applicability be applied in accordance with Tables 2-6 above. Note, where relevant overlay policy would allow for a Deemed-to-Satisfy Pathway to be maintained, relevant provisions from the overlay will be applied, rather than as an Overlay Exclusion.

Precise details of the zones to be amended are contained in ATTACHMENT A, and the corresponding Part of the Code and issue/topic identified

Comment

The presentation of this information and change does not enable the reader to clearly understand what is proposed.

The extent of the policy change is not fully understood and clarification is sought. Attachment A indicates a number of development types that will remove an overlay or overlays to enable the DTS pathway to operate more efficiently. Clarity is sought around the removal of the Water Resources Overlay in Neighbourhood-type Zones to better facilitate DTS pathway for detached dwellings, dwelling addition, row-dwelling and semi-detached dwellings. Confirmation is sought whether neighbourhood type zones capture the Urban Corridor Business Zone.

If it does, what is the implication of removing Water Resources Overlay from DTS pathway for dwellings in neighbourhood type zones - specifically for an application that presents a change in land use in parts of Thebarton either with existing zoning (Urban Corridor Business) or through possible future Code Amendments to land in Thebarton as industrial uses vacate adjacent the River Torrens (see image three).

Image Three: Water Resources Overlay in relation to land subject to recently approved proposal to initiate a Code Amendment and the Urban Corridor (Boulevard) Zone in Thebarton

Whilst the policies contained in the Water Resources Overlay do not specifically refer to dwellings, a number of the policies speak to this using the term development or identify the intent of overlay. Specifically the overlay as per DO2 seeks:

Maintain the conveyance function and natural flow paths of watercourses to assist in the management of flood waters and stormwater runoff.

There is concern that possible Code Amendments will unlock a DTS a pathway (depending on zone sought) for new dwellings (detached, semi-detached and row dwellings) that remove consideration of key policy contained in the Water Resources Overlay such as:

- PO 1.1 Watercourses and their beds, banks, wetlands and floodplains (1% AEP flood extent) are not damaged or modified and are retained in their natural state, except where modification is required for essential access or maintenance purposes.
- PO 1.2 Development avoids interfering with the existing hydrology or water regime of swamps and wetlands other than to improve the existing conditions to enhance environmental values.
- PO 1.5 Development that increases surface water run-off includes a suitably sized strip of vegetated land on each side of a watercourse to filter runoff to:
 - reduce the impacts on native aquatic ecosystems
 - minimise soil loss eroding into the watercourse.

Council Administration have not been able to test this, but seek assurance from the Department that new development in areas currently within the Water Resources Overlay retains the intent of this overlay during the DTS assessment of certain land uses including dwellings.

2.3.2.15 Detached Dwellings in Master Planned Zones as an Accepted Development Pathway

2.3.2.16 Detached Dwellings – Medium and High Rise Development – Policy Relevance

Issue

Feedback has indicated that provisions related to medium and high-rise residential development are not applied to detached dwellings and dwelling additions in Table 3 of the Urban Corridor (Living) Zone, even though the zone allows for medium-rise developments of three storeys. As such, matters related to landscaping, rainwater tanks and tree planting are unable to be adequately assessed against policy provisions specifically related to medium-rise development.

Note: Whilst this issue had been raised in relation to the Urban Corridor (Living) Zone, it has been identified that a range of other Neighbourhood-type Zones also allow for various dwelling types at heights of three storeys or above. As such, the investigations and feedback will also take these additional zones into account.

Proposed Code Change

AMEND assessment pathways for all dwelling types within zones where three storey development (and above) is contemplated to ensure that policy provisions relating to medium and high-rise development is applied.

Comment

Proposed amendment seeks consistency in application of policy in assessing all dwelling types where three storeys or above. There still appears to a gap in linkage to WSUD, tree planting landscaping for medium-rise detached dwellings.

No further comment.

2.3.2.17 Discrete vs Discreet – Garages & Carports – Policy Review

Issue

Feedback has suggested that Performance Outcome 10.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone contains a typo that alters the meaning of the overall provision. The typo relates to the spelling of the word discreet/discrete.

It has also been suggested that PO 10.1 needn't be applied to a carport or garage as it duplicates policy that applies to these development types as part of the zone ancillary buildings and structures policy.

Proposed Code Change

AMEND Performance Outcome 10.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone to use the word “discreet” (instead of discrete)

REMOVE linkages to PO and DTS/DPF 10.1 for Carports and Outbuildings within the Established Neighbourhood Zone and Township Neighbourhood Zone

Comment

The proposed amendment appears to result in the provision seeking garages and carports to be unobtrusive or inconspicuous. This outcome is consistent with the nature of the outcomes sought in the Established Neighbourhood.

No further comment.

2.3.2.18 Discrete vs Discreet – Garages & Carports – Linkages

Issue

It has been suggested that PO 10.1 need not be applied to a carport or garage, given it duplicates policy that applies to these development types as part of the zone ancillary buildings and structures policy.

Proposed Code Change

REMOVE linkages to PO and DTS/DPF 10.1 for Carports and Outbuildings within the Established Neighbourhood Zone and Township Neighbourhood Zone

Comment

Support change, on the basis that PO 11.1 identifies that residential ancillary buildings and structures are sited and designed to not detract from the streetscape or appearance of buildings on the site or neighbouring properties.

No further comment.

2.3.2.19 Dwelling Alterations and Building Additions/Alterations – Assessment Pathways

Issue

Feedback has highlighted that the Code does not identify ‘building alterations and/or additions’ as a class of development which is assigned to assessment pathways or can be selected for use using the Line of Enquiry functionality on the Portal. As a result, alterations and/or additions are defaulting to the ‘all other Code assessed’ performance assessed pathway, which requires a full merit-based assessment (and in some cases public notification). Furthermore, the planning authority is required to consider the whole of the Code and identify the relevant assessment provisions to the proposal.

In comparison, ‘dwelling additions’ have a Deemed-to-satisfy pathway within most neighbourhood-type zones, and ‘Internal building work’ is prescribed as accepted in all zones, other than those located within the State or Local Heritage Place Overlays or State Heritage Area Overlay.

Part 5, Division 1, Section 57(1)(c) of the *Planning, Development and Infrastructure Act* requires rules and standards to be proportionate, suited to relevant conditions, and as far as is reasonably practicable and appropriate, minimise regulatory burden.

Further, the Code Drafting Principles promote the use of Accepted or Deemed-to-satisfy assessment pathways for a class of development that is commonly expected in the zone and where it can be assessed solely on quantitative, prescriptive criteria.

It is therefore appropriate to consider whether a streamlined assessment pathway could be provided for building alterations/and or additions.

Proposed Code Change

CREATE an accepted development pathway for building alterations where the development does not increase the total floor area and does not exceed the wall height and/or overall building height of the existing building. Include exemptions for State Heritage Places or Areas and Local Heritage Places.

AMEND the introductory text for *Table 1 – Accepted Development Classification*, *Table 2 – Deemed-to-Satisfy Development Classification* and *Table 3 – Applicable Policies for Performance Assessed*

Development to clarify that alterations and additions must be assessed against the same provision as the existing development category, unless alterations and/or additions are listed as a separate class of development.

Portal Changes

CREATE a new development type *Building alterations*

CREATE a note on the PlanSA Portal under ‘What policies apply to a development at an address?’ that provides advice on how to search for alterations and/or additions as follows:

For Alterations / Additions to an existing building (including internal building work), select the associated development type listed below and the Building alterations/additions development type. For example, or an alteration to a shop, select ‘Shop’ and ‘Building alterations’.

Comment

This amendment requires further investigation, specifically the change from internal alterations to building alterations, noting that internal alterations will not present the same impact on the streetscape as building alterations and may enable development that does not fully consider the context of locality (use of materials, heritage adjacency), or provide for appropriate mitigation of overlooking, potential encroachment of public space.

Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages

2.3.2.21 Interface Height – Multiple Zones: Policy and TNV – Policy Review

Issue

The Designated Performance Features (and Deemed-to-Satisfy Criteria) (DTS/DPF) relating to interface heights are inconsistent across several zones. For example, some of the interface building envelopes do not apply to the primary street frontage and most zones contain separate policy regarding the interface height adjacent a road.

This may result in misinterpretation or inconsistent application of interface heights.

Proposed Code Change

AMEND the TNV Interface Height policies in Part 6.6 of the Code to include ‘(except where this boundary is a street boundary)’

AMEND the interface height policies within the relevant Zones to replace ‘primary street boundary’ with ‘street boundary’ or add reference to ‘(except where this boundary is a street boundary)’

AMEND all diagrams within Interface Height TNV and policies to ensure consistent wording and interpretation

CREATE a PO 3.8 in the Township Main Street Zone and a PO 3.3 in the Recreation Zone to relate to built form scale adjacent neighbourhood-type zones

AMEND Table 3 of the Township Main Street Zone to apply new PO 3.8 to the following classes of development:

- Consulting Room
- Dwelling
- Office
- Residential flat building
- Shop
- Store

AMEND Table 3 of the Recreation Zone to apply new PO 3.3 to the following classes of development:

- Shop

Comment

Change in application of interface heights requires further investigation of the proposed change and impact on the streetscapes and sensitive receivers. A consistent and generic approach across zones may not be appropriate given the intent of each of the impacted zones, the tailoring of policy may be appropriate, further investigation is warranted.

2.3.2.22 Land Division – Site Contamination – Policy Relevance and Linkage

Issue

Part 9.1 of the Code (Referral Body: Environment Protection Authority) specifies that a referral is required for Performance Assessed Land Division in certain circumstances, however, the policy provisions of the Site Contamination General Development Policies are not linked to this development type, which makes it difficult for a user to ascertain whether a referral would be required. Zone Classification Tables (i.e., Tables 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to relevant authorities to use when assessing a proposed development. Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

ADD PO and DTS/DPF 1.1 of the Site Contamination General Development Policies to any Performance Assessed Land Division to ensure that site contamination matters are appropriately addressed.

Comment

Support the inclusion of site contamination provisions being called up for land division applications.

No further comment.

2.3.2.23 Non Residential Outbuildings – New Policy and Assessment Pathways

Issue

While assessment pathways for outbuildings currently exist, relevant policies are typically related to residential outbuildings. As such, non-residential outbuildings will often default to Performance Assessed where they are not ancillary to a dwelling (e.g., a shed for a church or a school in a neighbourhood-type zone).

Proposals for outbuildings are development under the circumstances set out in Schedule 4 of the *Planning, Development and Infrastructure (General) Regulations 2017* (the General Regulations) and currently require assessment against the Code. However, the Regulations do not specify that an outbuilding must be ancillary to a dwelling, but only that it is ancillary to another building on the site. To streamline the assessment pathway, there is merit in refining the policy framework to address outbuildings that are not associated with a dwelling.

Proposed Code Change

CREATE an additional performance outcome in all applicable zones for Ancillary Structures and Buildings not specifically in association with a dwelling.

ADD new policy provisions to existing pathways for outbuildings, carports and verandahs to allow for assessment of these development types where not in association with a dwelling.

Comment

Do not support the inclusion of these types of structures when not residential in nature. Consideration of use including what is to be stored in these structures and location form key elements in the assessment.

2.3.2.24 Outbuildings – Accepted Development Criteria

Issue

Feedback was raised that within the Housing Diversity Neighbourhood Zone, Table 1 – Accepted Development had a duplication for ‘outbuilding’ located on or abutting a boundary (not being a boundary with a primary or secondary street). The duplication essentially repeated the same policy with a slight variation in wording.

Proposed Code Change

REMOVE all instances where a duplication has occurred, remove Outbuilding criteria 10 in Table 1 – Outbuildings.

Comment

No further comment.

2.3.2.25 Pool Fencing – Accepted Development Pathway

Issue

Although an Accepted Pathway exists for a swimming pool or spa pool, at present this does not consider the prerequisite for an associated safety fence.

As a result, there is no way to achieve an Accepted Development Pathway for a swimming pool as the associated safety fence must be performance assessed.

This slows assessment timeframes as it involves planners in what is ultimately a Building Rules matter. The matter is considered problematic and thus warrants updating to better reflect one of the key goals of the Code, which is to ensure planning policy is consistent and clear, ultimately making the planning process quicker, simpler and more equitable.

Proposed Code Change

AMEND – The Accepted Pathway for ‘Swimming pool or spa pool’ across pertinent zones to include ‘and Swimming Pool Safety Features’.

Comment

No further comment.

2.3.2.26 Primary Street Setback – Use of Building Line

Issue

Concerns have been raised with the current definition and policy application of the term ‘building line’ as it is leading to potentially undesirable outcomes.

Proposed Code Change

AMEND the Building line term to reflect the removal of the 1.5m projection policy

AMEND the policy for primary street setback across all zones listed below. The removal of the building line reference within policy should provide for clear interpretation of the requirement for the primary street setback.

Business Neighbourhood Zone – DTS/DPF 3.2

City Living Zone – DTS/DPF 3.1

Employment Zone – DTS/DPF 3.1

Established Neighbourhood Zone – DTS/DPF 5.1

General Neighbourhood Zone – DTS/DPF 5.1

Golf Course Estate Zone – DTS/DPF 4.1

Hills Neighbourhood Zone – DTS/DPF 5.1

Home Industry Zone – DTS/DPF 3.1

Neighbourhood Zone – DTS/DPF 5.1

Rural Neighbourhood Zone – DTS/DPF 3.1
Rural Settlement Zone – DTS/DPF 2.1
Suburban Business Zone – DTS/DPF 3.4
Suburban Neighbourhood Zone – DTS/DPF 5.1
Township Neighbourhood Zone – DTS/DPF 5.1
Urban Corridor (Boulevard) Zone – DTS/DPF 2.4
Urban Corridor (Business) Zone – DTS/DPF 2.3
Urban Corridor (Living) Zone – DTS/DPF 2.2
Urban Renewal Neighbourhood Zone – DTS/DPF 3.1
Waterfront Neighbourhood Zone DTS/DPF 5.1
Housing Diversity Neighbourhood Zone – DTS/DPF 4.1
Master Planned Neighbourhood Zone – DTS/DPF 6.1
Master Planned Renewal Zone – DTS/DPF 6.1
Master Planned Township Zone DTS/DPF 6.1
Strategic Employment Zone – DTS/DPF 3.3
Urban Neighbourhood Zone – DTS/DPF 2.5

Comment

This has the potential to significantly alter the character of streetscapes. Existing policy (as written in Code) does not alter the ability for an applicant/developer to lodge something different to what the Code currently provides for and be performance assessed within the context of its immediate locality. This change is significant and requires a thorough review of impact, particularly on the Established Neighbourhood Zone where setbacks are often part of the pattern of development and form the character of the Zone and captured via Character Area Overlay.

Replacement Building – Overlay Exclusions: Coastal Flooding Overlay

Tourist Accommodation – Total Floor Area – Rural Zones

Part 3 – Overlays

2.3.3.1 Affordable Housing Overlay – Referral Trigger

Issue

The following issues have been identified by the South Australian Housing Authority in relation to the Procedural Matters (PM) – Referrals section of the Affordable Housing Overlay:

- Unnecessary referral of development applications by the South Australian Housing Authority to itself as the agency responsible for the provision of referral advice.
- Confusion regarding when an application should be referred.

Proposed Code Change

AMEND the referral trigger to exclude from the referral trigger development applications where the applicant is the South Australian Housing Authority.

AMEND the referral trigger to focus on the three matters submitted by the South Australian Housing Authority in their example above.

Comment

No objection to SAHA developments not requiring referral unless the proposal does not seek to meet PO 1.1 and the intent of the overlay.

Query PO 1.1 which states:

Development comprising 20 or more dwellings/allotments incorporates affordable housing.

The referral provides a discretionary element, that referral is required if the development comprises 20 or more dwellings or residential allotments and the development is intending to provide affordable housing. Whilst PO 1.1 seeks that development of this scale incorporates affordable housing. There appears to be a conflict between the referral and the policy intent.

2.3.3.2 Coastal Areas Overlay – Policy Intent

Issue

The Department for Environment and Water has identified some specific policy improvements within the Coastal Areas Overlay to better clarify intended outcomes and ensure greater consistency between Performance Outcomes and Deemed-to-Satisfy Criteria/Designated Performance Features. This includes:

- expanding the range of potential impacts to the marine and onshore coastal environment from development in PO 4.1 to address other potential impacts not currently identified in the Performance Outcome, in particular the spread of diseases
- ensuring the range of potential impacts identified in PO 4.7 aligns with those identified in the accompanying Deemed-to-Satisfy Criteria/Designated Performance Feature (DTS/DPF 4.7).

Proposed Code Change

AMEND PO 4.1 to ensure that development will not unreasonably affect the marine and onshore coastal environment by way of spread of diseases in addition to other listed potential impacts within the Performance Outcome.

AMEND DTS/DPF 4.7 to include reference to ‘cobbles’ in addition to removal of shell grit or sand by development to ensure wording is consistent with the accompanying Performance Outcome (PO 4.7).

Comment

No response required broadens policy to address impacts not captured in the Code currently or alignment between performance outcome and designated performance feature.

No further comment.

2.3.3.3 Design Overlay – Referral

Issue

The Design Overlay currently contains a clause that exempts a referral to the Government Architect where it relates to a variation of a development application that has either previously been referred to the Government Architect (or Associate Government Architect) or been granted development authorisation under legislation.

Provision should be included in the referral trigger to allow discretion to the relevant authority to refer a variation to the Government Architect (or Associate Government Architect) should they consider it warranted, particularly where the variation may be more significant or could impact on the Office of Design and Architecture South Australia's Principles of Good Design.

Proposed Code Change

AMEND the exemption clause in the referral trigger in the Overlay to allow discretion to the relevant authority to refer a variation to the Government Architect (or Associate Government Architect) should they consider it warranted taking into account the purpose of the referral.

Comment

No response required - provides increased flexibility to allow discretion to the relevant authority to refer a variation to the Government Architect (or Associate Government Architect) should they consider it warranted. Should update Practice Direction to reflect any change.

2.3.3.4 Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 – Linkages

Issue

Feedback has suggested that the current wording of PO and DTS/DPF 3.5 of the Hazards (Flooding) Overlay implies that this policy should apply to habitable buildings as well as non-habitable structures such as verandahs, carports or outbuildings. However, it has been identified that this policy has been applied inconsistently for various development types across different zones.

Proposed Code Change

AMEND policy linkages to ensure a consistent approach for the application of PO and DTS/DPF 3.5 of the Overlay to various development types.

Comment

No further comment.

2.3.3.5 Heritage Adjacency Overlay – Referral

Issue

The current wording for the referral trigger in the Heritage Adjacency Overlay is not explicit in respect to which authority, body or individual determines whether a development may materially affect the context of a State Heritage Place.

Proposed Code Change

AMEND the referral trigger in the Overlay to clarify that the relevant authority should be tasked with the responsibility to determine if a proposed development may materially affect the context of a State Heritage Place and should be referred to the Heritage Minister, as existed under previous legislation.

Comment

Support inclusion of *Development which in the opinion of the relevant authority materially affects the context within which the State Heritage Place is situated* within the Code. Under the former planning system, the relevant planning authority was clearly charged with the responsibility to determine if a

proposal would materially affect the context of a State Heritage Place, albeit sometimes based on informal discussions with heritage officers from the Department for Environment and Water prior to making this determination. This was considered to work well in practice.

No further comment.

Key Outback and Rural Routes Overlay - Policy consistency with other Transport Overlays

2.3.3.7 Major Urban Transport Routes Overlay - Revised policy and referral triggers

Issue

Following further review, the Department for Transport and Infrastructure (DIT) has suggested several updates to the suite of transport overlays in the Code, including the Major Urban Transport Routes Overlay.

This includes a review against a range of technical guideline sources (e.g., Austroads Guide to Road Design) used by DIT to ensure consistent values are applied within the various transport overlays. The suggested changes aim to provide greater policy clarity and interpretation and achieve the following:

- streamline assessment pathways and reduce unnecessary referrals, in particular for small scale developments that have negligible or minor road network implications
- provide greater opportunities for relevant authorities to assess more common or minor forms of development
- better align policies with legislative requirements and responsibilities
- provide simpler policy criteria that better reflects actual practice
- reflect formal and informal feedback from industry as part of the Code's implementation.

Suggested policy changes (with the exception of some quantitative values) also align with separate but related changes proposed in this Amendment for the Urban Transport Routes Overlay and Key Outback and Rural Routes Overlay, to ensure consistency across the various transport overlays in the Code.

Proposed Code Change

CREATE a new part (c)(vi) in DTS/DPF 3.1 to address a change in use from residential to a small-scale commercial or non-residential use to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

AMEND DTS/DPF 4.1 part (a) to be more concise and improve policy interpretation.

AMEND the quantitative criteria in respect to the separation between access points in the table in DTS/DPF 4.1 part (c) to include updated requirements for development intended to serve between 1 and 6 dwellings as distinct from other forms of development on a 60 km/h speed limit road, to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

CREATE a new part (a) in DTS/DPF 5.1 that recognises established usage of prior access for smaller scale residential developments (i.e., between 1 and 6 dwellings) with very low traffic generation and network implications to remove the need to justify existing established access for this scale of development, streamline assessment and reduce unnecessary referrals.

AMEND the introductory statement in DTS/DPF 5.1 to ensure the new item (a) above is addressed and that proposed development satisfies either part (a) or both parts (b) & (c), ensuring that development is either minor scale residential

development and uses an existing access point or that consideration is given to both vehicular and pedestrian sightlines for other and larger scale forms of development.

AMEND the quantitative criteria in respect to both an 'access point serving 1-6 dwellings' and 'access point serving all other development' in DTS/DPF 5.1 part (b) to align with relevant and contemporary Austroads technical guidelines.

CREATE a new part (c) in DTS/DPF 7.1 to ensure development does not result in access points becoming stormwater flow paths directly onto roads.

Comment

No further comment.

Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent

Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent

Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral

Prescribed Surface Water Areas Overlay – Terminology

Prescribed Water Resources Area Overlay – Referral

2.3.3.13 Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation

Issue

Feedback has raised the need to improve access to and visibility of ‘Representative Buildings’ in the Character Area Overlay and the Historic Area Overlay and whether the policies of both overlays should specifically refer to representative buildings to provide a clear purpose and role of these buildings.

Proposed Code Change

AMEND the Historic Area Overlay and Character Area Overlay spatial mapping to show ‘Representative Buildings’ similar to the way they are currently displayed in the ‘Planning Reference’ section of SAPP.

Comment

The improved visibility of representative buildings is supported. Suggest that there is further work to be done, including identification through the line of enquiry tool, and clearer policy around the role and purpose of representative buildings.

River Murray Flood Plain Protection Area Overlay – Outbuildings – Policy Intent

River Murray Flood Plain Protection Area Overlay – Outbuildings – Linkage

River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy

River Murray Flood Plain Protection Area Overlay – Referrals

River Murray Tributaries Protection Area Overlay – Policy Intent

River Murray Tributaries Protection Area Overlay – Referrals

State Significant Native Vegetation Areas Overlay – Referral

2.3.3.21 Traffic Generating Development Overlay – Referral

Issue

A possible anomaly has been identified with respect Traffic Generating Development Overlay – whereby development for over 50 dwellings is currently not addressed, notwithstanding that land division involving the creation of 50 or more additional allotments is.

Proposed Code Change

That DTS/DPF 1.1 – 1.3 in the overlay captures built form applications proposing in excess of 50 dwellings ensures that such applications are assessed against the overlay.

That the referral to the Commissioner of Highways be amended to enable referral of development proposing a building containing more than 50 dwellings to the Commissioner of Highways at the built form stage of the development (add a new clause).

AMEND the existing referral for 'land division creating in excess of 50 allotments' to ensure that a development referred under the new clause does not end up being referred twice for the same reasons.

Comment

No further comment

2.3.3.22 Urban Transport Routes Overlay - Revised policy and referral triggers

Issue

The Department for Transport and Infrastructure (DIT) has suggested a number of updates to the suite of transport overlays in the Code, including the Urban Transport Routes Overlay.

This includes a review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) used by DIT to ensure consistent values are applied within the various transport overlays. The suggested changes aim to provide greater policy clarity and interpretation and:

- streamline assessment pathways and reduce unnecessary referrals, in particular for small scale developments that have negligible or minor road network implications
- provide greater opportunities for relevant authorities to assess more common or minor forms of development
- better align policies with legislative requirements and responsibilities
- provide simpler policy criteria that better reflects actual practice
- reflect formal and informal feedback from industry as part of the Code's implementation.

Suggested policy changes (with the exception of some quantitative values) also align with separate but related changes proposed in this Amendment for the Major Urban Transport Routes Overlay and Key Outback and Rural Routes Overlay to ensure consistency across the various transport overlays in the Code.

Proposed Code Change

REMOVE superfluous numbering in DTS/DPF 1.1 part (b)(i) and DTS/DPF 3.1 part (b) to correct an error and improve interpretation.

CREATE a new part (c)(vi) in DTS/DPF 3.1 to address a change in use from residential to a small-scale commercial or non-residential use to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

AMEND DTS/DPF 4.1 part (a) to be more concise and improve policy interpretation.

AMEND the quantitative criteria in respect to the separation between access points in the table in DTS/DPF 4.1 part (c) to include updated requirements for development intended to serve between 1 and 6 dwellings as distinct from other forms of development on a 60 km/h speed limit road, to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

CREATE a new part (a) in DTS/DPF 5.1 that recognises established usage of prior access for smaller scale residential developments (i.e., between 1 and 6 dwellings) with very low traffic generation and network implications to remove the need to justify existing established access for this scale of development, streamline assessment and reduce unnecessary referrals.

AMEND the introductory statement in DTS/DPF 5.1 to ensure the new item (a) (above) is addressed and that proposed development satisfies either part (a) or both parts (b) & (c), ensuring that development is

either minor scale residential development and uses an existing access point or that consideration is given to both vehicular and pedestrian sightlines for other and larger scale forms of development.

AMEND the quantitative criteria in respect to both an 'access point serving 1-6 dwellings' and 'access point serving all other development' in DTS/DPF 5.1 part (b) to align with relevant and contemporary Austroads technical guidelines.

CREATE a new part (c) in DTS/DPF 7.1 to ensure development does not result in access points becoming stormwater flow paths directly onto roads.

Comment

No further comment

Part 4 – General Development Policies

Aquaculture – General Development Policies – Policy Review

2.3.4.2 Carport and Outbuilding – Internal Parking Dimensions – Linkages

Issue

Feedback has suggested that policy provisions from the Design in Urban Areas and Design General Development Policies relating to garage dominance and the internal dimensions of enclosed parking spaces do not currently apply to applications for carports or garages which are not under the main roof of a dwelling. In particular, this relates to the following provisions of the Design in Urban Areas General Development Policies:

- Design in Urban Areas [Residential Development - Low Rise [External appearance]] DTS/DPF 20.1
- Design in Urban Areas [Residential Development - Low Rise [Car parking, access and manoeuvrability]] DTS/DPF 23.1

Note: Whilst this issue has been raised in relation to the Design in Urban Areas General Development Policies, equivalent policies are contained within the Design General Development Policies:

- Design [All Residential development [Garage appearance]] PO 14.1
- Design [All Residential development [Car parking, access and manoeuvrability]] PO 19.1

As such, discussion will also consider these provisions.

Zone Classification Tables (i.e., Tables 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to a relevant authority to use when assessing a proposed development. Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

ADD Design in Urban Areas PO 23.1 or Design PO 19.1 (depending on Zone) to Deemed-to-Satisfy and Performance Assessed pathways for Carports and Outbuildings in to provide guidance for the assessment of internal dimensions for enclosed parking spaces.

Comment

Discussion and review is required generally about the internal dimensions contained in the Code for carports and garages, however the proposed amendment seeks to provide important policy linkage based on the development type.

No further comment

Commercial Forestry - Forestry General Development Policies – Policy Review

2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways

Issue

Proposals for decks are deemed development under the circumstances set out in Schedule 4 of the *Planning, Development and Infrastructure (General) Regulations 2017* and currently require assessment against Code. A greater number of decks are requiring approval than anticipated, in part, due to the general increase in home improvement activity, which is burdening the planning system with minor matters.

Feedback has highlighted that the Code does not include specific provisions for the assessment of decks and as a result, the planning authority is required to consider the whole of the Code and identify the

relevant assessment provisions for the proposal. In addition, decks are defaulting to the performance assessed pathway, which requires a full merit-based assessment (and in some cases public notification). Part 5, Division 1, Section 57(1)(c) of the *Planning, Development and Infrastructure Act 2016* requires rules and standards to be proportionate, suited to relevant conditions, and as far as is reasonably practicable and appropriate, minimise regulatory burden.

It is therefore appropriate to consider whether there is an opportunity to streamline the assessment pathway for decks that may be attached to a dwelling or other building or stand alone.

Proposed Code Change

CREATE additional policy within the Design, and Design in Urban Areas module specific to decks to include assessment provisions that address overlooking.

CREATE a deemed-to-satisfy and performance assessed pathway for decks in neighbourhood-type, residential employment, rural and recreation type zones linking the proposed new decks policy, with overlay applicability and relevant General Development policies reflecting comparable development types such as a verandah.

NOTE: In order to ensure consistency across different development types within a given Zone, relevant policy provisions from the Design in Urban Areas General Development Policies should be applied to Decks where provisions from this module are called up for other development types within a Zone. In all other cases, the relevant provisions of the Design General Development Policies.

Comment

The inclusion of a DTS pathway is supported in neighbourhood-type zones, however concern still remains around screening in some instances where it may create undue impact due to height of screening required to mitigate potential overlooking and decking matching the FFL due to site conditions even in areas that are considered 'flat'.

Further consideration to decks when not ancillary to dwellings e.g. commercial require a performance assessed pathway with appropriate policy captured to assess use, siting, overlooking etc. Appears there are policy gaps in the Code for this type of development.

2.3.4.5. Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance

Issue

Feedback has identified that policy provisions related to driveways and access points have been applied inconsistently across some zones, as well as cases where multiple equivalent policy provisions from different modules are being called up for a single development type. This issue relates to the following policy provisions:

- Design in Urban Areas [Residential Development - Low Rise [Car parking, access and manoeuvrability]]: PO 23.3
- Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3
- Transport, Access and Parking [Vehicle Access]: PO 3.6

Zone Classification Tables (i.e., Table 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to a relevant authority to use when assessing a proposed development.

Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

AMEND wording of Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3 to be consistent with equivalent provisions within the Design in Urban Areas module.

REMOVE linkage to Transport, Access and Parking PO 3.6 and associated DTS/DPF for the following development types in all relevant Zones where they apply in Table 3 – Applicable Policies for Performance Assessed Development to remove conflicting policy from this pathway.

Comment

No further comment

2.3.4.6. Design in Urban Areas – DTS/DPF 19.1 - Soft Landscaping – Policy Review

Issue

Part 4 of the Code - General Development Policies, Design in Urban Areas contains two provisions in relation to soft landscaping for residential development. DTS/DPF 19.1 outlines soft landscaping provisions of ancillary buildings and DTS/DPF 22.1 provides soft landscaping provisions for all low-rise residential development. These provisions contain slightly different wording in relation to the minimum dimension needed for soft landscaping.

Feedback has also highlighted confusion of the application of the soft landscaping policies for group dwellings and residential flat buildings that contain common property as it is not explicit if the common property is included or excluded in the calculations of soft landscaping percentage.

Proposed Code Amendment

AMEND Design in Urban Areas DTS/DPF 19.1 and DTS/DPF 22.1 to be consistent in wording and explicitly state that common property is to be included in soft landscaping calculations.

Comment

The effect of this policy amendment / interpretation is that some dwellings in a group dwelling or RFB (wherever there is common property) could have little or no direct access to soft landscaping which could lead to poor amenity and urban heat outcomes.

2.3.4.7. Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review

Issue

Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 relate to the design of driveways. However, the policy can be difficult to interpret, particularly in relation to the angle of driveways relative to a road.

Proposed Code Change

AMEND Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 to provide clarity.

Comment

No further comment

2.3.4.8. Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review

Issue

The parking of any vehicle exceeding 3,000 kg (including the weight of any attached trailer) on land used for residential purposes is development under the *Planning Development and Infrastructure Act 2016*, unless it is:

- the parking of a caravan or motor-home of any weight on land used for residential purposes by a person who is an occupant of a dwelling situated on that land or
- a special circumstances which applies due to the previous dwelling being destroyed by a bushfire.

However, there is no policy contained within the Code specifically guiding the assessment of heavy vehicle parking. Similarly, there is no definition contained within the Code regarding this land use.

Proposed Code Change

CREATE new policy within the Transport, Access and Parking General Module to guide the assessment of heavy vehicle parking

CREATE a new land use definition for heavy vehicle parking (refer to the definitions section of this Code Amendment for further details)

Comment

No further comment

2.3.4.9. Housing Renewal General Development Policies - Policy Review

Issue

The Housing Renewal General Development Policies were written to apply to Housing Trust / Community Housing proposals. However, there is nothing in the Code to exclude the policies from being applied to 'All Code Assessed Development' – performance assessed development that is not a Housing Trust or community housing proposal. In addition, several of the Housing Renewal policies conflict with the Design and Design in Urban Areas policies.

As a result, some General Development Policies applicable to dwellings are conflicting and, given that no hierarchy applies to General Development Policies, it is not clear which policies should be applied to 'All Code Assessed Development'.

Proposed Code Change

CREATE an interpretation note for the Housing Renewal General Development Policies to confirm that the policies are applicable only to Housing Trust / Community Housing proposals

Comment

No further comment

2.3.4.10. Land Division – General Development Policies – Policy Review

Issue

Feedback received since the inception of the Code has identified policy duplication within the Land Division General Development Policies.

Proposed Code Change

AMEND the Land Division General Development Policies to remove duplicated policy

Comment

No further comment

2.3.4.11. Land Division – General Development Policies – Linkages

Issue

Feedback received since the inception of the Code has identified that not all the policy provisions from the Land Division general Development Policies are linked to Performance Assessed Land Divisions within zones.

Proposed Code Changes

ADD PO 2.8 and PO 3.11 of the Land Division General Development Policies to the Performance Assessed pathway for "Land Division" in all zones to ensure a consistent approach to the application of policy provisions from this module.

Comment

No further comment

2.3.4.12. Transport, Access and Parking – General Development Policy – Fences – Linkages

Issue

Feedback has indicated that the policy provisions currently applied to a Performance Assessed Fence in various zones do not address matters related to preservation of sightlines between vehicles and pedestrians where fences are located adjacent to driveways or corner sites.

From a planning perspective, all development must be assessed against the relevant provisions of the Code (see section 102(1)(a)(i) of the Act. Code content must therefore be directly relevant to the assessment of development.

Proposed Code Change

APPLY relevant policy provisions from the Transport, Access and Parking General Development Policy module to Performance Assessed Fences to address matters relating to preservation of sightlines

Comment

Applies policy critical for assessing and ultimately maintaining sightlines.

No further comment

2.3.4.13. Transport, Access and Parking – General Development Policy – Car Parking Rates Table - Review

Issue

Transport, Access and Parking Tables 1 and 2 prescribe the intended car parking rates for various forms of development. The following issues have been identified regarding these tables:

- Some car parking rates are listed which fit multiple definitions. For example, car parking rates exist for both a pre-school and a child care centre which is a type of pre-school
- Car parking rates in the Urban Neighbourhood Zone at Bowden are more onerous than the car parking rates that existed within the City of Charles Sturt Development Plan, creating challenges for delivering the scale and intensity of development envisaged for the transit-oriented development.

As a result, some of the car parking rates are not easily understood or consistently applied.

Proposed Code Change

AMEND Transport, Access and Parking Table 1 to position all land use classes on the 'class of development' column and all 'sub-classes' within the 'car parking rate' column

AMEND Transport, Access and Parking Table 2 to update references to the Urban Neighbourhood Zone and add specific car parking rates for the UN Zone within Bowden

Comment

Appears to provide greater alignment and less capacity for conflicting policy between development type and car parking table.

No further comment.

2.3.4.14. Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation

Issue

Car parking rates applied to development through the Transport, Access and Parking General Development Policies are structured to enable alternative rates to be applied in Designated Areas where reduced car parking rates are appropriate and/or where a car parking fund exists to offset any car parking shortfalls.

However, the interpretation is not readily apparent in some instances, including:

- Which Table is most appropriate for identifying the relevant rate
- Whether the Table 2 – Criteria are applicable to a Designated Area.

This can result in confusion during the assessment of a development and may result in the car parking rates being applied inconsistently.

Proposed Code Changes

AMEND Transport, Access and Parking DTS/DPF 5.1 to provide clarity on when each car parking rate is applicable

CREATE a definition for a High Frequency Public Transit Area

AMEND Transport, Access and Parking Table 2 to include reference to the High Frequency Public Transit Area where appropriate

REMOVE the Table 2 – Criteria within Transport, Access and Parking Table 2

AMEND the interpretation notes for Transport, Access and Parking Table 2 to reflect the removal of the Table 2 – Criteria

Comment

Supported on the following understanding:

Appears amendments clarify how and when to apply designated area rates. A further improvement would be for SAPPa to map 'High Frequency Public Transit Area' and/or 'Designated Areas' to provide greater clarity of when these rates apply.

It is also recommended that guidance be provided on how to apply the minimum and maximum car parking rates.

Part 5 – Specified matters and areas identified under the Act and Regulations

There are no proposed Code changes to Part 5 of the Code as part of this Code Amendment

Part 6 – Index of Technical and Numeric Variations

There are no proposed Code changes to Part 6 of the Code as part of this Code Amendment

Part 7 – Land Use Definitions

Issue

Improvements to the Land Use and Administrative Definitions in the Code – specifically a review of Part 7 – Land Use Definitions and Part 8 – Administrative Terms and Definitions to provide greater clarity in interpretation and relationship with policy.

Proposed Code Changes

AMEND Part 7 – Land Use Definition in relation to the following definitions or terms:

- Ancillary accommodation
- Caravan and tourist park
- Commercial forestry
- Educational establishment
- Indoor recreation facility
- Office
- Pre-school
- Tourist accommodation
- Workers accommodation

CREATE new definitions for Part 7 – Land Use Definition in relation to the following terms:

- Heavy vehicles parking
- Function venue

Part 8 – Administrative Terms and Definitions

Issue

Improvements to the Land Use and Administrative Definitions in the Code – specifically a review of Part 7 – Land Use Definitions and Part 8 – Administrative Terms and Definitions to provide greater clarity in interpretation and relationship with policy.

Proposed Code Changes

AMEND Part 8 – Administrative Terms and Definitions in relation to the following term:

- Building height
- Building line
- Wall height

CREATE new definition Part 8 – Administrative Terms and Definitions in relation to the following terms:

- Catalyst site
- Direct overlooking
- High frequency public transit area
- Post height

REMOVE Gross Density from Part 8 – Administrative Terms and Definitions

2.3.8.1. Building Height – Amend

Comment

Refer to comments in 2.3.2.12

2.3.8.2. Building Line – Amend

Comment

Refer to comments in 2.3.2.26

2.3.8.3. Wall Height – Amend

2.3.8.5. Direct Overlooking – New Definition

Comment

No comment

2.3.8.6. High Frequency Public Transit Area – New Definition

Comment

Support the inclusion of this definition but would also recommend these areas and designated areas are spatially applied in SAPP.

2.3.8.7. Post Height – New Definition

Comment

No Comment

2.3.8.8. Gross Density – Delete Definition

It is recommended this definition be retained as a useful point of reference for comparison against net density and for when it is referenced in broader strategy and policy considerations.

Part 9 – Referrals

2.3.9.1. Environment Protection Authority Referrals - Review of Interpretation and Referral Triggers

Issue

Under the *Development Regulations 2008* (now ceased), schedule 8 required a referral to the Environment Protection Authority (EPA):

Development that involves, or is for the purposes of, an activity specified in Schedule 22 (including, where an activity is only relevant when a threshold level of capacity is reached, development with the capacity or potential to operate above the threshold level, and an alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level)

The above ensured that alterations to an activity of major environmental significance required a referral. No similar preamble is included in Part 9.1 of the Code and as a result, the EPA has advised that some activities of major environmental significance are not being referred to them. This has resulted in works being approved that increase the risk of pollution or environmental harm and present challenges for the subsequent EPA licence. Accordingly, the EPA has requested that similar wording be contemplated in Part 9.1 of the Code.

Additionally, Class 3 activities are low risk potentially contaminating activities and do not warrant EPA involvement through the referral process. To assist and provide further clarity, the inclusion of the reference within the South Australian Property and Planning Atlas when land division is proposed to land within a groundwater prohibition area.

Proposed Code Change

CREATE an interpretation noted for Part 9.1 of the Code to confirm when referrals are required

AMEND the Class of Development / Activity Site Contamination – Land Division Class to removed class 3 activity needing to be referred and inclusion of the reference to South Australian Property and Planning Atlas.

Comment

Appears that the proposed interpretation to be included in Part 9.1 will add clarity to instances when developments are required to be referred to the EPA in line with previous Development Act particularly where capacity for a licensed premises may increase.

No further comment.

Part 10 – Significant Trees

There are no proposed Code changes to Part 10 of the Code as part of this Code Amendment

Part 11 – Local Heritage Places

2.3.11.1. Listing of State Heritage Places

Issue

As part of this Amendment it is proposed to include a list of current State Heritage Places in the Code, similar to the way Local Heritage Places are listed in Part 11 – Local Heritage Places. This is to improve visibility of State Heritage Place details in the Code to complement the State Heritage Places Overlay. As State Heritage Places are governed by a separate Act – the *Heritage Places Act 1993* – and that listings can be added and removed at any time under that Act (subject to the processes of that Act), it is considered necessary to also include explanation in Part 1 the Code that State Heritage Places identified in the Code (by the State Heritage Places Overlay, the Heritage reference layer of the SA Planning Database and the list proposed to be added to Part 11 Code) are point in time references and that the State Heritage Register should be relied on in the event of any inconsistency.

Proposed Code Change

AMEND the title of ‘Part 11 – Local Heritage Places’ to ‘Part 11 – Heritage Places’

AMEND Part 11 of the Code to include the list of current State Heritage Places currently mapped in the State Heritage Places Overlay. It is recommended that the list include the follow details:

- Property address
- Descriptions / extent of listing
- Section 16 Criteria
- State Heritage ID

AMEND Part 1 of the Code to include rules of interpretation that explain that where there is a discrepancy between the Code’s list of:

- State Heritage Places and the South Australian Heritage Register, the Register will prevail
- Local Heritage Places and the South Australian Heritage Register, the Code will prevail.

Comment

Support inclusion of State Heritage Places.

Part 12 – Concept Plans

There are no proposed Code changes to Part 12 of the Code as part of this Code Amendment

Part 13 – Table of Amendments

Part 13 of the Code – Table of Amendments: Updates to the publication date, Code version number, amendment type and summary of amendments within the ‘Table of Planning and Design Code Amendments’ to reflect the amendments to the Code

**RE: SUBMISSION REGARDING THE MISCELLANEOUS TECHNICAL CODE AMENDMENT FROM THE
 BARUNGA WEST COUNCIL**

The Barunga West Council has taken the opportunity to prepare a submission for consideration on some of the proposed amendments to the policy provisions within the Planning and Design Code that has the potential to have significant impacts on residential development and development patterns, especially within Fisherman's Bay and Port Broughton.

In relation to the proposed changes within 2.3.2 Part 1 – Zones and Sub Zones, the Barunga West Council supports the proposed inclusion and changes outlined in items 2.3.2.1 up to and including 2.3.2.8 as outlined in Attachment A – Proposed Code Policy – Amendment Instructions.

Particular reference has been made to Section 2.3.2.9 – Restricted Development Classifications – Table 4 with the following comments provided by the Barunga West Council:

Overlay, Zone or Sub Zone	Proposed Changes	Comments
Rewording of PO 1.1 within the Limited Land Division Overlay	Deleting and additional dwelling and replacing with a new dwelling	Changes are supported by the Barunga West Council
Rural Zone – Table 4 regarding land divisions	Amending the wording by removing residential and replacing with sensitive use or sensitive receiver	Changes are supported by the Barunga West Council
Conservation Zone – Restricted Development	By adding exceptions to the restricted renewable energy facility land use for solar mounted solar panels and battery storage facilities	Changes are supported by the Barunga West Council as renewable energy facilities need to be assessed on their merit rather than be restricted if

		we want to reach the renewable energy targets
Employment Zone	Removing Industry, waste reception, storage, treatment or disposal and wrecking yards from the restricted list and including Special Industry as a restricted land use	Changes are supported by the Barunga West Council as Special Industry has the potential to have significant impacts on sensitive receivers and therefore inclusion is supported.
Employment (Bulk Handling) Zone	Dwelling is removed from the restricted list and no other land use specified.	Changes are supported by the Barunga West Council as it allows for greater flexibility, especially in rural environments for value adding activities and other compatible land uses.
Rural Shack Settlement Zone	Removal of dwelling and Land Division from the Restricted Development category	Changes are supported by the Barunga West Council for the reasons explained below, especially in relation to the Fisherman's Bay development

1.1 - Historical Information:

Fisherman Bay was first established in the 1920's when a number of local fisherman commenced constructing shacks and other structures on private farmland. In 1974 the landowner indicated his intent to sell and the single parcel of land was purchased (a single freehold title) by a group of 10 families who owned shacks at Fisherman Bay. These families formed a partnership for the investment, and established Fisherman Bay Management Pty Ltd (FBM) to look after their interests and to run the settlement. Over the last 46 years there have been several changes to the make-up of the partnership, with some partners selling and other membership changing hands via inheritance.

Shack owners who have constructed shacks or other structures on the land visit the facilities regularly themselves as well as providing a holiday destination for other relatives and visitors for personal enjoyment. The only income that was initially generated by FBM was through the Licence Agreements issued to each of the shack owners, where the license fee was collected in advance.

The existing leased shack sites vary from well-established accommodation to basic accommodation on varying sized allotments.

In October 2017, DAC approved the application, subject to the following conditions:

- Construction of a seawall
- Construction of an effluent, treatment and collection system;
- Construction of roadworks and associated stormwater management system;
- Fire certification of all allotments.

The last two (2) years has culminated in the finalisation of documentation and appropriate contracts to allow the freeholding of allotments at Fisherman's Bay. As indicated the freehold allotments vary in size with a significant number of the allotments in the vicinity of 250 to 320m² with an irregular development pattern. The majority of the allotments have some degree of built form where many of the allotment owners indicating that they are prepared to rebuild when all of the existing services such as powerline relocation, stormwater management and wastewater disposal system has been completed to adequately services the newly created freehold allotments.

The Barunga West Council is committing significant financial investment (powerline relocation, stormwater management and waste water disposal system) that is based on the current allotment numbers, sizes and configurations. Additional allotments, via way of performance assessed land divisions, will significantly constrain the infrastructure roll out and place additional stain on this sensitive coastal area.

What is currently being experienced by the Barunga West Council is existing landholders are buying two allotments and wanting to create 3 allotments and there is no policy within the zone to adequately assess such proposals:

The existing policy existing in the Rural Shack Settlement Zone at Fisherman Bay in relation to land divisions:

Land Division		
Performance Outcome	DTS/DPF Criteria	Comments
<p>PO 4.1</p> <p>Allotments are of suitable size and dimension to contribute to a pattern of development that is consistent with the shack settlement.</p>	<p>DTS/DPF 4.1</p> <p>Development accords with the following:</p> <p>a) no additional allotments are created or</p> <p>b) site areas (or allotment areas in the case of land division) are not less than:</p>	<p>The existing policy for land divisions does not alleviate the scenario outlined above but rather states that such a proposal cannot be assessed as DTS and would therefore be assessed on merit. As there is not defined minimum allotment size there is the potential of significant</p>

	<p>In relation to DTS/DPF 4.1, in instances where:</p> <p>c) more than one value is returned in the same field, refer to the <i>Minimum Site Area Technical and Numeric Variation</i> layer in the SA planning database to determine the applicable value relevant to the site of the proposed development</p> <p>d) no value is returned for DTS/DPF 4.1(b) (i.e. there is a blank field), then none are applicable and the relevant development cannot be classified as deemed-to-satisfy unless DTS/DPF 4.1(a) is met.</p>	<p>intensification and the creation of allotment where the size of any future built form is compromised due to other factors such as boundary offsets and setback from the coast as required by the Coastal Protection Board.</p> <p><u>The Barunga West Council therefore requests that land divisions remain as restricted development.</u></p>
--	---	---

The Barunga West Council supports the proposed changes to the restricted development in the Township and Township Activity Centre Zone.

Transportable Dwellings

The Barunga West Council is finding it challenging to assess a recent influx of transportable dwellings proposed within this community. It is understood that other regional Councils are dealing with similar issues.

Transportable dwellings pose the issue with their overall form, style and visual character. Displaying a typical rectangular profile, these forms of development provide minimal articulation, visual interest and have the potential to create an eyesore in local communities. It is recognised that there is an 'affordable housing' argument that should be given considered, especially in this current market where building costs have skyrocketed and trade persons are difficult to source in regional areas. However, there needs to be a balance better affordable housing that does not compromise the amenity of the locality.

Notwithstanding, the Planning and Code is considered to have a shortfall in *design* provisions that would assist to require improved building. A key shortfall of the 'design' related provisions that applies to rural areas is that the 'Design' General Development Policies are different to those contained within the 'Design in Urban Areas' General Development Policies.

A simple 'fix' could be the inclusion of Performance Outcome 20.2 of the Design in Urban Areas General Development Policies into the 'Design' General Development Policies:

External Appearance	
<p>PO XXX</p> <p>Dwelling elevations facing public streets and common driveways make a positive contribution to the streetscape and the appearance of common driveway areas.</p>	<p>DTS/DPF XXX</p> <p>Each dwelling includes at least 3 of the following design features within the building elevation facing a primary street, and at least 2 of the following design features within the building elevation facing any other public road (other than a laneway) or a common driveway:</p> <ul style="list-style-type: none"> (a) a minimum of 30% of the building wall is set back an additional 300mm from the building line (b) a porch or portico projects at least 1m from the building wall (c) a balcony projects from the building wall (d) a verandah projects at least 1m from the building wall (e) a minimum 30% of the width of the upper level projects forward from the lower level primary building line by at least 300mm <p>a minimum of two different materials or finishes are incorporated on the walls of the front building elevation, with a maximum of 80% of the building elevation in a single material or finish.</p>

This Performance Outcome is useful as it would apply to all forms of dwellings within all Zones and not just relate to transportable dwellings. While it is appreciated that common driveways are not typical within regional areas, it would be useful if such an application is approved. It also provides increased application of the policy across a wider area of regional councils.

The argument is based on the fact that the suggested inclusion in the 'Design' module is an existing P&D Code policy. The Barunga West Council is not seeking to create a new policy but rather apply this across other areas where it would be useful to assess dwelling applications.

Reference has been made to Section 2.3.2.10 – Notification Tables and the Barunga West Council supports the changes to increase the length of walls on the boundary from 11m to 11.5m, which provides consistency for all the zones.

Reference has been made to Part 1 – Zones and Subzones – Barunga West Council supports the proposed changes within the zones and subzones suggested for the zones and subzones within the Barunga West Council area and as detailed on pages 127 to and including page 145 of Attachment A.

Reference has also been made to Part 4 – General Development Policies - Barunga West Council supports the proposed changes within the zones and subzones for the suggested changes to the building walls and Dwelling Walls within the zones and subzones within the Barunga West Council area and as detailed on pages 146 to and including page 162 of Attachment A.

A review of Part 7 – Land Use Definitions – The Barunga West Council supports the proposed changes.

In relation to the Part 8 - Administrative Terms and Definitions the Barunga West Council offers the following comments as the definition of a Catalyst Site only relates to the City Main Street Zone and therefore has no impact on rural councils. With regards to the changes to the direct overlooking from a window should be retained as having the sill of the window 1.5 metres above the finished floor level on the upper floor. Overlooking from a deck, balcony or terrace as proposed makes no sense as you are still able to look into the adjoining property with the suggested changes and therefore achieves no effective result.

Reference has been made to Part 9 – Referrals and the notes of Interpretation the Barunga West Council supports the proposed changes remove class 3 from the Clause 1(4) of Schedule 9 of the Planning, Development and Infrastructure (General) Regulations 2017.

Reference has been made to Part 11 – Local Heritage Places – The Barunga West Council supports amending Part 11 – Local Heritage Places by renaming the heading from Local Heritage Place to Heritage Places as many in the community see Local Heritage Places as having lesser value, but the term 'Heritage Places' gives more credence to the fact that the places has some heritage value and character that needs to be preserved and carefully restored or modified to ensure the historical significance is not lost with renovations or additions.

In relation to the State Heritage Places is an idea supported by the Barunga West Council in that if there is any inconsistency between the Register and the State Heritage Places listed in Part 11 of the Planning and Design Code, an entry in the Register will prevail to the extent of any inconsistency.' This approach is in line with the same approach taken in the Barossa Valley and the McLaren Vale area is so much of there is inconsistencies between the zone policy and the policy contained in the Character Preservation Area, then the policy in the Character Preservation Area prevails.

Reference has also been made to Part 12 – Concept Plans – The Barunga West Council does not have any Concept Plans contained in the Planning & Design Code and therefore the proposed changes have no impact.

The Barunga West Council thanks the Planning and Land Use Services Group for the opportunity to provide constructive input to the proposed changes outlined in the Miscellaneous Technical Code Amendment.

Dear Code Amendment Team

Miscellaneous Technical Enhancement Code Amendment

Thank you for the opportunity to provide input into the Miscellaneous Technical Enhancement Code Amendment (CA).

Council has reviewed and considered the CA that has sought to make improvements to the new planning system following input from the industry. Council would like to commend the State Planning Commission for listening to the planning sector and those working within it to continue to improve and evolve the states' planning system.

Overall the amendments are generally supported with the attached submission highlighting those areas that are still of concern to Council.

I trust that the submission is clear however should you have any queries please contact Sally Roberts, Manager Strategic Development on

Kind regards

Nigel Morris
Chief Executive Officer

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

Section	Proposed Amendment	Comment	Recommendation
Part 1 – Rules of Interpretation			
2.3.1.1.	Application of Spatial Policy Relevant to the Site of the Development	Amend Rules of Interpretation to include explanation and rules on how to determine relevant policy when a spatial layer only applies to part of a site that is subject of a development application.	Support Provides further clarity around the spatial application of policy.
2.3.1.2.	Spatial maintenance updates – comprising minor or operational amendments	Amend Rules of Interpretation to include explanation and rules on how spatial layers are updated in order to maintain correct relationships with cadastre or roads	Support
Part 2 – Zones and Sub Zones			
2.3.2.1.	Conservation Zone – land division – PO 2.1 – Policy	Amend PO 2.1 of the Conservation Zone to clarify that land division should avoid creating additional allotments with frontage to the coast or River Murray. Additional policy being introduced into the Conservation Zone to reiterate that newly created allotments (including those that are realigned) should not create new river or coastal frontages.	Support This ensures consistency with existing policies within the Coastal Areas and River Murray Floodplain Overlays.
2.3.2.2.	Conservation Zone – land division – DTS/DPF 2.1 – Policy	Amend DTS/DPF 2.1 (b) of the Conservation to include reference to the River Murray to clarify that land division should avoid creating additional allotments with frontage to the River Murray Additional policy being introduced into the Conservation Zone to reiterate that newly created allotments (including those that are realigned) should not create new river or coastal frontages.	Support This ensures consistency with existing policies within the River Murray Floodplain Overlays.
2.3.2.3.	Master Planned Zones – Site Dimensions and Land Division – Policy Review	Inclusion of reference to ‘Concept Plans’ in PO 11.3 of the Master Planned Township Zone and Master Planned Neighbourhood Zone.	Support Ensures concept plans (if applicable) are considered within the policy.
2.3.2.4.	Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages	Link ‘interface between land use’ policies for dwellings in rural areas. This ensures that the assessment of dwellings consider interface impacts with existing and desired rural land use activities.	Support Ensures more consistent assessment of dwellings in rural areas.

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.2.5.	Rural Zone – Detached Dwelling – Linkages	'Dwelling addition' design/siting policies are being called up within the Code when assessing new dwellings. This amendment creates a new link ensuring new dwellings are assessed against PO 5.3, which prescribes setbacks, design and scale provisions for dwellings.	Support This has been identified internally as an issue and will improve the assessment of dwellings in rural areas.
2.3.2.6.	Rural Zone – Land Division / Boundary Realignment - Linkages	PO 11.3, which is a policy that guides land division and boundary realignments, is not currently being called up by the Code for land division applications. This amendment seeks to create a new link ensuring this policy is applied.	Support This will ensure better guidance when assessing dwellings within the Rural Zone.
2.3.2.9.	Restricted Development Classification – Table 4		
2.3.2.9.1.	Industry listed as a restricted development classification	<p>Proposal to remove 'industry' from Restricted forms of development across all zones and replace with 'Special Industry'.</p> <p>Special Industry is a more intensive form of industry where the methods of manufacture adopted or goods used/stored are likely to cause or create significant nuisance (i.e. dust, fumes, vapours smells etc.) or result in the discharge of foul liquid or blood or other substances which are liable to become foul.</p> <p>This amendment results in less impacting forms of industry to be assessed by the local authority rather than the State.</p>	Partial Support Support within the Employment Zones however feel should remain as restricted in the Activity Zones where industrial type activities would not necessarily be appropriate particularly where these types of zones apply within townships.
2.3.2.9.2.	Land Division within the Limited Land Division Overlay	While the assessing policy remains unchanged and land divisions that create additional allotments should not be supported where this overlay applies, it does provide a level of encouragement for developers / landowners to submit applications. It then does open up the ability for appeal rights that Council will need to manage.	Do not support Retain land division as a restricted development within the Limited Land Division Overlay areas.
2.3.2.9.3.	Dwelling within the Limited Dwelling Overlay	Similarly to the above, the construction of new dwellings within the Limited Dwelling Overlay (i.e. the Currency Creek paper township) is no longer proposed to be	Do not support Retain dwellings as restricted development in

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

		<p>Restricted Development. The justification for this is that the policy is strong enough to refuse dwellings in this location and that this can be done by the local authority rather than the SCAP. In an area where you absolutely do not want dwellings, being restricted provides a clear deterrent to an applicant.</p> <p>Support the change to the wording from 'additional dwelling' to 'no new dwelling' which assists in removing the ambiguity in the policy.</p>	<p>the Limited Dwelling Overlay.</p> <p>Support Agree with change to the reference of 'additional dwelling' to 'no new dwelling'.</p>
2.3.2.9.5.	Dwelling and Land Division within the Deferred Urban Zone	<p>Currently within the Deferred Urban Zone, only development that will not result in more than one dwelling on an allotment is permitted. More than one dwelling is currently restricted development.</p> <p>The proposed amendment seeks to remove 'dwellings' and 'land divisions' from the restricted development category and make all dwellings and land divisions 'performance assessed'.</p> <p>The proposed amendment also seeks to introduce a new policy which states that dwellings should be located on an allotment used and ancillary to primary production, and will not result in more than one dwelling on an allotment.</p>	<p>Do not support Not supportive for similar reasons as outlined for the limited dwelling and land division overlay. At a minimum, retain land divisions in the Deferred Urban Zone as restricted development.</p> <p>Support Agree with introduction of new policy to guide dwellings and additional dwellings in the Deferred Urban Zone.</p>
2.3.2.9.6.	Employment Zone – Various land uses	<p>Proposal to remove 'waste reception, storage, treatment or disposal' and 'wrecking yard' from the restricted development category within the Employment Zone.</p> <p>The Employment Zone supports a diverse range of low-impact light industrial, commercial and business activity land uses.</p> <p>It is considered that there is sufficient policy within the Employment Zone to manage these types of land uses by the local authority.</p>	<p>Support</p>

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.2.9.8.	Land Division and Dwellings within the Rural Shack Settlement Zone	<p>The Rural Shack Settlement Zone applies to existing river shack areas including Goolwa Channel Drive and Mundoo Channel Drive, Hindmarsh Island.</p> <p>Within the Rural Shack Settlement Zone, a dwelling is currently restricted other than a detached dwelling that will not result in more than one dwelling on an allotment. Land division is also restricted in the zone except for land division that creates an allotment for an existing dwelling, is for the purpose of creating a public road or reserve or is for a minor boundary realignment to remove a minor anomaly.</p> <p>The proposal is to remove dwellings and land divisions from the restricted table in the Rural Shack Settlement Zone.</p> <p>It is considered that other forms of dwellings can be adequately managed by the local authority, however the removal of land divisions from the restricted category may result in applications for further division and fragmentation of sensitive coastal land.</p>	<p>Partial support At a minimum, retain land divisions in the Rural Shack Settlement Zone as restricted forms of development.</p> <p>Support removal of dwellings.</p>
2.3.2.10.	Notification Tables – Table 5 – Procedural Matters (PM)		
2.3.2.10.1.	Notification Tables – Minor Development	<p>Outbuildings, decks and other ancillary structures are proposed to no longer require notification in Neighbourhood Zones (regardless of whether they exceed boundary length or height provisions). This will help reduce the number of Assessment Panel reports and is more consistent with the former Development Regulation requirements.</p> <p>This amendment also proposed to amend the interpretations section of each zone’s public notification table, and Part 1 – Rules of Interpretation by inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is</p>	<p>Support The removal of minor structures from the need to be notified will improve assessment timeframes and reduce Assessment Panel reports.</p> <p>The new ‘minor’ rules of interpretation will assist in staff determining that applications are minor, in the context of what would normally be notified.</p>

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

		<p>minor in nature, in which case the application will not require notification.</p> <p>For example, a building that may marginally exceed a building height policy (i.e. 100mm above) could be determined as minor in the context of the increase above the notified requirement, rather than considering if the development as a whole is minor.</p>	
2.3.2.10.2.	Notification Tables – Errors and Inconsistencies	<p>This amendment proposes a number of changes to notification, specifically:</p> <ul style="list-style-type: none"> • correct inconsistencies between terminology used in assessment policies and notification triggers • correct inconsistency between notification triggers and on-boundary development within zones • Remove the requirement to place a sign on land in the Productive Rural Landscape Zone (signs are currently exempt in a Rural Zone). Signs in the Productive Rural Landscape Zone are ineffective as a notification tool, given they are only A3 in size and barely visible on country and rural roads. • Technical and/or typographical errors 	Support
2.3.2.10.3.	Notification Tables – Frost Fans	<p>It has been suggested that frost fans be removed from notification, as they are a form of development which is usually anticipated within horticultural areas.</p> <p>Frost fans are usually a common source of complaint, particularly in areas where dwellings are less dispersed, therefore it has not been recommended to remove frost fans from notification.</p>	<p>Support</p> <p>The local authority still has discretion to determine a frost fan is 'minor' and does not warrant notification, in scenarios where limited frost fans are proposed and they are well setback from sensitive receivers.</p>
2.3.2.10.4.	Notification Tables – Building on railway land / Temporary public service depot	Concerns were raised that all 'building on railway land' type developments are exempt from notification, when	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

		<p>they could take any form and nuisance impacts are unknown.</p> <p>It is proposed to amend the notification table so that building on railway land be pared back, such that only 'railway line' and 'building for the purposes of railway activities' are exempt from notification</p>	
2.3.2.10.5.	Notification Tables – Demolition	<p>The Code currently prescribes the demolition of Local Heritage Places and State Heritage Places as a form of development which requires notification. Demolition of buildings within a Historic Area Overlay currently require notification.</p> <p>Concern has been raised as 'partial demolition' is not included within the notification clause.</p> <p>The Code is proposed to be amended such that demolition includes 'partial demolition' ensuring that partial demolition of heritage places is captured as a notifiable development.</p> <p>Furthermore, it is proposed that buildings in State Heritage Areas (i.e. Goolwa State Heritage Area) and within a Historic Area Overlay are exempt from notification where, in the opinion of the relevant authority, the building is not in keeping with the features of identified heritage value in the State Heritage Area, or in keeping with the historic attributes identified in the Historic Area Statement.</p>	<p>Support</p> <p>Support the inclusion of 'partial demolition'.</p> <p>Support as the amendment will give the Relevant Authority the power to determine that the building is not in keeping with the historic attributes identified in the Historic Area or State Heritage Area.</p>
2.3.2.11.	Building Height – TNV and context – Policy refinement	<p>Amendment of Code policies where a PO relating to building height sometime seeks a different outcome as expressed within a TNV.</p> <p>Amendments proposed to ensure consistent terminology is used for TNV's and ensure that PO's only require development to meet one of two building height outcomes (either expressed within the PO or TNV).</p>	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.2.12.	Building Height, Building Wall Setback and Wall Height – Policy Review	Amendments to definitions of ‘building height’ and ‘wall height’ and inclusion of new definition ‘post height’. (discussed in part 8 – definitions 2.3.8.1 -	Do not support Refer to Part 8, 2.3.8.1
2.3.2.13.	Building Walls and Dwelling Walls – Policy Review	<p>The Code policies reference ‘dwelling walls’ and ‘building walls’ and there is inconsistency in the used term across the various neighbourhood type zones, particularly noting that the term ‘dwelling walls’ then limits the policy to apply to dwellings only, and not other forms of non-residential development which may be envisaged within a particular neighbourhood type zone.</p> <p>The proposed amendment seeks to change reference from ‘dwelling walls’ to ‘building walls’ for all side and rear setback provisions within neighbourhood type zones where the policy is specified to residential buildings.</p>	Support
2.3.2.14.	Common and Minor Development – Overlay Relevance – Assessment Pathways	Deemed to Satisfy (DTS) pathway are proposed to be extended to include identified development types in many Overlays. For example, outbuildings and other ancillary structures may now have a DTS pathway in most Overlays (but not in Heritage, Historic or Native Vegetation Overlays).	Support
2.3.2.15.	Detached Dwellings in Master Planned Zones as an Accepted Development Pathway	<p>Accepted Development pathways for a detached dwellings within a Master Planned Zone is not available in locations where certain overlays are applied.</p> <p>Detached dwellings can only be designated as an accepted development where a Building Envelope Plan has been established.</p> <p>It is proposed to amend the Code such that a number of Overlays are removed from the accepted criteria in Table 1 of Master Planned Zones which will open up more accepted pathways for dwellings and realise the intent of the zone.</p>	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.2.17.	Discrete vs Discreet - Garages & Carports - Policy Review	Correction of a typo relating to the spelling of the word discreet/discrete (to use the word 'discreet').	Support
2.3.2.18.	Discrete vs Discreet - Garages & Carports - Linkages	Removal of linkages to PO and DTS/DPF 10.1 for carports and outbuildings as this is replicated in PO and DTS/DPF 11.	Support
2.3.2.19.	Dwelling Alterations and Building Additions/Alterations – Assessment Pathways	An assessment pathway has been added for Dwelling and Building Additions.	Support
2.3.2.20.	Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages	Correct Code to call up all relevant policies relating to horticulture development and remove Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay from the list of Overlay exclusions for Deemed-to-Satisfy Horticulture.	Support
2.3.2.21.	Interface Height – Multiple Zones: Policy and TNV – Policy Review	Minor technical changes to interface height policies for consistent interpretation, and inclusion of a new interface height policy for development in a Township Main Street Zone	Support
2.3.2.22.	Land Division – Site Contamination – Policy Relevance and Linkage	Ensuring that site contamination policies are called up for land division applications, ensuring matters relating to site contamination are appropriately considered during the assessment.	Support
2.3.2.23.	Non-Residential Outbuildings – New Policy and Assessment Pathways	Outbuildings are not just domestic sheds, as an outbuilding by definition is a building ancillary to another building erected on the site. For example, a shed at the rear of a church. The Code does not have any assessment pathway for non-residential outbuildings, and it is proposed to create new policies and assessment pathways for outbuilding, carports and verandahs to allow for the assessment of these types of development where not associated with a dwelling	Support
2.3.2.24.	Outbuildings - Accepted Development Criteria	Removal of duplication of outbuilding accepted criteria policy	Support
2.3.2.25.	Pool Fencing – Accepted Development Pathway	Inclusion of accepted assessment pathway for pool fencing, to avoid pool fencing requiring a planning consent	Support
2.3.2.26	Primary Street Setback – Use of Building Line	Will ensure ancillary buildings are sited behind the building line.	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.2.27	Replacement Building – Overlay Exclusions: Coastal Flooding Overlay	Assessment pathways to exclude Deemed-to-Satisfy Replacement Buildings where they are located within the “Coastal Flooding Overlay”.	Support
2.3.2.28.	Tourist Accommodation – Total Floor Area – Rural Zones	<p>The current wording DTS/DPF 6.3 in the Rural Zone and Productive Rural Landscape Zone is open to interpretation whether the total floor area should be applied per building or across multiple new buildings forming a single integrated tourist accommodation facility.</p> <p>The Commission has noted that the potential interpretation of DTS/DPF 6.3 as applying individually to multiple buildings (i.e. each individual building within an integrated tourist accommodation facility could be up to 100m² without triggering the policy) rather than to the cumulative total floor area in tourist accommodation use associated with a parcel of land is inconsistent with the intent of PO 6.3.</p> <p>It is proposed to amend DTS/DPF to reflect that the intent is to be a cumulative total.</p>	<p>Support with amendment Generally support this interpretation, and noted that this is only a DTS/DPF trigger. However, PO 6.3 should also be amended to include policy around scale. For example:</p> <p><i>PO 6.3 Tourist accommodation is associated with the primary use of the land for primary production or primary production related value adding industry to enhance and provide authentic visitor experiences, and is of a scale that is ancillary to the primary use of the land and maintains the existing pleasant rural character.</i></p>
Part 3 – Overlays			
2.3.3.1.	Affordable Housing Overlay – Referral Trigger	Minor change to remove referral to SA Housing Authority for their own developments.	Support
2.3.3.2.	Coastal Areas Overlay – Policy Intent	Amendments to PO 4.1 and DTS/DPF 4.7 which are policy improvements within the Coastal Areas Overlay to better clarify intended outcomes based on feedback from the Department for Environment and Water.	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.3.4.	Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 - Linkages	Amendment of linkages to flooding policy PO and DTS/DPF 3.5 to ensure all intended types of development are captured and to ensure consistency in application.	Support
2.3.3.5.	Heritage Adjacency Overlay - Referral	Amendment of the referral trigger in the Overlay to clarify that the relevant authority is tasked with the responsibility to determine if a proposed development may materially affect the context of a State Heritage Place, which is consistent with previous legislation.	Support
2.3.3.7.	Major Urban Transport Routes Overlay - Revised policy and referral triggers	Updates to the suite of transport provisions following review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) to provide greater policy clarity and interpretation.	Support
2.3.3.8.	Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent	Amendments to minor duplication of words 'water quality' in PO 2.1.	Support
2.3.3.10.	Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral	Amendments to referral triggers to clarify the intent to capture referrals for second dwellings (other than where the existing dwelling is to be demolished), tourist accommodation and workers' accommodation.	Support
2.3.3.12.	Prescribed Water Resources Area Overlay – Referral	Amendments to the referral triggers to remove the need for a statutory referral for certain classes of development where a lawful water allocation already exists that can service the new development.	Support
2.3.3.13.	Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation	Amendments to the Historic Area Overlay and Character Area Overlay spatial mapping to show 'Representative Buildings' similar to the way they are currently displayed in the 'Planning Reference' section of SAPPA. This will result in better visibility of representative buildings on spatial mapping and in application of the Code.	Support
2.3.3.14.	River Murray Flood Plain Protection Area Overlay – Outbuildings - Policy intent	Amendments to DTS/DPF 5.4(a) to clarify that doors/removable panels etc. should be located on opposing sides or ends and facing the direction of water flow to enable to the flow of floodwater. This is consistent with previous policy in the Development Plan.	Support
2.3.3.15.	River Murray Flood Plain Protection Area Overlay – Outbuildings – Linkage	Linking PO 4.2 to outbuilding assessments, as this policy relates to this form of development but is not currently applied for outbuildings.	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.3.16.	River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy	Creation of a new PO in the River Murray Flood Plain Protection Area Overlay that specifically requires that development has a lawful, sustainable and reliable water supply that does not place undue strain on water resources in prescribed water areas to complement policies in the River Murray Tributaries Protection Area Overlay and various Prescribed Water Overlays.	Support
2.3.3.17.	River Murray Flood Plain Protection Area Overlay - Referrals	<p>Currently there are too many referrals for a number of developments, which has resulted in more referrals in the Code compared to the former system. It is proposed to amend the referral triggers to remove the need for referrals for dwellings, outbuildings and other buildings subject to specific criteria.</p> <p>This will reduce processing time for a large number of development applications.</p>	Support
2.3.3.18.	River Murray Tributaries Protection Area Overlay – Policy intent	Minor amendment to PO 1.2 to expand the range prescribed water resources areas where undue strain on watercourses should not occur from the listed classes of development.	Support
2.3.3.19.	River Murray Tributaries Protection Area Overlay – Referrals	Amendments to the referral triggers to remove the need for a statutory referral for certain classes of development where a lawful water allocation already exists that can service the new development.	Support
2.3.3.20.	State Significant Native Vegetation Areas Overlay - Referral Trigger	Amendment to the referral triggers to remove the need for a referral to the Native Vegetation Council for 'Level 1 clearance' as categorised in an accredited consultant's report	Support
2.3.3.21.	Traffic Generating Development Overlay – Referral	Currently there is a referral trigger to the Commissioner for Highways where more than 50 allotments are proposed within a Traffic Generating Development Overlay. This amendment seeks to also include '50 dwellings' in the instance that a land division may not be proposed.	Support
2.3.3.22.	Urban Transport Routes Overlay - Revised policy and referral triggers	Updates to the suite of transport provisions following review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) to provide greater policy clarity and interpretation.	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

Part 4 – General Development Policies			
2.3.4.1.	Aquaculture – General Development Policies – Policy Review	Updates to the suite of aquaculture policies to better allow policies to be satisfied if a licence is already granted under the Aquaculture Act 2001, as well as removal of superfluous policy.	Support
2.3.4.2.	Carport and Outbuilding – Internal Parking Dimensions – Linkages	Inclusion of design provisions to be applicable to carports and outbuildings to provide guidance for the assessment of internal dimensions for enclosed parking spaces.	Support
2.3.4.3.	Commercial Forestry - Forestry General Development Policies – Policy Review	Inclusion of commercial forestry as an envisaged use within the Rural Zone and Productive Rural Landscape Zone, as well as amendments to commercial forestry setback provisions	Support
2.3.4.4.	Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways	Creation of an assessment pathway for decks. This will result in quicker assessment timeframes for decks, which currently do not have an assessment pathway and require assessment against the full Code. The new policy provides better guidance for the assessment of decks.	Support
2.3.4.5.	Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance	Amendments to the Design module PO 19.3 to be consistent with equivalent provisions in the Design in Urban Areas module, and correct policy linkages to avoid conflicting policy.	Support
2.3.4.6.	Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review	Amendment to soft landscaping policies to ensure consistent wording and state common property is included in soft landscaping calculations.	Support
2.3.4.7.	Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review	Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 relate to the design of driveways. However, the policy can be difficult to interpret, particularly in relation to the angle of driveways relative to a road. It is proposed to amend the wording of the policy to provide clearer interpretation and supported by a figure.	Support
2.3.4.8.	Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review	Currently no policy exists for heavy vehicle parking. It is proposed to create a new definition (discussed in Part 7 below) and create new policy which guides the assessment of heavy vehicle parking. The new policy is designed to discourage heavy vehicle parking in residential areas and ensure environmental/interface impacts are addressed.	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.4.9.	Housing Renewal General Development Policies - Policy Review	Creation of a note to state that Housing Renewal General Development Policies are only applicable to Housing Trust / Community Housing proposals	Support
2.3.4.10.	Land Division – General Development Policies – Policy Review	Removal of some duplicated land division policies.	Support
2.3.4.11.	Land Division – General Development Policies – Linkages	Create linkages to land division policies PO 2.8 and PO 3.11 which is not currently linked to land division applications and should be linked.	Support
2.3.4.12.	Transport, Access and Parking – General Development Policy – Fences – Linkages	Application of relevant policies from the Transport, Access and Parking module to performance assessed development applications for fences, particularly for policies which related to development on corner allotments and vehicle sightlines.	Support
2.3.4.13.	Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review	Some car parking rates are listed which fit multiple definitions, for example, car parking rates exist for both a pre-school and a childcare centre which is a type of pre-school. The proposed amendment does not seek to change the parking rates for these developments, but rather re-organise the car parking rate tables to ensure consistency.	Support
2.3.4.14.	Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation	The interpretation of which rates to apply with respect to the tables.	Support
Part 7 – Land Use Definitions			
2.3.7.1.	Ancillary Accommodation – Amend	<p>The amendment to include 'is not a self-contained residence' is supported, however the definition may actually result in unintended impacts for our assessment, particularly around the inclusion of the connection to utilities wording in part (d)</p> <p><i>(d) is subordinate to and does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling.</i></p>	<p>Do not support</p> <p>We often have ancillary accommodation proposals that share the same facilities as the dwelling, but sometimes would have a separate waste control system due to complications with changes or connecting to the existing system, or reluctance to install a singular larger system.</p>

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

			It would therefore be better if incorporated into the policy and left as an assessment consideration, rather than being in the definition. This would also then allow for a distinction between water catchment areas, where one system is preferred, and less water sensitive areas.
2.3.7.2.	Caravan and Tourist Park – Amend	Concerns with deletion of this definition and inclusion in the definition of tourist accommodation.	Do not support Could result in unintended consequences, such as proposals for caravan parks in rural areas, as they will be able to be assessed as a form of tourist accommodation. If it is to be included then perhaps additional policy is required to control scale, bushfire requirements and access.
2.3.7.3.	Commercial Forestry – Amend	Minor changes to the definition to better accommodate farm-scale forestry.	Support
2.3.7.4.	Educational Establishment – Amend	Changes from the word 'establishment' to 'facility' to better capture multiple forms of educational facilities.	Support
2.3.7.5.	Indoor Recreation Facility – Amend	It is reasonable to anticipate that an indoor recreation facility may only occupy part of a building, rather than an entire building. This amendment seeks to include the words 'or part of a building' to allow flexibility to apply the land use term to partial land use changes (i.e. a personal training gym within a shopping centre complex)	Support
2.3.7.6.	Office – Amend	Similar to the issue with the indoor recreation facility definition, the definition of 'office' is proposed to be	Support

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

		amended to include 'or part of a building' to provide further clarity that suggests a standalone office within a building can be classed as an 'office'	
2.3.7.7.	Pre-school – Amend	Proposal to change the definition from 'pre-school' to 'child care facility' and include an additional component to allow for out-of-school hour's care (include vacation care). This addition seeks to capture all forms/places or care for children and provide clearer guidance.	Support
2.3.7.8.	Renewable Energy Facility – Policy Refinement	The current definition for renewable energy facility inadvertently captures domestic scale energy facilities, such as solar panels and battery storage. In a number of zones, renewable energy facilities are listed as 'restricted' forms of development, meaning the SCAP is the relevant authority. It is proposed to amend the restricted development tables in all zones, and include exemptions for renewable energy facilities that are for solar panels and battery storage facilities for domestic use only.	Support
2.3.7.9.	Tourist Accommodation – Amend	Concerns with the new definition that includes 'caravan and tourist park' for reasons discussed in 2.3.7.2 above. Otherwise supportive of the changes to the definition.	Partial support Do not support the inclusion of caravan and tourist parks within the definition of tourist accommodation. Support other minor amendments to the definition to capture ancillary onsite facilities and facilities for the management of accommodation
2.3.7.10.	Workers Accommodation – Amend	Minor changes to the definition of workers accommodation to include additional activities that	Support with exception Issue with deletion of 'or similar'.

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

		workers accommodation may be associated with, including bulk handling or freight facilities.	
2.3.7.11.	Heavy Vehicle Parking – New Definition	<p>Heavy vehicle parking currently requires approval, unless it meets the exemptions under the Regulations, which include exemptions for vehicles under 3000kg, a caravan/motor home on and used for residential purposes by a person who is an occupant of a dwelling situated on that land or special circumstances which apply due to the previous dwelling being destroyed by bushfire.</p> <p>The new definition in the Code seeks to capture 'heavy vehicle parking' as a defined land use, which includes the parking of any vehicle exceeding 3000kg in weight (including attached trailers) on land used for residential purposes.</p>	<p>Support</p> <p>The definition assists the authority in the assessment of applications of such nature.</p>
2.3.7.12.	Function Venue – New Definition	Function Venue definition included – broad definition to include indoor and outdoor venues.	<p>Support</p> <p>The inclusion of a definition for a function venue provides a broad definition to capture various commercial activities and uses within the Code.</p>
Part 8 – Administrative Terms and Definitions			
2.3.8.1.	Building Height – Amend	Building Height – changes to the administrative definitions to include natural ground level, although there is still a reference to the lower of the finished level or natural ground level (rather than our preference for natural ground level alone to be the relevant reference for measuring purposes).	<p>Do not support</p> <p>Preference is to use natural ground level alone to be the relevant reference for measuring purposes. This definition does not appear to take into account a dwelling built on stumps or posts, or if there has been any fill put on the site. Therefore,</p>

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

			if a dwelling is elevated on posts or the site has been filled then a dwelling can become higher than the zone height provisions. Although aligning with the old Residential Code areas this has caused problems particularly in areas where views are being taken advantage of.
2.3.8.2.	Building Line – Amend	This term is now only going to apply to ancillary structures.	Support.
2.3.8.3.	Wall Height – Amend	Refer to 2.3.8.1	Do not support.
2.3.8.4.	Catalyst Site – New Definition	Reference made to catalyst sites within policy without a clear definition of what this is.	Support
2.3.8.5.	Direct Overlooking – New Definition	Direct Overlooking administrative definition included – radius of 15 metres from a window or balcony included and 45 degree angle from a window only.	Support with exception Support the definition however difficult to apply in areas where distant views are anticipated such as within coastal areas. Additional policy would assist to allow for the application of distant view considerations. .
2.3.8.7.	Post Height – New Definition	This is related to the wall and building height measurements and requires some further investigation as to the impact of this new definition as it refers back to a measurement from the top of the footing and does not necessarily take into account the natural ground level.	Support with exception. Definition supported provided taken from natural ground level.
2.3.8.8.	Gross Density - Delete	Definition being deleted and being replaced with 'net residential density' which is an existing definition and is a more useful measure for where it applies.	Support

Part 9 – Referrals

**Miscellaneous Technical Enhancement Code Amendment
Alexandrina Council – Consultation Submission**

2.3.9.1.	Environment Protection Authority Referrals - Review of Interpretation and Referral Triggers	Support the amendments. The amendments to referral triggers to remove class 3 activities from requiring referral are noted to be an administrative error when drafting the Code and were never supposed to be captured. Class 3 activities are considered very low risk and applications for development on sites with class 3 activities do not warrant EPA referral, but are still assessed under the Code.	Support
Part 11 – Local Heritage Places			
2.3.11.1.	Listing of State Heritage Places	Support the inclusion of State Heritage Places list in the Code, and disclaimer that they may not be up to date and to refer to the SA Heritage Register. This provides more visibility of State Heritage Places within the Code, and ensures that Local and State Heritage Places are captured in the same document under separate headings.	Support
Other Comments	Policy Call Up	It has been stated on a number of occasions that there is sufficient policy within the Code to assist with making decisions. This is accepted however it needs to be ensured that this policy is being called up at the right time. For example when calling up the policy for a detached dwelling in a Neighbourhood Zone the environmental performance policies within the General Development Policies - Design in Urban Areas are not called up. These are great policies that should be called up when dwellings are being constructed across all neighbourhood type zones.	
	Conservation Zone	There is no assessment pathway for a verandah, whilst there is for other structures such as outbuildings, carports and dwelling addition.	Provide a performance assessment pathway for a verandah.
	Hazards (Flooding – Evidence Required) Overlay –PO 1.1 Linkages	Link PO 1.1 to applications for land division.

OFFICIAL

Good afternoon,

Consultation is now open on the [Miscellaneous Technical Enhancement Code Amendment](#).

The Miscellaneous Technical Enhancement Code Amendment proposes a series of technical amendments which aim to enhance the general performance and operation of the Planning and Design Code (the Code), based on feedback from stakeholders.

Consultation is open from **25 July to 23 September 2022**. All relevant information about the Miscellaneous Technical Enhancement Code Amendment, including information on how to provide feedback, can be found on the [PlanSA portal](#).

In addition, the Planning and Land Use Services Code Amendment Team would like to invite to you an online **practitioners briefing** on this Code Amendment from **10am - 12pm on Wednesday 3 August**.

An overview of the proposed changes will be provided, with a chance to ask questions at the end.

The briefing will be conducted via ZOOM. Visit the Planning and Land Use Services Eventbrite page to register your attendance: [planSAevents.eventbrite.com](#)

Should this briefing time not suit you, the team will be providing the same briefing and overview at the PlanSA Policy Forum on 19 August.

Should you have any questions, please contact the Code Amendment Team on 1800 752 664 or via email at: plansa@sa.gov.au.

Kind regards,

PlanSA

Dear Sir/Madam,

RE: MISCELLANEOUS TECHNICAL ENHANCEMENTS CODE AMENDMENT

Thank you for opportunity to make submission in respect to the Miscellaneous Technical Enhancements Code Amendment.

The Barossa Council administration broadly supports the amendment which seeks to address technical and operational elements to improve the general performance and operation of the Planning and Design Code.

Some of the matters that we specifically support are:

- In relation to the matter of frost fans, we agree with the commentary contained within the consultation document that frost fans can impact on the amenity of nearby residents and therefore warrant some form of public notification;
- We support the removal of public notice signs being required for developments within the Productive Rural Landscape Zone;
- We support the removal of restricted classification for land division within the Limited Land Division Overlay, such that these applications will be assessed by the Council's Assessment Panel or Assessment Manager, but we do flag that land division subject to the Character Preservation Act may be prohibited in circumstances where it will create an additional allotment for residential development. In this circumstance, the Commision may be wish to retain a 'restricted' classification for such land division as it relates to the Character Preservation District;
- We support the explicit reference to safety features within applicable Table 1 Accepted Development Classification tables attached to 'swimming pool or spa pool', so as to enable such developments to be treated as 'accepted' development.

While we support many of the proposed enhancements within the amendment, there are some aspects of the enhancements that we would like to flag for further consideration and there are some omissions that we would like addressed within the amendment.

The following table sets out relevant issues/concerns and offers solution:

Concern/Issue	Suggested solution
<u>Public Notification – Boundary development</u>	
We broadly support the reduction in ancillary developments subject to public notification. Notwithstanding,	Subject retaining walls to public notification, perhaps where they are proposed on a boundary and exceed

premium wine food tourism heritage lifestyle community

<p>the removal of retaining walls from notification is questioned, especially where the retaining wall is of more substantive height (ie. > 1.5m). High retaining walls on boundary can have material impacts upon neighbours in respect to visual and privacy impact and it is considered that adjacent landowners and occupiers should be afforded opportunity to make submission in these circumstances through a public notification process.</p>	<p>1.5m (examples of references to 1.5m within the Hills Neighbourhood Zone and Character Preservation District Overlay).</p>
<p><u>Public Notification – Dwellings in Rural Zone, Productive Rural Landscape Zone</u></p> <p>Dwellings are excluded from public notification within Table 5 of the Rural Zone and Productive Rural Landscape Zone. Excluding dwellings from public notification is questioned as it is considered there are circumstances where public notification may be warranted. Dwellings may result in land use conflict as a result of encroachment upon incompatible activities such as a winery or frost fan. Public notification is considered to be warranted in these instances, especially where such dwellings are not associated with primary production and/or where below a prescribed TNV. Adjacent landowners and occupiers will often be able to provide important insight into local conditions or activities that might inform the Relevant Authority's consideration of whether the proposal is acceptable.</p>	<p>Exclude dwellings from the public notification exemption in Table 5 of the Rural Zone and Productive Rural Landscape Zone or insert appropriate conditions within Column 2 as to when public notification shall apply, such as for example:</p> <p>Except dwelling that does not satisfy any of the following:</p> <ul style="list-style-type: none"> - Is not associated with primary production; - Does not accord with DTS/DPF 5.1, 5.2 or 5.3
<p><u>Performance Outcome 1.1, Rural Zone:</u></p> <p>Performance Outcome 1.1 of the Rural Zone makes explicit reference to "The productive value of rural land for a range of primary production activities and associated value adding, processing, warehousing and distribution is supported, protected and maintained". DTS/DPF 1.1 lists forms of development that are regarded as satisfying the Performance Outcome. Given that the Performance Outcome is expressed in a way that uses should support, protect and maintain the productive value of rural land, there is an inherent tension in that some forms of development listed within the DTS/DPF may have no relationship with primary production, yet are translated as meeting this Performance Outcome of the Rural Zone because the list of</p>	<p>Remove uses within the DTS/DPF 1.1 that are not directly associated with primary production or alternatively amend the expression within the DTS/DPF 1.1 to make it clear that these forms of development must be associated with primary production.</p>

<p>uses is not subject to a qualification. Examples where this scenario can arise are in respect to the following uses:</p> <ul style="list-style-type: none"> - Dwelling - Industry - Shop - Tourist accommodation - Transport distribution - Warehouse <p>In relation to dwellings, the other tension is that a dwelling can be proposed below a TNV yet still be interpreted by this DTS/DPF as meeting the Performance Outcome.</p>	
<p><u>Performance Outcome 2.1, Rural Zone and Productive Rural Landscape Zone</u></p> <p>Performance Outcome 2.1 of the Rural Zone and Productive Rural Landscape Zone seek "Development is provided with suitable vehicle access". While this Performance Outcome is not subject to amendment under this Code Amendment, we have found shortcomings with the DPF in that the DTS/DPF 2.1 seeks "Development is serviced by an all-weather traffickable public road". For larger scale developments, the surface of the road is only one of the considerations as to whether the road access is suitable for the development. For example, is the road wide enough to facilitate two-way movements, does the surface need to be sealed due to the high volume of projected movements. The present construction of the DTS/DPF means that there is limited capacity for Council's to negotiate upgrade to a rural road where the proposed development will exceed the capacity of the existing road.</p>	<p>Amend the DTS/DPF 2.1 to either delete the current reference to provide greater flexibility for the Relevant Authority to address instances where the road width and/or surface is not adequate for the type of land use, or otherwise broaden the principles that should be taken into account when determining whether the vehicle access is suitable.</p>
<p><u>Swimming pool and spa pool safety features:</u></p> <p>The Code amendment makes explicit reference to safety features associated with all references to 'swimming pool or spa pool' within applicable Table 1 Accepted Development Classification Tables. Notwithstanding, the amendment does not appear to make corresponding changes to references within other parts of the Code where 'swimming pool or spa pool' is made. For example, changes to Table 5 – public notification tables within the</p>	<p>Review all references to 'swimming pool or spa pool' within the Planning and Design Code and include in the reference 'and associated swimming pool safety features'.</p>

<p>Amendment make reference to swimming pool or spa pool but there is no corresponding reference to safety features.</p>	
<p><u>Ancillary accommodation:</u></p> <p>We support the amendments to the definition of 'ancillary accommodation'. However, there is a void of policy within the Code specific to ancillary accommodation that can be used to assess an application for performance assessment against.</p>	<p>Similar to the proposed approach within this Code Amendment to decks, we support additional performance assessed policies that are specific to ancillary accommodation.</p>
<p><u>Winery and Beverage Policies, Rural Zone and Productive Rural Landscape Zone</u></p> <p>Substantive policies relating to winery and beverage production contained within the previous Primary Production Zone of the Barossa Development Plan have not transitioned to the Planning and Design Code. As this form of development is common within the Barossa Council, but equally within many of the peri-urban Councils surrounding metropolitan Adelaide, there is strong desire that such policies are reintroduced, in some form within the Planning and Design Code. These policies could also be expanded to include other forms of beverage production such as cideries and distilleries. Previous policies within the Barossa Development Plan were found to be effective in respect to:</p> <ul style="list-style-type: none"> - Establishing appropriate buffers for wineries and beverage production facilities from sensitive receivers; - Triggering public notification where buffers were not achieved for sensitive receivers; - Place obligation that the use should be directly associated with the use of the land (ie. a minimum area of vineyards required to be linked with the winery). 	<p>Reintroduce planning policies from the previous Barossa Development Plan within the Rural Zone and Productive Rural Landscape Zone, specific to wineries and beverage production, or alternatively contain such policies within a new General Module applicable to such forms of development.</p>
<p><u>Tourist accommodation:</u></p> <p>The commentary within the consultation document makes reference to the DTS/DPF 6.3 of the Rural Zone as providing "applicable floor area guidance appropriate to support <u>small-scale, ancillary tourist accommodation...</u>" (my underlining).</p>	<p>Insert reference to 'small-scale' within Performance Outcome 6.4 of the Rural Zone.</p>

<p>While the proposed amendment seeks to make the DPF policy clearer that it is the cumulative total, the Performance Outcome itself makes no reference to small-scale and it is therefore open to all scales of tourist accommodation being submitted. The DTS/DPF is one way the Performance Outcome can be met. Previous policy within the Primary Production (Barossa Valley Region) desired Land Use of the Barossa Development Plan made reference to "<u>diversification of existing farming activities through small scale tourist accommodation</u>". (my underlining)</p> <p>The other issue found with the current policy is that DTS/DPF 6.3 (b) and (c) relate to the size, scale and number of tourist accommodation which has no relationship to the Performance Outcome 6.3 which refers to "tourist accommodation being associated with the primary use of the land for primary production...".</p>	<p>Shift DTS/DPF 6.3(b) and (c) to the DTS/DPF 6.4 that corresponds with Performance Outcome 6.4 which directly relates to "new building or buildings being sited, designed and of a scale to maintain a pleasant rural character and amenity".</p>
<p><u>Camp Ground:</u></p> <p>A campground is a term that is not defined within the Planning and Design Code, despite there being an exclusion within the definition of 'Tourist Accommodation' in Part 7 of the Code to it. We question the rationale for excluding a campground from the definition as we consider a campground takes on a similar character to that of tourist accommodation. Given that a campground is excluded from this definition, it will be 'all other code assessed'. There are limited policies that directly relate to campground within the Planning and Design Code that can be used to assess against, noting that policies applicable to tourist accommodation cannot be applied as a campground is excluded from the definition.</p>	<p>Amend the definition of 'tourist accommodation' to make explicit that a campground is included rather than excluded within the definition. Alternatively, insert a definition for campground and provide appropriate policy within the Code suitable to assess a campground against.</p>
<p><u>Function centres</u></p> <p>The DTS/DPF 6.5(b) associated with Performance Outcome 6.5 refers to the number of persons attending a function, yet the Performance Outcome 6.5 refers to "Function centres are associated with the primary use of the land for primary production or primary production related value adding industry". The DTS/DPF 6.5(b)</p>	<p>Shift DTS/DPF 6.5(b) to the DTS/DPF 6.6 that corresponds to Performance Outcome 6.6 which directly relates to "Function centres are sited, designed and of a scale that maintains a pleasant natural and rural character and amenity".</p>

<p>therefore does not appropriately relate to the Performance Outcome.</p> <p>Noting that a new definition is proposed for 'Function Venue' within the proposed Amendment, will current references within the Rural Zone to Function Centre be amended to that of a 'Function Venue'?</p> <p>In the proposed definition of 'Function Venue', how will the definition address scenarios like a cellar door or restaurant that are used for functions such as weddings on occasions.</p>	<p>Update applicable references to Function Centre within the Rural Zone to 'Function Venue'.</p> <p>Include within the list of exclusions a shop and cellar door. In addition, after the words "Means premises used" insert "primarily" to reflect that facilities that host occasional events/functions are not necessarily a 'function venue'.</p>
<p><u>Multiple Dwelling</u></p> <p>The Development Regulations 2008 previously contained a definition for 'Multiple Dwelling' and this definition was as follows: Means 1 dwelling occupied by more than 5 persons who live independently of one another and share common facilities within that dwelling". The definition has not transitioned over to the Planning and Design Code. It is noted that within the document initiating this Code Amendment, a reference was made that this this definition would be considered under the Code Amendment but a recommendation to address this matter is not contained within the recommended changes.</p> <p>While it is appreciated that the definitions do not determine what constitutes a change in land use, the previous definition provided some guidance as to the maximum number of persons that could live independently within the same building without a development authorisation. The absence of definition has left open to interpretation when shared use of a dwelling by multiple persons constitutes a change in land use. The National Construction Code does address Class 1b use but the definition in the NCC refers to more than 12 persons living within one building. Uses in the nature of a boarding house can impact upon the amenity of a locality by way of parking pressures, demand on utilities and the like. In addition, there is a void of policy in the Code to address such developments.</p>	<p>Insert new definition for multiple dwelling or boarding house within the Code and insert additional policies for assessment within appropriate Zones.</p>
<p><u>Special Event:</u></p>	

<p>The Development Regulations 2008 previously contained a definition to "special event" which read as follows: "Means a community, cultural, arts, entertainment, recreational, sporting or other similar event that is to be held over a limited period of time". This definition has not translated into the Planning and Design Code. There are differing interpretations as to whether a one off or annual event is a change of land use for which a development authorisation is required. Some guidance in respect to how special events should be interpreted would be of assistance.</p>	<p>Insert clause within the PDI (General) Regulations that a special event is not 'development', subject to appropriate terms in relation to the length of the event and the frequency of events.</p>
---	---

As we understand it is not within scope to address spatial anomalies and local technical anomalies under this Code Amendment, we have not made reference to the many previous omissions and anomalies flagged as part of the phase three transition to the Planning and Design Code, which we note are yet to be resolved. We would like to take this opportunity to restate our desire to have these matters addressed and we would welcome opportunity to meet with staff from PLUS to discuss.

I thank you for the opportunity to make submission in respect to the Miscellaneous Technical Enhancements Code Amendment and we look forward to receiving feedback on how our submission will be addressed within the final Code Amendment implementation.

Yours sincerely,

Aaron Curtis

Dear Mr Holden

MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

Thank you for the opportunity to provide comment on the *Miscellaneous Technical Enhancement Code Amendment*. The Council's submission is attached for your consideration, in addition to the comments below.

The Council supports the intent of the Code Amendment, to improve minor and technical aspects of the Code. As the Code has been in operation in Greater Adelaide for 18 months, it is timely to undertake a detailed review of how it has been working in practice, both in terms of policy interpretation and procedural application.

Given the magnitude of the Code and the length of time it has been operational, it is not surprising that this Code Amendment is extensive and covers a broad range of changes. However, the scale and level of detail included in this Amendment has made it very challenging and resource intensive to review and provide feedback, for practitioners and even more so for community members. This has also proved time consuming in responding to enquiries and requests to help the understanding of the community about the proposed Code changes. In this respect, it is requested that future technical Code Amendments are smaller in scale by being focused on particular themes or sections of the Code and/or by being undertaken more frequently with a reduced volume of proposed changes. This would assist stakeholders to better understand and respond to the changes and allow for improved communication and consultation processes.

It is understood this Code Amendment is intended to be limited to minor changes which do not result in meaningfully different development outcomes. However, some of the proposed changes will affect development outcomes and the assessment process of several different development types, and it is considered that additional analysis, explanation and examples should have been provided for some of these changes. There are a number of previously suggested amendments by this Council and other practitioners which have not been included on the basis they are outside the scope of this amendment, but they are considered to result in no more substantial policy change than what has been included. A range of additional suggested amendments have been included at the end of the attached submission, along with other changes which are more substantial but are considered important and necessary improvements to the Code. The Council would like to see a clear pathway and programmed resourcing for how and when these remaining amendments will be progressed.

NPSP Submission – Comments on proposed changes in MTE Code Amendment

<p>2.3.1.1</p>	<p align="center">Application of Spatial Policy Relevant to the Site of the Development</p> <p>Where a zone/subzone/overlay/TNV does not apply to the whole of a site, the spatially based rules are only applicable to the relevant portion of the site.</p> <p>Supported – subject to comments</p> <p>Will this change also affect the application of some clauses in the Regulations which refer to zones or overlays as set out in the Code? For example, pursuant to Schedule 4, certain fencing is exempt from requiring approval provided it is not within a specified flood overlay. Currently, if a portion of a property is in the designated flood overlay, the fence will require approval even if the fence is located on a portion of the site which is not within the overlay. However, we assume this change would mean that approval is not required if the fence is not within the overlay, which is supported.</p> <p>Can further guidance be provided about how to process development applications where the development site is affected by 2 different zones, particularly with respect to category of development, notification requirements etc?</p>
<p>2.3.1.2</p>	<p align="center">Spatial Maintenance Updates</p> <p align="center">Minor spatial amendments to occur outside of a Code Amendment</p> <p>Supported</p> <p>Will there be a public record of these minor amendments in case we need to reference changes to a particular site over time?</p>
<p>2.3.2.7</p>	<p align="center">Urban Corridor Zones – Primary Road Corridor Policy Review</p> <p align="center">Consistency of terminology</p> <p>Not supported – alternative recommendation</p> <p>We acknowledge the inconsistencies in terminology used in the Urban Corridor Zones. However, we do not support a blanket amendment to “primary road corridor (i.e. a State Maintained Road)”.</p> <p>There are roads in NPSP Urban Corridor Zones which will form the primary frontage of a development site but are not a State Maintained Road (e.g. King William Street and The Parade West Kent Town). A variety of policies will be affected by the proposed wording change and these should not be exclusive to development sites with frontages to State Maintained Roads. For example, some policies which would be affected by the change relate to active frontages and building heights and these issues are just as relevant to development sites which are not on State Maintained Roads. If there are policies which are intended to only apply to State Maintained Roads, there should be a clear policy purpose for this distinction (noting that many arterial road issues should or could be addressed through relevant Overlays).</p> <p>We also note there are policies which refer to ‘primary street frontage’, ‘primary frontage’, ‘primary street boundary’, ‘primary street’ etc which are not affected by the proposed policy change. While we don’t think these should be amended to refer to ‘State Maintained Road’ we do recommend a broader review of terminology in the UC Zones to provide greater consistency in the policy wording, other than where there is an intentional difference in policy terminology. Clarification should also be provided for what constitutes a primary frontage. For example, the former Schweppes factory site in Payneham, which was rezoned to Urban Corridor through a 2021 Ministerial Development Plan Amendment, has 4 street frontages, any or all of which could have served as a primary frontage for future development.</p> <p>For reference, an assessment of the policies which will be affected by the proposed change and those which won’t be affected but use similar terminology are outlined in Attachment A.</p>
<p>2.3.2.8</p>	<p align="center">Urban Corridor Zones – Side Boundary Setback</p> <p align="center">Correcting inconsistencies between side setback POs (referencing existing character) and DPFs (prescribing side setbacks which may be inconsistent with existing character)</p> <p>Supported – subject to comments</p> <p>We support correcting inconsistencies between the PO and DPF, provided there are adequate policies applicable in Table 3 in relation to access to internal light and ventilation for neighbours and future property occupants of the development.</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

2.3.2.9	<p align="center">Restricted Development</p> <p align="center">Employment Zone – Industry, Wrecking Yard, Waste Treatment no longer restricted Local Activity Centre / Suburban Activity Centre / Suburban Main Street Zones – Industry no longer restricted Suburban Business – Special Industry now restricted</p>
	<p>Partially supported - refer to comments</p> <p>The changes to restricted development are generally supported in terms of the Council Assessment Panel / Assessment Manager being the relevant authority, however it is important there are adequate policies to address firstly when and where these land uses are anticipated or appropriate and secondly interface between land uses, as discussed in more detail below.</p> <p>With respect to when these land uses are appropriate, we acknowledge that a land use being identified as restricted is not an indication of whether the land use is appropriate or not, as was the case with former non-complying developments. However, in reality a land use being identified as restricted is still a deterrent for applicants given the additional processing, third party appeal rights etc. For these land uses to be removed from a restricted development classification in Table 4, there needs to be clear policy direction at the zone level about what land uses are anticipated. For example, the Employment Zone policies refer to 'low-impact' and 'compatible' land uses and Suburban Business Zone policies refer to uses with 'low level off-site impacts'. This may help to discourage general industry and similarly impactful land uses in these zones. However, the policies for the Local and Suburban Activities Centres and Suburban Main Street Zone are less instructive about the level of impact which is anticipated in the zone and encourage a broader range of uses. This may make it harder to discourage industry uses, despite the fact that industry is more likely to be at odds with the intent of these zones (e.g. with respect to street activation and services to the local community). As such, we consider additional policy is required in Local and Suburban Activity Centre and Suburban Main Street Zones to discourage impactful industry uses.</p> <p>With respect to interface between land uses, in NPSP all of the affected zones have interfaces with sensitive zones or properties, and therefore in many locations general industry will not be appropriate. It is important the general development policies provide clear and instructive guidance for development adjacent to sensitive receivers and are able to be applied to the development. As such, if these uses are removed from Table 4, it is recommended these uses are 'all other Code Assessed' to allow the assessing planner to select the policies relevant to the site circumstances. It is also recommended that additional policy is included in Interface Between Land Uses which speaks against impactful non-residential uses at the interface with sensitive zones or receivers.</p>
2.3.2.10.1	<p align="center">Notification tables – Minor Departure from Notification criteria</p> <p align="center">Ability for RA to determine a variation to one or more notification triggers is minor</p> <p>Supported</p> <p>In addition to this change, we would recommend an enhancement to the DAP which more easily allows the relevant authority to document what departures are considered minor and the rationale for this decision (for both a departure from notification criteria and when the development is considered minor). Currently we need to fill out a separate file note to document this decision, which is time consuming, cumbersome and does not ensure good record keeping and monitoring.</p> <p align="center">Notification Tables – Minor Structures</p> <p align="center">Various minor structures will no longer require notification (e.g. fence, outbuilding, retaining wall etc)</p> <p>Supported - subject to comments</p> <p>We support this change, subject to a strengthening of policies relating to ancillary structures. Refer to the additional recommended inclusion outlined below titled: Amendments to PO for ancillary buildings to provide consistency with DPF. This recommendation is proposed whether or not the change to the notification tables is made through this Code Amendment as it is considered a current policy gap for performance assessed developments.</p>
2.3.2.10.2	<p align="center">Notification Tables – building levels</p> <p align="center">Some tables reference 'storeys' but should reference 'building levels'</p> <p>Supported</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

	<p align="center">Notification Tables – Land Division</p> <p align="center">Most zones exempt land division from notification but some zones (incl UC Zones don't). Update tables so zones exempt land division from notification</p> <p>Supported</p>
<p>2.3.2.10.5</p>	<p align="center">Notification Tables – Demolition</p> <p align="center">Clarify partial demolition constitutes demolition for notification purposes Introduce exemption from notification for buildings in HAO</p> <p>Supported subject to amendment</p> <p>We generally support this amendment, however we are concerned the clause could be misinterpreted with unintended outcomes.</p> <p>It is possible for a SHP or LHP to be not in keeping with the historic attributes identified in the applicable HAS (e.g. it is a unique building constructed in a different era or style to the surrounding area). In this circumstance, someone could interpret the clause to mean the demolition of the SHP or LHP does not require notification on the basis that the demolition is consistent with clause 2. If the exception is re-worded to be an 'or' then this should resolve this issue, as outlined below</p> <p><i>'Except any of the following: development that involves:</i></p> <ol style="list-style-type: none"> <i>1. the demolition (or partial demolition) of a State or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated)</i> <p align="center"><i>or</i></p> <i>2. the demolition (or partial demolition) of a building in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated).'</i>
<p>2.3.2.11</p>	<p align="center">Building Height – TNV and context</p> <p align="center">Amend PO wording so development should either comply with TNV or the meet a qualitative test</p> <p align="center">Urban Corridor Zones</p> <p align="center"><i>Building height is consistent with the [TNV] and otherwise or positively responds to the local context including the site's frontage, depth, and adjacent primary corridor or street width.</i></p> <p>NOT SUPPORTED</p> <p>The TNV heights for the Urban Corridor Zones were carefully selected and consulted upon with the community as part of the 2013 DPA and were considered the maximum appropriate height on either an area or site-by-site basis and supported with nuanced height policy and Concept Plans. The Significant Development Sites policy and Affordable Housing policy allows additional 'bonus' height above the TNV when certain criteria are met. As contained in submissions on the draft P& D Code, we do not support the concept of these 'bonus height' policies, which undermine the policy meaning of "maximum" height. That said, they do at least provide a numerical 'limit' to height increase and require certain criteria to be met.</p> <p>This policy amendment could easily be interpreted as permitting a building height to exceed the TNV, where it is considered that the development 'positively responds' to the context and site conditions etc. This qualitative policy provides no certainty for the community and surrounding property occupants and could in fact undermine the criteria outlined in the other 'bonus height' policies. For example, a an applicant could reference a nearby development which has a different maximum building height TNV, or a site which achieved additional height through the significant development sites policy, and use this as justification for their development responding to the local context.</p> <p>We recommend this policy is amended to:</p> <p><i>Building height is consistent with the [TNV] and otherwise or and positively responds to the local context including the site's frontage, depth, and adjacent primary corridor or street width.</i></p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

	<p align="center">Housing Diversity Neighbourhood Zone <i>Building height is consistent with the [TNV] and is otherwise or is generally low rise, or complements the height of nearby buildings.</i></p> <p align="center">Local Activity Centre, Suburban Activity Centre, Employment Zones <i>Building height is consistent with the [TNV] and is otherwise or is generally low rise to complement the established streetscape and local character.</i></p> <p>Supported We note that the TNV in some HDN Zone locations in NPSP is 3 storeys, however the qualitative test would generally prevent a development exceeding 2 storeys in areas where the TNVs is 2 storeys.</p> <p align="center">Suburban Main Street <i>Building height is consistent with the [TNV] and otherwise or is low-to-medium rise, where the height commensurate with the development site's frontage and depth as well as the main street width, to complement the main street character.</i></p> <p>NOT SUPPORTED Medium rise is defined as 3-6 storeys whereas the SMS Zone areas in NPSP have a TNV of 2 storeys. We also note the policy seeks development which "complement(s)" rather than is "consistent with" the main street character. As such, this policy (as amended) could allow building heights which exceed the TNV and result in associated poor development outcomes.</p> <p align="center">Community Facilities Zone <i>Building height is consistent with the [TNV] or otherwise is generally consistent with the prevailing character of the locality and height of nearby buildings.</i></p> <p>Supported NPSP does not currently have TNVs specified for CF Zone</p>
<p>2.3.2.12</p>	<p align="center">South facing wall - Policy review Consistently use the term 'south facing' rather than 'wall facing a southern boundary'</p> <p>Supported</p> <p align="center">Wall height definition Wall height definition amended so it's taken from footings or natural ground level, depending on what the policy says.</p> <p>Comments We acknowledge this amendment is providing clarification and correcting inconsistencies and therefore we don't oppose this amendment in principle. We also acknowledge that since the use of Rescode provisions, wall height in some circumstances / areas has been measured from the top of the footings. However, we remain concerned about the potential maximum wall heights (particularly boundary walls) which can be achieved given Design in Urban Areas DTS 8.1 allows for fill up to 1m high, potentially resulting in boundary walls which are 4m high above neighbouring ground level and 11.5m long. The potential impact of a wall this long and high, particularly through a DTS pathway, is not considered reasonable. It would be preferable if a lower fill level or boundary wall height was permissible through DTS, and higher levels of fill or larger boundary walls can be assessed through a performance assessed pathway.</p> <p>We support ancillary buildings maintaining a wall height measured from natural ground level rather than the footings, as ancillary buildings are more commonly adjacent to private open space / areas with visual outlook on neighbouring properties and are generally expected to be minor structures. As such, wall heights should be measured from NGL to minimise visual impact, particularly through DTS pathways.</p> <p align="center">Building Height definition Some zones (typically former Rescode) will have building height measured from top of the footings rather than NGL</p> <p>NOT SUPPORTED As per the comments above, we are concerned about building height being measured from the top of the footings when up to 1m of fill can occur for a DTS development. We acknowledge there is a difference in how wall and building heights are measured, but there is greater flexibility in designing total building height (i.e. through reduced ceiling heights, roof pitch and design etc) and a total building height of 10m is considered excessive and unnecessary in many circumstances, at least through a DTS pathway.</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

2.3.2.13	<p align="center">Setbacks</p> <p align="center">Changes from 'dwelling' to 'building' to ensure policies apply to non-residential buildings</p> <p>Supported (with further changes for consistency) Support change from 'dwelling' to 'building' to capture non-residential buildings. We recommend this change also extends to the Business Neighbourhood Zone, which although is not a neighbourhood zone, does have a mix of residential and commercial uses envisaged. Specifically, the following BN Zone policies should be reviewed:</p> <p>PO 3.4 <i>Dwelling</i> boundary walls are limited in height and length to manage visual and overshadowing impacts on adjoining residential properties.</p> <p>DTS/DPF 3.4 Except where the <i>dwelling</i> is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b):...</p> <p>PO 3.6 <i>Buildings</i> are set back from side boundaries to provide:</p> <ul style="list-style-type: none"> a) separation between <i>dwelling</i>s in a way that complements the established character of the locality b) access to natural light and ventilation for neighbours. <p>PO 3.7 <i>Buildings</i> are set back from rear boundaries to provide:</p> <ul style="list-style-type: none"> a) separation between <i>dwelling</i>s in a way that complements the established character of the locality b) access to natural light and ventilation for neighbours c) open space recreational opportunities d) space for landscaping and vegetation. <p>We also recommend consideration be given to whether separate setback policies should be developed which require greater setbacks for group dwellings and RFBs which often extend for almost the full length of a property and present an overall larger bulk and scale than typical detached or semi-detached dwellings.</p>
2.3.2.14	<p align="center">Overlays – Natural Resources and Environment Overlays</p> <p align="center">Applicability of Stormwater Management Overlay</p> <p>Comments We recommend that SMO policies are applied to dwelling additions above a specified floor area, noting that an additional SMO policy may need to be developed to ensure the requirements are commensurate with the scale of development.</p> <p align="center">Overlays – Affordable Housing</p> <p>Note Table 5 indicates the Affordable Housing Overlay doesn't apply to detached, semi-detached and row dwellings but it looks like it does in the Code? Perhaps this is an error?</p> <p align="center">Overlays – Future Road Widening</p> <p>Note Table 5 indicates the Future Road Widening Overlay doesn't apply to ancillary structures, but it looks like it does in the Code. Is this intended to change or is this an error?</p>
2.3.2.16	<p align="center">Detached dwellings – Medium and High Rise policy relevance</p> <p align="center"><i>Med & high rise policies don't apply to detached dwellings (i.e. 3 storey detached dwellings are missing policies)</i></p> <p>Supported subject to amendments We initially raised this anomaly for suggested policy change, however the changes in the Code Amendment do not address the policy gap issues we raised with PLUS, which were primarily concerned with a lack of landscaping, tree planting and WSUD (specifically water retention and reuse) policies and waste collection for multiple dwelling sites. While we support including the additional policies as proposed, there are several other Design in Urban Areas policies which should be applied to detached dwellings in this zone (particularly landscaping and WSUD) to ensure 3+ storey detached dwellings can be assessed against appropriate policy. However, we note there appears to be a lack of specific or instructive WSUD</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

	policy which should also be considered through this Code Amendment, or a separate Code Amendment if it is outside the scope of the MTE CA. This policy should be developed as a priority.
2.3.2.17	<p align="center">Discrete vs Discreet</p> <p align="center"><i>Discrete used instead of discreet. Amendment to use discreet</i></p> <p>Supported</p>
2.3.2.18	<p align="center">Established Neighbourhood PO 10.1</p> <p align="center"><i>Unnecessary application of this policy to carports and garages which are proposed as separate elements as DPF 11.1 has the same effect</i></p> <p>Supported</p>
2.3.2.19	<p align="center">Building Alterations – Assessment Pathways</p> <p align="center"><i>Clarification that a reference to a land use includes: change of use, construction of, or alteration to 'Building alterations' substituted into Table 1 in lieu of 'Internal Alterations'</i></p> <p>NOT SUPPORTED</p> <p>We support the clarification that reference to a land use can include an 'alteration' of a building containing that land use. However, we do not support the substitution of 'Internal Alterations' with 'Building Alterations' for the reasons outlined below.</p> <p>External building alterations could have meaningful physical impacts even outside the HAO. Examples include changes to privacy treatments on upper-level windows, substantial changes to building design in the Character Area Overlay or zones which provide specific design guidance such as high street zones (e.g. altering the façade to include large expanses of glazing or bricking up windows). We note that in some circumstances these changes could constitute a variation to a previous approval in its own right, but this will not always be the case. With respect to the HAO clause, substantial changes to the sides of the building could occur in a way which detrimentally affect the historic value of the building, such as the total replacement of side walls beyond the facade.</p> <p>It is considered the following current criteria relating to internal building work provides sufficient flexibility to allow minor external changes to occur through an accepted pathway: <i>"Other than where located within the HAO there will be no alteration to the external appearance of the building to any significant degree"</i>. On numerous occasions in the past, this clause has allowed us to process internal fit out applications as accepted (or previously Sch1A) where the fit out requires minor external changes. More substantial external alterations can be assessed with consideration given to potential impacts on the streetscape or neighbouring properties.</p>
2.3.2.21	<p align="center">Interface Height – Building Envelope Policy</p> <p align="center"><i>Amend building envelope policy in various zones such that it does not apply where the residential property / zone is separated by a road</i></p> <p>NOT SUPPORTED</p> <p>In the transition to the Code, the building envelope policy in Urban Corridor Zones was amended such that it no longer applied where the site was separated from the residential property / zone by a road, and only applied where the site shared a boundary with the residential property. NPSP previously objected to this change in our Phase 3 Code submission.</p> <p>Similarly, we do not support the proposed change to building envelope policy in other zones. We are of the view the building envelope policy provides a more appropriate transition to sensitive receivers than the qualitative policy relating to transition in scale across the road, particularly in circumstances where the road which separates the properties is very narrow.</p>
2.3.2.22	<p align="center">Land Division – Site Contamination Policy</p> <p align="center"><i>Link site contamination policy to performance assessed land divisions</i></p> <p>Supported</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

2.3.2.23	Non-residential outbuildings <i>Include policies relating to non-residential outbuildings</i>
	Supported We note that the outbuilding should be used for genuinely ancillary and secondary purposes (e.g. storage or car parking) and not as an additional area for undertaking the a commercial use, so as to avoid potentially issues affecting neighbours, such as noise / odour / smoke etc. In instances where the outbuilding is used for an expansion of the existing non-residential use and is causing impact issues, this will need to be addressed through compliance action.
2.3.2.24	Outbuildings – Accepted criteria <i>Amend Table 1 to remove duplicated</i>
	Supported
2.3.2.25	Pool fencing – Accepted Development Pathway <i>Amend Table 1 such that swimming pool safety features associated with a pool are accepted</i>
	Supported
2.3.2.26	Primary Street Setback – Use of ‘building line’ <i>Amend front setback policies to allow dwellings to be the average setback of both adjoining dwellings where one of those setbacks is a secondary street setback and removing clause relating to adjoining dwellings separated by a road</i>
	Supported This change is generally supported, however we recommend stronger policy is included the Historic Area and Character Area Overlays where the proposed policy change could result in negative streetscape outcomes. For example HAO PO 2.4 could be amended as follows: HAO & CAO PO 2.4 <i>Development is consistent with the prevailing front and side boundary setback pattern in the character area, provided the development does not detrimentally affect the streetscape or the setting of adjacent buildings which demonstrate the historic characteristics as expressed in the Historic Area Statement.</i> We also recommend additional policy is included in the HAO and CAO regarding development of corner sites, to ensure development adequate addresses both street frontages.
2.3.2.27	Replacement Building – Overlay Exclusions: Coastal Flooding Overlay <i>Exclude DTS Replacement Buildings from Coastal Flooding Overlay</i>
	Supported – but note recommended amendment We have no objection to the amendment as proposed, however we have previously recommended that the Hazards (Flooding – General) Overlay also be an exclusion for DTS replacement buildings. Currently there are no FFL requirements applied to Replacement Buildings which are affected by the Flooding – General Overlay. This is considered to present an unreasonable level of risk. As such, the Flooding – General Overlay should be an exclusion for a DTS pathway for replacement buildings, or at least the relevant Overlay DTS policies should be applied in Table 2, so that replacement buildings meet the necessary FFL requirements.
2.3.3.1	Affordable Housing Overlay – Referral Trigger <i>Remove unnecessary referral to SAHA when SAHA is the applicant. Also amend referral trigger to resolve processing confusion</i>
	Suggest revision The referral criteria as proposed appears to only require a referral where the development is already proposing affordable housing, but this doesn’t capture developments where the applicant has not proposed to include affordable housing. Could the criteria require a referral for any development with 20 or more dwellings to allow SAHA to provide advice or direction regarding the provision of affordable housing in the development?

NPSP Submission – Comments on proposed changes in MTE Code Amendment

2.3.3.3	<p style="text-align: center;">Design Overlay Referral <i>Allow a discretionary referral to Gov Architect for variation applications</i></p> <p>Supported – subject to comments Support the ability to refer variations to the Government Architect, however it is recommended that the relevant authority err on the side of caution to allow the Government Architect to determine what variations are minor or do not affect the intent of the referral to avoid “minor” changes, such as changes to materials, from negatively affecting the original intended design outcome.</p>
2.3.3.4	<p style="text-align: center;">Hazards (Flooding) Overlay <i>Correct inconsistencies and errors in application of H(F)O policies</i></p> <p>Supported</p>
2.3.3.5	<p style="text-align: center;">Heritage Adjacency Overlay <i>Amend referral wording to clarify the RA can determine whether development materially affects SHP</i></p> <p>Supported</p>
2.3.3.7	<p style="text-align: center;">Major Urban Transport Routes Overlay <i>Revised policy and referral triggers – e.g. change of use from residential to small office / consulting room no longer requires referral</i></p> <p>Supported</p>
2.3.3.13	<p style="text-align: center;">Representative Buildings in SAPP <i>Spatially map RBs in HAO in SAPP</i></p> <p>Supported subject to comments We support the inclusion of Representative Buildings (RBs) in the spatial mapping of the Historic Area Overlay in SAPP as this will improve visibility of which properties are identified as RBs.</p> <p>However, we recommend the line of enquiry Code tool should also identify RBs, and the HAO policy should be clearer about the purpose and role of RBs. We note these require significant system changes or are considered outside the scope of this Code Amendment. However, it is our opinion that referencing RBs in the HAO policy does not ‘change the goal posts’ with respect to RBs that already exist.</p> <p>RBs are defined (in part) as: <i>“buildings which display characteristics of importance in a particular area”</i></p> <p>The HAO demolition policy PO 7.1 anticipates the retention of buildings which: <i>“demonstrate the historic characteristics as expressed in the Historic Area Statement”</i></p> <p>Therefore, we are of the view that since RBs are recognised as having characteristics important to the local area, and the demolition policy seeks the retention of buildings which demonstrate historic characteristics in the HAS (which is reflective of the local area), RBs are envisaged as being retained by PO 7.1 (noting this is not to the exclusion of other buildings). Therefore, it is not considered a policy ‘shift’ to recognise RBs (in <u>addition</u> to other contributing buildings) in this policy. On this basis we recommend PO 7.1 is amended through this Code Amendment, or if not, a subsequent Code Amendment be prioritised to clarify the purpose and role of RBs.</p>
2.3.3.21	<p style="text-align: center;">Traffic Generating Development Overlay <i>Policy and referral changes to provide consistency in land use applications with 50+ dwellings and land divisions with 50+ allotments</i></p> <p>Supported</p>
2.3.3.22	<p style="text-align: center;">Urban Transport Routes Overlay <i>Revised policy and referral triggers – e.g. change of use from residential to small office / consulting room no longer requires referral</i></p> <p>Supported</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

<p>2.3.4.2</p>	<p align="center">Carport & Outbuilding internal dimensions linkages</p> <p align="center"><i>Improve policy linkages to ensure minimum internal dimensions are applied to all carports and garages</i></p> <p>Supported Subject to comments</p> <p>This amendment is supported, however we consider the minimum dimensions outlined in DiUA 23.1 are insufficient for larger common vehicles and should be increased to ensure convenient and practical use of garages.</p>
<p>2.3.4.4</p>	<p align="center">Decks – Assessment Pathways</p> <p align="center"><i>Provide policies and assessment pathways specific to decks</i></p>
	<p>Supported – subject to comments</p> <p>The inclusion of policies and assessment pathways specific to decks is supported, however we have the following concerns:</p> <p>We recommend including policy to ensure privacy screens associated with decks are not so high that they have an unreasonable visual impact on neighbouring properties. That is, there should be a maximum as well as a minimum screen height for DTS decks and a deck which has a FFL that requires a screen which exceeds the maximum should be performance assessed. A DPF policy should be included for performance assessed decks to articulate that where a deck FFL is so high that the necessary screening height for privacy results in an adverse visual impact on neighbours, the deck FFL should be reduced.</p> <p>DTS X.1 (a)(iii) states: <i>“when attached to the dwelling, has a finished floor level consistent with the finished floor level of the dwelling”</i></p> <p>Recommend this is amended to require the FFL to be <i>no greater than</i> the FFL of the dwelling as the proposed policy currently reads as though a deck with a lower FFL would be excluded from the DTS pathway. There doesn't appear to be a maximum FFL for decks which are not attached to a dwelling; this could also be specified as being no higher than the FFL of the dwelling or an otherwise specified maximum FFL, at least for the purposes of a DTS pathway.</p> <p>A deck associated with a commercial use could result in unreasonable noise or other impacts for neighbours. e.g. a deck accommodating a beer garden, outdoor dining or entertainment area. Decks associated with commercial developments should be excluded from a DTS pathway to allow an appropriate assessment of impacts and a greater setback from boundaries. Additionally, Table 3 should include relevant 'Interface between land uses' policies. The policies as drafted also indicate that a deck associated with a commercial use does not need to be in line with or behind the main building. While there are many mixed use or commercial streetscapes where this may be suitable and beneficial for active frontages, this will not be the case in every circumstance and should be reconsidered. Finally, PO X.2 refers to 'minimising' overlooking and we recommend this is amended to "prevent 'direct overlooking'".</p>
<p>2.3.4.6</p>	<p align="center">Soft landscaping policy</p> <p align="center"><i>Include minimum dimension for soft landscaping in DIUA 19.1. Amend DPF 22.1 to clarify the soft landscaping requirement applies to the whole site, not individual sites for group / RFBs.</i></p> <p>NOT SUPPORTED – alternative recommendation</p> <p>The effect of this policy amendment / interpretation is that some dwellings in a group dwelling or RFB could have little or no direct access to soft landscaping which could lead to poor amenity, increased energy costs and urban heat outcomes. The POS requirements in Design In Urban Areas Table 1 are very minimal at any rate, particularly the 24m² for sites <301m². During consultation on the Code, PLUS staff explained that other policy parameters such as soft landscaping requirements and site coverage would essentially regulate the size of backyards, however this proposed amendment removes the soft landscaping requirement, which could have a flow on effect resulting in a reduction in private yard sizes. Additionally, there is no site coverage requirement in the HDN Zone (where group dwellings and RFBs are most common) and in NPSP there is no minimum site area for RFBs in the HDN Zone.</p> <p>If the intent of this policy amendment is retained, we recommend a further amendment to DPF 22.1(a) such that where the average site area of the dwellings on the site is <150m², 15% of the total site should be soft landscaping as 10% soft landscaping across the total site is considered insufficient to offset this level of density / infill.</p>

NPSP Submission – Comments on proposed changes in MTE Code Amendment

2.3.4.7	<p align="center">Driveways – DIUA 23.5 <i>Reword policy relating to driveway angle to clarify how to apply the policy</i></p> <p>Supported</p>
2.3.4.9	<p align="center">Housing Renewal Policies <i>Include advisory note to clarify that Housing Renewal Policies should only be applied to Housing Trust Community Housing proposals</i></p> <p>Supported</p>
2.3.4.10	<p align="center">Land Division Policy Review <i>Consolidate repeated policies</i></p> <p>Supported</p>
2.3.4.11	<p align="center">Land Division Policy Linkages <i>Include Land Division PO 2.8 and 3.11 in relevant Table 3s (currently missing)</i></p> <p>Supported</p>
2.3.4.12	<p align="center">Fences – Policy Linkages (sightlines) <i>Link policies relating to preservation of sightlines for fences</i></p> <p>Supported</p>
2.3.4.13	<p align="center">Car parking rates table review <i>Amend car parking rates table to align land use wording with definitions and avoid conflicting car parking rates for sub-classes of the same land use</i></p> <p>Supported</p>
2.3.4.14	<p align="center">Car parking rates for designated areas <i>Amendments to reduce confusion on whether a property falls within a designated area or not</i></p> <p>Supported</p> <p>We support any amendments which clarify how and when to apply designated area rates, however a further improvement would be for SAPPa to map 'High Frequency Public Transit Area' and/or 'Designated Areas'.</p> <p>It is also recommended that guidance be provided on how to apply the minimum and maximum car parking rates. It is our interpretation that a development has satisfied the relevant DPF + Table 2 when the minimum car parking rate has been provided, and the maximum car parking rate is specified to prevent an over-supply of car parking which may undermine the overall policy intent of encouraging alternative forms of transport. The alternative interpretation (which we do not think is applicable) is that the relevant authority can set a required car parking provision from within that range – i.e. can require the applicant to apply above the minimum requirement, provided it is no more than the maximum.</p>
2.3.7.1	<p align="center">Definition – Ancillary Accommodation <i>Amend land use definition</i></p> <p>Supported – subject to comments</p> <p>We recommend greater clarity is provided in the distinction between 'ancillary accommodation', 'outbuilding' and 'dwelling addition' for freestanding 'rumpus room' or 'studio' style buildings. Freestanding rumpus rooms or studios are a really common form of residential development. They are typically designed to be an occupied room associated with the main house and normally do not have facilities typical of a granny flat, such as a bathroom or kitchenette. We have historically lodged these as 'habitable outbuildings' but this is not an ideal description, given outbuildings are defined as a non-habitable building. We don't typically use 'ancillary accommodation' if they don't appear to be intended as accommodation separate to the main house. We also note that in the DAP 'Ancillary Accommodation' falls under the category of 'New Housing' which these proposals are clearly not, and to submit such applications under 'New Housing' could misrepresent the nature of accommodation available in a particular area. We have also not typically used 'dwelling addition' where they are detached from the main dwelling.</p> <p>Discussions with other Councils have indicated a variety of approaches to what elements are selected for this type of development. As such, clarification or guidance on what element should be selected for rumpus rooms / studios would be appreciated and would ensure a consistent approach across relevant authorities.</p>

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Minor and Technical Changes

The following are suggested changes which are minor or technical and are recommended to be included in the current Code Amendment

Business Neighbourhood – Policies applicable to Shops, Offices and Consulting Rooms

The following are the *Land Use and Intensity* policies in the BN Zone

PO 1.1 *Housing and accommodation types appropriate to the locality complemented by shops, offices, consulting rooms and other non-residential uses that do not materially impact residential amenity.*

PO 1.2 *Business and commercial land uses complement and enhance the prevailing or emerging neighbourhood character.*

PO 1.3 *Changes in the use of land between similar businesses encourages the efficient reuse of commercial premises and supports continued local access to a range of services compatible to the locality.*

Although each of these 3 policies appear to be relevant to shops, offices and consulting rooms, Table 3 is not consistent in the policies that are applied to each land use:

Business Neighbourhood Zone Table 3	
Land Use	Zone Policies (Land Use and Intensity)
Consulting Room	PO 1.1, PO 1.2, PO 1.3
Office	PO 1.1, PO 1.2
Shop	PO 1.1

Recommend the policies applied in Table 3 are amended to be more consistent across these land uses

Boundary Development – Differences between Accepted and DTS for Carports and Verandahs

The tables below illustrate differences between accepted and DTS pathways for common ancillary development types in different neighbourhood zones. Comments included below each comparison provide recommended amendments for greater consistency

General Neighbour.	Accepted	DTS
Carport	<p>8. <i>If situated on or abutting a boundary (not being a boundary with a primary street) - a length not exceeding 11m unless:</i></p> <ul style="list-style-type: none"> a) <i>a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary; and</i> b) <i>the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent.</i> <p>9. <i>If the carport abuts or is situated on the boundary of the allotment (not being a boundary with a primary street):</i></p> <ul style="list-style-type: none"> a) <i>it will not result in all relevant walls or structures located along the boundary exceeding 45% of the length of the boundary; and</i> b) <i>it will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or abut the proposed wall or structure.</i> 	<p><i>Ancillary Buildings and Structures</i> DTS/DPF 11.1</p> <p>(e) <i>if situated on a boundary (not being a boundary with a primary street or secondary street), do not exceed a length of 11.5m unless:</i></p> <ul style="list-style-type: none"> i. <i>a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary and</i> ii. <i>the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent</i> <p>(f) <i>if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary will not exceed 45% of the length of that boundary</i></p> <p>(g) <i>will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or about the proposed wall or structure</i></p>

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

The length of an accepted carport can be 11m whereas the length of an accepted verandah as well as the length of a DTS carport or DTS verandah, is 11.5m. These should be consistent.

Verandah	8. Length - does not exceed 11.5m if any part of the structure abuts or is situated on a boundary of the allotment.	<p>Ancillary Buildings and Structures DTS/DPF 11.1</p> <p>(h) if situated on a boundary (not being a boundary with a primary street or secondary street), do not exceed a length of 11.5m unless:</p> <p>iii. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary and</p> <p>iv. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent</p> <p>(i) if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary will not exceed 45% of the length of that boundary</p> <p>(j) will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or about the proposed wall or structure</p>
----------	--	--

The criteria for an accepted verandah does not include parameters relating to a maximum of 45% of development along the boundary length or boundary structures not being within 3m of another boundary structure. This could lead to an accepted development resulting in an overall greater level of boundary development than a DTS development. The accepted criteria for a verandah should be consistent with a carport.

Note, the same issue applies for a verandah in the Housing Diversity Zone.

Established Neighbour.	Accepted	DTS
Carport	N/A – no accepted pathway	<p>(e) if situated on a boundary (not being a boundary with a primary street or secondary street), a length not exceeding 8m unless:</p> <p>v. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary and</p> <p>vi. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent</p> <p>(f) if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary not exceeding 45% of the length of that boundary</p> <p>(g) will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or about the proposed wall or structure</p>

Not sure why there isn't an accepted pathway for carports if there is a DTS pathway?

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Verandah	8. Length - does not exceed 8m if any part of the structure abuts or is situated on a boundary of the allotment	<p>DTS / DPF 11.1</p> <ul style="list-style-type: none"> i. if situated on a boundary (not being a boundary with a primary street or secondary street), a length not exceeding 8m unless: <ul style="list-style-type: none"> i. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary and ii. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent ii. if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary not exceeding 45% of the length of that boundary iii. will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or abut the proposed wall or structure
<p>As per the comments for the GN Zone, we recommend the accepted criteria for a verandah should include parameters relating to 45% boundary development and no boundary structures within 3m of another structure, to be consistent with the DTS criteria.</p>		

Table 5 – Interpretation

We note a s76 Code Amendment following the ERD Committee review of the Phase 3 Code resulted in some amendments to the interpretation clauses and wording across Table 5 procedural matters tables. However, we consider the tables are still difficult to interpret and should be further revised.

We consider the following amendment should be made to the ‘minor test’ contained in Clause 1 to clarify the relevant authority only needs to apply the minor test to the element(s) which triggered notification. e.g. in the case of a dwelling addition at the rear of a Local Heritage Place, the partial demolition of the Local Heritage Place triggers notification but this could be considered minor, without the need for the planner to apply the minor test to the dwelling addition which in its own right doesn’t require notification:

***Development** An element of the development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners of occupiers of land in the locality of the site of the development.*

It is also recommended the interpretation clause is revised to provide a clearer intent. For example the following clause implies that if there are 2 elements in the development, and one of those elements is excluded from notification then the whole development is excluded from notification even if the other element in its own right would require notification. It is recommended this is amended to clarify this is not the case:

Where a development or an element of a development falls within more than one class of development listed in Column A, it will be excluded from notification if it is excluded (in its entirety) under any of those classes of development. It need not be excluded under all applicable classes of development.

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Clarify interpretation of 'site' for Table 1 – Private Open Space

Dwelling Type	Minimum Rate
Dwelling (at ground level, other than a residential flat building that includes above ground dwellings)	Total private open space area: (a) Site area < 301m ² : 24m ² located behind the building line. (b) Site area ≥ 301m ² : 60m ² located behind the building line. Minimum directly accessible from a living room: 16m ² / with a minimum dimension 3m.

We have previously had an applicant of a group dwelling development form the view that because the average site area for the dwellings was <301m² (taking into account common area), all dwellings could have the minimum 24m² POS despite some dwellings having an individual site area which exceeded 301m². In support of this view, he referenced that site area for group dwellings is commonly referenced as an average site area across the site (e.g. the minimum site area specified at the zone level).

Recommend Table 1 is refined to clarify how to calculate and apply POS requirements for group dwellings / RFBs)

DTS Land Division criteria

Land divisions in General Neighbourhood and Housing Diversity Neighbourhood Zone (and perhaps other zones) can be DTS if they meet the following criteria:

GN Zone DTS 2.3

Division of land satisfies (a), (b) or (c):

- a) reflects the site boundaries illustrated and approved in an existing development authorisation under the Development Act 1993 or Planning, Development and Infrastructure Act 2016 where the allotments are used or are proposed to be used solely for residential purposes

or

Land Division DTS 1.1

Division of land satisfies (a) or (b):

- a) reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016 where the allotments are used or are proposed to be used solely for residential purposes

The term 'development authorisation' is defined in the Act as "any assessment, decision, permission, consent, approval, authorisation or certificate required by this Act...". Although it's exceptionally unlikely, given building consents can be issued prior to planning consents, it is possible for a land division to be DTS on the basis the dwellings have received a building consent without having received a planning consent.

Recommend 'development authorisation' is replaced with 'planning consent' or 'development approval'.

Non-residential uses in neighbourhood zones

The policies relating to non-residential uses in many residential zones refers to a site which 'abuts an Activity Centre'. We've recently had a query as to whether a property which is directly adjacent to the Activity Centre but is separated by a road, counts as a property which 'abuts' the Activity Centre. Assuming this reflects the intent of the policy, it would be useful for the policy be amended to the effect of 'the development site shares a boundary with a property in an Activity Centre'

Recommend definition is provided for for 'abuts' or clarification is provided in the policy.

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Amendments to PO for ancillary buildings to provide consistency with DPF

The policy relating to ancillary buildings in many neighbourhood zones provides the following PO:

PO 11.1 Residential ancillary buildings and structures are sited and designed to not detract from the streetscape or appearance of buildings on the site or neighbouring properties.

This PO appears to focus two desired outcomes: 1) on impacts on the streetscape and 2) not detracting from the appearance of buildings on the site or neighbouring properties. While some ancillary buildings could have an impact on the street (e.g. carports), the more relevant concerns for most ancillary buildings is 1) impacts on neighbouring properties with respect to visual outlook / access to light and 2) the siting of the outbuilding and how much of the subject land should be developed (e.g. limiting the size of the ancillary structure, retaining soft landscaping etc). These issues are addressed in the DPF but not reflected in the PO.

When an ancillary building is performance assessed, the PO is the relevant policy which is applied. Although the DPF refers to limiting impacts on neighbours and maximising soft landscaping, the fact that these are not reflected in the PO makes it difficult to push for these outcomes in a performance assessed development. For example, an applicant could argue that if their outbuilding in the rear of the site doesn't have a streetscape impact and doesn't 'detract from the appearance of buildings', then it meets the PO, notwithstanding any visual impacts on the neighbour.

Recommend amending the PO to reflect the full scope and intent of the criteria in the DPF, or at least recommend including policies such as DiUA PO 20.3 (visual impact) and PO 22.1 (soft landscaping) in Table 3 for ancillary structures in residential zones. This recommendation also extends to the new ancillary buildings policy outlined in amendment 2.3.2.23. We also recommend a review of the other structures proposed to be exempt from notification to ensure there are adequate policies able to be applied to assess impacts on neighbouring properties

DIUA PO 4.1 – Access to Sunlight

Design in Urban Areas PO 4.1

Buildings are sited, oriented and designed to maximise natural sunlight access and ventilation to main activity areas, habitable rooms, common areas and open spaces.

This policy is useful for encouraging / supporting developments to improve access to natural light for future occupants of a development, however it does not appear to be included in Table 3 for many residential development types.

Recommend this policy is included in Table 3 for more developments

Ancillary Accommodation – Potential for overlooking from mezzanines or second storeys

None of the policies applicable to ancillary accommodation in Table 2 or 3 in most neighbourhood zones specifically limit the building to one storey or prevent there being a mezzanine. Although Ancillary Development DPF 11.1 limits wall heights to 3m and overall building height to 5m, we have recently had a DTS ancillary accommodation which included a mezzanine and dormer windows which could easily result in direct overlooking of neighbours.

Recommend that DTS ancillary accommodation is always limited to a single level (with no mezzanine) and a performance assessed ancillary accommodation includes POs relating to overlooking so we can ensure appropriate privacy treatments are included on any windows.

Definition – 'Terrace Arrangement'

'Terrace arrangement' is defined as: "a group of 3 or more detached dwellings erected side by side and abutting each other but not joined by way of a party wall or party walls." It's not clear whether a terrace dwelling must be lodged in the same application as other dwellings, or if they can be lodged separately (particularly in a large subdivision where allotments have been sold separately).

Recommend clarification is provided to indicate whether or not dwellings must be lodged in the same application to meet the definition of terrace arrangement.

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Design in Urban Areas DTS/DFP 23.4

DiUA DTS/DPF 23.4 states (in part):

Vehicle access to designated car parking spaces satisfy (a) or (b):

(b) where newly proposed, is set back:

- i. 0.5m or more from any street furniture, street pole, infrastructure services pit, or other stormwater or utility infrastructure unless consent is provided from the asset owner*

We previously sought advice from PLUS staff as to whether 'street furniture' or 'utility infrastructure' includes on-street traffic calming devices such as speed humps or chicanes. The advice received was that the intent of the policy was to capture infrastructure that exists between the bottom of the kerb and the property boundary, so would not include speed humps or chicanes etc.

It would be preferable for the DTS criteria in the Code to only permit DTS development in circumstances where there were no obstructions to the driveway. While the modification of road infrastructure such as speed humps and chicanes can (at least currently) be dealt with through the Section 221 process, applicants often leave their S221 application to much later in the process, and an applicant may incorrectly assume the modification of road infrastructure is a fait accompli if they've received a planning consent or development approval. If Council staff are undertaking the DTS planning assessment, we can obviously discuss this issue with the applicant during our assessment. However, where planning consent is issued by a private Accredited Professional, the developer may not give any thought to this issue until much later in the process (at which point it is harder to resolve). I also note that relocating or modifying speed humps and chicanes can be very expensive and difficult. For example, relocation of one speed hump can have a flow on effect to other infrastructure on the street if there's a need to maintain prescribed distances between humps / chicanes. When the Design Standard for vehicle crossovers is introduced and an associated Section 221 permit is no longer required, it is even more imperative that the Code policies and/or Design Standards consider infrastructure in the street.

Recommend DTS/SPF 23.4 is amended (or other policy is developed) to allow street infrastructure such as speed humps and chicanes are considered as part of a DTS assessment.

Character Area Overlay – Alterations and Additions PO 3.2

Character Area Overlay PO 3.2 relates to adaptive reuse but is under the heading 'alterations and additions'.

Recommend moving PO 3.2 to its own heading 'Adaptive Reuse'

Definition of Mezzanine

A mezzanine is currently defined as:

an intermediate floor within a building level that is open to the floor below and does not extend over the whole floor space.

We have had some proposed developments where the mezzanine has occupied almost the same floor space as the floor below, and have had the potential to result in similar impacts as a second building level, such as higher wall heights and potential overlooking. It is recommended this definition is reviewed, or new policies are introduced to limit these impacts, such as a mezzanine occupying a maximum percentage of the floor space below and requirements to prevent overlooking

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Changes to Policy Wording and Application

The following are changes to policy wording or application, or in some cases where new policies may be required to fill a policy gap. As such, the below suggestions may be considered outside the scope of this Code Amendment, but are recommended for consideration by the Commission

Spatial Application of Urban Tree Canopy & Stormwater Management Overlay

The UTC and SM Overlays don't apply to non-residential developments in Neighbourhood Zones and also don't apply to any developments in mixed use and other non-residential zones. While there are some General Development Policies relating to landscaping and stormwater, they are not as extensive nor as prescriptive as the Overlay policies, and even still these are often not prescribed in Table 3s. This is a missed opportunity and results in an inconsistent approach to tree planting/ retention and stormwater management across the metropolitan area and will undermine achieving the targets set out in the *30 Year Plan*. For example, a detached dwelling in the Business Neighbourhood Zone does not require a new tree(s) or rainwater tank*, whereas an adjacent detached dwelling in the Established Neighbourhood Zone does.

**Note that Table 3 in many zones appears to incorrectly list UTC & SM Overlay policies even though those Overlays don't apply in those zones.*

Recommend UTC and SM Overlays are applied to most or all zones and include additional policies to cater to non-residential developments. Alternatively, ensure the General Development Policies place a similar requirement for the planting of trees and rainwater capture / reuse, commensurate with the scale / impact of the land use.

Land Stability Policies

The Code does not have sufficient policies relating to land stability, including when land instability poses a risk to development and also when development poses a risk to land stability.

Recommend an Overlay is created where land instability can be mapped, and General Development Policies can be created which are not location specific.

Privacy from Ground Level

The Code is lacking policy relating to privacy from the ground level of buildings which are raised above natural ground level and/or which sit substantially higher than a neighbour's yard. There are policies which deal with upper-level overlooking, and Design PO 10.2 which deals with overlooking from 'balconies, terraces and decks', however none appear to address overlooking from within the dwelling, or in raised yards more generally.

Recommend including additional policies in Design in Urban Areas which require developments to not result in unreasonable levels of overlooking of neighbouring residential properties, and for these to be applied in relevant Table 3s.

Heat loading / roof colour

Energy efficiency policies should encourage light coloured roofs to minimise heat loading. Urban heat mapping demonstrates a significant difference between light and dark coloured roofs.

Recommend including additional policies (or modify existing policies) seeking lighter coloured roofs in the interest of energy efficiency, noting however that the roofs should not result in unreasonable glare on adjacent properties or the surrounding landscape.

Car stacking policies

The Code lacks policy guidance for car stackers (i.e. semi-automated / automated vehicle parking system for stacking cars in a car park). This is becoming an assessment consideration for this Council and has implications for manoeuvring areas, queuing areas and access considerations.

Recommend including policies which provide guidance for when car stackers may be appropriate (e.g. only for residential, not for commercial developments, only for staff parking spaces, maximum number of spaces serviced by a car stacker, noise limits for the equipment etc). Note that the Victorian planning scheme addresses car stackers, where these are not supported for commercial developments.

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Design in Urban Areas – External Appearance DPF 20.2

DTS/DPF 20.2 states:

Each dwelling includes at least 3 of the following design features within the *building elevation facing a primary street*, and at least 2 of the following design features within the *building elevation facing any other public road* (other than a laneway) or a common driveway:

- a) a minimum of 30% of the *building wall* is set back an additional 300mm from the *building line*
- b) a porch or portico projects at least 1m from the *building wall*
- c) a balcony projects from the *building wall*
- d) a verandah projects at least 1m from the *building wall*
- e) eaves of a minimum 400mm width extend along the width of the *front elevation*
- f) a minimum 30% of the width of the upper level projects forward from the *lower level primary building line* by at least 300mm

a minimum of two different materials or finishes are incorporated on the walls of the *front building elevation*, with a maximum of 80% of the *building elevation* in a single material or finish.

The above policy uses a range of terms referring to parts of the building, including:

- (front) building elevation (facing a primary street) (facing any other public road)
- building wall
- building line
- front elevation
- lower-level primary building line

Although these generally refer to different parts of the building, the policy would benefit from greater consistency and clarity with the terminology:

For part (a) it is unclear what constitutes the building wall as distinct from the building line.

For part (c) there is no specified distance for a balcony projection.

For part (e) it is unclear if the 400mm eaves must extend along the full width of the building and/or should be on either side of the building. For example how would this policy apply to building facades which include a gable (such as a villa style) or parapet.

Recommend the number of different terms used to describe the facade or parts of the facade are reduced and define these terms were possible. Provide clearer wording for parts (a), (b), and (e)

Site Coverage

A dwelling meeting the maximum site coverage without any covered outdoor area can be processed as DTS. Any subsequent applications for covered outdoor area or outbuildings are difficult to assess as, while providing covered outdoor area is generally supported, the development would exceed the maximum site coverage.

Recommend providing two alternate criteria for site coverage policies: a lower amount (e.g. 55%) for a dwelling excluding covered outdoor area or outbuildings, and a higher amount (e.g. 60%) for a dwelling and covered outdoor area or outbuildings.

Private Open Space

Table 1 – Private Open Space – Dwelling at ground level

Total private open space area:

1. Site area <301m²: 24m² located behind the building line.
2. Site area ≥ 301m²: 60m² located behind the building line.

Minimum directly accessible from a living room: 16m² / with a minimum dimension 3m.

POS totalling 24m² is considered insufficient for many dwellings on <301m². Previously AGD staff have advised that this is sufficient POS on the basis that a combination of the required POS + soft landscaping + site coverage will result in a sufficient yard space for occupants. However, for dwellings with shared common area, the soft landscaping policy does not require soft landscaping in areas exclusive to each dwelling (it could be proposed in common areas only) and in the Housing Diversity Neighbourhood Zone there is no site coverage policy. As a result, a group dwelling or dwelling in a ground level RFB on a site <301 m² could only have 24m² of POS in its exclusive site.

Recommend providing a more varied POS requirement which provides a more appropriate size of POS, particularly for sites <301 m²

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Boundary walls with parapets

(Example policy)

General Neighbourhood DPF 7.1

Except where the dwelling is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (a) or (b) below:

- a) side boundary walls adjoin or abut a boundary wall of a building on adjoining land for the same or lesser length and height*
- b) side boundary walls do not:
 - i) exceed 3m in height from the top of footings ...**

The policy is not clear as to whether the boundary wall height should include or exclude parapets on the front of the structure (e.g. a parapet on the front of a garage which is located on the side boundary).

Recommend the policy is amended to include a clause catering to parapets, or the policy could clarify that parapets on the facade are not included in the boundary wall height. (Note this should also be consistent with public notification triggers in Table 5).

Established Neighbourhood Zone PO/DPF 7.1

PO 7.1

Dwelling boundary walls are limited in height and length to manage visual and overshadowing impacts on adjoining properties.

DTS/DPF 7.1

Dwellings do not incorporate side boundary walls where a side boundary setback value is returned in (a) below:

Minimum Side Boundary Setback

Specified side setback distance

or

(b) where no side boundary setback value is returned in (a) above, and except where the dwelling is located on a central site within a row dwelling or terrace arrangement, side boundary walls occur only on one side boundary and satisfy (i) or (ii) below:

- i. side boundary walls adjoin or abut a boundary wall of a building on adjoining land for the same or lesser length and height*
- ii. side boundary walls do not:
 - A. exceed 3.2m in height from the lower of the natural or finished ground level*
 - B. exceed 8m in length*
 - C. when combined with other walls on the boundary of the subject development site, exceed a maximum 45% of the length of the boundary**

encroach within 3m of any other existing or proposed boundary walls on the subject land.

The wording of the PO anticipates boundary development, whereas the DPF anticipates boundary development only in some circumstances. As written, the policy could be interpreted one of two ways:

1. DTS/DPF 7.1 was written to prevent boundary development occurring for DTS dwelling additions (for sites where a side setback is given in the TNV) but boundary development can / should be contemplated during a performance assessed assessment given PO 7.1 is written in a way which expects boundary development to occur; or
2. DTS/DPF 7.1 was written to discourage boundary development even in a performance assessment pathway, and that PO 7.1 only expects boundary development to occur where no side setback has been specified.

We are aware that PO/DPF 8.1 provides specific guidance about side setbacks but that policy is not considered to help clarify this PO 7.1.

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Recommend the policy is reworded to be clearer as to when and in what circumstances boundary development should occur. If the intent was that boundary development *should not* occur where a side setback is specified, or at least be subject to a contextual assessment, we would suggest the PO be revised with something to the effect of:

Dwelling boundary walls:

- (a) occur in areas where boundary development is consistent and complementary to the established character of the locality; and
- (b) are limited in height and length to manage visual and overshadowing impacts on adjoining properties

If the intent was to prevent boundary development from occurring through a DTS pathway, but allow a contextual assessment of boundary walls through a PA pathway, we would suggest using two separate policies – one in Table 2 and another in Table 3.

Historic and Character Area Overlay Policies

Most policies in the Historic and Character Area Overlay are worded very generically making them difficult to apply to developments. Additionally, most policies don't refer to the Area Statements which contain more useful policy guidance; PO 1.1 does refer to the Statement but this policy is very general and it would be better other policies also referred to the Statement, for example:

PO 2.2

Development is consistent with the prevailing building and wall heights *expressed in the Area Statement and the surrounding locality.*

This would provide a more direct and clearer link to the Statements and make the policies easier to apply

Historic and Character Area Overlay Building Heights

The following policies are an example of HAO / Zone policies applicable to College Park

Established Neighbourhood Zone DTS/DPF 4.1: *Building height (excluding garages, carports and outbuildings) is no greater than... 2 levels*

HAO PO 2.2: *Development is consistent with the prevailing building and wall heights in the historic area.*

Historic Area Statement NPSP 1: *Building Height: Single storey, two storey in some locations*

The framework for building heights across the Established Neighbourhood Zone + Historic / Character Area Overlay + Historic / Character Area Statement is complex and causes confusion for applicants and community members trying to interpret the Code and understand the development expectations for a site. The zone / TNV provide a numerical figure, the Overlay policies refers to the 'historic area' (and it's not clear whether this is the surrounding locality or the overlay more broadly), and the Statement describes typical heights in the area covered by that Statement. Although the rules of interpretation clarify that Overlay policies take precedence over Zone policies in the event of any inconsistencies, because of the way the Code policies are presented in the Line of Enquiry format, this hierarchy isn't clear and applicants and owners have expressed confusion about the conflicting policies.

There is an opportunity to significantly review the policy framework for historic and character areas to simplify the combination of policies / guidelines / documents which need to be taken into account during an assessment in these areas. However, in the context of this current Code Amendment, the following is recommended:

- HAO / CAO PO 2.2 be amended to specifically refer to the building height given in the Area Statement
- The Line of Enquiry tool is amended to provide greater clarity to users on how to interpret any inconsistencies between zone and overlay policies

General Neighbourhood Zone – Group dwellings & RFBs frontage width

General Neighbourhood PDF 2.1

Minimum frontage widths:

Group Dwellings: 15m (total) // Dwelling within a residential flat building: 15m (total)

A total development site of 15m is generally insufficient to accommodate setbacks, car parking, manoeuvring etc associated with group dwellings and residential flat buildings.

Recommend increasing the frontage width to 18m

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Hammerhead / Battle Axe Developments

The Code lacks guidance on where hammerhead or battle axe developments are appropriate, particularly for historic and character areas.

Recommend including guidance in the Area Statements as to whether hammerhead developments are a typical feature in the locality

Housing Diversity Neighbourhood Zone – Detached Hammerhead Site Area/Frontage in TNV

Housing Diversity Neighbourhood TNV applicable in NPSP:

Minimum site area:	Minimum frontage
<i>Detached dwelling is 330 sqm;</i>	<i>Detached dwelling is 9m;</i>
<i>Semi-detached dwelling is 300 sqm;</i>	<i>Semi-detached dwelling is 8m;</i>
<i>Row dwelling is 200 sqm;</i>	<i>Row dwelling is 5m;</i>
<i>Group dwelling is 200 sqm</i>	<i>Group dwelling is 18m;</i>
	<i>Residential flat building is 18m</i>

The TNV does not distinguish a minimum site area or frontage width for detached dwellings on hammerhead / battleaxe allotments.

In the Development Plan the minimum site areas for detached dwellings were as follows:

Minimum site area (square metres):	Minimum frontage (metres):
<i>Detached dwelling (double garage) – 350</i>	<i>Detached dwelling (double garage) – 12.5</i>
<i>Detached dwelling (single garage) – 330</i>	<i>Detached dwelling (single garage) – 9</i>
<i>Detached dwelling (hammerhead) – 330 (exclusive of the driveway handle)</i>	<i>Detached dwelling (hammerhead) – 4</i>

It is understood that the omission of site area and frontage widths for hammerhead dwellings in the Code TNV was intentional and the Department considers that detached dwellings on hammerhead sites can be assessed on their merits with consideration given to the standard requirements for detached dwellings. However, the site area for detached dwellings (330m²) is insufficient as a total site area if it includes the driveway handle and the frontage width (9m) is too wide for a driveway handle. Hammerhead dwellings are relatively common form of infill development within the HDN Zone. It is considered much more practical for a separate site area and frontage width to be specified for these developments to provide a greater level of consistency and upfront information for applicants

Recommend including a site area and frontage width requirement in the TNV for detached dwellings on a hammerhead / battle-axe allotments. It is noted that this currently exists for the General Neighbourhood Zone as demonstrated below:

<u>Dwelling Type</u>	<u>Minimum site/allotment area per dwelling</u>	<u>Minimum site/allotment frontage</u>
<u>Detached dwelling (not in a terrace arrangement)</u>	300m ² (exclusive of any battle-axe allotment 'handle')	9m where not on a battle-axe site 5m where on a battle-axe site

NPSP Submission - Additional Recommended Inclusions to MTE Code Amendment

Glare from roofs

Although some accepted / DTS criteria relate to ancillary structures not being constructed of highly-reflective material, there appears to be no Code policies relating to glare or reflection from roofs with respect to potential impacts on neighbours (Interface Between Land Uses PO 7.1 only relates to visual impact for motorists and climate impacts).

Recommend a General Development Policy is included and appropriate applied to manage glare from reflective materials, with respect to impacts on adjacent property occupants.

Car parking in front yard

We have had some applications and enquiries seeking to establish a commercial use with car parking in front of the building in circumstances where this would have a negative streetscape impact, but have not had relevant policy to discourage this. We note that car parking in the front yard is discouraged in some, but not many, zones.

Recommend including a new General Development Policy which encourages car parking at the rear of sites rather than in front of buildings, where this is consistent with the locality.

Off-street bicycle parking requirements

The designated areas include a limited number of zones and therefore there are no bicycle parking requirements in many zones. While the relevant policy (Transport Access and Parking PO 9.1) refers to 'adequately sized' bicycle parking facilities, there are no prescriptive requirements in the policy or the table which has led to poorly considered bicycle facility.

We recommend amending the designated areas to include additional zones such as Local Activity Centre, Community Facilities, Employment and Recreation Zones. Also recommend including a requirement to meet bike parking dimensions and other physical design requirements set out in the relevant Australian Standard.

Environmental Performance Policies

We recommend additional policies are included in the Code to provide more detailed guidance for improved environmental performance, so as to 'raise the bar' with respect to climate responsive buildings. Although there are some environmental performance policies included in the Code, these are often not applied to developments in Table 3.

Attachment A – Urban Corridor Policy Comparison

Below is an analysis of Urban Corridor policies which refer to variations on “primary road corridor”, “primary frontage”, “primary street” etc.

Text in **red** will be affected by the proposed Code Amendment and would therefore only apply to State Maintained Roads.

Text in **blue** will not be affected by the proposed Code Amendment.

Above each PO is a brief description of the general intent or purpose of the policy

Urban Corridor (Boulevard)

<p>DO1 BUILT FORM / CONSISTENT FACADE Buildings that achieve a consistent, tall, uniform facade to frame the primary road corridor primary road corridor (ie a State maintained road) that are consistently well set back with areas of significant open space in front, other than in specified areas where a lesser or no setback is desired. Buildings accommodate a mix of compatible residential and non-residential uses including shops and other business activities at ground and lower floor levels with residential land uses above.</p>	
<p>PO 1.3 ACTIVE / VIBRANT FRONTAGE Dwellings developed in conjunction with non-residential uses that positively contribute to making the public realm of the primary road corridor primary road corridor (ie a State maintained road), open space frontage and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places.</p>	<p>DTS/DPF 1.3 Dwellings in mixed use buildings to be located at the upper floor levels of buildings.</p>
<p>PO 1.5 ACTIVE / VIBRANT FRONTAGE Ground floor uses positively contribute to an active primary road corridor primary road corridor (ie a State maintained road) and open space frontage.</p>	<p>DTS/DPF 1.5 Shop, office, or consulting room uses located on the ground floor level of mixed use buildings fronting the primary road corridor primary road corridor (ie a State maintained road).</p>
<p>PO 2.1 BUILT FORM / CONSISTENT FRAMING Buildings contribute to a consistent framing of the primary road corridor primary road corridor (ie a State maintained road), open space and public spaces and provide visual relief from building mass at street level.</p>	<p>DTS/DPF 2.1 Buildings: <ul style="list-style-type: none"> a) include a clearly defined podium or street wall with a maximum height of 2 levels or 8 metres b) have levels above the defined podium or street wall setback a minimum of 2m from that wall. </p>
<p>PO 2.3 ACTIVE INTERFACE / PASSIVE SURVEILLANCE Buildings designed to create visual connection between the public realm and ground level interior, to ensure an active interface with the primary street frontage and maximise passive surveillance.</p>	<p>DTS/DPF 2.3 Minimum 50% of the ground floor primary frontage of buildings are visually permeable, transparent or clear glazed.</p>
<p>PO 2.4 BUILT FORM / CONSISTENT STREETSCAPE EDGE Buildings setback from the primary street boundaries to provide a consistent streetscape edge with generous landscaping and tall articulated building facades, except in locations where a lesser or no setback is desired to achieve a more prominent, strongly defined, and continuous built form presence to the primary road corridor primary road corridor (ie a State maintained road).</p>	<p>DTS/DPF 2.4 The building line of buildings setback from the primary street boundary: <ul style="list-style-type: none"> a) not less than: <i>TNV</i> or <ul style="list-style-type: none"> b) where no value is returned in DTS/DPF(a): <ul style="list-style-type: none"> i. at least the average setback to the building line of existing buildings on adjoining sites which face the same primary street (including those buildings that would adjoin the site if not separated by a public road or a vacant allotment) ii. where there is only one existing building on adjoining sites which face the same primary street (including those that would adjoin if not separated by a public road or a vacant allotment), not less than the setback to the building line of that building. </p>

Attachment A – Urban Corridor Policy Comparison

	<p>In instances where (a) or (b) do not apply, then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.</p>
<p>PO 3.1 BUILDING HEIGHT Building height consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and otherwise positively responds to the local context including the site's frontage, depth, and adjacent primary corridor primary road corridor (ie a State maintained road) or street width.</p>	<p>DTS/DPF 3.1 Except where a Concept Plan specifies otherwise, development does not exceed the following building height(s): <i>TNV</i> In relation to DTS/DPF 3.1, in instances where:</p> <ul style="list-style-type: none"> a) more than one value is returned in the same field, refer to the Maximum Building Height (Levels) Technical and Numeric Variation layer or Maximum Building Height (Metres) Technical and Numeric Variation layer in the SA planning database to determine the applicable value relevant to the site of the proposed development b) only one value is returned (i.e. there is one blank field), then the relevant height in metres or building levels applies with no criteria for the other c) no value is returned (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)), then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.
<p>PO 4.2 BUILT FORM TRANSITION ON SECONDARY STREETS Buildings on an allotment fronting a road that is not the primary corridor (ie a State maintained road) primary road corridor (ie a State maintained road) and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</p>	
<p>PO 5.1 SIGNIFICANT DEVELOPMENT SITES Consolidation of significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m² in area, which may include one or more allotments) to achieve increased development yield provided that off-site impacts can be managed and broader community benefit is achieved in terms of design quality, community services, affordable housing provision, or sustainability features.</p>	<p>DTS/DPF 5.1 Development on significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m² in area) up to 30% above the maximum building height specified in DTS/DPF 3.1 (rounded to the nearest whole number) where it:</p> <ul style="list-style-type: none"> a) incorporates the retention, conservation and reuse of a building which is a listed heritage place or an existing built form and context that positively contributes to the character of the local area b) includes more than 15% of dwellings as affordable housing; or c) includes at least: <ul style="list-style-type: none"> (i) three of the following: <ul style="list-style-type: none"> A. high quality open space that is universally accessible and is directly connected to, and well integrated with, public realm areas of the street B. high quality, safe and secure, universally accessible pedestrian linkages that connect through the development site C. active uses are located on the public street frontages of the building, with any above ground car parking located behind

Attachment A – Urban Corridor Policy Comparison

	<ul style="list-style-type: none"> D. a range of dwelling types that includes at least 10% of 3+ bedroom apartments E. a child care centre <p>and</p> <ul style="list-style-type: none"> (ii) three of the following: <ul style="list-style-type: none"> A. a communal useable garden integrated with the design of the building that covers the majority of a rooftop area supported by services that ensure ongoing maintenance B. living landscaped vertical surfaces of at least 50m2 supported by services that ensure ongoing maintenance C. passive heating and cooling design elements including solar shading integrated into the building D. higher amenity through provision of private open space in excess of minimum requirements by 25% for at least 50% of dwellings.
<p>PO 5.2 SIGNIFICANT DEVELOPMENT SITES Development on a significant development site (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m² in area) designed to minimise impacts on residential uses in adjacent zones with regard to intensity of use, overshadowing, massing and building proportions.</p>	<p>DTS/DPF 5.2 Development on a significant development site (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m² in area) that: <ul style="list-style-type: none"> a) is constructed within zone's Interface Building Height provision as specified DTS/DPF4.1 b) locates non-residential activities and higher density elements towards the primary road corridor primary road corridor (ie a State maintained road) c) locates taller building elements towards the primary road corridor primary road corridor (ie a State maintained road). </p>
<p>PO 6.1 NO ADDITIONAL CROSSOVERS Development does not result in additional crossovers on the primary street frontage, except where rationalising existing crossovers on consolidated sites and is designed to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form</p>	<p>DTS/DPF 6.1 Vehicular access to be provided: <ul style="list-style-type: none"> a) via side streets or rear lanes provided there is no negative impact on residential amenity within the zone and in adjacent zones; or b) where it consolidates or replaces existing crossovers. </p>

Attachment A – Urban Corridor Policy Comparison

URBAN CORRIDOR (BUSINESS) ZONE

<p>D01 BUILDING ORIENTATION A medium rise mixed use zone with a strong focus on employment, which accommodates a diverse range of commercial and light industrial land uses together with compatible medium density residential development oriented towards a primary road corridor primary road corridor (ie a State maintained road).</p>	
<p>PO 1.4 ACTIVE / VIBRANT FRONTAGES Dwellings primarily developed in conjunction with non-residential uses to support local business, activities and contribute to making the primary road corridor primary road corridor (ie a State maintained road) and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places</p>	<p>DTS/DPF 1.4 Dwellings developed in conjunction with non-residential uses sited: a) at upper levels of buildings with non-residential uses located at ground level or b) behind non-residential uses on the same allotment.</p>
<p>PO 1.5 ACTIVE / VIBRANT FRONTAGES Ground floor uses positively contribute to an active primary road corridor primary road corridor (ie a State maintained road).</p>	<p>DTS/DPF 1.5 Shop, office, or consulting room uses located on the ground floor level of mixed use buildings fronting the primary road corridor primary road corridor (ie a State maintained road).</p>
<p>PO 2.2 ACTIVE FRONTAGE / PASSIVE SURVEILLANCE Buildings designed to create visual connection between the public realm and ground level interior, to ensure an active interface with the primary street frontage and maximise passive surveillance.</p>	<p>DTS/DPF 2.2 Minimum 50% of the ground floor primary frontage of buildings are visually permeable, transparent or clear glazed.</p>
<p>PO 2.3 BUILT FORM / CONSISTENT STREETSCAPE EDGE Buildings setback from the primary street boundaries contribute to the consistent established streetscape, except in locations where no setback is desired to achieve a more prominent, strongly defined, and continuous built form presence to the primary road corridor primary road corridor (ie a State maintained road).</p>	<p>DTS/DPF 2.3 The building line of buildings set back from the primary street boundary: a) not less than: TNV or b) where no value is returned in DTS/DPF(a): i. at least the average setback to the building line of existing buildings on adjoining sites which face the same primary street (including those buildings that would adjoin the site if not separated by a public road or a vacant allotment) ii. where there is only one existing building on adjoining sites which face the same primary street (including those that would adjoin if not separated by a public road or a vacant allotment), not less than the setback to the building line of that building. In instances where (a) or (b) do not apply, then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.</p>
<p>PO 3.1 BUILDING HEIGHT Building height consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and positively responds to the local context including the site's frontage, depth, and adjacent primary corridor primary road corridor (ie a State maintained road) or street width.</p>	<p>DTS/DPF 3.1 Except where a Concept Plan specifies otherwise, development does not exceed the following building height(s): TNV In relation to DTS/DPF 3.1, in instances where: a) more than one value is returned in the same field, refer to the Maximum Building Height (Levels) Technical and Numeric Variation layer or Maximum Building Height (Metres) Technical and Numeric</p>

Attachment A – Urban Corridor Policy Comparison

	<p>Variation layer in the SA planning database to determine the applicable value relevant to the site of the proposed development</p> <ul style="list-style-type: none"> b) only one value is returned (i.e. there is one blank field), then the relevant height in metres or building levels applies with no criteria for the other c) no value is returned (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)), then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.
<p>PO 4.2 BUILT FORM TRANSITION ON SECONDARY STREETS Buildings on an allotment fronting a road that is not the primary corridor (ie a State maintained road) primary road corridor (ie a State maintained road) and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</p>	
<p>PO 5.1 SIGNIFICANT DEVELOPMENT SITES Consolidation of significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m² in area, which may include one or more allotments) to achieve increased development yield provided that off-site impacts can be managed and broader community benefit is achieved in terms of design quality, community services, affordable housing provision, or sustainability features.</p>	<p>DTS/DPF 5.1 Development on significant development sites up to 30% above the maximum building height specified in DTS/DPF 3.1 (rounded to the nearest whole number) where it:</p> <ul style="list-style-type: none"> a) incorporates the retention, conservation and reuse of a building which is a listed heritage place or an existing built form and context that positively contributes to the character of the local area b) includes more than 15% of dwellings as affordable housing; or c) includes at least: <ul style="list-style-type: none"> (i) three of the following: <ul style="list-style-type: none"> A. high quality open space that is universally accessible and is directly connected to, and well integrated with, public realm areas of the street B. high quality, safe and secure, universally accessible pedestrian linkages that connect through the development site C. active uses are located on the public street frontages of the building, with any above ground car parking located behind D. a range of dwelling types that includes at least 10% of 3+ bedroom apartments E. a child care centre and (ii) three of the following: <ul style="list-style-type: none"> A. a communal useable garden integrated with the design of the building that covers the majority of a rooftop area supported by services that ensure ongoing maintenance B. living landscaped vertical surfaces of at least 50m² supported by services that ensure ongoing maintenance C. passive heating and cooling design elements including solar shading integrated into the building

Attachment A – Urban Corridor Policy Comparison

	D. higher amenity through provision of private open space in excess of minimum requirements by 25% for at least 50% of dwellings.
<p>PO 5.2 SIGNIFICANT DEVELOPMENT SITES Development on a significant development site (a site with a frontage to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m2 which may include one or more allotments) designed to minimise impacts on residential uses in adjacent zones with regard to intensity of use, overshadowing, massing and building proportions.</p>	<p>DTS/DPF 5.2 Development that:</p> <ul style="list-style-type: none"> a) is constructed within zone's Interface Building Height provision as specified DTS/DPF 4.1 b) locates non-residential activities and higher density elements towards the primary road corridor primary road corridor (ie a State maintained road) c) locates taller building elements towards the primary road corridor primary road corridor (ie a State maintained road).
<p>PO 6.1 NO ADDITIONAL CROSSOVERS Development does not result in additional crossovers on the primary street frontage, except where rationalising existing crossovers on consolidated sites and is designed to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form.</p>	<p>DTS/DPF 6.1 Vehicular access to be provided:</p> <ul style="list-style-type: none"> a) via side streets or rear lanes provided there is no negative impact on residential amenity within the zone and in adjacent zones or b) where it consolidates or replaces existing crossovers.

Attachment A – Urban Corridor Policy Comparison

URBAN CORRIDOR (LIVING) ZONE

<p>DO 1 BUILDING ORIENTATION A mixed use area with a strong residential focus that provides a diverse range of medium density housing options primarily in multi-level medium rise buildings supported by compatible non-residential land uses oriented towards a primary road corridor primary road corridor (ie a State maintained road), high frequency public transport route, activity centre or significant open space.</p>	
<p>PO 2.1 BUILT FORM / STREETSCAPE Buildings positively contribute to a continuous framing of the primary road / public transport corridor primary road corridor (ie a State maintained road) and public realm, and provide visual relief from building scale and massing from the ground level public realm.</p>	<p>DTS/DPF 2.1 Buildings: a) include a clearly defined podium or street wall with a maximum building height of 2 building levels or 8m in height b) have levels above the defined podium or street wall setback a minimum of 2m from that wall.</p>
<p>PO 2.2 BUILT FORM / CONSISTENT STREETSCAPE EDGE Buildings setback from the primary street boundaries are consistent with the established streetscape, except in locations where no setback is desired to achieve a more prominent, strongly defined, and continuous built form presence to the primary road corridor primary road corridor (ie a State maintained road).</p>	<p>DTS/DPF 2.2 The building line of buildings set back from the primary street boundary: a) not less than: <i>TNV</i> or b) where no value is returned in DTS/DPF(a): i. at least the average setback to the building line of existing buildings on adjoining sites which face the same primary street (including those buildings that would adjoin the site if not separated by a public road or a vacant allotment) ii. where there is only one existing building on adjoining sites which face the same primary street (including those that would adjoin if not separated by a public road or a vacant allotment), not less than the setback to the building line of that building. In instances where (a) or (b) do not apply, then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.</p>
<p>PO 3.1 BUILDING HEIGHT Building height consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and positively responds to the local context including the site's frontage, depth, and adjacent primary corridor primary road corridor (ie a State maintained road) or street width.</p>	<p>DTS/DPF 3.1 Except where a Concept Plan specifies otherwise, development does not exceed the following building height(s): <i>TNV</i> In relation to DTS/DPF 3.1, in instances where: a) more than one value is returned, refer to the Maximum Building Height (Levels) Technical and Numeric Variation layer or Maximum Building Height (Metres) Technical and Numeric Variation layer in the SA planning database to determine the applicable value relevant to the site of the proposed development b) only one value is returned (i.e. there is one blank field), then the relevant height in metres or building levels applies with no criteria for the other c) no value is returned (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)), then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.</p>

Attachment A – Urban Corridor Policy Comparison

<p>PO 4.2 BUILT FORM TRANSITION ON SECONDARY STREETS Buildings on an allotment fronting a road that is not the primary corridor (ie a State maintained road) primary road corridor (ie a State maintained road) and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</p>	
<p>PO 5.1 SIGNIFICANT DEVELOPMENT SITES Consolidation of significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 2500m2 in area, which may include one or more allotments) to achieve increased development yield provided that off-site impacts can be managed and broader community benefit is achieved in terms of design quality, community services, affordable housing provision, or sustainability features.</p>	<p>DTS/DPF 5.1 Development on significant development sites up to 30% above the maximum building height specified in DTS/DPF 3.1 (rounded to the nearest whole number) where it:</p> <ul style="list-style-type: none"> a) incorporates the retention, conservation and reuse of a building which is a listed heritage place or an existing built form and context that positively contributes to the character of the local area b) includes more than 15% of dwellings as affordable housing; or c) includes at least: <ul style="list-style-type: none"> (i) three of the following: <ul style="list-style-type: none"> A. high quality open space that is universally accessible and is directly connected to, and well integrated with, public realm areas of the street B. high quality, safe and secure, universally accessible pedestrian linkages that connect through the development site C. active uses are located on the public street frontages of the building, with any above ground car parking located behind D. a range of dwelling types that includes at least 10% of 3+ bedroom apartments E. a child care centre and (ii) three of the following: <ul style="list-style-type: none"> A. a communal useable garden integrated with the design of the building that covers the majority of a rooftop area supported by services that ensure ongoing maintenance B. living landscaped vertical surfaces of at least 50m2 supported by services that ensure ongoing maintenance C. passive heating and cooling design elements including solar shading integrated into the building D. higher amenity through provision of private open space in excess of minimum requirements by 25% for at least 50% of dwellings.
<p>PO 6.1 NO ADDITIONAL CROSSOVERS Development does not result in additional crossovers on the primary street frontage, except where rationalising existing crossovers on consolidated sites and is designed to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form.</p>	<p>DTS/DPF 6.1 Vehicular access to be provided:</p> <ul style="list-style-type: none"> a) via side streets or rear lanes provided there is no negative impact on residential amenity within the zone and in adjacent zones or b) where it consolidates or replaces existing crossovers.

Attachment A – Urban Corridor Policy Comparison

PO 6.2 CAR PARKING LOCATION

Development is designed to ensure car parking is located avoid negative impacts on the ~~primary corridor~~ primary road corridor (ie a State maintained road) streetscape.

DTS/DPF 6.2

Vehicle parking garages located behind buildings away from the primary main street frontage.

Attachment A – Urban Corridor Policy Comparison

URBAN CORRIDOR (MAIN STREET) ZONE

<p>PO 1.3 Ground floor uses contribute to a safe, active and vibrant main street.</p>	<p>DTS/DPF 1.3 ACTIVE FRONTAGE Shop, office, or consulting room uses located on the ground floor level of buildings fronting the primary road corridor primary road corridor (ie a State maintained road).</p>
<p>PO 2.6 BUILT FORM / ACTIVE STREETScape Buildings sited on the primary street boundary to achieve a continuity of built form frontage to the main street, with the occasional section of building set back to create outdoor dining areas, visually interesting building entrances and intimate but vibrant spaces.</p>	<p>DTS/DPF 2.6 Buildings with a 0m setback from the primary street boundary, with the exception of minor setbacks to accommodate outdoor dining areas.</p>
<p>PO 3.1 BUILDING HEIGHT Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and otherwise positively responds to the local context including the site's frontage, depth, and adjacent primary corridor primary road corridor (ie a State maintained road) or street width.</p>	<p>DTS/DPF 3.1 Except where a Concept Plan specifies otherwise, development does not exceed the following building height(s): <i>TNV</i> In relation to DTS/DPF 3.1, in instances where:</p> <ul style="list-style-type: none"> a) more than one value is returned in the same field, refer to the Maximum Building Height (Levels) Technical and Numeric Variation layer or Maximum Building Height (Metres) Technical and Numeric Variation layer in the SA planning database to determine the applicable value relevant to the site of the proposed development b) only one value is returned (i.e. there is one blank field), then the relevant height in metres or building levels applies with no criteria for the other c) no value is returned (i.e. there are blank fields for both maximum building height (metres) and maximum building height (levels)), then none are applicable and the relevant development cannot be classified as deemed-to-satisfy.
<p>PO 4.2 BUILT FORM TRANSITION ON SECONDARY STREETS Buildings on an allotment fronting a road that is not the primary corridor (ie a State maintained road)-primary road corridor (ie a State maintained road) and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</p>	
<p>PO 5.1 SIGNIFICANT DEVELOPMENT SITES Consolidation of significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 1500m2 in area, which may include one or more allotments) to achieve increased development yield, provided that off-site impacts can be managed and broader community benefit is achieved in terms of design quality, community services, affordable housing provision, or sustainability features.</p>	<p>DTS/DPF 5.1 Development on significant development sites (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 1500m2 in area, which may include one or more allotments) up to 30% above the maximum building height specified in DTS/DPF 3.1 (rounded to the nearest whole number) where it:</p> <ul style="list-style-type: none"> a) incorporates the retention, conservation and reuse of a building which is a listed heritage place or an existing built form and context that positively contributes to the character of the local area b) includes more than 15% of dwellings as affordable housing or c) includes at least:

Attachment A – Urban Corridor Policy Comparison

	<ul style="list-style-type: none"> i. three of the following: <ul style="list-style-type: none"> A. high quality open space that is universally accessible and is directly connected to, and well integrated with, public realm areas of the street B. high quality, safe and secure, universally accessible pedestrian linkages that connect through the development site C. active uses are located on the public street frontages of the building, with any above ground car parking located behind D. a range of dwelling types that includes at least 10% of 3+ bedroom apartments; E. a child care centre ii. three of the following: <ul style="list-style-type: none"> A. a communal useable garden integrated with the design of the building that covers the majority of a rooftop area supported by services that ensure ongoing maintenance; B. living landscaped vertical surfaces of at least 50m2 supported by services that ensure ongoing maintenance C. passive heating and cooling design elements including solar shading integrated into the building D. higher amenity through provision of private open space in excess of minimum requirements by 25% for at least 50% of dwellings.
<p>PO 5.2 SIGNIFICANT DEVELOPMENT SITES Development on a significant development site (a site with a frontage over 25m to a primary road corridor primary road corridor (ie a State maintained road) and over 1500m2 in area, which may include one or more allotments) designed to minimise impacts on residential uses in adjacent zones with regard to intensity of use, overshadowing, massing and building proportions.</p>	<p>DTS/DPF 5.2 Development on a significant development site (a site with a frontage over 25m to a primary road corridor and over 1500m2 in area, which may include one or more allotments) that: <ul style="list-style-type: none"> a) is constructed within the zone's Interface Building Height provision as specified DTS/DPF 4.1 b) locates non-residential activities and higher density elements towards the primary road corridor c) locates taller building elements towards the primary road corridor </p>
<p>PO 6.2 Development is designed to ensure car parking is located to avoid negative impacts on the main street rhythm and activation.</p>	<p>DTS/DPF 6.2 CAR PARKING LOCATION Vehicle parking garages located behind buildings away from the primary main street frontage.</p>

CLARE & GILBERT
VALLEYS COUNCIL

23 September 2022

Dear Sir/Madam,

Re: Miscellaneous Technical Enhancement Code Amendment

I write on behalf of the Clare and Gilbert Valleys Council (CGVC) in response to the Miscellaneous Technical Enhancement Code Amendment currently on public consultation. Thank you for giving the CGVC the chance to review and provide a written submission in response to this code amendment.

To provide some background, the CGVC is a relatively small Council with limited resources. We have recently seen substantial staff turnover, with two new planning officers (including myself) commencing this year. As a result of this turnover/transition period, the CGVC was unable to provide an input into the pre-consultation phase of the MTE code amendment in which the technical amendments that make up the MTE code amendment were initially raised by relevant stakeholders.

In reviewing technical amendments forming part of the MTE code amendment, the CGVC is generally supportive of the technical amendments put forward. We believe the changes will result in improved outcomes, will see a number of anomalies/errors we frequently come across (namely to do with POs not being generated for specific forms of development or the wrong POs being applied) rectified and the further refinement to both the tourist accommodation definition and tourist accommodation in a Rural Zone assessment criteria, which will be of great benefit to us.

We understand that this consultation period is a chance to review and comment on the technical amendments put forward in the early days of this code amendment. We also understand that this process will be one that is repeated at various intervals (be it annually or bi-annually). With this in mind, there are two matters that are not raised as part of the MTE code amendment that the CGVC wishes to be considered as part of the next available MTE code amendment process (or preferably if possible, this code amendment):

- **Dwellings/Dwelling Additions** – We could like to see 'Design in Urban Neighbourhood DO/DPF 20.2 applied to dwellings (of all typologies) and dwelling additions in the Neighbourhood Zone, Rural Neighbourhood Zone, Township Zone and Rural Living Zone. This provision relates to articulation of front facades. From time to time a dwelling will be submitted in these zones (typically a detached dwelling) that will feature limited façade articulation. However, as this provision is not generated via the applicable policy document, we are unable to assess against this provision. The only two provisions that relate to front elevations we have to assess against are 'Design – PO 11.1 and 11.2', which relate to dwellings consisting of a window that presents to the street (for passive surveillance) and a front door/entry that provides a legible entry point for visitors. The lack of PO/DPF 20.2 has seen dwellings with a poor presentation/lack of articulation to the streetscape approved,

CLARE & GILBERT VALLEYS COUNCIL

whereas if this policy was available for us to assess against, applicants could be held to a higher standard of articulation. Noting that this provision is applicable in a suburban Adelaide context, we see no reason as to why this couldn't be applied to the zones identified in the CGVC area, and other rural Councils, to strive for better design outcomes. Good design outcomes should be across the State, not just metropolitan areas

- **Agricultural Buildings in Rural Zone** – There is an anomaly where the accepted development pathway requires that an agricultural building be finished in pre-coloured steel sheeting or painted a non-reflective colour. Most agricultural buildings we see are zincalume, thus the accepted development pathway cannot be applied. However, when assessing the same proposal against the Deemed to Satisfy assessment criteria, no mention of pre-treated colours or painted surfaces are mentioned. Essentially outbuildings that would otherwise be accepted development but cannot be as they are proposed to be clad in zincalume are signed off as Deemed to Satisfy where the use of zincalume sheeting is not queried at all. Zincalume either has to be a DTS consideration or the requirement for pre-sheeted/painted surfaces at the accepted development level needs to be dropped.

To summarise, the CGVC is supportive of the technical amendments put forward as part of this MTE amendment however if possible, we would like to see the above adopted within this code amendment or a future code amendment as quickly as possible.

We look forward to being more involved in the next MTE code amendment process.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Henry Beesley'.

**MOUNT BARKER
DISTRICT COUNCIL**

Reference: DOC/22/122635

23 September 2022

Mr. Craig Holden
Chair
State Planning Commission
GPO BOX 1815
ADELAIDE SA 5001

Dear Mr. Holden,

RE: Miscellaneous Technical Enhancement Code Amendment – Mount Barker Council comments

I write in response to the Miscellaneous Technical Enhancement Code Amendment (MTE Code Amendment) that the State Planning Commission has prepared and released for public consultation.

Council staff support the regular review of the Code and we note the depth and breadth of the review that the Commission has undertaken. We are especially encouraged that the Commission are seeking to implement feedback received from Councils, industry and the community in the 12 months since the implementation of the Code.

Council staff have undertaken a detailed review of the Code Amendment and Attachment A and provide the attached spreadsheet outlining our thoughts and comments. We note that the majority of the changes proposed are relatively minor and fix grammatical, spelling or interpretation errors currently within the Code.

However, there are some areas, such as the definition of ancillary accommodation, boundary realignments, deemed to satisfy assessment pathways and the removal of Overlays that Council believes requires a greater level of investigations before these can be implemented.

Council staff remain committed to working with the State Planning Commission in the review of the Code and the implementation of the MTE Code Amendment.

Please do not hesitate to contact Glenn Searle, Senior Strategic Planner, on
or email: should you require any further information.

Yours sincerely,

A handwritten signature in blue ink, appearing to be 'M Walker', with a large loop and a trailing flourish.

Madeleine Walker
Manager Strategic and Community Planning

SECTION	ISSUE	SUPPORT (Y/N)?	COMMENTS
	Limited Dwelling Overlay		<ul style="list-style-type: none"> • Can this be applied to the St. Ives paper town?
2.3.1.2	Spatial maintenance updates	Investigations required	<ul style="list-style-type: none"> • How would maintenance updates work with the new bushfire mapping that will need to change with urban expansion (i.e. changing from medium areas to urban)? • How would this work with changed flood conditions through mitigation works? • Can Local Heritage Items be removed when demolition approval has been granted and undertaken? • Will there be a public record of these minor amendments in case we need to reference changes to a particular site over time?
2.3.2.3	Master Planned Zones – Site dimensions and land division	Yes	<ul style="list-style-type: none"> • Support - Adding the word “concept plan” to PO 11.3 – this isn’t very impactful on Mount Barker as our concept plans don’t show allotment layouts (just access, creeks, etc.
2.3.2.4	Rural Zone – Detached Dwelling Interface between land uses – linkages	Yes	<ul style="list-style-type: none"> • Support – this adds needed assessment criteria
2.3.2.5	Rural Zone – detached dwellings - linkages	Yes	<ul style="list-style-type: none"> • Support – currently an incorrect PO is being called up, this amendment rectifies this problem
2.3.2.6	Rural Zone – land division / boundary realignment - linkages	Yes	<ul style="list-style-type: none"> • Support - the linkage of policy. • However, the Commission needs to ensure that there is sufficient policy to assess boundary realignments notwithstanding the existence of the EFPA.
2.3.2.9	Restricted Development Table 4		
2.3.2.9.1	Industry (Employment,	More work required	<ul style="list-style-type: none"> • Not sure why the SCAP were the Relevant Authority in the first place. • The addition of Special Industry is supported.

	Suburban Business, LAC, SAC, Township, Township Activity Centre and Urban Activity Centre Zone		<ul style="list-style-type: none"> • However, the Commission needs to ensure that there is sufficient policy to assess the impact of industrial land uses in close proximity to residential land uses as occurs in Mount Barker Councils LAC, SAC, Township, Township Activity Centre and Urban Activity Centre Zones.
2.3.2.9.2	Land Division within the Limited Land Division Overlay	No	<ul style="list-style-type: none"> • This does nothing to deal with boundary realignments which are the predominant form of land division within the areas covered by the Limited Land Division Overlay • We recommend that new policy is introduced to deal with situation where boundary realignment occurs • This policy needs to apply land division principles from the SAPPL Mount Lofty Ranges Watershed Area Overlay that deal with boundary realignments • <i>Land division should only occur if no additional allotments are created wholly or partly in the Mount Lofty Ranges Watershed and where one or more of the following applies:</i> <ul style="list-style-type: none"> (a) <i>the proposal is for a minor readjustment of allotment boundaries to correct an anomaly in the placement of those boundaries with respect to the location of existing buildings or structures.</i> (b) <i>the proposal is to alter the boundaries of an allotment in order to improve the management of the land for the purpose of primary production and/or the conservation of natural features.</i> • <i>Land should not be divided, nor allotment boundaries rearranged when the proposal is likely to result in an increased risk of pollution of surface or underground water.</i> • <i>The realignment of boundaries should not result in the creation of development potential for a dwelling and associated wastewater management system, where no potential currently exists.</i>
2.3.2.9.3	Limited Dwelling Overlay	Yes	<ul style="list-style-type: none"> • Support • However, the PO & DTS seem to be at odds with each other • “PO 1.1: Development does not result in the establishment of a new dwelling”

			<ul style="list-style-type: none"> • “DTS/DPF 1.1: A new dwelling replaces an existing dwelling within the same allotment” • PO 1.1 says no new dwelling, but DTS/DPF 1.1 says a new dwelling is ok if it replaces an existing dwelling
2.3.2.9.5	Dwelling and land division within the Deferred Urban Zone	Yes	<ul style="list-style-type: none"> • Support • We would prefer a pathway to be able to give an early no to land divisions within the deferred urban zone. • However, the new PO 2.3 should assist with the assessment
2.3.2.9.6	Employment Zone	More work required	<ul style="list-style-type: none"> • The Commission needs to ensure that there is sufficient policy to assess the impact of waste reception, storage, treatment or disposal or wrecking yards proposals. • How will the impacts of industry on land uses outside of the notification area be dealt with?
2.3.2.9.9	Significant Management Overlay	Yes	<ul style="list-style-type: none"> • Support – This appears to reinstate the intent of the Dev Plan 350m setback from the sewerage ponds
	Rural Zone	Yes	<ul style="list-style-type: none"> • Support – No concerns as Zone is contained within the EFPA so land division for new residential allotments could not be supported
	Local Activity Centre Zone	More work required	<ul style="list-style-type: none"> • Support the addition of special industry but are there enough provisions within the zone/policy to adequately assess inappropriate industrial land uses? • This has not been shown to be the case in the Code Amendment document
	Productive Rural Landscape Zone	More work required	<ul style="list-style-type: none"> • It appears that all of our Productive Rural Landscape Zone is contained within the EFPA so land division for new residential allotments could not be supported • But the “investigations” listed are flawed as boundary realignment within this area has no policy that would be useful to assess it (PO 1.1 and DTS/DPF 1.1 as listed are not helpful as they only deal with the creation of an additional allotment) • We recommend that new policy is introduced to deal with situation where boundary realignment occurs • This policy needs to apply land division principles from the SAPPL Mount Lofty Ranges Watershed Area Overlay that deal with boundary realignments

			<ul style="list-style-type: none"> • <i>Land division should only occur if no additional allotments are created wholly or partly in the Mount Lofty Ranges Watershed and where one or more of the following applies:</i> <ul style="list-style-type: none"> (a) <i>the proposal is for a minor readjustment of allotment boundaries to correct an anomaly in the placement of those boundaries with respect to the location of existing buildings or structures.</i> (b) <i>the proposal is to alter the boundaries of an allotment in order to improve the management of the land for the purpose of primary production and/or the conservation of natural features.</i> • <i>Land should not be divided, nor allotment boundaries rearranged when the proposal is likely to result in an increased risk of pollution of surface or underground water.</i> • <i>The realignment of boundaries should not result in the creation of development potential for a dwelling and associated wastewater management system, where no potential currently exists.</i>
	Suburban Activity Zone	Investigations required	<ul style="list-style-type: none"> • Support the addition of special industry but are there enough provisions within the zone/policy to assess new industrial land uses?
	Suburban Main Street Zone	Investigations required	<ul style="list-style-type: none"> • Support the addition of special industry but are there enough provisions within the zone/policy to assess new industrial land uses?
	Township Zone (this is located at the old Chapmans site)	Investigations required	<ul style="list-style-type: none"> • What will be the interaction between the sub-zone, the Township Zone and this policy change? • This has not been shown to be the case in the Code Amendment document
	Township Main Street Zone	Investigations required	<ul style="list-style-type: none"> • This Zone is located over the historic Hahndorf main street, therefore it is extremely important to ensure that there is satisfactory policy to deal with industrial land uses within this State significant tourist locality
	Urban Activity Centre Zone	Investigations required	<ul style="list-style-type: none"> • Support the addition of special industry but are there enough provisions within the zone/policy to discourage new industrial land uses? • This has not been shown to be the case in the Code Amendment document

2.3.2.10	Notification Tables		
	Multiple Zones – Demolition (or partial demolition) of a State or Local Heritage Place	No	<ul style="list-style-type: none"> • The wording of this exception may inadvertently capture newly listed local heritage places that don't fit in with a listed style building that listed in the Historic Area Statement (for example an art-deco building located within a Federation style Historic Area Statement). • A way around this issue could be to have the exception as: <ul style="list-style-type: none"> ○ The building is a State or Local Heritage Building <li style="text-align: center;">OR ○ The Relevant Authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated • The only other fix for this issue to undertake a comprehensive review of all State and Local Heritage items to ensure that they have historic attributes that are identified in the Historic Area Statement. • The next step would be to ensure that any Code Amendment that elevates a Local Heritage Item updates the Historic Area Statement
	Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - Increasing the length of the boundary wall from 11m to 11.5m seems minor
	Township Zone	Yes	<ul style="list-style-type: none"> • Support - Former Chapmans site - Increasing the length of the boundary wall from 8m to 11.5m is acceptable
	All Zones (adding minor rule)	Yes	<ul style="list-style-type: none"> • Support – the Relevant Authority should be able to consider something as minor in the context of the locality
	Caravan and Tourist Park Zone Table 5 Clause 3	Yes	<ul style="list-style-type: none"> • No issues with allowing for the construction of minor developments such as: Air con units, carport, fence, outbuilding, retaining wall, shade sail, solar PV, swimming pool, verandah, water tank
	Community Facilities Zone Table 5 clause 3	Yes	<ul style="list-style-type: none"> • The allowance for the construction of minor developments is supported as the listed forms aren't tall or dominant. • Generally, parcels of land within the Community Facilities Zone are large and contain facilities that are run by State or Local Government.

	Conservation Zone Table 5 clause 2	More work required	<ul style="list-style-type: none"> • Not sure about having land division as a form of development exempt from public notification – conservation parks are increasingly used for commercial and recreational land uses and not just for conservation purposes. These the creation of smaller parcels of land for these uses is something that the public traditionally comment on.
	Employment Zone Table 5 clause 4	Yes	<ul style="list-style-type: none"> • The allowance for the construction of minor developments is supported as the listed forms aren't tall or dominant. • In addition the forms of development listed generally aren't likely to impact neighbouring land uses
	Established Neighbourhood Zone Table 5 clause 3	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours when large structures are constructed on or near the boundary
	Home Industry Table 5 clause 4	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours when large structures are constructed on or near the boundary
	Housing Diversity Neighbourhood Zone Table 5 clause 6	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Local Activity Centre Zone Table 5 clause 4	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours

	Master Planned Neighbourhood Zone Table 5 clause 7	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Neighbourhood Zone Table 5 clause 2 & clause 5	No	<ul style="list-style-type: none"> • Whilst understanding that the Code already makes 3 storey residential flat buildings undertaken by SAHT exempt from notification it should be noted that the TNV for the zone is 2 storey. • What is the reason that a residential flat building by SAHT exempt from notification while the same building undertaken by a private citizen not exempt? • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Open Space Zone Table 5 clause 2	Yes	<ul style="list-style-type: none"> • Support - Council owns all of the land within the OS Zone so no concerns as we will be in control of the size of buildings that are constructed within this zone/locality.
	Productive Rural Landscape Zone Sign on land	No	<ul style="list-style-type: none"> • Major concerns with not placing a sign on land as for the Rural/Productive Rural Landscape Zone. • Uses within these zones can have impacts well outside of the 60 metre area (i.e. smell, dust, vibration, heavy vehicles, noise, hours of operation, light spill, etc.). Given this how would nearby residents going to be informed about a new development application? • The Code/Act should allow for land uses which will have an impact outside of the land boundaries to be notified in writing to all properties within a 500 metre radius
	Productive Rural Landscape Zone Table 5 clause 2	Yes	<ul style="list-style-type: none"> • Support - minor structures (in the context of the zone – decks, fences and pergolas) being exempt from notification

Recreation Zone Table 5 clause 4	Yes	<ul style="list-style-type: none"> • Support - The allowance for the construction of minor developments is supported as the listed forms aren't tall or dominant. Plus they are all forms of development associated with recreation grounds
Resource Extraction Zone Table 5 clause 2	Yes	<ul style="list-style-type: none"> • Support - this zone is located around the old Brukunga Mine area - any of the minor developments would not be an issue in this zone
Rural Zone Table 5 clause 2	Yes	<ul style="list-style-type: none"> • Support - minor structures (in the context of the zone - decks, fences and pergolas) being exempt from notification
Rural Living Zone Table 5 clause 3	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
Rural Neighbourhood Zone Table 5 clauses 2 & 5	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours • Not sure why residential flat buildings (by SAHT) are being encourage/considered within a Rural Neighbourhood Zone - especially when the zone is set up for detached dwellings on large allotments.
Strategic Employment Zone Suburban Business Zone Suburban Main Street Zone Urban Activity Centre Zone	Yes	<ul style="list-style-type: none"> • Support - unlike the other zones listed above these are predominantly commercial or industrial zones. As such, they have less residential development which may be impacted by large structures within close proximity to the boundary. • As long as the excludes flues, stacks, etc. from the definition of air handling, air conditioning system or exhaust fan then there is no issue.

	Suburban Activity Centre Zone Table 5 clause 4	More work required	<ul style="list-style-type: none"> • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Township Neighbourhood Zone Table 5 clause 3	More work required	<ul style="list-style-type: none"> • Located in Nairne and Hahndorf • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Township Main Street Zone Table 5 clause	More work required	<ul style="list-style-type: none"> • This zone is located within the Hahndorf State Heritage Area – so not sure about excluding some forms of development that could significantly affect the look of a building or the streetscape (solar PV, verandah, exhaust fan, a/c, shade sail, outbuilding, fence, etc) • There needs to be some limits on the size of the structures (height, length, length on boundary, footprint, etc.) that are exempt from public notification. • If there are no limits in place then Council's will deal with an increased number of complaints from neighbours
	Urban Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support – this zone is located adjacent the Mount Barker railway station and contains a bus terminal and some commercial buildings.
2.3.2.11	Building Height – TNV and Context		
	Urban Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - This Zone is located adjacent the Mount Barker railway station. The current max building height TNV is 5 stories, but the site currently has small scale buildings – so the current context won't come into account.
	Housing Diversity Neighbourhood Zone	Unsure	<ul style="list-style-type: none"> • The map below shows sections of the HDN Zone (located in Mount Barker) that are located adjacent to areas that have a TNV for 5 storey development. • The proposed amendment will allow for building height to take into context/complement nearby development. How will the policy in the Code ensure that there isn't a building height creep from adjacent zones through the HDN Zone?

			<ul style="list-style-type: none"> It should be noted that Council spent a considerable amount of time negotiating building heights with the community when these were considered in the Regional Town Centre Zone DPA (2016). 
	Local Activity Centre Zone	Yes	<ul style="list-style-type: none"> Support - LAC's generally have a max building height TNV of 2 stories, this is in line with the Low Rise definition

	Suburban Activity Centre Zone	Yes	<ul style="list-style-type: none"> • Support - SAC's generally have a max building height TNV of 2 stories, this is in line with the Low Rise definition
	Employment Zone	Yes	<ul style="list-style-type: none"> • No max building height currently in the Employment Zone but most of the existing buildings are 2 stories in height
	Township Main Street Zone	Yes	<ul style="list-style-type: none"> • TMS located in Hahndorf and Nairne – neither of these has a max building height TNV. But the desired character for these areas is for 2 stories.
	Suburban Main Street Zone	No	<ul style="list-style-type: none"> • Current policy talks about low to medium rise – this could allow for up to 6 storeys which would not be envisaged within the Gawler Street Precinct (which is an Historic Area).
	Community Facilities Zone	No	<ul style="list-style-type: none"> • Current Code policy states that building height can be consistent with the prevailing character of the locality and the height of nearby buildings. • Mountain Pool is located adjacent a 3 storey and 5 storey TNV (in different zones). Which suggests that a higher building could be acceptable in this locality if an adjacent building is 5 storeys. This site also sits at the intersection of the Neighbourhood Zone and the Rural Living Zone, meaning that building heights will need to be carefully considered.

				
2.3.2.12	Building Height, Building Wall Setback and Wall Height			
	Post height definition	Yes	<ul style="list-style-type: none"> • Support – the definition mirrors the wall height definition 	
	Established Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 8.1 • Acceptable as this is talking about building setbacks and measures from the lower of natural or finished ground level 	
	Home Industry Zone	Yes	<ul style="list-style-type: none"> • Support – This fixes the inconsistencies between wording in DTS/DPF 3.3 	
	Housing Diversity Neighbourhood Zone	No	<ul style="list-style-type: none"> • Why is building height (in this instance) measured from the top of the footings and not from natural ground level as in the current Code definition? • What's to stop someone from placing 600mm of fill and 400mm (above ground level) footings and having a building that is 1 metre taller than natural ground level and 1 metre taller than the TNV? 	

			<ul style="list-style-type: none"> • PO 6.1 – if this is meant to deal with visual and overshadowing impacts of boundary walls why are we measuring from top of footings and not natural ground level?
	Master Planned Neighbourhood Zone	No	<ul style="list-style-type: none"> • Accepted table – given the sloping nature of the land within Mount Barker’s MPN Zone we do not support the changing of measuring building height from natural ground level to the top of footing height • DTS/DPF 5.1 – same as above – don’t support measuring building height from the top of the footing (how does this outcome support residential character?) • DTS/DPF 17.1 – support the addition of natural ground level – but this begs the question of why this references natural ground level but other provisions don’t?
	Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - Zone policies that are being amended already refer to boundary walls (not total building height), so no major change
	Productive Rural Landscape Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 14.1 (c) this policy already refers to walls so (not total building height), so no major change (also already refers to distance from natural ground level)
	Rural Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 13.1 (c) this policy already refers to walls so (not total building height), so no major change (also already refers to distance from natural ground level)
	Rural Living Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 2.5 (c) this policy already refers to walls so (not total building height), so no major change (also already refers to distance from natural ground level)
	Rural Neighbourhood	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 2.1 – this one is ok as building height (by definition) refers to natural ground level (unless otherwise stated)
	Township Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 7.1 (b)(ii) A – this already relates to boundary walls – the change in wording just clarifies this • Support - DTS/DPF 8.1 (b) – support as this clarifies where the height measurement is to come from (natural ground / finished ground level)
	Township Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 2.6 - support as this clarifies where the height measurement is to come from (natural ground / finished ground level) • Support - DTS/DPF 2.7 (a) - this already relates to boundary walls – the change in wording just clarifies this

	General Development Policies – Housing Renewal	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 6.1 - this already relates to boundary walls – the change in wording just clarifies this
2.3.2.13	Building Walls and Dwelling Walls – Policy Review		
	Established Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 6.1 (c) – this is a good pick up that will ensure that all buildings are covered by setback requirements and not just dwellings or residential structures • Support - DTS/DPF 7.1 & 7.1 (b) - this is a good pick up that will ensure that all buildings are covered by setback requirements and not just dwellings or residential structures • Support - DTS/DPF 9.1 (a) - this is a good pick up that will ensure that all buildings are covered by setback requirements and not just dwellings or residential structures
	Housing Diversity Neighbourhood Zone	More work required	<ul style="list-style-type: none"> • DTS/DPF 5.1 – what constitutes an “ancillary building”? This term is not defined within Part 7 or 8 of the Code. • The current provision will capture all building types but will this change capture all types of buildings that can be constructed in the HDN Zone? • If it doesn’t capture all building types then changes should be made to the policy to ensure that it does capture all building types.
	Master Planned Neighbourhood Zone	More work required	<ul style="list-style-type: none"> • PO 5.1 and DTS/DPF 5.1 – This may allow for 3 storey (or low to medium rise) shops, offices, consulting rooms, schools as the change is from dwelling walls to buildings walls. • We would suggest keeping the status quo and creating new policy to deal with non-residential development • This is similar for the other provisions listed – is the separation distance, wall height, etc. similar (with similar assessment considerations) for residential development and non-residential development within this zone? • How does this work with the Emerging Activity Centre Subzone?

	Neighbourhood Zone	More work required	<ul style="list-style-type: none"> • PO 7.1 and DTS/DPF 7.1 – fine • DTS/DPF 9.1 – excludes ancillary buildings and structures however PO 10.1 and DTS/DPF 10.1 talks only provide requirements for residential ancillary buildings. Since the Zone allows for a range of non-residential land uses could a non-residential ancillary structure slip through the cracks and have no policy governing wall height, size, etc?
	Rural Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 6.1
	Township Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support - DTS/DPF 6.1 (c) • Support - DTS/DPF 7.1 • Support - DTS/DPF 9.1 (a)
	Township Zone	Yes	<ul style="list-style-type: none"> • Support - PO 2.5 & DTS/DPF 2.5
2.3.2.14	Removing Overlays		
	Scenic Quality	More work required	<ul style="list-style-type: none"> • Seeing that the Scenic Quality Overlay is all about ensuring that development complements the natural and rural character of the locality shouldn't land division, ancillary accommodation, dwelling extensions and outbuildings be covered by it? • These forms of development have the ability to change the natural character of a site either through new structures or the removal of vegetation. • This Overlay would provide policy that would allow for more nuanced assessment of the visual impacts of a proposal. • With land division for arguments sake, you could consider the visual impact of removing vegetation or extensive earthworks on the visual amenity
	Water Resources Overlay	No	<ul style="list-style-type: none"> • This overlay is required at both the land division and the dwelling stage as the Master Planned Neighbourhood Zone as approximately 80% of the land is still open farmland / paddocks. • The creeks in the aerial photo below are still in their natural setting and any land division or residential development will need to take into account surface water, overland flow paths and creeks.

- This will also need to cover the Housing Diversity Neighbourhood Zone as a similar situation exists within Nairne where open farmland / paddocks (along with the dams and drainage lines) be converted to residential areas.

			
<p>2.3.2.15</p>	<p>Detached Dwellings in the Master Planned Neighbourhood Zone – Accepted Development Pathway</p>	<p>No</p>	<ul style="list-style-type: none"> • How can amendments be made to the accepted pathway for dwellings when we do not know how the Bushfire Overlay Code Amendment will affect these forms of development? • The pre-consultation version of the Bushfire CA showed significant changes to Mount Barker’s bushfire overlays • Whereas the issues highlighted in the Code Amendment documentation seem to mainly affect the Line of Enquiry tool. So is this an assessment issue or a Portal functionality issue?

2.3.2.16	Detached dwellings – 3 stories – Housing Diversity Neighbourhood Zone	More work required	<ul style="list-style-type: none"> • Support – The addition of extra policies to minimise impacts from overlooking, and to increase privacy. • However, this support is balanced by the need for the Commission to undertake additional research into the definition of direct overlooking as this has not been explored fully (see comments in section 2.3.8.5).
2.3.2.17	Discrete vs Discreet (typo)	Yes	<ul style="list-style-type: none"> • Support
2.3.2.18	Garage and carport linkages in Established Neighbourhood Zone and Township Neighbourhood Zone	Yes	<ul style="list-style-type: none"> • Support
2.3.2.19	Dwelling alterations and building additions/alteration – Assessment pathways	More work required	<ul style="list-style-type: none"> • Does there need to be a statement from the applicant that the use or intensity is not changing (i.e. internal alterations to consulting rooms (doctors) adding more consulting rooms)? • How would that statement be incorporated in the assessment?
2.3.2.20	Horticulture – Prescribed surface water areas overlay and Prescribed wells area overlay - Linkages	Yes	<ul style="list-style-type: none"> • Support
2.3.2.21	Interface Height – Various Zones	Yes	<ul style="list-style-type: none"> • Support - This clarifies poorly worded policy – essentially the policy as written would contradict the diagram in the Code and would apply to all boundaries equally, including the street frontage

2.3.2.22	Land division – Site Contamination - Linkage	Yes	<ul style="list-style-type: none"> • Support – The Commission need to ensure that PO 1.1 and DTS/DPF 1.1 are linked to all relevant dwelling forms of development for all zones.
2.3.2.23	Non-residential Outbuildings	More work required	<ul style="list-style-type: none"> • Support – Introducing policy to enable small-scale non-residential outbuildings to be assessed and to go through a DTS pathway. • However, there will need to linkages to ensure that native vegetation is not removed and that septic tanks and cwms connections are not built over (see General Development Policies, Infrastructure and Renewable Energy Facilities PO 12.1 and DTS/DPF 12.1 as well as PO 12.2 and DTS/DPF 12.2)
2.3.2.24	Outbuildings – Accepted Development Criteria	Yes	<ul style="list-style-type: none"> • Support - A building with a length greater than 11.5 metres would be unlikely to meet the 40m² requirement (criteria 6)
2.3.2.25	Pool fencing – Accepted development	Yes	<ul style="list-style-type: none"> • Support
2.3.2.26	Primary Street Setback – Use of building line	Yes	<ul style="list-style-type: none"> • Support • Council has previously taken a similar position in regards to front setbacks
2.3.2.28	Tourist Accommodation – Total Floor Areas – Rural Zones	More work required	<ul style="list-style-type: none"> • Proposed DTS/DPF 6.3 (b) (i) states: <i>new “building, or buildings, does not exceed a cumulative total floor area of 100m²”</i> • While Proposed DTS/DPF 6.3 (b) (ii) states: <i>“where in an existing building, does not exceed a total floor area of 150m²”</i> • The amended wording of the two DTS/DPF policies appears to allow for tourist accommodation within an existing building of 150m² as well as a new building with a total 100m².

			<ul style="list-style-type: none"> If the aim is to ensure that tourist accommodation remains small scale then these provisions need to be amended to ensure that floor areas for existing buildings and new buildings aren't separate.
2.3.3	Overlays		
2.3.3.1	Affordable housing overlay – referral trigger	Yes	<ul style="list-style-type: none"> Support - I would assume that if there is no agreement in place for the affordable housing (to deliver it) then the referral coming back from the SAHA would not be supportive
2.3.3.3	Hazards (Flooding) Overlay	Yes	<ul style="list-style-type: none"> Support
2.3.3.5	Heritage Adjacency Overlay - Referral	Yes	<ul style="list-style-type: none"> Support
2.3.3.7	Major Urban Transport Routes Overlay	Yes	<ul style="list-style-type: none"> Support This overlay only applies to land directly adjoining the South Eastern Freeway Seeing that individual developments (shops, offices, dwellings) will not be allowed access to the freeway these changes are of no consequence
2.3.3.9	Mount Lofty Ranges Water Supply Catchment Overlay (Area 2)	Yes	<ul style="list-style-type: none"> Support removing the double up of the wording
2.3.3.10	Mount Lofty Ranges Water Supply Catchment Area 1 & 2 - Referrals	Yes	<ul style="list-style-type: none"> Support - Changes are proposed to close a loophole in regards to workers accommodation and to also ensure that only those applications where 2 habitable buildings concurrently on the same site are referred
2.3.3.11	Prescribed Surface Water Area Overlay - terminology	Yes	<ul style="list-style-type: none"> Support - Seems to be a straightforward change to clarify wording/interpretation

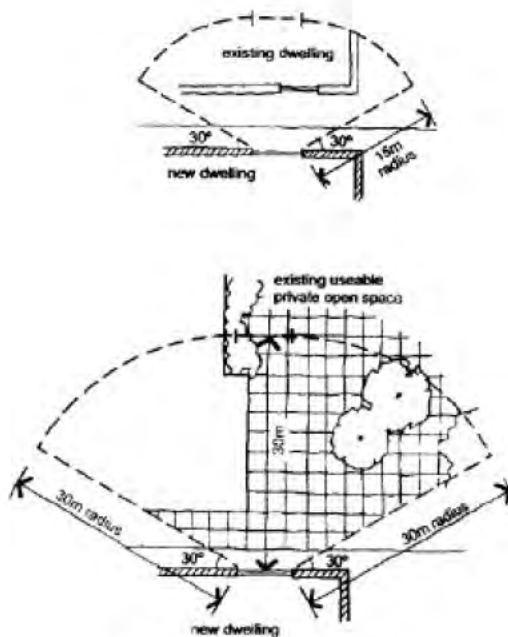

2.3.3.12	Prescribed Surface Water Area Overlay – Terminology	More work required	<ul style="list-style-type: none"> • Understand those listed land uses that already have a water allocation won't be referred. • But this now means that the Relevant Authority consideration is: <ul style="list-style-type: none"> a) Do they have a current approved water allocation? and b) Will the proposed use exceed the amount of water currently allocated? • Will the RA need to ask for this information at the lodgement/verification stage? • What happens in situations where the applicant doesn't know or can't quantify whether they will require additional water over their current allocation?
2.3.3.13	Representative Buildings – Historic Area Overlay – Spatial Representation	Yes	<ul style="list-style-type: none"> • Support – This is a welcome addition that allows for Representative buildings to be found in the SAPPA
2.3.3.18	River Murray Tributaries Protection Area – Policy intent	Yes	<ul style="list-style-type: none"> • Support – wording improvement
2.3.3.19	River Murray Tributaries Protection Area - Referrals	More work required	<ul style="list-style-type: none"> • Understand those listed land uses that already have a water allocation won't be referred. • But this now means that the Relevant Authority consideration is: <ul style="list-style-type: none"> c) Do they have a current approved water allocation? and d) Will the proposed use exceed the amount of water currently allocated? • Will the RA need to ask for this information at the lodgement/verification stage? • What happens in situations where the applicant doesn't know or can't quantify whether they will require additional water over their current allocation?
2.3.3.20	State Significant Native Vegetation Areas – Overlay – Referral trigger	More work required	<ul style="list-style-type: none"> • This proposes to allow for 'level 1' clearance to occur without a referral to the Native Vegetation Council. • More resources will be required to assist the RA to work out what is and is not level 1 native vegetation clearance.

2.3.3.21	Traffic Generating Development Overlay - Referral	Yes	<ul style="list-style-type: none"> • Support • The change will capture DA's with 50 or more dwellings, which isn't presently the case
2.3.3.22	Urban Transport Routes Overlay – Revised policy and referrals	Unsure	<ul style="list-style-type: none"> • DTS/DPF 3.1 – a change from a residential dwelling to a shop/office can still generate significant vehicle movements – even when they are less than 250m² – I would assume that the other exemptions (listed in (i)-(v)) are because an assessment is assumed to have been previously made
2.3.4	General Policies		
2.3.4.2	Carport and Outbuilding – Internal parking dimensions	Yes	<ul style="list-style-type: none"> • Support – this adds car parking width requirements to garages and carports that aren't under the main roof (where they currently don't exist)
2.3.4.3	Commercial Forestry – Policy Review	No	<ul style="list-style-type: none"> • The addition of Commercial Forestry to the list of envisaged developments in the Productive Rural Landscape Zone is not like for like (it was previously non-complying in the Native Vegetation Buffer Policy Area 3 and the Rural Landscape Protection Policy Area 26). • This will introduce a new use to these areas where it hasn't been before and therefore this should be undertaken by way of a dedicated Code Amendment and consultation process and not hidden within a broader document
2.3.4.4	Decks – Design, and Design in Urban Areas – Assessment Pathways	More work required	<ul style="list-style-type: none"> • The transparency of materials for the screen needs to be considered to ensure that direct or unreasonable overlooking occurs
2.3.4.5	Design – PO 19.3 – Driveway Access	Yes	<ul style="list-style-type: none"> • Support
2.3.4.6	Design in Urban Areas – Soft Landscaping	Yes	<ul style="list-style-type: none"> • Support
2.3.4.8	Heavy Vehicle Parking – Transport Access	No	<ul style="list-style-type: none"> • Seeing that this is general policy that can apply to any zone the operational times should reflect that.

	and Parking – Policy and Definition Review		<ul style="list-style-type: none"> • The proposed times of 6am to 9:30pm Monday to Saturday and 9:30am to 7pm on Sundays and public holidays are excessive for anything apart from large rural living allotments or rural zones. • Either the policy needs to be changed to consider different localities (for operational times) or two separate operational times should be included
2.3.4.9	Housing Renewal – Policy Review	Yes	<ul style="list-style-type: none"> • Support - The interpretation note will stop conflicts between policies in “all code assessed developments”
2.3.4.10	Land division – General Policies – Policy Review	Yes	<ul style="list-style-type: none"> • Support - PO 3.8 & DTS/DPF 3.8 – duplication of policy – support removal • Support - PO 10.2 & DTS/DPF 10.2 – duplication of policy – support removal
2.3.4.11	Land division - linkages	Yes	<ul style="list-style-type: none"> • Support - Linking PO 2.8 and PO 3.11 to performance assessed land division applications is supported
2.3.4.12	Transport, Access and Parking General Development Policy - Fences	Yes	<ul style="list-style-type: none"> • Support – adding policies to performance assessed fence applications to deal with corner cut off situations
2.3.4.13	Transport, Access and Parking – car parking rates table	Yes	<ul style="list-style-type: none"> • Support - No changes to the actual rates – the changes involve PLUS ensuring that 2 different car parking rates don’t get applied to the same land use
2.3.4.14	Transport, Access and Parking – car parking rates - interpretation	Yes	<ul style="list-style-type: none"> • Support - Adding further clarification to how to interpret areas that are exempt from reduced car parking requirements
2.3.7	Land Use Definitions		
2.3.7.1	Ancillary accommodation	More work required	<ul style="list-style-type: none"> • A greater level of clarity in definitions and policy is required to separate out different forms of ancillary buildings (granny flats, second dwellings, rumpus rooms and outbuildings). • Currently Council are seeing applications with all the elements of a dwelling (bedrooms, kitchen, bathroom, laundry) but to avoid assessment as a second

			<p>dwelling or granny flat these applications are described as ancillary accommodation, studio or other such descriptions (along with rooms being relabelled).</p> <ul style="list-style-type: none"> • Once these buildings have been constructed, they have the ability to be used as dwellings or rented on short stays platforms such as Airbnb. • The description listed in the Code Amendment documentation as well as the proposed definition does not provide this level of clarity to determine the element(s), correct assessment pathway and reach any true intent of the policy. • To avoid confusion the proposed definition should clearly separate out second dwellings, granny flats or buildings that contain all elements of a dwelling from those rumpus rooms or studio applications (i.e. subordinate to the main dwelling)
	Child care facility	Yes	<ul style="list-style-type: none"> • Support - Preschool being changed into child care facility
2.3.7.2	Caravan and Tourist Park	Yes	<ul style="list-style-type: none"> • Support - Added caravan and tourist park to the inclusion (definition) of Tourist Accommodation
2.3.7.3	Commercial forestry	Yes	<ul style="list-style-type: none"> • Support - Seems reasonable to clarify the definition
2.3.7.4	Educational establishment	Yes	<ul style="list-style-type: none"> • Support - Updating the terminology from establishment to facility – no issue
2.3.7.5	Indoor recreation facility	Yes	<ul style="list-style-type: none"> • Support - Added the words “or part of a building” to allow for situations where an indoor rec facility doesn’t form a whole building
2.3.7.6	Office	Yes	<ul style="list-style-type: none"> • Support - Added the words “or part of a building” to allow for situations where an office doesn’t form a whole building
2.3.7.7	Pre-school	Yes	<ul style="list-style-type: none"> • Support - Amended the definition of pre-school (changed to child care facility) and included the word ‘pre-school’ to the includes (column C). • No major impacts from a policy perspective
2.3.7.8	Renewable Energy Facility	Yes	<ul style="list-style-type: none"> • Support - Adding exclusions for domestic solar and battery storage for the Conservation Zone and Rural Zone • Currently the Code could be interpreted to capture domestic facilities and make them go through a restricted development path

2.3.7.9	Tourist Accommodation	Unsure	<ul style="list-style-type: none"> • Support – the expanded definition. • But how would the new additions (onsite service facilities and/or facilities for the management) work with the floor area requirements added in Section 2.3.2.28 and DTS/DPF 6.3 (b) (i) and (ii)?
2.3.7.10	Workers Accommodation	Yes	<ul style="list-style-type: none"> • Support - Updated the definition of workers accommodation to allow for it to be used in association or support of bulk handling and freight handling (at the request of Viterra)
2.3.7.11	Heavy vehicle parking	More work required	<ul style="list-style-type: none"> • Support – the new definition added to the Code as one did not previously exist • However, there needs to be clarification that this does not include the occupation of a caravan for residential purposes (i.e. a dwelling plus caravan both being inhabited)
2.3.7.12	Function centre	Yes	<ul style="list-style-type: none"> • Support - Support the addition of this definition
2.3.8	Administrative Definitions		
2.3.8.1	Building Height	Yes	<ul style="list-style-type: none"> • Support - Allows for the Code to apply its own measurement of building height in certain circumstances
2.3.8.2	Building Line	Unsure	<ul style="list-style-type: none"> • Need to check how this is to be implemented – will it only be for ancillary structures and not dwellings?
2.3.8.3	Wall height	Yes	<ul style="list-style-type: none"> • Support - Allows for the Code to apply its own measurement of wall height in certain circumstances
2.3.8.5	Direct Overlooking	No	<ul style="list-style-type: none"> • Councils previous Development Plan listed the following requirement for direct overlooking: • Direct overlooking from upper level habitable areas should restrict views within a horizontal distance of 15 metres to adjacent windows and 30 metres to outdoor areas beyond a 30 degree angle from the plane of the wall as shown in following diagram:

			 <p style="text-align: center;"><i>Area likely to be primarily affected by overlooking from upper level windows</i></p>
			<p>Council does not see why the threshold should be reduced from 30 metres, nor has the Commission adequately prosecuted their case for this reduction</p> <ul style="list-style-type: none"> • Clarification should be provided as to what constitutes an upper level?
2.3.8.6	High Frequency Public Transit Area	Yes	<ul style="list-style-type: none"> • Support - Mount Barker is not located within Metropolitan Adelaide so this amendment does not affect us
2.3.8.7	Post Height	Yes	<ul style="list-style-type: none"> • Support - Seems to match the definition of wall height – no issues
2.3.8.8	Gross Density	Yes	<ul style="list-style-type: none"> • Support – Gross density is not used in the Code policies anyway

2.3.9	Referrals		
2.3.9.1	EPA referral	Yes	<ul style="list-style-type: none"> • Support - Preamble – support – this will make sure that all applications that need to be referred occur (the EPA have reported that some expansions or incremental increases to uses/thresholds have not been referred) • Part 9 – Referrals – Part 9.1 - Site contamination – removing class 3 activity as a referral requirement – the EPA have advised PLUS that class 3 activities should never have been listed
2.3.11.1	Local Heritage Places	Yes	<ul style="list-style-type: none"> • Support - Allowing for local and state heritage places to be listed

[image003.jpg](#)

To the Code Amendment Team,

The Port Pirie Regional Council appreciate the chance to comment on the amendment to the Miscellaneous Technical Enhancement Code. The amendments have the support of the Council after consideration. However, the Council supports the insertion of more details in relation to the following:

- Establish a performance-based assessment process for evaluating solar farms in the Rural Zone.
- Establish a performance-based assessment process for a shop in the Suburban Neighbourhood Zone.
- Establish a performance-based assessment process for evaluating horse keeping in the Rural Living Zone.
- Create a performance-based assessment process for keeping animals in the Rural Living Zone and Rural Zone. The Code currently permits the keeping of horses in the Rural Zone, but not the keeping of other animals, such as goats, sheep, cattle, or lamas, for which our council receives requests.
- The Suburban Neighbourhood Zone's DPF 11.1(b) stipulates that outbuilding floor areas should not exceed 60m². The floor area falls short of both the standards set by our community and the previous Development Plan policies, therefore it is recommended that the area be increased for this Council to 100m². You might wish to add this to the above as an exclusionary policy or make a TNV.
- The introduction of a new question at the lodgement stage or under the Affordable Housing Overlay that asks the applicant to specify whether a development, such as a dwelling or a land division, is being done for affordable housing reasons in accordance with the applicable scheme.
- With regard to DPF 2.1 of the Suburban Neighbourhood Zone:
 - With no exclusionary condition for the lack of a connection to public utilities like sewer and water, the policy permits site areas as small as 300m². It is therefore requested that the policy be updated to take into account how newly divided land should be handled in cases where it is not connected to communal or public services.
 - The policy permits developers to submit a single application for numerous dwellings prior to receiving approval for a land division. The construction of infrastructure, which would typically be addressed during the land division consent, is not taken into account by this policy. As a result, it is considered that the policy should eliminate the option of supporting more than one dwelling before receiving authorisation for the division.
- In accordance with DPF 3.2 of the Hazards (Bushfire - General Risk) Overlay, habitable buildings must be entirely contained within an asset protection zone that is 50 metres from unmanaged grasslands and 100 metres from hazardous bushland vegetation. Given that portions of Council's Suburban Neighbourhood Zone are included in this overlay and may include allotments as small as 300m², this policy is thought to only apply to places with a high bushfire risk. It is therefore suggested that this policy be examined in order to determine whether such rules apply to areas with general bushfire risk and this policy be updated to not apply to areas within the Suburban Neighbourhood Zone.
- According to the Council's former Development Plan (prior to the BDP), the following locations are now included in the Community Facilities Zone, but they were once part of the zone currently known as the Suburban Activity Centre Zone. To guarantee that allotments are recorded within the Suburban Activity Centre Zone, it is requested that this zone anomaly be corrected. Alternatively, Council prefers that it be changed to the Suburban Neighbourhood Zone given that the area has been established for residential use.
 - Allotments. CT6089/769, CT6089/771, CT6089/768, CT6089/767, CT6089/766, CT6087/518, CT6119/926, CT6087/516 and CT6087/515

If you have any questions about any of the above, don't hesitate to contact me.

Warm Regards,

Adina Teaha

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

	Number	Change Topic	Council Administration position	CoA Comment
1.	2.3.1.1.	Changes to Rules of Interpretation	Support 	
2.	2.3.1.2	Changes to cadastral boundary determinations due to land division	Support 	
3.	2.3.2.9	Restricted Development Classification in the Capital City Zone and City Main Street Zone. Only retains Special Industry as RD. Industry and light industry become Performance Assessed.	Not Supported 	<p>The City of Adelaide does not support the changes unless it is demonstrated that appropriate protections are in place for economic growth and amenity. The changes to amend industry from Restricted Development to Performance Assessed pathways, whilst has the potential to be workable this pathway requires the policy settings to be in place to enable adequate protections to the sensitive land uses, city streets and economic conditions.</p> <p><u>Economic Growth Risk</u></p> <p>The City has progressively changed its land use policies to support a thriving commercial and residential hub. Industrial impacting land uses have purposely not been supported for the last 30 years or so, which has seen the residential quality of the city improve over time. Industrial land uses have moved to more appropriate locations and quality high density residential and offices have become the predominant land uses.</p> <p>It is important to ensure no industry development stifles any future development and growth opportunities. Given the intensity of inner-city development, one impacting site could negatively impact future residential and economic growth of the City. Whilst industry may be the</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

				<p>highest and best use for some sites at one point, it may dampen investment for others in the longer term.</p> <p><u>Amenity/Interface Policies</u></p> <p>At this stage, it has not been demonstrated that the potential impacts from industry development can adequately be managed through the assessment process. It is noted, that lower impacting light industry uses such as bakeries, distilleries and micro brewery's could be uses supported with appropriate policies. Changes to a Performance Assessed pathway needs to be supported by more policy to ameliorate impacts to future and existing sensitive high density residential and commercial land uses. Additional policy is needed around scale, buffers, hours of operation, heavy vehicle movements on city streets, noise impact to sensitive noise receivers, vibrations and dust. It is also noted, the City of Adelaide has previously advised that the Interface Between Land Uses GDP – Environment Noise Policy refers to the Environment Protection (Noise) Policy criteria 2009 which has not been updated to reflect the new PDI Act. It is unclear what policy will be applied in the proposed Capital City Zone. It is important that heavy vehicles and other externalities do not impact the successful places within city streets.</p> <p>In summary, at this stage, the risks to other economic growth opportunities are too great and this amendment is not supported.</p>
4.	2.3.2.10	<p>Notification Tables – All Zones</p> <p>Introduction of a minor test</p> <p><u>'A relevant authority may determine that a variation to 1 or more corresponding exclusions prescribed in Column B is minor in nature and does not require notification.'</u></p>	<p>Not Supported</p> 	<p>The procedural matters should be clear and not be subjective in order to de-risk developments (supporting developers and other stakeholders). The proposed amendment would effectively broaden the scope of what could be excluded from public notification. However, as it is subjective, it could result in decisions being made and then later challenged in the court system.</p> <p>It is noted, one Assessment Manager could consider one building level to be a minor change and another could view this as extreme. A community member or third party, could disagree and challenge this decision.</p> <p>To support clear decisions, CoA would prefer the Code Amendment process is used to determine notification processes rather than allowing</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

				<p>variations at the Development Assessment stage. This will support the consistency of assessment practice across the State and provide developers and stakeholders with more certainty of processes of notification.</p> <p>If there is a desire for less notification, it is recommended that the notification tables be re-drafted to be clear about what is and isn't required to be notified. We note, there is potential for notification tables to be changed so the exception in Column B doesn't directly relate to a DTS/DPF. This will give a buffer to enable minor departures from the policy to not require notification.</p> <p>However, if this proposed amendment is to occur there is a need for a Practice Direction for all relevant authorities to make the determination of minor in nature consistently.</p>
5.	2.3.2.10	<p>Notification Tables – Adelaide Park Lands Zone</p> <p>Introduces an additional test (underlined) for relevant authorities to exempt notification for</p> <ol style="list-style-type: none"> the demolition (or partial demolition) of a State or Local heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and <u>where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the</u> 	<p>Not Supported</p> 	<p>This comment applies to all Notification tables 2.3.2.10 Notification Tables</p> <p>The amendment is not supported for the following reasons:</p> <p><u>Application to zones</u> It is unclear why this amendment is needed given there are no current State Heritage Areas or Historic Area Overlays in the Adelaide Park Lands, Capital City, Main Street and City Riverbank Zones.</p> <p><u>Subjective</u></p> <p>Procedural matters should not be subjective to provide certainty to developers and other stakeholders. The Amendments open risk of poor interpretation resulting in decisions that can be challenged. Judicial review and challenges to the Courts frustrate the process and hinder development outcomes and community faith in the development system.</p> <p>To support clear decisions, this Code Amendment Process should be used for determining notification rather than allowing variation at the Development Assessment stage. This will support the consistency of practice across the State and support developers and stakeholder with more certainty of process.</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

		<u>State Heritage Area or Historic Area Statement.</u>		<u>Further assessment</u>
		2. the demolition (or partial demolition) of a building in a Historic Area Overlay (other than an ancillary building or <u>where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated</u>).		<p>The procedural matters should not require further assessment in order to verify the application. The amendments propose assessment of the heritage value in the State Heritage Areas or the Historic Attributes in the Historic Area Statement in order to determine whether it is notified. It is unclear how relevant heritage advice will be provided at the right time to support this decision, the timeframes required, and how this process will work when there are differences in opinion (e.g. applicants, heritage advisors and assessment managers). The practicality of this amendment is difficult to undertake during the validation process. This is not efficient and could result in errors.</p> <p>CoA recommends that the notification tables be re-drafted to be clear about what is and what isn't required to be notified.</p>
6.	2.3.2.10	Notification Tables – Adelaide Park Lands Zone Remove some developments from notification	Support 	Support the amendment as it will have minimal impact in the Adelaide Park Lands.
7.	2.3.2.10	Notification Tables – Business Neighbourhood Zone Demolition amendment	Not Supported 	<p>Not support, refer to comment above on all Public Notification Tables (line 5).</p> <p>The changes will not be applicable in the Business Neighbourhood Zone for the Melbourne Street Sub Zone as there are not any Historic Area Overlays or the State Heritage Area.</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

8.	2.3.2.10	Notification Tables – Business Neighbourhood Zone Remove some developments from notification	Support 	
9.	2.3.2.10	Notification Tables – Business Neighbourhood Zone Remove some developments from notification	Support in principle 	
10.	2.3.2.10	Notification Tables – Capital City Zone Demolition amendment	Not Support 	See comment above on all Public Notification Tables (line 5)
11.	2.3.2.10	Notification Tables – City Living Zone Removal of developments from notification	Partially 	Decks/ fences/ retaining walls/ outbuildings etc that are on residential boundaries and are over a certain height should be notified as they can negatively impact on outlook and amenity.
12.	2.3.2.10	Notification Tables – City Living Zone Demolition of local and state heritage places where they do not meet state heritage area or historic area statement attributes.	Not Supported 	See comment above on all Public Notification Tables (line 5)

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

13.	2.3.2.10	Notification Tables – City Living Zone To exclude railway line	Support 	
14.	2.3.2.10	Notification Tables – City Main Street Zone	Not Supported 	However, it is noted that this would not be impacted in this zone.
15.	2.3.2.10	Notification Tables – City Main Street Zone Removal of some developments from needing notification	Partially 	Decks/ fences/ retaining walls/ outbuildings etc that are on residential boundaries and are over a certain height should be notified as they can negatively impact on outlook and amenity.
16.	2.3.2.10	Notification Tables – City Main Street Zone To exclude railway line	Support (not relevant in CoA) 	
17.	2.3.2.10	Notification Tables – City Riverbank Zone Demolition of local and state heritage places where they do not meet state heritage area or historic area statement attributes.	Not Supported 	See Comment Above on all Public Notification Tables (line 5)

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

18.	2.3.2.10	Notification Tables – City Riverbank Zone Removal of minor developments from needing notification	Partially 	
19.	2.3.2.10	Notification Tables – City Riverbank Zone Removal of some developments from needing notification	Partially 	
20.	2.3.2.10	Notification Tables – City Riverbank Zone To exclude railway line	Support (not relevant in CoA) 	
21.	2.3.2.10	Notification Tables – Community Facilities Zone Removal of minor developments from needing notification	Support. 	See comment above on all Public Notification Tables (line 5)
22.	2.3.2.10	Notification Tables – Community Facilities Zone Demolition of local and state heritage places where they do not meet state heritage area or historic area statement attributes.	Not Supported 	See comment above on all Public Notification Tables (line 5)

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

23.	2.3.2.10	Notification Tables – Community Facilities Zone To exclude railway line	Support (not relevant in CoA) 	However, it is noted that this would not be impacted in this zone.
24.	2.3.2.11	Building Height – TNV and context – Policy refinement Amendments to Capital City Zone, City MainStreet Zone and Community Facilities Zone Minor changes to align to other state-wide zones.	Support 	
25.	2.3.2.12	Building Height, Building Wall Setback and Wall Height – Policy Review Changes to building height definition and application	Support 	
26.		<i>Part 4 – General Development Policies Changes to expression of policy</i>	Support 	
27.	2.3.2.13	Building Walls and Dwelling Walls City Living Zone Change from dwelling to building.	Support 	

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

28.	2.3.2.14	Common and Minor Development Overlay Swimming pools or spa pool in Historic Overlay can be Accepted development	Support 	
29.	2.3.2.14	Common and Minor Development Overlay	Partially support 	Additional references should be made to the Historic Area Overlay, Significant Tree Overlay, State Heritage Place Overlay and Local Heritage Place Overlay.
30.	2.3.2.16	Detached Dwellings – Medium and High Rise Development Policy Relevance. City Living Zone	Partially support 	It is noted, that there is need to apply policies to landscaping, tree planting and WSUD.
31.	2.3.2.17	Dwelling alterations and building additions/alterations – assessment pathways	Not Supported 	<p>This amendment is not support as it reduces the design integrity of the Planning and Design Code. Many Planning and Design Code policies have been carefully designed to support good design however, this amendment will erode their purpose. For example, activation policies, built form and character policies, interface, movement, access, advertisements etc and the Design in Urban Areas General Development Module etc. The ability for these matters to be altered without proper assessment is not supported as it could lead to poor design and poor neighbourhood outcomes.</p> <p>There should be a clear distinction between internal building alterations and external building alterations as the impacts are completely different. For instance, internal alterations are not visually visible from the streetscape while external building alteration such as bricking in windows and doors fronting the street could potentially have a negative impact on the activation and the attractiveness of the streetscape which is particularly important along streets with high pedestrian usage. The</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

				<p>City of Adelaide seeks to achieve high quality experiences for residents, workers and visitors by improving public spaces within the city, through passive surveillance, creating vibrant spaces and interesting pedestrian environments. By listing external alterations as an accepted class of development without proper assessment removes the Assessment Managers ability to ensure any of the above happens.</p> <p>There are no provisions in place to prevent public space encroachment e.g. verandahs, balconies, canopies etc nor are there any no provisions that consider the built form and character policies of the Zone or Subzone</p> <p>If the amendment is accepted, it is recommended that the following changes are made:</p> <ul style="list-style-type: none">• Include more criteria activation policies, built form and character policies, interface, movement, access, advertisements etc and the Design in Urban Areas General Development Module etc.• Distinguish between internal and external buildings alterations• Include the Historic Area Overlay as an exception• Include Heritage Adjacency Overlay as an exception• Ensure any building alterations that affect the building setback do not fall into the accepted development classification criteria• Ensure building alterations do not encroach into public space (without approval)• Policies to ensure passive design such as window shade and size and orientation of internal rooms.• Screening policies are included.
--	--	--	--	---

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

32.	2.3.2.20	Non-Residential Outbuildings – New Policy and Assessment Pathways	Support with amendments 	Whilst we support this amendment, we request that these policies do not apply in the Capital City Zone, City Mainstreet Zone, Community Facilities Zone, Business Neighborhood Zone and Adelaide Park Lands Zone. In addition, further policies should include: <ul style="list-style-type: none"> • vehicle access, • keeping in character and not visually dominating the streetscape • Design, materials and character compatible with the area
33.	2.3.2.21	Interface Height – Multiple Zones Community Facilities Zone – Changes to refer to street boundary.	Support 	
34.	2.3.2.22	Land Division – Site Contamination -Policy Relevance and Linkage The change means that Site Contamination policy PO 1.1 is relevant to Land Division Applications.	Support 	
35.	2.3.2.23	Non-Residential Outbuildings – New Policy and Assessment Pathways Provides new policies for ancillary buildings and structures for existing uses.	Support 	

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

36.	2.3.2.24	Outbuildings - Accepted Development Criteria	Not Supported 	It is unclear why this policy will be removed as it appears to be reasonable policy. We would support the retention of this policy.
37.	2.3.2.25	Pool Fencing Expand term to include “associated Swimming Pool Safety Features”	Support 	
38.	2.3.2.26	Primary Street Setback – Use of Building Business Neighbourhood Zone 3.2 City Living Zone	Partially support 	There is a need for the policy expression to align across zones. The use of character is important to give detail to the policy. It is suggested that ‘character’ is retained consistently.
39.	2.3.3.1	Affordable Housing Overlay – Referral Trigger	Partially Support 	<p>CoA supports the exclusion of the referral trigger by the SA Housing Authority.</p> <p>CoA does not support the changes to remove the Overlay as the driver for the Affordable Housing delivery.</p> <ol style="list-style-type: none"> 1. CoA Does not support lack advise sought from the SA Housing Authority 2. CoA Does not support the amendment drafting as is very unclear <p><u>Need for SA Housing Authority referral</u></p> <p>The proposed amendment is interpreted that if affordable housing is not provided then the referral is not needed. However, this contravenes the policies of the Affordable Housing Overlay including DO 2 and PO 1.1 and P1.2. Whilst we appreciate that some negotiations may not be</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

			<p>finalised until after the dwellings have been built, we would seek that the Planning system be used to condition affordable housing to be delivered. Any variation to this should be further assessed.</p> <p>These policies seek a delivery of affordable housing by the private sector. With the removal of the referral, it is unclear why any developer would opt into the affordable housing delivery.</p> <p>In addition, how does the Assessment Manager intended to assess the failure to deliver affordable housing without the comments from the SA Housing Authority.</p> <p>Development certainty is paramount, it is considered that if there is “opt in” approach provided, the lack of clarity will impact property prices and land economics.</p> <p>CoA continues to advocate for the delivery of Affordable Housing by the private sector within the planning system.</p> <p><u>Current policy drafting is unclear</u></p> <p>The drafted policy is very unclear with superfluous policy conditions. It also creates unnecessary complexity that confuses the intent of a referral.</p> <p>Part (a) and (c) need to be consolidated as it seems that if the development or land division (which is development) involved affordable housing it is to be referred.</p> <p>Part (b), relates to <i>planning concessions outlined in the Affordable Housing Overlay DTS 3.1, 3.2 or 4.1</i>. Part b should refer to the PO not the DTS. As the DTS is one way of achieving the PO. However, it is unclear if the SA Housing Authority would have the jurisdiction over these provisions when they relate to planning and design matters.</p> <p>In addition, the need to assess this during the validation is overly complex. The process now requires at validation an assessment of site areas and whether they are reduced, a density assessment, a building</p>
--	--	--	---

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

				height assessment and a parking rate assessment. This is unreasonable at validation.
40.	2.3.3.4	Design Overlay – Referral	Support in principle with Practice Directions provided 	It is recommended that Practice Directions are provided to guide this and reduce the risk of procedural error and reduction of design intent. Whilst it is recognised that there is a need to minimise unnecessary procedural steps, it is important for the intent of the Government Architect’s responses to be maintained to the fullest integrity. For example, simple matters of materials substitution can substantially change the appearance and durability of the building and these should be reviewed by the Government Architect. Given the contextual nuanced approach that the Government Architect facilitates, it is suggested that further guidance is provided for the Assessment Manager to exercise this power in contextual manner.
41.	2.3.3.5	Heritage Adjacency Overlay – Referral	Support in principle with Practice Directions provided 	To complement the operation of this, Practice Directions are required to further guide this.
42.	2.3.3.7	Major Urban Transport Overlay – Revised policy and referral triggers	Support 	
43.	2.3.3.13	Representative Buildings – Character Area Overlay and Historic Area Overlay- Spatial Representation	Support 	Whilst this applies this does not impact the City of Adelaide. The CoA does not have any representative buildings or a Character Area Overlay.

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

44.	2.3.3.21	Traffic Generating Development Overlay	Support 	The City of Adelaide does not have any State Maintained Roads. The ring route is a State Maintained Road. The changes will have a limited impact to CoA.
45.	2.3.4.2	Carport and Outbuilding – internal parking dimensions Applicable Zones <ul style="list-style-type: none"> • <i>Business Neighbourhood Zone</i> • <i>City Living Zone</i> 	Support 	<p>Whilst this amendment is supported, it noted that larger common vehicles should be considered to ensure universal design and convenient use of vehicles. It is noted, additional width is needed so people can easily manoeuvre in tight spaces.</p> <p>In addition, there needs to be adequate space to future proof electric vehicle charging points and circulation to waste areas.</p>
46.	2.3.4.4	Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways	Not Supported 	<p>These policies are too prescriptive for an urban context with various built form typologies.</p> <p>It is suggested, the PO is amended as follows:</p> <p>POX.1</p> <p><i>Residential Decks are designed and sited to:</i></p> <p>(a) <i>complement the associated building form</i></p> <p>(b) <i>minimise impacts on the streetscape and adjoining neighbours through siting behind the building line of the principal building (unless on a significant allotment or open space)</i></p> <p>(c) <i>minimise cut and fill and overall massing when viewed from adjacent land.</i></p> <p>If there is a need for a DTS, more nuanced policy is needed to address various zones.</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

47.	2.3.4.5	Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance	Support with amendments 	To support all modes, suggest the following amendment <i>PO 19.3</i> <i>Driveways <u>and access points</u> are located and designed to facilitate safe access and egress while maximising land available for street tree planting, <u>pedestrian movement</u>, <u>domestic waste collection</u>, <u>landscaped street frontages</u> and on- street parking.</i>
48.	2.3.4.6	Design In Urban Areas DTS/DPF – Soft Landscaping	Support with amendments 	Note, the CoA would support higher proportions of soft landscaping.
49.	2.3.4.7	Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review	Support 	
50.	2.3.4.8	Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review	Support 	Unlikely to impact CoA given the DTS of 0.4 ha.
51.	2.3.4.9	2.3.4.9 Housing Renewal General Development Policies - Policy Review	Support 	

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

52.	2.3.4.10	Land Division – General Development Policies	Support 	
53.	2.3.4.13	Transport, Access and Parking – General Development Policy	Support 	
54.	2.3.4.14	Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation	Support 	
55.	2.3.7	Land use definitions	Support with amendments 	<p>The proposed Amendment includes the term “part of a building” for Indoor recreation facility and Office. It is unclear if the “part of building inclusions” will complicate the land use assessment in cases where the main land use is something and also has an office component. There are many instances where part of a building is used as an alternative land use however, does not trigger a change of land use. It is considered that this change will trigger development where it does not necessarily need to. Offices are components of many land uses however, the themselves is not a land use in its own right.</p> <p>More refinement is needed to ensure unnecessary change of land use applications are not triggered by small uses. Clarification of scale and times needs could be helpful to support fact and degree considerations of when a change of use is required.</p> <p>In respect to function venues. It would be good to clarify the definition in relation to other land uses that also perform a function venue e.g. Tourist Accommodation, Community Facilities, Convention Centres, Hotels and Pubs.</p>

Attachment 1 – City of Adelaide Submission to the Miscellaneous Technical Enhancement Code Amendment

CoA Reference No: ACC2022/115657

56.	2.3.8	Administrative terms and definitions	Support 	
57.	2.3.9.1	EPA Referrals	Support 	
58.	2.3.11	Local heritage places	Not Supported 	The SA Heritage Register prevail. We understand this is the spirit of the legislation. There have been instances where the Planning and Design Code has been incorrect for a variety of reasons and despite being known have taken consideration time to correct. If the Planning and Design Code were to prevail in these instances, this could have an impact on the ability to apply the Local Heritage Overlay policies and there would an impact to the Local Heritage Place or State Heritage Place.

ADELAIDE SA 5000

Sent via e-mail: saplanningcommission@sa.gov.au

Dear Mr Lennon

Draft Planning & Design Code – Consultation Response

Thank you for the opportunity for the City of Adelaide to provide a response on the draft Planning and Design Code.

The City of Adelaide has a fundamental commitment to the role of good planning in shaping a vibrant, sustainable, competitive, and liveable capital city. The effective initiation and implementation of the new Planning and Design Code is critical to achieving the City of Adelaide's goals and aspirations on behalf of our ratepayers, investors, community and visitors.

The City of Adelaide is unique in South Australia, a capital city, economic hub, site of national heritage significance, and centre for culture and urban living. Business and residential growth is critical to enabling the city to thrive, and an efficient, user-friendly planning system with strong design principles is necessary to support this.

Please find attached the City of Adelaide's response to the Draft Planning and Design Code (Urban) (the Draft Code), released for public consultation on 1 October 2019. Please note, that the updated classification tables to the Draft Code released by the State Planning Commission on 23 December 2019 have not been reviewed. The large volume of additional material released without extension to the consultation timeframe has made review of this material impractical in terms of the resources required to consider the volume of content, and the Council's internal processes for endorsement of submissions.

The City of Adelaide would like to acknowledge the State Planning Commission in recognising the unique and important role of the City of Adelaide as the State's capital city in the Draft Code. However, as a result of our extensive analysis undertaken during the consultation period, the Draft Code requires considerable amendment. In its current form, the Draft Code has the potential to result in unintended consequences for the future of our environment, community and economy and must be resolved prior to implementation.

Our core observations with the Draft Code are:

- it is incomplete as a development assessment tool and needs significant updating
- Significant and effective policies from the current Adelaide (City) Development Plan are excluded and would need to be considered in the Code to enable the effective planning for city growth.

- the Draft Code adds unnecessary onus, cost, and time to the assessment of some developments that could be improved with our suggested amendments, and
- the Draft Code has the potential to compromise good planning practice and our feedback includes process improvements to achieve quality development outcomes.

The City of Adelaide's submission outlines 15 key recommendations that should be addressed prior to the implementation of the Planning and Design Code. We also request the opportunity to be heard on these recommendations by the State Planning Commission.

The City of Adelaide welcomes and commends the recently extended implementation date for the Planning and Design Code as a valuable opportunity to ensure that critical issues of completeness, quality, consistency, and implementation readiness are resolved prior to the Code coming into effect as the State's most significant instrument for development assessment. Council seeks to continue to collaborate with and assist the State Government during this period to address issues raised and opportunities for improvement identified in this submission.

I wish to also advise you that Council has resolved to delay the pursuit of the Pre-Transition DPA until after implementation of the Planning and Design Code. I also note that the Lot Fourteen Development Plan Amendment is yet to be finalised by the State Government, and that any changes to this DPA need to be reflected in the new Code.

I look forward to your earliest response to our feedback. Please contact Shanti Ditter, Associate Director, Planning Design and Development on [redacted] to discuss further.

Regards

Klinton Devenish

ACKNOWLEDGMENT OF COUNTRY

We acknowledge that Adelaide is on the traditional country of the Kurna people of the Adelaide Plains. We respect their Elders past and present. We recognise and respect their cultural heritage, beliefs and relationship with the land. We acknowledge that they are of continuing importance to the Kurna people living today. We also extend that respect to other Aboriginal Language Groups and other First Nations.

EXECUTIVE SUMMARY

This submission forms the City of Adelaide's response to the Draft Planning and Design Code (Urban) (the Draft Code) that was released for public consultation on 1 October 2019. It represents Council's fundamental commitment to the role of good planning in shaping a vibrant, sustainable, competitive, and liveable capital city.

The City of Adelaide is unique in South Australia; the state's capital city, economic hub, site of national heritage significance, and centre for culture and urban living. Business and residential growth will help the City thrive into the future, and an efficient, user-friendly planning system with strong design principles will support and facilitate this.

The City of Adelaide welcomes the recently extended implementation date for the Planning and Design Code as a valuable opportunity to ensure that critical issues of completeness, quality, consistency, and implementation readiness are resolved prior to the Code coming into effect. Council seeks ongoing collaboration to assist the State Government during this period to address issues raised in this submission. This submission includes a substantial evidence base, through an audit of where the Adelaide (City) Development Plan policies have or have not landed in the Draft Code and the impacts of these changes which have been discussed with the Department of Planning staff (see Attachment A.2). This has assisted Council to identify important policies which are currently missing in the Draft Code and a risk to the future of the City, which are subsequently recommended to be re-included in the Code (see Attachment A.1).

The City of Adelaide has 4 main concerns with the Draft Code:

1. As a development assessment tool, the Draft Code is incomplete.
2. Exclusion of significant and effective policies within the current Adelaide (City) Development Plan risks the future social, economic and physical prosperity of the City.
3. The Draft Code adds unnecessary onus, cost, and time to the assessment of some developments.
4. Failings of process are likely to result in the Draft Code undermining good planning practice and lead to compromised development outcomes.

These points are elaborated upon below.

As a development assessment tool, the Draft Code is incomplete

The draft documents on public consultation are insufficient to enable understanding and communication of, thus compromising Council's and the community's ability to prepare for the full impact and implications of the Draft Code on City development.

Public realm matters have not been addressed within the Draft Code, nor have any Design Standards released for consultation. Without these policy documents being in place is likely to undermine the capacity of the planning system to protect and enhance the quality of the public realm, resulting in uncertainty about how public land is used and managed.

The absence of a mechanism to replace existing sections of the *Local Government Act 1999* reduces the City of Adelaide's ability to manage impacts upon City businesses, residents and visitors caused by unregulated use of public roads and footpaths and is a fundamental concern of the Council. We request the State Government urgently address this matter in consultation with Council.

Exclusion of significant and effective policies risks the future of the City

From the earliest stages of planning reform, the State Government communicated that the initial Planning and Design Code would comprise current Development Plan policies in the new format. In effect a "like for like" transition was proposed to precede future changes to policy content that was to be developed in consultation with councils, community and stakeholders.

The current version of the Draft Code does not represent that commitment. Policy intent, content and tools fundamental to the City of Adelaide's ability to sustain and enhance the quality of its streets and buildings are absent from the Draft Code, and must be reinstated or replaced with suitable alternatives to avoid poor development outcomes that will potentially have a negative effect on the look and feel of our City. Amongst lost policies are those relating to demolition, economic activity, land use, design and character, the public realm and pedestrian movement.

The Draft Code raises Council's real concerns for the future, including the potential for an increased number of vacant sites as a result of premature demolition, a lower quality of built form and public realm than is currently enjoyed by the city's residents, workers, and visitors. The Code has the potential to negatively impact the quality of the pedestrian experience, and result in more conflict in the City environment resulting from potential incompatible land uses, traffic, noise, and management of waste.

The exclusion of important policies also removes or limits opportunities that currently exist in support of sustainable transport, economic development, sustainability and climate change adaptation, equity and diversity, and the arts. Many of these policies have been developed over time with considerable research and engagement and have been tried and tested over many years.

In 2019, the City of Adelaide declared a 'Climate Change Emergency'. It is critically important to Council that all tiers of government work together to take urgent action to manage risks related to climate change, and the new planning system should play a role in this.

The Draft Code lacks policies that assist with recognising unique attributes of local areas to ensure important and heritage places and areas are protected. This point extends to the nationally registered importance of the Adelaide Park Lands.

Unnecessary onus, cost, and time in development assessment

Through error or oversight, the effect of some parts of the Draft Code on the City of Adelaide will result in:

- increased public notification requirements,
- less certainty in determining particular classes of development,
- more complex and potentially longer and more costly assessment processes.

There are instances in which implementation of the Draft Code would require that applications that are simple and straightforward under the current Development Plan, are processed according to a more onerous assessment process and require public notification despite their low community impact or desirable development outcome.

Process is compromising quality development outcomes

The once in a generation opportunity presented by system-wide reform comes with a responsibility to consider the best available sources of knowledge and good practice to shape the future of our State.

The Draft Code has been prepared with a lack of community and stakeholder engagement, and it lacks evidence-based investigations to support significant policy shifts. The City of Adelaide is concerned that the community is not aware or does not fully understand the level of changes proposed to planning policies that affect their area or property.

In the City of Adelaide, the Draft Code introduces significant policy change relating to retail development and residential areas encouraging more a mixed-use development pattern which will create very different outcomes on the ground to those facilitated through the current system. The City of Adelaide has not been consulted on these shifts in policy direction, nor made aware of any compelling reasons or evidence base for the change. This potentially will undo 40 years of consistently applied policy that has supported growing the city population through a range of housing choices.

Preliminary commercial advice (Attachment A.11) has been obtained by Council regarding the Draft Code's proposal to enable within the City Living Zone a change of land use to 50sqm of a building to a commercial use as a 'Deemed to Satisfy' (DTS) development application. The advice affirms the 50sqm DTS proposal would weaken the business and economic role of main streets, reduce amenity in residential areas, reduce residential population in residential areas, and not foster public transport. The advice outlines main streets are experiencing insufficient demand, thus this proposal to increase supply, in particular through the DTS approval process, in locations other than main streets has insufficient basis and is at odds with fostering vibrant main streets and pleasant residential areas.

Finally, the lack of progress and consultation on essential implementation tools required for the Code's functioning, such as, the map viewer and ePlanning platform creates uncertainty for the City of Adelaide in its efforts to be business ready for implementation of the new planning system. This impacts not only the functioning of the planning system but the councils' business operations and ability to adequately service its customers and community.

City of Adelaide recommendations to State Government

The following list outlines all the recommendations that are made throughout this submission. The recommendations are found under the relevant subheading under Section 5.

1. Request to commence collaboration with the State Planning Commission on a Regional Plan for the City.
2. Request the State Planning Commission collaborate with the City of Adelaide to ensure that all relevant public realm matters are encapsulated appropriately in either the Planning and Design Code or a City of Adelaide Design Standard.
3. Enable regulation of the use of public roads through one of the following options (in order of preference):
 - a. Amending the PDI Act; or
 - b. Not proclaiming Schedule 6, Part 7 (Amendment of the LG Act), to allow for further investigations to be undertaken to understand the impacts and put appropriate measures in place to avoid adverse impacts; or
 - c. Development of a Practice Direction and/or Practice Guideline to clearly state that the planning approvals process should not consider construction matters or management of the use the public realm and that these remain within the ambit of Sections 221 222 of the LG Act; and

- d. Ensure public realm matters are encapsulated appropriately in either the Planning and Design Code or a specific City of Adelaide Design Standard prior to implementation of the Planning and Design Code; and
 - e. Investigate whether under the PDI Act, any standard conditions on a Development Application may resolve some matters currently dealt with by a Section 221/222 permit; and
 - f. Investigate the further legislative impacts of the amendment and put in place appropriate measures to ensure procedural processes are effective prior to implementation of the Planning and Design Code.
4. Include universal design principles within the Code and/or within relevant Design Standards prior to implementation (refer Attachment A.1 and A.2).
 5. Include existing Development Plan policies in the Planning and Design Code, as detailed in Attachment A.1 and A.2 of this submission.
 6. Include non-envisaged land use list to provide clarity and certainty to the community about what is envisaged, that will facilitate achievement of mandated assessment timeframes.
 7. Reword the procedural matters tables within all Zones applying to the City of Adelaide so that unnecessary public notification in the city for minor applications does not occur.
 8. List all envisaged land uses and development types within Zone classification tables and provide policies for their assessment to streamline processing and avoid envisaged land uses defaulting to the classification of all other code assessed development.
 9. Implement consistent language to describe forms of development throughout the Planning and Design Code, using defined terms wherever possible.
 10. Ensure classification tables in the City Zone reflect the common development types that occur in the local context enabling simpler and more efficient assessment of these applications.
 11. Implement a launch date that allows sufficient time to achieve the following:
 - Undertake comprehensive testing of the Planning and Design Code to identify significant policy changes, errors, missing content and/or unintended consequences to allow for required policy amendments;
 - Undertake additional consultation on changes to the Planning and Design Code arising from Phase 3 submissions (in preference to not making changes to the Draft Code following consultation on the basis that changes would delay introduction of the Planning and Design Code);
 - Notify every South Australian of the changes proposed to their property to meet the intent of the PDI Act and Community Engagement Charter;
 - Test the effect of the proposed Planning and Design Code in the ePlanning system (as originally proposed for in the announced transition process); and
 - Provide adequate time to prepare for the full implementation of the changes, including the considerable integration works required to Council's business systems in order to maintain current business operations and service levels to our community.
 12. Reinststate the policies developed collaboratively by the City of Adelaide and DPTI in good faith, and/or clearly communicate why this body of work was excluded from the Draft Code.
 13. Ensure forms of development assessed on merit currently are not classified as restricted under the Planning and Design Code, but rather performance assessed with reference to appropriate policies to be included in the Planning and Design Code.

14. Include comprehensive policies within the Planning and Design Code to assist with assessment or allow for matters to be conditioned, to streamline assessments.

15. Insert into Part 5 (Designated Areas) of the Planning and Design Code the following indicated in blue text:

Relevant authority - Commission	
Areas identified for the purposes of clause 4(1) of Schedule 6 of the Regulations – Buildings exceeding 4 storeys	Design Overlay <i>excluding where it applies to the City of Adelaide.</i>

1. INTRODUCTION

1.1 Scope of submission

This submission forms the City of Adelaide's response to the Draft Planning and Design Code (Urban) (the Draft Code), released for public consultation on 1 October 2019. Once finalised, the Draft Code will guide all future development in the City of Adelaide, replacing the Adelaide (City) Development Plan with its specific zones and policies that have been developed and refined over the last 5 decades.

A document of some 3,031 pages, the Draft Code has presented a significant undertaking for the City of Adelaide to interpret and consider its implications for the future of the City. Council has invested significant resources for this task, with the comprehensive analysis undertaken forming the basis of this submission.

In this context, it is important to note that updated classification tables to the October 2019 Draft Code released by the Department for Planning, Transport and Infrastructure (DPTI) on 23 December 2019 have not been reviewed in preparing this submission. The large volume of additional material released without extension to the consultation timeframe has made review of this material impossible in terms of the resources required to consider the volume of content.

The research and investigations undertaken to inform this submission have also been undertaken with the purpose of providing a clear record and line of sight between the current Adelaide (City) Development Plan and Draft Code that will be useful for future reference and audit purposes.

1.2 Planning reform context

The inception of the current planning reforms was in 2013 with the formation of the Expert Panel. The Expert Panel's vision for South Australia's new planning system was to create an 'effective, efficient and enabling planning system that:

Is simple, transparent, easy to understand and user-oriented

Is outcome-focussed, evidence-driven and open to innovation

Provides streamlined processes for investment at any scale

Is responsive to changing circumstances and priorities

*Places a premium on professionalism and integrity.*¹

Following a program of community and stakeholder engagement and the publication of 3 reports on the Expert Panel's findings, reform progressed with the gazettal of the *Planning and Development Act 2016* (SA) (the PDI Act).

Subsequently, various permeations of *Planning, Development and Infrastructure Regulations* have been developed to enable the new system to be brought into effect, with some gazetted and others still in progress. State Planning Policies provide the strategic land use planning framework for the state as a whole

The current stage of reform is the Planning and Design Code, described by the SA Planning Portal as:

¹ South Australia's Expert Panel, 'The Planning System we want on planning reform', December 2014, p 11.

the cornerstone of South Australia's new planning system. The Code will replace all development plans to become the single source of planning policy for assessing development applications across the state.

The Planning and Design Code is proposed to be implemented alongside an ePlanning tool through which the development assessment process will be conducted exclusively online.

1.3 City of Adelaide context

The City of Adelaide is a unique part of South Australia in many ways: the capital city of South Australia, an economic hub, a site of national heritage significance, and a centre for culture, lifestyle, and urban living. Each of these characteristics has been supported over the decades by a robust urban planning framework that has stood the test of time, in both the strategic and the day to day management of development and the urban environment.

Adelaide is a City Designed for Life. We know that built form and the urban environment contributes to overall liveability of a place, the wellbeing of its people and the richness of the experiences it offers. That is why people movement, accessibility and the built environment is not just about development for growth's sake. It's about evolving with the community's needs to shape and define the place we love. Our pioneering spirit ensures we stay ahead of the development curve, being thoughtfully innovative in shaping policies, prioritising our community's wellbeing as we evolve Adelaide's renowned character and heritage by design.

The City of Adelaide strongly supports development in the City, just as it supports high quality public spaces, sustainable landscapes, connected communities, protecting heritage for future generations, and vibrancy in arts and culture.

Business and residential growth will help the City thrive into the future, and an efficient, user-friendly planning system with strong design principles supports this.

1.4 Key issues and recommendations

The most significant finding of the City of Adelaide's review of the Draft Code is that it is not ready for implementation. On 7 February 2020, it was announced that the 1 July 2020 deadline for implementation, as stipulated in the PDI Act would be amended to a date to be set by proclamation in the SA Government Gazette, although the Minister for Planning has suggested that this will be September 2020.

Whilst this delay in implementation is commended, a primary recommendation of this submission is that the State Government extend the implementation not to just a date, but to ensure that critical issues of completeness, quality, consistency, training and business readiness are resolved prior to the Planning and Design Code coming into effect as the State's most significant instrument for development assessment.

The need for more time is further exemplified by the underdeveloped status of the ePlanning system and the training and implementation program required to enable a smooth transition to use of the Planning and Design Code.

Four significant concerns with the Draft Code underpin the need for more time to develop the Draft Code to a fit for purpose standard:

1. As a development assessment tool, the Draft Code is incomplete

Design standards for development, policies to address the public realm and arrangements for use of public realm must be in place for the real implications of application of the Draft Code to be understood.

2. Significant and effective policies have been excluded from the Draft Code

A vast range and number of policies including those relating to demolition, design, character and local context and must be reinstated or replaced with suitable alternatives. The exclusion of these policies creates uncertainty in the assessment process and

invites poor development outcomes that have a negative effect on the look and feel of our City.

3. The Draft Code adds unnecessary onus, cost, and time to the assessment of some developments

Through error or oversight, the effect of some parts of the Draft Code on the City of Adelaide is excessive public notification requirements, less certainty in determining class of development and lack of specific policy leading to more complex, and accordingly longer and more costly assessment process.

4. Failings of process have resulted in the Draft Code undermining good planning practice and compromising quality development outcomes

There is a need to address the weaknesses in the Draft Code that have occurred as a result of poor community and stakeholder engagement, and a lack of evidence-based investigations to support significant policy changes.

Unresolved, these issues pose real risks to the future environment, community and economy of the City of Adelaide. The matters identified are not critique for critique's sake, but rather represent the City of Adelaide's fundamental commitment to the role of good planning in shaping a smart, green, liveable and creative capital city.

1.5 Guide to the submission

In preparing this submission the City of Adelaide has undertaken extensive analysis and scenario testing of the Draft Code and its practical implications for development assessment. This analysis has informed the submission as presented in the following sections:

- Section 2 describes the unique nature of the City of Adelaide in an urban planning context, forming a reference point for consideration of impacts of the Draft Code
- Section 3 examines the Draft Code's alignment with strategic directions established in the State Planning Policies and City of Adelaide Strategic Plan 2016-2020
- Section 4 identifies the successful aspects of the Draft Code from the City of Adelaide's perspective
- Section 5 identifies recommendations to amendments to the Draft Code, based on the detailed analysis included in the Attachments A.1, A.2, A.3 and A.10.
- Section 6 details policy change, key issues and recommendations by zone, based on the detailed analysis included in the Attachments A.1 and A.2
- Attachments A.1 through A.11 form the detailed analysis of the Draft Code, specifically:
 - City of Adelaide Draft Code amendment document – proposed rewording and additional policies to be added
 - Audit of Adelaide (City) Development Plan against Draft Code
 - Draft Code testing using City of Adelaide development application examples
 - Low Risk Application study
 - City of Adelaide proposed Historic Area Statements
 - Commentary on Draft Practice Directions released 1 October 2019
 - Legal advice obtained by City of Adelaide relating to public realm matters
 - Detailed analysis of how the State Planning Policies have been captured in the Draft Code

- Recommendations for improvement to Part 1 – Rules of Interpretation of the Planning and Design Code
- Recommendations for improvement to Parts 7 and 8 – Land use definitions and Administrative definitions of the Planning and Design Code
- Preliminary commercial advice on impacts of policy introducing increased mixed-use development to residential areas and impacts on Main Streets

2. A UNIQUE HISTORY

The City of Adelaide occupies a special place in the context of Greater Adelaide and South Australia – effectively constituting the “heart” of our State.

Colonel William Light planned the “Capital City of Adelaide”, with the proposed built form surrounded by park lands, a design of international quality and importance. The Park Lands and City Layout are nationally recognised for their heritage value, reinforcing their cultural significance and contribution to sense of place.

In 2020, Adelaide welcomes ever increasing numbers of workers, students, tourists, visitors from the wider metropolitan area, and a growing population of residents. As well as being a centre of commerce, employment, and economic growth, the City is a vibrant cultural hub, it embraces research and development fostered by world class universities, numerous international arts festivals, and the world’s most significant collection of Aboriginal art and artefacts.

From an urban planning and local governance perspective, the needs and aspirations of the City of Adelaide are different to those of its immediate local government neighbours and other councils further afield. This distinction is acknowledged by a range of stakeholders including Australian and State governments, other councils and the Local Government Association, the Capital City Committee, and specifically by South Australia’s peak urban planning authority the State Planning Commission in its release of a dedicated section on the City of Adelaide in the *30-Year Plan for Greater Adelaide*.

This unique role in South Australia has historically made the City of Adelaide the subject of urban planning innovation, with examples including but not limited to:

- The *City of Adelaide Development Control Act 1976* providing for five yearly reviews to create a Plan, creation of innovative desired character statements, and City based decision-making arrangements for development
- The *City of Adelaide Act 1998* establishing a Capital City Committee - a unique collaborative governance measure through which senior elected representatives of the State Government and Council oversee common initiatives and coordination of functions
- The *Adelaide Park Lands Act 2005* establishing the Adelaide Park Lands Authority, a subsidiary of the Council with a board comprising both Council and State appointed members tasked with advising on the future of the unique Adelaide Park Lands
- The current *Development Regulations 2008 (SA)* have a number of City of Adelaide specific policies which were transitioned across from the *City of Adelaide Development Control Act 1976*. These policies have represented the legacy of the City’s leadership in planning and are important controls that were established to protect the city’s identity. These include:
 - provisions which require consent for demolition within the City which has proved critically important in minimising the unnecessary and premature demolition of buildings leading to vacant sites which provide little or no social, economic or physical value to the city, reduce activation opportunities and negatively affect city streetscapes; and
 - specific provisions relating to when advertising requires development approval or when it doesn’t.
- The *Planning, Development and Infrastructure (General) Regulations 2017* remove these unique clauses, requiring the City of Adelaide to fall into line with state-wide provisions. Creating consistency across the state is a key reason for the reform and City of Adelaide appreciates that having state-wide provisions would simplify things.

However, the historical reason for the City of Adelaide demolition and advertising provisions is steeped in history stemming back to the *City of Adelaide Plan 1974*, prior to the state-wide *Development Act 1993*. No rationale has been provided in support for removing these regulations. This may erode the legacy of the City's leadership in good planning practice and outcomes and risks the unique context that has helped shaped our capital city.

3. STRATEGIC ALIGNMENT

3.1 Alignment of the Planning and Design Code with State Planning Policies

The new planning system establishes a new policy framework and hierarchy. With the PDI Act and associated Regulations, the new planning system creates three key policy documents:

1. The State Planning Policies (SPPs) represent the highest-level policy document in the new planning system and provides planning objectives for the long-term vision for the entire state.
2. Regional Plans form the strategic documents that relate to a region.
3. The Planning and Design Code guides development assessment.

Regional Plans have not been developed in the new system, but will, for the time being, rely on the 30-year Plan for Greater Adelaide. This document does not provide the strategic focus the City seeks. There is risk that without a City focussed Regional Plan in place, the Council's strategic goals may not be achieved with the new planning system. Council would like to commence working with the State Planning Commission on a Regional Plan for our State's capital.

It is a requirement of the PDI Act that each document must be consistent with a higher-order document, to ensure that the long-term vision and strategic goals of an area can be facilitated and achieved.

The table below is a high-level assessment of the extent to which the Draft Code policies for the City of Adelaide contribute to achieving the SPPs, compared to the current City of Adelaide Development Plan. This analysis demonstrates there are many SPPs at risk of not being achieved unless recommendations for improving the Planning and Design Code are implemented. A thorough and detailed analysis is provided in Attachment A.8.

Recommendations

1. Request to commence collaboration with the State Planning Commission on a Regional Plan for the City.

State Planning Policies Objectives	P&DC alignment with SPP
<p>1 - Integrated Planning Integrated planning coordinates the strategic use of land with the necessary services and infrastructure. It can influence how a city or region grows and evolves, which if done well, creates liveable and sustainable places that contribute to our prosperity.</p>	Partially achieved
<p>2 - Design Quality Good design improves the way our buildings, streets and places function, making them more sustainable, more accessible, safer and healthier. The integration of design within the planning system encourages creative solutions to complex social, economic and environmental challenges including those arising from our changing settlement patterns.</p>	Not Achieved
<p>3 - Adaptive Reuse Adaptive reuse of buildings, sites and places in both urban and rural settings can have cultural, social, economic and environmental benefits. It can rejuvenate neighbourhoods and strengthen a sense of place and familiarity with the surrounding environment. A strong link to the past can enhance a sense of place, history and belonging and unlock new opportunities and promote innovation in design.</p>	Partially achieved
<p>4 - Biodiversity South Australia's unique biodiversity contributes to our quality of life, supports our economy and provides life-supporting functions such as clean air, water, sea and land. Maintaining and enhancing a healthy, biologically diverse environment ensures greater resilience to climate change, increases productivity and supports a healthy society.</p>	Not achieved
<p>5 - Climate Change Climate change will impact all areas of our society. Our future prosperity, the liveability of our cities and towns, the health and wellbeing of our communities and the resilience of our built and natural environment all depend on how well we adapt to and mitigate the impacts of climate change.</p>	Not Achieved
<p>6 - Housing Supply and Diversity Housing is an essential part of people's health and wellbeing. Our planning system must enable the sufficient and timely supply of land and a variety of housing choices at appropriate locations. With the changing composition of our community and our desire to live more sustainably, our housing supply needs to become more diverse in both metropolitan Adelaide and regional township locations.</p>	Partially achieved
<p>7 - Cultural Heritage South Australia's cultural heritage reflects the diversity, unique features and key moments in our state's history and contributes to our community's understanding of its sense of place and identity. The enduring, living, spiritual and cultural connection to the land by South Australia's First Peoples is recognised and acknowledged as an essential part of our cultural heritage.</p>	Partially achieved
<p>8 - Primary Industry South Australia's agriculture, forestry, fisheries and aquaculture industries are fundamental to our prosperity and identity. Along with their associated tourism and service industries—and the infrastructure that supports their production and marketing—primary industry value chains are major generators of economic activity and employment in each of the regions of the state.</p>	Partially achieved
<p>9 - Employment Lands Providing a suitable supply of land for employment uses is critical to support job growth and the economic prosperity of the communities. The planning system needs to support the diversification of our economy and remove barriers to innovation. It is critical that the right signals are sent to the market to attract interest, investment and tourism opportunities across South Australia.</p>	Insufficiently achieved

<p>10 - Key Resources</p> <p>Our valuable mineral and energy resources are the property of the Crown and are managed by the state on behalf of all South Australians. The mineral and energy resource sectors will continue to fuel economic development, support the growth and development of our communities, and provide an income stream to help fund infrastructure and support construction affordability.</p>	Partially achieved
<p>11 - Strategic Transport and Infrastructure</p> <p>The economic and social prosperity of South Australia relies on a transport system that is safe, integrated, coordinated, dependable and sustainable. Transport systems that provide effective connectivity underpin access for business to local, national and international markets; link people with employment, goods and services by providing travel choices; and contribute to a healthier and more connected society.</p>	Not achieved
<p>12 - Energy</p> <p>The provision of sustainable, reliable and affordable energy is essential in meeting the basic needs of communities and ensuring the long-term supply of key services across South Australia. Industries and business rely on energy for their viability while households rely on it daily to support their lives, health and comfort. The production of energy and associated infrastructure also contributes significantly to the state's economy.</p>	Partially achieved
<p>13 - Coastal Environment</p> <p>The South Australian coastal and marine environment has high intrinsic, aesthetic, social, environmental and economic values. It includes beaches, oceans, dune systems, tidal waters, wetlands and cliffs. The natural features of the coastal environment also provide vital habitat, contribute to our biodiversity and play an important role in protecting development and human occupation from flooding and erosion.</p>	Partially achieved.
<p>14 - Water Security and Quality</p> <p>Water is one of South Australia's most valuable natural resources. Access to a safe and reliable water supply is essential to support our communities and our diverse economy. Our water dependent ecosystems also rely on access to water so that they can continue to provide cultural, aesthetic, amenity, recreational and tourism benefits. It is therefore vital that we continue to protect and plan for our water now and into the future.</p>	Partially achieved
<p>15 - Natural Hazards</p> <p>Natural hazards are an integral part of the South Australian landscape and have the potential to impact on people, property, infrastructure, our economy and the environment. As we continue to grow and develop we need to plan for and mitigate risks from these hazards</p>	Partially achieved
<p>16- Emissions and Hazardous Activities</p> <p>Protecting communities and the environment from exposure to industrial emissions and hazards and site contamination is fundamental to the creation of healthy cities and regions. At the same time, it is critical that South Australia's industrial and infrastructure capacity and employment levels are preserved.</p>	Partially achieved.

3.2 City of Adelaide Strategic Plan 2016-2020

The Draft Code has been analysed against the City of Adelaide Strategic Plan 2016-2020 to demonstrate how the new planning system may impact Councils strategic goals. Please note, the City of Adelaide 2020-2024 Strategic Plan is currently undergoing drafting and consultation.

Objective	Action	Analysis of the Draft Planning and Design Code
SMART	<ul style="list-style-type: none"> Develop and promote an international City brand that showcases the smart, liveable, green and cultural advantages of Adelaide 	<ul style="list-style-type: none"> The Planning and Design Code will be important to ensure development achieves and enhances the city brand; 'Adelaide: Designed For Life'. Development needs to support the brand as one of the most liveable cities in the world by showcasing best practice design. The Draft Code does not emphasize this. Amendments to the Planning and Design Code, proposed as part of this submission may assist in supporting this action. However, emphasis of the importance of the City brand, may be better placed in a City of Adelaide Regional Plan which Council would like to discuss further with the Commission.
GREEN	<ul style="list-style-type: none"> Improve energy performance and use of renewable energy in Council and privately-owned buildings, including consideration of solar heating, solar energy generation and battery storage Work with private property owners and the State Government to embed better environmental performance into new and existing developments Identify opportunities for building adaptation and re-use that supports heritage aspirations while reducing carbon emissions and waste Work with all City stakeholders to increase public and private greening with street trees, gardens, community gardens, green walls and roofs, providing incentives where appropriate 	<ul style="list-style-type: none"> The Planning and Design Code has opportunity to respond to a changing climate and ensuring our built form, transport and waste systems are resilient. A number of actions set out in the City of Adelaide's Carbon Neutral Action Plan have not been met and have been delayed by the Planning Reform process. The City of Adelaide remains committed to ensuring development responds to our changing climate and appropriately manages our built form, transport and waste systems to ensure they are resilient. Amendments to the Planning and Design Code, proposed as part of this submission are sought to reduce the risks associated with climate change.
LIVEABLE	<ul style="list-style-type: none"> Encourage growth in the full range of residential property development in a mixed-use environment in a manner that respects the human scale and different character of districts in the City Promote and protect Adelaide's built character and heritage 	<ul style="list-style-type: none"> The Draft Code loses much of the fine grain detail that will reinforce the human scale and different character of districts in the City. There is a need to reinstate and enhance this policy to support contextual design. Whilst the Draft Code proposes a framework for heritage which is considered appropriate, the policies and statements

	through our operations, incentives, policies and direct investment, while working with and advocating to Federal and State governments for an increase in City buildings protected under State or Local Heritage regulations	relating to protection of heritage in the Draft Code require strengthening in order to protect Adelaide's built character and heritage.
CREATIVE	<ul style="list-style-type: none"> Increase public art and cultural expression in private development by using planning levers and requirements 	<ul style="list-style-type: none"> The Draft Code proposed no policies that guide public art and cultural expression in Development. Nor have levers been utilised to support public art in development. Amendments to the Planning and Design Code, proposed as part of this submission would provide policies to encourage development to value add to the city through creative expression.

4. WHAT THE DRAFT CODE DOES WELL

4.1 Recognising the City of Adelaide

The Draft Code preserves a number of the City of Adelaide's specific Zones and includes with several Subzones, acknowledging the uniqueness and importance of the City and North Adelaide to the state.

4.2 Structure and layout

The Draft Code modules (Zones, Subzones, Overlays and General Development Policies (GDP)) consistent structure is logical and assists with understanding. The use of subheadings within these modules makes particular policies easy to find. It is understood that all modules will utilise the previously promoted table format by implementation of the Planning and Design Code, with performance outcomes and deemed-to-satisfy or designated performance features sitting in side-by-side columns. This will significantly assist the readability and understanding of the Planning and Design Code.

The structure for the administrative and land use definitions (parts 7 and 8 of the Draft Code) is excellent. The use of an 'includes' and 'excludes' column are very useful. Whilst the tables require additional definitions to be added (see detailed discussion on this below), the structure is a good starting point and will assist to provide clarity in the future, and reduce the need for preliminary legal advice to determine the true nature of development.

4.3 Framework for heritage conservation

Whilst the policies require strengthening (see detailed discussion on this below), the framework for heritage that the Draft Code proposes is considered appropriate to maintain these unique and important places and areas. Additionally, the roll-over of all listed State Heritage Places and Local Heritage Places is valued by Council, with the City of Adelaide having 27% of South Australia's listed heritage places.

4.4 Water Sensitive Urban Design

The introduction of improved water sensitive urban design (WSUD) principles. However, the Planning and Design Code would benefit from WSUD principles appearing under all subheadings within the 'Design in Urban Areas' GDP. WSUD should be an aspiration for all development types, from small scale residential to high scale; this is currently not the case in the Draft Code.

The Draft Code WSUD policy will more easily enable CoA's aspiration of a liveable City but require further strengthening particularly in relation to the WSUD "deemed-to-satisfy" policies. Additionally, the provision of readily available guidelines for applicants would assist understanding, and combined with an appropriately implemented compliance mechanism will ensure the new planning system achieves WSUD.

4.5 Rationalisation of policy

A core objective of the planning reform was to achieve a rationalisation in policies across the State. The Draft Code has removed duplication of policy.

5. RECOMMENDATIONS FOR AMENDMENTS TO THE DRAFT CODE

The matters summarised below must be resolved prior to the finalisation and implementation of the Planning and Design Code. Unresolved, these issues pose real risks to the future environment, community and economy of the City of Adelaide.

The program of planning reform initiated in 2013 is a once in a generation event, and an immense task to embark upon and complete. South Australia's Expert Panel on Planning Reform established clear directions for the new planning system, intended to benefit all South Australians. Since the panel's ideas for reform were published in 2014, significant work has occurred, but the process has in part lost sight of the directions for reform, and how to best achieve the desired outcomes for a new planning system.

The matters identified here are not intended as critique for critique's sake, but rather represent the City of Adelaide's fundamental commitment to the role of good planning in shaping a vibrant, sustainable, competitive, and liveable capital city.

5.1 The Draft Planning and Design Code is incomplete

The City of Adelaide has thoroughly considered the consultation version of the Draft Code.² Regrettably, key policy elements with direct bearing on the implementation of the Code in the City of Adelaide have not been provided for comment, and the status of these elements is unclear.

In effect and based on the information provided, the City of Adelaide is unable to understand, communicate, or prepare for the full impact and implications of the Planning and Design Code on the City's landscapes and communities. Specific examples are described in the following table.

² The updated classification tables to the Draft Code released by SPC on 23 December 2019 have not been reviewed. The large volume of additional material released without extension to the consultation timeframe has made review of this material impracticable in terms of the resources required to consider the volume of content, and the council's internal processes for endorsement of submissions.

MISSING PIECES in the Draft Code/system	RISKS for the City of Adelaide
<p>Public realm</p> <p>Following requests for draft Design Standards, DPTI confirmed in December 2019 that none had been developed to date. The PDI Act requires that aspects of development relating public realm, infrastructure and encroachment be assessed against the P&D Code or Design Standards.³</p> <p>Further, the P&D Code does not include adequate provisions relating to development or activity in the public realm for the City of Adelaide.</p>	<p>Protection, coordination and enhancement of the public realm cannot be achieved through development control, resulting in reduced quality of the public realm, reduced safety and reduced visual amenity, and more uncertainty and conflict around the use of public land.</p>
<p>Approvals under sections 221 and 222 of the <i>Local Government Act 1999</i></p> <p>The PDI Act amends Sections 221 and 222 of the <i>Local Government Act 1999 (SA)</i> (LG Act) with the effect that activities currently requiring a council-issued permit will no longer require a permit if the activity forms part of an approved development application under the PDI Act.</p> <p>This relates to activities such as use of public roads (e.g. road closures, erection of cranes, encroachments), use or changes to public footpaths (e.g. outdoor dining, changes to crossovers) etc.</p>	<p>Unregulated use of public roads and footpaths (e.g. road closures, crane erection, outdoor dining, crossover changes) may lead to negative impacts upon:</p> <ul style="list-style-type: none"> • Conflicting legislative requirements whereby public consultation on changes to a public road are not able to be undertaken; • Use and enjoyment of the public realm; • Public safety, public liability and indemnity Maintenance and repair; • Local trade; • Occupiers of private land.

³ *Planning Development and Infrastructure Act 2016 (SA)* s 102 and 69.

MISSING PIECES in the Draft Code/system	RISKS for the City of Adelaide
<p>Universal Design</p> <p>The PDI Act provides principles of good planning, including that <i>“built form and the public realm should be designed to be inclusive and accessible to people with differing needs and capabilities (including through the serious consideration of universal design practices)”</i>.^[1]</p> <p>The Draft Code does not provide enough principles relating to universal design, nor are these principles applied to all development types, minimising their application in achieving universal design.</p>	<p>Unable to require universal design in development to provide access to people of all abilities in the City of Adelaide.</p>

Recommendations

2. Request the State Planning Commission collaborate with the City of Adelaide to ensure that all relevant public realm matters are encapsulated appropriately in either the Planning and Design Code or a City of Adelaide Design Standard.
3. Enable regulation of the use of public roads through one of the following options (in order of preference):
 - a. Amending the PDI Act; or
 - b. Not proclaiming Schedule 6, Part 7 (Amendment of the LG Act), to allow for further investigations to be undertaken to understand the impacts and put appropriate measures in place to avoid adverse impacts; or
 - c. Development of a Practice Direction and/or Practice Guideline to clearly state that the planning approvals process should not consider construction matters or management of the use the public realm and that these remain within the ambit of Sections 221 222 of the LG Act; and
 - d. Ensure public realm matters are encapsulated appropriately in either the Planning and Design Code or a specific City of Adelaide Design Standard prior to implementation of the Planning and Design Code; and
 - e. Investigate whether under the PDI Act, any standard conditions on a Development Application may resolve some matters currently dealt with by a Section 221/222 permit; and
 - f. Investigate the further legislative impacts of the amendment and put in place appropriate measures to ensure procedural processes are effective prior to implementation of the Planning and Design Code
4. Include universal design principles within the Planning and Design Code (refer Attachment A.1 and A.2) and/or within relevant Design Standards prior to implementation.

Public Realm – a missing piece

The PDI Act provides that developments must be assessed against the ‘planning rules’.⁴ The PDI Act defines ‘planning rules’ as including the Planning and Design Code and ‘Design Standards’, which relate to public realm or infrastructure matters.⁵ Many developments within the City of Adelaide have an impact or propose development on or within the public realm.

The Draft Code released 1 October 2019, does not provide any policies relating to the public realm, nor were any Design Standards released for consultation. Without policies in place, when the Planning and Design Code is implemented, many public realm matters may be at risk of not having a policy framework within which these would be appropriately dealt with. This is currently a missing element of the planning reform and significant risk to Council.

Additionally, the PDI Act makes amendments to Sections 221 and 222 of the *Local Government Act 1999* (SA) (LG Act). These sections relate to permits currently issued by Council for work and development within the public realm. In summary, these amendments mean that anything that would currently require a Section 221 or 222 permit to be issued by Council, if approved by a future development application under the PDI Act, a permit will no longer be required.

Whilst Council supports streamlining processes and removing red tape, these amendments appear to have not considered some fundamental and important processes of permits and poses a significant risk to Council.

Legal advice has been sought regarding the amendments. This advice outlines the risks for Council of this not being adequately resolved prior to implementation of the Planning and Design Code (legal advice provided in Attachment A.7). In summary the legal advice is as follows:

- If an application shows road closures or a crane on a plan that is granted Development Approval, a permit from Council would not be required. This would lead to an odd public policy outcome where an applicant for approval under the PDI Act can sidestep the clear legislative intent of the Parliament that certain alterations or use of public roads must be subject to public consultation.
- Council’s public realm policy documents need to be transferred to either policies within the Planning and Design Code or to a City of Adelaide Design Standard in the new planning system to be considered in the planning assessment process.
- The practical implementation of s 102(11)(b) which allows Council to charge fees for public realm matters is unclear.
- The requirement for, for example, the State Commission Assessment Panel to ‘consult’ with Council on anything that would otherwise be dealt with by s 221/22 of the LG Act, does not provide a timeframe for this process within the Planning, Development and Infrastructure (General) Regulations 2017, but does provide new statutory assessment timeframes. It is unclear how this ‘consultation’ will occur, and the timeframe involved.
- Matters relating to public indemnity insurance and liabilities are at risk of not being dealt with.
- It is unclear if Council wanted to undertake maintenance to a road and required public realm elements be removed to allow this, if this would be possible and if so, how it would occur.

⁴ *Planning, Development and Infrastructure Act 2016* (SA) s 102(1)(a).

⁵ *Planning, Development and Infrastructure Act 2016* (SA) s 69.

- It is also unclear what powers Council has to hold an encroachment owner accountable should their encroachment fall into disrepair.

Whilst Council staff have been discussing with DPTI staff possible ways to mitigate the unintended consequences of this legislative amendment, this must be resolved prior to the implementation of phase 3. This could put several public realm matters relating to construction, public consultation, liabilities, public indemnity insurance etc. at risk.

It is essential that these matters be dealt with and implemented at the same time the Planning and Design Code is implemented.

5.2 Loss of important policies risks the future look and feel of our City

From the earliest stages of development of the new planning system, DPTI communicated that the initial Planning and Design Code would comprise current Development Plan policies in the new Planning and Design Code format, in effect a “like for like” transition to precede future changes to policy content developed in consultation with councils, community and stakeholders.

The current version of the Draft Code does not represent that commitment. Policy intent, content and tools fundamental to the City of Adelaide’s ability to sustain and enhance the quality of its streets and buildings are absent from the Draft Code, and have not been replaced with substantive planning policy to the detail or rigour necessary to enable good development outcomes, evidenced by the review and testing of the Draft Code contained in Attachments A.1 through A.4.

Amongst current Adelaide (City) Development Plan policies excluded from the Draft Code are best-practice, evidence-based policies that directly contribute to the quality of environment and experience the city provides to its residents, workers, and visitors.

Attachments A.1 through A.3 illustrate in detail the extent and significance of policy loss in the City of Adelaide, while the following table summarises the policy losses of greatest impact, relating to:

- Demolition
- Design and character, appreciation of local context, and views
- Heritage, heritage adjacency, and the Adelaide Park Lands
- Movement, including policies relating to pedestrians, car and bicycle parking, integrated transport and land use planning, and emerging transport
- Land use
- Noise, waste management and energy efficiency
- Crime Prevention through Urban Design
- Public art
- Affordable housing and apartment quality

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Demolition</p> <p>In response to the unique and historic context, currently all demolition in the City of Adelaide requires planning consent. Demolition of a building is not supported until such a time as a replacement development on the site is granted Development Approval.</p> <p>Under the Draft Code no provision is made for demolition control in the City of Adelaide other than for a listed heritage place. This policy has been in place since the 1980s being an effective policy mechanism.</p>	<p>Unnecessary and premature demolition of buildings leading to vacant sites which provide little or no economic benefit to the city, reduce activation opportunities and negatively affect city streetscapes.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Design and character</p> <p>Policy tools to sustain local character and facilitate good design outcomes have been removed across the City of Adelaide (Refer below Section 5. Zone Summaries and Attachment A.2 Development Plan to Code Audit). Specific examples include the following policies lost in the Capital City and City Living Zones, however policy omissions across all Zones applying to the City of Adelaide have been identified.</p> <p>Policies absent from Capital City Zone:</p> <ul style="list-style-type: none"> • Human scale, a comfortable pedestrian environment, and intimate, active, inclusive and walkable spaces • Maintenance of Adelaide's distinct / historic grid pattern • The role of North Terrace as a cultural boulevard, King William Street as the commercial spine and Pulteney Street and Morphett Street as mixed-use commercial boulevards • Design solutions to ensure and facilitate good land use co-existence outcomes • Design of small-scale external alterations, e.g. shopfront alterations and canopies over footpaths • Application of podiums and associated design guidelines • Spacing between tower buildings to enable sunlight access to the public realm • Design and appearance of buildings e.g. façade composition, articulation and modelling with regard to settlement pattern Built form aspects of interface with the City Living Zone • Adaptability of ground floor levels through minimum ceiling to floor level heights. <p>Policies absent from City Living Zone:</p> <ul style="list-style-type: none"> • Design guidance to ensure buildings and additions are compatible with existing development (rather than a generic Deemed to Satisfy measure, e.g. for front setback) • Built form elements e.g. massing, frontage and setback widths, façade articulation • Local characteristics e.g. grand buildings on East Terrace, importance of landscaped grounds to historic character 	<p>Poorly designed development that does not respond to its context.</p> <p>Lowered quality of the built form and streetscapes that make the City:</p> <ul style="list-style-type: none"> • Economically attractive • Liveable • Walkable • Attractive to visitors • Competitive • Unique in the local character of its precincts and neighbourhoods. <p>Complaints due to poor outcomes being generated with little or no avenue for recourse.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Inappropriate land uses</p> <p>Explicit listing of land uses which are <i>not envisaged</i> in a Zone.</p> <p>Under the Draft Code land uses not explicitly envisaged default to a performance assessed development assessment pathway, but no suitable additional policies are included to guide an assessment.</p> <p>Additionally, some proposed Zones open up land use opportunities that are inappropriate for an area.</p> <p>The draft City Living Zone now has a more mixed-use approach than the intended residential focus, with shops, offices and consulting rooms under 50sqm being Deemed to Satisfy. This is not a provision that is contained anywhere within the Adelaide (City) Development Plan currently and has the potential to facilitate the infiltration on non-residential land uses within an historic residential area. This is not supported.</p> <p>Preliminary commercial advice affirms the 50sqm DTS proposal would weaken the business and economic role of main streets, reduce amenity in residential areas, reduce residential population in residential areas, and not foster public transport. The advice outlines main streets are experiencing insufficient demand, thus this proposal to increase supply, in particular through the DTS approval process, in locations other than main streets has insufficient basis and is at odds with fostering vibrant main streets and pleasant residential areas.</p>	<p>Establishment of land uses in areas where they are currently considered inappropriate due to potential for negative impacts and conflict, or where they compromise the intended land use profile of an area.</p> <p>Weakening of business and economic role of main streets and reduction in residential amenity.</p> <p>Council will have difficulty in assessing inappropriate development applications and will have no policy to refuse these applications against.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Appreciation of local context</p> <p>Desired Character Statements have been excluded from the Draft Code and the proposed Zones provide limited detail describing or requiring compatibility with the local context. The Draft Code uses Desired Outcomes, which are often very broad in application and do not provide enough detail about the local context.</p> <p>Existing Desired Character Statements have been drafted and refined over almost four decades, over which time they have facilitated good development outcomes that are suited to the contextually different localities within the City of Adelaide.</p> <p>Additionally, the Draft Code lacks policies relating to the streetscape in terms of height, roof form and pitch, scale, building materials, colours and detailing. These are important elements in ensuring a structure does not detract from the streetscape.</p>	<p>Undesirable change to the character, look and feel of local areas as the result of incompatible and inappropriate development.</p>
<p>Pedestrians</p> <p>Policy tools to protect and enhance pedestrian movement has been removed from the City of Adelaide Zones, and the General Development Policy modules do not relate to the complexity of the pedestrian network required for the City of Adelaide. Specific exclusions are:</p> <ul style="list-style-type: none"> • Policies that address the relationship of development with the human scale, and the intent to achieve a comfortable pedestrian environment • Map and policies addressing the core pedestrian area and envisaged pedestrian links⁶ • Policies to avoid creation of wind tunnels 	<p>Poor outcomes for pedestrian movement and the comfort of pedestrians moving within and through the City of Adelaide.</p>

⁶ City of Adelaide has identified a need to update these maps. The Draft Code currently does not provide adequate reference to the pedestrian network of the City and it is considered that this substantial change is beyond the scope of generation 1 of the Planning and Design Code and therefore must be reinstated.

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Car and bicycle parking</p> <p>The Draft Code increases car parking rates in some circumstances and reduces bicycle parking rates unique to the City of Adelaide.</p> <p>The Draft Code excludes the requirement for development to provide accessible car parks for holders of a Disability Parking Permit.</p>	<p>A backwards step for sustainable transport.</p> <p>Less development potential and economic development potential in the City due to excessive car parking requirements.</p> <p>The City's welcoming of people of all abilities is compromised.</p>
<p>Land use definitions</p> <p>Definitions of land uses for which the City of Adelaide receives applications, including but not limited to:</p> <ul style="list-style-type: none"> • Adult entertainment premises • Adult products and services premises • Amusement machine centre • Licenced premises • Licenced entertainment premises • Community centre • Health care facilities • Events <p>See Attachment A.10 for more detailed review of land use definitions.</p>	<p>Increased uncertainty of development assessment outcomes for applicants and the City of Adelaide resulting from undefined land uses and/or inconsistency of language.</p> <p>Increased legal review and costs to applicants, the community and Council.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Waste Management</p> <p>Adequate policies to require developments to accommodate appropriate waste management, particularly in the high-scale city context.</p>	<p>Developments without suitable consideration of waste management that:</p> <ul style="list-style-type: none"> • Reduce the quality of life for occupants and neighbours. • Result in waste storage/overflow that extends to public roads and spaces. • Increases waste management costs to the council i.e. increased collections, response to complaints, regulation of environmental health matters. • Increased negative environmental impact.
<p>Noise</p> <p>Detailed noise policies appropriate to assess noise impacts in a high-density mixed-use area. The policies in the current Development Plan were developed in 2006 with the collaboration and support of the State government. These are important policies and assist in achieving a co-existence of land uses that contributes to the vibrancy and success of the City and should be reinstated.</p> <p>The City of Adelaide is one of a handful of cities recognised worldwide as a UNESCO City for Music. Facilitating music in the City of Adelaide is contingent on good planning policy that mitigates the impacts of noise on more sensitive land uses.</p>	<p>Reduced amenity, increased conflict and increased noise compliance problems.</p> <p>A backwards step in facilitating the international recognition of Adelaide as a City for Music.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Heritage</p> <p>The draft policies contained within the State Heritage Place Overlay, Local Heritage Place Overlay and Historic Area Overlay are not comprehensive to ensure the protection of these unique and important places and areas.</p> <p>The details provided in the Commission’s draft Historic Area Statements, released 23 December 2019, have not included important detail identified by Council to identify the key characteristics and elements of importance that determine the prevailing styles and patterns of development in our areas. As currently proposed, their usefulness in assisting the development assessment process is of concern.</p>	<p>Inadequate policies or recognition of important attributes of an area to ensure protection our unique and important heritage places and areas.</p>
<p>Heritage adjacency</p> <p>Principles regarding development adjacent a listed heritage place or within a historic area are not contained within the Draft Code.</p>	<p>Reduction of/negative impact upon heritage value of significant places and streetscapes resulting from an inability to manage the impacts of adjacent development.</p>
<p>Adelaide Park Lands</p> <p>Policies to clearly specify inappropriate land uses and built form development.</p> <p>Zone specific policies relating to movement and parking, advertising and fencing.</p>	<p>Unclear direction for the Adelaide Park Lands.</p>
<p>Integrated transport and land use planning</p> <p>Policy tools to adequately manage transport and land use planning matters. This is particularly relevant to the City of Adelaide in which roads are under care and control of Council.</p> <p>The Draft Code provides overlays and principles for ‘traffic generating developments’ and ‘major urban transport routes’, but these overlays do not apply to the City of Adelaide.</p>	<p>Less transport efficiency in the City and greater incidence of transport/traffic and land use conflict, ultimately reducing the quality of the City environment for all.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Diversity in Housing</p> <p>Adequate policies to address, encourage or provide for a range of housing types, tenures or costs for the widely differing social and economic needs of residents.</p>	<p>Reduced equity and diversity in the City's residential population.</p>
<p>Apartment Quality</p> <p>Quantitative minimum floor space requirement for 'studio' apartments, nor alternative policy measure to require minimum standard for liveability.</p>	<p>Poor quality residential development detrimental to quality of life for City residents.</p> <p>Reputational risk to the City of Adelaide brand 'Design for Life', impacting future growth and demand.</p>
<p>Height Limits</p> <p>Australian Height Datum reference for the Obstacle Limitation Surface has been omitted. This is crucial for assessment purposes and determining whether a referral to Adelaide Airport Limited is required.</p>	<p>Unclear impact of development on airport operations.</p>
<p>Energy Efficient Design</p> <p>Policies to encourage and facilitate energy efficient design as proposed in the <i>Natural Resources and Development Discussion Paper</i> released by the State Planning Commission in August 2018.</p>	<p>A step backwards in sustainability and climate change adaptation for the City. At odds with Carbon Neutral agreement between City of Adelaide and State Government.</p> <p>Increased costs and reduced quality of life for City residents.</p> <p>Reputational risk to the City of Adelaide brand 'Design for Life'.</p>
<p>Emerging transport</p> <p>Policies to encourage and facilitate emerging transport technologies as proposed in the <i>Integrated Movement Systems Discussion Paper</i> released by the State Planning Commission in August 2018.</p>	<p>Missed opportunity to proactively facilitate emerging transport technologies and encourage innovative, efficient, sustainable transport systems.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Built Form Interface</p> <p>Omitted from Draft Code.</p>	<p>No ability to mitigate impacts of high-rise or scale development abutting lower scale or public realm areas.</p>
<p>Regulated and Significant Trees</p> <p>The Draft Code Map viewer provides a Significant Tree Overlay, however there is no corresponding Overlay within the Draft Code. There is a 'Regulated Tree Overlay', however the PDI Regulations and Development Plans make a clear distinction between significant and regulated trees and have different policy tests for each. This has not been carried over to the Draft Code.</p>	<p>Confusing policies relating to trees, or omissions of necessary policies creates uncertainty for assessment process as well as uncertainty for the future of tree protection in the State.</p>
<p>Temporary development</p> <p>Policies relating to land use or development applications of a temporary nature. The City of Adelaide receives multiple applications each year of this nature, particularly in relation to our role as the festival and cultural capital of the State.</p>	<p>Reduced understanding of how temporary applications will be assessed and processed in the future.</p>
<p>Views</p> <p>Explicit recognition and protection of important views and vistas are not identified within the Zone. Whilst some have been recognised in the Historic Area Statements, it is not a conclusive list as per the current Adelaide (City) Development Plan.</p>	<p>Landmark views in the City are not protected through development assessment and may be lost, reducing the amenity of our city for residents, visitors and tourists.</p>
<p>Crime Prevention through Urban Design</p> <p>Safety policies within the <i>Design in Urban Areas General Development Policy</i> module have limited application particularly in the City of Adelaide context.</p>	<p>Lost ability to contribute through internationally recognised best practice to community safety in public places utilising good design.</p>

Policies EXCLUDED from the Draft Code	RISKS for the City of Adelaide
<p>Public Art</p> <p>Adelaide (City) Development Plan Living Culture policies providing guidance on assessment of applications for public art, including consideration of design, materials, locations and safety.</p>	<p>No tools available to assess the numerous applications for public art received each year.</p>

Recommendations

5. Include existing Development Plan policies in the Planning and Design Code, as detailed in Attachment A.1 and A.2 of this submission.
6. Include non-envisaged land use list to provide clarity and certainty to the community about what is envisaged, and support achievement of assessment timeframes.

Uncertainty in demolition control

Through previous submission on the planning reform, the City of Adelaide has raised the importance of demolition controls within the City.

Currently, demolition within the City of Adelaide requires planning consent. This is a historic, unique and important policy to the City to avoid the unnecessary and premature demolition of buildings leading to vacant sites which provide little or no economic benefit to the city, reduce activation opportunities and negatively affect city streetscapes.

The gazetted *Planning, Development and Infrastructure (General) Regulations 2017* allows the demolition of buildings without development approval, other than a listed heritage place or where it is otherwise identified in the Planning and Design Code. In the *State Planning Commission's Guide – Key Changes to the PDI (General) Regulations 2017*, it was stated that in response to feedback received during consultation, the City of Adelaide would be an area designated by the Planning and Design Code that would require development approval for the demolition of a building.

This has not eventuated in the current Draft Code, in which 'demolition' is not listed in any classification table within any Zone within the City of Adelaide, other than demolition of a State Heritage or Local Heritage Place. Nor is the City of Adelaide excluded from this clause of the PDI Regulations, in Part 5 (Designated Areas) of the Draft Code.

On 22 August 2019, the Lord Mayor wrote to the Minister for Planning about the importance of maintaining demolition controls within the City of Adelaide.

On 8 November 2019, the Minister for Planning replied to the Lord Mayor's letter, stating:

"I am advised by the Department of Planning, Transport and Infrastructure (the department) the recently released consultation draft of the Planning and Design Code (the Code) contains demolition control within the City."

This advice contradicts the Draft Code, in which reference to demolition of buildings within any Zone classification table within the City of Adelaide is absent.

5.3 Some development assessment will take longer and cost more

An aim of the planning reform process as per the Expert Panel's recommendations was to streamline development assessment, reduce unnecessary cost and time, and provide clarity and certainty for applicants, planning authorities and communities.

As it stands, the Draft Code incorporates barriers to more streamlined development assessment, specifically as a result of the imprecise guidance provided for pathways of development due to minimal development types identified within the classification tables of each Zone.

There are many instances in which implementation of the Draft Code would subject applications that are simple and straightforward under the current Development Plan to a more onerous assessment process and require public notification despite their low community impact or desired development outcome.

Attachments A.1 through A.3 illustrate these changes in detail, while the table below summarises some of the most critical concerns with this aspect of the Draft Code. Aspects of the Draft Code with potential to increase the time and cost of development assessment specifically relate to:

- Determination of relevant authorities
- Missing land uses and forms of development within classification tables
- Increased requirements for public notification and specialist technical advice

The City of Adelaide supports making additional improvements to the Draft Code to reduce cost and complexity for simple applications for envisaged development and to save business and the community time and cost. Attachment A.4 (which has previously been provided to DPTI and the State Planning Commission) illustrates how the Planning and Design Code could make improvements to current practices to streamline what can be described as "low risk" applications.

Additionally, it is not clear whether the Planning and Design Code will result in financial impacts to development feasibility. The financial impact of the Planning and Design Code has not been tested. Increased construction costs may impact development opportunities in the city.

Parts of the Draft Code that INCREASE TIME AND COST of development assessment	RISKS for the City of Adelaide
<p>Classification of envisaged land uses</p> <p>'Envisaged land uses' identified in zone provisions are not consistently reflected in the associated zone classification tables.</p> <p>Envisaged land uses omitted from the classification tables are classified as <i>all other Code assessed development</i>, meaning:</p> <ul style="list-style-type: none"> • Public notification is required other than where applications are determined to be minor (minor is undefined), and • The Council Assessment Panel (CAP) is the relevant authority 	<p>Through procedural anomaly, the council bears the time and cost of performance assessment and public notification of applications for:</p> <ul style="list-style-type: none"> • Land uses that are explicitly envisaged by the zone policies, or • Minor applications which are adjacent another Zone due to narrow Zone boundaries or large parcel cadastres.
<p>Common forms of development are not classified</p> <p>The classes of development listed within the Draft Code's classification tables appear to be based on a suburban metropolitan context and do not reflect common application types that the City of Adelaide receives, such as 'external alterations to shop/restaurant/office/consulting rooms', 'installation of verandah/canopy above footpath', 'public art'.</p>	<p>The lack of definition and reference to appropriate policies for types of development common to the City of Adelaide will make their assessment more complex, likely increasing time and cost and reducing certainty in the assessment process.</p>
<p>Inconsistent and undefined terminology</p> <p>Residential development, dwelling, apartment are all terms used in the Draft Code. Some are not defined, making the difference between these terms, if any, unclear.</p>	<p>Reduces clarity, makes assessment more complex and provides less certainty to the applicant and community.</p>

Parts of the Draft Code that INCREASE TIME AND COST of development assessment	RISKS for the City of Adelaide
<p>Increased public notification</p> <p>The wording of ‘the site of the development is adjacent land to land in a different zone’ and ‘all other Code assessed development’ used in many City of Adelaide Zones may lead to increased public notification due to the boundaries of the Zones and land parcels and/or many envisaged forms of development not being listed within the relevant classification tables.</p> <p>Applications which should be subject to public notification, such as demolition of a State Heritage Place or Local Heritage Place is not required in the Draft Code. However, an application for ‘conservation work’ to a heritage place would default to ‘all other code assessed development’ and would require public notification. This is an adverse outcome of the Draft Code and is not supported.</p> <p>Whilst the Phase 3 P&D Code (Urban Areas) - Code Amendment – Update Report, released by the Commission on 23 December 2019, provides that the public notification triggers will be amended to avoid these unintended consequences, the proposed wording for these has not been released for consultation.</p>	<p>Notification of conservation works to a heritage place but not demolition of a heritage place.</p> <p>A substantially higher number of applications will be subject to public notification, at increased time and cost with no material benefit.</p> <p>Council is unclear what sort of applications will require public notification, and therefore cannot forecast how many applications may fall into this process and need to be assessed by the CAP.</p>
<p>Exemptions to Placement of Notices</p> <p>None of the City of Adelaide zones in the Draft Code state exemptions for placement of notices within the procedural matters table. In the City context where development is often not at ground level, the placement of notices at ground level is unnecessary. The increase in applications subject to notification under the Draft Code further exacerbates this burden to no obvious benefit.</p>	<p>Increased time and cost in placement and removal of notices in windows at ground level, where ground level notification is not relevant.</p>

Parts of the Draft Code that INCREASE TIME AND COST of development assessment	RISKS for the City of Adelaide
<p>Requirement to assess minor applications</p> <p>The City of Adelaide receives a large volume of applications for development it considers to be minor and low risk. Examples include some forms of change of land use, advertising, and external alterations to buildings.</p> <p>These applications are currently assessed on merit, and under the Draft Code they do not comply with Deemed to Satisfy criteria and will remain performance assessed.</p> <p>Attachment A.4 illustrates how the Draft Code could be amended to streamline assessment of “low risk” applications in the City of Adelaide.</p>	<p>Low impact developments continue to require a merit/performance development assessment, increasing time and cost for all involved.</p>
<p>Specialist support for applications</p> <p>The Draft Code will require some applications to provide expensive specialist or technical advice in instances when it is not necessarily required to assess the application. For example, demolition of a non-listed building within a Historic Area may require a report from either a structural engineer, heritage specialist or quantity surveyor.</p>	<p>Additional application costs may impact development opportunities.</p>

Recommendations

7. Reword the procedural matters tables within all Zones applying to the City of Adelaide so as to not unnecessarily increase public notification in the city for minor applications.
8. List all envisaged land uses and development types within Zone classification tables and provide policies for their assessment to streamline processing and to avoid envisaged land uses defaulting to the classification of *all other code assessed development*.
9. Implement consistent language to describe forms of development throughout the Planning and Design Code, using defined terms wherever possible.
10. Ensure classification tables in the City Zones reflect the common development types that occur in the local context enabling simpler and more efficient assessment of these applications.

5.4 The development of the Code is undermining good planning practice and outcomes

The once in a generation opportunity presented by system-wide reform comes with a responsibility to consider the best available sources of knowledge and good practice in seeking to shape the future of our State.

From the earliest stages of planning reform, the City of Adelaide has consistently expressed a desire to collaborate with the State Government to ensure the new planning system provides for a thriving, sustainable city that is of value to all South Australians. The reform process overall and development of the Draft Code in particular has not enabled this desire to be realised. While that is a concern in itself, there is a broader concern of how the persistent flaws in the reform process will manifest in the implementation of the system, and the outcomes it produces.

Opportunities to engage, collaborate, investigate and test in pursuit of the core objective of good planning practice in the PDI Act, have not been realised due to a focus on the previously set deadline for implementation of 1 July 2020. The result is a flawed planning system that runs the risk of unintended and perverse outcomes, inefficient implementation, confusion and frustration amongst all stakeholders, and ultimately detrimental impacts to landscapes and communities. With this date to be removed and replaced by a new date to be set by proclamation, there is now an opportunity to make significant improvements to the reform process.

Compromised Planning Practice	RISKS to the City of Adelaide
<p>Community Engagement Charter</p> <p>A core objective of the PDI Act is to provide a scheme for community participation regarding the initiation and development of planning policies.⁷ The Community Engagement Charter envisages an engagement process which “<i>matches the significance of the planning change</i>”. The Commission’s engagement plan identifies that “<i>everyone who lives in South Australia is affected by the Code</i>”. The scope, approach, activities and reach of the engagement undertaken by the State Planning Commission has been less than that stated and does not match the level of potential impact proposed by the Draft Code.</p>	<p>The community and Council are not aware or do not understand the level of changes to planning policies to their area or property.</p>

⁷ *Planning, Development and Infrastructure Act 2016 (SA) s 12(1)(b).*

Compromised Planning Practice	RISKS to the City of Adelaide
<p>Evidence-based policy</p> <p>The Draft Code includes significant policy changes with broad-reaching implications. No evidence-based rationale or analysis of impacts and management strategies has been provided for these changes. Examples include:</p> <ul style="list-style-type: none"> • Gross leasable floor area caps in areas which currently do not have this restriction (e.g. the proposed Urban Corridor (Main Streets) Zone and City Main Streets Zone) • Conversely, gross leasable floor areas allowing commercial uses within the City Living Zone, possibly causing impacts to residential amenity, but providing no evidence of impacts of taking commercial land uses away from Main Streets. • Quantitative setback provisions in the proposed City Living Zone which do not relate to the established pattern of development within these areas. 	<p>Unknown consequences to the changing retail market.</p> <p>Undesired land use pattern changes likely.</p>
<p>Systems and processes that support policy implementation</p> <p>The Draft Code was designed for an <i>ePlanning</i> format but was not ready for the consultation. Undertaking consultation on such a complicated document in the current manner is arguably not <i>'fit for purpose'</i>.</p> <p>The state-wide ePlanning solution will not provide all business requirements of Council, however the full impacts of this remain unclear. Consultation on the ePlanning solution has been limited. Council will have to work undertake significant integration works, but the specific details of what this involves remains unclear.</p> <p>The Draft Code Map viewer that was released with the consultation had many errors, relating to ambiguities with technical and numerical variations. Additionally, it is unclear whether a property selected is a listed heritage place itself or adjacent a heritage place. This creates confusion.</p>	<p>Council may not be business ready for implementation of the new planning system, impacting services to the community.</p> <p>Planning zoning and policies which apply to a property will not be clear to the customer when the new planning system is implemented.</p>

Compromised Planning Practice	RISKS to the City of Adelaide
<p>Local influence over planning decisions</p> <p>1. Development types moved from merit to restricted</p> <p>The Draft Code proposes some (but limited) land uses or forms of development be ‘restricted’ which are currently merit forms of development. This does not reflect the current Development Plan, in terms of undesired land use or development, nor does it necessarily reflect complexity. It is unclear the basis or need for this outcome.</p> <p>2. Relevant authorities</p> <p>The PDI Regulations states that developments over 4 storeys within Metropolitan Adelaide and identified within the Planning and Design Code will be assessed by the State Commission Assessment Panel.⁸</p> <p>The Draft Code applies the ‘Design Overlay’ for the purposes of this clause which applies to the City of Adelaide, meaning that all development over 4-storeys within the City of Adelaide would be assessed by the State Planning Commission. DPTI Administration have conceded this is an error and that Part 5 of the Planning and Design Code should state that this clause applies where the Design Overlay applies, except for the City of Adelaide.</p>	<p>Loss of ability to assess applications that are currently assessed by Council. This further erodes Council’s role as a legitimate assessment body.</p>
<p>Conditions of development</p> <p>As outlined in section 5.2 of this report, there are many critically important policies which have been omitted or significantly weakened in the Draft Code. The new planning system does not allow you to condition matters if not dealt with within the P&D Code.</p>	<p>Reduced policies in P&D Code may mean matters are not able to be adequately addressed during the assessment process or by way of a condition.</p>

Recommendations

- Commend the Minister for Planning and State Planning Commission for delaying the implementation of the Planning and Design Code and ePlanning solution but recommend that a new implementation date only be set that provides sufficient time to allow for the following to be achieved:

⁸ *Planning, Development and Infrastructure (General) Regulations 2017 (SA) Sch 6(4).*

- a. Full and comprehensive testing of the Planning and Design Code to identify significant policy changes, errors, missing content and/or unintended consequences to allow for required policy amendments;
 - b. Enable additional consultation on changes to the Planning and Design Code arising from Phase 3 submissions (in preference to not making changes to the Planning and Design Code following consultation on the basis that changes would delay introduction of the Planning and Design Code);
 - c. Ensure every South Australian is notified of the changes proposed to their property to meet the PDI Act and Community Engagement Charter;
 - d. The opportunity to test the effect of the proposed Planning and Design Code in the ePlanning system (as originally proposed for in the announced transition process); and
 - e. Provide adequate time to prepare for the full implementation of the changes, including the considerable integration works required to Council's business systems in order to maintain current business operations and service levels to our community.
12. Reinstate the policies developed collaboratively by the City of Adelaide and DPTI in good faith, and/or clearly communicate why this body of work was excluded from the Draft Code.
13. Ensure forms of development assessed on merit currently are not classified as restricted under the Planning and Design Code, but rather performance assessed with reference to appropriate policies to be included in the Code.
14. Provide comprehensive policies within the Planning and Design Code to assist with assessment or allow for matters to be conditioned, to truly streamline assessments.
15. Insert into Part 5 (Designated Areas) of the Planning and Design Code the following indicated in blue text:

Relevant authority - Commission	
Areas identified for the purposes of clause 4(1) of Schedule 6 of the Regulations – Buildings exceeding 4 storeys	Design Overlay <i>excluding where it applies to the City of Adelaide.</i>

Has South Australia’s Community Engagement Charter been upheld?

Table 4.1 summarises the City of Adelaide’s greatest concerns with the community and stakeholder engagement process with reference to the principles of South Australia’s Community Engagement Charter, and suggestions to realign the Code development process with those principles.

Community Engagement Charter Principle	Evidence of non-alignment	Proposed action to align
Engagement is genuine	No opportunity for consideration of the revised Code between close of Phase 3 consultation and implementation in July 2020. In effect this means either significant changes arising from Phase 3 will not be consulted on, or no significant changes will be made based on Phase 3 submissions.	<ul style="list-style-type: none"> • Delay implementation to enable additional consultation on changes to the Code arising from Phase 3 submissions and ensure every South Australian is notified of the changes proposed to their property to meet the PDI Act and Charter. • Reinstate the policies developed by the City of Adelaide and DPTI in good faith, and/or clearly communicate why this body of work was excluded from the Draft Code.
Engagement is inclusive and respectful	<p>Significant collaborative policy work undertaken by the City of Adelaide and DPTI is not reflected in the Draft Code, without explanation.</p> <p>The governance framework for making changes post consultation is also unclear.</p>	
Engagement is fit for purpose	The Draft Code was released with extensive errors. A majority of the consultation period has had to be used to note errors, rather than focus on whether the policies are sufficient, can be applied appropriately or identify what is missing.	
Engagement is informed and transparent	<p>Many of the City of Adelaide’s areas have had policies removed, new policies created, or areas rezoned completely. No evidence base for these decisions has been provided by the State Planning Commission, making it unclear as to how or why some things have been drafted and whether the Commission understands the history of some policies/areas and the impact that these changes will create.</p> <p>The release of an update report, updated classification tables and Phase 3 Historic Area Statements on 23 December 2019 has not allowed for an informed consultation period for the community or Council.</p>	
Engagement processes are reviewed and improved	The Commission has acknowledged the complexity of the Code and its accessibility; however, it remains unclear how this issue will be resolved in the interest of the community and ensuring sufficient engagement of the Code has occurred.	

6. RECOMMENDATIONS BY ZONE / OVERLAY / GDP

The Draft Code contains a number of city-specific Zones and several Subzones within the City of Adelaide, acknowledging the uniqueness and importance of the City and North Adelaide. Notwithstanding this, every Zone in the City has had some level of change; being either a reduction in policy to adequately reflect the local context or needs of the area or a proposed rezoning that does not provide the necessary policy requirements for the area (refer Section 5 above).

6.1 Zone change overview

The following table lists each of the Zones and Subzones proposed within the City of Adelaide under the Draft Code, with more details on each of the recommendations provided in Section 6.2.

The policy changes recommended can be found in Attachment A.1 - *City of Adelaide P&D Code amendment document – proposed rewording and additional policies to be added*. With the detailed analysis and reasoning within Attachment A.2 - *Audit of Adelaide (City) Development Plan into draft Planning and Design Code*.

Development Plan		Draft Code		Level of Policy Change ⁹	Draft Recommendation for Submission
Zone	Policy Area(s)	Zone	Subzone(s)		
Capital City	14	City Main St	Rundle Mall Rundle St Hindley St Gouger/Grote St	MODERATE	Support only with policy changes
	-	Capital City	-	MODERATE	Support only with policy changes
City Frame	-	Capital City	City Frame	MODERATE	Support only with policy changes
City Living	30	Capital City Zone	City Frame	MODERATE	Support only with policy changes
	All excluding 30	City Living Zone	Medium-High Intensity	MODERATE	Support only with policy changes
Adelaide Historic (Conservation)	-	City Living	-	HIGH	Support only with policy changes
	1, 3, 5, 7, 10, 12	City Living Zone	North Adelaide Low Intensity	HIGH	Recommend this apply to all of North Adelaide

⁹ Some of the HIGH ratings, relate to the fact that the current zone is proposed as a new Zone and our preliminary research has identified a number of policy changes for these areas as a result.

Development Plan		Draft Code		Level of Policy Change ⁹	Draft Recommendation for Submission
Zone	Policy Area(s)	Zone	Subzone(s)		
North Adelaide Historic (Conservation)	2, 4, 6, 8, 11		-	HIGH	Recommend the North Adelaide Low Intensity Subzone applies to these areas also
	15		Medium-High Intensity	HIGH	Support only with policy changes
	9	Community Facilities		HIGH	NOT Support. Still considering alternative Zones.
Institutional (St Andrews)	-	Community Facilities	-	MODERATE	NOT Support. Recommend the Capital City Zone / City Frame Subzone applies, but only with policy changes to deal with over height developments.
Riverbank Zone	27	City Riverbank	Health	MODERATE	Support only with policy changes
Riverbank Zone	28	City Riverbank	Entertainment	MODERATE	Support only with policy changes
Institutional (Government House)	-	City Riverbank	Cultural Institutions	HIGH	NOT Support. Recommend Government House form its own subzone of the City Riverbank Zone.
Institutional (University/Hospital)	West of Frome St	City Riverbank	Cultural Institutions	HIGH	Support only with policy changes
	East of Frome St	City Riverbank	Innovation	HIGH	Awaiting outcomes of Lot 14 DPA
Main St (Adelaide)	-	Urban Corridor (Main St)	-	HIGH	NOT Support. Recommend City Main Street Zone with own Subzone.
Main St (Hutt)	-	Urban Corridor (Main St)	-	HIGH	NOT Support. Recommend City Main Street Zone with own Subzone.
Main St (Melbourne East)	-	Urban Corridor (Main St)	-	HIGH	NOT Support. Recommend City Main Street Zone with own Subzone.

Development Plan		Draft Code		Level of Policy Change ⁹	Draft Recommendation for Submission
Zone	Policy Area(s)	Zone	Subzone(s)		
Main St (O'Connell)		Urban Corridor (Main St)		HIGH	NOT Support. Recommend City Main Street Zone with own Subzone.
Mixed Use (Melbourne West)		Suburban Activity Centre		HIGH	NOT Support. Recommend Business Neighbourhood Zone.
Park Lands Zone	All except 19, 21 and 25	City Park Lands Zone		HIGH	Support only with policy changes
	19, 21	City Park Lands Zone	Eastern Park Lands	HIGH	Recommend removal of Subzone and policy change to Zone to encapsulate needs of all areas within the Park Lands
	25	City Park Lands Zone	Adelaide Oval	HIGH	Recommend removal of Subzone and policy change to Zone to encapsulate needs of all areas within the Park Lands

*

6.2 Zone / Overlay or General Development Policy Summaries

The following sheets provide a summary of the analysis of the extent of policy change for each of the proposed Zones, overlays or general development policies that may apply within the City of Adelaide. They make recommendations on amendments required in the final Planning and Design Code for the City of Adelaide to be satisfied that all necessary policy requirements are catered for within the new planning system, so as not avoid the risk of adverse outcomes.

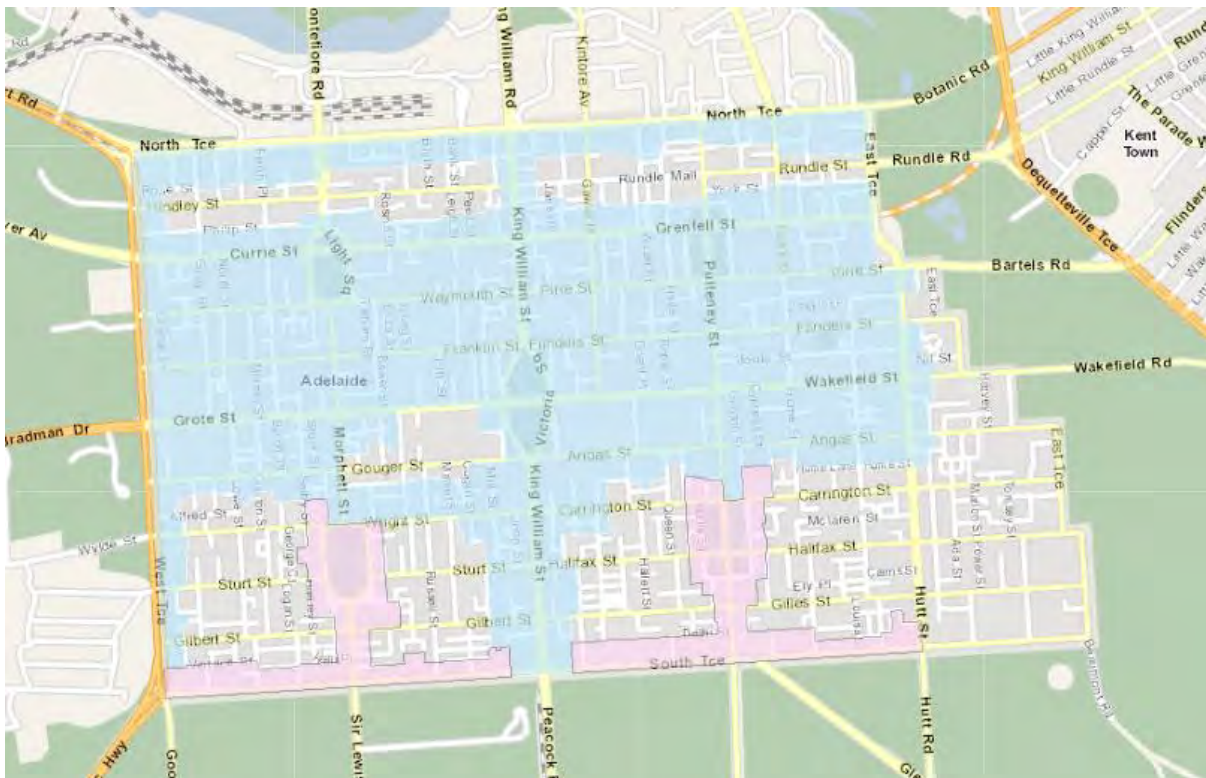

Capital City Zone

Subzones: City Frame Subzone

Replaces: Capital City Zone, Central Business Policy Area 13, City Frame Zone, City Living Zone / South Terrace Policy Area 30

Spatial changes: Excludes Gouger Street, Grote Street, Rundle Mall, Hindley Street and Rundle Street which fall within the City Main Street Zone under the Draft Code.

Spatial Application

Overview:

This Zone continues to recognise the City as the capital of South Australia and retains a number of existing policies that effectively guide high quality development in the City.

Notwithstanding this, a significant volume of effective policy has not transitioned to the new zone, creating potential for negative impacts on the City of Adelaide. Detailed analysis of the zone and recommended changes are included in Attachments A.1 and A.2. In summary, the main concerns with the Capital City Zone are:

- **No acknowledgment of local features** relevant to good development outcomes for the City of Adelaide. For example, there is no reference to Adelaide's distinct grid pattern, or the roles of North Terrace as a cultural boulevard, King William Street as the commercial spine, and Pulteney Street and Morphett Street as mixed-use commercial boulevards.

- **Lack of detailed design policies** to guide development that contributes positively to the look and feel of streets. For example, guidelines for reinforcing horizontal and vertical elements of streetscapes, articulation of buildings, use of podiums, and spacing between tower buildings to protect access to sunlight.
- **Loss of pedestrian-friendly policies** – an absence of policy to address human scale and quality of the pedestrian environment, and loss of policies designed to ensure pedestrian movement is given priority and ease over the dominance of vehicles. For example, the Core Pedestrian Areas has been excluded from the Zone as has the prohibition of multi-level carparks within the Core Pedestrian Area. These policies should be reinstated as they are important in ensuring pedestrian network is given priority and ease over the dominance of the use of vehicles.
- **Loss of built form interface policies** which will impact adjacent City Living Zones in ensuring an appropriate transition between the high-scale and intensity of the Capital City Zone and lower-scale and intensity of the City Living Zone.

Recommendation:

The City of Adelaide supports this Zone subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

City Riverbank Zone

Subzones: Health Subzone, Entertainment Subzone, Cultural/Institutions Subzone, Innovation Subzone

Replaces: Institutional (Government House) Zone, Institutional (University/Hospital) Zone
Riverbank Zone, Health Policy Area 27, Entertainment Policy Area 28

Spatial changes: includes Government House within Cultural/Institutions Subzone, introduces new Innovation subzone into area east of Frome Road which was previously Institutional (University/Hospital Subzone)

Spatial Application

	Riverbank Zone / Health Subzone
	Riverbank Zone / Entertainment Subzone
	Riverbank Zone / Cultural/Institutions Subzone
	Riverbank Zone / Innovation Subzone

Overview:

The City Riverbank Zone consolidates 3 existing Zones and 2 Policy Areas, located on the northern side of North Terrace.

There are some important existing policies which have not yet been adequately transitioned to the new zone. Detailed analysis of the zone and recommended changes are included in Attachments A.1 and A.2. In summary the main concerns with the City Riverbank Zone are:

- **No recognition of the vice-regal functions of Government House** and inappropriate inclusion of the Government House land within the Cultural and Institutions Subzone of the City Riverbank Zone.
- **Loss of built form interface policies** between North Terrace and River Torrens Valley across all subzones.
- **Loss of planning controls over land uses which are undesired**, with no adequate new policies provided to guide assessment of undesired land uses to maintain a distinction between the adjacent Capital City Zone.
- **Removal of existing policy to protect River Torrens water quality** noting the importance to the visual, economic, hydrological, recreational, and biodiversity value of the River Torrens for the City of Adelaide.
- **Removal of existing envisaged land uses.**

- **Innovation Subzone policies** which do not yet reflect City of Adelaide consultation feedback to the Lot Fourteen Development Plan Amendment (nor feedback from other submissions), noting that the Ministerial Lot Fourteen DPA has not yet been finalised by State Government.
- **Insufficient policies to protect operation of hospital helipad** and potential gaps in system of referral for development which could affect helipad operations (including during construction), in addition to referrals which exist in relation to the operation of Adelaide Airport.
- **No recognition of Park Lands** location and the natural environment of the River Torrens Valley.
- **Removal of key spatial information** currently communicated within Figures, such as reference to the “central pathway” which extends through this zone.

Recommendation:

It is recommended that the current Government House Zone be transitioned to a new “Government House Subzone” within the proposed City Riverbank Zone to provide adequate recognition of Government House and its unique vice-regal functions and ancillary land uses. Proposed Subzone provided in Attachment A.1 City of Adelaide P&D Code amendment document

The City of Adelaide supports the remainder of the proposed Zone subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

City Living Zone

Subzones: North Adelaide Low Intensity Subzone (NALISZ) and Medium-High Intensity Subzone (MHISZ)

Replaces: North Adelaide Historic (Conservation) Zone (including Policy Areas 1, 2, 3, 4, 5, 6, 7, 8, 10, 11, 12 and 15), Adelaide Historic (Conservation) Zone and City Living Zone (including Policy Area 29, 31, 32 and 33).

Spatial changes: None in North Adelaide. In South Adelaide, the new Zone includes the former City Living Zone and Adelaide Historic (Conservation) Zone but excludes Policy Area 30.

Spatial Application

	City Living Zone
	City Living Zone / North Adelaide Low Intensity Subzone
	City Living Zone / Medium-High Intensity Subzone

Overview:

The Draft Code proposes amendments to this Zone which currently applies to the City's southern residential areas. The Draft Code also proposes to apply this Zone to the residential areas of North Adelaide. There are some significant changes proposed to this Zone that may impact the future of these areas. Detailed analysis of the Zone and recommended changes are included in Attachments A.1 and A.2.

The main concerns with the City Living Zone are:

- **The Zone no longer reinforces or identifies the primacy of this area as the key residential districts of the City.** Preliminary commercial advice affirms that the Draft Code's proposal to allow change of use applications from residential to

office/shop/consulting room of 50sqm gross leasable floor area as a deemed to satisfy pathway would weaken the business and economic role of main streets, reduce amenity in residential areas, reduce residential population in residential areas, and not foster public transport. The advice outlines main streets are experiencing insufficient demand, thus this proposal to increase supply, in particular through the DTS approval process, in locations other than main streets has insufficient basis and is at odds with fostering vibrant main streets and pleasant residential areas.

- **The Zone lacks design detail and guidance to ensure buildings and additions are compatible.** Such as:
 - The policies do not take into account ceiling to floor level clearances having regard to the prevailing building height within the locality.
 - Many of the built form elements such as requiring buildings to be massed vertically or comprise of narrow frontage elements with generous front and side setbacks with well-articulated building façades have not been included.
 - All detail regarding design advice and/or references to design being driven by historic forms and landmarks had been removed. Some of the policy to guide future development could be included in the Historic Area Statements. Council is not satisfied with the Historic Area Statements that have been prepared by the SPC to date.
 - The zone doesn't provide for some of the local characteristics of the area.
 - Features such as driveway widths and location and boundary setbacks has been diminished and should be strengthened.
- **Landscaped open space** has been removed however has not been replaced with appropriate alternative policy.
- **Catalyst site provisions** may apply over the entire City Living Zone, due to ambiguous drafting, rather than just for the East Terrace area as in the current Development Plan. If they apply, the catalyst site policies have less controls over height than Significant Development Sites.
- **No advertising policies** are provided within the Zone and the advertisements General Development policies that apply to this zone are not consistent with the current requirements for these areas.

Recommendation:

The City of Adelaide supports this Zone subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document.

In addition, the North Adelaide Low Intensity Subzone should apply to all areas of the former North Adelaide H(C)Z, with the exception of PA 9 and PA15.

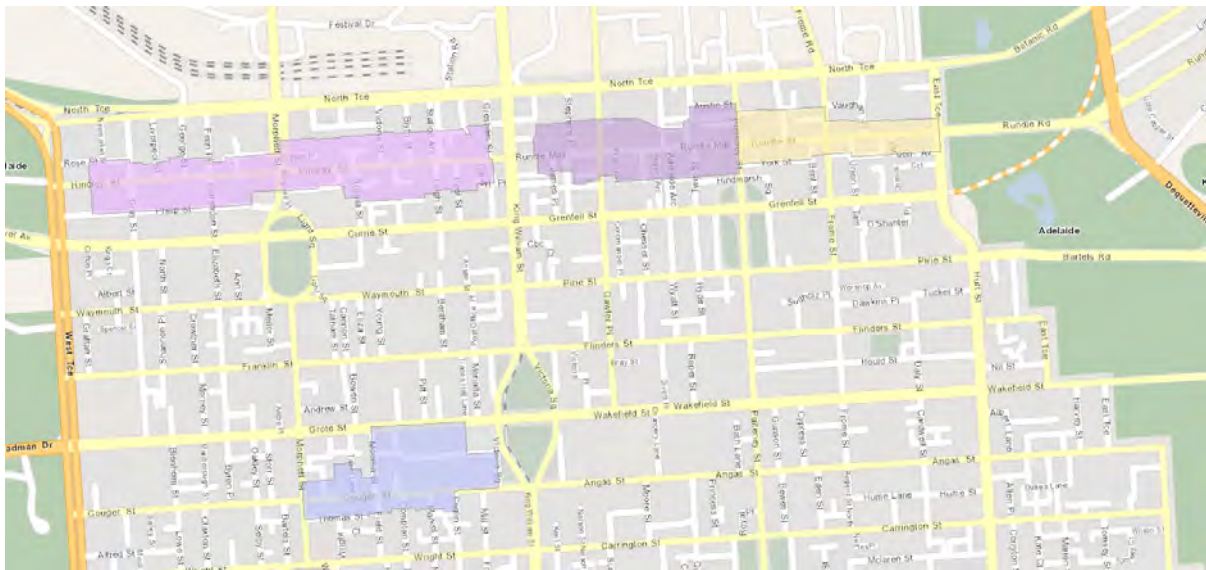

City Main Street Zone

Replaces: Capital City Zone (part) / Main Street Policy Area 14

Spatial changes: Hindley Street, Rundle Mall, Rundle Street, southern side of Grote Street, Gouger Street.

Spatial Application

	Gouger/Grote Subzone
	Rundle Mall Subzone
	Rundle Street Subzone
	Hindley Subzone

Overview:

This new Zone continues to recognise mixed use areas of the City as an important provider of shopping, hospitality, commercial, community, cultural and entertainment facilities for the City supported by medium to high density and residential development.

Notwithstanding this, there is some effective policy that has not transitioned to the new zone, creating potential for negative impacts on the public realm within the City of Adelaide.

Detailed analysis of the zone and recommended changes are included in Attachments A.1 and A.2. In summary, the main concerns with the City Main Street Zone are:

- **Important components of achieving human scale at street level within the City's Main Streets**, such as through the incorporation of verandahs to provide pedestrian shelter and sense of openness to the sky and the treatment of upper floor levels is missing.
- **Setbacks to create outdoor dining is not characteristic** to the character, layout of the City or universal design principles. Building entrances should not be setback unless they are original shop frontages.
- **Daytime activation policy** needs further work. Whilst small scale licensed premises, night clubs or bars are supported in some locations, their impact to day time activation needs to be managed through reducing their presence and scale on the streetscape during the day.

- **Vehicle access impacting main street continuity and fine grain activation.** Given the fine grain intensity of these locations, there is more than one street frontage that needs to be considered. To limit the impact on the pedestrian environment and economic vibrancy of these locations there is a need to ensure the vehicle garaging is sleeved or at basement. Only putting vehicle garages behind buildings will have a detrimental impact on economic vibrancy of these locations.

Recommendation:

- *The City of Adelaide supports this Zone subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.*
- *Note, it is recommended that the following Subzones are added: Hutt Street, O'Connell Street, Melbourne Street West and Halifax and Sturt Street. Note that this is subject to policy intent being transferred across to reflect the nuanced land use, built form and transport policies.*

Community Facilities Zone

Subzones: None

Replaces: North Adelaide Historic (Conservation) Zone / Women's and Children's Policy Area 9 and I1 Institutional (St Andrews) Zone

Spatial Application

 Community Facilities Zone

Overview:

This proposed new Zone for the City of Adelaide replaces a policy area in an Historic (Conservation) Zone and one of what were three Institutional Zones in the Adelaide (City) Development Plan. No Institutional Zones remain in the Code.

The purpose of the new Zone is to provide a range of public and private community, educational, recreational and health care facilities.

In summary, the issues of concern include:

- **The Code does not define terms** except 'educational' and 'indoor recreation centre'. It is not clear what a public community facility or private community facility could be, that is not health, education or recreation related.
- **Residential land uses are not supported in this Zone** but are currently considered on their merits in the areas this Zone is proposed to apply. This is a concern, particularly with the Park Lands frontages of these areas.

- **Inconsistency in application of the Zone.** Other Community Facility Zones proposed by the Code around greater Adelaide contain some but not all private and public hospitals, some but not all private and public schools but not kindergartens, some council facilities, but no residential land uses. The question arises whether the Community Facility Zone is the 'right' zone when the City contains many hospitals, schools etc that are in other zones.
- **Change to height limits proposed.** Currently, development north of Kermode Street can go to a maximum height of 14 levels or 43m. The Code proposes a maximum height in this locality of 6 storeys. In addition, currently along King William Road north of Kermode Street, the height limit is 2 storeys. The Code lifts this to 6 storeys, which is a considerable increase.

In summary, the allocation of the Community Facility Zone to the Women's and Children's Policy Area 9 and I1 Institutional (St Andrews) Zone represents a significant change in potential land uses from the existing Development Plan. The land use purpose of the Community Facility Zone is ill-defined and has been applied inconsistently across the City and Greater Adelaide. An appropriate Zone should be applied based on research as to what might be the most desirable land use to allow flexibility for the future.

Recommendation:

*The City of Adelaide **does not support** this Zone.*

The City of Adelaide suggests that a more appropriate and consistent Zone for these localities be investigated collaboratively between CoA and SPC.

The Capital City Zone / City Frame Subzone may be appropriate for the existing Institutional (St Andrew's) Zone, however the over-height provisions of this Zone should not apply to this area.

Further investigations as to appropriate Zoning for the existing Women's and Children's Policy Area 9 is still required.

See Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation for detailed analysis.

Suburban Activity Centre Zone

Replaces: Mixed Use (Melbourne West) Zone.

Spatial changes: No change.

Spatial Application

 Suburban Activity Centre Zone

Overview:

This new Zone envisages the area as an active retail precinct that includes neighbourhood scale shopping, business, entertainment and recreational facilities that provides for the daily and weekly shopping needs of the community.

New policies introduced are significantly different to what currently applies to the zone in terms of land use and built form requirements. Detailed analysis of the zone and recommended changes are included in Attachments A.1 and A.2. In summary, the main concerns with the Suburban Activity Centre Zone are:

- **The zone is not the right fit for the area** as the area envisages an active retail precinct that includes neighbourhood scale shopping, business, entertainment and recreational facilities that provides for the daily and weekly shopping needs of the community. The changed role of the Melbourne West will detract from the function of Melbourne Street east and many land uses listed are not appropriate for the area e.g. service trade premises and petrol filling stations.
- **The built form policies are contrary and different to the character of the area** that contains a high number of buildings with heritage status. No regard has been given to the historic pattern of development or existing building setbacks. The new zone encourages buildings to be built to the front boundary which is contrary to what is prescribed within the current zone that seeks to reinforce the historic siting pattern of buildings set back from boundaries in a landscaped setting.

Detailed analysis of the Suburban Activity Centre Zone can be found in Attachment A.2.

Recommendation:

- *The City of Adelaide does not support the use of this Zone.*
- *The City of Adelaide recommends that the Business Neighbourhood Zone is a more appropriate zone for Melbourne West subject to bespoke current policy being carried across.*

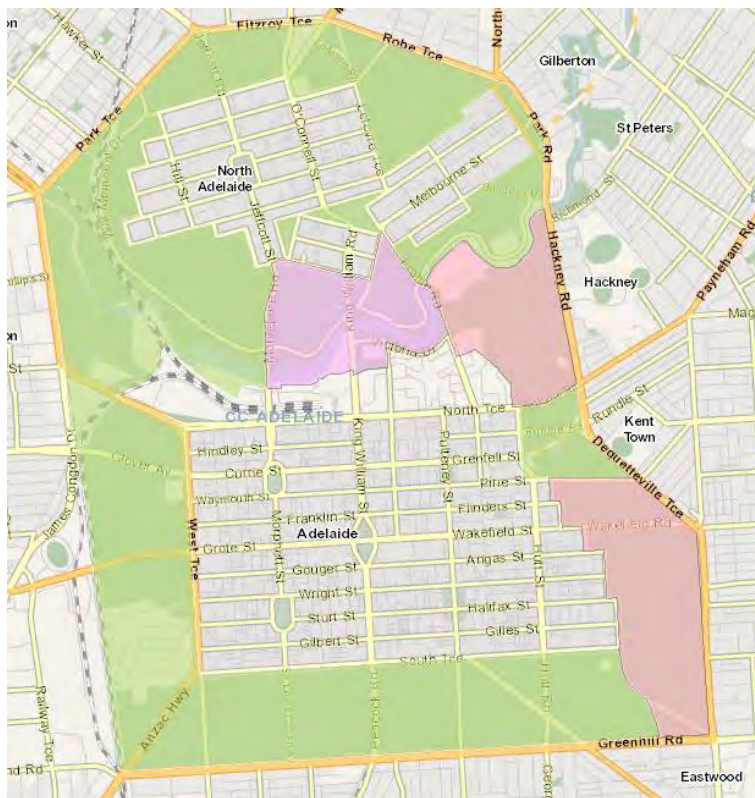

Park Lands Zone

Subzones: Eastern Park Lands Sub Zones and Adelaide Oval Sub Zone

Replaces: Park Lands Zone and its 11 Policy Areas

Spatial changes: Adelaide Oval Policy Area has been retailed. The Eastern Park Lands Policy Area includes (Botanic Policy Area and Eastern Park Lands Policy Areas).

Spatial Application

Overview:

It is acknowledged that the Adelaide (City) Development Plan Park Lands Zone is out of date. However, it is considered that full implementation of the Adelaide Park Lands Management Strategy would require further investigation before policy should be incorporated.

In considering the Draft Code, there is need to be pragmatic and retain the policy intent of the current Adelaide (City) Development Plan.

Whilst the recognition of the special attributes of the Adelaide Park Lands is reflected through the inclusion of a dedicated Zone in the Draft Code, there are areas in the proposed Zone that require further work.

The following provides an overview of the **key recommendations**:

1. **Renaming** City Park Lands Zone to Adelaide Park Lands Zone.

2. **Including the six (6) Squares** in the Adelaide Park Lands Zone as they are a part of the Adelaide Park Lands.
3. **Deleting the subzones** in favour of comprehensive Zone wide policies.
4. **Strengthening policies** to prevent inappropriate development (land uses and built form) in the Adelaide Park Lands Zone noting the removal of the current non-complying pathway.
5. **Including more descriptive policies within the 'Desired Outcomes'** of the Zone to protect and enhance the unique features of the Adelaide Park Lands.
6. **Revising the 'Built-form and Character'** provisions to provide greater clarity regarding new buildings in the Adelaide Park Lands, including the incorporation of the City of Adelaide's Park Lands Building Design Guidelines (under development) into the P&D Code; or being adopted as a Design Standard to further support high quality Park Lands building design.
7. **Including the unique planning considerations of the current zone** on matters relating to movement and parking, advertising and fencing (rather than the general policy that applies across other zones that does not adequately recognise the unique qualities of the Adelaide Park Lands).
8. Including **minor types of development that are currently not subject to notification** to continue to be exempt from public notification.
9. **Reinstating or including new mapping and / or concept plans** to support a clearer statutory planning framework.
10. Including educational establishment, hotel and public infrastructure as **Code Assessed (Performance Assessed) Development** rather than Restricted Development.

Recommendation:

The City of Adelaide supports this Zone only if necessary amendments are undertaken in accordance with the above listed recommendations and subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Urban Corridor (Main Street) Zone

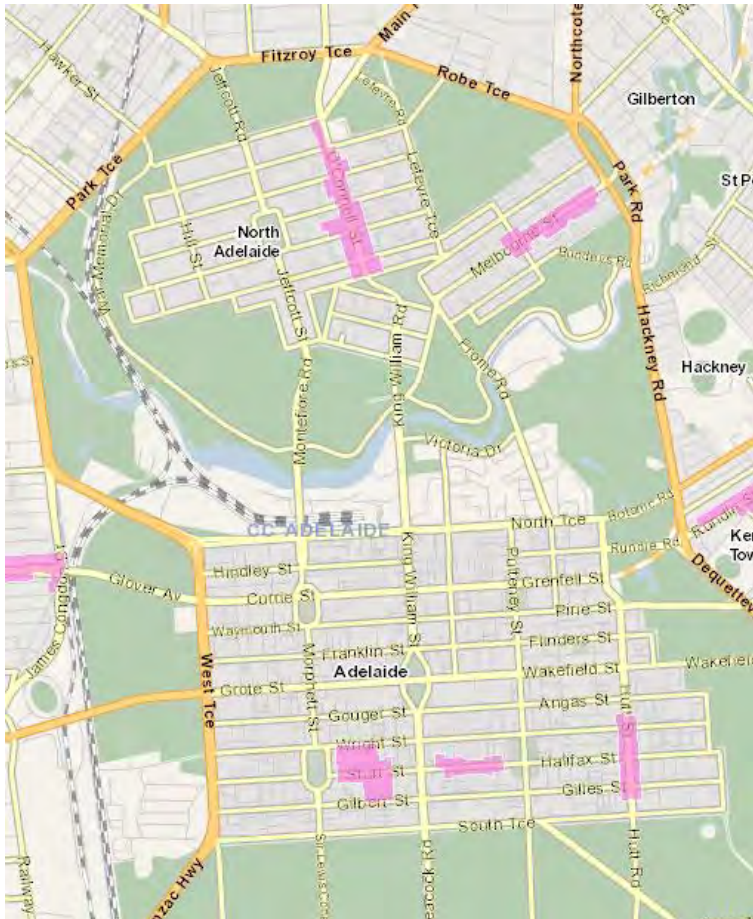

Subzones: Nil

Replaces: Main Street (O’Connell) Zone, Main Street (Melbourne East) Zone, Main Street (Hutt) Zone and Main Street (Adelaide) Zone

Spatial changes: Nil

Spatial Application

 Urban Corridor (Main Street) Zone

Overview:

These areas are some of the State’s earliest Main streets with historic building stock that provides character that supports a vibrant and attractive area to reside, set up businesses and visit. These areas are underpinned by dynamic economic activity with a strong retail focus.

This proposed Zone does not recognise the City as the capital of South Australia and dilutes a number of existing policies that effectively guide high quality development in the City. There is a need to reinstate the retail opportunities and reinforce the heritage values and character of these main streets.

An evidence base indicating the economic implications of the proposed retail hierarchy has not been provided and an informed study is required prior to making such substantial policy change to some of the State’s earliest main streets.

In summary, the concerns with the Urban Corridor (Main Street) Zone applying to these proposed areas are:

- **Change to land use and intensity without evidence or analysis.** The land use strategy of the existing main streets has been changed without analysis shared through the consultation.
- **Reduction in fine grain building detailing.** All of the City of Adelaide Main Streets have a strong built form pattern from its historic built form. This needs to be recognised in detail in the policy.
- **Catalyst sites policy has been replaced with Significant Development Sites** which still impacts adjacent Historic Areas and the overall form of main streets. Whilst it appears to be a reduction of impact there are still some concerns. The incentive policy approach is not supported as the main street form and character should be reinforced rather than an adhoc approach to building height and intensity. Interfaces to historic areas need to be carefully curated as the historic areas typically have small sites and have limited ability to manage the impact of the adjacent zone.
- **Movement** requirements reflecting the needs of the City are simply not captured in this proposed Zone.

Recommendation:

The City of Adelaide seeks the replacement of this zone with the City Main Street Zone. Each existing main street will be a subzone to support clear directions for the City of Adelaide and localised nuisance where necessary.

Additions and amendments have been described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

State Heritage Place Overlay

Function: Mechanism for identification of Individual State Heritage Places in the Code.

Replaces: Development Plan Council Wide Heritage and Conservation and Heritage, Conservation - North Adelaide and Table Adel/1- State Heritage Places

Overview:

The State Heritage Place (SHP) Overlay is the mechanism for identifying individual SHPs in the Code and replaces Table Adel/1 State Heritage Places and the Council Wide policies in the Development Plan.

The Overlay provides the policy settings for the assessments of development applications affecting SHPs. It also contains the referral trigger for applications to be referred to the heritage Minister.

Note: The pathway by which the application is assessed is found in the Zone.

City of Adelaide has the following comments on the State Heritage Place Overlay;

- The Draft Code does not require **public notification** for development applications seeking demolition of a SHP. This is not supported.
- The criteria for assessing whether **demolition** should be approved are rigorous and should be adequate to prevent unwarranted demolition. And, the heritage Minister now has the power to 'direct' that a SHP not be demolished. This is significant change as previously the Minister could only provide advice.
- The Draft Code does not provide an **adjacency provisions** and should be incorporated into the Code to enable development adjacent to SHPs to be sympathetic.
- There are inconsistencies with the Code's **use of terms**, even when those terms have been defined to have specific meanings. Minor corrections of terminology are required.
- The **land division** Performance Objectives in the Code should be expanded to enable applications to be refused in situations where the SHP should be able to retain enough land to enable flexible future uses. This is to prevent SHPs remaining on small land parcels that do not allow any future development and hence, substantially limit use options for the future.
- Performance Objectives are recommended to be added to the Code, relating to the following matters which are currently not accounted for within the Draft Code:
 - **Fencing**
 - **Landscaping**
 - **Views and vistas**
 - **Land use**
- The **referral triggers** are generally adequate with the following provisos.
 - The referral trigger includes a provision that allows the relevant authority not to refer a 'minor' application to the heritage Minister. There is concern that DA planners do not have the knowledge or experience to feel confident that works are 'minor', in which case, referrals to the heritage Minister will occur as they currently do.

Recommendation:

Support the State Heritage Place Overlay subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Local Heritage Place Overlay

Function: Mechanism for identification of Individual Local Heritage Places in the Code.

Replaces: Development Plan Council Wide Heritage and Conservation and Heritage, Conservation - North Adelaide and Table Adel/2- Local Heritage Places, Table Adela/3 – Local Heritage Places (Townscape) and Table Adel/4 – Local Heritage Places (City Significance).

Note: *The LHP Overlay should be read in conjunction with the Practice Guideline - (Interpretation of LHP Overlay, Historic Area Overlay and Character Area Overlay) 2019.*

Overview:

The Local Heritage Place (LHP) Overlay is the mechanism for identifying individual LHPs in the Code and replaces Tables Adel/2, 3 and 4 and the Council Wide policies in the Development Plan.

The Overlay provides the policy settings for the assessments of development applications affecting LHPs.

Note: there are no referral triggers for LHPs. This maintains the current situation where Council staff provide advice on development affecting LHPs. However, in some instances this will need to be achieved in reduced assessment timeframes.

Note: The pathway by which the application is assessed is found in the Zone.

City of Adelaide has the following comments on the Local Heritage Place Overlay;

- The Draft Code does not require **public notification** for development applications seeking demolition of a LHP. This is not supported.
- Unlike for SHPs, the criteria for assessing whether **demolition** should be approved does not include the provision that the reasons for demolition result from ‘the actions and unforeseen events beyond the control of the owner’. This could enable demolition applications caused by neglect to be approved. The Performance Objective should be amended to include this clause.
- An application for the total or part demolition of an LHP will require a **Local Heritage Place Impact Assessment** to be submitted. This is a justification for the proposed demolition and must be accompanied by appropriately qualified experts ranging from heritage professionals to structural engineers. The provision of these reports will be expensive for the applicant and for Council to seek an independent expert advice or review of the report.
- The Draft Code does not provide any **adjacency provisions** and should be incorporated into the Code to enable development adjacent to LHPs to be sympathetic.
- There are inconsistencies with the Code’s **use of terms**, even when those terms have been defined to have specific meanings. Minor corrections of terminology are required.
- The **land division** Performance Objectives in the Code should be expanded to enable applications to be refused in situations where the SHP should be able to retain enough land to enable flexible future uses. This is to prevent SHPs remaining on small land parcels that do not allow any future development and hence, substantially limit use options for the future.
- Performance Objectives are recommended to be added to the Code, relating to the following matters which are currently not accounted for within the Draft Code:
 - **Fencing**

- **Landscaping**
- **Views and vistas**
- **Land use**

Recommendation:

Support the Local Heritage Place Overlay subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Historic Area Overlay

Function: Mechanism for replacing Historic (Conservation) Zones in the Code.

Replaces: North Adelaide Historic (Conservation) Zone including Policy Areas 1, 2, 3, 4, 5, 6, 7, 8, 10, 11, 12, 15) and Adelaide Historic (Conservation) Zone.

Zones and Subzones: The HA Overlay sits over the City Living Zone and includes 2 new Subzones; the North Adelaide Low Intensity Subzone and the Medium-High Intensity Subzone.

Spatially: The HA Overlay applies to all the area that was previously covered by the North Adelaide HCZ and Adelaide HCZ with the exception of former Policy Area 9. This PA covers the site of the Women's and Children's Hospital and has been designated to be a Community Facilities Zone in the Code.

Note: *The Historic Area Overlay should be read in conjunction with the Practice Guideline - (Interpretation of LHP Overlay, Historic Area Overlay and Character Area Overlay) 2019.*

Overview:

The Historic Area (HA) Overlay is the mechanism for replacing all HCZs in the Code and replaces the 2 existing HCZs as described above. The Overlay sits over a base, but City specific residential Zone; the City Living Zone. The Overlay does not apply to all the Zone, just the area that was covered by the previous North Adelaide HCZ and Adelaide HCZ.

The Overlay provides the policy settings for the assessment of development applications for all sites contained within the boundaries of the Overlay.

Note: there are no referral triggers for the HA Overlay. Council staff will provide advice on development affecting sites in the HA Overlay.

Note: Unlike many other councils, the City of Adelaide does not have 'contributory items'.

Note: The pathway by which an application is assessed is found in the Zone.

City of Adelaide has the following comments on the Historic Area Overlay;

- This Overlay was originally named the 'Local Heritage Area Overlay'. It is recommended that this name be re-utilised as the use of the **word 'heritage'** encourages the Overlay to be considered as an area where the retention of appropriate buildings occur as opposed to their replacement.
 - If this recommendation is not taken up, the **Planning, Development and Infrastructure (General) Regulations 2017** will need to be amended to reflect the 'Historic Area Overlay' to ensure that the Overlay is valid.
- The **Historic Area Statements** currently in the Code are not adequate to protect these important and unique areas and should be expanded to more adequately address the characteristics of the locality.
- **Demolition:**
 - will be supported if the façade of the building has been substantially altered and cannot be reasonably, economically restored in a manner consistent with the building's original style. The term 'reasonably, economically restored' needs to be defined.
 - A criterion for demolition is if 'the building facade does not contribute to the historic character or the streetscape.' It is unclear the extent of this provision. What will occur if a building has a tall fence to the street or vegetation blocking the view? Will that enable demolition to occur?
 - An assessment of the 'structural integrity or condition of the building being beyond economic repair'. The Practice Guideline instructs that the economic

cost of repair should be balanced against replacement costs, but no further guidance is provided and is required.

- An application for the demolition of any building within the HA Overlay will require a Heritage Area Impact Assessment to be submitted. This is a justification for demolition and must be accompanied by appropriately qualified experts ranging from heritage professionals to structural engineers and quantity surveyors. The provision of these reports will be expensive for the applicant and for Council to seek an independent expert advice or review of the report.
- There is concern that the HA Overlay does not adequately reinforce the importance of the **design of new development** being based on the context.
- The patterns of existing **vehicle parking arrangements** (ie driveways and their locations) should be considered in any new development.
- The HA Overlay contains a Performance Objective that requires that valued **landscape elements** (which are not defined but presumably including public realm elements such as trees, verges, driveway locations, light poles) be maintained except where they compromise safety, create nuisance, or adversely impact on existing buildings or infrastructure. The meaning and implications of this PO is not clear.

Recommendation:

Support the Historic Area Overlay subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Summary Sheet:

Regulated Tree Overlay

Replaces: Regulated Tree policy; Significant Tree policy

Overview:

There is one Overlay proposed by the Planning and Design Code: the 'Regulated Tree Overlay' which generally applies across the City of Adelaide and is triggered by trees that satisfy the criteria of a 'regulated tree'. The Overlay applies to Adelaide, Adelaide Hills Council townships and parts of the Mount Barker Council and this is illustrated on the Consultation Map Viewer found on the SA Planning Portal.

The Consultation Map Viewer also includes a 'Significant Tree Overlay' which represents the list of 'significant trees' contained in Table Adel/5 of the City of Adelaide Development Plan.

However, there is no reference to the Significant Tree Overlay in the Regulated Tree Overlay policy. In addition, there is current policy relating to 'significant trees' which is missing from the Regulated Tree Overlay. Specifically:

- no policy which recognises the importance of significant trees as a habitat for native fauna
- no policy on replacement trees (where a significant tree has been removed)
- no policy on fencing type to protect significant trees during development.

Recommendation:

- *The City of Adelaide supports this General Development Policy Module subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.*

Summary Sheet

General Development Policy: Transport, Access and Parking

Replaces: Council Wide Transport and Access (Access and Movement; Pedestrian Access; Bicycle Access; Public Transport; Traffic and Vehicle Access; Car Parking)

Overview:

As the capital city of our state, the City of Adelaide is a significant hub for all forms of transport and access. The high volumes of movement through the City of Adelaide daily requires effective planning policies to ensure that all forms of movement can coexist and not diminish the amenity or negatively impact the function of the City.

The Draft Code provides a General Development Policy, as well as some Overlays and details within Zones relating to these matters. It is apparent from reviewing these various areas of the Draft Code, that several important policies that the City of Adelaide currently relies on, have been omitted from the Code. In particular, there are Overlays such as the 'traffic generating development' and 'urban transport routes overlay' which only apply to roads under the care and control of the State Government. Subsequently, these policies do not have any application within the City and have the resultant effect that there are insufficient policies to adequately address the transport, access and movement needs of the City.

City of Adelaide has the following comments to make specifically on the 'transport, access and parking' general development policy module:

- The Draft Code must reinstate the following policies:
 - Ensuring protection of the City's **fine urban grain** and active frontage by directing off-street parking away from street frontages.
 - Maintaining an **uninterrupted pedestrian and cycle pathway**.
 - limit the location of **multi-level car parks or non-ancillary car parking** use to particular locations throughout the City.
 - Include public transport routes **mapping** and the **pedestrian** routes mapping to ensure maintenance of attractive, comfortable, legible and safe pedestrian and cycling environments.
 - **Car parking rates** have changed and in some cases are higher than current rates outlined in the Adelaide (City) Development Plan which is a poor outcome.
 - There is also a reduction on **bicycle parking** requirements in some circumstances and some land uses are not listed as requiring consideration of a bicycle rate.
 - **Disabled vehicle parking rates**.
 - **Design principles** relating to parking areas, pedestrian comfort, waste movement etc. requires strengthening.
 - Increased policies on other sustainable forms of transport and emerging technologies is needed.

Recommendation:

- *The City of Adelaide supports this General Development Policy Module subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.*

Summary Sheet

New General Module: Design in Urban Areas

Replaces: Council Wide Living Culture; Community Facilities; City Living; Environmental; Housing Choice; Student Accommodation; Built Form and Townscape; Squares and Public Spaces; Centres and Main Streets

Overview:

The Design in Urban Areas Module reflects design-related policies derived largely from the South Australian Planning Policy Library (SAPPL). It is acknowledged that the Draft Code incorporates best practice policy relating to Water Sensitive Urban Design (WSUD), however would benefit from WSUD principles appearing under all subheadings within this Module and therefore applying to all development types.

Further to review of this module and consideration of the principles of good planning (section 14, *Planning, Development and Infrastructure Act 2016*), this module still requires further policy work to achieve the design excellence aspired for a vibrant City.

A summary of the key gaps has been provided below using the key 'Principles of Good Design':

- **Contextual Development:**

The Design in Urban Areas contains many policies that can apply broadly to development outside of the city. However, the Adelaide (City) Development Plan contains bespoke policy that is unique to the city context due to its compact and high-scale built form and its historic built form pattern. In particular:

- A contextual assessment should also include consideration of a context's 'built environment'; the current DO1 of Design in Urban Areas places emphasis on a 'natural' surrounding.
- There is no specific policy guiding the design of public art. The current Development Plan policy not only supports the incorporation of art within a building but also seeks innovative and creative architecture so that the building is a piece of art-in-itself.
- The Code has not introduced anything to replace the principle of 'Landscaped Open Space' which plays an important role in maintaining the established character of areas by ensuring landscaped space around buildings and heritage places in the residential areas south and north of City of Adelaide.
- There are no provisions within the Code that encourages the use of indigenous tree species.
- The Code speaks at a very high level requiring fine-grain detail at street level to reinforce human scale and only applies to buildings of 4 or more building levels. Human scale element plays an important part of the diversity, character and comfort of the pedestrian environment. It would be beneficial if the Code was more prescriptive on what is expected in built form terms in the City.
- Other than corner sites, no policy of articulation and modelling of buildings has been incorporated into the Code for all development.
- There is no policy which supports innovative and interesting skylines to contribute to the overall design and performance of the building.
- There is limited policy which supports the provision of pedestrian links connected to publicly accessible open space and plazas.
- Limited design policy for fencing and walls and there is no limit on height of fencing and walls forward of the building line.

- There is no policy that addresses the design of development on, over, encroaching upon, or opening on to public spaces, including verandahs or outdoor dining.
- **Durable Development:**
Policy within the current Adelaide (City) Development Plan that supports universal design has not been carried across. In particular:
 - residential development policy that seeks regard to adaptable housing standards as set out in the 'Australian Standard AS 4299: Adaptable Housing'.
 - finished ground floor levels of buildings that are at grade and/or level with the footpath.
- **Performing and Sustainable Development:**
Policy within the current City of Adelaide Development Plan seeks to facilitate a high-quality living environment for its residents. In particular:
 - There is no policy which supports a mix of housing types to meet the widely differing social and economic needs of residents.
 - The Interface between Land Uses Module contains policy which seeks to protect access to daylight and sunlight of neighbouring residential premises; however, there are no minimum requirements for ensuring protection of the development site's private open space, landscaped open space or communal open space from unreasonable levels of overshadowing. The built form interface component of the code is lacking.
 - There is no minimum floor space area for studios. The purpose is to provide a high-quality living environment for all future residents in varying accommodation.
 - The Code policy requires buildings to be designed and sited to maximise ventilation and light to main activity areas, habitable rooms, common areas and open space; however, the Code does not contain provisions on how this can be achieved. The maximum distance of 8 metres from a window that provides natural light and ventilation to a room (which could be used as a Deemed to Satisfy policy).
 - There is no policy which restricts the use of light wells as the primary source of daylight for living rooms or the appropriate dimensions of a light-well to be used as a source of daylight to other rooms.
 - The private open space requirements within the Code are higher than what the Adelaide (City) Development Plan stipulates. Many sites within the City are small and the high provision of open space required by the Code could potentially physically prohibit the ability to build dwellings within the City.
 - The Adelaide (City) Development Plan has more specific policy relating to distances from bedrooms to parking areas and access ways to minimise disturbance for occupants which has not been carried across.
 - There is no policy which ensures that the useable space within a dwelling/apartment is not compromised by internal structural columns.
 - There is no policy to protect dwellings/serviced apartments from noise associated with common access ways (for example, incorporation of acoustic core filled doors with airtight rubber seals for all entry doors into common access ways).
 - Further policy is needed that guides energy efficient outcomes and the incorporation of efficient energy use technologies such as geo-exchange and embedded, distributed energy generation systems such as cogeneration, wind power, fuel cells and solar photovoltaic panels that supplement the energy needs of the building.

Other Policies:

- **Crime Prevention Through Urban Design (CPTUD):**
The Code does not cover all CPTUD principles within the Development Plan for the City of Adelaide. In particular, design of shopfronts that provide security whilst ensuring visual permeability. These provisions are used frequently in the assessment of development proposals.
- **Student Accommodation:**
To ensure quality living environments for students, it is recommended that the Code include a policy that seeks provision of a room that is suitable in size to accommodate a single bed, book shelves, a desk and workspace and a cupboard/wardrobe to provide a quality living environment for students.
- **Demolition:**
Under the Draft Code, no provision is made for demolition control in the City of Adelaide apart for a listed heritage place. Unnecessary and premature demolition of buildings leading to vacant sites which provide little or no economic benefit to the city, reduce activation opportunities and negatively affect city streetscapes.
- **Waste Management:**
There is limited policy relating to the provision of a dedicated area for collection and sorting of on-site waste.

Recommendation:

The City of Adelaide supports this General Development Policy Module subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Summary Sheet

Other New General Modules (of note):

Advertisements

Infrastructure and Renewable Energy Facilities

Interface between Land Uses

Replaces: Advertising; Squares and Public Spaces; Park Lands; MOSS (Metropolitan Open Space System); Telecommunications Facilities.

Overview:

There are several General Modules proposed for the Draft Code which will address the majority of the current policies within the Adelaide (City) Development Plan.

This summary sheet will focus on policy gaps that exist within some of the General Modules:

Advertisements:

The policies that guide temporary advertisement hoardings or shrouds generally and for the screening of construction sites has not been carried across.

Sky signs (undesired) and LED signs are lacking detail in the Code and guidance on these structures is paramount in the City.

In addition, current advertisement policies contained within Zones are predominately missing in the Draft Code Zones and should be reinstated.

Infrastructure and Renewable Energy Facilities:

Although this module addresses the provision of renewable energy facilities, it is also important development minimises the consumption of non-renewable resources and uses alternative energy generation systems. Currently, the Adelaide (City) Development Plan contains policy that supports alternative energy generation systems.

Interface between Land Uses:

Due to the intensity and diversity of uses in the City, it is important that there is responsible co-existence between different desired uses to avoid land use conflict. Importantly, responsible co-existence between different desired land uses ensures the viability of more populous City with thriving businesses. Council's noise management policies currently play an important role in achieving this.

Currently, the Adelaide (City) Development Plan incorporates well regarded best practice noise policy that is recommended to be carried across to the Code.

Recommendation:

The City of Adelaide supports this General Module subject to the relevant additions and amendments described in Attachment A.1 City of Adelaide P&D Code amendment document and Attachment A.2 City of Adelaide audit documentation.

Summary Sheet:

What is missing from the Planning and Design Code?

Overview:

This Summary Sheet seeks to outline the missing elements from the Code that currently the City of Adelaide has the benefit of using during assessment of development. These are in addition to those outlined by the other Summary Sheets (Design in Urban Areas; Transport, Access and Parking, Other General Modules (of note), Regulated Tree Overlay and Heritage and Historic Area Overlays).

- **Managing Public Realm:**

Many developments within the City of Adelaide have an impact or propose development on or within the public realm. The Draft Code has not released any policies relating to the public realm nor were any Design Standards released for consultation. This is currently a missing element of the planning reform and significant risk to Council. Without policies in place, when the Code is implemented, many public realm matters may be at risk of not having a policy framework within which these would be appropriately dealt with.

- **Social Infrastructure**

The Code provides for a diversity of dwelling sizes however there isn't anything that specifically addresses, encourages or provides for a range of housing types, tenures or costs for the widely differing social and economic needs of residents. Some sort of formal provision or incentive should be built into the structure of the Code to ensure developments are required to provide for a variety of accommodation to meet the needs of low income people, student housing, social housing, housing for single people, large and small families, people with disabilities and people with other complex needs whilst ensuring integration with existing residential communities.

Recommendation:

- *The City of recommends that the State Planning Commission addresses these gaps as a matter of priority.*

ATTACHMENTS

- Attachment A.1** City of Adelaide P&D Code amendment document – proposed rewording and additional policies to be added

- Attachment A.2** Audit of Adelaide (City) Development Plan into draft Planning and Design Code

Attachment A.1

City of Adelaide P&D Code amendment document – proposed rewording and additional policies to be added

Attachment A.1 contains the City of Adelaide's edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

This document is not in final form and is recommended that it be used for ongoing future collaboration and discussions with DPTI to finalise the changes to the Planning and Design Code. The changes made are based on the Development Plan Code Analysis for the various relevant zones within the City of Adelaide which tracked the location of current Development Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy (found in Attachment A.2).

The blue text highlights the edits Council has recommended to be made to the policy.

Community Facilities Zone

Table 1 – Accepted Development Classification

<p>Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'</p>	<p>Accepted Development Classification Criteria</p>
<p>Building work on railway land</p>	<p>4 Building work is associated with a railway 5 It is situated (or to be situated) on railway land 6 It is required for the conduct or maintenance of railway activities.</p>
<p>Internal building work Except where any of the following apply:</p> <ul style="list-style-type: none"> • Historic Area Overlay • Local Heritage Place identified in the Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place identified in the State Heritage Place Overlay 	<p>7 There will be no increase in the total floor area of the building 8 There will be no alteration to the external appearance of the building.</p>
<p>Private bushfire shelters Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Preservation District Overlay • Coastal Areas Overlay • Hazards (Acid Sulfate Soils) Overlay • Hazards (Flooding) Overlay • Character Area Overlay • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place Overlay 	<p>9 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 10 Primary street setback – at least as far back as the building to which it is ancillary 11 Secondary street setback – at least 900mm from the boundary of the allotment 12 At least 6m from the corner of an allotment which abuts the intersection of two or more roads (other than where a 4m x 4m allotment cut-off is already in place).</p>

<ul style="list-style-type: none"> • Native Vegetation Overlay • State Significant Native Vegetation Overlay • Ramsar Wetlands Overlay • River Murray Flood Plain Overlay • Sloping Land Overlay • Water Resources Overlay 	
<p>Shade sail Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Preservation District Overlay • Coastal Areas Overlay • Hazards (Acid Sulfate Soils) Overlay • Character Area Overlay • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place Overlay • Native Vegetation Overlay • State Significant Native Vegetation Overlay • Ramsar Wetlands Overlay • River Murray Flood Plain Overlay • Sloping Land Overlay • Water Resources Overlay 	<p>22 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>23 Shade sail consists of permeable material</p> <p>24 The total area of the sail - does not exceed 40m²</p> <p>25 No part of the shade sail will be:</p> <p>(a) 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment</p> <p>(b) 5m above ground or floor level (depending on where it is situated) within any other part of the allotment</p> <p>26 Primary street setback – at least as far back as the building line of the building to which it is ancillary</p> <p>27 If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m</p> <p>28 In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment – the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.</p>
<p>Solar photovoltaic panels (roof mounted) Except where any of the following apply:</p> <ul style="list-style-type: none"> • Historic Area Overlay • Local Heritage Place identified in the Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place identified in the State Heritage Place Overlay 	<p>10 Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof</p> <p>11 Panels and associated components do not overhang any part of the roof</p> <p>12 Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.</p>

<p>Spa pool Swimming pool Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Preservation District Overlay • Coastal Areas Overlay • Hazards (Acid Sulfate Soils) Overlay • Hazards (Flooding) Overlay • Character Area Overlay • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place Overlay • Native Vegetation Overlay • State Significant Native Vegetation Overlay • Ramsar Wetlands Overlay • River Murray Flood Plain Overlay • Sloping Land Overlay • Water Resources Overlay 	<p>16 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>17 It is ancillary to a building erected on the site</p> <p>18 Allotment boundary setback – not less than 1m</p> <p>19 Primary street setback – at least as far back as the building line of the building to which it is ancillary</p> <p>20 Location of filtration system from a building on an adjoining allotment:</p> <p>(a) not less than 5m where the filtration system is located inside a solid structure that will have material impact on the transmission of noise</p> <p>(b) not less than 12m in any other case.</p>
<p>Water tank (above ground)</p> <ul style="list-style-type: none"> • Character Preservation District Overlay • Coastal Areas Overlay • Hazards (Flooding) Overlay • Character Area Overlay • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Area Overlay • State Heritage Place Overlay • Native Vegetation Overlay • State Significant Native Vegetation Overlay • Ramsar Wetlands Overlay • River Murray Flood Plain Overlay • Sloping Land Overlay • Water Resources Overlay 	<p>15 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>16 The tank is part of a roof drainage system</p> <p>17 Total floor area - not exceeding 15m²</p> <p>18 The tank is located wholly above ground</p> <p>19 Tank height – does not exceed 4m above natural ground level</p> <p>20 Primary street setback – at least as far back as the building line of the building to which it is ancillary</p> <p>21 In the case of a tank made of metal – the tank is pre-colour treated or painted in a non-reflective colour.</p>

<p>Water tank (underground) Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Preservation District Overlay • Coastal Areas Overlay • Hazards (Acid Sulfate Soils) Overlay • Native Vegetation Overlay • State Significant Native Vegetation Overlay • Ramsar Wetlands Overlay • Sloping Land Overlay • Water Resources Overlay 	<p>7 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>8 The tank (including any associated pump) is located wholly below the level of the ground.</p>

Working Draft

Assessment Provisions

Desired Outcomes (DO)

DO 1

Provision of a range of public and private community, educational, recreational and health care facilities.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Development is associated with or ancillary to the provision of community, educational, recreational and / or health care services.

DTS/DPF 1.1

Development comprises one or more of the following land uses:

- Consulting room
- Educational establishment
- Indoor recreation facility
- Office
- Place of worship
- Pre-school
- Recreation area
- Shop

PO 1.2

Integration and coordination of adjoining land uses to enhance accessibility and efficiency in service delivery.

DTS/DPF 1.2

None are applicable.

PO 1.3

Development avoids inhibiting or prejudicing future delivery of community, educational, recreational or health care services.

DTS/DPF 1.3

None are applicable.

PO X

Temporary use of vacant or underdeveloped land that is not likely to be the subject of long-term development in the short term. Temporary uses of vacant or underdeveloped land are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.

DTS/DPF X

None are applicable.

Built Form and Character

PO 2.1

A range of low to medium rise buildings, with the highest intensity of built form at the centre of the zone and lower scale at the peripheral zone interface.

DTS/DPF 2.1

Building height does not exceed a maximum height specified in the *Building Height Technical and Numeric Variations Overlay*.

Interface Height

PO 3.1

Buildings mitigate visual impacts of building massing on residential development within a neighbourhood zone.

DTS/DPF 3.1

Buildings constructed within a building envelope provided by a 45 degree plane measured from a height of 3 metres above natural ground level at the allotment boundary of a residential allotment within a neighbourhood zone as shown in the following diagram (except where this boundary is a southern boundary in which case DTS/DPF 3.2 will apply, or where this boundary is the primary street boundary):

PO 3.2

Buildings mitigate overshadowing of residential development within a neighbourhood zone.

DTS/DPF 3.2

Buildings on sites with a southern boundary adjoining a residential allotment within a neighbourhood zone are constructed within a building envelope provided by a 30 degree plane grading north measured from a height of 3m above natural ground level at the southern boundary, as shown in the following diagram:

Demolition

PO X

Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.

DTS/DPF X

None are applicable

PO X

Adequate car parking should be provided within the site area of the development to meet the demand generated by the development as [Table 1 – General Off-Street Car Parking Requirements](#); and
(a) car parking rates lower than the minimum may be appropriate where there is readily accessible and

frequent public transport in the locality or it can be demonstrated that a lower provision is warranted, such as for the following reasons:

- (i) the nature of development;
- (ii) existing heritage places on or adjacent to the development site which dictates the development of the site in a manner which hampers the provision of on-site parking;
- (iii) the opportunity to exploit shared car parking areas between uses based upon compatible hours of peak operation;
- (iv) use of a car share scheme; or
- (v) suitable arrangements for any parking shortfall to be met elsewhere or by other means.

DTS/DPF X

None are applicable.

Procedural Matters (PM)

Notification of Performance assessed development

All classes of development are excluded from notification except where it involves any of the following:

- (a) the site of the development is adjacent land to land in a different zone
- (b) development identified as "all other code assessed development" in Community Facilities Zone Table 3

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, City Frame and City Living Policy Area 30. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

No part of the shade sail will be: <ol style="list-style-type: none"> (a) 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment (b) 5m above ground or floor level (depending on where it is situated) within any other part of the allotment 5. Primary street setback – at least as far back as the building line of the building to which it is ancillary 6. If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m 7. In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment – the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.
<p>Solar photovoltaic panels (roof mounted)</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none"> • Historic Area Overlay • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	<ol style="list-style-type: none"> 1. Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof 2. Panels and associated components do not overhang any part of the roof 3. Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.
<p>Spa pool Swimming pool</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none"> • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Place Overlay • Sloping Land Overlay 	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. It is ancillary to a dwelling erected on the site 3. Allotment boundary setback – not less than 1m 4. Primary street setback – at least as far back as the building line of the building to which it is ancillary 5. Location of filtration system from a dwelling on an adjoining allotment: <ol style="list-style-type: none"> (a) not less than 5m where the filtration system is located inside a solid structure that will have material impact on the transmission of noise (b) not less than 12m in any other case.

Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'	Accepted Development Classification Criteria
Temporary Storage of Council Equipment	Appropriate measures are incorporated for: (a) dust control; (b) appropriate screening including landscaping; (c) containment of litter and waste; and (d) appropriate securing of the site.
Verandah Except where any of the following apply: <ul style="list-style-type: none"> • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Place Overlay 	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. It is ancillary to a dwelling erected on the site 3. Primary street setback – as far back as the building line of the building to which it is ancillary 4. Total floor area - does not exceed 40m² 5. Post height - does not exceed 3m measured from natural ground level 6. Building height - does not exceed 5m 7. Length - does not exceed 10m if any part of the structure abuts or is situated on a boundary of the allotment 8. Total roofed area of all existing and proposed buildings on the allotment - does not exceed 60%.
Water tank (above ground) Except where any of the following apply: <ul style="list-style-type: none"> • Historic Area Overlay • Local Heritage Place Overlay • State Heritage Place Overlay • Sloping Land Overlay 	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. The tank is part of a roof drainage system 3. Total floor area - not exceeding 15m² 4. The tank is located wholly above ground 5. Tank height – does not exceed 4m above natural ground level 6. Primary street setback – at least as far back as the building line of the building to which it is ancillary 7. In the case of a tank made of metal – the tank is pre-colour treated or painted in a non-reflective colour.
Water tank (underground) Except where any of the following apply: <ul style="list-style-type: none"> • Sloping Land Overlay 	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. The tank (including any associated pump) is located wholly below the level of the ground.

Table 4 – Restricted Development Classification

Class of Development The following Classes of Development are classified as Restricted subject to any 'Exclusions'	Exclusions
Development associated with or ancillary to any existing non-residential or institutional activity identified on any relevant Concept Plan contained in the <i>Concept Plan Technical and Numeric Data Overlay</i> within the site, or on a directly adjoining site, identified on the Concept Plan.	
Shop	Shop that comprises a change in use of an existing building that has been lawfully used as a shop, office or consulting room (or any combination thereof) Shop with a gross leasable floor area less than 200m ² Shop located on a site with a frontage to an arterial or collector road or adjacent a Main Street zone and it has a gross leasable floor area less than 1000m ² .

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1

Adelaide's main residential living districts with a range of stand-alone and paired cottages, terrace or row housing, and low to medium scale contemporary buildings.

DO X

~~Low-rise and , (with medium rise in certain areas), low to medium-density housing that supports a range of needs and lifestyles located within easy reach of a diversity of services and facilities that support city living. Employment and community service uses contribute to making the neighbourhood a convenient place to live without compromising residential amenity.~~

DO X

~~Conservation of heritage values and historic character established by areas of intact and architecturally diverse historic townscapes.~~

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

~~Primarily residential development accommodating a range of housing choices.~~

DTS/DPF 1.1

Development comprises one or more of the following land uses:

- Dwelling
- Residential Flat Building
- Retirement Facility
- Supported Accommodation

PO 1.2

~~None are applicable.~~

~~Non-residential development provides a range of services to the local community primarily in the form of small scale commercial uses, community services:~~

- ~~(a) commercial uses including small scale offices, consulting rooms and personal or domestic services establishment;~~
- ~~(b) community services such as educational establishments, community centres, places of worship, pre-schools, childcare and other health and welfare services;~~
- ~~(c) services and facilities ancillary to the function or operation of supported accommodation or retirement housing;~~
- ~~(d) open space and recreation facilities.~~

~~DTS/DPF 1.2~~

~~Development comprises one or more of the following land uses:~~

~~Child care centre~~

~~Community centre~~

~~Consulting room~~

~~Office~~

~~Place of worship~~

~~Pre-school~~

~~Educational establishment~~

~~Library~~

~~Recreation area~~

PO X

The following land uses are not envisaged: **REQUIRES FURTHER REVIEW**

- (a) Adult entertainment premises;
- (b) Adult products and services premises;
- (c) Amusement machine centre;
- (d) Art gallery;
- (e) Auditorium;
- (f) Cinema;
- (g) Car park except where ancillary to an approved or existing use;
- (h) Conference centre;
- (i) Hospital;
- (j) Industry;
- (k) Licensed entertainment premises;
- (l) Passenger terminal;
- (m) Road transport terminal;
- (n) Service trade premises;
- (o) Theatre except in Policy Area 15;
- (p) Transport depot;
- (q) Warehouse;
- (r) Animated Advertisements;
- (s) Third party advertising;
- (t) Advertisements at roof level where the sky or another building forms the background when viewed from ground level;
- (u) Backpackers hostel except:
 - a. in Policy Areas 3, 4, 9 and 15
 - b. on King William Road frontages in Policy Area 8
- (v) Bank except:
 - a. on Tynte Street frontages in Policy Area 4
 - b. on King William Road frontages in Policy Area 8
 - c. on Melbourne Street frontages in Policy Area 11
 - d. in Policy Area 15
- (w) Clinic except:

- a. (i) where directly associated with the Calvary Hospital site on Fig HS/1
- b. (ii) from an existing non-residential premises in Policy Area 5 and 15
- c. (iii) in Policy Area 9

(x) Community centre except:

- a. (i) in Policy Area 4 and 15
- b. (ii) east of Jeffcott Street in Policy Area 5

(y) Consulting room except:

- a. (i) where directly associated with the Calvary Hospital site on Fig HS/1
- b. (ii) from an existing non-residential premises in Policy Area 5
- c. (iii) on King William Road frontages in Policy Area 8
- d. (iv) in Policy Area 9
- e. (v) on Melbourne Street frontages in Policy Area 11
- f. (vi) in Policy Area 15

(z) Day care centre (other than a child care centre) except:

- a. (i) in Policy Areas 4, 7, 9 and 15
- b. (ii) east of Jeffcott Street in Policy Area 5
- c. (iii) where directly associated with the Helping Hand Aged Care site on Fig HS/3

(aa) Educational establishment except:

- a. (i) where directly associated with the St Dominic's Priory College site on Fig HS/2
- b. (ii) east of Jeffcott Street in Policy Area 5
- c. (iii) in Policy Areas 3, 4, 9 and 15
- d. (iv) on King William Road frontages in Policy Area 8
- e. (v) where directly associated with the Lincoln College site on Fig LF/1
- f. (vi) where directly associated with the St Ann's College site on Fig SW/1
- g. (vii) where directly associated with the St Mark's College site on Fig C8/1

(bb) Emergency shelter except:

- a. (i) east of Jeffcott Street in Policy Area 5
- b. (ii) in Policy Areas 4, 7, 9 and 15

(cc) Hotel except:

- a. (i) in Policy Areas 3, 4 and 9
- b. (ii) on King William Road frontages in Policy Area 8

(dd) Indoor recreation centre except:

- a. (i) on Tynte Street frontages in Policy Area 4
- b. (ii) in Policy Area 9 and 15

(ee) Leisure studio except:

a. (i) on Tynte Street frontages in Policy Area 4

b. (ii) in Policy Area 9 and 15

(ff) Licensed premises except on Tynte Street frontages in Policy Area 4

(gg) Motel except:

a. (i) in Policy Areas 3, 4, 9 and 15

b. (ii) on King William Road frontages in Policy Area 8

(hh) Multiple dwelling except:

a. (i) in Policy Areas 3, 5, 7, 8, 9 and 15

b. (ii) on land identified as St Ann's Colleges on Fig SW/1

(ii) Museum except in Policy Areas 4, 8 and 15

(jj) Nursing home except:

a. (i) on Archer Street frontages in Policy Area 4

b. (ii) both north of Tynte Street and west of Mansfield Street in Policy Area 4

c. (iii) east of Jeffcott Street in Policy Area 5

d. (iv) in Policy Areas 7, 9 and 15

e. (v) where directly associated with the Helping Hand Aged Care site on FigHS/3

(kk) Office except:

a. (i) from an existing non-residential premises in Policy Area 5

b. (ii) on King William Road frontages in Policy Area 8

c. (iii) in Policy Area 9 and 15

d. (iv) on Melbourne Street frontages in Policy Area 11

e. (v) where directly associated with the Helping Hand Aged Care site on FigHS/3

(ll) Public library except in Policy Areas 4, 8 and 15

(mm) Research laboratory except:

a. (i) where directly associated with the Calvary Hospital site on Fig HS/1

b. (ii) on Archer Street frontages in Policy Area 4

c. (iii) on King William Road frontages in Policy Area 8

d. (iv) in Policy Area 9 and 15

(nn) Restaurant in Policy Area 4 except on Tynte Street

(oo) Serviced apartment except:

a. (i) in Policy Areas 3, 4, 9 and 15

b. (ii) on King William Road frontages in Policy Area 8

(pp) Shop except:

a. (i) on Tynte Street frontages in Policy Area 4

b. (ii) the site of the North Adelaide Primitive Methodist Church located on Wellington Square in Policy Area 4

c. (iii) on King William Road frontages in Policy Area 8

d. (iv) on Melbourne Street frontages in Policy Area 11

e. (v) on Kermode Street frontages in Policy Area 9

f. (vii) where directly associated with the Calvary Hospital site on Fig HS/1

PO X

Restricting the introduction, expansion or intensification of non-residential uses in the Zone.

DTS/DPF X

None are applicable.

~~PO 1.3~~

~~Non-residential development compatible with the residential character and amenity of a neighbourhood.~~

~~DTS/DPF 1.3~~

~~None are applicable.~~

PO 1.4

Shops, consulting rooms and offices of a scale to maintain the residential amenity of the area and not prejudice the function and development of the City Main Street Zone.

DTS/DPF 1.4

Non-residential land uses limited to land lawfully used for non-residential purposes and to comprise land uses more in conformity with the intended residential amenity. Non-residential land uses are to be compatible with the residential character and amenity of a neighbourhood and of a scale and role that does not prejudice the envisaged development of non-residential zones.

~~Other than a change in the use of an existing building that has been lawfully used as a shop, office or consulting room (or any combination thereof), or where located with a frontage to an arterial or collector road or adjacent to an Urban Corridor, City Main Street or Capital City Zone, shops, offices or consulting rooms do not exceed 50m² in gross leasable floor area (individually or combined).~~

PO 1.5

Development associated with or ancillary to any existing non-residential or institutional activity identified on any relevant Concept Plan contained in the *Concept Plan Technical and Numeric Data Overlay* is contained within the site identified on the Concept Plan, or any directly adjoining site, to avoid detrimental impact on adjacent residential amenity.

DTS/DPF 1.5

None are applicable

PO X

St Ann's College on Fig SW/1, Lincoln College on Fig LF/1, Aquinas College on Fig C5/1 and Kathleen Lumley College on Fig F/1 will provide student accommodation and education activities. Development of these long established institutions are to meet community needs and future requirements whilst reinforcing the heritage values and amenity of the area.

DTS/DPF X

None are applicable.

PO X

Calvary Hospital on Fig HS/1 will provide hospital uses such as patient care, research, consulting rooms, visitor accommodation and ancillary services. Development of this long established institution is to meet community needs and future requirements whilst reinforcing the heritage values and amenity of the area.

DTS/DPF X

None are applicable.

PO X

St Dominic's Priory College on Fig HS/2 will continue to be associated with educational land uses. Development of this long established institution is to meet community needs and future requirements whilst reinforcing the heritage values and amenity of the area.

DTS/DPF X

None are applicable.

PO X

Helping Hand Aged Care on Fig HS/3 provides a valuable multi-functional aged care facility providing a variety of levels of care and accommodation for the elderly community. Development of this long established institution is to meet community needs and future requirements whilst reinforcing the heritage values and amenity of the area.

DTS/DPF X

None are applicable.

Built Form and Character

PO X

Residential development in the form of detached, semi-detached or group dwellings, residential flat buildings or alterations and additions to existing buildings designed to maintain a low scale at street level to complement the existing character established by the original historic dwelling stock. Dwellings will be varied but consistent with the prevailing rhythm of buildings and space.

DTS/DPF X

None are applicable.

PO X

Buildings that respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries.

DTS/DPF X

None are applicable.

PO X

Development that contributes to the landscape character of private and public open spaces and incorporate attractive landscaping to street frontages where building set-backs permit.

DTS/DPF X

None are applicable.

PO X

Infill development will take reference from the siting, form and key elements of existing buildings to ensure a highly attractive and compatible streetscape.

DTS/DPF X

None are applicable.

PO X

The predominant building scale and heritage places in the immediate locality will be referenced by new buildings/additions, particularly if they address public streets. Buildings will be well articulated and fenestration, contain frequent openings in building facades and incorporate verandahs, balconies and other features to ensure development complements the historic development pattern of the area.

DTS/DPF X

None are applicable.

PO X

In a locality where single storey development prevails, low profile solutions to 2 storey development that are located to the rear of an existing building, may be appropriate subject to ensuring there are no adverse impacts on the historic character of the streetscape and overshadowing and privacy impacts on neighbouring land.

DTS/DPF X

None are applicable.

PO X

Within the south-east of the City, development designed to complement the existing streetscape comprising the more spacious settings on the main east-west streets, Carrington, Halifax and Gilles Streets and the intimacy of the smaller streets and laneways.

DTS/DPF X

None are applicable.

PO X

Residential development at a greater density than prescribed within the *Numeric Variation Overlay* to only occur where buildings visible from the primary street frontage are consistent with character of the relevant Subzone/ Historic Area Statements or the street where prescribed (e.g. single storey detached dwellings) and only in the following circumstances:

- (a) on land greater than 2000m²; or
- (b) on land where the existing site area is 250m² or less and the development replaces a building that is not an identified Heritage Place; and
- (c) in either case, the resultant lot size should not vary more than 20% from that required.

DTS/DPF X

None are applicable.

PO 2.1

The number of dwellings increased in the zone while maintaining residential amenity.

DTS/DPF 2.1

The number of dwellings in the zone increased by:

- a. redevelopment of poor quality vacant and underutilised buildings or sites that are in discord with the desired outcomes of the zone and relevant sub zone;
- b. adaptation and conversion of non-residential buildings to residential uses; or
- c. development in upper levels of existing buildings, or by increasing the height of buildings or roof volumes, or on sites behind existing buildings.

PO 2.2

Development contributes to a predominantly low-rise residential character.

DTS/DPF 2.2

The building height:

- (a) Building height is not greater than any maximum, or less than any minimum, specified in the *Maximum Building Height Levels Technical and Numeric Variation Overlay*, the *Maximum Building Height Metres Technical and Numeric Variation Overlay*, or the *Minimum Building Height Levels Technical and Numeric Variation Overlay*; and/or
- (b) to take reference from the prevailing building heights (including the floor to ceiling clearances of each level) within the locality, with particular reference to adjacent heritage places.

PO X

Development up to the maximum building height is appropriate where:

- (a) the scale of the proposed building is compatible with scale and siting of adjacent buildings; and
- (b) there is no adverse impacts on the established residential amenity.

DTS/DPF X

None are applicable.

PO X

Development that proposes a building higher than the prevailing building height is to contribute to the character of a locality by ensuring the taller building elements are setback from street frontages to avoid a detrimental impact on the prevailing character.

DTS/DPF X

None are applicable

~~PO 2.3~~

~~Development designed to provide a strong built form edge to the Park Lands and Wellington Square through the regular siting and pattern of buildings addressing the primary street frontage.~~

~~DTS/DPF 2.3~~

~~None are applicable.~~

~~PO 2.4~~

~~Buildings on sloping areas constructed to take advantage of the landfall to provide semi-basement floors and views from upper levels southwards over the City, provided overlooking is adequately addressed through appropriate design.~~

~~DTS/DPF 2.4~~

~~None are applicable.~~

PO X

New roof forms designed to reinforce the prevailing character and pattern of historic roof forms in terms of the shape, pitch, angle and materials.

DTS/DPF X

None are applicable.

PO X

Verandahs or balconies over footpaths are not envisaged other than alterations to existing non-residential corner buildings or where development is sited on property boundaries to the major street frontage.

DTS/DPF X

None are applicable.

Fences

PO X

Fencing to a street frontage (including any secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, to:

- (a) be of a traditional style and detailing compatible with the style of the building, or for a new building, its design is to reference and complement fencing styles historically associated with the streetscape;
- (b) be on the primary street frontage, comprise low fencing or fencing with an open character combined with solid pillars and plinths or other similar palisade fencing styles that allow views of the associated building, by their height and design;
- (c) comprise materials compatible with traditional fencing materials such as stone and cast iron, brick, stone

or rendered pillars and plinths or other traditional materials such as timber or well detailed masonry, but should not include metal sheeting; and

- (d) ensure solid masonry fences are not built on the primary street frontage other than where it is required to be consistent with fencing of identified heritage value on the development site.

DTS/DPF X

None are applicable.

PO X

Fencing on corner sites designed to return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage to be constructed of traditional materials such as brick, rendered masonry and timber and not exceed 1.8m above ground level.

DTS/DPF X

None are applicable.

PO X

Fencing on rear and side property boundaries (behind the main face of the building), are to not exceed 2m above ground level and constructed of traditional materials, including corrugated metal sheeting. Side fences or walls greater than 1.2m forward of the main face of a building are not envisaged and are to be of a scale that allows oblique views of buildings.

DTS/DPF X

None are applicable.

Residential Flat Buildings and Group Dwellings

PO X

Residential flat buildings or group dwellings designed to have the appearance of a detached dwelling when viewed from the primary street frontage.

DTS/DPF X

None are applicable.

Row Dwellings

PO X

Row dwellings where prescribed as appropriate designed to ensure:

- (a) vehicle access can be provided from laneways or minor streets;
- (b) garaging is not incorporated into the principal street frontage of the building;
- (c) there is a maximum of 6 dwellings in any one group; and
- (d) they are not located overlooking the Park Lands or along the frontage of a major street.

DTS/DPF X

None are applicable.

Building Setbacks

PO X

Development consistent with the front, side and rear allotment boundaries where a consistent setback prevails in the locality.

DTS/DPF X

None are applicable.

PO X

Buildings designed to minimise impact on adjacent low scale housing in terms of massing and

overshadowing.

DTS/DPF X

Building envelope consistent with Figure 1, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent low scale housing in terms of massing and overshadowing through alternative design methods:

- (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45-degree plane, measured from a height of 3m above natural ground level at the allotment.

Figure 1

PO 3.1

Buildings setback from primary street boundaries to maintain the prevailing setbacks established by adjoining buildings complement the existing streetscape character.

DTS/DPF 3.1

Building setbacks at least (whichever is the lesser):

- a. 6m; or
- b. the average of existing buildings on the adjoining sites that face the same street.

PO 3.2

Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce a streetscape character.

DTS/DPF 3.2

Buildings no closer than 900mm to the secondary street boundary.

PO 3.3

Buildings set back from side boundaries to provide:

- (a) separation between dwellings in a way that complements the established character of the locality; and
- (b) access to natural light and ventilation for neighbours.

DTS/DPF 3.3

Other than walls located on a side boundary, buildings are set back from side boundaries:

- (a) at least 900mm where the wall is up to 3m measured from the top of the footings;
- (b) other than for a wall facing a southern side boundary, at least 900mm plus 1/3 of the wall height above 3m measured from the top of the footings; and
- (c) at least 1900mm plus 1/3 of the wall height above 3m measured from the top of the footings for

walls facing a southern side boundary.

PO 3.4

Buildings ~~are~~ setback from rear boundaries to provide:

- (a) access to natural light and ventilation for neighbours;
- (b) open space recreational opportunities; and
- (c) space for landscaping and vegetation.

DTS/DPF 3.4

Buildings ~~are~~ set back from the rear boundary at least:

- (a) 3m for the ground floor level; and
- (b) 5m for first floor building level.

PO 3.5

Boundary walls are limited in height and length to manage impacts on adjoining properties.

DTS/DPF 3.5

For buildings that do not have a common wall, any wall sited on a side boundary:

- (a) does not exceed 3m in height from the top of the footings;
- (b) does not exceed 8m in length;
- (c) when combined with other walls on the boundary, does not exceed 45% of the length of the boundary; and
- (d) is setback at least 3m from any existing or proposed boundary walls.

Daylight and Sunlight

PO X

Development designed to minimise overshadowing on sensitive uses.

DTS/DPF X

- (a) Development designed to minimise overshadowing on sensitive uses by ensuring:
- (b) north-facing windows to habitable rooms of existing dwellings in the City Living Zone receive at least 3 hours of direct sunlight over a portion of their surface between 9.00am and 3.00pm on 21 June;
- (c) ground level open space of existing residential buildings in the City Living Zone receive direct sunlight for a minimum of 2 hours between 9.00am and 3.00pm on 21 June to at least the smaller of the following:
 - i. half of the existing ground level open space; or
 - ii. 35m² of the existing ground level open space (with at least one of the area's dimensions measuring 2.5 metres).

Catalyst Sites **Relocate Policy to new East Terrace Subzone**

PO 4.1

~~Development on catalyst sites (sites greater than 1500-2500m², including one or more allotment), on land with a frontage to East Terrace) developed with medium to high scale residential uses.~~

~~DTS/DPF 4.1~~

~~None are applicable.~~

PO 4.2

~~Small scale shops, cafes and restaurants generally integrated with residential development and located on ground or first floor levels to increase street level activity facing the Park Lands.~~

~~DTS/DPF 4.2~~

~~None are applicable.~~

~~PO 4.3~~

~~Development designed to manage impacts in relation to building height, building proportions and traffic impacts, and avoid land uses, or intensity of land uses, that adversely affect residential amenity.~~

~~DTS/DPF 4.3~~

~~None are applicable.~~

~~PO 4.4~~

~~Parts of a development on a catalyst site that exceed the maximum building height specified in DPF 2.2 designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired character of the area.~~

~~DTS/DPF 4.4~~

~~Parts of a building above the maximum building height specified in DPF 2.2 include additional setbacks, avoid tall sheer walls, centrally locate taller elements, and provide variation of light and shadow through articulation.~~

Site Dimensions and Land Division

PO 5.1

Allotments created for residential purposes that are of suitable size and dimension and maintain a regular allotment pattern compatible with the housing pattern consistent with the character of the locality.

DTS/DPF 5.1

Development, except on Catalyst Sites, accords with the following:

- a) site areas (or allotment areas in the case of land division) not less than:
 - i. the minimum allotment size specified in the Minimum Allotment Size Technical and Numeric Variation Overlay; or
 - ii. the average site area of the adjoining allotments where the *Minimum Allotment Size Technical and Numeric Variation Overlay* does not apply; and
- b) site frontages not less than:
 - i. the minimum specified in the *Minimum Allotment Frontage Technical and Numeric Variation Overlay*; or

the frontage of the adjoining sites where the *Minimum Allotment Frontage Technical and Numeric Variation Overlay* does not apply.

PO X

The division of land in the form of a hammerhead allotment or similar allotment arrangement, such as a community title land division that includes a shared driveway, accords with the following:

- (a) have a frontage to a public road and a 'handle' width of not less than 5m and not more than 6m to enable the provision of landscaping on both sides of a driveway for its full length and a driveway pavement of not more than 3.5m in width;
- (b) locate allotment boundaries to provide a separation distance of 2m from the future driveway pavement and a bedroom window of a neighbouring dwelling;
- (c) ensure that on-site car parking can be accommodated on the site of an existing dwelling;
- (d) avoid the repetition of driveways immediately adjacent to each other; and
- (e) include fencing treatment along the length of the driveway that is consistent with the character of the area.

Car Parking, Movement and Access

PO 6.1

Car parking located and designed to ~~provide for the maximum utilisation of land and~~ minimise the visual impact on the residential amenity and character of the zone.

DTS/DPF 6.1

None are applicable.

PO X

Undercroft parking is not envisaged unless expressed specifically for a site.

DTS/DPF X

None are applicable.

PO X

Other than low scale residential development, car parking to be provided at basement level to optimise use of land and to limit the visual impact on the amenity and historic streetscape character.

DTS/DPF X

None are applicable.

PO X

Redevelopment of larger consolidated parcels, to incorporate car parking at basement level to optimise the use of land and to limit the visual impact on the amenity of the area. Additional surface car parking and above ground car parking to be avoided except in the case of low scale residential development.

DTS/DPF X

None are applicable.

PO X

Development is to establish a clear hierarchy of movement corridors through large sites to create a legible and permeable street pattern.

DTS/DPF X

None are applicable.

PO 6.2

Access to parking and service areas located and designed to minimise the impacts to pedestrian environments and maintain the residential scale and pattern of development.

DTS/DPF 6.2

Access to parking and service areas that:

- (a) are provided from minor streets, or side or rear lanes provided road width is suitable and the traffic generation does not unreasonably impact residential amenity; and
- (b) remove the visual impact of existing car parking, access and egresses to the area by siting any new car parking away from street frontages.

PO X

Vehicle access to land to be made via minor streets, rear lanes and existing crossovers wherever possible. In a street where vehicle access does not prevail on the primary street frontage, new crossovers are to be avoided.

DTS/DPF X

None are applicable.

PO X

New vehicle crossovers to be:

- (a) of minimum width to preserve and enhance street character;
- (b) designed to narrow the crossover width towards the road pavement and located to avoid the need to remove historic kerbing and significant trees;
- (c) separated from each other and located to ensure on-street car parking spaces are retained; and
- (d) placed to avoid relocation of utility and infrastructure inspection points, poles and equipment.

DTS/DPF X

None are applicable.

PO X

Adequate car parking provided within the development site to meet the demand generated by the development as **Table 1 – General Off-Street Car Parking Requirements**. Car parking rates lower than the minimum may be appropriate where there is readily accessible and frequent public transport in the locality or it can be demonstrated that a lower provision is warranted, such as for the following reasons:

- (a) the nature of development;
- (b) existing heritage places on or adjacent to the development site which dictates the development of the site in a manner which hampers the provision of on-site parking;
- (c) the opportunity to exploit shared car parking areas between uses based upon compatible hours of peak operation;
- (d) use of a car share scheme; and/or
- (e) suitable arrangements for any parking shortfall to be met elsewhere or by other means.

DTS/DPF X

None are applicable.

Concept Plans

PO 7.1

Development is compatible with the outcomes sought by any relevant Concept Plan contained within the Concept Plans Technical and Numeric Variation Overlay.

DTS/DPF 7.1

None are applicable.

Advertisements

PO X

Advertisements that:

- (a) do not exceed 0.2m² (exception of the Wellington Square frontages (sited between 2 and 38 Wellington Square where larger advertisements may be appropriate));
- (b) are limited in number;
- (c) do not exceed 3m above natural ground level or an abutting footpath or street.
- (d) do not project from a wall of a building.

DTS/DPF X

None are applicable.

PO X

Projecting advertising displays located beneath verandahs or awnings extending over the footpath.

DTS/DPF X

None are applicable.

PO X

Internally illuminated advertisements are only envisaged in the major streets otherwise external illumination of advertisements is envisaged.

DTS/DPF X

None are applicable.

Procedural Matters (PM)

Notification of Performance Assessed Development

Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.

All classes of performance assessed development are excluded from notification except where they involve any of the following:

- (a) the site of the development is adjacent land ~~to land~~ in a different zone
- (b) development involving a change of use from residential use to non-residential use
- (c) development identified as “all other code assessed development” in City Living Zone Table 3
- (d) development exceeding the height specified in DPF 2.2

North Adelaide Low Intensity Subzone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Low rise low density housing on large allotments in an open landscaped setting.

DO2

An important part of the town plan of Adelaide and the city grid layout, containing large grand dwellings on landscaped grounds.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Dwellings complement the low-density or very-low density character of the neighbourhood.

DTS/DPF 1.1

None are applicable.

Site Coverage

PO 2.1

Building footprints consistent with the character and pattern of the prevailing open landscaped character of the neighbourhood.

DTS/DPF 2.1

The development does not result in a total roofed area (excluding eaves of a dwelling) on the site exceeding 50%.

Built Form and Character

PO X

New development that respects the low scale, environmental quality, character and historic value of the area through the incorporation of a high standard of design, materials and landscaping.

DTS/DPF X

Buildings that complement the historic built form by:

- (a) utilising stone, brick and/or brick render as the main external finish to walls;
- (b) ensuring coated surfaces visible from the street are finished in natural render, limewash, cement or mineral paints (plastic coatings or renders are not envisaged); and
- (c) avoiding brightly coloured or highly reflective surfaces.

Building Setbacks

PO 2.1

Buildings setback from primary street boundaries to complement the existing streetscape character.

DTS/DPF 2.1

Building setback from the primary street boundary at least the average setbacks of the dwellings on the adjoining allotments.

PO 2.2

Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce the neighbourhood's streetscape character.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings setback from side boundaries to provide separation between dwellings in a way that is consistent with the established streetscape of the locality.

DTS/DPF 2.3

Building setback from side boundary at least the average side setbacks of the dwellings on the adjoining allotments.

PO 2.4

Buildings on sloping areas constructed to take advantage of the landfall to provide semi-basement floors and views from upper levels southwards over the City, provided overlooking is adequately addressed through appropriate design.

DTS/DPF 2.4

None are applicable.

Medium-High Intensity Subzone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Low to medium rise housing in a variety of forms with an eclectic mix of non-residential land uses interspersed (including as mixed-use development) that complement the area's urban residential amenity.

DO2

Redevelopment of existing non-residential sites into integrated mixed-use developments to increase the

residential population and vibrancy of the area.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Development of medium density accommodation types for living, including dwellings and supported accommodation.

DTS/DPF 1.1

Residential development in the form of detached, semi-detached or row dwellings, or alterations and additions to existing buildings.

Built Form and Character

PO 2.1

Development contributes to a low - medium rise urban residential character.

DTS/DPF 2.1

Building height is not greater than the maximum, or less than the minimum, requirements specified in the *Building Height Technical and Numeric Variation Overlay* or *Concept Plan Technical and Numeric Variation Overlay*.

PO X

Buildings designed to have a strong horizontal emphasis with clearly defined and segmented vertical elements. Façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades, verandahs, fenestration and balconies.

DTS/DPF X

None are applicable.

Building Setbacks

PO 2.2

Buildings setback from primary street boundaries to complement the existing streetscape character.

DTS/DPF 2.2

Building setbacks at least ~~(whichever is the lesser):~~

~~(a) 6m; or~~

(b) the average of existing buildings on the adjoining sites that face the same street.

PO 2.3

Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce a streetscape character.

DTS/DPF 2.3

Buildings no closer than 600mm to the secondary street boundary.

PO 2.4

Buildings are setback from rear boundaries to provide:

- (c) access to natural light and ventilation for neighbours;
- (d) open space recreational opportunities; and
- (e) space for landscaping and vegetation.

DTS/DPF 2.4

Buildings are set back from the rear boundary at least:

- (a) 3m for the ground and first floor level; and
- (b) an additional 3m for each level above the first floor level.

Boundary Walls

PO 2.5

Boundary walls are limited in height and length to mitigate adverse impacts on the amenity of adjoining land users, include through an unreasonable loss of natural sunlight and ventilation.

DTS/DPF 2.5

For buildings that do not have a common wall, any wall sited on a side boundary:

- (a) does not exceed 3m in height from the top of the footings;
- (b) does not exceed 8m in length;
- (c) when combined with other walls on the boundary, does not exceed 45% of the length of the boundary; and
- (d) is setback at least 3m from any existing or proposed boundary walls.

East Terrace Subzone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Grand buildings set on attractive, landscaped grounds in a Park Lands edge setting.

DO2

Development will continue to provide a high level of amenity with a mix of residential dwelling types and styles, that are complementary in design to the many State and Local Heritage Places.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Non-residential development is only envisaged on sites fronting Wakefield Street or on a catalyst site, where non-residential development is appropriate at the ground and or first floor and residential development above.

DTS/DPF 1.1

None are applicable.

Built Form and Character

PO 2.1

Development to continue the traditional siting patterns of large buildings set in generous, high quality landscaped grounds with substantial front and side boundary set-backs to frame East Terrace and provide a distinct edge to the City.

DTS/DPF 2.1

Landscaped open space arranged and planted in a manner that:

- (a) provides for the retention of existing significant vegetation;
- (b) maintains and enhances the established predominant amenity and landscape character of the locality;

and

(c) respects the amenity of abutting residential allotments to the rear.

PO 2.2

Private properties will be defined by formal fencing which allows for views to, and an appreciation of, the distinctive garden setting and spacious character at-ground underpinned by the rhythm of front and side boundary setbacks.

DTS/DPF 2.1

None are applicable.

Catalyst Sites

PO 4.1

Development on catalyst sites (sites greater than ~~1500~~ 2500m², including one or more allotment), ~~on land with a frontage to East Terrace~~ developed with medium to high scale residential uses.

DTS/DPF 4.1

None are applicable.

PO 4.2

Small scale shops, cafes and restaurants generally integrated with residential development and located on ground ~~or first floor levels to increase street level activity facing the Park Lands.~~

DTS/DPF 4.2

None are applicable.

PO 4.3

Development designed to manage impacts in relation to building height, building proportions and traffic impacts, and avoid land uses, or intensity of land uses, that adversely affect residential amenity.

DTS/DPF 4.3

None are applicable.

PO 4.4

Parts of a development on a catalyst site that exceed the maximum building height specified in DPF 2.2 designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired character of the area.

DTS/DPF 4.4

Parts of a building above the maximum building height specified in DPF 2.2 include additional setbacks, avoid tall sheer walls, centrally locate taller elements, and provide variation of light and shadow through articulation.

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, and Main Street Policy Area 14. ~~City Frame and City Living Policy Area 30.~~

It has also been recommended that the areas proposed to transition to the Urban Corridor (Main Street) Zones be transitioned to this zone (the City Main Street Zone).

Some of the policy also assumes that the Core Pedestrian Area Map Adel/1 (Overlays 2, 2A and 3) and Map Adel/1 (Overlay 1) are being transitioned to the Planning and Design Code.

This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

City Main Street Zone

Table 1 – Accepted Development Classification

Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'	Accepted Development Classification Criteria
Internal building work Except where any of the following apply: <ul style="list-style-type: none"> • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	1 There will be no increase in the total floor area of the building 2 There will be no alteration to the external appearance of the building.

<p>Shade sail Except where any of the following apply:</p> <ul style="list-style-type: none"> Local Heritage Place Overlay State Heritage Place Overlay 	<ol style="list-style-type: none"> The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system Shade sail consists of permeable material The total area of the sail - does not exceed 40m² No part of the shade sail will be: <ol style="list-style-type: none"> 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment 5m above ground or floor level (depending on where it is situated) within any other part of the allotment Primary street setback – at least as far back as the building line of the building to which it is ancillary If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment – the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.
<p>Solar photovoltaic panels (roof mounted) Except where any of the following apply:</p> <ul style="list-style-type: none"> A Local Heritage Place identified in the Local Heritage Place Overlay A State Heritage Place identified in the State Heritage Place Overlay 	<ol style="list-style-type: none"> 19 Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof 20 Panels and associated components do not overhang any part of the roof 21 Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.
<p>Temporary Storage of Council Equipment</p>	<p>Appropriate measures are incorporated for:</p> <ol style="list-style-type: none"> dust control; appropriate screening including landscaping; containment of litter and waste; and appropriate securing of the site.
<p>Water tank (underground)</p>	<ol style="list-style-type: none"> The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system The tank (including any associated pump) is located wholly below the level of the ground.

Table 2 – Deemed-to-Satisfy Development Classification

Class of Development	Deemed-to-Satisfy Development Classification Criteria
The following Classes of Development are	<p>Provisions referred to are Deemed-to-Satisfy Criteria</p> <p>Where a development comprises more than one Class of Development the relevant criteria will be taken to be the sum of the criteria for each Class of Development.</p>

classified as Deemed-to-Satisfy Development subject to meeting the 'Deemed-to-Satisfy Development Classification Criteria'	Zone	General Development Policies	Subzone (applies only in the area affected by the Subzone)	Overlay (applies only in the area affected by the Overlay)
<p>Advertisement Except where any of the following apply:</p> <ul style="list-style-type: none"> • Design Overlay • Local Heritage Place Overlay • State Heritage Place Overlay 	None	<p>Clearance from Overhead Powerlines: DTS 1.1</p> <p>Advertisements [Appearance]: DTS 1.1, 1.3, 1.4, 1.5</p> <p>Advertisements [Proliferation of Advertisements]: DTS 2.1, 2.2</p> <p>Advertisements [Advertising Content]: DTS 3.1</p> <p>Advertisements [Amenity Content]: DTS 4.1</p> <p>Advertising [Safety]: DTS 5.1, 5.2, 5.3, 5.4, 5.5</p>	None	<p>Local Heritage Place Overlay</p> <p>State Heritage Place Overlay</p>
<p>Change of use in an existing building (that does not involve any building work or modification that would otherwise require planning consent) from:</p> <ul style="list-style-type: none"> • an office to a consulting room or shop • a shop to an office or consulting room • a dwelling to an office or consulting room 	None	None	None	None

Assessment Provisions

Desired Outcomes (DO)

DO 1

A mixed use zone providing important shopping, hospitality, commercial, community, cultural and entertainment facilities for the City supported by medium to high density and residential development. Non-residential activities including shops, restaurants and licensed premises will positively contribute to the day and evening economies, public safety, walkability and City vibrancy.

DO 2

Well-designed and diverse medium to high density accommodation options, including dwellings, supported accommodation, student accommodation, short term accommodation developed in conjunction with non residential development. ~~either as part of a mixed use development or wholly residential development.~~

DO 2

Development with built form positively contributing to:

- a. a streetscape that is visually interesting at human-scale comprising articulated buildings with a high level of fenestration and balconies oriented towards the street; and
- b. a fine-grain public realm comprising buildings with active frontages that are designed to reinforce the street rhythm **and intimate character**, that consider the facades, articulation and massing of existing buildings and any spaces between them, and provide narrow tenancy footprints at ground level.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A **vibrant** mix of land uses adding to the vitality of the area and extend activities outside shop hours including restaurants, educational, community and cultural facilities and visitor and residential accommodation **that contribute to the vibrancy of the city.**

DTS/DPF 1.1

Development comprises one or more of the following land uses:

● **Apartments**

- Child Care Centre
- Consulting Room
- Dwelling
- Hotel
- Licensed Entertainment Premises
- Licensed Premises

- Office
- Supported Accommodation
- Restaurant
- Residential flat building
- Shop
- Student Accommodation
- Tourist Accommodation

PO 1.2

Retail, office, entertainment and recreation related uses supplemented by other businesses that provide a range of goods and services to the city and the surrounding district.

DTS/DPF 1.2

None are applicable.

~~DTS/DPF 1.2~~

~~Shops, office or consulting rooms do not exceed 2,000m² total gross leasable floor area in a single building.~~

PO 1.3

Small-scale licensed entertainment premises, night clubs or bars and lands uses typically closed during the day designed to contribute to day and evening street activation. ~~not to detract from the vitality of the area when closed.~~

DTS/DPF 1.3

None are applicable.

PO 1.4

Dwellings, including residential flat buildings, developed in conjunction with non-residential uses to support business, entertainment and recreational activities that contribute to making the main street locality and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places.

DTS/DPF 1.4

Dwellings, including residential flat buildings, developed in conjunction with non-residential uses sited:

- a. at upper levels of buildings with non-residential uses located at ground level; or
- b. behind non-residential uses on the same allotment.

~~PO 1.5~~

~~Development of well-designed and diverse medium to high density accommodation options, including dwellings, supported accommodation, student accommodation, short term accommodation, either as part of a mixed use development or wholly residential development.~~

~~DTS/DPF 1.5~~

~~None are applicable.~~

PO X

Multi-level, non-ancillary vehicle parking structures are not located within:

- (a) the Core Pedestrian Area shown on Map Adel/1 (Overlays 2, 2A and 3).
- (b) on frontages to East Terrace, Rundle Street, Gawler Place, Hindley Street, Hutt, Melbourne, O'Connell, Sturt and Halifax Street.

DTS/DPF X

None are applicable

PO X

Multi-level, non ancillary vehicle parking structures within buildings developed in conjunction with

commercial, retail or other non-carpark uses on street frontages especially at ground level.

DTS/DPF 1.6

None are applicable.

Activation

PO 1.7

Ground floor level uses generating high levels of pedestrian activity and contribute to an active and vibrant main street.

DTS/DPF 1.7

~~Shop, restaurant, office, or consulting room uses located on the ground floor level of buildings.~~

None are applicable.

PO X

Temporary use temporary use of vacant or underdeveloped land that is not likely to be the subject of long-term development in the short term. Temporary uses of vacant or underdeveloped land are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.

DTS/DPF X

None are applicable.

PO X

Non-residential land uses at ground floor level such as shops and restaurants that support and maximise pedestrian activity to provide visual interest and positively contribute to public safety, walkability and vibrancy by achieving all of the following:

- (a) building articulation and fenestration;
- (b) frequent window openings;
- (c) land uses that spill out onto the footpath;
- (d) verandahs, balconies awnings and other features that provide weather protection.

DTS/DPF X

None are applicable.

PO X

Car parking elements to be sleeved to ensure an activated street frontage.

DTS/DPF X

None are applicable.

PO X

Temporary use of vacant or underdeveloped land for up to 24 months that is not likely to be the subject of long-term development in the short term are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.

DTS/DPF X

None are applicable.

Built Form and Character

PO 2.1

Buildings:

- a. designed to ~~to~~ reinforce the street edge and grid pattern of the city streets;

- b. designed to include a podium/street wall and upper level setback that responds to local context, including the scale and context of adjacent built form, to ensure a cohesive and consistent streetscape and ~~positively contribute to a sense of enclosure~~ **maintain a sense of spaciousness and openness to the sky to achieve human scale at street level**;
- c. ~~designed to incorporate verandahs, canopies or pedestrian shelters to contribute towards a continuity of verandahs and maintain a sheltered, high amenity pedestrian environment;~~ **designed to incorporate verandahs, canopies or pedestrian shelters to contribute towards a continuity of verandahs and maintain a sheltered, high amenity pedestrian environment;**
- d. with a rich visual design that has regard to above street level fenestration, balconies, parapets, architectural detailing and ornamentation.

DTS/DPF 2.1

None are applicable.

PO 2.2

Buildings and structures designed to complement and respond to the established fine grained main street character by:

- a. ensuring, veranda profile, and materials of construction are consistent with and positively respond to adjacent traditional main street buildings; and
- b. complementing the traditional shop-front elements, such as narrow buildings and tenancy footprints, with frequently repeated frontages, and clear-glazed narrow shop front displays above raised display levels [base stall boards] and recessed entries.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings designed to create visual connection between the public realm and ground level interior, to ensure an active interface with the main street and maximise passive surveillance.

DTS/DPF 2.3

The ground floor primary frontage of buildings provide at least ~~5 metres or 6-50%~~ **5 metres or 6-50%** of the street frontage ~~(whichever is greater)~~ as an entry / foyer or display window to a shop or other community or commercial use that provides pedestrian interest and activation.

~~PO 2.4~~

~~Buildings provide a high amenity pedestrian environment by providing shelter and shade over footpaths.~~

~~DTS/DPF 2.4~~

~~Buildings that provide a continuity of verandas, canopies, awnings or other pedestrian shelters.~~

PO 2.4

Buildings are adaptable and flexible to accommodate a range of land uses.

DTS/DPF 2.4

The ground floor of buildings contain a minimum floor to ceiling height of 3.5m.

PO 2.5

Building heights where the height is commensurate with the scale of development along the main street and complements the height of buildings in the adjacent zone.

DTS/DPF 2.5

Building height is not greater than any maximum, ~~or less than any minimum~~, specified in the *Maximum Building Height Levels Technical and Numeric Variation Overlay* or the *Maximum Building Height Metres Technical and Numeric Variation Overlay*, ~~or the *Minimum Building Height Levels Technical and Numeric Variation Overlay*.~~

Notes with respect to Building Heights:

- There are **no minimum building heights** shown on the Consultation Map Viewer
- Recommend that the 'minimum building height' become a separate DTS/DPF and PO.

PO 2.6

Building height complements the height of buildings in the adjacent zone to manage the interface with low-rise residential development.

DTS/DPF 2.6

Building height is not less than any minimum, specified by the *Minimum Building Height Levels Technical and Numeric Variation Overlay*.

PO X

Development that reinforces the Mainstreets as important pedestrian promenades and vibrant places

DTS/DPF X

None are applicable.

PO 2.7

Buildings sited on the primary street boundary to achieve a continuity of built form frontage to the main street, ~~with the occasional section of building set back to create outdoor dining areas, visually interesting building entrances and intimate but vibrant spaces.~~

DTS/DPF 2.7

~~Buildings with a 0m setback from the primary street boundary, with the exception of minor setbacks to accommodate outdoor dining areas.~~

PO 2.8

In secondary streets and laneways (off the main street) building setbacks above the street wall may be relatively shallow or non-existent to create intimate spaces through a greater sense of enclosure.

DTS/DPF 2.8

Buildings with a 0m setback from the secondary street boundary.

PO 2.9

High rise built form on the northern side of Rundle Mall, Rundle Street, Hindley Street and Gouger Street incorporating slender tower elements, spaces between buildings or other design techniques that enable natural sunlight access to the southern footpath.

DTS/DPF 2.9

None are applicable.

PO X

Innovative and interesting skylines that contribute to the overall design quality, identity and performance of the building.

DTS/DPF X

Incorporate an architectural roof feature within the design of the building by:

- creating a feature that forms part of its overall architectural form and composition;
- ensuring visual compatibility with nearby towers and other structures whilst maintaining architectural distinction;
- providing sky line features capable of being viewed over great distances;
- including modelled parapets and compatibility of podia height at street alignment;
- integrating plant and fixtures within the roof top design; and/or
- incorporating roof top gardens and terraces.

PO X

Development to provide and maintain pedestrian shelter, access and through-site links in accordance with the walking routes identified within **Map Adel/1 (Overlays 2, 2A and 3)**. Such facilities to be appropriately designed and detailed to enhance the pedestrian environment, have regard to the mobility needs of people with disabilities, and be safe, suitable and accessible.

DTS/DPF X

None are applicable.

PO X

Corner buildings adjacent to street intersections and buildings along a routes identified within **Map Adel/1 (Overlay 4)** should provide weather protection for pedestrians in the form of verandahs, awnings or canopies. Where verandahs or awnings are provided which block street lighting, they should include additional lighting beneath the canopy.

DTS/DPF X

None are applicable.

Demolition

PO X

Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.

DTS/DPF X

None are applicable.

Access and Movement

PO 4.1

Access to, and movement within, the Main Street Zone to be universally accessible, easy, safe, comfortable, convenient and legible for people of all abilities, with priority given to pedestrians, and cyclists and public transport.

DTS/DPF 4.1

None are applicable.

PO 4.2

Vehicular access points associated with vehicle parking areas and/or multi level, non ancillary carparking structures are not situated along Rundle Street, Hindley Street, Gawler Place, O'Connell, Melbourne, Hutt, Sturt or Halifax Street or across primary City access and secondary City access roads identified in Map Adel/1 (Overlay 1).

DTS/DPF 4.2

None are applicable.

PO 4.3

Development is designed to ensure car parking areas are **designed and positioned** to avoid negative impacts on the main street rhythm and activation.

DTS/DPF 4.3

Vehicle parking areas are ~~garages~~ **sleeved, located in the basement and/or located behind buildings away**

from the ~~primary main~~ street frontage.

PO 4.4

Development does not result in additional crossovers on the main street, **except where rationalising existing crossovers on consolidated sites and is designed** to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form.

DTS/DPF 4.4

Vehicular access to be provided:

- (a) via side streets or rear lanes provided there is no negative impact on **active floor space**, residential amenity within the zone and in adjacent zones; or
- (b) where it consolidates or replaces existing crossovers.

PO X

Pedestrian movement based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links.

DTS/DPF X

None are applicable.

PO X

Adequate car parking to be provided within the site area of the development to meet the demand generated by the development as Table 1 – General Off-Street Car Parking Requirements; and

- (a) car parking rates lower than the minimum may be appropriate where there is readily accessible and frequent public transport in the locality or it can be demonstrated that a lower provision is warranted, such as for the following reasons:
 - (i) the nature of development;
 - (ii) existing heritage places on or adjacent to the development site which dictates the development of the site in a manner which hampers the provision of on-site parking;
 - (iii) the opportunity to exploit shared car parking areas between uses based upon compatible hours of peak operation;
 - (iv) use of a car share scheme; or
 - (v) suitable arrangements for any parking shortfall to be met elsewhere or by other means.

DTS/DPF X

None are applicable.

PO X

Undercroft parking is not appropriate within the Zone.

DTS/DPF X

None are applicable.

PO X

The finished ground floor level of buildings designed to be at grade and/or level with the footpath to provide direct universal pedestrian access and street level activation.

DTS/DPF X

None are applicable.

PO X

Development that contributes to the quality of the public realm as a safe, secure and accessible environment for pedestrian movement. Development designed and detailed to enhance the pedestrian environment for safe and universal access.

DTS/DPF X

None are applicable.

PO X

Development designed to maintain and enhance continuous footpaths to ensure:

- (a) ensure pedestrian flow is free and uninterrupted; and
- (b) maintain and enhance the pedestrian permeability in areas identified in Map Adelaide XXX.

DTS/DPF X

Development designed to reflect the significance of the paths and increase the permeability of the pedestrian network identified within Map Adel/1 (Overlay 2) NEED OVERLAY MAP and/or Concept Plan by ensuring:

- (a) pedestrians are not disrupted or inconvenienced by badly designed or located vehicle access ramps in footpaths or streets; and
- (b) vehicle and service entry points are kept to a minimum to avoid adverse impact on pedestrian amenity.

PO X

Development to provide weather protection for pedestrians in the form of verandahs, awnings or canopies with adequate lighting to support pedestrian safety and movement.

DTS/DPF X

Clearance should be aligned to adjoining buildings and above the existing footpath level for a minimum of:

- (a) 3m above the existing footpath level for verandahs, awnings or canopies;
- (b) 2.5m for advertisements; and
- (c) 2.3 m for temporary structures, retractable canopies.

PO X

Vehicular access points associated with multi-level and/or non-ancillary car parks located outside areas identified outside the Core Pedestrian Area (insert map to reflect Overlay2A), designed to minimise disruption to pedestrians, cyclists, public transport and traffic flow.

DTS/DPF X

None are applicable.

PO X

Vehicular access points located to minimise conflict with public transport, pedestrian and cyclist movement and/or activity on any major pedestrian thoroughfare.

PO X

Multi-level car parks or non-ancillary car parking use of an existing building to only be established where it can be demonstrated that there is a need that is not adequately satisfied by other parking facilities in the locality.

DTS/DPF X

None are applicable.

PO X

Multi-level car parks and short stay public use of ancillary car parking spaces are discouraged at ground floor street frontages in the Primary Pedestrian Area identified in Map Adel/1 (Overlays 2, 2A and 3). Multi-level car parks, short stay public use of ancillary car parking spaces or non-ancillary car parking use of an existing building may be appropriate where it:

- (a) is located away from ground floor street frontages to major streets;
- (b) ensures vehicle access is from the road with less pedestrian activity in instances where a site has access to more than one road frontage;
- (c) has no more than one entry lane and one exit lane;
- (d) has a controlled exit at the property boundary to stop vehicles before travelling across the footpath;
- (e) has no more than one left in and one left out access point;

- (f) avoids access points along high concentration public transport routes identified in Map Adel/1 (Overlay 4); and
- (g) with respect to ancillary parking, is provided at basement level, or undercroft if located behind other uses which provide activity on the street frontage.

In areas outside the Core and Primary Pedestrian Areas identified in Map Adel/1 (Overlays 2, 2A and 3), car parking may be provided to serve a development within the site of the development or elsewhere. Where car parking is provided, it should be:

- (a) provided with vehicle access points that do not cross major walking routes identified in Map Adel/1 (Overlay 2); and
- (b) located away from frontages to major streets wherever possible.

DTS/DPF X
None are applicable.

PO X
Multi-level car parks or non-ancillary car parking use of an existing building should only be established where it can be demonstrated that there is a need which is not adequately satisfied by other parking facilities and public transport services in the locality.

DTS/DPF X
None are applicable.

PO X
Where vehicular access to a development is gained by an existing crossing in the Core Pedestrian Area identified in Map Adel/1 (Overlay 2A), there should be no increase in the number of parking spaces served by the crossing, nor any increase in the number of existing crossings serving that development.

DTS/DPF X
None are applicable.

PO X
Buildings located along primary and secondary access roads sited to avoid the need for vehicles to reverse on to the road (unless the dimensions of the site make this impractical).

DTS/DPF X
None are applicable.

PO Development should have regard to the bicycle routes identified within Map Adel/1 (Overlay 3) by:
(a) limiting vehicular access points; and
(b) ensuring that vehicles can enter and leave the site in a forward direction, thereby avoiding reverse manoeuvres.

Procedural Matters (PM)

Notification of Performance assessed development

Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.

All classes of development are excluded from notification except where it involves any of the following:

- (a) the site of the development is adjacent land to land in a different zone
- (b) development identified as “all other code assessed development” in City Main Street Zone Table 3
- (c) shop, office or consulting room in excess of the gross leasable floor area specified in DTS/DPF 1.2.

Working Draft

Rundle Street Sub Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Rundle Street developed as an important shopping, leisure, dining and gathering place, complemented by compatible residential accommodation in upper levels.

DO2

Development along Rundle Street is informed by the local context, including the existing built form and heritage buildings of relatively consistent scale and massing that were built in the nineteenth and early twentieth century with façades that typically provide a high proportion of solid-to-void, a high level of articulation (including ornamentation and fenestration) and a combination of high-quality materials).

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A premium retail and leisure area comprising an active restaurant and shopping precinct and a mix of land uses, including residential on upper levels, that extend activity into the evening to enhance the vibrancy of the area.

DTS/DPF1.1

None are applicable.

PO 1.2

Licensed entertainment premises, nightclubs or bars:

- a. small in scale;
- b. secondary to the primary land uses mix of the street;
- c. located above or below ground level;
- d. limited in numbers;
- e. do not detract from the streets daytime activation; and
- f. minimise negative impacts on nearby residential development.

DTS/DPF 1.2

None are applicable.

Built Form and Character

PO 2.1

Buildings with frontage to Rundle Street (west of Frome Street) to be informed by the local context when transitioning from podium element within the streetscape to taller set-back elements taller to protect the human scale of the main street.

DTS/DPF 2.1

Buildings with frontage to Rundle Street (west of Frome Street):

- (a) include a clearly defined podium or street wall with a maximum building height of 6 building levels in height; and
- (b) have levels above the defined podium or street wall setback a minimum of 3m from that wall.

PO 2.2

Buildings with frontage to Rundle Street (west of Frome Street) designed to reinforce the prevailing datum heights and parapet levels of the street by design elements that provide a clear distinction between levels above and below the prevailing datum line.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings with frontage to Rundle Street (east of Frome Street):

- (a) incorporate podium elements to reconcile the scale relationship between the taller elements and the existing streetscape; and
- (b) designed to reinforce the prevailing datum heights and parapet levels of the street.

DTS/DPF 2.3

Buildings fronting Rundle Street (east of Frome Street):

- (a) include a maximum podium/street wall height that is consistent with one of the adjacent buildings facing the street and does not exceed 13m;
- (b) include an upper level setback, measured from the street wall, of not less than 3m stepping up to a height of 6 storeys, then a further setback of not less than 3m stepping up to the maximum overall height; and
- (c) design elements that create a clear distinction between the 13m and 22m datum lines.

PO 2.4

Buildings with frontage to Rundle Street:

- (a) carefully designed so that the historic main street character is retained and enhanced;
- (b) consistent with the intimate scale and intricate and diverse architectural features of Rundle Street;
- (c) maintain the continuity of building facades retaining the subtle diversity and variety of roof and parapet lines and the horizontal massing of the townscape;
- (d) incorporate a vertical emphasis in the composition of their street facades and the disposition and proportioning of openings; and
- (e) ensure upper levels of buildings are designed to reduce visual mass from the human scale of the main street.

DTS/DPF 2.4

None are applicable.

Rundle Mall Sub Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Rundle Mall developed as the State's premier shopping destination.

DO2

Development informed by Rundle Mall's strong and unique character, vibrancy and sense of place, established by a pedestrian space framed by continuous built form made-up of active frontages that are fine-grain and visually interesting from the public realm, and framed with a strong sense of arrival from King William Street and Pulteney Street and the adjoining minor streets, arcades and laneways.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A premier retail area consisting of a mix of complementary land uses that include a wide range of specialty and larger scale shops and mixed business and land uses, including residential and office on upper levels, that extend activity into the evening to enhance public safety and the vibrancy of the area.

DTS/DPF 1.1

None are applicable.

Built Form and Character

PO 2.1

Buildings positively contribute to the built form framing Rundle Mall's public realm by responding the local context and provide visual relief at ground level from building height and massing.

DTS/DPF 2.1

Buildings:

- (a) include a clearly defined podium or street wall with a maximum building height of 6 building levels; and
- (b) have levels above the defined podium or street wall setback of 3m or more from that wall.

Movement and Access

PO 3.1

Pedestrian movement network made up of pedestrian malls, arcades and lanes that are safe, legible, comfortable and universally designed, and link the surrounding areas to provide a variety of north-south routes to Rundle Mall and east-west links for people moving between buildings.

DTS/DPF 3.1

None are applicable.

PO 3.2

Access for on-site servicing and deliveries from minor streets and private lanes wherever possible, rather than from Rundle Mall.

DTS/DPF 3.2

None are applicable.

Hindley Street Sub Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Development of:

- (a) Hindley Street (east of Morphett Street) as the pre-eminent evening and late night entertainment hub for metropolitan Adelaide with complementary shopping, hospitality, mixed business and high-density living; and
- (b) Hindley Street (west of Morphett Street) as a main street with a range of retail, educational, mixed business, cultural, short-stay accommodation and hospitality uses and high-density living.

DO2

Development along Hindley Street to be cognisant of a streetscape characterised by nineteenth century buildings that are predominantly 2 and 3 storeys with buildings forming a continuous built form edge along the street frontage.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Hindley Street (east of Morphett Street) comprising a mix of land uses making the area the City's primary focus for late night hospitality and entertainment.

DTS/DPF 1.1

None are applicable.

PO 1.2

Late night entertainment on Hindley Street (east of Morphett Street) designed and managed to integrate effectively with day time and evening land use activities.

DTS/DPF 1.2

None are applicable.

PO 1.3

Hindley Street (west of Morphett Street) comprising a mix of business, educational, cultural, short-stay accommodation, hospitality and retail activities with licensed premises integrating effectively with day time and evening land use activities.

DTS/DPF 1.3

None are applicable.

Built Form and Character

PO 2.1

Buildings informed by local context that frame Hindley Street and nearby public realm, and provide overall visual relief from building mass at ground level.

DTS/DPF 2.1

Buildings:

- (a) include a clearly defined podium or street wall with a maximum building height of 6 building levels in height; and
- (b) have levels above the defined podium or street wall setback of 3m or more from that wall.

PO 2.2

Buildings fronting Hindley Street designed to reinforce the prevailing datum heights and parapet levels of the street through articulated facades that provide a clear distinction between levels above and below the prevailing datum line.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings fronting Hindley Street:

- (a) enhanced by the refurbishment of nineteenth century buildings;
- (b) complemented by contextual new development that provides a visually interesting built form, positively contributes to the existing and desired character and provides a safe, active and intimate human scale; and
- (c) maintain the rhythm and visually continuity of verandahs, awnings, parapets and facade lines and other architectural details at podium level.

DTS/DPF 2.3

None are applicable.

Gouger and Grote Street Sub Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO1

Development of:

- (a) Gouger Street as a mix of retail, restaurant, commercial and mixed business uses, including professional services, wholesaling and culturally diverse community activities that contribute to the unique character and vibrancy of the street during the day and evening; and
- (b) Grote Street as an active restaurant and shopping street that complements the main entrance and vibrancy of the Adelaide Central Market and supports the retail, community and diverse cultural functions of the area.

DO2

Development of Gouger Street to respect a cohesive streetscape derived from the predominant 2 to 3 storey high buildings along the street edge.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Gouger and Grote Streets continue to develop as an active restaurant and shopping precinct complementing the main entry points and activity of the adjacent Adelaide Central Market, while also supporting the retail, community and diverse cultural function of the wider precinct.

DTS/DPF 1.1

None are applicable.

PO 1.2

Licensed entertainment premises, nightclubs or bars that:

- (a) are small in scale;
- (b) secondary to the primary land uses mix of the street;

- (c) are located above or below ground level;
- (d) limited in numbers;
- (e) do not detract from the streets daytime activation; and
- (f) minimise negative impacts on nearby residential development.

DTS/DPF 1.2

None are applicable.

PO 1.3

Mix of land uses within 'Chinatown' around Moonta Street reinforced and opportunities for new precincts, such as in minor streets and lanes, established.

DTS/DPF 1.3

None are applicable.

Built Form and Character

PO 2.1

Buildings informed by local context frame Gouger Street and nearby public realm, and provide overall visual relief from building mass at ground level.

DTS/DPF 2.1

Buildings:

- (a) include a clearly defined podium or street wall with a maximum building height of 6 building levels in height; and
- (b) have levels above the defined podium or street wall setback of 3m or more from that wall.

PO 2.2

Buildings fronting Gouger Street designed to reinforce the prevailing datum heights and parapet levels of the street through articulated facades that provide a clear distinction between levels above and below the prevailing datum line.

DTS/DPF 2.2

None are applicable.

Attachment A.1 City of Adelaide P&D Code amendment document

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, City Frame and City Living Policy Area 30. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

Capital City Zone

Table 1 – Accepted Development Classification

Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'	Accepted Development Classification Criteria
Shade sail Except where any of the following apply: <ul style="list-style-type: none"> • Local Heritage Place Overlay • State Heritage Place Overlay • Sloping Land Overlay 	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. Shade sail consists of permeable material 3. The total area of the sail - does not exceed 40m² 4. No part of the shade sail will be: <ol style="list-style-type: none"> a. 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment b. 5m above ground or floor level (depending on where it is situated) within any other part of the allotment 5. Primary street setback – at least as far back as the building line of the building to which it is ancillary 6. If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m 7. In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment – the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.

Attachment A.1 City of Adelaide P&D Code amendment document

<p>Solar photovoltaic panels (roof mounted) Except where any of the following apply:</p> <ul style="list-style-type: none"> • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	<ol style="list-style-type: none"> 1. Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof 2. Panels and associated components do not overhang any part of the roof 3. Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.
<p>Temporary Storage of Council Equipment</p>	<p>Appropriate measures are incorporated for:</p> <ol style="list-style-type: none"> (a) dust control; (b) appropriate screening including landscaping; (c) containment of litter and waste; and (d) appropriate securing of the site.
<p>Water tank (underground)</p>	<ol style="list-style-type: none"> 1. The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 2. The tank (including any associated pump) is located wholly below the level of the ground.

Multi-Level Carpark in Core Pedestrian Area	
Industry	Light Industry

Assessment Provisions

Desired Outcome (DO)

DO 1

A Zone that is the economic and cultural focus of the State, and includes a range of residential, employment, community, educational, innovation, recreational, tourism and entertainment facilities. It is anticipated that additional opportunities for population and employment growth will be created.

DO 2

High intensity and large scaled development with high street walls that reinforce the distinctive grid pattern layout of the City with active non-residential ground level uses to positively contribute to public safety, inclusivity and vibrancy. [Design quality of buildings and public spaces is a priority in this zone.](#)

DO 3

[Buildings and public spaces of quality design that respond to site context and broader streetscape.](#)

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use

PO 1.1

A [vibrant](#) mix of residential, retail, community, civic and cultural, health, educational, recreational, tourism and entertainment facilities [that will increase the city's vibrancy.](#)

DTS/DPF 1.1

The following types of development, or combinations thereof, are envisaged:

- (a) Apartments
- (b) Child Care Centre
- (c) Consulting Room
- (d) Dwelling

- (e) Educational Establishment
- (f) Hospital
- (g) Hotel
- (h) Licensed Entertainment Premises
- (i) Licensed Premises
- (j) Library
- (k) Office
- (l) Supported Accommodation
- (m) Residential Flat Building
- (n) Restaurant
- (o) Shop
- (p) Student Accommodation
- (q) Tourist Accommodation

PO 1.2

Development that reinforces King William Street as the commercial spine of the City.

DTS/DPF X

None are applicable.

PO X

Development along Pulteney Street and Morphett Street that includes mixed use commercial land uses.

DTS/DPF X

None are applicable.

Activation

PO 2.1

Non-residential land uses at ground floor level such as shops and restaurants that support and maximise pedestrian activity to provide visual interest and positively contribute to public safety, walkability and vibrancy by achieving all of the following:

- (a) building articulation and fenestration;
- (b) frequent window openings;
- (c) land uses that spill out onto the footpath;
- (d) verandahs, balconies awnings and other features that provide weather protection.

None are applicable.

PO 2.2

Land uses typically closed during the day, such as licensed premises and licensed entertainment premises, that support ancillary uses suited to daytime and evening activation at street-level and compatible with surrounding land uses, in particular residential development.

DTS/DPF 2.2

None are applicable.

PO X

Ground and first floor level car parking elements to be sleeved by residential or non-residential land uses (such as shops, offices and consulting rooms) to ensure an activated street frontage.

DTS/DPF X

None are applicable.

PO X

Temporary use of vacant or underdeveloped land for up to 24 months that is not likely to be the subject of long-term development in the short term are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.

DTS/DPF X

None are applicable.

Built form and Character

PO 3.1

A contextual design response that manages differences in scale and building proportions to maintain a cohesive streetscape and frame city streets.

DTS/DPF 3.1

None are applicable

PO X

Buildings designed to have a strong horizontal emphasis with clearly defined and segmented vertical elements. At street level, the use of solid materials will be appropriately balanced with glazed areas to provide visual interest and activity.

DTS/DPF X

None are applicable

PO X

Buildings designed to ensure tall façades are well articulated with finer details that contribute positively to the public realm, including modelled façades, canopies, fenestration and balconies.

DTS/DPF X

None are applicable

PO 3.2

Buildings designed to reinforce the prevailing datum heights and parapet levels of the street through design elements that provide a clear distinction between levels above and below the prevailing datum line.

DTS/DPF 3.2

Except where the site is located within the area identified on **Concept Plan ##** (land within Dev Plan Policy Area 13), buildings be designed to include a podium/street wall height and upper level setback (in the order of 3-6 metres) that:

- (a) relates to the scale and context of adjoining built form;
- (b) provides a human scale at street level;
- (c) creates a well-defined and continuity of frontage;
- (d) gives emphasis and definition to street corners to clearly define the street grid;
- (e) contributes to the interest, vitality and security of the pedestrian environment;
- (f) maintains a sense of openness to the sky for pedestrians and brings daylight to the street; and
- (g) achieves pedestrian comfort by minimising micro climatic impacts (particularly shade/shelter, wind tunnelling and downward drafts).

PO X

Buildings aligned and built to the street frontage, except where a setback is required to provide a contextual response to a heritage place.

DTS/DPF X

None are applicable.

PO X

Strongly modelled building façades that incorporate a vertical composition that reflect the proportions of existing frontages and ensure that architectural detailing is consistent around corners and along minor streets and laneways.

DTS/DPF X

None are applicable.

PO X

Development incorporating art that is accessible to the public and contextually relevant.

DTS/DPF X

None are applicable.

PO X

Development that reinforces North Terrace as an important pedestrian promenade and cultural boulevard.

DTS/DPF X

None are applicable.

PO X

Development on key corner sites at the entrances to the City grid and Squares will create landmark buildings that provide a strong built form edge and pedestrian scale detailing to both street frontages.

DTS/DPF X

None are applicable.

PO X

Innovative and interesting skylines that contribute to the overall design quality, identity and performance of the building.

DTS/DPF X

Incorporate an architectural roof feature within the design of the building by:

- (a) creating a feature that forms part of its overall architectural form and composition;
- (b) ensuring visual compatibility with nearby towers and other structures whilst maintaining architectural distinction;
- (c) providing sky line features capable of being viewed over great distances;
- (d) including modelled parapets and compatibility of podia height at street alignment;
- (e) integrating plant and fixtures within the roof top design; and/or
- (f) incorporating roof top gardens and terraces.

PO 3.3

Development along The Terraces (North, East, South and West) designed to positively contribute to a continuous built form to frame the Park Lands and city edge.

DTS/DPF 3.3

None are applicable.

PO 3.4

Development along the City's boulevards (as identified in Capital City Zone Table 5.1) designed to provide a visible sense of arrival into the City with buildings built to the street boundary at ground level and strongly define junctions where located on a corner site.

DTS/DPF 3.4

None are applicable.

PO 3.5

Development along the City's boulevards (as identified in Capital City Zone Table 5.1) designed to maximise views to the Park Lands and civic landmarks and not clutter existing view corridors to the Adelaide Hills as when viewed from the public realm.

DTS/DPF 3.5

None are applicable.

PO 3.6

Development fronting Victoria, Hindmarsh, Whitmore, Hurtle and Light Squares designed to provide a comfortable pedestrian and recreation environment by enabling direct sunlight to a majority of the square.

DTS/DPF 3.6

Development enables direct sunlight to a minimum of 75% of the landscaped part of each Square at the September equinox.

PO 3.7

Development fronting Victoria, Hindmarsh, Whitmore, Hurtle and Light Squares designed to reinforce the enclosure of the Squares with a continuous built-form with no upper level setbacks.

DTS/DPF 3.7

None are applicable.

PO 3.8

Provision of outdoor eating and drinking facilities associated with cafes and restaurants fronting Victoria, Hindmarsh, Whitmore, Hurtle and Light Squares to positively contribute to activity, and create a focus for leisure, in the squares.

DTS/DPF 3.8

None are applicable.

PO 3.9

Development along minor streets and laneways that is informed by its local context and designed to provide a sense of enclosure, and enable fine-grain uses at street-level to create an intimate, active, inclusive and walkable public realm.

DTS/DPF 3.9

None are applicable.

PO 3.10

Buildings north of the City Main Street Zone designed to enable natural sunlight access to the southern footpath of the Main Street.

DTS/DPF 3.10

Buildings north of the City Main Street Zone incorporate narrow and setback tower elements and provide spaces between buildings.

PO X

Buildings set back at higher levels above the street wall to provide views to the sky and create a comfortable pedestrian environment within important pedestrian areas.

DTS/DPF X

None are applicable.

PO X

Development that maintains the existing built-form pattern and structure of streets and laneways.

DTS/DPF X

None are applicable.

PO X

Development to provide and maintain pedestrian shelter, access and through-site links in accordance with the walking routes identified within Map Adel/1 (Overlays 2, 2A and 3). Such facilities to be appropriately designed and detailed to enhance the pedestrian environment, have regard to the mobility needs of people with disabilities, and be safe, suitable and accessible.

DTS/DPF X

None are applicable.

PO X

Corner buildings adjacent to street intersections and buildings along a high concentration public transport route or along public transport pedestrian routes identified within Map Adel/1 (Overlay 4) designed to provide weather protection for pedestrians in the form of verandahs, awnings or canopies. Where verandahs or awnings block street lighting, additional lighting beneath the canopy is to be incorporated.

DTS/DPF X

None are applicable.

Building Height

PO 4.1

Development not exceeding the maximum building height desired for the location unless, notwithstanding its height, it positively responds to the local context that forms the desired future character of the locality, achieves the desired outcomes of the Zone and the anticipated city form expressed in the *Maximum Building Height Levels Technical and Numeric Variation Overlay* and the *Maximum Building Height Metres Technical and Numeric Variation Overlay*.

DTS/DPF 4.1

Building height is not greater than any maximum, or less than any minimum, specified in the *Maximum Building Height Levels Technical and Numeric Variation Overlay*, the *Maximum Building Height Metres Technical and Numeric Variation Overlay*, or the *Minimum Building Height Levels Technical and Numeric Variation Overlay*.

PO 4.2

Development within the maximum building height specified in the *Building Height Technical and Numeric Variation Overlay* unless it includes additional

design quality, environmental or sustainability features.

DTS/DPF 4.2

Development not exceeding the maximum building height specified in *in Maximum Building Height Levels Technical and Numeric Variation Overlay* unless it has regard to the context that forms the positive character of the locality and is sympathetic to the character of the Zone and the anticipated city form expressed:

- (a) incorporates the retention, conservation and reuse of a building which is a listed heritage place or an existing built form and context that positively contributes to the character of the local area;
- (b) includes more than 15% of dwellings as affordable housing; or
- (c) includes at least:
 - (i) three of the following:
 - A. the development provides an orderly transition up to an existing taller building or prescribed maximum height on the *Maximum Building Height Levels Technical and Numeric Variation Overlay*, the *Maximum Building Height Metres Technical and Numeric Variation Overlay*;
 - B. high quality open space that is universally accessible and is directly connected to, and well integrated with, public realm areas of the street;
 - C. high quality, safe and secure, universally accessible pedestrian linkages that connect through the development site;
 - D. no on site car parking is provided;
 - E. active uses are located on at least 75% of the public street frontages of the building, with any above ground car parking located behind;
 - F. a range of dwelling types that includes at least 10% of 3+ bedroom apartments;
 - G. the building is adjacent to the Park Lands;
 - H. the impact on adjacent properties is no greater than a building of the maximum height on the *Maximum Building Height Levels Technical and Numeric Variation Overlay*, the *Maximum Building Height Metres Technical and Numeric Variation Overlay* in relation to sunlight access and overlooking; and
 - (ii) three of the following sustainable design measures are provided:
 - A. a communal useable garden integrated with the design of the building that covers the majority of a rooftop area supported by services that ensure ongoing maintenance;
 - B. living landscaped vertical surfaces of at least 50m² supported by services that ensure ongoing maintenance;
 - C. passive heating and cooling design elements including solar shading integrated into the building;
 - D. higher amenity through provision of private open space in excess of minimum requirements by 25% for at least 50% of dwellings;
 - E. solar photovoltaic cells on the majority of the available roof area, supported by services that ensure ongoing maintenance.

PO 4.3

Buildings designed to achieve optimal height and floor space yields.

DTS/DPF 4.3

New development has a minimum building height of:

- (a) not less than half of the maximum building height specified in DTS/DPF 5.1;
- (b) 8 building levels (with a minimum of 28m) in the **Central Business Area Sub-Zone (INSERT INTO TNV)**; or
- (c) 3 building levels (with a minimum of 11.5m), or 4 building levels (with a minimum of 15m) on sites fronting South Terrace, in the City Frame Sub-Zone;
- (d) other than where:
- (e) a lower building height is necessary to achieve compliance with the Commonwealth Airports (Protection of Airspace) Regulations;
- (f) the site of the development adjoins the City Living Zone and a lesser building height is required to positively manage the interface with low-rise residential development;
- (g) the site of the development adjoins a heritage place, or contains a heritage place; or
- (h) the development includes the construction of a building in the same, or substantially the same, position as a building which was demolished, as a result of significant damage caused by an event within the previous three years where the new building has the same, or substantially the same, layout and external appearance as the previous building.

Interface

PO 5.1

Development designed to manage the interface with the City Living Zone and the ~~Adelaide Historic (Conservation) Zone~~ in relation to building height, overshadowing, massing, building proportions, traffic impact, overlooking and by avoiding land uses, or intensity of land uses, that adversely affect residential amenity.

DTS/DPF 5.1

Building height does not exceed a maximum height specified in the *Building Height Technical and Numeric Variations Overlay*.

PO 5.2

Parts of a development that exceed the maximum building height specified in DTS/DPF 5.1 and that adjoin the City Living Zone boundaries carefully designed to minimise negative visual and amenity impacts to residential living areas and outdoor open space.

DTS/DPF 5.2

Parts of a building above the maximum building height specified in DTS/DPF 5.1 include additional setbacks, avoid tall sheer walls, centrally locate taller elements, provide variation of light and shadow through articulation and create visual interest.

PO X

Development adjacent to land in the City Living Zone designed to minimise overshadowing on sensitive uses.

DTS/DPF X

Development adjacent to land in the City Living Zone designed to minimise overshadowing on sensitive uses by ensuring:

- (a) north-facing windows to habitable rooms of existing dwellings in the City Living Zone receive at least 3 hours of direct sunlight over a portion of their

surface between 9.00am and 3.00pm on 21 June;

- (b) ground level open space of existing residential buildings in the City Living Zone receive direct sunlight for a minimum of 2 hours between 9.00am and 3.00pm on 21 June to at least the smaller of the following:
 - (i) half of the existing ground level open space; or
 - (ii) 35m² of the existing ground level open space (with at least one of the area's dimensions measuring 2.5 metres).

Demolition

PO X

Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.

DTS/DPF X

None are applicable

Access and Movement

PO 6.1

Access to, and movement within, the Capital City Zone to be universally accessible, easy, safe, comfortable, convenient and legible for people of all abilities, with priority given to pedestrians, and cyclists and public transport.

DTS/DPF 6.1

None are applicable.

PO X

Pedestrian movement based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links.

DTS/DPF X

None are applicable.

Access

PO X

The finished ground floor level of buildings designed to be at grade and/or level with the footpath to provide direct universal pedestrian access and street level activation.

DTS/DPF X

None are applicable.

PO X

Development that contributes to the quality of the public realm as a safe, secure and accessible environment for pedestrian movement. Development designed and detailed to enhance the pedestrian environment for safe and universal access.

DTS/DPF X

None are applicable.

PO X

Development **Core, Primary and Secondary Pedestrian Areas identified within Map Adel/1 (Overlays 2, 2A and 3)**, designed to maintain and enhance continuous footpaths to ensure:

- (a) ensure pedestrian flow is free and uninterrupted; and
- (b) maintain and enhance the pedestrian permeability in areas **identified in Map Adelaide XXX.**

DTS/DPF X

Development designed to reflect the significance of the paths and increase the permeability of the pedestrian network identified within Map Adel/1 (Overlay 2) **NEED OVERLAY MAP and/or Concept Plan** by ensuring:

- (a) pedestrians are not disrupted or inconvenienced by badly designed or located vehicle access ramps in footpaths or streets; and
- (b) vehicle and service entry points are kept to a minimum to avoid adverse impact on pedestrian amenity.

PO X

Development to provide weather protection for pedestrians in the form of verandahs, awnings or canopies with adequate lighting to support pedestrian safety and movement.

DTS/DPF X

Clearance should be aligned to adjoining buildings and above the existing footpath level for a minimum of:

- (a) 3m above the existing footpath level for verandahs, awnings or canopies;
- (b) 2.5m for advertisements; and
- (c) 2.3 m for temporary structures, retractable canopies.

PO 7.1

Vehicular access points associated with multi-level and/or non-ancillary car parks located **outside areas identified outside the Core Pedestrian Area (insert map to reflect Overlay2A)**, designed to minimise disruption to pedestrians, cyclists, public transport and traffic flow.

DTS/DPF 7.1

None are applicable.

PO X

~~On are located on a secondary road frontage, maintains pedestrian amenity or utilise an existing crossover.~~

PO 7.2

Vehicular access points ~~associated with multi-level and/or non-ancillary car parks within the Core and Primary Pedestrian Areas identified in Map Adel/1 (Overlay 2A) located to minimise~~ ~~minimise interruption to street frontages and conflict with public transport, pedestrian and cyclist movement and/or activity on any major pedestrian thoroughfare.~~

~~Locate vehicular access points associated with multi-level and/or non-ancillary car parks away from primary street frontages.~~

PO X

The number of access points on primary city access roads identified in **Map Adel/1 (Overlay 1)** to be limited to minimise traffic and pedestrian inconvenience, interference with public transport facilities and adverse effects on the environment.

DTS/DPF X

None are applicable.

DTS/DPF 7.2

Vehicle access points are not envisaged in the following locations:

- (a) Core and Primary Pedestrian Area **(insert map)**
- (b) on any of the frontages to North Terrace, East Terrace, King William Street, Rundle Street, Hindley Street, Currie Street, Waymouth Street (to the east of Light Square), Victoria Square, Pirie Street (to the west of Pulteney), Light Square, Hindmarsh Square or Grenfell Street or Gawler Place;
- (c) where they conflict with existing or projected pedestrian movement and/or activity;
- (d) where they would cause undue disruption to traffic flow; and
- (e) where it involves creating new crossovers in North Terrace, Rundle Street, Hindley Street, Currie Street and Waymouth Street (east of Light Square), Grenfell Street and Pirie Street (west of Pulteney Street), Victoria Square, Light Square, Hindmarsh Square, Gawler Place and King William Street or access across primary City access and secondary City access roads identified in **Map Adel/1 (Overlay 1). NEED OVERLAY MAP and/or Concept Plan.**

~~DTS/DPF 7.2~~

~~Vehicular access points associated with multi-level and/or non-ancillary car parks not located on any of the frontages to North Terrace, East Terrace, King William Street, Rundle Street, Hindley Street, Currie Street, Waymouth Street (to the east of Light Square), Victoria Square, Pirie Street (to the west of Pulteney), Light Square, Hindmarsh Square or Grenfell Street or Gawler Place.~~

PO X

Development designed to provide and maintain pedestrian shelter, access and through-site links in accordance with the walking routes identified within **Map Adel/1 (Overlays 2, 2A and 3)**. Such facilities are to be appropriately designed and detailed to enhance the pedestrian environment, have regard to the mobility needs of people with disabilities, and be safe, suitable and accessible.

DTS/DPF X

None are applicable.

PO X

Off-street parking in the Core Pedestrian Area identified in Map Adel/1 (Overlay 2A) will only be appropriate where:

- (a) parking is ancillary to another activity carried out on the land;
- (b) it can be provided without loss of pedestrian amenity; and
- (c) it is not separately created on a strata title or community title basis (unless in association with another title held on the site).

DTS/DPF X

None are applicable.

PO X

Multi-level car parks or non-ancillary car parking use of an existing building to only be established where it can be demonstrated that there is a need that is not adequately satisfied by other parking facilities in the locality.

DTS/DPF X

None are applicable.

PO X

Multi-level car parks and short stay public use of ancillary car parking spaces are discouraged at ground floor street frontages in the **Primary Pedestrian Area identified in Map Adel/1 (Overlays 2, 2A and 3)**. Multi-level car parks, short stay public use of ancillary car parking spaces or non-ancillary car parking use of an existing building may be appropriate where it:

- (a) is located away from ground floor street frontages to major streets;
- (b) ensures vehicle access is from the road with less pedestrian activity in instances where a site has access to more than one road frontage;
- (c) has no more than one entry lane and one exit lane;
- (d) has a controlled exit at the property boundary to stop vehicles before travelling across the footpath;
- (e) has no more than one left in and one left out access point;
- (f) avoids access points along high concentration public transport routes identified in Map Adel/1 (Overlay 4); and
- (g) with respect to ancillary parking, is provided at basement level, or undercroft if located behind other uses which provide activity on the street frontage.

In areas outside the Core and Primary Pedestrian Areas identified in Map Adel/1 (Overlays 2, 2A and 3), car parking may be provided to serve a development within the site of the development or elsewhere. Where car parking is provided, it should be:

- (a) provided with vehicle access points that do not cross major walking routes identified in Map Adel/1 (Overlay 2); and
- (b) located away from frontages to major streets wherever possible.

DTS/DPF X

None are applicable.

PO X

Multi-level car parks or non-ancillary car parking use of an existing building should only be established where it can be demonstrated that there is a need which is not adequately satisfied by other parking facilities and public transport services in the locality.

DTS/DPF X

None are applicable.

PO X

Where vehicular access to a development is gained by an existing crossing in the Core Pedestrian Area identified in Map Adel/1 (Overlay 2A), there should be no increase in the number of parking spaces served by the crossing, nor any increase in the number of existing crossings serving that development.

DTS/DPF X

None are applicable.

PO X

Buildings located along primary and secondary access roads sited to avoid the need for vehicles to reverse on to the road (unless the dimensions of the site make this impractical).

DTS/DPF X

None are applicable.

PO Development should have regard to the bicycle routes identified within Map Adel/1 (Overlay 3) by:

- (a) limiting vehicular access points; and
- (b) ensuring that vehicles can enter and leave the site in a forward direction, thereby avoiding reverse manoeuvres.

Advertisements

PO 8.1

Advertisements use simple graphics and be restrained in their size, design and colour.

DTS/DPF 8.1

In Chesser Street, French Street and Coromandel Place advertisements not located more than 3.7m above natural ground level or an abutting footpath or street.

Table 5.1 - City Boulevards

West Terrace, North Terrace, East Terrace, South Terrace, Currie Street, Grenfell Street, Franklin Street, Flinders Street, Grote Street, Wakefield Street, Morphett Street, King William Street and Pulteney Street.

Procedural Matters (PM)

Notification

- (a) development identified as “all other code assessed development” in Capital City Zone Table 3
- (b) development that exceeds the maximum building height specified in DTS/DPF 5.1 where the site of the development is adjacent land to land in a different zone except the City Park Lands Zone.

All classes of performance assessed development are excluded from notification except where they involve any of the following:

City Frame Sub-Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1

A Sub-Zone primarily containing medium to high scale residential development supported by a mix of shops, personal services, restaurants and community and hospitality uses, to create an active and visually continuous edge to the Park Lands and Squares. [\(and buildings to overlook or be oriented towards the Park Lands and Squares and pedestrian and cycle routes\)](#)

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use

PO 1.1

Medium to high scale residential development supported by a mix of shops, personal services, restaurants and community and hospitality uses [at ground level](#).

DTS/DPF 1.1

Development:

- (a) wholly medium to high scale residential types of development, supported accommodation or tourist accommodation; or
(b) medium to high scale residential development types of development with ground level non-residential land uses which comprise:

- Consulting room
- Hotel
- Indoor recreation facility
- Licensed entertainment premises
- Office
- Pre-school
- Personal or domestic services establishment
- Restaurant
- Shop or group of shops

PO 1.2

Additions to existing wholly non-residential development may occur [in limited numbers](#) where it is located and/or designed in a manner that does not unreasonably impact negatively upon adjacent residential land uses.

DTS/DPF 1.2

None are applicable.

PO 1.3

Small scale licensed entertainment premises, nightclubs or bars designed and sited to maintain day and evening activation at street level and where they do not unreasonably negatively impact dwellings contained within the same building or adjacent residential development.

DTS/DPF 1.3

None are applicable.

Design and Appearance

PO 2.1

Development to encourage a uniform streetscape established through a largely consistent front setback. Landscaping and small variations in front setback may occur where they will assist in softening the continuous edge of new built form, reinforce the sense of address and provide a higher amenity streetscape and pedestrian environment which is shaded by street trees and other mature vegetation.

DTS/DPF 2.1

None are applicable.

PO 2.2

Buildings create visual interest and active street frontages to maximise passive surveillance of the streets, squares and / or **Adelaide Park Lands**.

DTS/DPF 2.2

The ground floor primary frontage of buildings provide at least 70% of the street frontage as visually permeable, transparent or clear glazed.

Missing Policy:

- The ground floor of buildings contain a minimum floor to ceiling height of 3.5 metres
- Development on land abutting the City Living Zone avoid tall, sheer walls at the interface by ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper levels
- Catalyst site policies (although the zone policies have absorbed the catalyst site policies)

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Park Lands Zone and associated policy areas. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

City Adelaide Park Lands Zone

Table 1 – Accepted Development Classification

Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'	Accepted Development Classification Criteria
Internal building work Except where any of the following apply: <ul style="list-style-type: none"> • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	7 There will be no increase in the total floor area of the building 8 There will be no alteration to the external appearance of the building.
Shade sail Except where any of the following apply: <ul style="list-style-type: none"> • Local Heritage Place Overlay • State Heritage Place Overlay • Sloping Land Overlay 	22 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system 23 Shade sail consists of permeable material 24 The total area of the sail - does not exceed 40m ² 25 No part of the shade sail will be: <ul style="list-style-type: none"> (a) 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment (b) 5m above ground or floor level (depending on where it is situated) within any other part of the allotment 26 Primary street setback — at least as far back as the building line of the building to which it is ancillary 27 If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m 28 In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment — the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.

<p>Solar photovoltaic panels (roof mounted)</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none">• A Local Heritage Place identified in the Local Heritage Place Overlay	<p>16 Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof</p> <p>17 Panels and associated components do not overhang any part of the roof</p>
--	---

Working Draft

<ul style="list-style-type: none"> A State Heritage Place identified in the State Heritage Place Overlay 	18 Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.
<p>Water tank (underground)</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none"> Sloping Land Overlay 	<p>7 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>8 The tank (including any associated pump) is located wholly below the level of the ground.</p>

Table 2 – Deemed-to-Satisfy Development Classification

<p>Class of Development</p> <p>The following Classes of Development are classified as Deemed-to-Satisfy Development subject to meeting the 'Deemed-to-Satisfy Development Classification Criteria'</p>	<p>Deemed-to-Satisfy Development Classification Criteria</p> <p>Provisions referred to are Deemed-to-Satisfy Criteria</p> <p>Where a development comprises more than one Class of Development the relevant criteria will be taken to be the sum of the criteria for each Class of Development.</p>

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

A unique world renown publicly accessible and well connected open space that forms part of the Metropolitan Open Space System linking the City, inner suburbs, hills and coast that creates a distinctive landscaped park setting supports an extraordinary range of outdoor recreation uses, environmental value, cultural heritage and social connections.

DO 2

Contains a range of unenclosed landscapes including urban address, formal park, sports and recreation, woodland and riparian connected through a variety of movement paths for various modes to access and recreate within the Park Lands. The Adelaide Park Lands provide a variety of levels of activity supporting a range of interfaces to the surrounding urban areas, comfort and amenity levels. Ranging from mirco, small, medium, large to major hubs supporting passive recreation through to large events and major sporting events. —passive and active recreational activities with a high level of amenity, including a safe and connected walking and cycling network, natural areas, sporting fields and club facilities, formal cultural gardens, public artwork and passive recreation areas, as well as opportunities to support a variety of temporary events, such as festivals, concerts and sporting events.

DO 3

The six city squares include Hindmarsh Square, Hurtle Square, Whitmore Square, Victoria Square, Light Square and Wellington Square. These squares provide a formal park setting providing a focal point for the outdoor recreational needs and social connections of city residents, workers and visitors. Access to the squares will be progressively strengthened to remove the barriers to access by the existing road and car parking networks.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A diverse range of open space, recreation and sporting activities.

DTS / DPF 1.1

Development comprises one or more of the following land uses:

Conservation work

Multi-purpose tourism, cultural, community and/or recreational use ancillary to an outdoor recreation use

Cemetery except within existing site boundaries

Play facilities

Outdoor Recreation area (informal and formal)

Ancillary Shop

Ancillary Restaurant

Special Events

Hotel except within existing site boundaries

Education establishment within existing site boundaries

Licensed premises ancillary to a multi-purpose recreation facility

Sporting field or club facility

Structures associated with a public facility such as bike and vehicle parking, picnic / barbeque area, shelter and toilet.

PO XX

Land uses other than those listed in DTS/DPF 1.1 is inappropriate

PO XX

Development within the Park Lands provides a range of publicly accessible land uses for more than one user group.

DTS/DPF XX

None are applicable

PO 1.2

Shops and restaurants ~~that in appropriate areas of the Park Lands:~~

- (a) providing a range of goods and services for the users of activities in the Park Lands and where such goods and services are not otherwise conveniently located; and
- (b) positively contributing to Park Lands activation ~~and setting without being visually prominent.~~

DTS / DPF 1.2

Shops and restaurants ~~that are:~~

- (a) ancillary to a recreational use, club ~~and or~~ sporting facility;
- (b) temporary ~~except where located~~ located in area marked XXX on map (reference park numbers, include Botanic Park, Eastern Park Lands, Southern Park Lands Policy Areas, Western Park Lands Policy Areas, River Torrens West Policy Area Area Marked F on Map Adelaide 48)
- (c) not exceeding 50 ~~100~~m² in gross leasable floor space; and
- (c) not increasing the building footprint.

PO 1.3

Special events and formal recreation uses of a temporary or transient nature limiting their impacts on the amenity of residential areas and the recreational use of the open and natural character of the Park Lands.

DTS/DPF 1.3

None are applicable

PO 1.4

The use of land or buildings to house temporary public service depots or site compounds associated with public infrastructure, Park Lands management and construction activities where the duration and scale of impacts to the Park Lands and adjacent Zones are minimised.

DTS / DPF 1.4

Temporary public service depots or site compounds:

- (a) occupy land for no longer than 3 months; and
- (b) ensure waste litter and water are contained on site.

PO 1.5

The adaptive reuse of existing buildings to ~~where~~ development:

- a) supports higher utilisation of buildings by multiple community groups,
- b) improves the design quality and appearance of the building,
- c) minimises the need to increase the building footprint,
- d) progressively returns alienated land to the Park Lands uses; and
- e) and positively contributes to the cultural value, amenity and activation of the Park Lands.

DTS/DPF 1.5

None are applicable

Built Form and Character

PO XX

Development comprises one or more of the following built form:

Advertising
Art Sculptures
Bridges to support pedestrian and cycling infrastructure
Bike parking
Conservation works
Earthworks
Golf course
Landscaping and associated works
Lighting
Monuments
Multi-purpose recreation, tourism, cultural and community buildings and structures
Outbuildings
Public toilets
Shade structures
Temporary advertising
Tree Damaging Activity
Vehicle parking

Development

PO XX

Development in the Squares that supports the outdoor relaxation, enjoyment and leisure of the City's population. The landscaped areas should be enlarged to support visual and functional amenity. Development should:

- a) Provide ease of movement for pedestrian and cyclists accessing the squares
- b) Reduce and rationalise car parking and vehicular areas to enhance the squares visual and functional amenity as premier public spaces

c) Retain and enhance large canopy trees

d) Minimise buildings, structures, utilities and service facilities

e) Incorporate high quality design

PO 1.6

New Development should that seek to reduces and minimises the building footprint and hard surfaces on the landscaped and open setting of the Park Lands and should only be considered where:

- (a) it is ancillary to the use and enjoyment of open space;
- (b) rationalises and reduces the overall building footprint within the Park Lands the development is the replacement of an existing building;
- (c) built form buildings provides a low scale (up to 3 storeys) and contextual design response that complements the heritage values, open space function and natural and cultural character of the area;
- (d) important views are retained;
- (e) enhances natural creek channels and water courses as major landscape and stormwater management features;
- (f) built form is high quality and complements its setting when viewed from all perspectives; the building design contextual and of high quality so that it complements its setting when viewed from all perspectives;
- (g) provides complementary recreation, sporting or tourism facilities that could not otherwise have been provided in the area zone; and
- (h) the building is designed to be enable multi-use purpose and can be used by more than one user by different group.

DTS/DPF 1.6

None are applicable

PO 1.7

The redevelopment of existing buildings and structures within the following sites in a way that is ancillary and complementary to existing uses, including:

- (a) Torrens Lake – boating facilities
- (b) Police Barracks and Old Adelaide Gaol – adaptation of existing buildings and supportive public uses
- (c) Adelaide and Botanic High Schools – education and related facilities
- (d) National Wine Centre – Multi-purpose event complex – tourism related facilities within the existing site boundaries
- (e) Adelaide Botanic Garden – restaurants, function facilities and passive recreation facilities
- (f) Adelaide Zoo – a range of ancillary activities that add to the zoo as a key city attraction
- (g) Golf Course and club house – club facilities and restaurants
- (h) West Terrace Cemetery – chapel, visitor and interpretative centre and operational facilities
- (i) North Adelaide and Adelaide Central Train Station – rail services facilities
- (j) Adelaide Aquatic Centre – Consolidate and replace existing buildings with recreational sporting, clubrooms and associated administrative functions

DTS/DPF 1.7

None are applicable

~~PO 1.8~~

~~Development at the Adelaide Aquatic Centre site to consolidate and replace existing buildings with recreational sporting clubrooms, facilities and associated administrative functions.~~

DTS/DPF 1.8

None are applicable

PO 1.9

Development of public infrastructure is appropriate within existing roads, railway corridors or the O-Bahn corridor where it does not create any additional impact on the amenity of the Adelaide Park Lands and enhances pedestrian access through the Park Lands.

DTS/DPF 1.9

None are applicable

~~Built Form and Character~~

~~PO 2.1~~

~~A contextual design response that complements the heritage values, open space function, natural and cultural character of the area. and is suitably screened by landscaping~~

DTS/DPF 2.1

None are applicable.

PO 2.2

Development includes lighting that positively contributes to wayfinding, public safety, security, activity and amenity within the Park Lands.

DTS/DPF 2.2

None are applicable.

PO 2.3

Utility and supply services, holding tanks, sub-stations, power lines and other utility facilities that are unobtrusive and where practicable placed underground.

DTS/DPF 2.3

None are applicable.

PO 2.4

Development sited and designed to minimise negative amenity impacts on residential uses. in the City Living Zone.

DTS/DPF 2.4

None are applicable

PO 2.5

Development sited and designed to reinforce the National Heritage values, landscape character and cultural (indigenous and post-colonial) heritage values.

PO 2.5

New monuments that retain from the heritage values and contribute to enjoyment of the Park Lands.

Natural / Cultural Landscape Character

PO 3.1

Development that protects and enhances and improves public access to: areas of special landscape character including (identified in Concept Plan XX X(To be prepared):

- a) the avenue of Moreton Bay Figure trees along War Memorial Drive;
- b) a group of trees at the north west corner of Park No 2;
- c) the Casuarinas in Park 3 adjacent to Main North Road;
- d) the Pinus canariensis in Park 4;
- e) the Araucarias in Parks 4 and 5 adjacent to LeFevre Road;
- f) a stand of trees in Park 6 along LeFevre and Kingston Terraces;
- g) the avenue of Palms along Robe Terrace;
- h) the olive groves in Parks 7 and 8 between Mann Road and Park Road;
- i) the stand of Eucalyptus trees adjoining MacKinnon Parade west;
- j) the mixed exotic and Australian native plantings surrounding the University Oval in Park 12.; the formal character of the avenue of Plane trees in Botanic Park and in Frome Road;
- k) the avenue of Moreton Bay Figure trees in the Botanic Gardens;
- l) the significant avenue of Plane trees and significant individual trees in Park 14;
- m) the Kensington Gardens tramway embankment;
- n) a central row of Peppercorn trees and Eucalypts along the tributary and Wakefield Road in Park 15;
- o) the Olive Grove between the tributary and East Terrace in Park 15;
- p) the dominant groups of Eucalypts at the northern, southern, western and Fullarton Road edges of Park 16;
- q) the Olive Grove in the north western corner of Park 16;
- r) the avenues of trees along the cycle paths of Park 16;
- s) the Glover Playground;
- t) the remnant native vegetation to the area south of Victoria Racecourse;
- u) the old Engineering and Water Supply Reservoir mound within the Southern Park Lands;
- v) Veale Gardens;
- w) The historic Glenside carriage ways row of stately elm trees;
- x) areas of remnant native vegetation;
- y) the olive groves adjacent the Police Barracks in Park 27 South;
- z) the stand of Eucalypts between the railway and the river in Park 27 north;
- aa) the trees, particularly the Moreton Bay Figs on the northern side of the Adelaide Oval, together with buildings of heritage value;
- bb) the Pioneer Women's Memorial Garden in Park 12;
- cc) the Palm trees surrounding the Parade Ground in Park 12;
- dd) the Women's War Memorial Gardens;
- ee) the avenue of Elms along Victoria Drive;
- ff) areas and items of indigenous;
- gg) areas of post-colonial cultural heritage value significance.
- hh) the Pennington Gardens (west);
- ii) Osmond Gardens;
- jj) Himeji Gardens; and
- kk) the Creswell Gardens.

DTS/DPF 3.1

None are applicable.

PO 3.2

Development is sited and designed to maintain the visual distinction between the predominantly open landscape character of the Park Lands and the built-form of adjacent Zones.

DTS/DPF 3.2

None are applicable.

PO 3.3

Development sensitive to native biodiversity and incorporates ways to protect and improve biodiversity through its design.

DTS/DPF 3.3

None are applicable.

~~PO 3.4~~

~~Development enhances natural creek channels and watercourses as a major landscape and stormwater management feature.~~

DTS/DPF 3.4

None are applicable.

Advertisements

PO 4.1

Small permanent advertisements or advertising hoardings only in association with an existing or approved uses within the Park Lands building.

DTS/DPF 4.1

None are applicable.

PO 4.2

Temporary advertisements relating to a local event of a religious, educational, cultural, social or recreational character or to an event of a political character limited in size and number and not detract from the open and natural character of the zone.

DTS / DPF 4.2

~~Temporary~~ Advertisements:

- (a) not exceeding 2m² on a building or site;
- (b) not displayed more than 1 month prior to the event and 1 week after the event concludes except for an advertisement that relates to a federal, State or local government election; and
- (c) do not:
 - (i) move or flash;
 - (ii) reflect light so as to be an undue distraction to motorists;
 - (iii) be internally illuminated; or
 - (iv) be used to principally advertise brands or products.

Fencing

PO XX

Additional permanent fencing is not envisaged except around play spaces where the open character is maintained.

DTS/DPF XX

None are applicable

Movement, access and parking

PO XX

Development provides universal public access to the Park Lands

PO 5.2

Development should support the open space values and activation of the Adelaide Park Lands by avoiding car parking on the Park Lands. Additional vehicle car parking should only be provided where development has provided adequate:

- Walking infrastructure
- Cycling infrastructure
- Optimisation of the public transport network to access the Park Lands
- Utilisation of on-street car parking
- Utilisation of drop off and pick up areas
- Utilisation of shared vehicle parking within existing car parks
- Rationalisation of existing vehicle parking
- Utilising existing road network

Development should support accessible vehicle access by siting buildings close to existing road networks to reduce the need for access roads and to utilise the on-street network where possible.

DTS/DPF XX

Development does not restrict public access to land within the zone and ensures the Park Lands are universally accessible.

DTS/DPF 5.2

None are applicable.

PO 5.3

Car parking in the zone should be reduced and limited to only serve activities within the Park Lands unless otherwise permitted in the relevant sub-zone.

DTS/DPF XX

None are applicable.

PO XX

Rationalisation and reconfiguring of existing car parking should result in no increase to existing parking in Park 1, Park 2, Park 13 and Park 14, Park 16 and Park 23.

DTS/DPF XX

None are applicable.

PO 5.4

Public infrastructure that provides shared pedestrian and cycling links that maintain and enhanced connectivity throughout the Park Lands

DTS/DPF 5.4

None are applicable.

PO 5.5

Development to support walking and cycling as primary modes of transport to and within the Park Lands.

DTS/DPF 5.5

None are applicable.

DTS/DPF 5.3

None are applicable.

PO 5.4

Public vehicle access limited to existing roads.

DTS/DPF 5.4

None are applicable.

Procedural Matters (PM)

Notification of Performance assessed development

Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.

All classes of development are excluded from notification except where it involves any of the following:

- (a) the site of the development is adjacent land to land in a different zone
- (b) development identified as "all other code assessed development" in Adelaide City Park Lands Zone Table.

~~Eastern Park Lands Sub Zone~~

~~Assessment Provisions (AP)~~

~~Desired Outcomes (DO)~~

~~DO 1~~

~~Formal and informal recreation that provides tourism, education, research and informal recreational enjoyment including, the Zoological Gardens, Botanic Gardens, Botanic Park, the National Wine Centre and Victoria Park, carefully managed to sensitively balance the interaction between the built, natural and landscaped environment.~~

~~Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria~~

~~Land Use and Intensity~~

~~PO 1.1~~

~~A range of community, tourism, educational and recreational uses for the wider community.~~

~~DTS/DPF 1.1~~

~~Development comprises one or more of the land uses listed in DTS 1.1 of the Zone.~~

~~Built Form and Character~~

~~PO 2.1~~

~~National Wine Centre contained within its existing site boundaries and that will not result in an increase in~~

total floor area.

DTS/DPF 2.1

None are applicable.

PO 2.2

The upgrading or replacement of existing buildings, structures and facilities in the Zoological and Botanic Gardens minimises negative visual impact as when viewed from outside of the subzone.

DTS/DPF 2.2

None are applicable.

PO 2.3

Maintain or improve views to the Zoo from the River Torrens/ Karrawirra Parri Valley when fencing, structures or buildings are upgraded or replaced.

DTS/DPF 2.3

None are applicable.

PO 2.4

Fencing to the northern boundary of the Botanic Gardens to improve visual continuity and access between the Botanic Gardens and Botanic Park and visually improves this aspect to the Botanic Garden.

DTS/DPF 2.4

None are applicable.

Movement and Access

PO 3.1

Maintain car parking for Park Lands users and visitors at the following locations:

- (a) in designated car parks along the Hackney and Fullarton Road frontages; and
- (b) limited parking on the inner racecourse track area at Victoria Park (in an area south of the cycle track east of Halifax Street) but only when races and special events are being held.

DTS/DPF 3.1

None are applicable.

Adelaide Oval Sub Zone

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1

A sub zone providing a centre for important outdoor civic, leisure and cultural functions for the City based on Elder Park, Adelaide Oval and Memorial Drive tennis courts with development of the River Bank as the premier cultural and tourism area of the City.

The premier sporting and tourism area of the City supporting large scale outdoor civic, leisure, sporting and cultural activities of national significance, incorporating Adelaide Oval, Adelaide Riverbank, Elder Park, Memorial Drive tennis precinct and the Torrens Parade Ground.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A vibrant mix of recreational facilities to meet the needs of the state.

~~DTS/DPF 1.1~~

~~Development comprises one or more of the land uses listed in DTS 1.1 of the Zone.~~

~~PO 1.2~~

~~Community, cultural, tourism, shop, restaurant or licensed premises located adjacent to the southern bank of the River Torrens between Montefiore Road and King William Road.~~

Working Draft

DTS/DPF 1.2

None are applicable

PO 1.3

Special events on Elder Park and Adelaide Oval activate this precinct.

DTS/DPF 1.3

None are applicable

PO 1.4

Community, cultural and tourism uses in association with the Torrens Training Depot and Parade Ground.

DTS/DPF 1.4

None are applicable

Built Form and Character

PO 2.2

Development of the Adelaide Oval:

- (a) — protects and maintains the cultural significance and heritage value of Adelaide Oval; and
- (b) — continues the distinct built form character of Adelaide Oval;

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings associated with the continuation of formal recreational uses associated with Adelaide Oval and Memorial Drive within existing site boundaries.

DTS/DPF 2.3

None are applicable.

City Riverbank Zone

Table 1 — Accepted Development Classification

<p>Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'</p>	<p>Accepted Development Classification Criteria</p>
<p>Internal building work Except where any of the following apply:</p> <ul style="list-style-type: none"> • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	<p>9— There will be no increase in the total floor area of the building</p> <p>10— There will be no alteration to the external appearance of the building.</p>
<p>Shade sail</p>	<p>29— The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p>

Working Draft

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, City Frame and City Living Policy Area 30. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

City Riverbank Zone

Table 1 – Accepted Development Classification

Class of Development The following Classes of Development are classified as Accepted Development subject to meeting the 'Accepted Development Classification Criteria'	Accepted Development Classification Criteria
Internal building work Except where any of the following apply: <ul style="list-style-type: none"> • A Local Heritage Place identified in the Local Heritage Place Overlay • A State Heritage Place identified in the State Heritage Place Overlay 	9 There will be no increase in the total floor area of the building 10 There will be no alteration to the external appearance of the building.
Shade sail	29 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system

<p>Except where any of the following apply:</p> <ul style="list-style-type: none"> Local Heritage Place Overlay State Heritage Place Overlay Sloping Land Overlay 	<p>30 Shade sail consists of permeable material</p> <p>31 The total area of the sail - does not exceed 40m²</p> <p>32 No part of the shade sail will be:</p> <p>(a) 3m above ground or floor level (depending on where it is situated) at any place within 900mm of a boundary of the allotment</p> <p>(b) 5m above ground or floor level (depending on where it is situated) within any other part of the allotment</p> <p>33 Primary street setback – at least as far back as the building line of the building to which it is ancillary</p> <p>34 If any part of the sail will be situated on a boundary of the allotment, the length of sail along a boundary does not exceed 8m</p> <p>35 In a case where any part of the sail or a supporting structure will be situated on a side boundary of the allotment – the length of the sail and any such supporting structure together with all relevant walls or structures located along the boundary will not exceed 45% of the length of the boundary.</p>
<p>Solar photovoltaic panels (roof mounted)</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none"> A Local Heritage Place identified in the Local Heritage Place Overlay A State Heritage Place identified in the State Heritage Place Overlay 	<p>19 Panels are installed parallel to the roof of a building and with the underside surface of the panel not being more than 100mm above the surface of the roof</p> <p>20 Panels and associated components do not overhang any part of the roof</p> <p>21 Does not apply to system with a generating capacity of more than 5MW that is to be connected to the State's power system.</p>
<p>Temporary Storage of Council Equipment</p>	<p>Appropriate measures are incorporated for:</p> <p>(a) dust control;</p> <p>(b) appropriate screening including landscaping;</p> <p>(c) containment of litter and waste; and</p> <p>(d) appropriate securing of the site.</p>
<p>Water tank (underground)</p> <p>Except where any of the following apply:</p> <ul style="list-style-type: none"> Sloping Land Overlay 	<p>9 The development will not be built, or encroach, on an area that is, or will be, required for a sewerage system or waste control system</p> <p>10 The tank (including any associated pump) is located wholly below the level of the ground.</p>

Table 2 – Deemed-to-Satisfy Development Classification

Class of Development The following Classes of Development are classified as Deemed-to-Satisfy Development subject to meeting the 'Deemed-to-Satisfy Development Classification Criteria'	Deemed-to-Satisfy Development Classification Criteria Provisions referred to are Deemed-to-Satisfy Criteria Where a development comprises more than one Class of Development the relevant criteria will be taken to be the sum of the criteria for each Class of Development.			
	Zone	General Development Policies	Subzone (applies only in the area affected by the Subzone)	Overlay (applies only in the area affected by the Overlay)
Change of use in an existing building (that does not involve any building work or modification that would otherwise require planning consent) from: <ul style="list-style-type: none"> a shop to an office or consulting room an office or consulting room to a shop except within Government House Sub-Zone. Table 4 – Restricted Development Classification

Class of Development	Exclusions
The following Classes of Development are classified as Restricted subject to any 'Exclusions'	
Nil	

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Exemplary design quality and architecture that is contemporary and innovative, respectful of the heritage buildings, Park Lands setting and civic functions of the locality.

DO 2

A fine grained precinct with a quality public realm that is inviting and comfortable for pedestrians.

DO 3

Strong visual and physical connections between important buildings, public spaces, the Park Lands and other key destinations.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A diverse range of land uses that connect the city centre to the natural environment of the River Torrens and Park Lands with clusters of related activities, such as:

- (a) clinical health, training, education and research;
- (b) entertainment, tourism and accommodation;
- (c) education and administration;
- (d) innovative science and employment; and
- (e) Community and cultural institutions.

DTS/DPF 1.1

Development comprises one or more of the following land uses:

- (a) Advertisement
- (b) Community centre
- (c) Consulting room
- (d) Office
- (e) Convention centre
- (f) Educational establishment
- (g) Entertainment venue
- (h) Helicopter landing facility
- (i) Hospital
- (j) Hotel
- (k) Licensed premises in association with hotel, restaurant, shop or the like
- (l) Land division
- (m) Light industry (including high technology and research based activity)
- (n) Motel
- (o) Restaurant
- (p) Shop
- (q) Serviced apartments
- (r) Tourist accommodation.

PO X

Temporary use of vacant or underdeveloped land that is not likely to be the subject of long-term development in the short term. Temporary uses of vacant or underdeveloped land are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.

DTS/DPF X

None are applicable.

Built Form and Character

PO 2.1

Building heights within the zone providing an orderly transition in scale, with lower buildings located towards the Adelaide Park Lands, Adelaide Botanic Garden and River Torrens and taller buildings towards North Terrace and other City Boulevards identified in City Riverbank Zone Table 5.1.

DTS/DPF 2.1

None are applicable

PO 2.2

Development:

- (a) contributes to the activation of the public realm by presenting an attractive human scaled pedestrian-oriented frontage at ground level that adds interest, ~~and~~ vibrancy ~~and~~ passive surveillance;
- (b) that incorporates well defined and accessible public spaces that provide civic entries to the Zone;
- (c) contributes to pedestrian comfort by minimising micro climatic impacts;
- (d) maintains a sense of openness to the sky for pedestrians and allow sunlight access to the public realm, particularly plaza areas during the Spring and Autumn; ~~and~~
- (e) provides a clear sense of address to each building;
- (f) compatible with the topography of the site and change in character from a strong city edge on the southern side of North Terrace to the landscaped setting provided by the River Torrens and Adelaide Park Lands; and
- (g) designed to respect the landscape setting and biodiversity provided by the Torrens Valley and Adelaide Park Lands.

DTS/DPF 2.2

None are applicable.

PO X

Development that provides strong visual and physical connections between important buildings, public spaces and the leisure and recreation activities of the River Torrens and Park Lands.

DTS/DPF X

None are applicable.

PO 2.3

Development reinforces the grand boulevard character of North Terrace and King William Road, by reflecting the patterns of landscaped spaces and built form, building proportions and scale.

DTS/DPF 2.3

None are applicable.

PO 2.4

Coordinated development providing public spaces and landscaping, including deep plantings, that soften the dominance of buildings, provide a range of spaces that are suitable for group meetings and social activities and spaces for passive enjoyment.

DTS/DPF 2.4

None are applicable.

PO 2.5

Pedestrian shelter and public art designed as an integral part of built form, open space and landscaping.

DTS/DPF 2.5

None are applicable.

PO 2.6

The contribution of heritage buildings enhanced by ensuring:

- (a) buildings can be adapted and reused for modern purposes while protecting important heritage fabric
- (b) views and physical connections to heritage buildings and their important heritage features is maintained
- (c) the ground level interface with heritage buildings incorporates publicly accessible spaces and active land uses that support public access where appropriate.

DTS/DPF 2.6

None are applicable.

Demolition

PO

Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.

DTS/DPF

None are applicable

Advertising

PO 3.1

Advertisements designed to achieve an overall consistency of appearance and be of a type, scale and image that complement the zone.

DTS/DPF 3.1

None are applicable.

Movement, parking and access

PO 4.1

Development designed to encourage pedestrian/bicycle circulation (as illustrated in Rb/2 and 3) at the North Terrace level and create or maintain:

- (a) connections between North Terrace and the River Torrens linear park at key pedestrian focal points;
- (b) east-west connections through the city; and
- (c) existing pedestrian and cycling connections, including the Gawler Greenway, Outer Harbor Greenway and River Torrens Linear Park trail to be maintained.

DTS/DPF 4.1

None are applicable.

PO 4.2

A central pedestrian pathway (as illustrated within Figures Rb/1, 2, and 3) designed as a single plane surface and maintained to:

- (a) allow people to walk and ride through and within the Zone from East to West and connect with the North to South pathways; and
- (b) link key buildings and public areas within the Zone.

DTS/DPF 4.2

None are applicable.

PO 4.3

Pedestrian and bicycle movement prioritised and designed to be free from vehicle conflict.

DTS/DPF 4.3

None are applicable.

PO 4.4

Development to provide a safe night-time environment along streetscapes, pedestrian and cycle paths and building surrounds by the arrangement of buildings and active building frontages that enhance casual surveillance and provide appropriate lighting and clear lines of sight.

DTS/DPF 4.4

None are applicable.

PO X

Development to provide the majority of car parking spaces in undercroft/basement areas. Vehicle parking provided at ground level or above, designed to:

- (a) minimise the extent of parking visible from public areas to that which is required for emergency service vehicles, temporary event parking and set down (drop off) functions;
- (b) ensure they are not located along ground floor street frontages or detract from the provision of active street frontages; and
- (c) incorporate façade treatments along major street frontages that are sufficiently enclosed and detailed to complement neighbouring buildings and screen vehicle parking from view from public areas and other buildings.

DTS/DPF X

None are applicable.

PO X

Adequate car parking to be provided within the site area of the development to meet the demand generated by the development as Table 1 – General Off-Street Car Parking Requirements; and

- (a) car parking rates lower than the minimum may be appropriate where there is readily accessible and frequent public transport in the locality or it can be demonstrated that a lower provision is warranted, such as for the following reasons:
 - (i) the nature of development;
 - (ii) existing heritage places on or adjacent to the development site which dictates the development of the site in a manner which hampers the provision of on-site parking;
 - (iii) the opportunity to exploit shared car parking areas between uses based upon compatible hours of peak operation;
 - (iv) use of a car share scheme; or
 - (v) suitable arrangements for any parking shortfall to be met elsewhere or by other means.

DTS/DPF X

None are applicable.

Water Management

PO X

Development to incorporate a range of water sensitive urban design measures that minimise water quality impacts on the River Torrens, such as stormwater treatment, harvesting and reuse.

DTS/DPF X

None are applicable.

Table 5.1 – City Boulevards

North Terrace, Morphett Street and King William Road.

Procedural Matters (PM)

Notification of Performance assessed development

Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.

All classes of development are excluded from notification except where it involves any of the following:

- (a) the site of the development is adjacent land to land in a different zone
- (b) development identified as “all other code assessed development” in Riverbank Zone Table 3
- (c) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Health sub zone
- (d) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Entertainment sub zone
- (e) development exceeding the maximum building height specified in DTS/DPF 2.3 of the Innovation sub zone
- (f) development exceeding the maximum building height specified in DTS/DPF 2.4 of the Entertainment sub zone

Health Subzone

Assessment Criteria (AC)

Desired Outcomes (DO)

DO 1

A health precinct that creates an identifiable and unified city precinct with strong connections to the Torrens River, North Terrace, the Royal Adelaide Hospital and wider city.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A range of health and education facilities that support the establishment of an internationally recognised health and biomedical precinct.

DTS/DPF 1.1

Land uses such as health centre, lighting for night operations and associated communication equipment for helicopter landing facility are envisaged. The types of development envisaged within the zone, except:

- (a) Community centre;
- (b) Convention centre;
- (c) Entertainment venue;
- (d) Hotel;
- (e) Serviced apartments; and
- (f) Tourist accommodation

PO X

Buildings along Montefiore Road (between North Terrace and the central pathway shown in Figures Rb/2 and 3) will contain a range of uses that are complementary to both the Health SubZone and the adjoining

Entertainment SubZone and will include temporary accommodation, tourist accommodation, conference facilities, hotels and serviced apartments and designed to integrate and activate the street frontage and provide direct pedestrian access from Montefiore Road, Festival Drive and North Terrace

Built Form and Character

PO 2.1

Buildings that have a positive scale relationship to the North Terrace edge of the Capital City Zone and provide a grand entrance to the City from the west.

DTS/DPF 2.1

Buildings fronting North Terrace not exceeding 15 building levels and 53m in building height.

PO 2.2

Where buildings exceed 15 building levels or 53m in building height they will be of exemplary design and meet the Commonwealth Airports (Protection of Airspace) Regulations.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings north of the central pathway (illustrated within Figure Rb/2 and 3) designed to provide an active edge to the River Torrens and of a low scale commensurate with the landscape setting.

DTS/DPF 2.3

None are applicable.

PO 2.4

Development to provide a satisfactory interface to roads and railways by addressing issues of access, safety, security, noise, air emissions and vibration so that:

- (a) the effective and efficient operation of the road system and rail service adjacent to the Zone is not detrimentally affected; and
- (b) the potential for adverse impacts on hospital occupants and activities as a result of road traffic and the operation of rail services adjacent to the Zone is minimised.

DTS/DPF 2.4

None are applicable.

PO 2.5

Development sited and designed to enable the continued operation of rail and road services within and adjacent to the Zone.

DTS/DPF 2.5

None are applicable.

Movement, Parking and Access

PO X

Buildings designed to integrate and activate the street frontage and provide direct pedestrian access from Montefiore Road, Festival Drive and North Terrace.

DTS/DPF X

None are applicable.

PO X

Buildings are to be serviced by vehicular access points from North Terrace and Port Road that provide for convenient, safe and legible controlled access for ambulances, emergency drop-off for the public and general goods and services vehicles, as well as vehicle access for patient drop-off, and visitor and staff parking.

DTS/DPF X

None are applicable.

Entertainment Subzone

Assessment Criteria (AC)

Desired Outcomes (DO)

DO 1

A prominent, vibrant and safe public plaza that provides a focal point for the Riverbank precinct and is supported by a vibrant mix of land uses that encourage use by city workers, residents, families, students, youth, children and tourists.

DO 1

A principal public space for significant public events that caters for large numbers of visitors and events but also safe and convivial when lesser numbers of people are present. Strong visual permeability through the site will be important in maintaining the legibility of this place as part of the City and Riverbank.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Development of a range of cultural, parliamentary, office, entertainment, retail, public arts and cultural activities and conference and ancillary land uses.

DTS/DPF 1.1

The types of development envisaged include: ~~within the zone, except~~

- (a) Auditorium;
- (b) Casino;
- (c) Carparking;
- (d) Cinemas;
- (e) Concert halls;
- (f) Conference centres;
- (g) Cultural facility;
- (h) Licensed premises and Licensed entertainment premises;
- (i) Motels;
- (j) Public spaces;
- (k) Theatres; and
- (l) Tourist accommodation.
- ~~(m) Community centre~~
- ~~(n) Educational establishment~~
- ~~(o) Helicopter landing Facility~~
- ~~(p) Hospital~~
- ~~(q) Light industry~~
- ~~(r) Motel~~

PO X

Land uses such as cafes, restaurants and small-scale specialty shops at ground level that activate public spaces during the day and evening.

DTS/DPF X

None are applicable.

PO 1.2

Residential development only where it is demonstrated that noise, light spill and other impacts on residential amenity associated with the envisaged mix of uses and a vibrant public plaza can be

adequately addressed.

DTS/DPF 1.2

None are applicable.

Built Form and Character

PO X

Development that is designed to maintain views and showcase, respect and build on existing landmark and heritage buildings including the Festival Centre, Parliament Houses, Convention Centre, Adelaide Railway Station and Casino.

DTS/DPF X

None are applicable.

PO X

The architectural expression of the built form will respond to the rich character of the local setting with contemporary juxtapositions providing new settings for heritage places.

DTS/DPF X

None are applicable.

PO X

Regeneration of the existing Festival Plaza (Southern Plaza) and car park to address structural and functional deficiencies to reinforce and enhance the area as the primary cultural and entertainment hub and provide high quality spaces for public use, including significant public events.

DTS/DPF X

None are applicable.

PO 2.1

Building heights providing the greatest level of intensity and scale south of the central pathway.

DTS/DPF 2.1

Buildings south of the central pathway not exceeding 20 building levels and 71m in building height.

PO 2.2

Where buildings exceed 20 building levels or 71m in building height they will be of exemplary design, located south of the central pathway and meet the Commonwealth Airports (Protection of Airspace) Regulations.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings north of the central pathway designed to provide an active edge to the River Torrens and of a low scale commensurate with its landscape setting.

DTS/DPF 2.3

None are applicable.

PO 2.4

Buildings along King William Road designed to enable views through to important State Heritage buildings and the public plaza area.

DTS/DPF 2.4

None are applicable.

PO 2.5

A new public plaza developed on a single plane minimising grade changes across the site so as to maximise pedestrian connectivity.

DTS/DPF 2.5

None are applicable.

PO X

Incorporate safe and convenient pedestrian paths.

DTS/DPF X

None are applicable.

Innovation Subzone (SUBJECT OF THE DPA – CoA comments were submitted as part of the consultation process)

Assessment Criteria (AC)

Desired Outcomes (DO)

DO 1

An innovation precinct accommodating a range of commercial, educational and research activities supported by a mix of compatible employment generating land uses including tourism, hospitality, cultural, entertainment and retail activities.

DO 2

A range of low to high rise buildings within a landscaped setting that respond to heritage buildings on the site and transition down in height and scale towards the Adelaide Park Lands and the Adelaide Botanic Garden.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

Development of innovative commercial, educational and research activities supported by a mix of compatible employment generating land uses.

DTS/DPF 1.1

The types of development envisaged within the zone.

PO 1.2

Small scale retail development to meet the day to day needs of workers and visitors to the precinct.

DTS/DPF 1.2

Shops not exceeding 250m² total gross leasable floor area.

PO 1.3

A range of small to medium scale services and facilities serving the area such as child care facilities, personal services establishment and the like.

DTS/DPF 1.3

None are applicable.

PO 1.4

Higher impact land uses such commercial development (including high technology and research based activity) clustered in key nodes where compatible with adjoining uses.

DTS/DPF 1.4

None are applicable.

Built Form and Character

PO 2.1

A high standard of contemporary architectural design, which incorporates vertical rhythms, proportions, compositions, materials, parapet or balcony heights. A combination of solid and glass finishes used to

produce visual interest on all sides.

DTS/DPF 2.1

None are applicable.

PO 2.2

Buildings adjacent to the Adelaide Botanic Garden or Park Lands sited and designed to create view corridors to and from the Adelaide Botanic Garden.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings of a height and scale that minimise impacts on the Adelaide Botanic Garden and Park Lands as well as referencing the scale of buildings facing North Terrace and Frome Road.

DTS/DPF 2.3

Buildings not exceeding 15 building levels and 53m in building height.

PO 2.4

Where buildings exceed 15 building levels or 53m in building height they will be of exemplary design, located centrally within the site and meet the Commonwealth Airports (Protection of Airspace) Regulations.

DTS/DPF 2.4

None are applicable.

PO X

Development fronting North Terrace to:

- (a) maintain the existing pattern of building form and open space, providing greater grassed or landscaped areas at grade to North Terrace; and
- (b) ensure architectural compatibility with the red brick and stucco buildings which extend east from the Frome Road/North Terrace intersection.

DTS/DPF X

None are applicable.

Open Space

PO 3.1

Development on the eastern portion of the site:

- (a) results in an open park like setting complementary to the Adelaide Botanic Garden;
- (b) carefully managed to sensitively balance its interaction with surrounding uses such as the Adelaide Zoo, Adelaide Botanic Garden and the Adelaide Park Lands;
- (c) minimises uses or activities that would alienate the area from public usage;
- (d) provides opportunities for tourism, education, research, informal recreation and cultural enjoyment;
- (e) improves pedestrian links through the area, and improve the public realm and use and enjoyment of the Adelaide Park Lands; and
- (f) provides greater exposure and accessibility for the Adelaide Botanic Garden and North Terrace frontage.

DTS/DPF 3.1

None are applicable.

Cultural Institutions Subzone

Assessment Criteria (AC)

Desired Outcomes (DO)

DO 1

The cultural and institutional heart of the City comprising of a vibrant cluster of cultural and institution uses including tertiary education, research, libraries and museums that attract students, professionals, workers and visitors to the city.

DO 2

Well designed and functional buildings set within a landscaped setting and public spaces that provides pedestrian and cyclist friendly streetscapes and active street frontages that facilitate positive social interaction.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Use and Intensity

PO 1.1

A diverse range of cultural and institutional uses including tertiary education, research, library, museums and galleries.

DTS/DPF 1.1

The types of development envisaged within the zone, except:

- (a) Convention centre
- (b) Entertainment venue
- (c) Helicopter landing facility
- (d) Hospital
- (e) Motel
- (f) Serviced apartments
- (g) Tourist accommodation.

Built Form and Character

PO 2.1

Development that emphasises the horizontal grouping of building elements and uses vertical proportions in projections and in the disposition of openings into the design of the facade.

DTS/DPF 2.1

None are applicable.

PO 2.2

Buildings with modelled and textured facades of predominantly masonry appearance similar to the early buildings that contribute to the established historical character of the zone.

DTS/DPF 2.2

None are applicable.

PO X

Development that:

- (a) is compatible in design and siting with existing buildings; and
- (b) maintains the established set-back pattern of alternating buildings and landscaped spaces along the North Terrace frontage.

DTS/DPF 2.2

None are applicable.

PO X

Buildings that maintain the existing landscaped open space between the buildings and the street boundary, unless greater pavement area is required for pedestrians.

DTS/DPF 2.2

None are applicable.

PO 2.3

Buildings that complement the form, appearance, materials and finishes of existing buildings in the locality, including the predominant:

- (a) Red brick or masonry walls; ~~and~~
- (b) Slate, shingles, terra cotta tiles or copper for exposed roofs; and
- (c) the use of ornament and decoration in building facades and roof forms to ensure additions are compatible with nearby buildings in form and appearance.

DTS/DPF 2.3

None are applicable.

PO 2.4

Building heights within the zone that transition down to the Park Lands from the height of existing buildings established along North Terrace.

DTS/DPF 2.4

Buildings located:

- (a) along road and Park Lands frontages not exceeding 3 building levels and 11.5m in building height; and
- (b) away from road and Park Lands frontages not exceeding 6 building levels and 22m in building height.

PO X

Retain open space between or in front of existing buildings along the North Terrace, Frome Road, Kintore Avenue and Victoria Drive frontages are inappropriate.

DTS/DPF X

None are applicable.

PO X

Expansion of existing activities will be accommodated by sensitive infill development with the construction of new buildings within present sites or on vacant land currently used for car parking, in accordance with coordinated master plans of the major institutions.

DTS/DPF X

None are applicable.

PO 2.5

Pleasant and interesting lawn and paved landscaped areas that create spaces suitable for a variety of activities ranging from those suitable for group meetings and social activities to those for quiet retreat and relaxation.

DTS/DPF 2.5

None are applicable.

PO X

The landscaped edge along North Terrace that provide shade for pedestrians while enhancing northward views from North Terrace. Landscaping design to the north of North Terrace that incorporates large, high-crowned trees that allows views through to the forecourt spaces of the many significant cultural and institutional buildings.

DTS/DPF X

None are applicable.

PO X

Conserve the plantings between the boundary fence and the University buildings along the Victoria Drive frontage.

DTS/DPF X

None are applicable.

Movement, Car Parking and Access

PO X

Maintain and further develop the pedestrian links in north-south and east-west directions as illustrated in Map Adel/1 (Overlay 2A), Maps Adel/45 and 50 and Figure I/3.

DTS/DPF X

None are applicable.

PO X

The North Terrace frontage is a prime section of the City's 'cultural boulevard' in which the improvement of pedestrian amenity and ease of pedestrian movement across North Terrace will be a priority.

DTS/DPF X

None are applicable.

PO X

Improvements to the northern footpaths will be integrated with redevelopments of the Museum, State Library, Royal Adelaide Hospital and university forecourts to provide greater levels of visibility and access to these buildings.

DTS/DPF X

None are applicable.

Government House Subzone

Assessment Criteria (AC)

Desired Outcomes (DO)

DO 1

Continue to serve vice-regal functions and accommodate uses ancillary to that function.

DO 2

The environmental character of the Zone will remain predominantly landscaped park, with no further major development taking place.

Land Use and Intensity

PO 1.1

Government House and its ancillary uses are the only desired activities envisaged. All other uses are not envisaged.

DTS/DPF 1.1

None are applicable.

Built Form and Character

PO 2.1

Development that is not substantial or visually intrusive.

DTS/DPF 2.1

None are applicable.

PO 2.2

Alterations or minor additions to Government House itself and other outbuildings are appropriate, subject to their deference to and conformity with the character of existing buildings in the Government House grounds.

DTS/DPF 2.2

None are applicable.

PO 2.3

Small garden-associated structures such as pavilions, gazebos, or greenhouses are appropriate.

DTS/DPF 2.3

None are applicable.

PO 2.4

Development that does not detrimentally affect the establishment and growth of the landscape features of the Zone.

DTS/DPF 2.4

None are applicable.

PO 2.5

Prince Henry Gardens will continue to provide significant pedestrian shelter and amenity. This avenue of trees and other plantings will be maintained as a contrast to the built form south of North Terrace, through replacement planting wherever necessary.

Advertisements

PO 3.1

Integrated low free-standing signs that are non-illuminated and limited in size and number.

DTS/DPF 3.1

None are applicable.

Carparking and Access

PO 4.1

No additional vehicle access points are envisaged

DTS/DPF 4.1

None are applicable.

PO 4.2

Provision of on-site parking to serve the needs of Government House should be provided on-site. No other parking is to be developed in the Zone

DTS/DPF 4.2

None are applicable.

Affordable Housing Overlay

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1.

Affordable housing that includes a range of affordable dwelling types is integrated into residential and mixed use development.

DO 2

Development that caters for a variety of household structures.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Land Division

PO 1.1

Development comprising 20 or more dwellings provides housing suited to a range of incomes including households with low – moderate incomes.

DTS/DPF 1.1

Development comprising 20 or more dwellings or residential allotments includes a minimum of 15% affordable housing except where:

- a. it can be demonstrated that any shortfall in affordable housing has been provided in a previous stage of development; or
- b. it can be demonstrated that any shortfall in affordable housing will be accommodated in a subsequent stage or stages of development.

PO 1.2

Affordable housing is distributed throughout the development to avoid an overconcentration of affordable housing.

DTS/DPF 1.2

None are applicable.

Built Form and Character

PO 2.1

Affordable housing is designed to complement the design and character of residential development within the development area.

DTS/DPF 2.1

None are applicable.

Affordable Housing Incentives

PO 3.1

Allotments created for affordable housing are a suitable size and dimension that provide a high standard of occupant amenity and integrate with residential neighbourhoods.

DTS/DPF 3.1

Where constituting affordable housing, the minimum site area specified for a dwelling can be reduced by up to 20%.

PO 3.2

To support the provision of affordable housing building heights may be increased above the maximum specified in the *Building Heights Technical and Numeric Variations Data Overlay*. **Development designed to designed to minimise negative visual and amenity impacts on surrounding residents and streetscape.**

PLAY WITH WORDS MORE

DTS/DPF 3.2

Where a mixed-use development or apartment building includes at least 15% affordable housing, the maximum building height specified can be increased by 1 storey in City Living, General Neighbourhood, Housing Diversity Neighbourhood Greenfield Neighbourhood, Masterplanned Suburban Neighbourhood zones, and up to 30% in any other zone.

Movement and Car Parking

PO 4.1

Sufficient car parking is provided to meet the needs of occupants of affordable housing.

Working Draft

DTS/DPF 4.1

Dwellings constituting affordable housing are provided with car parking in accordance with the following:

- a. 0 carpark for an apartment; and
- b. 1 carpark per dwelling for any other dwelling.

Procedural Matters (PM)

Referrals		
Class of Development / Activity	Referral Body	Purpose of Referral
Development for the purposes of the provision of affordable housing (applying the criteria determined under regulation 4 of the <i>South Australian Housing Trust Regulations 2010</i>)	Minister responsible for administering the <i>South Australian Housing Trust Act 1995</i>	To enable commitment and obligations on the provision of dwellings or allotments for affordable housing to be executed.

Regulated Tree

Overlay Assessment

Provisions (AP) Desired

Outcome (DO)

DO 1

The conservation of regulated trees to provide aesthetic and environmental benefits and to mitigate tree loss through appropriate development and redevelopment.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Tree Retention and Health

PO 1.1

Regulated trees are retained where they make an important visual contribution to local character and amenity.

DTS / DPF 1.1

None are applicable.

PO 1.2

Regulated trees listed as rare or endangered under the National Parks and Wildlife Act 1972 are conserved.

DTS / DPF 1.2

A tree not listed as rare or endangered.

PO 1.3

A tree damaging activity not in connection with other development is undertaken to:

- (a) remove a diseased tree where its life expectancy is short;
- (b) mitigate an unacceptable risk to public or private safety due to limb drop or the like;
- (c) rectify or prevent extensive damage to a building of value :
 - (i) a Local Heritage Place;
 - (ii) a State Heritage Place;
 - (iii) a substantial building of value;

and there is no reasonable alternative to rectify or prevent such damage other than to undertake a tree damaging activity;

- (d) reduce an unacceptable hazard associated with a tree within 20m of an existing residential, tourist accommodation or other habitable building from bushfire;
- (e) treat disease or otherwise in the general interests of the health of the tree;
- (f) maintain the aesthetic appearance and structural integrity of the tree.

DTS / DPF 1.3

None are applicable.

PO 1.4

A tree damaging activity in connection with other development is undertaken to accommodate the reasonable development of land in accordance with the relevant zone or subzone where it might not otherwise be possible and, in the case of a significant tree, all reasonable development options and design solutions have been considered to prevent substantial tree- damaging activity occurring.

DTS / DPF 1.4

None are applicable.

Ground work affecting trees

PO 2.1

Regulated trees, including their root systems, are not unduly compromised by excavation and / or filling of land, or the sealing of surfaces within the vicinity of the tree to support their retention and health.

DTS / DPF 2.1

Regulated trees are protected during the course of development by protecting the tree's branches and roots by the erection of a secure fence prior to commencement of any work on site to prevent any disturbance to such area, for example by compaction, excavation, filling or contact causing damage to branches, trunks, or root systems. Fencing is to:

- (a) consist of a 2m high solid, chain mesh, steel or similar fabrication with posts at 3m intervals;
- (b) incorporate on all sides a clearly legible sign displaying the words "Tree Protection Area"; and
- (c) not be erected closer to the tree than a distance equal to half of the height of the tree or the full width of the branch spread (whichever is lesser).

Land Division

PO 3.1

Land division results in an allotment configuration that enables its subsequent development and the retention of regulated trees as far as is reasonably practicable.

DTS/DPF 3.1

Land division where:

- (a) there are no regulated trees located within or adjacent to the plan of division; or
- (b) the application demonstrates that an area exists to accommodate subsequent development of proposed allotments after an allowance has been made for a tree protection zone around any regulated tree within and adjacent to the plan of division.

Procedural Matters (PM)

General Comments

Other than in DO1, the HA Overlay doesn't have the general principles that reinforce using the existing built form as the basis for a contextual design response. The Nth Ad and Ad HCZ reinforces this over and over again. Is one DO enough or should every PO be reinforced with the importance of contextual design?

Do we want to link everything back to the HA Statement to tighten it up or leave it loose by just saying 'in the historic area'?

Re PO5.2 – This PO is suggesting that valued landscape elements, presumably including public realm elements (like trees, verges, driveway locations, light poles) be maintained except where they compromise safety, create nuisance, or adversely impact on existing buildings or infrastructure. Could this be applied to street trees as a justification for removal ie tree roots damaging a building, or underground services?

Include in the Practice Direction advice to cover that Demolition PO 6.1b does not mean that if the façade is obscured by a tall fence or vegetation, that that provision will then apply.

Historic Area Overlay

Assessment Provisions (AP)

DO 1

Reinforce historic themes and characteristics through conservation and contextually ~~responsive development~~, design and adaptive reuse that responds to ~~and reinforces~~ existing coherent patterns in built form, ~~the setting of buildings and ancillary structures and streetscapes and built form~~ as expressed in the ~~Historic Area Statement~~ Historic Area Statement.

Built Form

PO 1.1

The form of ~~new buildings and structures~~ development that ~~are~~ is visible from the public realm ~~are~~ is consistent with the prevailing historic attributes and characteristics ~~of the historic area as expressed in the~~ Historic Area Statement.

DTS 1.1

None are applicable

PO 1.2

Development is consistent with the prevailing building heights and wall heights ~~in the historic area as expressed in the~~ Historic Area Statement.

DTS 1.2

None are applicable

PO 1.3

~~Design and a~~ Architectural detailing of street facing buildings complement the prevailing characteristics ~~in the historic area as expressed in the~~ Historic Area Statement.

DTS 1.3

None are applicable

PO 1.4

Development is consistent with the prevailing front and side boundary setback pattern ~~in the historic area as expressed in the~~ Historic Area Statement.

DTS 1.4

None are applicable

PO 1.5

Materials are either consistent with or complement those [within historic area expressed in the Historic Area Statement](#).

DTS 1.5

None are applicable

Alterations and additions

PO 2.1

Alterations and additions complement the subject building and are sited to ensure they do not dominate the primary facade and employ a contextual design approach.

DTS 2.1

Alterations and additions are fully contained within the roof space of an existing building with no external alterations made to the building elevation facing the primary street.

PO 2.2

Encourage the adaptive reuse of buildings that complement the prevailing historic [values and themes and characteristics](#) of the locality, by enabling complementary changes to buildings to accommodate new land uses [that are facilitated by dispensation in relation to other planning guidelines](#).

DTS 2.2

None are applicable

Ancillary development

PO 3.1

Ancillary development, including carports, outbuildings and garages, complements the historic character of the area and associated buildings [as expressed in the Historic Area Statement](#).

DTS 3.1

None are applicable

PO 3.2

Ancillary development, including carports, [outbuildings](#) and garages, are located behind the building line of the principal building(s).

DTS 3.2

None are applicable

PO 3.3

Advertising and advertising hoardings are located and designed to complement the building, be unobtrusive, not conceal or obstruct significant architectural elements and detailing, or dominate the building or its setting.

DTS 3.3

None are applicable

PO 3.4

Front fencing and gates are consistent with the traditional period, style and form of the associated built form [as expressed in the Historic Area Statement](#).

DTS 3.4

None are applicable

Land Division

PO 4.1

Land division creates allotments that are capable of accommodating buildings of a bulk and scale that reflect existing buildings and setbacks [and vehicle parking patterns in the historic area as expressed in the Historic Area Statement](#).

DTS 4.1

None are applicable

Context and Streetscape Amenity

PO 5.1

The width of driveways and other vehicle access ways are consistent with the prevalent width, [pattern and location](#) of existing driveways [of the historic area as expressed in the Historic Area Statement](#).

DTS 5.1

None are applicable

PO 5.2

Development maintains the valued landscape patterns and characteristics that contribute to the [historic area Historic Area](#), except where they compromise safety, create nuisance, or impact adversely on existing buildings or infrastructure.

DTS 5.2

None are applicable

Demolition

PO 6.1

~~Buildings and structures~~ Development that demonstrates the historic characteristics as expressed in the ~~Historic Area Statement~~ [Historic Area Statement](#) ~~are is~~ not demolished, unless:

- (a) the front elevation of the building has been substantially altered and cannot be reasonably, economically restored in a manner consistent with the building's original style; or
- (b) the building façade does not contribute to the historic character of the streetscape [as expressed in the Historic Area Statement](#); or
- (c) the structural integrity or condition of the building is beyond economic repair.

DTS 6.1

None are applicable

PO 6.2

Partial demolition ~~of a building~~ where that portion to be demolished does not contribute to the historic character of the streetscape [as expressed in the Historic Area Statement](#).

DTS 6.2

None are applicable

PO 6.3

Buildings, or elements of buildings, that do not conform with the values described in the [Historic Area Statement](#), may be demolished.

DTS 6.3

None are applicable

Ruins

PO 7.1

Development that conserves and complements features and ruins associated with former activities of significance including those associated with mining, farming and industry.

The objectives of this PO is difficult to understand. What is a feature associated with a former activity of significance that isn't a ruin? A slag heap, railway siding? Why are only mining farming and industry identified?

DTS 7.1

None are applicable

Historic Area Statement

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce, this unified, consistent historic streetscape character.

New development will be generally limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or towards the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Example – Large Estate

Heritage Characteristics	Prevailing Characteristics
Era of Development	-1880 to 1900. -1930 to 1940.
Subdivision Pattern	-Site areas of 1500- 3000 square metres. -Street frontages, 30 metres. -Generous front set-backs (e.g. 11 metres). -Side set-backs between 4 and 8 metres so as to maintain a total spacing between neighbouring dwelling walls, of some 12 metres.
Architectural Buildings	-Victorian and Turn-of-the-Century Villas/Mansions. -Tudors and Bungalows (1930-40's).
Materials	-Consistent with the materials contained within the architectural building.
Setting and Public Realm	-Wide streets. -Substantial trees. -Expansive allotments, street frontages and gardens. -Heywood Park.
Fencing	-Low and essentially open-style fencing. -May also include masonry pier and plinth fence with decorative open sections of up to 1.8 metres in total height.
Height	-Single storey built scale to the streetscape. -Second storey elements should be integrated sympathetically into the dwelling design.

Example – Large allotments, single level

Heritage Characteristics	Examples
Historical Period	-1900s-1920s

Attachment A.1 City of Adelaide P&D Code amendment document

Subdivision Pattern	<ul style="list-style-type: none"> -Large allotments, fronting wide -Single-storey detached -Detached dwellings should have a primary street frontage not less than 18 metres.
Architectural Buildings	<ul style="list-style-type: none"> - Bungalows - Edwardian (Queen Anne) - Federation - Tudor Style
Materials	<ul style="list-style-type: none"> -Retention of original finishes and unpainted stone
Setting and Public Realm	<ul style="list-style-type: none"> -Tree lined avenues -Front gardens important design element -Landscaping around the dwelling
Fencing	<ul style="list-style-type: none"> -Front fencing is compatible with the period and style of the dwelling -Solid and high front fences are generally inappropriate (may be considered on roads of high traffic volume) -Lower more open fencing that allows an appreciation of the detailing of the dwelling, such as timber picket and paling, wire mesh with timber or tube framing, woven crimped wire, and masonry with galvanised steel ribbon. - Side and rear fences in traditional materials.
Height	<ul style="list-style-type: none"> -No more than one storey above natural ground level, except where the predominant height in the immediate locality is two storey. -In this instance development should not be more than two storeys above the natural ground level.

Example – Narrow Village

Heritage Characteristics	Examples
Historical Period	-Late 19 th Century (1870s to 1890s)
Subdivision Pattern	<ul style="list-style-type: none"> -Narrow allotments of varying widths -Closely spaced early small dwellings and narrow streets -Centred on the triangle created by Main North Road, Carter Street, Highbury Street and Argyle street.
Architectural Buildings	<ul style="list-style-type: none"> -Single fronted cottages -Attached cottages -Corner shops -Church

Materials	<ul style="list-style-type: none"> -Bluestone or sandstone with brick quoins around doors and window openings and wall corners -Sometimes rendered quoins -Side and rear walls are usually red brick or random rubble (stone) or river stone construction. -Roof cladding corrugated iron with OF profile gutters
Setting and Public Realm	<ul style="list-style-type: none"> -Village Character -Narrow Streets
Fencing	-Original front fences should be maintained and restored.
Height	- PDC refers to maximum height of 9 metres or 2 storeys.

Example – Grand/Mansion 1 – 750+

Heritage Characteristics	Prevailing Characteristics
Era and/or style of development	-Predominantly turn of the 20 th century, with valued dwellings to approximately 1940
Subdivision Pattern	<ul style="list-style-type: none"> -Site areas of 750 - 1200 square metres. -Street frontages of around 15 metres. -Front set-backs in the order of 7 metres. -Side set-backs between 1 and 4 metres so as to maintain a total spacing between neighbouring dwelling walls, of some 4metres.
Architectural Buildings	<ul style="list-style-type: none"> -Victorian and Turn-of-the-Century Villas (asymmetrical and symmetrical) -double-fronted cottages -limited complementary, Inter-war era styles
Materials	-Consistent with the materials associated with the architectural styles of the subject building and streetscape.
Setting and Public Realm	<ul style="list-style-type: none"> -Wide streets. -Substantial trees. -Expansive allotments, street frontages and gardens. -Original parks and street layouts.
Fencing	<ul style="list-style-type: none"> - Low, open fencing reflective of the architectural style of the subject building -May also include masonry pier and plinth fence with decorative open sections of up to 1.8 metres in total height.
Height	<ul style="list-style-type: none"> -Single and two storey built scale to the streetscape. -building wall heights in the order of 3.6 metres - total roof heights in the order of 5.6 metres or 6.5 metres -roof pitches in the order of 27 degrees and 35 degrees.

Example – Grand/Mansion 2 – 1200+

Heritage Characteristics	Prevailing Characteristics
Era and/or style of development	-Predominantly turn of the 20 th century, with valued dwellings to approximately 1940
Subdivision Pattern	-Site areas of 1200- 3000 square metres. -Street frontages of 30 metres or more. -Generous front set-backs (e.g. 11 metres). -Side set-backs between 4 and 8 metres so as to maintain a total spacing between neighbouring dwelling walls, of some 12 metres.
Architectural Buildings	-Victorian and Turn-of-the-Century Villas/Mansions. -1930s-1940s International Styles -Gentleman's Tudors and Bungalows
Materials	-Consistent with the materials associated with the architectural styles of the subject building and streetscape.
Setting and Public Realm	-Wide streets. -Substantial trees. -Expansive allotments, street frontages and gardens. -Original parks and street layouts.
Fencing	- Low, open fencing reflective of the architectural style of the subject building -May also include masonry pier and plinth fence with decorative open sections of up to 1.8 metres in total height.
Height	-Single and two storey built scale to the streetscape.

Example – Township (mixed / residential)

Heritage Characteristics	Prevailing Characteristics
Era and/or style of development	- Turn of 20 th Century
Subdivision Pattern	- Traditional grid land division pattern - Within the main street/town centre, consistent setbacks and strong building line with little interruption. Buildings square to the street.
Architectural Buildings	-Within the main street/town centre, distinctive built form reflecting mix of civic, commercial and retail activities -Verandahs and parapets - Traditional railway architecture including workshops and industrial buildings - Small, humble worker's accommodation, including single and double fronted cottages and row cottages -More prosperous stone/masonry villas surrounded by gardens/landscaping

Materials	<ul style="list-style-type: none"> -Consistent with the materials associated with the architectural styles of the subject building and streetscape. -CGI roofing -Weatherboard/fibro -Local stone/masonry
Setting and Public Realm	<ul style="list-style-type: none"> - Stone kerbing - Wide streets in original layout - Traditional parks/gardens - Maintenance of rural character and scenic views
Fencing	<ul style="list-style-type: none"> -Rural style fencing - Low, open fencing reflective of the architectural style of the subject building
Height	<ul style="list-style-type: none"> -Predominantly single storey where residential or retail -Two storeys associated with grand, civic or commercial activities -Roof pitches between 30-45 degrees, reflecting traditional styles

General Comments

Adjacent Development

Definitions are required for the terms 'a danger to property', 'significantly diseased' and what is a 'short' life expectancy.

Keep the words consistent with the Definitions as per Attach 4 of the Practice Guideline.

Local Heritage Place Overlay

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Development maintains the heritage ~~and cultural~~ values of Local Heritage Places through conservation, ~~ongoing use and adaptive reuse~~ (not necessary – see Definition of conservation).

Land Use

PO

Land uses that enable the sympathetic adaptation of heritage places to new uses.

DTS

None are applicable.

Built Form

PO 1.1

The form of new buildings and structures ~~maintains does not detrimentally affect~~ the heritage values of the Place.

DTS 1.1

None are applicable.

PO 1.2

Massing and scale of development ~~maintains does not detrimentally affect~~ the heritage values of the Place.

DTS 1.2

None are applicable.

PO 1.3

Design and architectural detailing ~~maintains does not detrimentally affect~~ the heritage values of the Place.

DTS 1.3

None are applicable.

PO 1.4

Development is consistent with boundary setbacks and setting.

DTS 1.4

None are applicable.

PO 1.5

Materials and colours are either consistent with or complement the heritage values of the Place.

DTS 1.5

None are applicable.

PO 1.6

~~New buildings are~~ Development is not placed or erected between the front street boundary and the façade

Attachment A.1 City of Adelaide P&D Code amendment document

~~of a Local Heritage Place or in a position that continues the alignment of the façade of the Place.~~
Integrate additions to the rear or side of Heritage Places and avoid additions in front of elements of heritage significance.

DTS 1.6

None are applicable.

PO 1.7

Development of a ~~Local Heritage~~ Place retains elements contributing to its heritage value.

DTS 1.7

None are applicable.

Alterations and Additions

PO 2.1

Alterations and additions complement the ~~subject building~~ Place and are sited to be unobtrusive, not conceal or obstruct ~~heritage elements of heritage value and detailing~~, or dominate the Place or its setting.

DTS 2.1

None are applicable.

PO 2.2

Encourage the adaptive reuse of ~~Local Heritage~~ Places by enabling compatible changes to buildings to accommodate new land uses.

DTS 2.2

None are applicable.

Ancillary Development

PO 3.1

Ancillary development, including carports, outbuildings and garages, complements the heritage values of the Place.

DTS 3.1

None are applicable.

PO 3.2

Ancillary development, including carports, outbuildings and garages, is located behind the building line of the principle al building(s).

DTS 3.2

None are applicable.

PO 3.3

Advertising and advertising hoardings should be designed to complement the ~~Local Heritage~~ Place, be unobtrusive, not conceal or obstruct ~~heritage elements and detailing of heritage value~~, or dominate the ~~building~~ Place or its setting.

DTS 3.3

None are applicable.

Fencing

PO

Fencing to the street boundary, any secondary street frontage and returning along the side boundaries to the alignment of the main face of a Heritage Place is designed and constructed to be compatible with and complementary to the Place.

DTS

None are applicable.

Land Division

PO 4.1

Land division creates allotments that:

- (a) are compatible with the surrounding pattern of subdivision of the ~~Local Heritage~~-Place; and
- (b) are of a dimension to accommodate new development that reinforces and is compatible with the heritage values of the ~~Local Heritage~~ Place.
- (c) retain enough land surrounding the Place to enable future development that can accommodate a variety of future land uses.

DTS 4.1

None are applicable.

Landscape Context and Streetscape Amenity

PO

Landscaping that achieves the desired landscape context and streetscape amenity consistent with the heritage values of the Place.

DTS

None are applicable.

~~Landscape Context and Streetscape Amenity~~ Move to Demolition

Demolition

PO 6.1

Local Heritage Places are not demolished, destroyed or removed in total or in part unless either of the following apply:

- (a) the portion of the Place to be demolished, destroyed or removed is excluded from the extent of listing that is of heritage value; or
- (b) the structural integrity or condition of the ~~building~~ Place represents an unacceptable risk to public or private safety and results from actions and unforeseen events beyond the control of the owner and is irredeemably beyond repair.

DTS 6.1

None are applicable.

PO 6.2

The demolition, destruction or removal of a ~~building a component of the site~~, portion of a ~~building~~ Place or other feature or attribute is appropriate where it does not contribute to the heritage values of the Place.

DTS 6.2

None are applicable.

PO 5.1

Individually heritage listed trees, parks, historic gardens and memorial avenues retained unless:

- (a) trees / plantings are, or have the potential to be, a danger to life or property; or
- (b) trees / plantings are significantly diseased and their life expectancy is short.

DTS 5.1

None are applicable.

Conservation Works

PO 7.1

Conservation works to [the identified elements of heritage value of a Place exterior of a Place](#) match existing materials [of heritage value](#) to be repaired and utilise traditional work methods.

DTS 7.1

None are applicable.

Views and Vistas

PO

Retain and reinstate important views and vistas to heritage places from public roads as well as between any elements of identified heritage significance.

DTS

None are applicable.

Procedural Matters (PM)

General Comments

Adjacency provisions are missing, although the change I made to referral trigger d(ii) might be enough.

The use of terminology is not consistent even with the Definitions in the Practice Guideline.

In the referral trigger (ii) Maddie raised the question of whether or not the average planner would be able to make a judgement about whether works to a heritage place were minor or not. I've suggested that all alts and adds get referred.

Definitions are required for the terms 'a danger to property', 'significantly diseased' and what is a 'short' life expectancy.

See other comments in yellow in the Referral triggers.

State Heritage Place Overlay

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Development maintains the heritage and cultural values of State Heritage Places through conservation, ongoing use and adaptive reuse.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Infrastructure and Renewable Energy Facilities

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1

Efficient provision of infrastructure networks and services, renewable energy facilities and ancillary development in a manner that minimises hazard, is environmentally and culturally sensitive and that suitably manages adverse visual impacts on natural and rural landscapes and residential amenity.

DO 2

Development compatible with the long-term sustainability of the environment that minimises consumption of non-renewable resources and utilises alternative energy generation systems.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

General

PO 1.1

Development located and designed to minimise hazard or nuisance to adjacent development and land uses.

DTS/DPF 1.1

None are applicable.

PO 1.2

Locate infrastructure and utility services including the supply of water, gas, and electricity in common trenches or conduits.

DTS/DPF 1.2

None are applicable.

PO 1.3

Provision made for utility services to the development site, including provision for the supply of water, gas and electricity and for the satisfactory disposal and potential re-use of sewage and waste water, drainage and storm water from the development site.

DTS/DPF 1.3

None are applicable.

Visual Amenity

PO 2.1

The visual impact of above ground infrastructure networks and services, renewable energy facilities (excluding wind farms), energy storage facilities and ancillary development from townships, scenic routes and public roads is minimised and managed by:

- (a) utilising features of the natural landscape to obscure views where practicable;
- (b) siting development below ridgelines where practicable;
- (c) avoiding visually sensitive and significant landscapes;
- (d) using materials and finishes with low reflectivity and colours that complement the surroundings;
- (e) using existing vegetation to screen buildings; and
- (f) incorporating landscaping or landscaped mounding around the perimeter of a site and between adjacent allotments accommodating, or zoned to primarily accommodate sensitive receivers.

DTS/DPF 2.1

None are applicable.

PO 2.2

Substations, pumping stations, battery storage facilities, maintenance sheds and other ancillary structures incorporate vegetation buffers to reduce adverse visual impacts on adjacent land.

DTS/DPF 2.2

None are applicable.

PO 2.3

Surfaces exposed by earthworks associated with installation of storage facilities, pipework, penstock, substations and other ancillary plant are reinstated and revegetated to reduce adverse visual impacts on adjacent land.

DTS/DPF 2.3

None are applicable.

Rehabilitation

PO 3.1

Progressive rehabilitation (incorporating revegetation) of disturbed areas, ahead of or upon decommissioning of areas used for renewable energy facilities and transmission corridors.

DTS/DPF 3.1

None are applicable.

Hazard Management

PO 4.1

Infrastructure and renewable energy facilities and ancillary development located and operated to not adversely impact maritime or air transport safety, including the operation of ports, airfields and landing strips.

DTS/DPF 4.1

None are applicable.

PO 4.2

Facilities for energy generating, power storage and transmission separated from dwellings, tourist accommodation and frequently visited public places (such as viewing platforms / lookouts) to reduce risks to public safety from fire or equipment malfunction.

DTS/DPF 4.2

None are applicable.

PO 4.3

Bushfire hazard risk minimised for renewable energy facilities by providing appropriate access tracks, safety equipment, and water tanks and establishing cleared areas around substations, battery storage and operations compounds.

DTS/DPF 4.3

None are applicable.

Electricity Infrastructure and Battery Storage Facilities

PO 5.1

Electricity infrastructure located to minimise visual impacts through techniques including:

- (a) siting utilities and services:

- (i) on areas already cleared of native vegetation; or
- (ii) where there is minimal interference or disturbance to existing native vegetation or biodiversity; and

(b) grouping utility buildings and structures with non-residential development, where practicable.

DTS/DPF 5.1

None are applicable.

PO 5.2

Electricity supply (excluding transmission lines) serving new development in urban areas and townships installed underground, excluding lines having a capacity exceeding or equal to 33kV.

DTS/DPF 5.2

None are applicable.

PO 5.3

Battery storage facilities co-located with substation infrastructure where practicable to minimise the development footprint and reduce environmental impacts.

DTS/DPF 5.3

None are applicable.

Telecommunication Facilities

PO 6.1

Where technically feasible, telecommunications facilities seek to reduce visual impact by incorporating techniques such as:

- (c) avoiding proliferation of facilities in a local area;
- (d) co-locating with other communications facilities;
- (e) locating antennae as close as practical to support structures ; and
- (f) screening using landscaping and existing vegetation, particularly for equipment shelters and huts.

DTS/DPF 6.1

None are applicable.

PO 6.2

Telecommunications facilities sited and designed to minimise visual impact having regard to:

- (c) the size, scale, context and characteristics of existing structures, heritage, landforms and vegetation so as to be compatible with the local environment;
- (d) incorporating the facility within an existing structure that may serve another purpose; and
- (e) using existing buildings and vegetation for screening.

DTS/DPF 6.2

None are applicable.

PO 6.3

Telecommunication infrastructure to be removed when it is redundant or no longer required for transmission.

DTS/DPF 6.3

None are applicable.

Renewable Energy Facilities

PO 7.1

Renewable energy facilities located as close as practicable to existing transmission infrastructure to facilitate connections and minimise environmental impacts as a result of extending transmission infrastructure.

DTS/DPF 7.1

None are applicable.

Renewable Energy Facilities (Wind Farm)

PO 8.1

Visual impact of wind turbine generators on the amenity of residential and tourist development reduced through appropriate separation.

DTS/DPF 8.1

Wind turbine generators are:

- (a) setback at least 1,200m from the base of the turbine to non-associated (non-stakeholder) dwellings and tourist accommodation;
- (b) setback at least 2,000m from the base of a turbine to any of the following zones:
 - i. Settlement Zone;
 - ii. Township Zone;
 - iii. Rural Living Zone; or
 - iv. Rural Neighbourhood Zone

with an additional 10m setback per additional metre over 150m overall turbine height (measured from the base of the turbine).

PO 8.2

The visual impact of wind turbine generators on natural landscapes managed by:

- (a) designing wind turbine generators to be uniform in colour, size and shape;
- (b) coordinating blade rotation and direction; and
- (c) mounting wind turbine generators on tubular towers as opposed to lattice towers.

DTS/DPF 8.2

None are applicable.

PO 8.3

Wind turbine generators and ancillary development minimise potential for bird and bat strike.

DTS/DPF 8.3

None are applicable.

PO 8.4

Wind turbine generators incorporate recognition systems or physical markers to minimise the risk to aircraft operations.

DTS/DPF 8.4

No Commonwealth air safety (CASA / ASA) or Defence requirement is applicable.

PO 8.5

Meteorological masts and guidewires identifiable to aircraft through the use of colour bands, marker balls, high visibility sleeves or flashing strobes.

DTS/DPF 8.5

None are applicable.

Renewable Energy Facilities (Solar Power)

PO 9.1

Solar power facilities generating 5MW or more are not located on land of high environmental, scenic or cultural value.

DTS/DPF 9.1

None are applicable.

PO 9.2

Solar power facilities allow for movement of wildlife by:

- (a) incorporating wildlife corridors and habitat refuges; and
- (b) avoiding the use of extensive security or perimeter fencing; or
- (c) incorporating fencing that enables the passage of small animals without unreasonably compromising the security of the facility.

DTS/DPF 9.2

None are applicable.

PO 9.3

Amenity impacts of solar power facilities minimised through separation from sensitive receivers.

DTS/DPF 9.3

Solar power facilities are setback at least:

- (a) 500 metres from conservation areas;
- (b) 100 metres from Township, Settlement, Rural Neighbourhood and Rural Living Zones; and
- (c) 30 metres from adjoining land.

PO 9.4

Solar power facilities incorporate landscaping within setbacks from adjacent road frontages and boundaries of adjacent allotments accommodating non-host dwellings.

DTS/DPF 9.4

None are applicable.

Hydropower / Pumped Hydropower Facilities

PO 10.1

Hydropower / pumped hydropower facility storage designed and operated to minimise the risk of storage dam failure.

DTS/DPF 10.1

None are applicable.

PO 10.2

Hydropower / pumped hydropower facility storage designed and operated to minimise water loss through increased evaporation or system leakage, with the incorporation of appropriate liners, dam covers, operational measures or detection systems.

DTS/DPF 10.2

None are applicable.

PO 10.3

Hydropower / pumped hydropower facilities on existing or former mine sites minimise environmental impacts from site contamination, including from mine operations or water sources subject to such processes, now or in the future.

[DTS/DPF 10.3](#)

None are applicable.

Water Supply

[PO 11.1](#)

Development connected to an appropriate water supply to meet the ongoing requirements of the intended use.

[DTS/DPF 11.1](#)

Development is connected, or will be connected, to a reticulated water scheme or mains water supply with the capacity to meet the on-going requirements of the development.

[PO 11.2](#)

Dwellings connected to a reticulated water scheme or mains water supply with the capacity to meet the requirements of the intended use. Where this is not available an appropriate rainwater tank or storage system for domestic use is provided.

[DTS/DPF 11.2](#)

A dwelling is connected, or will be connected, to a reticulated water scheme or mains water supply with the capacity to meet the requirements of the development. Where this is not available it is instead serviced by a rainwater tank or tanks capable of holding at least 50,000 litres of water which is:

- (a) exclusively for domestic use; and
- (b) connected to the roof drainage system of the dwelling.

Wastewater Services

[PO 12.1](#)

Development is connected to an approved common waste water disposal service with the capacity to meet the requirements of the intended use. Where this is not available an appropriate on-site service is provided to meet the on-going requirements of the intended use in accordance with the following:

- (a) it is wholly located and contained within the allotment of the development they will service.
- (b) in areas where there is a high risk of contamination of surface, ground, or marine water resources from on-site disposal of liquid wastes are to include disposal systems that minimise the risk of pollution to those water resources
- (c) ensures septic tank effluent drainage fields and other waste water disposal areas located away from watercourses and flood prone, sloping, saline or poorly drained land to minimise environmental harm.

[DTS/DPF 12.1](#)

Development is connected, or will be connected, to an approved common waste water disposal service with the capacity to meet the requirements of the development. Where this is not available it is instead serviced by an on-site waste water treatment system in accordance with the following:

- (a) is wholly located and contained within the allotment of development it will service; and
- (b) ensures no part of a septic tank effluent drainage field or any other waste water disposal system is located:
 - i. within 50m of a watercourse, bore, well or dam;
 - ii. on any land with a slope greater than 20% (1-in-5), or a depth to bedrock or seasonal or permanent water table less than 1.2m; and

- iii. on land that is waterlogged, saline, part of a runway area or likely to be inundated by a 10% AEP flood event.

[PO 12.2](#)

Effluent drainage fields and other waste water disposal areas maintained to ensure the effective operation of waste systems and minimise risks to human health and environmental harm.

[DTS/DPF 12.2](#)

Development is not built on, or encroaches within, an area that is, or will be, required for a sewerage system or waste control system.

Working Draft

Temporary Facilities

PO 13.1

In rural and remote locations, development that is likely to generate significant waste material during construction, including packaging waste, makes provision for a temporary on-site waste storage enclosure to minimise the incidence of wind-blown litter.

DTS/DPF 13.1

A waste collection and disposal service will be used to dispose of the volume of waste and at a rate it is generated.

PO 13.2

Temporary facilities to support the establishment of renewable energy facilities (including borrow pits, concrete batching plants, laydown, storage, access roads and worker amenity areas) are sited and operated to minimise environmental impact.

DTS/DPF 13.2

None are applicable.

Working Draft

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, City Frame and City Living Policy Area 30. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

Transport, Access and Parking

Assessment Provisions (AP)

Desired Outcomes (DO)

DO 1

A comprehensive, integrated and connected transport system that is safe, sustainable, efficient, convenient and accessible to all users with priority given to public transport, pedestrian and cyclist safety and access.

DO XX

Development that supports a shift towards active and sustainable transport modes (i.e. public transport, mobility as a service, cycling and walking) in order to promote affordable, healthy and communities.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Movement Systems

PO 1.1

Development integrated with the existing transport system and designed to minimise its potential impact on the functional performance of the transport system.

DTS/DPF 1.1

None are applicable.

PO 1.2

Development is designed to discourage commercial and industrial vehicle movements through residential areas streets and adjacent other sensitive receivers.

DTS/DPF 1.2

None are applicable.

PO 1.3

~~Industrial, commercial and service vehicle movements, loading areas and designated parking spaces are separated from passenger vehicle car parking areas to ensure efficient and safe movement and minimise potential conflict.~~

Facilities for the loading and unloading of courier, delivery and service vehicles and access for emergency vehicles should be provided on-site as appropriate to the size and nature of the development. Such facilities should be screened from public view and designed, where possible, so that vehicles may enter and leave in a forward direction.

DTS/DPF 1.3

Commercial vehicle facilities in compliance with the requirements recommended in Australian Standard AS 2890:2: Off-Street Parking - Part 2: Commercial Vehicle Facilities.

PO 1.4

Development sited and designed so that queuing, loading, unloading and turning of all traffic likely to be generated avoids interrupting the operation of public roads, bicycle paths, public transport and queuing on public roads and pedestrian paths.

DTS/DPF 1.4

None are applicable.

All vehicle manoeuvring occurs onsite.

Sightlines

PO 2.1

Maintenance or enhancement of sightlines at intersections, pedestrian and cycle crossings, and crossovers to allotments for motorists, cyclists and pedestrians to ensure safety for all road users and pedestrians.

DTS/DPF 2.1

None are applicable.

PO 2.2

Walls, fencing and landscaping adjacent to driveways and corner sites are designed to provide adequate sightlines between vehicles, cyclists, public transport users and pedestrians.

DTS/DPF 2.2

None are applicable.

Vehicle Access

PO 3.1

Safe and convenient access that minimises impact or interruption on the operation of public roads.

DTS/DPF 3.1

The access is:

- (a) provided via a lawfully existing or authorised driveway or access point or an access point for which consent has been granted as part of an application for the division of land; and
- (b) not located within 6m of an intersection of 2 or more roads or a pedestrian actuated crossing;
- (c) Access does not result in traffic hazards or vehicle queuing on footpaths or public roads; and
- (d) Located on minor streets and lanes where possible.

PO 3.2

Where development incorporating vehicular access ramps ensures vehicles can enter and exit a site safely and without creating a hazard to pedestrians, cyclists and other vehicular traffic.

DTS/DPF 3.2

None are applicable.

PO 3.3

Access points sited and designed to accommodate the type and volume of traffic likely to be generated by the development or land use whilst supporting a comfortable pedestrian and cyclist environment.

DTS/DPF 3.3

None are applicable.

PO 3.4

Attachment A.1 City of Adelaide P&D Code amendment document

Access points sited and designed to minimise any adverse impacts on neighbouring properties and road networks.

DTS/DPF 3.4

None are applicable.

PO 3.5

Access points located so as not to interfere with mature street trees, existing street furniture (including directional signs, lighting, seating and weather shelters), public transport services, cyclist infrastructure or infrastructure services to maintain the appearance of the streetscape, preserve local amenity and minimise disruption to utility infrastructure assets.

DTS/DPF 3.5

The access point does not involve the removal or relocation of public transport stops, bikeways, mature street trees, street furniture or utility infrastructure services.

PO 3.6

Driveways and access points are separated and minimised in number to optimise the provision of on-street visitor parking (where on-street parking is appropriate).

DTS/DPF 3.6

Driveways and access points:

- (a) for sites with a frontage to a public road of 20m or less, one access point no greater than 3.5m in width is provided.
- (b) for sites with a frontage to a public road greater than 20m:
 - i. a single access point no greater than 6m in width is provided; or
 - ii. not more than two access points with a width of 3.5m each are provided.
- (c) In all cases, garaging and parking structures (including the width of any support structure) provided on a public street frontage or on a laneway that functions as the dwellings primary frontage should be of a width less than 50 percent of the allotment width on that frontage.

PO 3.7

Access points appropriately separated from level crossings to avoid interference and ensure their safe ongoing operation.

DTS/DPF 3.7

None are applicable.

PO 3.8

Driveways, access points, access tracks and parking areas are designed and constructed to allow adequate movement and manoeuvrability having regard to the types of vehicles that are reasonably anticipated.

DTS/DPF 3.8

None are applicable.

PO 3.9

Development designed to ensure vehicle circulation between activity areas occurs within the site without the need to use public roads.

DTS/DPF 3.9

None are applicable.

PO XX

Attachment A.1 City of Adelaide P&D Code amendment document

Facilities for loading and unloading of courier, delivery and service vehicles and access for emergency vehicles should be provided onsite as appropriate to the size and nature of the development. Facilities should be designed to enable vehicles to enter and leave in a forward direction.

DTS/DPF xx9

None are applicable.

PO XXX Buildings located along primary and secondary access roads should be sited to avoid the need for vehicles to reverse on to the road.

PO XX Vehicular access to development located within the Core and Primary Pedestrian Areas identified in **Map Adel/1 (Overlay 2A)** should be limited and designed to minimise interruption to street frontages.

Where vehicular access to a development is gained by an existing crossing in the Core Pedestrian Area identified in **Map Adel/1 (Overlay 2A)**, there should be no increase in the number of parking spaces served by the crossing, nor any increase in the number of existing crossings serving that development.

PO XX The number of access points on primary city access roads identified in **Map Adel/1 (Overlay 1)** should be limited to minimise traffic and pedestrian inconvenience, interference with public transport facilities and adverse effects on the environment.

Access for People with Disabilities

PO 4.1

Development sited and designed to provide safe, dignified and convenient access for people with a disability. Access should be provided through the principle entrance subject to heritage considerations. Internal building design such as hallways and lifts should be designed to enable adequate maneuvering for people with mobility aids.

DTS/DPF 4.1

None are applicable.

PO XX

Access roads should within development should:

- a) include platforms across roadways at pedestrian crossing points;
- b) Not have steep gradients;
- c) Have level surface passenger loading areas.

DTS/DPF 4.1

Development should provide car parking spaces for people with disabilities.

DTS/DPF 4.1

Disabled car parking should be provided as follows:

- a) A minimum of 1 car parking space in every 15 spaces provided with any form of development should function as a car parking space suitable for use by people with disabilities and other people with small children and prams so they can easily be loaded/unloaded from vehicle side doors;
- b) Every second parking space provided for people with special needs shall be reserved for the exclusive use of people with disabilities (i.e. 1 in 30 spaces); and
- c) Development should be adaptable to enable car parking areas to be retrofitted

Attachment A.1 City of Adelaide P&D Code amendment document

PO XX

Development including the parking areas for older people and people with high needs and or disabilities should:

- (a) be conveniently located on site within easy walking distance;
- (b) be adequate service areas for residents, staff, service providers and visitors;
- (c) include separate and appropriately marked storage places for people with disabilities and spaces for small electrically powered vehicles;
- (d) have slip-resistant surfaces with low gradients;
- (e) allow ease of vehicle manoeuvrability;
- (f) be designed to allow the full opening of all vehicle doors; and
- (g) minimise the impact of car parking on adjacent residences due to visual intrusion, noise and emission of fumes.
- (h) the gradient of the car parking space not steeper than 1:20.

DTS/DPF XX

None are applicable.

Vehicle Parking Rates

PO 5.1

The provision of sufficient on-site vehicle parking and specifically marked accessible car parking places to meet the needs of the development or land use having regard to factors that may support a reduced on-site rate such as:

- (a) availability of on-street car parking
- (b) shared usage of other parking areas
- (c) in relation to a mixed-use development, where the hours of operation of commercial activities complement the residential use of the site the provision of vehicle parking may be shared
- (d) Walkable distance to public transport stops

DTS/DPF 5.1

Development provides a number of car parking spaces on-site at a rate no less than the amount calculated using Transport, Access and Parking Table 1 – General Off-Street Car Parking Requirements or Transport, Access and Parking Table 2 – Off-Street Vehicle Parking Requirements in Designated Areas, whichever is relevant.

PO XX

Development provides parking for people with a disability and other people with small children at a rate of 1 car parking space in every 15 spaces provided within any form of development.

PO XX

Every second parking space provided for people with special needs shall be reserved for the exclusive use of people with a disabilities (i.e. 1 in 30 spaces)

Vehicle Parking Areas

PO 6.1

Vehicle parking areas that are sited and designed to minimise impact on the operation of public roads by avoiding the use of public roads when moving from one part of a parking area to another.

DTS/DPF 6.1

Movement between vehicle parking areas within the site can occur without the need to use a public road.

PO 6.2

Vehicle parking areas appropriately located, designed and constructed to minimise impacts on adjacent sensitive receivers through measures such as [avoiding lightspill and glare, noise attenuation](#), ensuring they are attractively developed and landscaped, screen fenced, and the like.

DTS/DPF 6.2

None are applicable.

PO 6.3

Vehicle parking areas designed to ~~provide opportunity for integration~~ and shared-use of adjacent car parking areas to reduce the total extent of vehicle parking areas and access points.

DTS/DPF 6.3

None are applicable.

PO 6.4

Pedestrian linkages between parking areas and the development are provided and are safe and convenient.

DTS/DPF 6.4

None are applicable.

PO 6.4

Vehicle parking areas designed to:

- (b) include adequate provision for manoeuvring and individually accessible car standing areas;
- (c) enable, where practical, vehicles to enter and leave the site in a forward direction;
- (d) minimise interruption to the pattern of built form along street frontages;
- (e) provide for access off minor streets and for the screening from public view of such car parking areas by buildings on the site wherever possible;
- (g) minimise loss of existing on-street parking spaces arising through crossovers and access;

PO 6.4

PO 6.5

Vehicle parking areas that are likely to be used during non-daylight hours are provided with floodlit entry and exit points to ensure clear visibility to users. [Lighting should be provided within parking areas to support a comfortable use.](#)

DTS/DPF 6.5

None are applicable.

PO 6.6

Loading areas and designated parking spaces for [loading and unloading of courier, delivery, service vehicles](#) service vehicles provided within the boundary of the site.

Attachment A.1 City of Adelaide P&D Code amendment document

DTS/DPF 6.6

Loading areas and designated parking spaces are wholly located within the site.

PO 6.7

On-site visitor parking spaces are sited and designed to be accessible to all visitors at all times.

DTS/DPF 6.7

None are applicable.

PO X

Development designed to ensure safe and convenient on-site car parking for resident and visitor vehicles.

DTS/DPF X

None are applicable.

PO X

Garages and parking structures designed and located so that they do not visually dominate the street frontage.

DTS/DPF X

None are applicable.

PO X

Multi level car parks should be:

- (a) located away from ground floor street frontages to major streets;
 - (b) ensures vehicle access is from the road with less pedestrian activity in instances where a site has access to more than one road frontage;
 - (c) has no more than one entry lane and one exit lane;
 - (d) has a controlled exit at the property boundary to stop vehicles before travelling across the footpath;
 - (e) has no more than one left in and one left out access point;
 - (f) avoids access points along public transport routes and bikeways; and
 - (g) with respect to ancillary parking, is provided at basement level, or undercroft if located behind other uses which provide activity on the street frontage.
- (a) does not cross major walking routes; and
 - (b) located away from frontages to major streets wherever possible.

Undercroft and Below Ground Garaging and Parking of Vehicles

PO 7.1

Undercroft and below ground garaging of vehicles designed to enable safe entry and exit from the site without compromising pedestrian or cyclist comfort and safety or causing conflict with other vehicles.

DTS/DPF 7.1

None are applicable.

PO 7.1

Car parking within a basement or undercroft designed to ensure:

- (a) the width of access driveways is kept to a minimum and does not detract from the streetscape;
- (b) driveways provide safe and convenient access and egress;
- (c) access is restricted to one driveway or one point of access and egress;
- (d) vehicles can exit in a forward direction and not compromise pedestrian safety or cause conflict with other vehicles; and
- (e) the height of the car park ceiling does not exceed 1m above the finished ground floor level to ensure

minimal impact on the streetscape.

DTS/DPF 7.1

None are applicable.

Internal Roads and Parking Areas in Residential Parks and Caravan and Tourist Parks

PO 8.1

Internal road and vehicle parking areas surfaced to prevent dust becoming a nuisance to park residents and occupants.

DTS/DPF 8.1

None are applicable.

PO 8.2

Traffic circulation and movement within the park that is pedestrian friendly and promotes low speed vehicle movement

DTS/DPF 8.2

None are applicable.

Bicycle Access Parking in Designated Areas

PO 9.1

The provision of adequately sized on-site bicycle parking facilities to encourage cycling as an active transport mode supporting community health.

DTS/DPF 9.1

Areas and / or fixtures are provided for the parking and storage of bicycles at a rate not less than the amount calculated using Transport, Access and Parking Table 3 - Off Street Bicycle Parking Requirements.

PO 9.2

Bicycle parking facilities provide for the secure storage and tethering of bicycles in a place where casual surveillance is possible, is well lit and signed for the safety and convenience of cyclists and to deter property theft.

DTS/DPF 9.2

None are applicable.

Onsite secure bicycle parking facilities

1) for residents and employees (long stay) should be:

- (a) located in a prominent place;
- (b) located at ground floor level;
- (c) located undercover;
- (d) located where passive surveillance is possible, or covered by CCTV;
- (e) well lit and well signed;
- (f) close to well used entrances;
- (g) accessible by cycling along a safe, well lit route;
- (h) take the form of a secure cage with locking rails inside or individual bicycle lockers; and
- (i) in the case of a cage have an access key/pass common to the building access key/pass.

2) for short stay users (i.e. bicycle rails) should be:

- (a) directly associated with the main entrance;

- (b) located at ground floor level;
- (c) located undercover;
- (d) well lit and well signed;
- (e) located where passive surveillance is possible, or covered by CCTV; and
- (f) accessible by cycling along a safe, well lit route.

PO 9.3

Non-residential development incorporates end-of-journey facilities for employees such as showers, changing facilities and secure lockers, and signage indicating the location of the facilities to encourage cycling as a mode of journey-to-work transport.

DTS/DPF 9.3

None are applicable.

PO XX

Pedestrian Access

PO XX

Development supports pedestrians by providing shelter and reducing conflicts with other modes.

PO XX

Development should reflect the significance of paths and increase the permeability of the pedestrian network.

DTS/DPF XX

(a) pedestrians are not disrupted or inconvenienced by badly designed or located vehicle access ramps in footpaths or streets; and

(b) vehicle and service entry points are kept to a minimum to avoid adverse impact on pedestrian amenity.

PO XX

Corner buildings adjacent to street intersections and buildings along a high concentration public transport route or along public transport pedestrian routes identified should provide weather protection for pedestrians in the form of verandahs, awnings or canopies. Where verandahs or awnings are provided which block street lighting, they should include additional lighting beneath the canopy.

DTS/DPF XX

None are applicable.

PO XX

Within the Core, Primary and Secondary Pedestrian Areas identified within Map Adel/1 (Overlays 2, 2A and 3), development should be designed to support the establishment and maintenance of continuous footpaths so that pedestrian flow is free and uninterrupted. Pedestrian access should be provided at ground level mid-block between all streets.

DTS/DPF XX

None are applicable.

PO XX

Attachment A.1 City of Adelaide P&D Code amendment document

Development should provide and maintain pedestrian shelter, access and through-site links in accordance with the walking routes identified within [Map Adel/1 \(Overlays 2, 2A and 3\)](#) and the provisions of the Zone or Policy Area in which it is located. Such facilities should be appropriately designed and detailed to enhance the pedestrian environment, have regard to the mobility needs of people with disabilities, and be safe, suitable and accessible.

DTS/DPF XX

None are applicable.

Public transport integration

PO XX

Development along public transport routes should:

- (a) ensure there are pedestrian links through the site if needed to provide increased access to public transport;
- (b) provide shelter (e.g. verandahs) for pedestrians against wind, sun and rain;
- (c) provide interest and activity at street level; and
- (d) where possible, avoid vehicle access across public transport routes. Where unavoidable, vehicle access should be integrated into the design of the development whilst retaining active street frontages.

Loading and servicing

PO XX

Adequate off-street facilities for loading and unloading of courier, delivery and service vehicles and access for emergency vehicles.

Table 1 – General Off-Street Car Parking Requirements

Class of Development	Car Parking Rate (unless varied by Table 3 onwards)
Residential Development	
Detached Dwelling	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling.
Group Dwelling	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling. 0.33 spaces per dwelling for visitor parking where development involves 3 or more dwellings.

Residential Flat Building	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling.
----------------------------------	--

Working Draft

Class of Development	Car Parking Rate (unless varied by Table 3 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.
	0.33 spaces per dwelling for visitor parking where development involves 3 or more dwellings.
Row Dwelling	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling.
Semi-Detached Dwelling	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling.
Aged / Supported Accommodation	
Aged person's accommodation	0.3 spaces per bed.
Nursing home	0.3 spaces per bed.
Retirement village	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling – 2 spaces per dwelling. 0.2 spaces per dwelling for visitor parking.
Supported accommodation	0.3 spaces per bed.
Residential Development (Other)	
Ancillary accommodation	No additional requirements beyond those associated with the main dwelling.
Residential park	1 or 2 bedroom dwelling – 1 space per dwelling. 3 or more bedroom dwelling - 2 spaces per dwelling. 0.2 spaces per dwelling for visitor parking.
Workers' accommodation	0.5 spaces per bed plus 0.25 spaces per bed for visitor parking.
Tourist	
Caravan park / tourist park	Parks with 100 sites or less – a minimum of 1 space per 10 sites to be used for accommodation.

Class of Development	Car Parking Rate (unless varied by Table 3 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.
	Parks with more than 100 sites - a minimum of 1 space per 15 sites used for accommodation. A minimum of 1 space for every caravan (permanently fixed to the ground) or cabin.
Tourist accommodation	1 car parking space per accommodation unit / guest room.
Commercial Uses	
Auction room/ depot	1 space per 100m ² of building floor area plus an additional 2 spaces.
Automotive collision repair	3 spaces per 100m ² of gross leasable floor area plus 1 space for each vehicle being serviced, repaired or fitted with accessories, including vehicles waiting to be repaired, fitted with accessories or collected by owners.
Bulky goods outlet	3 spaces per 100m ² of gross leasable floor area.
Call centre	8 spaces per 100m ² of gross leasable floor area.
Motor repair station	3 spaces per 100m ² of gross leasable floor area plus 1 space for each vehicle being serviced, repaired or fitted with accessories, including vehicles waiting to be repaired, fitted with accessories or collected by owners.
Office	4 spaces per 100m ² of gross leasable floor area.
Retail fuel outlet	6 spaces per service bay, plus 50% of the spaces calculated to be provided for ancillary uses
Service trade premises	4 spaces per 100m ² of gross leasable floor area 1 space per 100m ² of outdoor area used for display purposes.
Shop other than a bulky goods outlet or restaurant	7 spaces per 100m ² of gross leasable floor area where not located in an integrated complex containing two or more tenancies (and which may comprise more than one building) where facilities for off-street vehicle

Class of Development	Car Parking Rate (unless varied by Table 3 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.
	<p>parking, vehicle loading and unloading, and the storage and collection of refuse are shared.</p> <p>6 spaces per 100m² of gross leasable floor area where located in an integrated complex containing two or more tenancies (and which may comprise more than one building) where facilities for off-street vehicle parking, vehicle loading and unloading, and the storage and collection of refuse are shared.</p>
Community and Civic Uses	
Childcare centre	0.25 spaces per child
Library	4 spaces per 100m ² of total floor area.
Community facility	10 spaces per 100m ² of total floor area.
Hall / meeting hall	0.2 spaces per seat.
Place of worship	1 space for every 3 visitor seats.
Pre-school	1 per employee plus 0.25 per child (drop off/pick up bays)
Educational establishment	<p>For a primary school - 1.1 space per full time equivalent employee plus 0.25 spaces per student.</p> <p>For a secondary school - 1.1 per full time equivalent employee plus 0.16 spaces per student</p> <p>For a tertiary institution - 0.8 per student based on the maximum number of students on the site at any time.</p>
Health Related Uses	
Hospital	5 spaces per bed.
Consulting room	4 spaces per 100m ² of gross leasable floor area.

Class of Development	Car Parking Rate (unless varied by Table 3 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.
Recreational and Entertainment Uses	
Amusement machine centre	1 space per 10m ² of total floor area.
Bowling club	10 spaces per bowling green.
Cinema complex	0.33 spaces per seat.
Concert hall / theatre	0.33 spaces per seat.
Hotel	1 space for every 2m ² of total floor area in a public bar plus 1 space for every 6m ² of total floor area available to the public in a lounge, beer garden or other licensed area.
Indoor recreation facility	7 spaces per 100m ² of total floor area For a squash court or tennis court – 4 spaces per court.
Restaurant	Premises with a dine-in service only - 0.4 spaces per seat. Premises with a dine-in and take-away services - 0.55 spaces per seat. [Note: requirements associated with a drive-through service are to be considered separately to the parking rates mentioned herein]
Industry/Employment Uses	
Fuel depot	If employee numbers are known - 1 space per employee with a minimum of 2 spaces per premises. If employee numbers are unknown - 1.85 spaces per 100m ² of total floor area with a minimum of 2 spaces per premises.
Industry	If employee numbers are known - 1 space per employee with a minimum of 2 spaces per premises. If employee numbers are unknown - 1.85 spaces per 100m ² of total floor area with a minimum of 2 spaces per premises.

Class of Development	Car Parking Rate (unless varied by Table 3 onwards) Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.
Store	<p>If employee numbers are known - 1 space per employee with a minimum of 2 spaces per premises.</p> <p>If employee numbers are unknown - 1.85 spaces per 100m² of total building floor area with a minimum of 2 spaces per premises.</p>
Timber yard	<p>If employee numbers are known - 1 space per employee with a minimum of 2 spaces per premises.</p> <p>If employee numbers are unknown - 1.85 spaces per 100m² of total floor area with a minimum of 2 spaces per premises.</p>
Warehouse	<p>If employee numbers are known - 1 space per employee with a minimum of 2 spaces per premises.</p> <p>If employee numbers are unknown - 1.85 spaces per 100m² of total floor area with a minimum of 2 spaces per premises.</p>
Other Uses	
Funeral Parlour	1 space per 5 seats in the chapel plus 1 space for each vehicle operated by the parlour.
Radio or Television Station	5 spaces per 100m ² of total building floor area.

Table 2 – Off-Street Vehicle Parking Requirements in Designated Areas

Class of Development	Car Parking Rate		Designated Areas
	Minimum number of spaces	Maximum number of spaces	
Development generally			
All classes of development	No minimum.	<p>No maximum except in within the Primary Pedestrian Area shown on Map Adel/1 (Overlay 2A):</p> <p>Where maximum is</p> <ul style="list-style-type: none"> 1 space for each dwelling with a total floor area less than 75 square metres 2 spaces for each dwelling with a total floor area between 75 square metres and 150 square metres 3 spaces for each dwelling with a total floor area greater than 150 square metres. <p>Multi-unit dwelling: 1 visitor space for each 6 dwellings.</p>	<p>Capital City Zone (except in primary pedestrian area)</p> <p>City Main Street Zone</p> <p>City Riverbank Zone</p> <p>Adelaide Park Lands</p>
Non-residential development			

Attachment A.1 City of Adelaide P&D Code amendment document

<p>Non-residential development excluding tourist accommodation</p>	<p>3 spaces per 100m² of gross leasable floor area.</p>	<p>5 spaces per 100m² of gross leasable floor area.</p>	<p>Urban Activity Centre Zone Urban Corridor (Boulevard) Zone Urban Corridor (Business) Zone Urban Corridor (Living) Zone Urban Corridor (Main Street) Zone Urban Neighbourhood Zone Community Facilities Zone City Living Zone</p>
<p>Non-residential development excluding tourist accommodation</p>	<p>3 spaces per 100m² of gross leasable floor area.</p>	<p>6 spaces per 100m² of gross leasable floor area.</p>	<p>Where located in accordance with the Table 2 - Criteria: Business Neighbourhood Zone Education and Innovation Zone Suburban Activity Centre Zone Suburban Business and Innovation Zone Suburban Main Street Zone Urban Activity Centre Zone</p>

Working Draft

Class of Development	Car Parking Rate		Designated Areas
	Minimum number of spaces	Maximum number of spaces	
Tourist accommodation	Where a development comprises more than one development type, then the overall car parking rate will be taken to be the sum of the car parking rates for each development type.		
	1 space for every 4 bedrooms up to 100 bedrooms plus 1 space for every 5 bedrooms over 100 bedrooms	1 space per 2 bedrooms up to 100 bedrooms and 1 space per 4 bedrooms over 100 bedrooms	Urban Activity Centre Zone Urban Corridor (Boulevard) Zone Urban Corridor (Business) Zone Urban Corridor (Living) Zone Urban Corridor (Main Street) Zone Urban Neighbourhood Zone City Living Zone Community Facilities Zone
Residential development			
Residential component of a multi-storey building	Dwelling with no separate bedroom – 0.25 spaces per dwelling	None specified.	Urban Activity Centre Zone Urban Corridor (Boulevard) Zone Urban Corridor (Business) Zone Urban Corridor (Living) Zone Urban Corridor (Main Street) Zone Urban Neighbourhood Zone City Living Zone Community Facilities Zone
	1 bedroom dwelling – 0.75 spaces per dwelling 2 bedroom dwelling – 1 space per dwelling 3 or more bedroom dwelling – 1.25 spaces per dwelling 0.25 spaces per dwelling for visitor parking.		
Residential flat building	Dwelling with no separate bedroom – 0.25 spaces per dwelling	None specified.	Urban Activity Centre Zone Urban Corridor (Boulevard) Zone

Table 2 - Criteria:

The designated area is wholly located within Metropolitan Adelaide and any part of the area satisfies one of the following:

- (b) is within 400 metres of a bus interchange⁽¹⁾
- (c) is within 400 metres of an O-Bahn interchange⁽¹⁾
- (d) is within 400 metres of a passenger rail station⁽¹⁾
- (e) is within 400 metres of a passenger tram station⁽¹⁾
- (f) is within 400 metres of the Adelaide Parklands.

[NOTE(S): (1) Measured from an area that contains any platform(s), shelter(s) or stop(s) where people congregate for the purpose waiting to board a bus, tram or train, but does not include areas used for the parking of vehicles.]

Table 3 – Off-Street Bicycle Parking Requirements

The bicycle parking rates apply within designated areas located within parts of the State identified in the Schedule to Table 3.

Class of Development	Bicycle Parking Rate Where a development comprises more than one development type, then the overall bicycle parking rate will be taken to be the sum of the bicycle parking rates for each development type.
Aged care (nursing home and retirement village)	1 per 7 people the facility is capable of accommodating and 1 per 60 people the facility is capable of accommodating.
Child care centre	1 per 20 employees 1 per 40 children
Community centre	1 per 1500 square metres of gross leasable floor area for employees and 2 + 1 per 1500 square metres of gross leasable floor area.
Consulting Room	1 space per 20 employees plus 1 space per 20 consulting rooms for customers.
Educational establishment	For a secondary school – 1 space per 20 full-time time employees plus 10 percent of the total number of employee spaces for visitors. For tertiary education – 1 space per 20 employees plus 1 space per 10 full time students.
Hospital	1 space per 15 beds plus 1 space per 30 beds for visitors.
Indoor recreation facility	1 space per 4 employees plus 1 space per 200m ² of gross leasable floor area for visitors.
Licensed Premises	1 per 20 employees 1 per 60 square metres total floor area. 1 per 40 square metres of bar floor area 1 per 120 square metres lounge and beer garden floor area 1 per 60 square metres dining floor area 1 per 40 square metres gaming room floor area.
Multi-level car parking station	1 per 20 employees plus 5 percent of the total number of proposed car parking spaces.

Attachment A.1 City of Adelaide P&D Code amendment document

Office	1 space for every 200m ² of gross leasable floor area plus 2 spaces plus 1 space per 1000m ² of gross leasable floor area for visitors.
Recreation area	1 per 1500 spectator seats for employees. 1 per 250 visitors and customers.
Dwelling	1 for every dwelling/apartment with a total floor area less than 150 square metres. 2 for every dwelling/apartment with a total floor area greater than 150 square metres. 1 for every 10 dwellings for visitors
Residential flat building	1 space for every 4 dwellings for residents plus 1 for every 10 dwellings for visitors.
Residential component of a multi-storey building	1 space for every 4 dwellings for residents plus 1 space for every 10 dwellings for visitors.
Shop	1 space for every 300m² of gross leasable floor area plus 1 space for every 600m² of gross leasable floor area for customers. 1 per 20 employees 1 per 50 seats
Tourist accommodation	1 space for every 20 employees plus 2 for the first 40 rooms and 1 for every additional 40 rooms for visitors.

Schedule to Table 3

Site Contamination

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Protection of human health and the environment wherever site contamination has been identified or is suspected to have occurred.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

PO 1.1

Ensure land/buildings and/or water, including underground water is suitable for sensitive use in circumstances where it is, or may have been, subject to site contamination as a result of previously established uses of land or activities in the vicinity of the land.

DTS/DPF 1.1

(a) Development:

- i. does not incorporate a change of use of land;
- ii. incorporates a change of use of land that is not a more sensitive use of land than previously established uses of the land;
- iii. in respect of which the applicant is able to furnish, or the relevant authority is in possession of, a site contamination audit report less than 5 years old under Part 10A of the Environment Protection Act 1993 to the effect:
 - a that site contamination does not exist (or no longer exists) at the land; or
 - b that any site contamination at the land has been cleared or addressed to the extent necessary to enable the land to be suitable for sensitive use; or
- iv. the allotment was the subject of consent granted under the Development Act 1993 or the Planning Development and Infrastructure Act 2016 on or after 1 September 2009 in relation the division of the land.

(b) Information of the suitability of land for the proposed land use to be provided as part of the development application and to include:

- i. the provision of a report of the land use history and condition of the site;
- ii. where the report reveals that contamination is suspected or identified, a detailed site assessment report that determines whether site contamination poses an actual or potential risk to human health and the environment, either on or off the site, of sufficient magnitude to warrant remediation appropriate to the proposed land use;
- iii. where remediation is warranted, a remediation and/or management strategy prepared in consultation with an independent Environmental Auditor, Contaminated Land, endorsed by the EPA;
- iv. a site audit report, prepared by an independent Environmental Auditor, Contaminated Land, endorsed by the EPA, that states that in the opinion of the Auditor, the site is suitable for the intended uses(s), or for certain stated uses(s) and also states any conditions pertaining to the use(s).

Note

This document contains City of Adelaide edited version of the Planning and Design Code (Phase 3) released for consultation on 1 October 2019.

Blue text highlights the edits Council has made to the policy.

The changes made are based on the Development Plan Code Analysis for the Capital City Zone, City Frame and City Living Policy Area 30. This document tracked the location of current Dev Plan policy, identified what is missing, what errors have been made and provides a response and recommendations in regard to the direction of future Code policy.

Design in Urban Areas

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Development that is:

- (a) contextual – by considering, recognising and carefully responding to its natural surroundings and positively contributing to the character of the immediate area;
- (b) durable – fit for purpose, adaptable and long lasting;
- (c) inclusive – by integrating landscape design to optimise pedestrian and cyclist usability, privacy and equitable access, and also promote the provision of quality spaces integrated with the public realm that can be used for access and recreation and help optimise security and safety both internally and within the public realm, for occupants and visitors alike; and
- (d) sustainable – by integrating sustainable techniques into the design and siting of development and landscaping to improve community health, urban heat, water management, environmental performance, biodiversity and local amenity and to minimise energy consumption.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

ALL DEVELOPMENT

External Appearance

PO X

Buildings that enhance public environment and achieve a high standard of external appearance by:

- (a) the use of high-quality durable materials and finishes that age well to minimise ongoing maintenance requirements;
- (b) providing a high degree of visual interest through articulation and fenestration;
- (c) ensuring lower levels are well integrated with and contribute to a vibrant public realm; and
- (d) maintaining a sense of openness to the sky and daylight to public spaces, open space areas and existing buildings.

DTS X

Buildings designed to:

- (a) utilise a combination (or thereof) of the following external materials and finishes:
 - i. masonry;
 - ii. natural stone;
 - iii. prefinished materials that minimise staining, discolouring or deterioration, and avoiding painted surfaces particularly above ground level; and
- (b) avoid large blank facades and incorporate design features within blank walls on side boundaries which have the potential to be built out.

PO X

Designing building facades fronting street frontages, access ways, driveways or public spaces at an appropriate scale, rhythm and proportion that responds to the use of the building, the desired character of the locality and the modelling and proportions of adjacent buildings.

DTS X

None are applicable.

PO 1.1

Buildings that reinforce and define corners through architectural form, changes in setback, articulation, materials, colour and massing (including height, width, bulk, roof form and slope) and addresses all street frontages.

DTS 1.1

None are applicable.

PO 1.2

Where zero or minor setbacks are desirable, development provides shelter over footpaths to positively contribute to the walkability and comfort of the public realm.

DTS 1.2

None are applicable.

PO 1.3

Buildings (other than ancillary buildings, group dwellings or buildings on a battle-axe allotment) designed so the main façade faces the primary street frontage of the land on which they are situated.

DTS 1.3

None are applicable.

PO

Entrances to multi-storey buildings are safe, attractive, welcoming, functional and contribute to streetscape character.

DTS / DPF

Entrances to multi-storey buildings:

- (a) oriented towards the street;
- (b) clearly visible and easily identifiable from the street and vehicle parking areas;
- (c) designed to be prominent, accentuated and a welcoming feature if there are no active or occupied ground floor uses;
- (d) provide shelter, a sense of personal address and transitional space around the entry;
- (e) located as close as practicable to the lift and / or lobby access to minimise the need for long access corridors; and
- (f) avoid the creation of potential areas of entrapment.

PO 1.4

Plant, exhaust and intake vents and other technical equipment integrated into the building design to minimise visibility from the public realm and negative impacts on residential amenity by:

- (a) positioning plant and equipment discretely, in unobtrusive locations as viewed from public roads and spaces;
- (b) screening rooftop plant and equipment from view; and
- (c) when located on the roof of non-residential development, locating the plant and equipment as far as practicable from adjacent sensitive land uses.

DTS / DPF 1.4

Development does not incorporate any structures that protrude beyond the roofline.

PO 1.5

The negative visual impact of outdoor storage, waste management, loading and service areas is minimised by integrating them into the building design and [locating or](#) screening them from public view (such as fencing, landscaping and built form) taking into account the form of development contemplated in the relevant zone.

DTS 1.5

None are applicable.

[Safety and Surveillance](#)

PO 2.1

Development maximises opportunities for passive surveillance of the public realm by providing clear lines of sight, appropriate lighting and the use of visually permeable screening wherever practicable.

DTS 2.1

~~None are applicable.~~

Development that maximises visibility of the public realm by:

- (a) orientating windows, doors and building entrances towards the street, open spaces, car parks, pedestrian routes and public transport stops;
- (b) avoiding high walls, blank facades, carports and landscaping that obscures direct views to public areas;
- (c) arranging living areas, windows, pedestrian paths and balconies to overlook recreation areas, entrances and car parks;
- (d) positioning recreational and public space areas so they are bound by roads on at least two road frontages or overlooked by development;
- (e) creating a complementary mix of day and night-time activities, such as residential, commercial, recreational and community uses, that extend the duration and level of intensity of public activity;
- (f) locating public toilets, telephones and other public facilities with direct access and good visibility from well-trafficked public spaces;
- (g) ensuring that rear service areas and access lanes are either secured or exposed to surveillance; and
- (h) ensuring the surveillance of isolated locations through the use of audio monitors, emergency telephones or alarms, video cameras or staff e.g. by surveillance of lift and toilet areas within car parks.

PO 2.2

Development designed to differentiate public, communal and private areas.

DTS 2.2

~~None are applicable.~~

Development that promotes territoriality or sense of ownership through physical features that express ownership and control over the environment and provide a clear delineation of public and private space by:

- (a) clear delineation of boundaries marking public, private and semi-private space, such as by paving, lighting, walls and planting;
- (b) dividing large development sites into territorial zones to create a sense of ownership of common space by smaller groups of dwellings; and
- (c) locating main entrances and exits at the front of a site and in view of a street.

PO 2.3

Buildings designed with safe, perceptible and direct access from public street frontages and vehicle parking areas.

DTS 2.3

~~None are applicable.~~

Development that provides awareness through design of what is around and what is ahead so that legitimate users and observers can make an accurate assessment of the safety of a locality and site and plan their behaviour accordingly by:

- (a) avoiding blind sharp corners, pillars, tall solid fences and a sudden change in grade of pathways, stairs or corridors so that movement can be predicted;
- (b) using devices such as convex security mirrors or reflective surfaces where lines of sight are impeded;
- (c) ensuring barriers along pathways such as landscaping, fencing and walls are permeable;
- (d) planting shrubs that have a mature height less than 1 metre and trees with a canopy that begins at 2 metres;
- (e) adequate and consistent lighting of open spaces, building entrances, parking and pedestrian areas to avoid the creation of shadowed areas; and
- (f) use of robust and durable design features to discourage vandalism.

PO 2.4

Development at street level designed to maximise opportunities for passive surveillance of adjacent public realm.

DTS 2.4

None are applicable.

PO 2.5

Common areas and entry points of buildings (such as the foyer areas of residential buildings), and non-residential land uses at street level, maximise passive surveillance from the public realm to the inside of the building at night.

DTS 2.5

None are applicable.

PO X

Buildings designed to minimise access between roofs, balconies and windows of adjacent buildings to maximise security and safety.

DTS X

None are applicable.

PO X

Designing permanent structures over the footpaths designed to ensure continued pedestrian movement.

DTS /DPF X

Structures that:

- (a) are setback a minimum of 600mm from the kerb edge or 1 metre from a street tree, light pole or street furniture element;
- (b) will not narrow the footpath width to less than 1.8m;
- (c) have a minimum vertical clearance height of 2.5m above the footpath level;
- (d) are not less than 600mm high above the footpath level; and
- (e) not encroach horizontally more than 150mm into the public road.

PO X

Where posts are required to support permanent structure, to be located 600mm from the kerb edge and 1m from a street tree, light pole or street furniture element.

DTS X

None are applicable.

Landscaping

PO X

Landscaping that:

- (a) forms an integral part of the design of development;

- (b) is selected and designed for water conservation;
- (c) incorporates local indigenous species suited to the site and development;
- (d) is provided to all areas of communal open space, drainage and shared car parking areas;
- (e) fosters human scale;
- (f) protects predominant landscape features; and
- (g) provides for the retention of trees.

DTS X

None are applicable.

PO X

Landscaping incorporating local indigenous species suited to the site and development and consistent with the character of the area.

DTS X

None are applicable.

PO X

Development designed and sited to retain:

- (a) existing trees of substantial size and merit; and
- (b) existing street-trees and accommodate and protect their normal growth pattern.

DTS X

None are applicable.

PO 3.1

Landscaped (including trees), permeable open spaces incorporated to:

- (a) minimise heat absorption and reflection;
- (b) maximise shade and shelter;
- (c) maximise stormwater infiltration; and
- (d) enhance the appearance of land and streetscapes.

DTS 3.1

None are applicable.

PO X

Driveways commencing from a primary street frontage and terminating at or near the rear of a site, such as in hammerhead allotments and shared driveways in group dwelling developments, are to be located, landscaped and fenced to minimise detrimental impact on the streetscape appearance and the amenity of neighbouring residential properties.

DTS X

None are applicable.

Environmental Performance

PO 4.1

Buildings sited, oriented and designed to maximise natural sunlight access and ventilation to main activity areas, habitable rooms, common areas and open spaces.

DTS 4.1

~~None are applicable.~~

Locate living areas, private open space and communal open space in a position that will receive sunlight by:

- (a) providing a minimum of two hours of direct sunlight solar time on 22 June to:
 - i. at least one habitable room window (excluding bathroom, toilet, laundry or storage room windows);
 - ii. to at least 20% of the private open space; and
 - iii. communal open space, where the space provides the primary private open space for any adjacent residential development.

- (b) Ensuring a maximum distance of 8m from habitable room window to living, dining, bedroom or kitchen.
- (c) Appropriate orientation of the building to:
 - i. maximise north/south facing facades;
 - ii. ensure the north facade receives good direct solar radiation;
 - iii. minimise east/west facades to protect the building from summer sun and winter winds;
 - iv. narrow floor plates to maximise floor area receiving good daylight; and/or
 - v. minimise the ratio of wall surface to floor area.

PO 4.2

Buildings sited and designed to maximise passive environmental performance and minimise energy consumption and reliance on mechanical systems, such as heating and cooling.

DTS 4.2

~~None are applicable.~~

Buildings designed to:

- (a) minimise energy consumption by:
 - i. window orientation and shading;
 - ii. adequate thermal mass including night time purging to cool thermal mass;
 - iii. appropriate insulation by insulating windows, walls, floors and roofs; and sealing of external openings.
 - iv. maximising natural ventilation including the provision of openable windows;
 - v. appropriate selection of materials, colours and finishes; and
 - vi. incorporation of efficient energy use technologies such as geo-exchange and embedded, distributed energy generation systems such as cogeneration, wind power, fuel cells and solar photovoltaic panels that supplement the energy needs of the building.
- (b) Development designed to provide natural ventilation of habitable rooms by:
 - i. positioning window and door openings to encourage cross ventilation from cooling summer breezes;
 - ii. installing small low-level windows on the windward side and larger raised openings on the leeward side to maximise airspeed in the room;
 - iii. installing higher level casement or sash windows, clerestory windows or operable fanlight windows to facilitate convective currents;
 - iv. selecting windows which the occupants can reconfigure to funnel breezes such as vertical louvred, casement windows and externally opening doors;
 - v. ensuring the internal layout minimises interruptions to airflow;
 - vi. limiting building depth to allow for ease of cross ventilation; and/or
 - vii. draught proofing doors, windows and other openings."

PO 4.3

Buildings incorporate climate responsive techniques and features such as building and window orientation, use of eaves, verandahs and shading structures, water harvesting, at ground landscaping, green walls, green roofs and photovoltaic cells.

DTS 4.3

None are applicable.

PO X

Roofs orientated and pitched to facilitate the efficient use of solar collectors and photovoltaic cells.

DTS X

Roof incorporating an area of at least 10m² that:

- (a) faces between 30° east and 20° west of north respectively; and
- (b) has a pitch of greater than 18°.

Water Sensitive Design

PO 5.1

Development sited and designed to maintain natural hydrological systems without negatively impacting:

- (a) the quantity and quality of surface and groundwater;
- (b) the depth and directional flow of surface and groundwater; or
- (c) the quality and function of natural springs.

DTS 5.1

None are applicable.

PO X

Development likely to result in risk of export of sediment, suspended solids, organic matter, nutrients, oil and grease include stormwater management systems designed to minimise pollutants entering stormwater.

DTS/DPF X

Development includes stormwater management systems designed to achieve the following gross pollutant outcomes:

- (a) 80% reduction in average annual total suspended solids;
- (b) 60% reduction in average annual total phosphorus;
- (c) 45% reduction in average annual total nitrogen;
- (d) 90% reduction of litter/gross pollutants compared to untreated stormwater runoff; and
- (e) no visible oils/grease for flows up to the 1-in-3 month average return interval flood peak flow.

PO X

Water discharged from a development site to be of a physical, chemical and biological condition equivalent to or better than its pre-developed state.

DTS X

None are applicable.

PO X

Development includes stormwater management systems to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS/DPF X

Development includes stormwater management systems that:

- (a) maintain a pre-development peak flow rate from the site, based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan;
- (b) maintains the stormwater runoff time to peak to match that of the pre-development; and
- (c) manages up to and including the 100-year ARI flood event (1% AEP) to avoid flooding of buildings.

Erosion Control

PO X

Development designed and located to prevent erosion.

DTS/DPF X

None are applicable.

Car parking appearance

PO 6.1

Development facing the street designed to minimise the negative impacts of any semi-basement and under-croft car parking on streetscapes.

DTS/DPF 6.1

The protrusion of semi-basement and undercroft car parking structures does not exceed 1.2m above

finished ground level and is screened through appropriate plantings, except in a location or zone where a continuous ground floor façade aligned with the front property boundary is desired.

PO 6.2

Vehicle parking areas appropriately located, designed and constructed to minimise impacts on adjacent sensitive receivers through measures such as ensuring they are attractively developed and landscaped, screen fenced, and the like.

DTS 6.2

None are applicable.

PO 6.3

Pedestrian connections that are safe, legible, direct and accessible are provided between parking areas and the development.

DTS 6.3

None are applicable.

PO 6.4

Street level vehicle parking areas that are open to the sky are landscaped to provide shade and reduce solar heat absorption and reflection.

DTS / DPF 6.4

Vehicle parking areas that are open to the sky and comprise 10 or more car parking spaces include a shade tree with a mature canopy of 4m diameter spaced for each 10 car parking spaces provided and a landscaped strip on any road frontage of a minimum dimension of 1m.

PO 6.5

Vehicle parking areas are landscaped along public frontages, allotment boundaries and between double rows of parking spaces.

DTS / DPF 6.5

Vehicle parking areas comprising 10 or more car parking spaces contain a vegetated landscaped strip of a minimum dimension of:

- (a) 1m along all public road frontages and allotment boundaries; and
- (b) 0.6m between double rows of car parking spaces.

PO 6.6

Vehicle parking areas and associated driveways are landscaped to shade and positively contribute to amenity.

DTS 6.6

None are applicable.

PO 6.7

Vehicle parking areas and accessways incorporate integrated stormwater management techniques such as permeable or porous surfaces, infiltration systems, drainage swales or rain gardens that integrate with landscaping requirements.

DTS 6.7

None are applicable.

PO X

Buildings are to be set back from rear access ways to provide adequate maneuverability.

DTS X

The minimum setback from a rear access way is as follows:

- (a) where the access way is wider than 6.5m – no set back
- (b) where the access way is less than 6.5m in width, a setback distance equal to the additional width

required to make the access way 6.5 metres or more

PO X

Garaging and parking structures (including the width of any support structure) provided on a public street frontage or on a laneway that functions as the dwellings primary frontage should be of a width less than 50 percent of the allotment width on that frontage.

DTS X

None are applicable.

PO X

Multi-level car parks designed to:

- (a) be located away from ground floor street frontages;
- (b) ensure vehicle access is from the road with less pedestrian activity;
- (c) there is no more than one entry lane and one exit lane;
- (d) have a controlled exit at the property boundary to stop vehicles before travelling across the footpath;
- (e) has no more than one left in and one left out access point;
- (f) avoid access points along high concentration public transport routes;
- (g) with respect to ancillary parking, is provided at basement level, or undercroft if located behind other uses which provide activity on the street frontage;
- (h) provide active street frontages and land uses such as commercial, retail or other non-car park uses, along ground floor street frontages to maintain pedestrian interest and activity at street level;
- (i) be of a high quality design and complement the surrounding built form in terms of height, bulk and scale;
- (j) provide surveillance, lighting and direct sightlines along clearly defined and direct walkways, through and within car parking areas and to lift and toilet areas;
- (k) ensure corner sites with two major street frontages, be set back from the major street frontages, with commercial or other non-car park floor space in front of and screening the car parking building;
- (l) be on a site with only one major street frontage, include screening so that any car parking is not visible from the public realm either day or night, and detailed to complement neighbouring buildings in a manner consistent with desired character in the relevant Zone and subzone;
- (m) incorporate treatments to manage the interface with adjacent housing, such as careful use of siting and use of materials and landscaping;
- (n) ensure there are no vehicle access points across major walking routes; and
- (o) provide safe and secure bicycle parking spaces.

DTS X

None are applicable.

Earthworks

PO 7.1

Development, including any associated driveways and access tracks, minimises the need for earthworks to limit disturbance to natural topography.

DTS / DPF 7.1

Development does not involve either:

- (a) excavation exceeding a vertical height of 1m;
- (b) filling exceeding a vertical height of 1m; or
- (c) a total combined excavation and filling vertical height of 2m or more.

Fences and walls

PO 8.1

Fences, walls and retaining walls of sufficient height to maintain privacy and security without unreasonably impacting visual amenity and adjoining land's access to sunlight.

DTS 8.1

~~None are applicable.~~

Fences and walls abutting streets (excluding service lanes) that:

- (a) are articulated and detailed to provide visual interest;
- (b) are compatible with the associated development and with any existing attractive fences and walls in the locality;
- (c) enable visibility of buildings from and to the street to enhance safety and allow surveillance;
- (d) assist development to address the street; and
- (e) are no greater more than 1.2m high if solid (forward of the building line). This height may be increased to 2m if the fence has openings which make it more than 50% transparent.

PO 8.2

Landscaping incorporated on the low side of retaining walls that are visible from public roads and public open space to minimise visual impacts.

DTS / DPF 8.2

A vegetated landscaped strip 500mm deep or more is provided against the low side of a retaining wall.

Building Services

PO

Services including gas and water meters conveniently located, screened from public view and integrated with the façade design.

DTS/DPF

None are applicable.

Building Adaptability

PO

Buildings designed to be adaptable and flexible to allow for a range of land uses without the need for significant alterations to the building and respond to changing economic and social conditions.

DTS/DPF

Ground floor level of buildings have a minimum floor to ceiling height of 3.5m.

PO

Buildings, where practical are refurbished, adapted and reused to ensure an efficient use of resources.

DTS/DPF

None are applicable.

Roof Top Plant and Ancillary Equipment

PO

Roof top plant and ancillary equipment that projects above the ceiling of the top storey that:

- (a) is designed to minimise the visual impact; and
- (b) is screened from view, including the potential view looking down or across from existing or possible higher buildings, or included in a decorative roof form that is integrated into the design of the building.

DTS/DPF

None are applicable.

Public Art

PO

Development where appropriate, integrates public art into the design of new or refurbished building sites in a manner that:

- (a) demonstrates artistic excellence and innovation in design;

- (b) incorporates high quality materials;
- (c) enhances the setting of new development;
- (d) is integrated into the design of the building and the surrounding environment;
- (e) considers any existing public art works; and
- (f) does not hinder sight lines or create entrapment spots.

DTS/DPF

Public art may be in the following form and locations:

- (a) treating the building as a piece of art in itself;
- (b) locating art in publicly accessible locations such as near main entrances, lobbies and street frontages;
- (c) using water as a landscaping element including animating spaces with fountains, pools and waterfalls, for which the re-use of stormwater is encouraged;
- (d) designing paving so it becomes a piece of art in itself;
- (e) using lighting to enhance the architectural characteristics of a building; or
- (f) providing spaces within the development for accommodating temporary or outdoor gallery opportunities.

Site Facilities/Waste Storage

PO

Development greater than 2000 m² of total floor area manages waste by:

- (a) containing a dedicated area for the collection and sorting of construction waste and recyclable building materials;
- (b) on-site storage and management of waste;
- (c) disposal of non-recyclable waste; and
- (d) incorporating waste water and stormwater re-use including the treatment and re-use of grey water.

DTS/DPF

None are applicable.

Demolition

PO

Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.

ALL DEVELOPMENT - 4 OR MORE BUILDING LEVELS

External Appearance

PO 9.1

Buildings positively contribute to the character of the local area by responding to local context.

DTS 9.1

None are applicable.

PO 9.2

Fine-grain detail at street level and a mixture of materials at lower building levels near the public interface are provided to reinforce a human scale.

DTS 9.2

None are applicable.

PO X

Buildings to create new features that contribute to an areas character where there is little or no established building pattern.

DTS X

None are applicable.

PO 9.3

Buildings designed to reduce visual mass by breaking up building façades into distinct elements.

DTS 9.3

None are applicable.

PO X

The height, scale and massing of buildings that reflect and reinforce:

- (a) the consistent parapet lines, floor levels, height and massing with existing buildings;
- (b) the prevailing pattern of visual sub-division of neighbouring building frontages where frontages display a character pattern of vertical and horizontal sub-divisions;
- (c) avoid massive unbroken facades; and
- (d) ground, middle and rooftop levels.

DTS X

None are applicable.

PO 9.4

Boundary walls visible from public land include visually interesting treatments to break up large blank elevations.

DTS 9.4

None are applicable.

PO X

The design, external materials, colours and finishes of buildings that have regard to their surrounding townscape context, built form and public environment.

DTS X

None are applicable.

PO 9.5

External materials and finishes are of high quality, durable and age well to minimise ongoing maintenance requirements and contribute to positively to the public realm.

DTS / DPF 9.5

Buildings utilise a combination (or thereof) of the following external materials and finishes:

- (a) masonry;
- (b) natural stone; and
- (c) pre-finished materials that minimise staining, discolouring or deterioration.

PO 9.6

Street facing building elevations designed to provide attractive, high quality and pedestrian friendly street frontages.

DTS / DPF 9.6

Building street frontages incorporate:

- (a) active uses such as shops or offices;
- (b) prominent entry areas for multi-storey buildings (where it is a common entry);
- (c) habitable rooms of dwellings; and
- (d) areas of communal public realm with public art or the like, where consistent with the Zone and/or sub zone provisions.

PO 9.7

Entrances to multi-storey buildings are safe, attractive, welcoming, functional and contribute to streetscape character.

DTS / DPF 9.7

Entrances to multi-storey buildings:

- (a) oriented towards the street;
- (b) clearly visible and easily identifiable from the street and vehicle parking areas;
- (c) designed to be prominent, accentuated and a welcoming feature if there are no active or occupied ground floor uses;
- (d) provide shelter, a sense of personal address and transitional space around the entry;
- (e) located as close as practicable to the lift and / or lobby access to minimise the need for long access corridors; and
- (f) avoid the creation of potential areas of entrapment.

PO 9.8

Building services, plant and mechanical equipment that:

- (a) do not dominate street frontages and are of high-quality materials; and/or
- (b) are screened from view from the public realm.

DTS 9.8

None are applicable.

Landscaping

PO 10.1

Development facing a street provides a well landscaped area that contains a deep soil space to accommodate a tree of a species and size adequate to provide shade, contribute to tree canopy targets and soften the appearance of buildings.

DTS / DPF 10.1

Buildings provide a 4m by 4m deep soil space in front of the building to accommodate a medium to large tree, except where no building setback from front property boundaries is desired.

PO 10.2

Deep soil zones provided to retain existing vegetation or provide areas that can accommodate new deep root vegetation, including tall trees with large canopies to provide shade and soften the appearance of multi storey buildings.

DTS / DPF 10.2

Multi-storey development provides deep soil zones and incorporate trees at not less than the following rates, except in a location or zone where full site coverage is desired:

Site-area	Minimum-deep-soil-area	Minimum-dimension	Tree/-deep-soil-zones
<300m ²	10m ²	1.5m	1-small-tree/-10m ² -deep-soil
300-1500m ²	7%·site·area	3m	1·medium·tree·/-·30m ² ·deep·soil
>1500m ²	7%·site·area	6m	1·large·or·medium·tree·/-·60m ² ·deep·soil
Tree-size-and-site-area-definitions			
Small-tree	4-6m·mature·height·and·<4m·canopy·spread		
Medium-tree	6-12m·mature·height·and·4-8m·canopy·spread		
Large-tree	12m·mature·height·and·>8m·canopy·spread		
Site-area	The·total·area·for·development·site,·not·average·area·per·dwelling		

PO 10.3

Deep soil zones provided with access to natural light to assist in maintaining vegetation health.

DTS 10.3

None are applicable.

PO 10.4

Unless separated by a public road or reserve, development sites adjacent to any zone that has a primary purpose of accommodating low rise residential development incorporate a deep soil zone along the common boundary, to enable medium to large trees to be retained or established to assist in screening new buildings of 3 or more storeys in height.

DTS / DPF 10.4

Building elements of 3 or more storeys in height are set back at least 6m from a zone boundary in which a deep soil zone area is incorporated.

Environmental

PO 11.1

Development minimises detrimental micro-climatic impacts on adjacent land and buildings.

DTS 11.1

None are applicable.

PO 11.2

Development incorporates sustainable design techniques and features such as window orientation, eaves and shading structures, water harvesting, green walls, and roof designs that enable the provision of rain water tanks (where they are not provided elsewhere on site), green roofs and photovoltaic cells.

DTS 11.2

None are applicable.

PO 11.3

Development of 5 or more storeys, or 21m or more in height (as measured from natural ground level and excluding rooftop mounted mechanical plant and equipment), designed to minimise the impacts of wind through measures such as:

- (a) a podium at the base of a tall tower and aligned with the street to deflect wind away from the street;
- (b) substantial verandahs around a building to deflect downward travelling wind flows over pedestrian areas;
- (c) the placement of buildings and use of setbacks to deflect the wind at ground level; and /or
- (d) avoid tall shear facades that create windy conditions at street level.

DTS 11.3

None are applicable.

Site Facilities / Waste Storage

PO 12.1

Development provides dedicated area for on-site collection and sorting of recyclable materials and refuse, green organic waste and wash bay facilities for the ongoing maintenance of bins that is adequate in size considering the number and nature of the activities they will serve and the frequency of collection.

DTS 12.1

None are applicable.

PO 12.2

Communal waste storage and collection areas located, enclosed and designed to be screened from view from the public domain, open space and dwellings.

DTS 12.2

None are applicable.

PO 12.3

Communal waste storage and collection areas designed to be well ventilated and located away from habitable rooms.

DTS 12.3

None are applicable.

PO 12.4

Communal waste storage and collection areas designed to allow waste and recycling collection vehicles to enter and leave the site without reversing.

DTS 12.4

None are applicable.

PO 12.5

For mixed use developments, non-residential waste and recycling storage areas and access provide opportunities for on-site management of food waste through composting or other waste recovery as appropriate.

DTS 12.5

None are applicable.

Car Parking

PO 13.1

Multi-level vehicle parking structures designed to contribute to active street frontages and complement neighbouring buildings.

DTS/ DPF 13.1

Multi-level vehicle parking structures within buildings to:

- (a) provide land uses such as commercial, retail or other non-car parking uses along ground floor street frontages; and
- (b) incorporate facade treatments along major street frontages that are sufficiently enclosed and detailed to complement adjacent buildings and limit impacts of light pollution .

PO 13.2

Multi-level vehicle parking structures within buildings complement the surrounding built form in terms of height, massing and scale.

DTS 13.2

None are applicable.

ALL RESIDENTIAL DEVELOPMENT

External Appearance

PO 14.1

Dwellings incorporate windows facing primary street frontages to encourage passive surveillance and make a positive contribution to the streetscape.

DTS/DPF 14.1

Each dwelling with a frontage to a public street includes at least one window with a total window area of at least 2m² facing the primary street, from a habitable room that has a minimum room dimension of 2.7m.

PO 14.2

Dwellings incorporate entry doors within street frontages to address the street and provide a legible entry point for visitors.

DTS/DPF 14.2

Dwellings with a frontage to a public street have the entry door facing the public street.

Outlook and Amenity

PO 15.1

Primary living rooms have an external outlook to provide a high standard of amenity for occupants.

DTS / DPF 15.1

Buildings designed to ensure primary living rooms (other than kitchens):

- (a) incorporate a window with an external outlook towards the street frontage or private open space; and
- (b) do not depend on lightwells to provide the primary source of daylight and outlook.

PO 15.2

Bedrooms separated or shielded from active communal recreation areas, common access areas and vehicle parking areas and access ways to mitigate noise and artificial light intrusion.

DTS 15.2

None are applicable.

Development designed to ensure bedrooms are separated or shielded from parking areas and access ways

by:

- (a) setting back bedroom windows a minimum of 2m from common driveways and parking areas;
- (b) installation of a solid fence at least 1.8m above the level of the driveway and/or parking area; and/or
- (c) incorporating a window sill height at least 1.5m above the level of the parking area and/or driveway.

Accessibility

PO

Universal design features are incorporated to provide options for people living with disabilities or limited mobility and / or to facilitate ageing in place.

DTS

None are applicable.

Housing Diversity

PO

Development comprising of a range of housing types, tenures and cost, to meet the widely differing social and economic needs of residents.

DTS

None are applicable.

Landscaping

PO X

Tree planting provided to:

- (a) contribute shade and shelter;
- (b) improve outlook for occupants of buildings;
- (c) reduce the apparent mass of buildings;
- (d) contribute to biodiversity;
- (e) mitigate urban heat; and
- (f) improve the amenity and character of streetscapes and contribute to attractive vistas.

DTS / DPF X

Tree planting is provided in accordance with the following tables:

(a)

Allotment-size	Tree-size* and number required per dwelling
<450m ²	1 small tree per dwelling
450-800m ²	1 medium tree
800m ² +	1 large tree

*refer Table DTS X Tree Size

Table DTS-21.2 Tree Size			
Tree-Size	Mature-Height	Mature-spread	Min-soil-area
Small	4-6m	2-4m	10m ² and min. dimension of 1.5m
Medium	6-12m	4-8m	30m ² and min. dimension of 2m
Large	>12m	>8m	60m ² and min. dimension of 4m

Table DTS X Tree Size

- (b) The following discounts apply where existing trees are retained on the subject land that are not a species identified in Regulation 3F(4)(b):

Retained tree height	Retained tree spread	Retained soil area within development site	Discount applied
4-6m	<4m	10m ² and min dimension of 1.5m	2 small
6-12m	4-8m	30m ² and min dimension of 3m	2 medium
>12m	>8m	60m ² and min dimension of 6m	2 large

- (c) Trees can be replaced with smaller trees in accordance with the following rates:

Tree size*	Equivalent planting
Medium tree	2 small trees
Large tree	4 small trees or 2 medium trees

*refer Table DTS X Tree Size

Ancillary Development

PO 16.1

Residential ancillary buildings and structures sited and designed to not detract from the streetscape or appearance of buildings on the site or neighbouring properties in terms of height, roof form and pitch, scale, building materials, colours and detailing.

DTS / DPF 16.1

Residential ancillary buildings and structures:

- (b) are not being constructed, added to or altered so that any part is situated:
- i. in front of any part of the building line of the dwelling to which it is ancillary; or
 - ii. within 900mm of a boundary of the allotment with a secondary street (if the land has boundaries on two or more roads);
- (c) in the case of a garage or carport, the garage or carport is setback at least 5.5m from the boundary of the primary street;
- (d) not exceeding 7m or 50% of the site frontage (whichever is the lesser) when facing a primary street or secondary street;
- (e) if situated on a boundary (not being a boundary with a primary street or secondary street), a length not exceeding 10m unless:
- i. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary; and
 - ii. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent;
- (f) if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary not exceeding 45% of the length of that boundary;
- (g) will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or abut the proposed wall or structure;

- (h) have a wall height or post height not exceeding 3m above natural ground level;
- (i) have a roof height where no part of the roof is more than 5m above the natural ground level; and
- (j) if clad in sheet metal, is pre-colour treated or painted in a non-reflective colour.

PO 16.2

Ancillary buildings and structures do not impede on-site functional requirements such as private open space provision, car parking requirements or result in over-development of the site.

DTS / DPF 16.2

Ancillary buildings and structures do not result in:

- (a) less private open space than specified in Design in Urban Areas Table 1 – Outdoor Open Space;
- (b) less on-site car parking than specified in Transport, Access and Parking Table 1 - Off-street Car Parking Requirements; and
- (c) the total roofed floor area of all existing or proposed ancillary building(s) or structure(s) exceeding 60m².

PO 16.3

Fixed plant and equipment in the form of pumps and/or filtration systems for a swimming pool or spa positioned and/or housed to not cause unreasonable noise nuisance to adjacent sensitive receivers.

DTS/DPF 16.3

The pump and/or filtration system is ancillary to a dwelling erected on the same site and is:

- (a) enclosed in a solid acoustic structure that is located at least 5m from the nearest habitable room located on an adjoining allotment; or
- (b) located at least 12m from the nearest habitable room located on an adjoining allotment.

Flooding

PO 17.1

Residential accommodation sited, designed and constructed to prevent the entry of floodwaters where the entry of flood waters is likely to result in undue damage to or compromise ongoing activities within buildings.

DTS / DPF 17.1

Residential accommodation has a ground finished floor level 300mm above the top of the kerb level of the primary street.

RESIDENTIAL DEVELOPMENT - 3 BUILDING LEVELS OR LESS

External appearance

PO 18.1

Garaging designed to not detract from the streetscape or [visually dominate from street](#) appearance of a dwelling.

DTS/DPF 18.1

Garages and carports facing a street:

- (a) do not exceed 7m in width or 50% of the sites frontage (whichever is less); and
- (b) are situated so that no part of the garage or carport will be in front of any part of the building line of the dwelling
- (c) are setback at least 5.5m from the boundary of the primary street; and
- (d) unless the dwelling has two storeys along the street frontage:
 - i. have single width car parking with a maximum garage door not exceeding 3.5m on sites with a frontage of 12m; or less
 - ii. have a garage door not exceeding 50% of the site frontage or 7m (whichever is less) on sites

with a frontage greater than 12m.

PO X

Building set-backs that complement the prevailing set-backs in the street in relation to:

- (a) street frontages; and
- (b) side and rear boundaries.

DTS X

Where setbacks vary the following setbacks apply:

- (a) the same distance as one or the other of the adjoining buildings, provided the difference between the set-backs of the 2 adjoining buildings is less than or equal to 2m; or
- (b) not less than the average of the set-backs of the adjoining buildings, if the difference between the set-backs of the adjoining buildings is greater than 2m.

PO 18.2

Dwelling facades make a positive contribution to streetscapes and common areas by providing variation of light and shadow and creating a sense of depth.

DTS/DPF 18.2

Each dwelling includes at least 3 of the following design features within each façade facing a public road or common driveway:

- (a) a minimum of 30% of the façade is setback an additional 300mm from the primary building line;
- (b) a porch or portico that projects at least 1m from the building façade that is open on at least 2 sides;
- (c) a balcony that projects from the building façade;
- (d) a verandah that projects at least 1m from the building façade;
- (e) eaves surrounding the dwelling of a minimum 450mm width;
- (f) 3a minimum 30% of the upper level projects forward from the lower level primary building line.

PO 18.3

The apparent mass of larger buildings is reduced when viewed from adjoining allotments or public streets.

DTS/DPF 18.3

Buildings of 2 or more building levels and a length exceeding 20m adjacent a secondary street or side boundary incorporate a step back of the building façade of more than 300mm for a minimum length of 1m, at least every 10m.

Overlooking / Visual Privacy

PO 19.1

Development mitigates direct overlooking of habitable rooms and private open spaces of dwellings.

DTS / DPF 19.1

Upper level windows facing side or rear boundaries shared with an allotment put to residential use:

- (a) are permanently obscured to a height of 1.5m above finished floor level that is fixed or not capable of being opened more than 200mm;
- (b) have sill heights greater than or equal to 1.5m above finished floor level; or
- (c) incorporate screening to a height of 1.5m above finished floor level; and
- (d) the building will not have a balcony or terrace on an upper building level, other than where the longest

side of that balcony or terrace will face a road (including any road reserve), or reserve (including any land held as open space), and is at least 15m from the private open space of any other dwelling.

Residential Amenity

PO X

Dwellings that provide a high-quality living environment.

DTS / DPF X

Dwellings provide the following minimum internal floor areas:

- (a) studio (where there is no separate bedroom): 35m²;
- (b) 1 bedroom dwelling/apartment: 50m²;
- (c) 2 bedroom dwelling/apartment: 65m²; and
- (d) 3+ bedroom dwelling/apartment: 80m² plus an additional 15m² for every additional bedroom over 3 bedrooms.

Note: Dwelling/apartment "unit size" includes internal storage areas but does not include balconies or car parking as part of the calculation.

Private Open Space

PO 20.1

Dwellings provided with suitable sized areas of usable private open space to meet the needs of occupants.

DTS / DPF 20.1

Private open space provided in accordance with Design in Urban Areas Table 1 - Outdoor Open Space.

PO 20.2

Private open space positioned to provide convenient access from internal living areas.

DTS / DPF 20.2

Private open space is directly accessible from a habitable room, other than a bedroom or study.

PO 20.3

Private open space is positioned and designed to:

- (a) provide useable outdoor space that suits the needs of occupants;
- (b) achieve comfortable year-round use by having a northerly aspect;
- (c) minimise overlooking from adjacent buildings;
- (d) take advantage of natural features of the land and desirable orientation and vistas;
- (e) be located away from bedroom windows on adjoining land to minimise acoustic impacts;
- (f) animate the street frontage by encouraging activity between buildings and public streets;
- (g) adequately define public and private space when located forward of the building; and
- (h) prolong activity along street frontages by protecting against inclement weather.

DTS / DPF 20.3

A portion of the private open space specified in DTS 20.1 can be provided forward of the primary building line where:

- (a) the area is fenced to a maximum height of 1.8m;
- (b) the area incorporates a verandah with a minimum dimension of 1.5m
- (c) an area is provided behind the primary building line that has the minimum dimensions identified in DTS 20.1;

Landscaping

PO 21.1

Soft landscaping incorporated into development to:

- (a) minimise heat absorption and reflection;
- (b) contribute shade and shelter;

- (c) provide for stormwater infiltration and biodiversity; and
- (d) enhance the appearance of land and streetscapes.

DTS / DPF 21.1

Residential development incorporates areas for soft landscaping with a minimum dimension of 0.5 metres provided in accordance with the following:

(a)

Dwelling-site-area-(or-in-the-case-of-residential-flat-or-group-average-site-area)-(square-metres)	%-of-site-
<200	15%
201--450	20%
>450	25%

; and

- (b) 25% of any land between the road boundary and the primary building line is provided for soft landscaping with a minimum dimension of 0.5 metres.

PO 21.2

Tree planting provided to:

- (g) contribute shade and shelter;
- (h) improve outlook for occupants of buildings;
- (i) reduce the apparent mass of buildings;
- (j) contribute to biodiversity;
- (k) mitigate urban heat; and
- (l) improve the amenity and character of streetscapes and contribute to attractive vistas.

DTS / DPF 21.2

Tree planting is provided in accordance with the following tables:

(a)

Allotment-size	Tree-size*-and-number-required-per-dwelling
<450m ²	1-small-tree-per-dwelling
450-800m ²	1-medium-tree
800m ² +	1-large-tree

*refer Table DTS 21.2 Tree Size

Table-DTS-21.2-Tree-Size			
Tree-Size	Mature-Height	Mature-spread	Min-soil-area
Small	4-6m	2-4m	10m ² -and-min-dimension-of-1.5m
Medium	6-12m	4-8m	30m ² -and-min-dimension-of-2m
Large	>12m	>8m	60m ² -and-min-dimension-of-4m

Table DTS 21.2 Tree Size

- (d) The following discounts apply where existing trees are retained on the subject land that are not a species identified in Regulation 3F(4)(b):

Retained tree height	Retained tree spread	Retained soil area within development site	Discount applied
4-6m	<4m	10m ² and min dimension of 1.5m	2 small
6-12m	4-8m	30m ² and min dimension of 3m	2 medium
>12m	>8m	60m ² and min dimension of 6m	2 large

(e) Trees can be replaced with smaller trees in accordance with the following rates:

Tree size*	Equivalent planting
Medium tree	2 small trees
Large tree	4 small trees or 2 medium trees

*refer Table DTS 21.2 Tree Size

Water Sensitive Design

PO 22.1

Residential development designed to capture and re-use stormwater to:

- (a) maximise conservation of water resources;
- (b) manage peak stormwater runoff flows and volume to ensure the carrying capacities of downstream systems are not overloaded; and
- (c) manage stormwater runoff quality.

DTS / DPF 22.1

Residential development in the form of:

- (a) detached, semi-detached or row dwellings include a retention rainwater tank storage:
 - i. connected to at least 80% of the roof area of the dwelling (row dwelling), or at least 60% of the roof area of the dwelling (detached and semi-detached dwellings);
 - ii. connected to all toilets and either the laundry cold water outlets or hot water service;
 - iii. that has a minimum total capacity in accordance with Table 1, and
 - iv. the roof is at least 80% of the impervious area; or

Table 1: Retention Rainwater Tank

Allotment size (m ²)	Minimum site % perviousness	Minimum rainwater tank volume	Additional site permeability discount opportunity	
			Site % perviousness	Minimum rainwater tank volume (L)
<200	15%	2,000		
201-400	20%	3,000	30%	2,000
400-500	25%	5,000	35%	3,000

- (a) hammerhead dwellings have driveways and pathways constructed of a minimum of 50% permeable or porous material and include a retention rainwater tank storage:
 - i. connected to at least 60% of the roof area of the dwelling;
 - ii. connected to all toilets and either the laundry cold water outlets or hot water service; and
 - iii. that has a minimum total capacity in accordance with Table 2.

Table 2: Retention Rainwater Tank Option

Allotment-size-(m ²)	Site-%-pervious-ness	Rainwater-tank-volume-(L)
<200	15%	2,000
201-400	20%	3,000
401-500	25%	5,000

PO 22.2

Development creating 5-19 dwellings includes stormwater management systems that minimise the discharge of sediment, suspended solids, organic matter, nutrients, bacteria, litter and other contaminants to the stormwater system, watercourses or other water bodies.

DTS 22.2

Development creating 5-19 dwellings is accompanied by an approved Stormwater Management Plan that achieves the following stormwater runoff outcomes:

- (a) 80 per cent reduction in average annual total suspended solids;
- (b) 60 per cent reduction in average annual total phosphorus; and
- (c) 45 per cent reduction in average annual total nitrogen.

PO 22.3

Development creating 5-19 dwellings includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS 22.3

Development creating 5-19 dwellings

- (a) maintains:
 - i. a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 5-year ARI (18.1% AEP) 30 minute storm; and
 - ii. the stormwater runoff time to peak to match that of the pre-development condition; or
- (b) capture and retain the difference in pre-development runoff volume (based upon a 0.35 runoff coefficient) vs post development runoff volume from the site for a 5-year ARI (18.1% AEP) 30 minute storm; and
- (c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings.

Car parking, access and manoeuvrability

PO 23.1

Covered car parking spaces are of dimensions to be functional, accessible and convenient.

DTS / DPF 23.1

Covered car parking spaces:

- (a) where enclosed by fencing or walls, have:
 - i. a minimum internal width of 3.2m and length of 6.0m for a single space;
 - ii. a minimum internal width of 6.0m and length of 6.0m for a double space (side by side); and
 - iii. a minimum internal width of 3.2m and length of 11m for a double space (tandem); or
- (b) where not enclosed by fencing, walls or garage doors, have:
 - i. a minimum width of 3.0m and minimum length of 5.5m for a single space;
 - ii. a minimum width of 5.2m and minimum length of 5.5m for a double (side by side) space; and
 - iii. a minimum width of 3.0m and minimum length of 10.4m for a double (tandem) space.

PO 23.2

Uncovered car parking space are of dimensions to be functional, accessible and convenient.

DTS / DPF 23.2

Uncovered car parking spaces have a minimum width of 2.4m and a minimum length of 5.5m.

PO 23.3

Driveways and access points located and designed to facilitate safe access and egress while maximising land available for street tree planting, landscaped street frontages and on-street parking.

DTS / DPF 23.3

Driveways and access points:

- (a) for sites with a frontage to a public road of 12m or less, have a maximum width of 3.2m measured at the property boundary and are the only access point provided on the site; or
- (b) for sites with a frontage to a public road greater than 12m:
 - i. have a maximum width of 6m measured at the property and are the only access point provided on the site; or
 - ii. have a maximum width of 3.2 metres measured at the property boundary and no more than two access points are provided on site.

PO 23.4

Vehicle access is safe, convenient, minimises interruption to the operation of public roads and does not interfere with street infrastructure or street trees.

DTS / DPF 23.4

Vehicle access to designated car parking spaces:

- (a) is provided via a lawfully existing or authorised driveway or access point or an access point for which consent has been granted as part of an application for the division of land
- (b) where newly proposed, is setback:
 - (a) 500mm or more from any street furniture, street pole, infrastructure services pit, or other stormwater or utility infrastructure unless consent is provided from the asset owner;
 - (b) 2m or more from a street tree unless consent is provided from the treeowner;
 - (c) 6m or more from the tangent point of an intersection of 2 or more roads or a pedestrian-actuated crossing.

PO 23.5

Driveways are designed to enable safe and convenient vehicle movements from the public road to on-site parking spaces.

DTS/ DPF 23.5

Driveways are designed and sited so that:

- (a) the gradient from the place of access on the boundary of the allotment to the finished floor level at the front of the garage or carport when work is completed is not steeper than 1:4 on average; and
- (b) the centre of the driveway at the public road boundary is no more than 25 degree deviation from the centre of the front of the covered car parking space for which it provides vehicle access.

PO 23.6

Driveways and access points are designed and distributed to optimise the provision of on-street visitor parking (where on-street parking is appropriate).

DTS / DPF 23.6

Where on-street parking is available directly adjacent the site, parking is retained in accordance with the following requirements:

- (a) 1 on-street car park per 3 proposed dwellings (rounded up to the nearest whole number); and
- (b) minimum car park length of 6m.

PO X

Where there is a side or rear laneway abutting the land, access to the parking area is to be from the laneway,

rather than the main street frontage.

DTS X

None are applicable.

Waste storage

PO 24.1

Provision is made for the convenient storage of waste bins in a location screened from public view.

DTS / DPF 24.1

Dwellings are provided with:

- (a) an area of 3m² or more for the storage of waste (separate from any designated car parking spaces or private open space) is provided behind the building line; and
- (b) a continuous unobstructed path of travel with a minimum width of 800mm between the waste bin storage area and the street.

Storage Facilities

PO X

Development that does not provide ground level private open space or has less than 50m² of private open space is to incorporate adequate areas for the storage of goods and chattels other than food and clothing either:

- (a) in the dwelling (but not including a habitable room);
- (b) in a garage, carport or outbuilding; or
- (c) within an on-site communal facility.

DTS X

Dwellings provided with a covered secure storage area of not less than 8 cubic metres

Design of Transportable Dwellings

PO 25.1

The sub-floor space beneath transportable buildings enclosed to give the appearance of a permanent structure.

DTS 25.1

None are applicable.

RESIDENTIAL DEVELOPMENT - 4 OR MORE BUILDING LEVELS (INCLUDING SERVICED APARTMENTS)

Outlook and Visual Privacy

PO 26.1

Ground level dwellings have a satisfactory short range visual outlook to public, communal or private open space.

DTS / DPF 26.1

Buildings:

- (a) provide a habitable room at ground and ~~or~~ first level with a window facing toward the street; and
- (b) limit the height / extent of solid walls or fences facing the street to 1.2m high above the footpath level or, where higher, to 50% of the site frontage.

PO 26.2

The visual privacy of ground level dwellings within multi-level buildings is protected.

DTS / DPF 26.2

The finished floor level of ground level dwellings in multi-storey developments is raised by up to 1.2m.

Private Open Space

PO 27.1

Dwellings provided with suitable sized areas of usable private open space to meet the needs of occupants.

DTS / DPF 27.1

Private open space provided in accordance with Design in Urban Areas Table 1 - Outdoor Open Space.

Apartment Amenity

PO 28.1

Residential accommodation within multi-level buildings have habitable rooms, windows and balconies designed and positioned to be separated from those of other dwellings and accommodation to provide visual and acoustic privacy and allow for natural ventilation and the infiltration of daylight into interior and outdoor spaces.

DTS / DPF 28.1

Habitable rooms and balconies of independent dwellings and accommodation are separated by at least 6m from one another where there is a direct 'line of sight' between them and 3m or more from a side or rear property boundary.

PO X

Light wells used as a source of daylight, ventilation, outlook and sunlight provided:

- (a) lightwells are not living rooms only source of outlook;
- (b) lightwells up to 18m have a minimum horizontal dimension of 3m or 6m if overlooked by bedrooms; and
- (c) lightwells higher than 18m have a minimum horizontal dimension of 6m or 9m if overlooked by bedrooms.

PO 28.2

Balconies are designed, positioned and integrated into the overall architectural form and detail of the development to:

- (a) respond to daylight, wind, and acoustic conditions to maximise comfort and provide visual privacy; and
- (b) allow views and casual surveillance of the street while providing for safety and visual privacy of nearby living spaces and private outdoor areas.

DTS / DPF 28.2

Balconies utilise a combination (or thereof) of the following design elements:

- (a) sun screens;
- (b) pergolas;
- (c) louvres;
- (d) green facades; or
- (e) openable walls.

PO 28.3

Balconies are of sufficient size and depth to accommodate outdoor seating and promote indoor / outdoor living.

DTS / DPF 28.3

Balconies open directly from a habitable room and incorporate:

- (a) a minimum dimension of 2m or more and are well proportioned to accommodate a table and 2 chairs; or
- (b) a minimum dimension of 2.4m and are well proportioned to accommodate a table and 4 chairs.

Site Facilities and Storage

PO 28.4

Dwellings are provided with sufficient space for storage to meet likely occupant needs.

DTS / DPF 28.4

Dwellings (not including student accommodation ~~or serviced apartments~~) are provided with storage at the following rates:

- (a) studio: 6m³ or more;
- (b) 1 bedroom dwelling / apartment: 8m³ or more;
- (c) bedroom dwelling / apartment: 10m³ or more; and
- (d) 3+ bedroom dwelling / apartment: 12m³; and
- (e) 50% or more of the storage volume is provided within the dwelling.

~~**PO 28.5**~~

~~Universal design features are incorporated to provide options for people living with disabilities or limited mobility and / or to facilitate ageing in place.~~

~~**DTS 28.5**~~

~~None are applicable.~~

PO X

Common mailbox structure located close to the main pedestrian entrance.

DTS X

None are applicable.

Apartment Configuration

PO 29.1

Buildings containing in excess of 10 dwellings provide a variety of dwelling sizes and a range in the number of bedrooms per dwelling to contribute to housing diversity.

DTS / DPF 29.1

Buildings containing in excess of 10 dwellings provide at least one of each of the following:

- (a) studio (where there is no separate bedroom) **with a floor area of at least 35m²**;
- (b) 1 bedroom dwelling / apartment with a floor area of at least 50m²;
- (c) 2 bedroom dwelling / apartment with a floor area of at least 65m²; and
- (d) 3+ bedroom dwelling / apartment with a floor area of at least 80m², and any dwelling over 3 bedrooms provides an additional 15m² for every additional bedroom.

PO 29.2

Dwellings located on the ground floor of multi-level buildings with 3 or more bedrooms have the windows of their habitable rooms overlooking internal courtyard space or other public space, where possible.

DTS 29.2

None are applicable.

PO X

Buildings designed to ensure internal structural columns align with the position of internal walls to provide useable space.

DTS X

None are applicable.

Common Areas

PO 30.1

The size of lifts, lobbies and corridors is sufficient to accommodate movement of bicycles, strollers, mobility aids and visitor waiting areas.

DTS / DPF 30.1

Common corridor or circulation areas:

- (a) have a minimum ceiling height of 2.7m;
- (b) provide access to no more than 8 dwellings; and
- (c) incorporate a wider section of apartment entries where the corridors exceed 12m in length from a core.

Car Parking Areas

PO X

Car parking areas designed and located to:

- (a) be close and convenient to dwellings/apartments;
- (b) be lit at night;
- (c) be well ventilated if enclosed;
- (d) avoid headlight glare into windows; and
- (e) clearly define visitor parking.

DTS X

None are applicable

Working Draft

GROUP DWELLINGS, RESIDENTIAL FLAT BUILDINGS AND BATTLE-AXE DEVELOPMENT

Amenity

PO 31.1

Dwellings are of a suitable size to provide high standard of amenity for occupants.

DTS / DPF 31.1

Dwellings have a minimum internal floor area in accordance with the following table:

Bedrooms	Minimum internal floor area
Studio (where there is no separate bedroom)	35m ²
1 bed	50m ²
2 bed	65m ²
3+ bed	80m ² , and any dwelling over 3 bedrooms provides an additional 15m ² for every additional bedroom

PO 31.2

The orientation and siting of buildings minimises impacts on the amenity, outlook and privacy of occupants and neighbours.

DTS / DPF 31.1

None are applicable.

PO 31.3

Development maximises the number of dwellings that face public open space and public streets and limits dwellings oriented towards neighbouring properties.

DTS 31.3

None are applicable.

Communal Open Space

PO 32.1

Communal open space provided where private open space provision is inadequate to meet the needs of occupants or where the nature of the development is such that private open space is not ordinarily provided.

DTS 32.1

None are applicable.

Car parking, access and manoeuvrability

PO 33.1

Driveways and access points are designed and distributed to optimise the provision of on-street visitor parking (where on-street parking is appropriate).

DTS / DPF 33.1

Where on-street parking is available directly adjacent the site, parking is retained in accordance with the following requirements:

- (a) 1 on-street car park per 3 proposed dwellings (rounded up to the nearest whole number); and
- (b) minimum car park length of 6m.

PO 33.2

The number of vehicular access points onto public roads is minimised to reduce interruption of the footpath and positively contribute to public safety and walkability.

DTS / DPF 33.2

Access to group dwellings or dwellings within a residential flat building provided via a single common driveway.

PO 33.3

Driveways, access points, access tracks and parking areas are designed and constructed to allow adequate movement and manoeuvrability of the types of vehicles that are reasonably anticipated.

DTS / DPF 33.3

Battle-axe driveways and driveways that service more than one dwelling satisfy the following:

- (a) a width of 3m or more;
- (b) for driveways servicing three or more dwellings which exceed 30m in length, incorporate a least one vehicle passing point with a width of 5m or more and a length of 6m or more, and an additional passing point at least every 30m thereafter;
- (c) locate the passing point in (b) within 12m of the primary street boundary; and
- (d) a width of 5m or more for at least the first 6m from the primary street boundary where located on an arterial road.

PO 33.4

Driveways that service more than one dwelling are designed to allow passenger vehicles to enter and exit the site in a safe and convenient manner.

DTS / DPF 33.4

Driveways providing access to more than one dwelling allow a B85 passenger vehicle to enter and exit all dedicated car parks and garages in a forward direction without requiring more than a 2-point-turn manoeuvre.

PO 33.5

Dwellings are adequately separated from common driveways and manoeuvring areas.

DTS/DPF 33.5

Dwellings are at least 1.5m from any vehicle movement path required to achieve DTS 34.3.

Landscaping

PO 34.1

Landscaping is provided between dwellings and common driveways to improve the outlook for occupants and improve the appearance of common areas.

DTS/ DPF 34.1

Other than where located directly in front of a garage or directly adjacent a building entry door, soft landscaping with a minimum dimension of 1m is provided between a dwelling and common driveway.

PO 34.2

Landscaping is provided that improves the appearance of common driveways.

DTS / DPF 34.2

Where a common driveway is located directly adjacent the side or rear boundary of the site, soft landscaping with a minimum dimension of 1m is provided between the driveway and site boundary (excluding along the perimeter of a passing point required in DTS 34.3).

Site Facilities / Waste Storage

PO 35.1

Provision is made for suitable mailbox facilities close to the major pedestrian entry to the site or conveniently located considering the nature of accommodation and mobility of occupants.

DTS 35.1

None are applicable.

PO 35.2

Provision is made for suitable external clothes drying facilities.

DTS 35.2

None are applicable.

PO 35.3

Provision is made for suitable household waste and recyclable material storage facilities conveniently located away, or screened, from public view.

DTS 35.3

None are applicable.

PO 35.4

Waste and recyclable material storage areas are located away from dwellings.

DTS / DPF 35.4

Dedicated waste and recyclable material storage areas are located at least 3m from any habitable room window.

PO 35.5

Provision is made for on-site waste collection where 10 or more bins are to be collected at any one time.

DTS 35.5

None are applicable.

SUPPORTED ACCOMMODATION, HOUSING FOR AGED PERSONS, AND PEOPLE WITH DISABILITIES

Siting and Configuration

PO 36.1

Supported accommodation and housing for aged persons and people with disabilities located where on-site movement of residents is not unduly restricted by the slope of the land.

DTS 36.1

None are applicable.

Movement and Access

PO 37.1

Development designed to support safe and convenient access and movement for residents by providing:

- (a) ground-level access or lifted access to all units;
- (b) level entry porches, ramps, paths, driveways, passenger loading areas and areas adjacent to footpaths that allow for the passing of wheelchairs and resting places;
- (c) car parks with gradients no steeper than 1-in-40, and of sufficient area to provide for wheelchair manoeuvrability; and
- (d) kerb ramps at pedestrian crossing points.

DTS 37.1

None are applicable.

Communal Open Space

PO 38.1

Development designed to provide attractive, convenient and comfortable indoor and outdoor communal areas to be used by residents and visitors alike.

DTS 38.1

None are applicable.

PO 38.2

Communal open space provided where private open space provision is inadequate to meet the needs of occupants or where the nature of the development is such that private open space is not ordinarily provided (such as supported accommodation).

DTS 38.2

None are applicable.

Site Facilities / Waste Storage

PO 39.1

Development designed to provide storage areas for personal items and specialised equipment such as small electric powered vehicles, including facilities for the recharging of small electric powered vehicles.

DTS 39.1

None are applicable.

PO 39.2

Provision is made for suitable mailbox facilities close to the major pedestrian entry to the site or conveniently located considering the nature of accommodation and mobility of occupants.

DTS 39.2

None are applicable.

PO 39.3

Provision is made for suitable external clothes drying facilities.

DTS 39.3

None are applicable.

PO 39.4

Provision is made for suitable household waste and recyclable material storage facilities conveniently located away, or screened, from view.

DTS 39.4

None are applicable.

PO 39.5

Waste and recyclable material storage areas are located away from dwellings.

DTS / DPF 39.5

Dedicated waste and recyclable material storage areas are located at least 3m from any habitable room window.

PO 39.6

Provision is made for on-site waste collection where 10 or more bins are to be collected at any one time.

DTS 39.6

None are applicable.

PO 39.7

Services including gas and water meters conveniently located and screened from public view.

DTS 39.7

None are applicable.

STUDENT ACCOMMODATION**PO 40.1**

Student accommodation is designed to provide safe, secure, attractive, convenient and comfortable living conditions for residents, including an internal layout and facilities that are designed to provide sufficient space and amenity for the requirements of student life and promote social interaction.

DTS / DPF 41.1

Student accommodation provides:

- (a) a range of living options that meet a variety of accommodation needs, such as one bedroom, two bedroom and disability access units;
- (b) common or shared facilities to enable a more efficient use of space, including:
 - i. shared cooking, laundry and external drying facilities;
 - ii. internal and external communal and private open space provided in accordance with Design in Urban Areas Table 1 - Outdoor Open Space;
 - iii. common storage facilities at the rate of 8 cubic metres for every 2 dwellings or students;
 - iv. common on-site parking to meet anticipated demand in accordance with Transport, Access and Parking Table 1 - Off-street Car Parking Requirements ; and
 - v. secure and sheltered bicycle parking at the rate of one space for every 2 students.
- (c) bedrooms of a suitable size to accommodate a single bed, book shelves, a desk and workspace, and a cupboard/wardrobe.

PO 40.2

Student accommodation designed to provide easy adaptation of the building to accommodate an alternative use of the building in the event it is no longer required for student housing.

DTS 40.2

None are applicable.

ALL NON-RESIDENTIAL DEVELOPMENT

Water Sensitive Design

PO 41.1

Development likely to result in risk of export of sediment, suspended solids, organic matter, nutrients, oil and grease include stormwater management systems designed to minimise pollutants entering stormwater.

DTS/DPF 41.1

Development includes stormwater management systems designed to achieve the following gross pollutant outcomes:

- (a) 80 per cent reduction in average annual total suspended solids;
- (b) 60 per cent reduction in average annual total phosphorus;
- (c) 45 per cent reduction in average annual total nitrogen;
- (d) 90 per cent reduction of litter/gross pollutants compared to untreated stormwater runoff; and
- (e) no visible oils/grease for flows up to the 1-in-3 month average return interval flood peakflow.

PO 41.2

Water discharged from a development site to be of a physical, chemical and biological condition equivalent to or better than its pre-developed state.

DTS 41.2

None are applicable.

PO 41.3

Development includes stormwater management systems to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS / DPF 41.3

Development includes stormwater management systems that:

- (a) maintain a pre-development peak flow rate from the site, based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan;
- (b) maintains the stormwater runoff time to peak to match that of the pre-development; and
- (c) manages up to and including the 100-year ARI flood event (1% AEP) to avoid flooding of buildings.

Wash-down and Waste Loading and Unloading

PO 42.1

Areas for activities including loading and unloading, storage of waste refuse bins in commercial and industrial development or wash-down areas used for the cleaning of vehicles, plant or equipment that are:

- (a) designed to contain all wastewater likely to pollute stormwater within a bunded and roofed area to exclude the entry of external surface stormwater run-off;
- (b) paved with an impervious material to facilitate wastewater collection;
- (c) of sufficient size to prevent 'splash-out' or 'over-spray' of wastewater from the wash-down area; and
- (d) designed to drain wastewater to either:
 - i. a treatment device such as a sediment trap and coalescing plate oil separator with subsequent disposal to a sewer, private or Community Wastewater Management Scheme; or

- ii. a holding tank and its subsequent removal off-site on a regular basis.

DTS 42.1

None are applicable.

Waste Management

PO

Development that does not result in emission of atmospheric, liquid or other pollutants, or cause unacceptable levels of smell and odour that would detrimentally affect the amenity of adjacent properties or its locality. Land uses such as restaurants, shops, cafés or other uses that generate smell and odour that:

- (a) ensure extraction flues, ventilation and plant equipment are located in appropriate locations that will not detrimentally affect the amenity of adjacent occupiers in terms of noise, odours and the appearance of the equipment;
- (b) ensure ventilation and extraction equipment and ducting have the capacity to clean and filter the air before being released into the atmosphere; and
- (c) ensure the size of the ventilation and extraction equipment is suitable and has the capacity to adequately cater for the demand generated by the potential number of patrons.

Activation

PO

Street facing building elevations designed to provide attractive, high quality and pedestrian friendly street frontages.

DTS / DPF

Building street frontages incorporate:

- (a) active uses such as shops or offices;
- (b) prominent entry areas for multi-storey buildings (where it is a common entry);
- (c) habitable rooms of dwellings; and
- (d) areas of communal public realm with public art or the like, where consistent with the Zone and/or sub zone provisions.

PO

Retail frontages designed to provide interest to passing pedestrians at street level and relief to building mass.

DTS/DPF:

Development designed to:

- (a) provide views into and out of buildings;
- (b) provide interest and active window displays;
- (c) provide external light fittings, where street lighting is blocked e.g. under verandahs;
- (d) use transparent glass, open mesh or transparent security shutters that allow views into and out of the building; and/or
- (e) incorporate detailed architectural facade treatment

Outdoor Dining

PO

Outdoor dining that:

- (a) is located outside the associated premises;
- (b) provides sufficient set-backs and clearances from kerbs, property boundaries and buildings;
- (c) is located in an area safe for patrons where the security of the building is not compromised;
- (d) ensures the dining area is set back from the building line at street intersections;
- (e) ensures unimpeded pedestrian flow through free and uninterrupted pedestrian paths; and

(f) ensures wheelchair access to pedestrian ramps is not compromised.

DTS

None are applicable.

PO

Structures that:

- (a) are of high quality design and form an integral part of the streetscape;
- (b) maintain public access; and
- (c) maintain views of significant sightlines, buildings and landmarks.

DTS

None are applicable.

Safety and Surveillance

PO

Shopfronts designed to incorporate security features that complement the frontage and allow window shopping out of hours.

DTS/DPF

Security grilles designed to:

- (a) be transparent and illuminated to complement the appearance of the frontage;
- (b) provide for window shopping; and
- (c) allow for the spill of light from the shop front onto the street.

Solid shutters with less than 75% permeability are not acceptable.

Table 1 - Outdoor Open Space

Dwelling Type	Dwelling / Site Configuration	Minimum Rate
Detached dwelling Semi-detached dwelling Row dwelling Group dwelling	Site area >1,000m ²	Total area: 20% of total site area Adjacent to habitable room: 10% total site area / minimum dimension 4m.
	Site area 500m ² – 1,000m ²	Total area: 80m ² Adjacent to habitable room: 24m ² / minimum dimension 4m.
	Site area 300m ² - 500m ²	Total area: 60m ² Adjacent to habitable room: 16m ² / minimum dimension 4m.
	Site area <300m ²	Total area: 24m ² Adjacent to habitable room: 16m ² / minimum dimension 3m

Cabin or caravan (permanently fixed to the ground) in a Residential Park Zone or Caravan and Tourist Park Zone		Total area: 16m ² , which may be uses as second car parking space, provided on each site intended for residential occupation.
Apartments	Dwellings at ground level:	
	- All types	15m ² / minimum dimension 3m
	Dwellings located above ground level:	
	- Studio	4m ² / minimum dimension 1.8m
	- One bedroom dwelling	8m ² / minimum dimension 2.1m
	- Two bedroom dwelling	11m ² / minimum dimension 2.4m
	- Three + bedroom dwelling	15 m ² / minimum dimension 2.6m

Working Draft

Working Draft

Land Division in Urban Areas

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Land division that:

- (a) creates allotments having appropriate dimensions and shape for intended use;
- (b) allows efficient provision of new infrastructure and optimum use of existing underutilised infrastructure;
- (c) integrates and allocates adequate and suitable land for the preservation of site features of value including significant vegetation, watercourses, water bodies and other environmental features;
- (d) supports energy efficiency in building orientation;
- (e) creates a compact urban form that supports active travel, walkability and the use of public transport; and
- (f) avoids areas of high natural hazard risk.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

ALL LAND DIVISION

Allotment configuration

PO 1.1

Land division creates allotments suitable for their intended use taking into account physical characteristics of the land, preservation of environmental and cultural features of value and the prevailing context and character of the locality.

DTS/DPF 1.1

Land division for the:

- (a) minor adjustment of allotment boundaries to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures where no additional allotments are created; or
- (b) creation of a single additional allotment for residential purposes where:
 - i. the allotment will contain a single lawfully existing dwelling or an approval for a single dwelling exists and is operative;
 - ii. access is provided via a lawfully existing driveway or access point or an access point for which approval under the Local Government Act exists and is operative; and
 - iii. the resulting allotment achieves any minimum site area and frontage width specified by the relevant zone or a relevant Technical and Numeric Variation Overlays.

PO X

The size, shape, orientation and layout of allotments in any land division (or development creating sites likely to be divided into allotments) to:

- (a) enable land to be efficiently and effectively used for its intended use;
- (b) allow development that reinforces and achieves the desired character of the locality, as expressed in the relevant Zone and Subzone;
- (c) enable development that is energy efficient; and
- (d) where the land abuts a side or rear laneway, be designed to facilitate vehicle access to allotments from the laneway rather than the main street frontage.

DTS X

None are applicable

Design and Layout

PO 2.1

Land division results in a pattern of development that minimises the likelihood of future earthworks and retaining walls

DTS 2.1

None are applicable.

PO 2.2

Land division enables appropriate treatment of the interface between potentially conflicting land uses and/or zones.

DTS 2.2

None are applicable.

Working Draft

PO 2.3

Land division maximises the number of allotments that face public open space and public streets.

DTS 2.3

None are applicable.

PO 2.4

Land division integrated with site features, adjacent land uses, the existing transport network and available infrastructure.

DTS 2.4

None are applicable.

PO 2.5

Development and infrastructure provided and staged in a manner that supports an orderly and economic provision of land, infrastructure and services.

DTS 2.5

None are applicable

PO 2.6

Land division results in watercourses being retained within open space and land subject to flooding free from development.

DTS 2.6

None are applicable.

PO 2.7

Land division results in street patterns that are legible and connected to the surrounding street network.

DTS 2.7

None are applicable.

PO 2.8

Land division is designed to allocate adequate and suitable land for the preservation of existing vegetation of value including native vegetation, regulated and significant trees.

DTS 2.8

None are applicable.

DTS 2.9

Land division resulting in allotments of varying size to encourage housing diversity and of an adequate area and dimension to accommodate:

- (a) the siting and construction of a dwelling that reinforces the desired character of the locality;
- (b) the provision of private open space; and
- (c) safe and convenient vehicle access and parking.

DTS 2.9

None are applicable.

Roads and Access

PO 3.1

Land division provides allotments with access to a public road.

DTS 3.1

None are applicable.

PO 3.2

Street patterns and intersections designed to enable the safe and efficient movement of pedestrian, cycle and vehicular traffic.

DTS 3.2

None are applicable.

PO 3.3

Land division does not impede access to publicly owned open space and recreation facilities.

DTS 3.3

None are applicable.

PO 3.4

Road reserves provide for safe and convenient movement and parking of projected volumes of vehicles, and allow for the efficient movement of service and emergency vehicles.

DTS 3.4

None are applicable.

PO 3.5

Road reserves provide for footpaths, cycle lanes and shared-use paths, and accommodate street tree planting, landscaping and street furniture.

DTS 3.5

None are applicable.

PO 3.6

Road reserves accommodate stormwater drainage and public utilities.

DTS 3.6

None are applicable.

PO 3.7

Road reserves provide unobstructed vehicular access and egress to and from individual allotments and sites.

DTS 3.7

None are applicable.

PO 3.8

Street patterns and intersections designed to enable the safe and efficient movement of pedestrian, cycle and vehicular traffic.

DTS 3.8

None are applicable.

PO 3.9

Roads, open space and thoroughfares provided establish safe and convenient linkages to the surrounding open space and transport network.

DTS 3.9

None are applicable.

PO 3.10

Public streets include tree planting to provide shade and enhance the amenity of streetscapes.

DTS 3.10

None are applicable.

PO 3.11

Local streets designed to create low-speed environments that are safe for cyclists and pedestrians.

DTS 3.11

None are applicable.

Infrastructure

PO 4.1

Land division incorporates public utility services within road reserves or within dedicated easements.

DTS 4.1

None are applicable.

PO 4.2

Waste water, sewage and other effluent is capable of being disposed of from each allotment without unreasonable risk to public health or the environment.

DTS/DPF 4.2

Each allotment can be connected to any of the following:

- (a) a waste water treatment plant that has the hydraulic volume and pollutant load treatment and disposal capacity for the maximum predicted wastewater volume generated by subsequent development of the proposed allotments; or
- (b) a form of on-site waste water treatment and disposal that meets relevant public health and environmental standards.

PO 4.3

Septic tank effluent drainage fields and other waste water disposal areas maintained to ensure the effective operation of waste systems and minimise risks to human health and environmental harm.

DTS / DPF 4.3

Development is not built on, or encroaches within, an area that is, or will be, required for a sewerage system or waste control system.

PO 4.4

Constructed wetland systems, including associated detention and retention basins, sited and designed to ensure public health and safety is protected including by minimising potential public health risks arising from the breeding of mosquitoes.

DTS 4.4

None are applicable.

PO 4.5

Constructed wetland systems, including associated detention and retention basins, sited and designed to allow sediments to settle prior to discharge into watercourses or the marine environment.

DTS 4.5

None are applicable.

PO 4.6

Constructed wetland systems, including associated detention and retention basins, sited and designed to function as a landscape feature.

DTS 4.6

None are applicable.

MINOR LAND DIVISION (UNDER 20 ALLOTMENTS)

Open Space

PO 5.1

Land division proposing an additional allotment under 1 hectare in area provides or supports the provision of open space.

DTS 5.1

None are applicable.

PO 5.2

Land division creating 5-19 non-residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS 5.2

Land division creating 5-19 non-residential allotments is accompanied by an approved Stormwater Management Plan and manages up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings and:

- (a) maintain
 - i. a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 5-year ARI (18.1% AEP) 30 minute storm; and
 - ii. the stormwater runoff time to peak to match that of the pre-development; or
- (b) capture and retain the difference in pre-development runoff volume (based upon a 0.35 runoff coefficient) vs post development runoff volume from the site for a 5-year ARI (18.1% AEP) 30 minute storm; and
- (c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings.

Solar Orientation

PO 6.1

Land division for residential purposes facilitates solar access for energy efficiency through allotment orientation.

DTS 6.1

None are applicable.

Water Sensitive Design

PO 7.1

Land division creating 5-19 allotments includes stormwater management systems that minimise the discharge of sediment, suspended solids, organic matter, nutrients, bacteria, litter and other contaminants to the stormwater system, watercourses or other water bodies.

DTS 7.1

Land division creating 5-19 allotments is accompanied by an approved Stormwater Management Plan and achieves the following stormwater runoff outcomes:

- (a) 80 per cent reduction in average annual total suspended solids;
- (b) 60 per cent reduction in average annual total phosphorus;
- (c) 45 per cent reduction in average annual total nitrogen.

PO 7.2

Land division creating 5-19 non-residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS / DPF 7.2

Land division creating 5-19 non-residential allotments includes a storm water management system designed to:

- (a) maintain a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan;

- (b) maintain the stormwater runoff time to peak to match that of the pre-development; and
- (c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1%AEP).

MAJOR LAND DIVISION (20+ ALLOTMENTS)

Open Space

PO 8.1

Land division allocates or retains, evenly distributed, high quality areas of open space to improve residential amenity and provide urban heat amelioration.

DTS 8.1

None are applicable

PO 8.2

Land allocated for open space is suitable for intended active and passive recreational use considering gradient and potential for inundation.

DTS / DPF 8.2

Where provided, no more than 20% of open space:

- (a) has a slope in excess of 1 in 4; and
- (b) is comprised of watercourses, wetlands or detention basins.

PO 8.3

Land allocated for active recreation is of a size and has dimensions capable of accommodating a range of active recreational activities.

DTS 8.3

None are applicable.

Water Sensitive Design

PO 9.1

Land division creating 20 or more residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS/DPF 9.1

Land division creating 20 or more residential allotments is accompanied by an approved Stormwater Management Plan and manages up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings and:

- (a) maintains pre-development peak 5-year ARI (18.1% AEP) flow rate from the site, and maintains the time to peak to match that of the pre-development; or
- (b) captures and retains the difference in pre-development volume vs post development volume from the site for a 5-year ARI (18.1% AEP) 30 minute storm; or where there is no adequate local drainage scheme to connect to, captures and retains post development volume from the site for a 5 year ARI (18.1% AEP) 30 minute storm.

PO 9.2

Land division creating 20 or more non- residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.

DTS/DPF 9.2

Land division creating 20 or more non- residential allotments is accompanied by an approved Stormwater Management Plan and manages up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings and:

- (a) maintains pre-development peak 20-year ARI (5% AEP) flow rate from the site and, maintains the time to peak to match that of the pre-development; or
- (b) captures and retains the difference in pre-development volume vs post development volume from the site for a 20-year ARI (5% AEP) 30 minute storm; where there is no adequate local drainage scheme to connect to, captures and retains post development volume from the site for a 20 year ARI (5% AEP) 30 minute storm.

PO 9.3

Land division creating 20 or more allotments includes stormwater management systems that minimise the discharge of sediment, suspended solids, organic matter, nutrients, bacteria, litter and other contaminants to the stormwater system, watercourses or other water bodies

DTS 9.3

Land division creating 20 or more allotments is accompanied by an approved Stormwater Management Plan and achieves the following stormwater runoff outcomes:

- (a) 80 per cent reduction in average annual total suspended solids;
- (b) 60 per cent reduction in average annual total phosphorus;
- (c) 45 per cent reduction in average annual total nitrogen.

Solar Orientation

PO 10.1

Land division for residential purposes facilitates solar access for energy efficient through allotment orientation and allotment dimensions.

DTS/DPF 10.1

Land division results in:

- (a) at least 80% of allotments oriented so that their long axis conforms with figure 10.1:

- a. 80% of allotments with an east-west orientation having a minimum frontage of 15m
- b. no more than 20% of allotments are located on the south side of east-west oriented streets.

Advertisements

Assessment Provisions (AP)

Desired Outcome (DO)

DO 1

Advertisements and advertising hoardings are designed appropriate to context, are efficient and effective in communicating with the public, are limited in number to avoid clutter, and do not create hazard.

Performance Outcomes and Deemed to Satisfy / Designated Performance Outcome Criteria

Appearance

PO 1.1

Advertisements are compatible and integrated with the design of the building and/or land they are located on.

DTS/DPF 1.1

Advertisements attached to a building:

- (a) if located below canopy level, are flush with a wall;
- (b) if located at canopy level, are in the form of a fascia sign;
- (c) if located above a canopy:
 - i. are flush with a wall;
 - ii. do not have any part rising above parapet height; and
 - iii. are not attached to the roof of the building.
- (d) if attached to the side of a verandah, do not exceed the width of the verandah or project from the verandah;
- (e) if attached to the front of a verandah, do not exceed the length of the verandah or project from the verandah;
- (f) if attached to a two storey building, have no part located above the finished floor level of the second storey of the building; and
- (g) where they are flush with a wall, do not, in combination with any other existing sign, cover more than 15% of the building facade to which they are attached.

PO 1.2

Advertisements ~~or advertising hoarding~~ designed to conceal their supporting ~~structures advertising hoarding~~ from view.

DTS 1.2

None are applicable.

PO 1.3

Advertising located so as to not encroach on public land or the land of an adjacent allotment.

DTS/DPF 1.3

Advertisements and/or advertising hoardings are:

- (a) completely contained within the boundaries of the site; or
- (b) if a road widening is applicable, advertising and/or advertising hoarding are completely contained within the proposed property boundary realignment.

PO 1.4

Where possible advertisements on public land are integrated with existing structures and infrastructure.

DTS/DPF 1.4

An advertisement on public land:

- (a) achieves Advertisements DTS/DPF 1.1; or
- (b) is integrated with a bus shelter and it is not to be illuminated.

PO 1.5

Advertisements and/or advertising hoarding of a scale and size appropriate to the character of the locality.

DTS / DPF 1.5

Advertising and/or advertising hoardings meet the area and height requirements set out in [Advertisements Table 1 – Maximum Size and Height Requirements](#)

Proliferation of Advertisements

PO 2.1

Proliferation of advertisements minimised to avoid visual clutter and untidiness.

DTS/DPF 2.1

No more than one advertisement is displayed on each public road per occupancy.

PO 2.2

Multiple-business or activity advertisements co-located and coordinated to avoid visual clutter and untidiness.

DTS/DPF 2.2

Advertisements for multiple-business or activity complex incorporating information regarding each business or activity in a single advertisement fixture or structure.

Advertising Content

PO 3.1

Content of advertisements primarily limited to information relating to the lawful use of land they are located on.

DTS/DPF 3.1

An advertisement does not contain third party content.

Amenity Impacts

PO 4.1

Light spill from advertisement illumination does not unreasonably compromise amenity of adjacent and proximate sensitive receivers.

DTS/DPF 4.1

An advertisement does not incorporate any illumination.

Safety

PO 5.1

Advertisements and/or advertising hoardings erected on a verandah or project from a building wall designed and located to allow for safe and convenient pedestrian access.

DTS/DPF 5.1

An advertisement with a minimum clearance of 2.5m between the top of the footway and base of the underside of the sign.

PO 5.2

Advertisements and/or advertising hoardings do not distract or create a hazard to drivers through excessive illumination.

DTS/DPF 5.2

No advertisement illumination is proposed.

PO 5.3

Advertisements and/or advertising hoardings do not create a hazard to drivers by:

- (a) being liable to interpretation by drivers as an official traffic sign or signal;
- (b) obscuring or impairing a driver's view of official traffic signs or signals; or
- (c) obscuring or impairing a driver's view of features of a road that are potentially hazardous (such as junctions, bends, changes in width and traffic control devices) or other road or rail vehicles at/or approaching level crossings.

DTS/DPF 5.3

DTS/DPF 1.1, 1.2, 5.1, 5.2 and 5.5 are met.

PO 5.4

Advertisements and/or advertising hoardings do not create a hazard by distracting drivers from the primary driving task at a location where the demands on driver concentration are high.

DTS/DPF 5.4

An advertisement and/or advertising hoarding not located along or adjacent to a road having a speed limit of 80km/h or more.

PO 5.5

Advertisements and/or advertising hoardings provide sufficient clearance from the road carriageway to allow for safe and convenient movement by all road users

DTS/DPF 5.5

Where the advertisement or advertising hoarding is:

- (a) on a kerbed road with a speed zone of 60km/h or less, the advertisement or advertising hoarding is located at least 0.6m from the roadside edge of the kerb;
- (b) on an unkerbed road with a speed zone of 60km/h or less, the advertisement or advertising hoarding is located at least 5.5m from the edge of the seal; or
- (c) on any other kerbed or unkerbed road, the advertisement or advertising hoarding is located a minimum of the following distance from the roadside edge of the kerb or the seal:
 - i. 110 km/h road – 14m
 - ii. 100 km/h road – 13m
 - iii. 90 km/h road – 10m
 - iv. 70 or 80 km/h road – 8.5m

Vending Machines and Automatic Teller Machines

PO X

Development of vending machines, automatic teller machines and fast food outlets that:

- (a) maintain the character and continuity of activity along street frontages;
- (b) maintain good visibility from the street or public places for security; and
- (c) not disrupt pedestrian movement.

DTS / DPF X

None are applicable.

PO X

Advertisements on vending machines and automatic teller machines are restrained in size and style.

DTS / DPF X

None are applicable.

Temporary Advertisement Hoardings

PO X

Temporary advertisement hoardings or shrouds required for the screening of construction sites or for creating visual interest that are:

- (a) of a high standard of design;
- (b) displayed only during the period of construction;
- (c) comprised of high quality opaque, solid and non-reflective material that is durable, low maintenance and appropriate to the City context;
- (d) required to conceal wiring and conduits; and
- (e) do not create undue risk to public or private safety.

DTS / DPF X

None are applicable

Outdoor Dining Signage and Advertisements

PO X

Signage and advertisements associated with outdoor dining identifying the business name or logo, or advertises goods sold on glass and canvas screens and umbrellas that:

- (a) complement the amenity of the premises;
- (b) are of an appropriate design and consistent with the desired character of the locality;
- (c) does not exceed a portion that covers 10% of the total available space on each outdoor dining item, up to half of which can be commercial advertisements in the form of product logos used or sold by the premises;
- (d) are non illuminated or animated; and
- (e) does not include third party advertising on outdoor dining items.

DTS / DPF X

None are applicable

Table 1 – Maximum Size and Height Requirements

Advertisements and Advertising Hoardings			
P&D Code Zone	Type of Advertisement	Advertised area	Maximum height (metres)
Urban Activity Centre Suburban Activity Centre	Attached to building	Does not exceed 25 per cent of the ground floor wall area on the façade the sign is placed	N/A

Working Draft

Attachment A.2

Audit of Adelaide City Development Plan into Draft Planning and Design Code

Attachment A.2 contains an audit of where the Adelaide (City) Development Plan (25 July 2019) policies have or have not landed in the Draft Code and the impacts of these changes. It provides information on why these policies are important to the City of Adelaide and makes recommendations as to which policies should be reinstated within the Planning and Design Code.

These tables have been used in transition meetings between the City of Adelaide staff and DPTI staff. And is included as an attachment to show the evidence base for our findings and recommendations. The City of Adelaide seeks to continue discussing these tables to ensure important policies that have been identified as missing within the Draft Code are re-included in the Planning and Design Code.

Zone	Policy area(s)	1 - Included in the Code and retains same policy intent	2 - Wording changed but policy intent remains (OK)	3 - Included in the Code but policy intent changed (NOT OK)	4 - Not included in the Code but OK to remove	5 - Not included in the Code and should be reinstated

General comments						
Number	Description	Transition category	Where has it been included?	Comments		
Policy Objectives						
1	The City of Adelaide as the prime meeting place and cultural focus for the people of metropolitan Adelaide and the State.	2	Capital City Zone DO 1			
2	The City of Adelaide as a major focus for tourism, conventions, leisure, entertainment, sport and recreation, education, cultural development and the arts.	2	Capital City Zone DO 1			
3	Development that enhances the public environment and provides interest at street level.	5		include the following PO within General Development Policies - Design in Urban Areas (All Development) under the heading 'External Appearance'. <i>PO</i> <i>Buildings that enhance public environment and achieves a high standard of external appearance by:</i> <i>(a)the use of high-quality materials and finishes.</i> <i>(b)providing a high degree of visual interest through articulation,</i> <i>(c)ensuring lower levels are well integrated with, and contribute to a vibrant public realm</i>		
Principles of Development Control						
1	Development should, where appropriate, integrate public art into the design of new or refurbished building sites in a manner which is integrated with and commensurate in scale with, the new or refurbished buildings. For the purpose of enhancing the public environment, public art should: (a) demonstrate artistic excellence and innovation in design; (b) be made of high quality materials; (c) enhance the setting of new development; (d) be integrated into the design of the building and the surrounding environment; (e) consider any existing public art works; and (f) not hinder sight lines or create entrapment spots. Design Techniques (these are ONE WAY of meeting the above Principle) 1.1 Design solutions may include: (a) treating the building as a piece of art in itself; (b) locating art in publicly accessible locations such as near main entrances, lobbies and street frontages; (c) using water as a landscaping element including animating spaces with fountains, pools and waterfalls, for which the re-use of stormwater is encouraged; (d) designing paving so it becomes a piece of art in itself; (e) using lighting to enhance the architectural characteristics of a building; or (f) providing spaces within the development for accommodating temporary or outdoor gallery opportunities.	5		There is no specific policy guiding the design of public art. It is recommended this PDC is included as a PO and DTS/DPF within Design in Urban Area (All Development) under a new heading 'Public Art' and worded as follows: <i>PO</i> <i>Development where appropriate, integrates public art into the design of new or refurbished building sites in a manner that:</i> <i>(a) demonstrates artistic excellence and innovation in design;</i> <i>(b) incorporates high quality materials;</i> <i>(c) enhances the setting of new development;</i> <i>(d) is integrated into the design of the building and the surrounding environment;</i> <i>(e) considers any existing public art works; and</i> <i>(f) does not hinder sight lines or create entrapment spots.</i> <i>DTS/DPF</i> <i>Public art may be in the following form and locations:</i> <i>(a) treating the building as a piece of art in itself;</i> <i>(b) locating art in publicly accessible locations such as near main entrances, lobbies and street frontages;</i> <i>(c) using water as a landscaping element including animating spaces with fountains, pools and waterfalls, for which the re-use of stormwater is encouraged;</i> <i>(d) designing paving so it becomes a piece of art in itself;</i> <i>(e) using lighting to enhance the architectural characteristics of a building; or</i> <i>(f) providing spaces within the development for accommodating temporary or outdoor gallery opportunities</i>

Policy Objectives				
OBJ 6	A variety of housing options which supplement existing types of housing and suit the widely differing social, cultural and economic needs of all existing and future residents.	5		The social side of housing except for affordable housing seems to be lacking from the Code. It is recommended the following PO be included within Design in Urban Areas GDP [All Residential Development] under a new heading 'Housing Diversity': <i>PO</i> <i>Development comprising of a range of housing types, tenures and cost, to meet the widely differing social and economic needs of residents.</i> <i>DTS</i> <i>None are applicable.</i>
OBJ 7	A range of long and short term residential opportunities to increase the number and range of dwellings available whilst protecting identified areas of special character and improving the quality of the residential environment.	4		
OBJ 8	A broad range of accommodation to meet the needs of low income, disadvantaged and groups with complex needs whilst ensuring integration with existing residential communities.	5		"As Above"
Principles of Development Control				
5	Development should comprise of a range of housing types, tenures and cost, to meet the widely differing social and economic needs of residents.	5		The Code addresses a diversity of of dwelling sizes but does not go beyond this. The social side of housing needs to be addressed more fully or at least encouraged. It is recommended the policy above is included.
6	Development should provide a variety of accommodation to meet the needs of low income people, student housing, social housing, housing for single people, large and small families, people with disabilities and people with other complex needs These forms of housing should be distributed throughout the Council area to avoid over-concentration of similar types of housing in a particular area and should be of a scale and appearance that reinforces and achieves the desired character of the locality, as expressed in the relevant Zone and Policy Area.	5	General Development Policies - Design in Urban Areas (Residential Development 4 or more Bulding Levels) PO 29.1	The Code addresses a diversity of of dwelling sizes but does not go beyond this. The social side of housing needs to be addressed more fully or at least encouraged. It is recommended the policy above is included.
7	Residential development should be designed to be adaptable to meet people's needs throughout their lifespan to ensure that changes associated with old age, special access and mobility can be accommodated. Design Technique (this is ONE WAY of meeting the above Principle) 7.1 Buildings constructed in accordance with the requirements set out in Australian Standard AS 4299: 'Adaptable Housing'.	2	General Development Policies - Design in Urban Areas (Residential Development 4 or more Bulding Levels) PO 28.5	Universal Design should apply to all residential development to ensure people can age in place. It is recommended PO 28.5 is relocated and applied to all residential development under a new heading 'Accessibility'.
8	Residential development for older people and people with disabilities should be: (a) located within easy walking distance to essential facilities such as convenience shops, health and community services and public transport; (b) located where on-site movement of residents is not unduly restricted by the slope of the land; (c) located and designed to promote interaction with other sections of the community, without compromising privacy; (d) of a scale and appearance that reinforces the desired character of the locality; and (e) provided with access to public and private open space and landscaping to meet the needs of residents.	2	(b) General Development Policies - Design in Urban Areas PO 36.1 (e) General Development Policies - Design in Urban Areas PO 38.2	

Number	Description	Transition category	Where has it been included?	Comments
9	<p>The City Living Zone, Adelaide Historic (Conservation) Zone and North Adelaide Historic (Conservation) Zone should develop as follows:</p> <p>(a) Residential areas should comprise a wide range of housing alongside a diversity of community facilities, with many heritage places conserved. Residential amenity should be enhanced and attractive townscape qualities reinforced.</p> <p>(b) Adelaide was once a predominantly residential City. The character in the south east corner continues to reflect this historical pattern with distinctive dwelling types and earlyshops from the mid to late 19th century. This historic importance is identified by the Adelaide Historic (Conservation) Zone within which development should complement and protect the historic character. In the south east and south west corners, groups of mid to late 19th housing remain amidst development from the 20th century. This early housing is identified within Historic (Conservation) Areas where development should complement and protect the historic character.</p> <p>(c) North Adelaide is associated with the foundation of the City of Adelaide. It retains many buildings and sites of State and Local Heritage value and provides strong cultural and historic evidence of the creation of the colony, the establishment of early settlement and the development of the capital city over time. North Adelaide contains excellent examples of a diverse range of residential architecture from all periods of the City's development, which individually and as groups, reflect the periods of economic prosperity of the City and the social composition of the colonial population. The remaining historic housing is an essential and defining element of North Adelaide's cultural value and is a microcosm of housing styles and periods in the State as a whole. The historic value of the residential parts is such that they are identified as the North Adelaide Historic (Conservation) Zone within which development should complement and protect the historic character.</p> <p>(d) The City Living Zone fronting South Terrace, and between Whitmore and Hurtle Squares, is suited to medium density mixed use development, accompanied by community and commercial activities. East Terrace is suited to medium rise housing.</p> <p>(e) The interface between established non-residential uses with neighbouring residential properties should be effectively managed, recognising the legitimate rights of commercial and community activities whilst protecting the amenity of residents.</p> <p>(f) Small scale, small size, ancillary businesses and activities which provide a local service to residents</p>	5	City Living Zone DO 2 PO 1.3, PO 1.4,	<p>The historic elements important to the character of the Conservation Areas should be included within the Historic Area Statements as recommended within Council's submission.</p> <p>In addition, it is recommended that DTS 1.4 within the City Living Zone is rewritten as follows to ensure that non-residential land uses are limited to land lawfully used for non-residential purposes:</p> <p><i>DTS/DPF 1.4</i> <i>Non-residential land uses limited to land lawfully used for non-residential purposes and to comprise land uses more in conformity with the intended residential amenity. Non-residential land uses should be of a scale and role to not prejudice the envisaged development of non-residential zones.</i></p>

9	High-quality student accommodation that creates an affordable, safe, healthy and comfortable living environment.	2	General Development Policies - Design in Urban Areas PO 40.1	
Principles of Development Control				
10	Residential development specifically designed for the short-term occupation of students may provide reduced internal floor areas, car parking, storage areas and/or areas of private open space provided that: (a) residents have access to common or shared facilities that enable a more efficient use of space (such as cooking, laundry, common rooms or communal open space); (b) every living room has a window that provides an external outlook and maximises access to natural light; (c) the development is designed to enable easy adaptation or reconfiguration to accommodate an alternative use; (d) the development is designed to maximise opportunities to access natural ventilation and natural light; (e) private open space is provided in the form of balconies and/or substituted with communal open space (including rooftop gardens, common rooms or the like) that is accessible to all occupants of the building; and (f) the internal layout and facilities provide sufficient space and amenity for the requirements of student life and promote social interaction.	2	(a), (c), (e), covered in General Development Policies - Design in Urban Areas DTS/DPF 40.1 (b) covered in General Development Policies - Design in Urban Areas PO 15.1 (d) covered in General Development Policies - Design in Urban Areas PO 4.1 (f) covered in General Development Policies - Design in Urban Areas PO 40.1	
11	Internal common areas should be capable of being used in a variety of ways to meet the study, social and cultural needs of students.	2	General Development Policies - Design in Urban Areas DTS/DPF 40.1	
12	Development should provide secure long-term storage space in both communal and private areas.	2	General Development Policies - Design in Urban Areas DTS/DPF 40.1	
13	Student accommodation with shared living areas should ensure bedrooms are of a suitable size to accommodate a single bed, book shelves, a desk and workspace, and a cupboard/wardrobe.	5		To ensure quality living environments and private space for students include as part of the General Development Policies - Design in Urban Areas DTS/DPF 41.1(c): <i>DTS/DPF 41.1(c)</i> <i>(c) bedrooms of a suitable size to accommodate a single bed, book shelves, a desk and workspace, and a cupboard/wardrobe.</i>
NEW CONTENT IN THE CODE (insert below)				
DESIGN IN URBAN AREAS - STUDENT ACCOMMODATION				
DTS/DPF 41.1	Student accommodation provides: (b) common or shared facilities to enable a more efficient use of space, including: iv. common on-site parking to meet anticipated demand in accordance with Transport, Access and Parking Table 1 - Off-street Car Parking Requirements ; and v. secure and sheltered bicycle parking at the rate of one space for every 2 students.			No car parking requirements for student accommodation are listed within Table 1. Supported

		General Development Policies - Land Division in Urban Areas		
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
10	Land in appropriate localities divided into allotments in an orderly, economic and environmentally sustainable manner that meets the needs of the community and is consistent with the desired character of the Zone and Policy Areas.	5	Covered partly in General Development Policy - Land Division in Urban Areas PO 1.1	Reword General Development Policy - Land Division in Urban Areas PO 1.1 a follows to ensure consideration is given to the character of the locality: <i>"Land division creates allotments suitable for their intended use taking into account physical characteristics of the land, preservation of environmental and cultural features of value and the prevailing context and character of the locality."</i>
Principles of Development Control				
14	Land division should create allotments that allow for the provision of built form which reinforces the desired character of the locality and accords with Council Wide provisions and Zone and Policy Area provisions.	5	Covered partly in General Development Policy - Land Division in Urban Areas PO 1.1	"As Above"
15	The size, shape, orientation and layout of allotments in any land division (or development creating sites likely to be divided into allotments) should: (a) enable land to be efficiently and effectively used for its intended use; (b) allow development that reinforces and achieves the desired character of the locality, as expressed in the relevant Zone and Policy Area; (c) enable development that is energy efficient; and (d) where the land abuts a side or rear laneway, be designed to facilitate vehicle access to allotments from the laneway rather than the main street frontage.	2	(a), (c) covered in General Development Policies - Land Division in Urban Areas DO 1(a) and (d) and PO 1.1	"As Above"
16	Residential allotments should be of varying size to encourage housing diversity and should provide adequate area and dimension to accommodate: (a) the siting and construction of a dwelling that reinforces the desired character of the locality; (b) the provision of private open space; and (c) safe and convenient vehicle access and parking.	5		Land divisions should provide allotments of varying sizes to enable a diversity of housing. It is recommended the following PO be included in Land Division in Urban Areas GDP under the heading 'Design and Layout': <i>PO 2.9 Land division resulting in allotments of varying size to encourage housing diversity and of an adequate area and dimension to accommodate: (a) the siting and construction of a dwelling that reinforces the desired character of the locality; (b) the provision of private open space; and (c) safe and convenient vehicle access and parking. DTS 2.9 None are applicable.</i>
NEW CONTENT IN THE CODE (insert below)				
	LAND DIVISION IN URBAN AREAS			
DO 1	Land division that: (a) creates allotments having appropriate dimensions and shape for intended use; (b) allows efficient provision of new infrastructure and optimum use of existing underutilised infrastructure; (c) integrates and allocates adequate and suitable land for the preservation of site features of value including significant vegetation, watercourses, water bodies and other environmental features; (d) supports energy efficiency in building orientation;			Supported.

Number	Description	Transition category	Where has it been included?	Comments
	(e) creates a compact urban form that supports active travel, walkability and the use of public transport; and (f) avoids areas of high natural hazard risk.			
	ALL LAND DIVISION Allotment configuration			
DTS/DPF 1.1	Land division for the: (a) minor adjustment of allotment boundaries to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures where no additional allotments are created; or (b) creation of a single additional allotment for residential purposes where: i. the allotment will contain a single lawfully existing dwelling or an approval for a single dwelling exists and is operative; ii. access is provided via a lawfully existing driveway or access point or an access point for which approval under the Local Government Act exists and is operative; and iii. the resulting allotment achieves any minimum site area and frontage width specified by the relevant zone or a relevant Technical and Numeric Variation Overlays.			Supported.
	Design and Layout			
PO 2.1	Land division results in a pattern of development that minimises the likelihood of future earthworks and retaining walls			Supported.
PO 2.2	Land division enables appropriate treatment of the interface between potentially conflicting land uses and/or zones.			Supported.
PO 2.3	Land division maximises the number of allotments that face public open space and public streets.			Supported.
PO 2.4	Land division integrated with site features, adjacent land uses, the existing transport network and available infrastructure.			Supported.
PO 2.5	Development and infrastructure provided and staged in a manner that supports an orderly and economic provision of land, infrastructure and services.			Supported.
PO 2.6	Land division results in watercourses being retained within open space and land subject to flooding free from development.			Supported.
PO 2.7	Land division results in street patterns that are legible and connected to the surrounding street network.			Supported.
PO 2.8	Land division is designed to allocate adequate and suitable land for the preservation of existing vegetation of value including native vegetation, regulated and significant trees.			Supported.
	Roads and Access			
PO 3.1	Land division provides allotments with access to a public road.			Supported.
PO 3.2	Street patterns and intersections designed to enable the safe and efficient movement of pedestrian, cycle and vehicular traffic.			
PO 3.3	Land division does not impede access to publicly owned open space and recreation facilities.			Supported.
PO 3.4	Road reserves provide for safe and convenient movement and parking of projected volumes of vehicles, and allow for the efficient movement of service and emergency vehicles.			Supported.
PO 3.5	Road reserves provide for footpaths, cycle lanes and shared-use paths, and accommodate street tree planting, landscaping and street furniture.			Supported.
PO 3.6	Road reserves accommodate stormwater drainage and public utilities.			Supported.
PO 3.7	Road reserves provide unobstructed vehicular access and egress to and from individual allotments and sites.			Supported.
PO 3.8	Street patterns and intersections designed to enable the safe and efficient movement of pedestrian, cycle and vehicular traffic.			Supported.
PO 3.9	Roads, open space and thoroughfares provided establish safe and convenient linkages to the surrounding open space and transport network.			Supported.
PO 3.10	Public streets include tree planting to provide shade and enhance the amenity of streetscapes.			Supported.
PO 3.11	Local streets designed to create low-speed environments that are safe for cyclists and pedestrians.			Supported.
	Infrastructure			
PO 4.1	Land division incorporates public utility services within road reserves or within dedicated easements.			Supported.
PO 4.2	Waste water, sewage and other effluent is capable of being disposed of from each allotment without unreasonable risk to public health or the environment.			Supported.
DTS/DPF 4.2	Each allotment can be connected to any of the following: (a) a waste water treatment plant that has the hydraulic volume and pollutant load treatment and disposal capacity for the maximum predicted wastewater volume generated by subsequent development of the proposed allotments; or (b) a form of on-site waste water treatment and disposal that meets relevant public health and environmental standards.			Supported, however this is not an issue for the City.

Number	Description	Transition category	Where has it been included?	Comments
PO 4.3	Septic tank effluent drainage fields and other waste water disposal areas maintained to ensure the effective operation of waste systems and minimise risks to human health and environmental harm.			Supported, however this is not an issue for the City.
DTS/DPF 4.3	Development is not built on, or encroaches within, an area that is, or will be, required for a sewerage system or waste control system.			Supported, however this is not an issue for the City.
PO 4.4	Constructed wetland systems, including associated detention and retention basins, sited and designed to ensure public health and safety is protected including by minimising potential public health risks arising from the breeding of mosquitoes.			
PO 4.5	Constructed wetland systems, including associated detention and retention basins, sited and designed to allow sediments to settle prior to discharge into watercourses or the marine environment.			Supported however not applicable to the City.
PO 4.6	Constructed wetland systems, including associated detention and retention basins, sited and designed to function as a landscape feature.			Supported
	MINOR LAND DIVISION (UNDER 20 ALLOTMENTS) Open Space			
PO 5.1	Land division proposing an additional allotment under 1 hectare in area provides or supports the provision of open space.			Supported.
PO 5.2	Land division creating 5-19 non-residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.			Supported.
DTS 5.2	Land division creating 5-19 non-residential allotments is accompanied by an approved Stormwater Management Plan and manages up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings and: (a) maintain i. a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 5-year ARI (18.1% AEP) 30 minute storm; and ii. the stormwater runoff time to peak to match that of the pre-development; or (b) capture and retain the difference in pre-development runoff volume (based upon a 0.35 runoff coefficient) vs post development runoff volume from the site for a 5-year ARI (18.1% AEP) 30 minute storm; and (c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings.			Supported.
	Solar Orientation			
PO 6.1	Land division for residential purposes facilitates solar access for energy efficiency through allotment orientation.			Supported.
	Water Sensitive Design			
PO 7.1	Land division creating 5-19 allotments includes stormwater management systems that minimise the discharge of sediment, suspended solids, organic matter, nutrients, bacteria, litter and other contaminants to the stormwater system, watercourses or other water bodies.			Supported.
DTS 7.1	Land division creating 5-19 allotments is accompanied by an approved Stormwater Management Plan and achieves the following stormwater runoff outcomes: (a) 80 per cent reduction in average annual total suspended solids; (b) 60 per cent reduction in average annual total phosphorus; (c) 45 per cent reduction in average annual total nitrogen.			Supported.
PO 7.2	Land division creating 5-19 non-residential allotments includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.			Supported.
DTS/DPF 7.2	Land division creating 5-19 non-residential allotments includes a storm water management system designed to: (a) maintain a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan; (b) maintain the stormwater runoff time to peak to match that of the pre-development; and (c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1% AEP).			Supported.

General comments					
Number	Description	Transition category	Where has it been included?	Comments	
Policy Objectives					
OBJ 11	Low scale residential development designed to be attractive, visually compatible with surrounding development and consistent with the desired character of the Zone and Policy Area.	5		Development that is visually compatible with surrounding development is important to ensure consistency and for ensuring the character of the area is maintained and built upon. INSERT the following PO within General Development Policies - Design in Urban Areas (All Development) under the heading 'External Appearance'. <i>PO</i> <i>Designing building facades fronting street frontages, access ways, driveways or public spaces at an appropriate scale, rhythm and proportion that responds to the use of the building, the desired character of the locality and the modelling and proportions of adjacent buildings.</i>	
OBJ 12	Development that enhances the public environment.	4			
Principles of Development Control					
17	Low scale residential development should: (a) protect existing site features, including vegetation and items or features of heritage value; (b) provide sufficient open space for the planting of trees to: (i) complement and enhance the existing landscape character; (ii) provide amenity for residents; and (iii) screen storage, service and parking areas. (c) protect remaining trees from damage to their root systems; and (d) incorporate building footing designs that allow root growth of existing trees.	4			
18	Low scale residential development should be compatible with the desired character of the locality, as expressed in the Zone and Policy Area in terms of: (a) building height; (b) building mass and proportion; (c) external materials, patterns, textures, colours and decorative elements; (d) ground floor height above natural ground level; (e) roof form and pitch; (f) facade articulation and detailing, and window and door proportions; (g) verandahs, eaves, parapets and window sun screens; and (h) driveway crossovers, fence style and alignment.	5		Development that is visually compatible with surrounding development is important to ensure consistency and for ensuring the character of the area is maintained and built upon. Insert as a PO within General Development Policies - Design in Urban Areas (All Development) under the heading 'External Appearance'.	
19	Low scale residential development abutting streets, access ways or driveways should include fenestration and well lit and easily identifiable doorways facing towards the street, access way or driveway so that buildings provide an easily identifiable entrance and facilitate passive surveillance of the street, accessway or driveway.	2	General Development Policies - Design in Urban Areas PO 1.3, PO 2.1, PO 2.4, PO 14.1, PO 14.2		
20	The visual bulk of low scale residential development adjacent to street frontages and private open space should be minimised through colour, building materials, detailing, setback, articulation and fenestration.	5		Include as a PO within General Development Policies - Design in Urban Areas (All Development) under the heading 'External Appearance'.	
21	Low scale residential development should incorporate attractive and pleasant communal spaces, access ways and driveways through: (a) landscaping and paving creating variety and visual interest; and (b) built form fronting communal spaces, access ways and driveways incorporating variety in appearance, such as through variation in colour, materials, setbacks and form. Communal spaces, access ways and driveways which are lengthy and contain no variety in appearance should be avoided.	4			

Number	Description	Transition category	Where has it been included?	Comments
NEW CONTENT IN THE CODE (insert below)				
DESIGN IN URBAN AREAS - RESIDENTIAL DEVELOPMENT - 3 Building levels or Less				
PO 18.3	The apparent mass of larger buildings is reduced when viewed from adjoining allotments or public streets.			Supported.
DTS/DPF 18.3	Buildings of 2 or more building levels and a length exceeding 20m adjacent a secondary street or side boundary incorporate a step back of the building façade of more than 300mm for a minimum length of 1m, at least every 10m.			REQUIRES FURTHER REVIEW - It is questionable whether this approach will produce a desirable outcome, In some streets a greater setback would be required
PO 21.1	Landscaping Soft landscaping incorporated into development to: (a) minimise heat absorption and reflection; (b) contribute shade and shelter; (c) provide for stormwater infiltration and biodiversity; and (d) enhance the appearance of land and streetscapes.			Supported. This should apply to 'All Development' not just for buildings less than 3 building levels.
DTS / DPF 21.1	Residential development incorporates areas for soft landscaping with a minimum dimension of 0.5 metres provided in accordance with the following: (b) 25% of any land between the road boundary and the primary building line is provided for soft landscaping with a minimum dimension of 0.5 metres.			REQUIRES FURTHER REVIEW. IT is questionable whether the minimum dimension is enough to provide a quality area of soft landscaping. A 1 metre minimum dimension is normally applied. It is recommended the minimum 1 metre dimension is required.
PO 21.2	Tree planting provided to: (a) contribute shade and shelter; (b) improve outlook for occupants of buildings; (c) reduce the apparent mass of buildings; (d) contribute to biodiversity; (e) mitigate urban heat; and (f) improve the amenity and character of streetscapes and contribute to attractive vistas.			Supported. This should apply to 'All Residential Development' not just for buildings less than 3 building levels. It is recommended this PO be included as a PO within Design in Urban Areas GDP [All Residential Development] under a new heading 'Landscaping'.
DTS/DPF 21.2	Tree planting is provided in accordance with the following tables: (b) The following discounts apply where existing trees are retained on the subject land that are not a species identified in Regulation3F(4)(b): (c) Trees can be replaced with smaller trees in accordance with the following rates:			REQUIRES FURTHER REVIEW. The way the DTS are written is very confusing making it difficult to understand. It is recommended the DTS 12.2 is rewritten in a manner that is easy to interpret.
PO 25.1	Design of Transportable Dwellings The sub-floor space beneath transportable buildings enclosed to give the appearance of a permanent structure.			Supported.
DESIGN IN URBAN AREAS - ALL DEVELOPMENT				
PO 1.1	Buildings that reinforce corners through changes in setback, articulation, materials, colour and massing (including height, width, bulk, roof form and slope).			Supported. Revise as follows to better address the issues: <i>Buildings that reinforce and define corners through architectural form, changes in setback, articulation, materials, colour and massing (including height, width, bulk, roof form and slope) and addresses all street frontages.</i>
PO 1.2	Where zero or minor setbacks are desirable, development provides shelter over footpaths to positively contribute to the walkability and comfort of the public realm.			Supported.
PO 1.4	Plant, exhaust and intake vents and other technical equipment integrated into the building design to minimise visibility from the public realm and negative impacts on residential amenity by: (a) positioning plant and equipment discretely, in unobtrusive locations as viewed from public roads and spaces; (b) screening rooftop plant and equipment from view; and (c) when located on the roof of non-residential development, locating the plant and equipment as far as practicable from adjacent sensitive land uses.			Supported.
DTS / DPF 1.4	Development does not incorporate any structures that protrude beyond the roofline.			Supported.
PO 1.5	The negative visual impact of outdoor storage, waste management, loading and service areas is minimised by integrating them into the building design and screening them from public view (such as fencing, landscaping and built form) taking into account the form of development contemplated in the relevant zone.			Supported. Revise wording as follows: <i>The negative visual impact of outdoor storage, waste management, loading and service areas is minimised by integrating them into the building design and locating or screening them from public view (such as fencing, landscaping and built form) taking into account the form of development contemplated in the relevant zone.</i>

Number	Description	Transition category	Where has it been included?	Comments
PO 3.1	Landscaped (including trees), permeable open spaces incorporated to: (a) minimise heat absorption and reflection; (b) maximise shade and shelter; (c) maximise stormwater infiltration; and (d) enhance the appearance of land and streetscapes.			An additional PO should also be included in the General Development Policies - Design in Urban Areas (all Development) under the heading 'Landscaping' and worded as follows: <i>Landscaping that:</i> (a) forms an integral part of the design of development; (b) is selected and designed for water conservation; (c) incorporates local indigenous species suited to the site and development; (d) is provided to all areas of communal open space, drainage and shared car parking areas; (e) fosters human scale; (f) protects predominant landscape features; and (g) provides for the retention of trees.

Zone		1 - Included in the Code and retains same policy intent	0%	
		2 - Wording changed but policy intent remains (OK)	0%	
		3 - Included in the Code but policy intent changed (NOT OK)	0%	
		4 - Not included in the Code but OK to remove	0%	
		5 - Not included in the Code and should be reinstated	100%	
Dwelling Set-backs				
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
OBJ 13	Building set-backs that complement the prevailing set-backs in the street.	5		Buildings that reflect the prevailing setbacks in the street are important to ensure consistency and for ensuring the character of the area is maintained and built upon. It is recommended this provision is included as a PO within General Development Policies - Design in Urban areas (Residential Development - 3 Building Levels or Less) under the heading 'External Appearance'.
Principles of Development Control				
22	To reinforce the pattern and character of individual streets, set-backs of low scale residential development should be consistent with the prevailing set-back in the locality in relation to: (a) street frontages; and (b) side and rear boundaries. Design Techniques (these are ONE WAY of meeting the above Principle) 22.1 In relation to 22(a), in instances where set-backs vary, development (excluding open porches, etc) should be set back: (a) the same distance as one or the other of the adjoining buildings, provided the difference between the set-backs of the two adjoining buildings is less than or equal to 2 metres; or (b) not less than the average of the set-backs of the adjoining buildings, if the difference between the set-backs of the adjoining buildings is greater than 2 metres.	5		Buildings that reflect the prevailing setbacks in the street are important to ensure consistency and for ensuring the character of the area is maintained and built upon. It is recommended this provision is included as a PO and DTS/DPF within General Development Policies - Design in Urban Areas (Residential Development - 3 Building Levels or Less) under the heading 'External Appearance'.

General comments			
Number	Description	Transition category	Where has it been included?
Policy Objectives			
OBJ 15	The protection of access to daylight and sunlight and the amenity of neighbouring residential premises.	2	General Development Policies - Design in Urban Areas PO 4.1
Principles of Development Control			
25	Low scale residential development should ensure an adequate level of sunlight to: (a) ground level private or communal open space of adjacent residential development; (b) upper level balconies which provide the primary private open space area for any adjacent residential development; (c) communal open space which provides the primary private open space for any adjacent residential development; and (d) habitable room windows of adjacent residential development. Design Technique (this is ONE WAY of meeting part of the above Principle) 25.1 In relation to Principle 26(d), habitable rooms have windows with a horizontal distance between any facing building, measured perpendicular to the face of the window, of 0.9 metres minimum which is clear to the sky (i.e. 0.9 metres between fascias/gutters).	2	General Development Policies - Design in Urban Areas PO 4.1
26	Low scale residential development should be designed to ensure habitable rooms, private open space and communal open space, where such communal open space provides the primary area private open space, are the main recipients of sunlight.	2	General Development Policies - Design in Urban Areas PO 4.1
27	Development within or adjoining the City Living Zone, the Adelaide Historic (Conservation) Zone or the North Adelaide Historic (Conservation) Zone should maintain at least two hours of direct sunlight between 9.00am and 3.00pm solar time on 22 June to either the northern facade or at least one ground floor habitable room window (excluding bathroom, toilet, laundry or storage room windows), of any neighbouring residential property and to at least 20 percent of that property's private open space, private landscaped open space or communal open space, where such communal open space provides the primary private open space for any adjacent residential development. Where the existing period of direct sunlight is less than two hours per day or covers less than 20 percent of open space, development should not further reduce it.	5	The policies in reard to daylight and sunlight are very broad and do not set standards on what is considered to be appropriate levels of sunlight. This policy should apply to all development within or adjoining the City Living Zone. INSERT Policy as a PO and DTS within the City Living Zone under a new heading 'Daylight and Sunlight' and include within the Capital City Zone under the heading 'Interface'.
28	Within the City Living Zone, the Adelaide Historic (Conservation) Zone or the North Adelaide Historic (Conservation) Zone, sunlight to solar panels should be maintained for a minimum of 2 consecutive hours between 9.00am and 3.00pm solar time on 22 June provided it does not restrict the reasonable development of adjoining sites.	5	There are no provisions in regard to solar panels of a domestic nature within the Code. It is recommended this policy be included as a DTS within the Interface Between land Uses GDP under the heading 'Overshadowing'..
NEW CONTENT IN THE CODE (insert below)			
DESIGN IN URBAN AREAS - ALL DEVELOPMENT			
PO 4.1	Buildings sited, oriented and designed to maximise natural sunlight access and ventilation to main activity areas, habitable rooms, common areas and open spaces.		Supported. This PO should be expanded further to include appropriate standards for acceptable sunlight levels for development. Include Council Wide PDC7 from Adelaide (City) Development Plan as DTS/PDF 4.1
PO 8.1	Fences, walls and retaining walls of sufficient height to maintain privacy and security without unreasonably impacting visual amenity and adjoining land's access to sunlight.		Supported.
PO 4.2	Buildings sited and designed to maximise passive environmental performance and minimise energy consumption and reliance on mechanical systems, such as heating and cooling.		Supported.

Policy Objectives				
OBJ 16	Private open space to meet the requirements of occupants of low scale residential development for outdoor activities.	2	General Dev Policies - Design in Urban Area PO 20.3	
Principles of Development Control				
29	Low scale residential development should provide private open space for each dwelling.	2	General Dev Policies - Design in Urban Area PO 20.1 and DTS/DPF 20.1	
30	Private open space should be directly accessible from a living room and in the form of: (a) ground level courtyard or other private open space screened from adjacent properties and public areas (e.g. public roads, public open space); or (b) balconies, terraces, roof gardens, decks or other elevated outdoor areas provided the amenity and visual privacy of adjacent properties is protected.	2	General Dev Policies - Design in Urban Area PO 20.2 and DTS/DPF 20.2	
31	Low scale residential development should provide private open space of sufficient area, dimension and shape and be appropriately located to be functional for the occupants' needs and should satisfy the following: (a) residential dwellings with ground level habitable rooms to include private open space which satisfies the following table: residential dwellings with no ground level habitable rooms to include private open space in the form of balconies, terraces, roof gardens, decks or other elevated outdoor areas directly accessible from a habitable room which satisfies the following table:	3	General Dev Policies - Design in Urban Area PO 20.1 and DTS/DPF 20.1	REQUIRES FURTHER REVIEW. The private open space requirements within the Code are higher than what the Adelaide City Dev stipulates. Many sites within the City are small and the high provision of open space required by the Code could potentially physically prohibit the ability to build dwellings within the City. It is recommended the open space requirements for the City in regard to Residential Development 3 Building Levels or Less is reviewed further as no investigations have been undertaken to substantiate a change in policy for City development. Alternatively the existing CoA policy is retained and reinserted.
32	Private open space should be located: (a) to take advantage of natural features of the land; (b) to minimise overlooking from adjacent buildings; (c) away from bedroom windows on adjoining land to minimise acoustic impacts; and (d) provide for the retention of existing significant vegetation.	5		Include in Private Open Space policies in Design in Urban Areas GDP within Residential Development - 3 Building levels or Less PO 20.3 under the heading 'Private Open Space'.
33	Private open space should, where possible: (a) achieve comfortable year-round use by having a northerly aspect; (b) not be significantly shaded by the associated dwelling or adjacent development during winter; and (c) be shaded in summer.	5		Include in Private Open Space policies in Design in Urban Areas GDP within Residential Development - 3 Building levels or Less PO 20.3 under the heading 'Private Open Space'.
34	A proportion of ground level private open space should be open to the sky to provide amenity, opportunities for landscaping, a reduction in stormwater runoff and enable stormwater infiltration. Design Technique (this is ONE WAY of meeting the above Principle) 34.1 At least 70 percent of ground level private open space is not covered by roof overhangs, verandahs or impermeable structures.	4		
NEW CONTENT IN THE CODE (insert below)				
DESIGN IN URBAN AREAS - RESIDENTIAL DEVELOPMENT - 3 Building levels or Less				
PO 20.3	Private open space is positioned and designed to: (a) provide useable outdoor space that suits the needs of occupants; (b) take advantage of desirable orientation and vistas; (c) animate the street frontage by encouraging activity between buildings and public streets; (d) adequately define public and private space when located forward of the building; and			Supported however should also include a provision that seeks the location of private open space on the northern side of the dwelling.

Number	Description	Transition category	Where has it been included?	Comments
	(e) prolong activity along street frontages by protecting against inclement weather.			
DTS / DPF 20.3	A portion of the private open space specified in DTS 20.1 can be provided forward of the primary building line where: (a) the area is fenced to a maximum height of 1.8m; (b) the area incorporates a verandah with a minimum dimension of 1.5m (c) an area is provided behind the primary building line that has the minimum dimensions identified in DTS 20.1;			Supported

Policy Objectives					
OBJ 17	Low scale residential development sited and designed to protect visual and acoustic privacy for the occupants of the dwellings and nearby residents.	2	General Dev Policies - Design in Urban Area PO 14.1		
Principles of Development Control					
35	Low scale residential development should be sited and designed to avoid the need for screening devices to protect the privacy of the occupants of adjacent dwellings and to enable internal spaces of proposed dwellings to be as pleasant and as usable as possible.	2	General Development Policies - Design in Urban Areas DTS/DPF 14.1	Buildings should be designed and sited in a manner that does not rely solely on poor amenity outcomes for dwellings. This can be achieved through the design of a building in terms of window orientation and staggering of windows.	
36	In the event that direct overlooking occurs from proposed upper level habitable room windows, external balconies, terraces, decks and roof gardens to habitable room windows and primary areas of private open space of adjacent dwellings, such direct overlooking should be minimised by: (a) setting buildings back from boundaries;	2	General Development Policies - Design in Urban Areas PO 14.1, DTS 14.1		
36	(b) screening devices such as: (i) canopy projections above windows to minimise viewing down into rooms; (ii) horizontal projecting sills to restrict downward overlooking; or (iii) side window or balcony screens to restrict sideways/oblique overlooking;. (c) orientating windows to avoid direct views; and (d) landscaping. Design Techniques (these are ONE WAY of meeting the above Principle) 36.1 Direct views from upper level habitable room windows to the habitable room windows or useable private open space* of an adjacent residential development restricted (assuming a viewing height of up to 1.6 metres above floor level) by: (a) permanently fixed translucent glazing in the part of the window below 1.6 metres above floor level for non-habitable rooms such as bathrooms, laundries or storage areas; (b) window sill heights of 1.6 metres above the finished floor level; (c) screening devices such as lattice screens to balconies, permanently fixed external perforated panels or trellises which have a maximum of 25 percent openings; and/or (d) staggering windows which face one another so viewing is oblique rather than direct (refer to Figure 36.1 and 36.2). Direct views from external upper level balconies, terraces or decks to the habitable room windows or useable area of private open space of an adjacent residential development restricted by permanently fixed external screens, including (refer to Figure 36.3): (a) wing walls for the length of the balcony, terrace or deck; (b) solid or translucent panels; and/or (c) perforated panel or trellises which have a maximum of 25 percent openings; (d) below 1.6 metres above ground level. Windows and balconies within an upper level habitable room designed to prevent overlooking (assuming a viewing height of up to 1.6 metres above floor level) of more than 50 percent of the useable private open space of a lower-level dwelling within the building (refer to Figure 36.4).	2	General Development Policies - Design in Urban Areas PO 14.1, DTS 14.1		
37	Permanently fixed external screening devices should be designed and coloured to blend with the predominant associated building materials.	4

Carports, Garages and Fencing					
General comments					
Number	Description	Transition category	Where has it been included?	Comments	
Policy Objectives					
OBJ 18	Car accommodation and fencing that enhances pedestrian amenity and the desired character and appearance of the streetscape.	2	General Dev Policies - Design in Urban Areas PO 18.1		
OBJ 19	Car accommodation that does not dominate views of the associated dwelling from the street.				
Principles of Development Control					
40	Where there is a side or rear laneway abutting land, access to the parking area should be from the laneway, rather than along the main street frontage.	5		This is important to retaining the character of many part of the City and should be inserted. INSERT s a PO within General Dev Policies - Design in Urban Areas [Residential Development - 3 Building Levels or Less] Car Parking, Access and Manoeuvrability.	
41	Garages and carports should: (a) be compatible with the building design, adjacent development and desired character of the streetscape in terms of height, roof form and pitch, scale, building materials, colours and detailing;	5	General Dev Policies - Design in Urban Areas PO 16.1. DTS/DPF 16.1(a)	No mention is made to the character of the streetscape in terms of height, roof form and pitch, scale, building materials, colours and detailing. These are important elements in ensuring a structure does not detract from the streetscape. On this basis it is recommended that this principle is included as part of PO 16.1 of the General Dev Policies - Design in Urban Areas [All Residential Development] under the heading 'Ancillary Development'.	
41	(b) be set back behind the building frontage (excluding verandahs and balconies) to preserve the existing street pattern;	2	General Dev Policies - Design in Urban Areas PO 16.1. DTS/DPF 16.1(a)	This principle is important to ensure the protection of the existing street pattern.	
41	(c) not diminish the streetscape attractiveness by visually dominating the street elevation of the associated dwelling in terms of width, size, design and location; and	5		It is important structures do not visually dominate the street appearance of the dwelling and it is recommended this component is addressed within PO 18.1 of General Dev Policies - Design in Urban Areas [All Residential Development] under the heading 'External Appearance'.	
41	(d) have a width no greater than 50 percent of the allotment width on a public street frontage or on a laneway that functions as the dwellings primary frontage.	2	General Dev Policies - Design in Urban Areas DTS/DPF 16.1(c) and DTS/DPF 18.1(a)		
41	Design Techniques (these are ONE WAY of meeting parts of the above Principle) 41.1 In relation to Principle 41(b), set-backs of garages and carports from the main face of the dwelling not less than 0.5 metres behind the main face of the associated dwelling. 41.2 In relation to Principle 41(c): (a) crossovers and the width of the driveway no greater than 3 metres wide; (b) where an enclosed double carport or garage is set back less than 6 metres from the street: (i) two separate doors provided with a distance of not less than 300 millimetres between them; or (ii) double tilt-up doors provided with moulded door panels having a maximum width of 5 metres.	3	General Dev Policies - Design in Urban Areas DTS/DPF 23.3	REQUIRES FURTHER REVIEW. DTS/DPF 23.3 includes provision for a maximum driveway width of 6 metres. This is not in characteristic or desired within many areas of the City and would mean less provision for on -street tree planting and vehicle parking as well as distrcting from the streetscape. It also depends on the width of the lot. It is recommended that this policy be REVIEWED FURTHER taking into consideration the streetscape character of the City's Streets.	
42	Garages and carports located on side boundaries should be limited in length and height to: (a) minimise the visual impact of buildings from adjacent properties; (b) minimise the overshadowing of adjoining properties; and (c) maintain an adequate level of daylight to existing and future adjacent residential development and private open space.	2	General Dev Policies - Design in Urban Areas PO 16.1. DTS/DPF 16.1(e),(f), (g).		

Number	Description	Transition category	Where has it been included?	Comments
43	Fences and walls abutting streets (excluding service lanes) should: (a) be articulated and detailed to provide visual interest; (b) be compatible with the associated development and with any existing attractive fences and walls in the locality; (c) enable visibility of buildings from and to the street to enhance safety and allow surveillance; (d) assist development to address the street; and (e) be no more than 1.2 metres high if solid (forward of the building line). This height may be increased to 2 metres if the fence has openings which make it more than 50 percent transparent.	5		Include as DTS/DPF 8.1 within the General Dev Policies - Design in Urban Areas [All Residential Development] under the heading 'Fences and Walls'.
NEW CONTENT IN THE CODE (insert below)				
ALL RESIDENTIAL DEVELOPMENT				
DTS / DPF 16.1	Residential ancillary buildings and structures: (d) if situated on a boundary (not being a boundary with a primary street or secondary street), a length not exceeding 10m unless: i. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary; and ii. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent; (e) if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary not exceeding 45% of the length of that boundary; (f) will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or abut the proposed wall or structure; (g) have a wall height or post height not exceeding 3m above natural ground level; (h) have a roof height where no part of the roof is more than 5m above the natural ground level; and (i) if clad in sheet metal, is pre-colour treated or painted in a non-reflective colour.		Supported	
PO 16.2	Ancillary buildings and structures do not impede on-site functional requirements such as private open space provision, car parking requirements or result in over-development of the site.			Supported
DTS / DPF 16.2	Ancillary buildings and structures do not result in: (a) less private open space than specified in Design in Urban Areas Table 1 – Outdoor Open Space; (b) less on-site car parking than specified in Transport, Access and Parking Table 1 - Off-street Car Parking Requirements; and (c) the total roofed floor area of all existing or proposed ancillary building(s) or structure(s) exceeding 60m ² .			Supported
PO 23.1	Covered car parking spaces are of dimensions to be functional, accessible and convenient.			Supported
DTS / DPF 23.1	Covered car parking spaces: (a) where enclosed by fencing or walls, have: i. a minimum internal width of 3.2m and length of 6.0m for a single space; ii. a minimum internal width of 6.0m and length of 6.0m for a double space (side by side); and iii. a minimum internal width of 3.2m and length of 11m for a double space (tandem); or (b) where not enclosed by fencing, walls or garage doors, have: i. a minimum width of 3.0m and minimum length of 5.5m for a single space; ii. a minimum width of 5.2m and minimum length of 5.5m for a double (side by side) space; and iii. a minimum width of 3.0m and minimum length of 10.4m for a double (tandem) space.			Supported
PO 23.2	Uncovered car parking space are of dimensions to be functional, accessible and convenient.			Supported
DTS / DPF 23.2	Uncovered car parking spaces have a minimum width of 2.4m and a minimum length of 5.5m.			Supported
PO 23.3	Driveways and access points located and designed to facilitate safe access and egress while maximising land available for street tree planting, landscaped street frontages and on-street parking.			Supported
DTS/ DPF 23.3	Driveways and access points: (a) for sites with a frontage to a public road of 12m or less, have a maximum width of 3.2m measured at the property boundary and are the only access point provided on the site; or (b) for sites with a frontage to a public road greater than 12m:			Supported

Number	Description	Transition category	Where has it been included?	Comments
	i. have a maximum width of 6m measured at the property and are the only access point provided on the site; or ii. have a maximum width of 3.2 metres measured at the property boundary and no more than two access points are provided on site.			
PO 23.4	Vehicle access is safe, convenient, minimises interruption to the operation of public roads and does not interfere with street infrastructure or street trees.			Supported
DTS / DPF 23.4	Vehicle access to designated car parking spaces: (a) is provided via a lawfully existing or authorised driveway or access point or an access point for which consent has been granted as part of an application for the division of land (b) where newly proposed, is setback: (a) 500mm or more from any street furniture, street pole, infrastructure services pit, or other stormwater or utility infrastructure unless consent is provided from the asset owner; (b) 2m or more from a street tree unless consent is provided from the tree owner; (c) 6m or more from the tangent point of an intersection of 2 or more roads or a pedestrian-actuated crossing.			Supported
PO 23.5	Driveways are designed to enable safe and convenient vehicle movements from the public road to on-site parking spaces.			Supported
DTS/ DPF 23.5	Driveways are designed and sited so that: (a) the gradient from the place of access on the boundary of the allotment to the finished floor level at the front of the garage or carport when work is completed is not steeper than 1:4 on average; and (b) the centre of the driveway at the public road boundary is no more than 25 degree deviation from the centre of the front of the covered car parking space for which it provides vehicle access.			Supported
PO 23.6	Driveways and access points are designed and distributed to optimise the provision of on-street visitor parking (where on-street parking is appropriate).			Supported
DTS / DPF 23.6	Where on-street parking is available directly adjacent the site, parking is retained in accordance with the following requirements: (a) 1 on-street car park per 3 proposed dwellings (rounded up to the nearest whole number); and (b) minimum car park length of 6m.			Supported, this is probably more relevant to greenfield sites.
				Supported, this is probably more relevant to greenfield sites.

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
22	Medium to high scale residential (including student accommodation) or serviced apartment development that: (a) has a high standard of amenity and environmental performance; (b) comprises functional internal layouts; (c) is adaptable to meet a variety of accommodation and living needs; and (d) includes well-designed and functional recreation and storage areas.	2	(a) General Development Policy - Design in Urban Areas DO 1(b) (c) General Development Policy - Design in Urban Areas DO 1(b) (d) General Development Policy - Design in Urban Areas PO 28.4 and DTS/DPF 28.4.	
Principles of Development Control				
Building Entrances				
48	Entrances to medium to high scale residential or serviced apartment development should: (a) be oriented towards the street; (b) be visible and easily identifiable from the street; and (c) provide shelter, a sense of personal address and transitional space around the entry.	2	General Development Policy - Design in Urban Areas PO 9.7 and DTS/DPF 9.7	
49	Entrances to individual dwellings or apartments within medium to high scale residential or serviced apartment development should: (a) be located as close as practical to the lift and/or lobby access and minimise the need for long access corridors; (b) be clearly identifiable; and avoid the creation of potential areas for entrapment.	2	General Development Policy - Design in Urban Areas PO 9.7 and DTS/DPF 9.7	
Daylight, Sunlight and Ventilation				
50	Medium to high scale residential or serviced apartment development should be designed to maximise opportunities to facilitate natural ventilation and capitalise on natural daylight and minimise the need for artificial lighting during daylight hours.	2	General Development Policy - Design in Urban Areas PO 4.1, PO 28.1	
51	Medium to high scale residential or serviced apartment development should be designed and located to maximise solar access to dwellings and communal open space on the norther facade.	2	General Development Policy - Design in Urban Areas PO 4.2	
52	Ceiling heights that promote the use of taller windows, highlight windows, fan lights and light shelves should be utilised to facilitate access to natural light, improve daylight distribution and enhance air circulation, particularly in dwellings with limited light access and deep interiors.			
53	All new medium to high scale residential or serviced apartment development should have direct ventilation and natural light.	2	General Development Policy - Design in Urban Areas PO 4.1, PO 28.1	
54	The maximum distance of a habitable room such as a living, dining, bedroom or kitchen from a window providing natural light and ventilation to that room is 8 metres.	3	General Development Policy - Design in Urban Areas PO 4.1 in part	The new policy requires buildings to be designed and sited to maximise ventilation and light to main activity areas, habitable rooms, common areas and open space. It does not prescribe the maximum distance required from a window. This policy ensures quality living accommodation and should be included as a DTS to PO 4.1 in the Design in Urban Areas GDP.
55	Light wells should not be used as the primary source of daylight for living rooms to ensure a sufficient level of outlook and daylight.	5		The quality of life within a medium high rise development is important and outlook and daylight plays an important part in providing a quality living environment. It is recommended the principle is INSERTED and incorporated into DTS/DPF 15.1 within the Design in Urban Areas GDP [All Residential Development] under the heading 'Outlook and Amenity'.
56	Medium to high scale residential or serviced apartment development should be designed to ensure living areas, private open space or communal open space, where such communal open space provides the primary area of private open space, are the main recipients of sunlight.	2	General Development Policy - Design in Urban Areas PO 4.1 in part	

Number	Description	Transition category	Where has it been included?	Comments
57	Medium to high scale residential or serviced apartment development should locate living areas, private open space and communal open space, where such communal open space provides the primary area of private open space, where they will receive sunlight and, where possible, should maintain at least two hours of direct sunlight solar time on 22 June to: (a) at least one habitable room window (excluding bathroom, toilet, laundry or storage room windows); (b) to at least 20 percent of the private open space; and (c) communal open space, where such communal open space provides the primary private open space for any adjacent residential development.	3	General Development Policy - Design in Urban Areas PO 4.1 in part	INSERT the following DTS for PO 4.1 within Design in Urban Areas GDP as follows: "Locate living areas, private open space and communal open space in a position that will receive sunlight and, where possible, provides a minimum of two hours of direct sunlight solar time on 22 June to: (a) at least one habitable room window (excluding bathroom, toilet, laundry or storage room windows); (b) to at least 20 percent of the private open space; and (c) communal open space, where the space provides the primary private open space for any adjacent residential development."
58	Natural cross ventilation of habitable rooms should be achieved by the following methods: (a) positioning window and door openings in different directions to encourage cross ventilation from cooling summer breezes; (b) installing small low level windows on the windward side and larger raised openings on the leeward side to maximise airspeed in the room; (c) installing higher level casement or sash windows, clerestory windows or operable fanlight windows to facilitate convective currents; (d) selecting windows which the occupants can reconfigure to funnel breezes such as vertical louvred, casement windows and externally opening doors; (e) ensuring the internal layout minimises interruptions to airflow; (f) limiting building depth to allow for ease of cross ventilation; and/or (g) draught proofing doors, windows and other openings.	5		Include as a DTS for PO 4.2 " Development designed to provide natural ventilation of habitable rooms by: (a) positioning window and door openings in different directions to encourage cross ventilation from cooling summer breezes; (b) installing small low level windows on the windward side and larger raised openings on the leeward side to maximise airspeed in the room; (c) installing higher level casement or sash windows, clerestory windows or operable fanlight windows to facilitate convective currents; (d) selecting windows which the occupants can reconfigure to funnel breezes such as vertical louvred, casement windows and externally opening doors; (e) ensuring the internal layout minimises interruptions to airflow; (f) limiting building depth to allow for ease of cross ventilation; and/or (g) draught proofing doors, windows and other openings."
Private Open Space				
59	Medium to high scale residential development and serviced apartments should provide the following private open space: (a) studio (where there is no separate bedroom): no minimum requirement but some provision is desirable. (b) 1 bedroom dwelling/apartment: 8 square metres. (c) 2 bedroom dwelling/apartment: 11 square metres. (d) 3+ bedroom dwelling/apartment: 15 square metres.	2	General Development Policy - Design in Urban Areas PO 27.1 and DTS/DPF 27.1	
60	Medium to high scale residential (other than student accommodation) or serviced apartment development should ensure direct access from living areas to private open space areas, which may take the form of balconies, terraces, decks or other elevated outdoor areas provided the amenity and visual privacy of adjacent properties is protected.	2	General Development Policy - Design in Urban Areas PO 20.1 and DTS/DPF 20.1	
61	Other than for student accommodation, private open space should have a minimum dimension of 2 metres and should be well proportioned to be functional and promote indoor/outdoor living.	2	General Development Policy - Design in Urban Areas Table 1.	
62	Balconies should be integrated into the overall architectural form and detail of the development and should: (a) utilise sun screens, pergolas, shutters and openable walls to control sunlight and wind; (b) be cantilevered, partially cantilevered and/or recessed in response to daylight, wind, acoustic and visual privacy; (c) be of a depth that ensures sunlight can enter the dwelling below; and (d) allow views and casual surveillance of the street while providing for safety and visual privacy.	2	General Development Policy - Design in Urban Areas PO 28.2 and DTS/DPF 28.2	
63	Secondary balconies, including Juliet balconies or operable walls with balustrades should be considered, subject to overlooking and privacy, for additional amenity and choice.			
64	For clothes drying, balconies off laundries or bathrooms and roof top areas should be screened from public view.	2	General Development Policy - Design in Urban Areas PO 35.2 (group dwellings, residential flat buildings)	This provision should apply to all residential development and should be applied and relocated and put under the heading ' All Residential Development'.
65	The incorporation of roof top gardens is encouraged providing it does not result in unreasonable overlooking or loss of privacy.	2	General Development Policy - Design in Urban Areas PO 4.3	
Visual Privacy				
66	Medium to high scale residential or serviced apartment development should be designed and sited to minimise the potential overlooking of habitable rooms such as bedrooms and living areas of adjacent development.	2	General Development Policy - Design in Urban Areas PO 28.1 and DTS/DPF 28.1	

Number	Description	Transition category	Where has it been included?	Comments
67	A habitable room window, balcony, roof garden, terrace or deck should be set-back from boundaries with adjacent sites at least three metres to provide an adequate level of amenity and privacy and to not restrict the reasonable development of adjacent sites.	2	General Development Policy - Design in Urban Areas PO 28.1 and DTS/DPF 28.1	
Noise and Internal Layout				
68	Medium to high scale residential or serviced apartment development close to high noise sources (e.g. major roads, established places of entertainment and centres of activity) should be designed to locate noise sensitive rooms and private open space away from noise sources, or be protected by appropriate shielding techniques.	5		The reduction and management of noise transmission into apartments in the City is important as it can affect the quality of residential living and if managed appropriately can ensure a diversity of land use co-existence which is vital to the character, function and attraction of the City. It is recommended this policy is INSERTED into the Interface Between Land Uses GDP under the heading 'Activities Generating Noise or Vibration'.
69	Attached or abutting dwellings/apartments should be designed to minimise the transmission of sound between dwellings and, in particular, to protect bedrooms from possible noise intrusions.	5		Noise transmission should be addressed and acknowledged within Code policy on between dwellings is an important issue. It is recommended this policy is INSERTED into the Interface Between Land Uses GDP under the heading 'Activities Generating Noise or Vibration'.
Minimum Unit Sizes				
70	Medium to high scale residential or serviced apartment development should provide a high quality living environment by ensuring the following minimum internal floor areas: (a) studio (where there is no separate bedroom): 35 square metres. (b) 1 bedroom dwelling/apartment: 50 square metres (c) 2 bedroom dwelling/apartment: 65 square metres (d) 3+ bedroom dwelling/apartment: 80 square metres plus an additional 15 square metres for every additional bedroom over 3 bedrooms. Note: Dwelling/apartment "unit size" includes internal storage areas but does not include balconies or car parking as part of the calculation.	3	General Development Policy - Design in Urban Areas PO 29.1 and DTS/DPF 29.1	The purpose is to provide a high quality living environment for future residents. The new policy intent is to provide a diversity of housing. Standards for studio's have not been included. Recommended that a separate policy is written that states as follows within the Design in Urban Areas GDP [Residential Development - 3 Building Levels or Less] under a new heading Residential Amenity': PO <i>Buildings that provide a high quality living environment."</i> DTS <i>Dwellings provide the following minimum internal floor areas:</i> (a) studio (where there is no separate bedroom): 35 square metres. (b) 1 bedroom dwelling/apartment: 50 square metres (c) 2 bedroom dwelling/apartment: 65 square metres (d) 3+ bedroom dwelling/apartment: 80 square metres plus an additional 15 square metres for every additional bedroom over 3 bedrooms. Note: Dwelling/apartment "unit size" includes internal storage areas but
71	Internal structural columns should correspond with the position of internal walls to ensure that the space within the dwelling/apartment is useable.	5		To ensure that the space within the apartment is useable this principle should be applied and INSERTED into Design in Urban Areas GDP [Residential Development - 4 or More Building Levels] under the heading 'Apartment Configuration': PO <i>"Buildings designed to ensure internal structural columns align with the position of internal walls to provide useable space."</i>
Adaptability				
72	Within medium to high scale residential or serviced apartment development, dwelling/apartment layouts should be adaptable to accommodate: (a) a range of activities and privacy levels between different spaces; (b) flexible room sizes and proportions; (c) efficient circulation to optimise the functionality of floor space within rooms; and (d) the future reuse of student accommodation as residential apartments through a design and layout that allows individual apartments to be reconfigured into a larger dwelling or other alternative use. Design Technique (this is ONE WAY of meeting the above Principle) 72.1 Design solutions may include: (a) windows in all habitable rooms and to the maximum number of non-habitable rooms; (b) adequate room sizes or open plan dwellings which provide a range of furniture layout options; and/or (c) dual master bedrooms that can support two independent adults living together or a live/work	4	General Development Policy - Design in Urban Areas DO 1(b), PO 40.2	
Outlook				

Number	Description	Transition category	Where has it been included?	Comments
73	All medium to high scale residential or serviced apartment development should be designed to ensure the living rooms have a satisfactory external outlook. Living rooms that do not have an outlook or the only source of outlook is through high level windows or a skylight are not considered to provide an appropriate level of amenity for the occupiers. Note: Outlook is a short range prospect and is distinct from a view which is more extensive and long range to particular objects or geographic features.	2	General Development Policy - Design in Urban Areas PO 15.1 and DTS/DPF 15.1	
74	Light wells may be used as a source of daylight, ventilation, outlook and sunlight for medium to high scale residential or serviced apartment development provided that: (a) living rooms do not have lightwells as their only source of outlook; (b) lightwells up to 18 metres in height have a minimum horizontal dimension of 3 metres or 6 metres if overlooked by bedrooms; and (c) lightwells higher than 18 metres in height have a minimum horizontal dimension of 6 metres or 9 metres if overlooked by bedrooms.	5		Due to site constraints there are times when lightwells can provide a source of daylight, ventilation, outlook and sunlight. Standards need to be in place to ensure the lightwell serves its purpose at an appropriate standard. On this basis it is recommended this principle be INSERTED as a PO and DTS within the Design in Urban Areas GDP [Residential Development - 4 or more Building Levels] under the heading 'Apartment Amenity'.
On-Site Parking and Fencing				
Policy Objectives				
23	Safe and convenient on-site car parking for resident and visitor vehicles.	5		This provision should apply to all parking areas. It is recommended it is included within Transport, Access and Parking GDPs under the heading 'Vehicle Parking Areas'. <i>PO</i> <i>Development designed to ensure safe and convenient on-site car parking for resident and visitor vehicles.</i>
Principles of Development Control				
75	To ensure an adequate provision of on-site parking, car parking should be provided for medium to high scale residential (other than student accommodation) or serviced apartment development in accordance with Table Adel/7.	5		NEEDS FURTHER REVIEW The parking standards proposed need to be reviewed so that they are more in aligned with the City's need. The parking standards prescribed are too high and not required for the City due to the walkability of the City and the closeness to services, facilities and employment.
76	Garages and parking structures associated with medium to high scale residential or serviced apartment development should be located so that they do not visually dominate the street frontage.	5		This is important to the character o the streetscape and should apply to all garages and structures associated with all uses. It is recommended it is included within Transport, Access and Parking GDP under the heading 'Vehicle Parking Areas'. <i>PO</i> <i>Garages and parking structures designed and located so that they do not visually dominate the street frontage.</i>
77	Car parking areas should be designed and located to: (a) be close and convenient to dwellings/apartments; (b) be lit at night; (c) be well ventilated if enclosed; (d) avoid headlight glare into windows; and (e) clearly define visitor parking.	5		This should apply to car parking areas within with medium high scale residential developments. It is recommended it is included Design in Urban Areas GDP [Residential Development - 4 or more Building Levels] under a new heading 'Car Parking Areas'.
78	Where garages are located within a basement or undercroft: (a) the width of access driveways should be kept to a minimum and should not detract from the streetscape; (b) driveways should be designed to ensure safe and convenient access and egress; (c) access should be restricted to one driveway or one point of access and egress; (d) vehicles should be able to safely exit in a forward direction and should not compromise pedestrian safety or cause conflict with other vehicles; and (e) the height of the car park ceiling should not exceed 1 metre above the finished ground floor level to ensure minimal impact on the streetscape.	5	Clause b covered in Transport, Access and Parking General Development Policies under the heading 'Undercroft and below Ground Garaging PO 7.1	Belongs in Transport, Access and Parking GDP under the heading 'Undercroft and Below Ground Garaging'. <i>PO</i> <i>Car parking within a basement or undercroft designed to ensure:</i> <i>(a) the width of access driveways is kept to a minimum and does not detract from the streetscape;</i> <i>(b) driveways provide safe and convenient access and egress;</i> <i>(c) access is restricted to one driveway or one point of access and egress;</i> <i>(d) vehicles can exit in a forward direction and not compromise pedestrian safety or cause conflict with other vehicles; and</i> <i>(e) the height of the car park ceiling does not exceed 1m above the finished ground floor level to ensure minimal impact on the streetscape.</i>
79	Fencing and walls should: (a) be articulated and detailed to provide visual interest; (b) assist the development to address the street; (c) assist in the provision of safety and surveillance; (d) assist in highlighting entrances; and (e) enable visibility of buildings from and to the street.	5		This provision should apply to all development and be included in Design in Urban Areas GDP [All Dev] under the heading 'Fences and Walls'.

Number	Description	Transition category	Where has it been included?	Comments
Storage Areas				
80	Site facilities should be readily accessible to each dwelling/serviced apartment, complement the development and relevant desired character and should include: (a) a common mail box structure located close to the main pedestrian entrance; (b) areas for the storage and collection of goods, materials, refuse and waste including facilities to enable the separation of recyclable materials as appropriate to the size and nature of the development and screened from public view; and (c) external clothes drying areas for residential dwellings that do not incorporate ground level open space.	2	General Development Policy - Design in Urban Areas PO 12.1, 12.2.3, and DTS/DPF 28.4.	Adequately covers the sorting, storage and collection of waste however there is no policy that addresses mailboxes. It is recommended the following PO be included within Design in Urban Area GDP [Residential Development - 4 or more Building Levels] under a new heading 'Site Facilities and Storage' : PO <i>"Common mailbox structure close to the main pedestrian entrance."</i>
81	Medium to high scale residential (other than student accommodation) or serviced apartment development should provide adequate and accessible storage facilities for the occupants at the following minimum rates: (a) studio: 6 cubic metres (b) 1 bedroom dwelling/apartment: 8 cubic metres (c) 2 bedroom dwelling/apartment: 10 cubic metres (d) 3+ bedroom dwelling/apartment: 12 cubic metres 50 percent of the storage space should be provided within the dwelling/apartment with the remainder provided in the basement or other communal areas.	2	General Development Policy - Design in Urban Areas PO 28.4 and DTS/DPF 28.4.	Storage standards should also apply to serviced apartments. For future adaptability it is important storage provisions are provided. Revise DTS/DPF 28.4 to ensure serviced apartments provide storage facilities. In addition insert a new heading title 'Site Facilities and Storage' above PO 28.4.
NEW CONTENT IN THE CODE (insert below)				
ALL DEV - 4 OR MORE BUILDING LEVELS				
PO 1.1	Buildings that reinforce corners through changes in setback, articulation, materials, colour and massing (including height, width, bulk, roof form and slope).			Revise PO 1.1 as follows: <i>"Buildings that reinforce and define corners through architectural changes in setback, articulation, materials, colour and massing (including height, width, bulk, roof form and slope)."</i>
PO 1.2	Where zero or minor setbacks are desirable, development provides shelter over footpaths to positively contribute to the walkability and comfort of the public realm.			Supported
PO 1.3	Buildings (other than ancillary buildings, group dwellings or buildings on a battle-axe allotment) designed so the main façade faces the primary street frontage of the land on which they are situated.			Supported
PO 1.4	Plant, exhaust and intake vents and other technical equipment integrated into the building design to minimise visibility from the public realm and negative impacts on residential amenity by: (a) positioning plant and equipment discretely, in unobtrusive locations as viewed from public roads and spaces; (b) screening rooftop plant and equipment from view; and (c) when located on the roof of non-residential development, locating the plant and equipment as far as practicable from adjacent sensitive land uses.			Supported This should apply to all new residential and non residential development. Revise PO 1.4 (c) as follows: <i>"locating the plant and equipment as far as practicable from adjacent sensitive land uses."</i>
DTS / DPF 1.4	Development does not incorporate any structures that protrude beyond the roofline.			Supported
PO 1.5	The negative visual impact of outdoor storage, waste management, loading and service areas is minimised by integrating them into the building design and screening them from public view (such as fencing, landscaping and built form) taking into account the form of development contemplated in the			Supported
Safety				
PO 2.1	Development maximises opportunities for passive surveillance of the public realm by providing clear lines of sight, appropriate lighting and the use of visually permeable screening wherever practicable.			Supported - All the CPTED Principles in PDC 82,83,84, 85 and 86 should apply to all development.
PO 2.2	Development designed to differentiate public, communal and private areas.			Supported - All the CPTED Principles in PDC 82,83,84, 85 and 86 should apply to all development.
PO 2.3	Buildings designed with safe, perceptible and direct access from public street frontages and vehicle parking areas.			Supported - All the CPTED Principles in PDC 82,83,84, 85 and 86 should apply to all development.
PO 2.4	Development at street level designed to maximise opportunities for passive surveillance of adjacent public realm.			Supported - All the CPTED Principles in PDC 82,83,84, 85 and 86 should apply to all development.
PO 2.5	Common areas and entry points of buildings (such as the foyer areas of residential buildings), and non-residential land uses at street level, maximise passive surveillance from the public realm to the inside of the building at night.			Supported - All the CPTED Principles in PDC 82,83,84, 85 and 86 should apply to all development.
PO 3.1	Landscaped (including trees), permeable open spaces incorporated to:			Supported

Number	Description	Transition category	Where has it been included?	Comments
	(a) minimise heat absorption and reflection; (b) maximise shade and shelter; (c) maximise stormwater infiltration; and (d) enhance the appearance of land and streetscapes.			
	Water Sensitive Design			
PO 5.1	Development sited and designed to maintain natural hydrological systems without negatively impacting: (a) the quantity and quality of surface and groundwater; (b) the depth and directional flow of surface and groundwater; or (c) the quality and function of natural springs. Car parking appearance			Supported
PO 6.1	Development facing the street designed to minimise the negative impacts of any semi-basement and under-croft car parking on streetscapes.			Supported
DTS/DPF 6.1	The protrusion of semi-basement and undercroft car parking structures does not exceed 1.2m above finished ground level and is screened through appropriate plantings, except in a location or zone where a continuous ground floor façade aligned with the front property boundary is desired.			1.2 metres above the finished floor level is too high and should be reduced to a maximum of 1 metre to ensure minimal impact on the streetscape. It is recommended this height is revised accordingly.
PO 6.2	Vehicle parking areas appropriately located, designed and constructed to minimise impacts on adjacent sensitive receivers through measures such as ensuring they are attractively developed and landscaped, screen fenced, and the like.			Supported
PO 6.3	Pedestrian connections that are safe, legible, direct and accessible are provided between parking areas and the development.			Supported
PO6.4	Street level vehicle parking areas that are open to the sky are landscaped to provide shade and reduce solar heat absorption and reflection.			Supported
DTS / DPF 6.4	Vehicle parking areas that are open to the sky and comprise 10 or more car parking spaces include a shade tree with a mature canopy of 4m diameter spaced for each 10 car parking spaces provided and a landscaped strip on any road frontage of a minimum dimension of 1m.			Supported
PO 6.5	Vehicle parking areas are landscaped along public frontages, allotment boundaries and between double rows of parking spaces.			Supported
DTS / DPF 6.5	Vehicle parking areas comprising 10 or more car parking spaces contain a vegetated landscaped strip of a minimum dimension of: (a) 1m along all public road frontages and allotment boundaries; and (b) 0.6m between double rows of car parking spaces.			Supported
PO 6.6	Vehicle parking areas and associated driveways are landscaped to shade and positively contribute to amenity.			
PO 6.7	Vehicle parking areas and accessways incorporate integrated stormwater management techniques such as permeable or porous surfaces, infiltration systems, drainage swales or rain gardens that integrate with landscaping requirements.			Supported
PO 8.1	Fences, walls and retaining walls of sufficient height to maintain privacy and security without unreasonably impacting visual amenity and adjoining land's access to sunlight.			Supported
PO 8.2	Landscaping incorporated on the low side of retaining walls that are visible from public roads and public open space to minimise visual impacts.			Supported
DTS / DPF 8.2	A vegetated landscaped strip 500mm deep or more is provided against the low side of a retaining wall.			Supported
	ALL DEVELOPMENT - 4 OR MORE BUILDING LEVELS			Supported
PO 9.1	Buildings positively contribute to the character of the local area by responding to local context.			Supported
PO 9.2	Fine-grain detail at street level and a mixture of materials at lower building levels near the public interface are provided to reinforce a human scale.			Supported
PO 9.3	Buildings designed to reduce visual mass by breaking up building façades into distinct elements.			Supported
PO 9.4	Boundary walls visible from public land include visually interesting treatments to break up large blank elevations.			Supported
PO 9.5	External materials and finishes are durable and age well to minimise ongoing maintenance requirements.			Supported
DTS / DPF 9.5	Buildings utilise a combination (or thereof) of the following external materials and finishes: (a) masonry; (b) natural stone; and (c) pre-finished materials that minimise staining, discolouring or deterioration.			Supported
PO 9.6	Street facing building elevations designed to provide attractive, high quality and pedestrian friendly street frontages.			Supported
DTS / DPF 9.6	Building street frontages incorporate:			Supported

Number	Description	Transition category	Where has it been included?	Comments
	(a) active uses such as shops or offices; (b) prominent entry areas for multi-storey buildings (where it is a common entry); (c) habitable rooms of dwellings; and (d) areas of communal public realm with public art or the like, where consistent with the Zone and/or sub zone provisions.			
PO 9.8	Building services, plant and mechanical equipment screened from view from the public realm.			Buildings services, plant and mechanical equipment should be designed into the building to ensure they do not dominate street frontages and are of high quality materials. It is recommended that this policy be revised accordingly.
	Landscaping			Building services
PO 10.1	Development facing a street provides a well landscaped area that contains a deep soil space to accommodate a tree of a species and size adequate to provide shade, contribute to tree canopy targets and soften the appearance of buildings.			Supported
DTS / DPF 10.1	Buildings provide a 4m by 4m deep soil space in front of the building to accommodate a medium to large tree, except where no building setback from front property boundaries is desired.			Supported
PO 10.2	Deep soil zones provided to retain existing vegetation or provide areas that can accommodate new deep root vegetation, including tall trees with large canopies to provide shade and soften the appearance of multi storey buildings.			Supported
DTS / DPF 10.2	Multi-storey development provides deep soil zones and incorporate trees at not less than the following rates, except in a location or zone where full site coverage is desired:			Supported
PO 10.3	Deep soil zones provided with access to natural light to assist in maintaining vegetation health.			Supported
PO 10.4	Unless separated by a public road or reserve, development sites adjacent to any zone that has a primary purpose of accommodating low rise residential development incorporate a deep soil zone along the common boundary, to enable medium to large trees to be retained or established to assist in screening new buildings of 3 or more storeys in height.			Supported
DTS / DPF 10.4	Building elements of 3 or more storeys in height are set back at least 6m from a zone boundary in which a deep soil zone area is incorporated.			Supported
	Environmental			
PO 11.2	Development incorporates sustainable design techniques and features such as window orientation, eaves and shading structures, water harvesting, green walls, and roof designs that enable the provision of rain water tanks (where they are not provided elsewhere on site), green roofs and photovoltaic cells.			Supported
PO 12.3	Communal waste storage and collection areas designed to be well ventilated and located away from habitable rooms.			Supported
PO 12.4	Communal waste storage and collection areas designed to allow waste and recycling collection vehicles to enter and leave the site without reversing.			Supported
PO 12.5	For mixed use developments, non-residential waste and recycling storage areas and access provide opportunities for on-site management of food waste through composting or other waste recovery as appropriate.			Supported. A provision should also be provided on recycling of construction waste.
	Car Parking			
PO 13.1	Multi-level vehicle parking structures designed to contribute to active street frontages and complement neighbouring buildings.			Supported
DTS/ DPF 13.1	Multi-level vehicle parking structures within buildings to:			Supported
	(a) provide land uses such as commercial, retail or other non-car parking uses along ground floor street frontages; and			Supported
	(b) incorporate facade treatments along major street frontages that are sufficiently enclosed and detailed to complement adjacent buildings.			Supported
PO 13.2	Multi-level vehicle parking structures within buildings complement the surrounding built form in terms of height, massing and scale.			Supported
	ALL RESIDENTIAL DEVELOPMENT			
	External Appearance			
PO 14.1	Dwellings incorporate windows facing primary street frontages to encourage passive surveillance and			Supported
DTS/DPF 14.1	Each dwelling with a frontage to a public street includes at least one window with a total window area of at least 2m ² facing the primary street, from a habitable room that has a minimum room dimension of 2.7m.			Supported
PO 14.2	Dwellings incorporate entry doors within street frontages to address the street and provide a legible entry point for visitors.			Supported

Number	Description	Transition category	Where has it been included?	Comments
DTS/DPF 14.2	Dwellings with a frontage to a public street have the entry door facing the public street.			Supported
	Outlook and Amenity			
PO 15.2	Bedrooms separated or shielded from active communal recreation areas, common access areas and vehicle parking areas and access ways to mitigate noise and artificial light intrusion.			Supported
	Ancillary Development			
PO 16.1	Residential ancillary buildings and structures sited and designed to not detract from the streetscape or appearance of buildings on the site or neighbouring properties.			Supported
DTS / DPF 16.1	Residential ancillary buildings and structures:			
	(a) are not being constructed, added to or altered so that any part is situated:			
	i. in front of any part of the building line of the dwelling to which it is ancillary; or			Supported
	ii. within 900mm of a boundary of the allotment with a secondary street (if the land has boundaries on two or more roads);			Supported
	(b) in the case of a garage or carport, the garage or carport is setback at least 5.5m from the boundary of the primary street;			FURTHER REVIEW REQUIRED. This does not work in Historic Character areas
	(c) not exceeding 7m or 50% of the site frontage (whichever is the lesser) when facing a primary street or secondary street;			FURTHER REVIEW REQUIRED. This may not work for all areas
	(d) if situated on a boundary (not being a boundary with a primary street or secondary street), a length not exceeding 10m unless:			Supported
	i. a longer wall or structure exists on the adjacent site and is situated on the same allotment boundary; and			Supported
	ii. the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent;			FURTHER REVIEW REQUIRED. What if it is a form of development we would normally discourage. Unclear about the purpose of this PO
	(e) if situated on a boundary of the allotment (not being a boundary with a primary street or secondary street), all walls or structures on the boundary not exceeding 45% of the length of that boundary;			Supported
	(f) will not be located within 3m of any other wall along the same boundary unless on an adjacent site on that boundary there is an existing wall of a building that would be adjacent to or abut the proposed wall or structure;			FURTHER REVIEW REQUIRED. This is not going to work in the City particularly for small narrow sites. Many existing buildings are setback less than this.
	(g) have a wall height or post height not exceeding 3m above natural ground level;			FURTHER REVIEW REQUIRED. Further work is required on the impact of this policy on existing historic buildings.
	(h) have a roof height where no part of the roof is more than 5m above the natural ground level; and			Supported
	(i) if clad in sheet metal, is pre-colour treated or painted in a non-reflective colour.			Supported
PO 16.2	Ancillary buildings and structures do not impede on-site functional requirements such as private open space provision, car parking requirements or result in over-development of the site.			Supported
DTS / DPF 16.2	Ancillary buildings and structures do not result in:			
	(a) less private open space than specified in Design in Urban Areas Table 1 – Outdoor Open Space;			Supported
	(b) less on-site car parking than specified in Transport, Access and Parking Table 1 - Off-street Car Parking Requirements; and			Supported
	(c) the total roofed floor area of all existing or proposed ancillary building(s) or structure(s) exceeding 60m ² .			Supported
PO 16.3	Fixed plant and equipment in the form of pumps and/or filtration systems for a swimming pool or spa positioned and/or housed to not cause unreasonable noise nuisance to adjacent sensitive receivers.			Supported
DTS/DPF 16.3	The pump and/or filtration system is ancillary to a dwelling erected on the same site and is:			Supported
	(a) enclosed in a solid acoustic structure that is located at least 5m from the nearest habitable room located on an adjoining allotment; or			Supported
	(b) located at least 12m from the nearest habitable room located on an adjoining allotment.			Supported
	Flooding			
PO 17.1	Residential accommodation sited, designed and constructed to prevent the entry of floodwaters where the entry of flood waters is likely to result in undue damage to or compromise ongoing activities within buildings.			Supported
DTS / DPF 17.1	Residential accommodation has a ground finished floor level 300mm above the top of the kerb level of the primary street.			Supported
	RESIDENTIAL DEVELOPMENT - 4 OR MORE BUILDING LEVELS (INCLUDING SERVICED APARTMENTS)			

Number	Description	Transition category	Where has it been included?	Comments
	Outlook and Visual Privacy			
PO 26.1	Ground level dwellings have a satisfactory short range visual outlook to public, communal or private open space.			Supported
DTS / DPF 26.1	Buildings:			Supported
	(a) provide a habitable room at ground or first level with a window facing toward the street; and			All ground floors should overlook the street. Flat facades at ground level do not contribute to the human scale of the street or contribute to pedestrian safety.
	(b) limit the height / extent of solid walls or fences facing the street to 1.2m high above the footpath level or, where higher, to 50% of the site frontage.			Supported
PO 26.2	The visual privacy of ground level dwellings within multi-level buildings is protected.			Supported
DTS / DPF 26.2	The finished floor level of ground level dwellings in multi-storey developments is raised by up to 1.2m.			REQUIRES FURTHER REVIEW. 1.2 metres is too high and not consistent with the general character for most of the areas within metropolitan Adelaide. It will also create unnecessary accessibility issues.
PO 28.3	Balconies are of sufficient size and depth to accommodate outdoor seating and promote indoor / outdoor living.			Supported
	Apartment Configuration			
PO 29.1	Buildings containing in excess of 10 dwellings provide a variety of dwelling sizes and a range in the number of bedrooms per dwelling to contribute to housing diversity.			Supported
DTS / DPF 29.1	Buildings containing in excess of 10 dwellings provide at least one of each of the following:			Supported, ensures a mix and diversity of development
	(a) studio (where there is no separate bedroom);			Requires a floor area standard for studio's to ensure quality living environment.
	(b) 1 bedroom dwelling / apartment with a floor area of at least 50m ² ;			Supported
	(c) 2 bedroom dwelling / apartment with a floor area of at least 65m ² ; and			Supported
	(d) 3+ bedroom dwelling / apartment with a floor area of at least 80m ² , and any dwelling over 3 bedrooms provides an additional 15m ² for every additional bedroom.			Supported
PO 29.2	Dwellings located on the ground floor of multi-level buildings with 3 or more bedrooms have the windows of their habitable rooms overlooking internal courtyard space or other public space, where possible.			Supported.
	Common Areas			
PO 30.1	The size of lifts, lobbies and corridors is sufficient to accommodate movement of bicycles, strollers, mobility aids and visitor waiting areas.			Supported
DTS / DPF 30.1	Common corridor or circulation areas:			Supported
	(a) have a minimum ceiling height of 2.7m;			Supported
	(b) provide access to no more than 8 dwellings; and			Supported
	(c) incorporate a wider section of apartment entries where the corridors exceed 12m in length from a core.			Supported

Zone	Crime Prevention Through Urban Design	1 - Included in the Code and retains same policy intent	0%

86	Public toilets should be designed and located to: (a) promote the visibility of people entering and exiting the facility by avoiding recessed entrances and dense shrubbery which obstructs passive surveillance; (b) limit opportunities for vandalism through the use of vandal proof lighting on the public toilet buildings and nearby; (c) avoid features which facilitate loitering, such as seating or telephones immediately adjacent the structure; and (d) maximise surveillance through location near public transport links, pedestrian and cyclist networks.	4	Not included	
NEW CONTENT IN THE CODE (insert below)				
	This is hard to assess. The CPTUD stuff is spread throughout the Code in Zones and in Overlays. Generally, the provisions have been removed of all their detail. Several things are not mentioned at all including security screens being 75% open			

Zone		1 - Included in the Code and retains same policy intent	0%	
Policy area(s)	Operating Hours and Associated Activities...	2 - Wording changed but policy intent remains (OK)	67%	
		3 - Included in the Code but policy intent changed (NOT OK)	33%	
		4 - Not included in the Code but OK to remove	0%	
		5 - Not included in the Code and should be reinstated	0%	
General comments	There appears to be nothing in the Code on Operating Hours of Licensed Premises. Include in Interface Between Land Uses GDP under Hours of Operation			
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
25	Operating hours of licensed premises or licensed entertainment premises, together with associated activities of such premises, established and operated so as to reinforce the desired character of the locality and appropriate behavioural activities.	2	Interface Between Land Uses GDP [Hours of Operation]; PO 2.1	
Principles of Development Control				
87	Licensed premises and licensed entertainment premises or similar should: (a) be located, designed and operated in order to reinforce the desired character of a locality, as expressed in the relevant Zone or Policy Area; (b) be located, designed and operated so as to not negatively impact on peoples orderly use and enjoyment of a locality, such as through disorderly behavioural activities and/or disorderly behavioural movement to and from such land uses; and (c) incorporate best practice measures to effectively manage the behaviour of users moving to and from such land uses.	3	(a) addressed in the land use provisions of the relevant zones and subzone.	Licensed premises and licensed entertainment premises as a use are addressed within the relevant zones and subzones of the Code. The Code however does not address the management of licensed premises or licensed entertainment premises. It is important these matters are considered at the planning stage of the development and incorporated into the Interface between Land Uses GDP under the heading 'Activities Generating Noise or Vibration'. It is recommended the following PO is inserted and applied through the assessment tables: <i>PO</i> <i>"Licensed premises and licensed entertainment premises or similar to be located, designed and operated to:</i> <i>(a)reinforce the character desired in the relevant zone or subzone;</i> <i>(b)ensure continued enjoyment of the locality by incorporating best practice measures to effectively manage the behaviour of users moving to and from such land uses."</i>
88	Licensed premises and licensed entertainment premises or similar should operate with operating hours to reinforce the desired character of the locality.	2	GDP - Interface between Land Uses PO 2.1	
NEW CONTENT IN THE CODE (insert below)				

Zone				1 - Included in the Code and retains same policy intent	0%
Policy area(s)				2 - Wording changed but policy intent remains (OK)	36%
				3 - Included in the Code but policy intent changed (NOT OK)	14%
				4 - Not included in the Code but OK to remove	0%
				5 - Not included in the Code and should be reinstated	50%
General comments	In Interface between Land Uses (Activities Generating Noise or Vibration) Noise and Air Emissions Overlay Aircraft Noise Exposure Overlay Also specific Pos in the Health Subzone, Entertainment Subzone, in tables				
Number	Column16380	Transition category	Where has it been included?	Comments	
Policy Objectives					
OBJ 26	Development that does not unreasonably interfere with the desired character of the locality by generating unduly annoying or disturbing noise.	2	Interface between Land Uses - PO4.1 Interface - PO4.4 Noise Overlay DO1		
OBJ 27	Noise sensitive development designed to protect its occupants from existing noise sources and from noise sources contemplated within the relevant Zone or Policy Area and that does not unreasonably interfere with the operation of non-residential uses contemplated within the relevant Zone or Policy Area.	2	Noise Overlay PO1.1, PO1.3	by placing buildings in between sensitive and non sensitive, location of more sensitive rooms, using barriers and building design elements. Locate POS and common areas and outdoor play areas within schools and pre-schools away from emission sources. No info on how far away and how much noise is acceptable The protection of existing non-residential uses contemplated in the relevant zone is important to ensure protection of these important uses and land use co-existence. It is recommended that PO 1.1 under the heading 'General Land Use Compatibility' within the Interface Between Land Uses GDP be revised as follows: <i>PO 1.1 Sensitive receivers designed and sited to protect residents and occupants from adverse impacts generated by lawfully existing land uses and land uses desired in the zone does not unreasonably interfere with the operation of these non-residential uses desired in the zone .</i>	
Principles of Development Control					
Noise Sources					
89	Development with potential to emit significant noise (including licensed entertainment premises and licensed premises) should incorporate appropriate noise attenuation measures in to their design to prevent noise from causing unreasonable interference with the amenity and desired character of the locality, as contemplated in the relevant Zone and Policy Area.	2	Interface between Land Uses - PO4.5	Design and siting of outdoor areas like beer gardens or dining areas.	
90	Development of licensed premises or licensed entertainment premises or similar in or adjacent to a City Living Zone, the Adelaide Historic (Conservation) Zone or the North Adelaide Historic (Conservation) Zone should include noise attenuation measures to achieve the following when assessed at the nearest existing or envisaged future noise sensitive development: (a) the music noise (L10, 15 min) is: (i) less than 8 dB above the level of background noise ₂ (L90,15 min) in any octave band of the sound spectrum; and (ii) less than 5 dB(A) above the level of background noise (LA 90,15 min) for the overall (sum of all octave bands) A-weighted level.	3	Interface DTS 4.6	It is important that policy gives recognition to uses that are envisaged by the zone to ensure future land use co-existence which is particularly important in the City. It is recommended that DTS/DPF 4.6 within the Interface Between Land Uses [Activities Generating Noise or Vibration] GDP be REVISED as follows: Revise words within Table heading 'Assessment Location' as follows: <i>"Externally at the nearest existing or envisaged noise sensitive location."</i> Revise music noise level as follows: <i>"a. Less than 8dB above the level of background noise (L90,15min) in any octave band of the sound spectrum (LOCT10,15 < LOCT90,15 + 8dB); and b. less than 5 dB(A) above the level of background noise (LA 90,15 min) or the overall (sum of all octave bands) A-weighted level."</i>	

Number	Column16380	Transition category	Where has it been included?	Comments
91	<p>Development of licensed premises or licensed entertainment premises or similar in the Capital City, Main Street, Mixed Use and City Frame Zones should include noise attenuation measures to achieve the following when assessed at:</p> <p>(a) the nearest existing noise sensitive location in or adjacent to that Zone:</p> <p>(i) music noise (L10, 15 min) less than 8 dB above the level of background noise (L90,15 min) in any octave band of the sound spectrum; and</p> <p>(ii) music noise (LA10, 15 min) less than 5 dB(A) above the level of background noise (LA90,15 min) for the overall (sum of all octave bands) A-weighted levels; or</p> <p>(b) the nearest envisaged future noise sensitive location in or adjacent to that Zone:</p> <p>(i) music noise (L10, 15 min) less than 8dB above the level of background noise (L90,15 min) in any octave band of the sound spectrum and music noise (L10, 15 min) less than 5dB(A) above the level of background noise (LA90,15 min) for the overall (sum of all octave bands) A-weighted levels; or</p> <p>(ii) music noise (L10, 15 min) less than 60dB(Lin) in any octave band of the sound spectrum and the overall (LA10,15 min) noise level is less than 55 dB(A).</p> <p>Note: A report regarding noise associated with licensed premises or licensed entertainment premises or similar prepared by an acoustic engineer at the planning application stage should specify the noise attenuation measures and address other typical noise sources to ensure those sources do not result in unreasonable interference. These noise attenuation measures might include:</p> <p>(a) installation of an in-house music system which has a limiting device that monitors and controls the volume of the system so that the maximum internal noise level certified by the acoustic engineer is not exceeded;</p> <p>(b) treatment of openings, such as by airlocks and seals for doors, sealing of wall and roof vents and treatment of ventilation and air-conditioning paths;</p> <p>(c) acoustic treatment of building elements, such as sealing and double glazing of windows or upgrading roof construction;</p> <p>(d) no entertainment on or in any balcony or outdoor area;</p> <p>(e) no loud speakers placed on or in the fascia of the premises, balcony or any adjacent outdoor area or footpath;</p> <p>(f) external windows and doors are kept closed where relied upon for noise attenuation;</p> <p>(g) locating and designing entrances and fencing to assist in keeping patrons away from noise sensitive areas; or</p> <p>(h) locating car park, delivery and rubbish collection areas away from noise sensitive development and limiting times of activity to minimise noise impacts.</p>	5	Not included	<p>Comments as above.</p> <p>Appropriate noise level maximums should be set for licensed premises and licensed entertainment premises.</p> <p>INSERT the following new PO and DTS under the heading 'Activities Generating Noise' within the Interface Between Land Uses GDP and apply through the assessment tables:</p> <p><i>PO</i> <i>"Licensed premises or licensed entertainment premises or similar incorporating appropriate noise attenuation measures."</i></p> <p><i>DTS/DPF</i> <i>"Development achieves the following when assessed at:</i> <i>(a)the nearest existing noise sensitive location in or adjacent to that Zone:</i> <i>(i)music noise (L10, 15 min) less than 8 dB above the level of background noise (L90,15 min) in any octave band of the sound spectrum; and</i> <i>(ii)music noise (LA10, 15 min) less than 5 dB(A) above the level of background noise (LA90,15 min) for the overall (sum of all octave bands) A-weighted levels; or</i> <i>(b)the nearest envisaged future noise sensitive location in or adjacent to that Zone:</i> <i>(i)music noise (L10, 15 min) less than 8dB above the level of background noise (L90,15 min) in any octave band of the sound spectrum and music noise (L10, 15 min) less than 5dB(A) above the level of background noise (LA90,15 min) for the overall (sum of all octave bands) A-weighted levels; or</i> <i>(ii)music noise (L10, 15 min) less than 60dB(Lin) in any octave band of the sound spectrum and the overall (LA10,15 min) noise level is less than 55 dB(A).</i> <i>Note: A report regarding noise associated with licensed premises or licensed entertainment premises or similar prepared by an acoustic engineer should specify the noise attenuation measures and address other typical noise</i></p>
92	Speakers should not be placed on the fascias of premises or on the pavement adjacent to the premises to ensure development does not diminish the enjoyment of other land in the locality.	5	Not Included	<p>INSERT the following new PO under the heading 'Activities Generating Noise' within the Interface Between Land Uses GDP and apply through the assessment tables:</p> <p><i>PO</i> <i>"Speakers are not be placed on the fascias of premises or on the pavement adjacent to the premises to ensure continued enjoyment of other land in the locality."</i></p>

The noise level associated with the combined operation of plant and equipment such as air conditioning, ventilation and refrigeration systems when assessed at the nearest existing or envisaged noise sensitive location in or adjacent to the site should not exceed</p> <p>(a) 55 dB(A) during daytime (7.00am to 10.00pm) and 45 dB(A) during night time (10.00pm to 7.00am) when measured and adjusted in accordance with the relevant environmental noise legislation except where it can be demonstrated that a high background noise exists.</p> <p>(b) 50 dB(A) during daytime (7.00am to 10.00pm) and 40 dB(A) during night time (10.00pm to 7.00am) in or adjacent to a City Living Zone, the Adelaide Historic (Conservation) Zone, the North Adelaide Historic (Conservation) Zone or the Park Lands Zone when measured and adjusted in accordance with the relevant environmental noise legislation except where it can be demonstrated that a high background noise exists.</p>	5	<p>p.12 - in a table related to location of filtration system from a dwelling on an adjoining lot.</p> <p>P 617 - PO3.2 Beverage Production in Rural Areas - Odour and Noise PO1.2 p.622 Bulk Handling and Storage p. 624 PO1.1 p.635 PO15.2 p 636 PO16.3 p. 657 PO11.2 p 658 PO12.3 p. 674 PO9.2</p> <p>Interface DTS 4.3 - locate pump ancillary to a dwelling in an acoustic structure at least 5m from the nearest habitable room located on an adjoining allotment/ or if not in an acoustic structure, at least 12m away.</p>	<p>Appropriate noise level maximums should be set for external plant and equipment.</p> <p>INSERT the following new DTS/DPF 4.2 under the heading 'Activities Generating Noise' within the Interface Between Land Uses GDP and apply through the assessment tables:</p> <p>The noise level associated with the combined operation of plant and equipment such as air conditioning, ventilation and refrigeration systems that will achieve the following noise levels:</p> <p><i>Assessment Location - Externally at the nearest existing or envisaged noise sensitive location</i></p> <p><i>Plant Noise Levels</i> <i>a.55 dB(A) during daytime (7.00am to 10.00pm) and 45 dB(A) during night time (10.00pm to 7.00am) when measured and adjusted in accordance with the relevant environmental noise legislation except where it can be demonstrated that a high background noise exists; and</i> <i>b.50 dB(A) during daytime (7.00am to 10.00pm) and 40 dB(A) during night time (10.00pm to 7.00am) in or adjacent to a residential zone when measured and adjusted in accordance with the relevant environmental noise legislation except where it can be demonstrated that a high background noise exists.</i></p>

Number	Column16380	Transition category	Where has it been included?	Comments
94	To ensure minimal disturbance to residents: (a) ancillary activities such as deliveries, collection, movement of private waste bins, goods, empty bottles and the like should not occur: (i) after 10.00pm; and (ii) before 7.00am Monday to Saturday or before 9.00am on a Sunday or Public Holiday. (b) typical activity within any car park area including vehicles being started, doors closing and vehicles moving away from the premises should not result in sleep disturbance when proposed for use after 10.00pm as defined by the limits recommended by the World Health Organisation.	5	Not included	Include the policy as a PO and DTS within Interface Between Land Uses GDP under the heading 'Hours of Operation' and apply through the assessment tables. <i>PO</i> <i>Ancillary activities that have minimal disturbance to residents.</i> <i>DTS/DPF 2.</i> <i>Activities such as deliveries, collection, movement of private waste bins, goods, empty bottles and the like to occur:</i> <i>(a) before 10.00pm; and</i> <i>(b) after 7.00am Monday to Saturday or after 9.00am on a Sunday or Public Holiday.</i>
Noise Receivers				
95	Noise sensitive development should incorporate adequate noise attenuation measures into their design and construction to provide occupants with reasonable amenity when exposed to noise sources such as major transport corridors (road, rail, tram and aircraft), commercial centres, entertainment premises and the like, and from activities and land uses contemplated in the relevant Zone and Policy Area provisions.	5		Include as a PO within Interface Between Land Uses under the heading 'Activities generating Noise or Vibrations' as follows and apply through the assessment tables: <i>"Noise sensitive development incorporating adequate noise attenuation measures into their design and construction to provide occupants with reasonable amenity when exposed to noise sources such as major transport corridors (road, rail, tram and aircraft), commercial centres, entertainment premises and the like, and from activities and land uses contemplated in the relevant Zone and SubZone provisions."</i>
96	Noise sensitive development in mixed use areas should not unreasonably interfere with the operation of surrounding non-residential uses that generate noise levels that are commensurate with the envisaged amenity of the locality.	2	Covered in Noise Overlay PO1.1, PO1.3	
97	Noise sensitive development adjacent to noise sources should include noise attenuation measures to achieve the following: (a) satisfaction of the sleep disturbance criteria in the bedrooms or sleeping areas of the development as defined by the limits recommended by the World Health Organisation; (b) the maximum satisfactory levels in any habitable room for development near major roads, as provided in the Australian/New Zealand Standard AS/NZS 2107:2000 - 'Acoustics - Recommended Design Sound Levels and Reverberation Times for Building Interiors'; and (c) noise level in any bedroom, when exposed to music noise (L10) from existing entertainment premises, being: (i) less than 8 dB above the level of background noise (L90,15 min) in any octave band of the sound spectrum; and (ii) less than 5 dB(A) above the level of background noise (LA90,15 min) for the overall (sum of all octave bands) A-weighted levels. Background noise within the habitable room can be taken to be that expected in a typical residential/apartment development of the type proposed, that is inclusive of internal noise sources such as air conditioning systems, refrigerators and the like as deemed appropriate. Unless otherwise demonstrated, the minimum background noise to be used will be: on the basis of the windows being closed for the noise sensitive development and any existing entertainment premises complying with the relevant legislation relating to noise emission. Note: The report prepared by a suitably qualified acoustic engineer at the planning application submission stage should identify existing noise sources, identify the appropriate level of sound attenuation required and specify the noise attenuation measures that will be applied to the proposal. The noise attenuation measures might include: (a) siting and orientating the building away from the noise source and/or providing an external area that limits noise levels to World Health Organisation recommendations for residential areas; (b) sensitive internal layout of rooms, by locating noise sensitive rooms such as bedrooms and secluded private open space areas away from the noise source; (c) locating and designing entrances to be sealed and to provide air lock entries to sensitive rooms; (d) window location and design through thicker glass or double glazing of windows in recognition of the noise source; (e) sloping of roof or flat roof/parapet design to assist in noise passing overhead rather than penetrating through the roof of the dwelling; (f) selecting appropriate construction materials, such as sound absorbing materials and materials that reduce	3	Not covered except for Noise Overlay PO1.1, PO1.3 which suggests location and screening devices	The inner city is a fantastic place to live because of the proximity to shops, restaurants transport and employment and entertainment. This mix of use contributes to a vibrant and exciting City. However, detailed assessment is required to ensure that interface issues between residential and non-residential uses are addressed. Due to the intensity and diversity of uses in the City it important that there is a responsible co-existence between different desired uses to avoid land use conflict. At present the Development Plan encompasses noise control policies so that residential and entertainment uses can co-exist. The current policies implement measures to minimise noise conflicts between residential and non-residential uses. The policies quantifiably define the desired level of acoustic amenity so that new residential development and new entertainment venues can incorporate appropriate design measures to meet the prescribed acoustic level requirements. On this basis it is important the principles is included as a DTS within within Interface Between Land Uses GDP under the heading 'Activities generating Noise or Vibrations' as follows and apply through the assessment tables: <i>Noise attenuation measures to achieve the following:</i> <i>(a) satisfaction of the sleep disturbance criteria in the bedrooms or sleeping areas of the development as defined by the limits recommended by the World Health Organisation;</i> <i>(b) the maximum satisfactory levels in any habitable room for development near major roads, as provided in the Australian/New Zealand Standard AS/NZS 2107:2000 - 'Acoustics - Recommended Design Sound Levels and Reverberation Times for Building Interiors'; and</i> <i>(c) noise level in any bedroom, when exposed to music noise (L10) from</i>

General comments	Don't forget about future proofing in terms of trucks. Design in Urban Areas Overlay Noise and Air Emissions Overlay			
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
28	Development which supports high local environmental quality, promotes waste minimisation, re-use and recycling, encourages waste water, grey water and stormwater re-use and does not generate unacceptable levels of air, liquid or solid pollution.	2	Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 12.1 Design in Urban Areas PO 22.1	
Principles of Development Control				
101	A dedicated area for on-site collection and sorting of recyclable materials and refuse should be provided within all new development.	2	Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 12.1, 12.5	
102	A dedicated area for the collection and sorting of construction waste and the recycling of building materials during construction as appropriate to the size and nature of the development should be provided and screened from public view.	5	Not included	Consideration should be given to the sorting and recycling of construction waste during construction. This provision should be included within Waste Treatment and Management Facilities GDP. In addition, the heading should be revised to 'Waste Treatment and Managment' to encompass all issues relating to waste.
103	Development greater than 2 000 square metres of total floor area should manage waste by: (a) containing a dedicated area for the collection and sorting of construction waste and recyclable building materials; (b) on-site storage and management of waste; (c) disposal of non-recyclable waste; and (d) incorporating waste water and stormwater re-use including the treatment and re-use of grey water.	3	Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 12.1, 12.5, 22.1	There are provisions that only relate to mixed use developments for all development 4 or more building levels. Waste management should be applied to all development. It is recommended this policy is INSERTED into Design in Urban Areas GDP [All Development] under a new heading 'Waste Management'.
104	Development should not result in emission of atmospheric, liquid or other pollutants, or cause unacceptable levels of smell and odour which would detrimentally affect the amenity of adjacent properties or its locality. Land uses such as restaurants, shops, cafés or other uses that generate smell and odour should: (a) ensure extraction flues, ventilation and plant equipment are located in appropriate locations that will not detrimentally affect the amenity of adjacent occupiers in terms of noise, odours and the appearance of the equipment; (b) ensure ventilation and extraction equipment and ducting have the capacity to clean and filter the air before being released into the atmosphere; and (c) ensure the size of the ventilation and extraction equipment is suitable and has the capacity to adequately cater for the demand generated by the potential number of patrons. Design Technique (this is ONE WAY of meeting the above Principle) 104.1 Ventilation equipment built in accordance with Australian Standard 1668.2-2002: 'The Use of Ventilation and Airconditioning in Buildings - Ventilation Design for Indoor Air Contaminant Control'.	3	Interface Between Land Uses GDP PO 5.1, 5.2 Noise and Air Emissions PO1.1, PO1.2 Design in Urban Areas - All Dev 4 storeys and more - PO 12.3	Refers to air sensitive dev located adjacent to air pollution to design and site to shield sensitive receivers (inc school's outdoor play areas) but a variety of location, separation or shielding measures. PO 1.2 says use design elements to disperse air pollutants. 12.3 talks about communal waste and collection areas be well ventilated. No standards are set for this. It is recommended this policy is INSERTED into Design in Urban Areas GDP [Non-Residential Development] under a new heading 'Waste Management'.

Policy area(s)	Contaminated Sites												
General Development Policy - Site Contamination													
General comments													
Number	Description	Transition category	Where has it been included?	Comments									
Policy Objectives													
29	A safe and healthy living and working environment.	2	GDP - Site Contamination - DO1										
Principles of Development Control													
105	<p>Where there is evidence of, or reasonable suspicion that land, buildings and/or water, including underground water, may have been contaminated, or there is evidence of past potentially contaminating activity/ies, development should only occur where it is demonstrated that the land, buildings and/or water can be made suitable for its intended use prior to commencement of that use.</p> <p>Note: Information of the suitability of land for the proposed land use should be provided as part of the development application and should include:</p> <p>(a) the provision of a report of the land use history and condition of the site;</p> <p>(b) where the report reveals that contamination is suspected or identified, a detailed site assessment report that determines whether site contamination poses an actual or potential risk to human health and the environment, either on or off the site, of sufficient magnitude to warrant remediation appropriate to the proposed land use;</p> <p>(c) where remediation is warranted, a remediation and/or management strategy prepared in consultation with an independent Environmental Auditor, Contaminated Land, endorsed by the EPA;</p> <p>(d) a site audit report, prepared by an independent Environmental Auditor, Contaminated Land, endorsed by the EPA, that states that in the opinion of the Auditor, the site is suitable for the intended uses(s), or for certain stated uses(s) and also states any conditions pertaining to the use(s).</p>	2	GDP - Site Contamination - PO 1.1 DTS 1.1	<p>Make land suitable for sensitive use. But DTS if no change of land use or the land use is not more sensitive, or if there is a site contamination report that's less than 5 years old (Pt 10A, EPA Act 1993), saying that: the land is no longer contaminated or the contamination has been cleared to enable the land to be used. Also if the lot was granted consent for a land division, its DTS.</p> <p>PO 1.1 of the Site Contamination GDP should be revised as follows to the use of land, buildings and/or water:</p> <p><i>PO 1.1</i> <i>"Ensure land, buildings and/or water is suitable for sensitive use in circumstances where it is, or may have been, subject to site contamination as a result of previously established uses of land or activities in the vicinity of the land."</i></p>									
NEW CONTENT IN THE CODE (insert below)													
	<p>Not new but there is a referral to the EPA for a change in land use except under the circumstances above. Referral trigger is on a site where site contam exists or may exist and there's been a Class 1 activity listed in a practice dimension, including on adjacent land. A further trigger is a change to a more sensitive land use on a site where contamination exists or may exist as a result of a Class 2 (listed in practice direction.) The purpose of the referral is for the EPA to tell Council to tell you the person to go and see. There is nothing in the referral purpose to make sure that that the land is appropriately de-contaminated.</p> <p>In the Urban Corridor Main Street Zone, there is a DTS criterion for change of use to existing building above ground floor from office or consulting room to dwelling other than on the ground floor. No Zone, Subzone, GDPS or Overlays apply. The issue is contaminated site to office and then office to dwelling.</p> <p>In some zones ie Capital City Zone, child care centres don't need an assessment of site contamination. I don't understand the link between the need for a referral if there is no overlay and only a GDP applies like site contamination.</p>

Policy Objectives						
30	Development which is compatible with the long term sustainability of the environment, minimises consumption of non-renewable resources and utilises alternative energy generation systems.	5		<p>Although the Infrastructure and Renewable Energy Facilities GDP addresses the provision of renewable energy facilities it is also important development minimises the consumption of non-renewable resources and uses alternative energy generation systems. It is important this is encouraged. On this basis it is recommended the following new DO 2 is included in the Infrastructure and Renewable Energy Facilities GDP:</p> <p><i>DO 2</i> Development compatible with the long-term sustainability of the environment that minimises consumption of non-renewable resources and utilises alternative energy generation systems.</p>		
Principles of Development Control						
All Development						
106	<p>Buildings should provide adequate thermal comfort for occupants and minimise the need for energy use for heating, cooling and lighting by:</p> <p>(a) providing an internal day living area with a north-facing window, other than for minor additions*, by:</p> <p>(i) arranging and concentrating main activity areas of a building to the north for solar penetration; and</p> <p>(ii) placing buildings on east-west allotments against or close to the southern boundary to maximise northern solar access and separation to other buildings to the north.</p> <p>(b) efficient layout, such as zoning house layout to enable main living areas to be separately heated and cooled, other than for minor additions;</p> <p>(c) locating, sizing and shading windows to reduce summer heat loads and permit entry of winter sun;</p> <p>(d) allowing for natural cross ventilation to enable cooling breezes to reduce internal temperatures in summer;</p> <p>(e) including thermal insulation of roof, walls, floors and ceilings and by draught proofing doors, windows and openings;</p> <p>(f) ensuring light colours are applied to external surfaces that receive a high degree of sun exposure, but not to an extent that will cause glare which produces discomfort or danger to pedestrians, occupants of adjacent buildings and users of vehicles;</p> <p>(g) providing an external clothes line for residential development; and</p> <p>(h) use of landscaping.</p> <p>Design Techniques (these are ONE WAY of meeting part of the above Principle)</p> <p>106.1 In relation to Principle 106(a), facing the length of the development to the north to maximise solar access with day living areas incorporating a window that faces between 20o west and 30o east of true north; or</p> <p>106.2 In relation to Principle 106(b):</p> <p>(a) grouping rooms with similar uses and heating and cooling needs;</p> <p>(b) incorporating doors between living areas and other rooms and corridors; and</p> <p>(c) placing utility areas such as bathrooms, toilets and laundries as buffer zones to the west.</p> <p>106.3 In relation to Principle 106(c):</p> <p>(a) dwellings and additions (other than minor additions) having a total window area (including glass doors) of less than 30 percent of the total wall area of the dwelling;</p>	2	<p>Design in Urban Areas [All Development]: PO 4.1, 4.2, 4.3</p> <p>GDP - Land Division in Urban Areas - DO1</p> <p>Minor Land Division (under 20 lots) - PO 6.1</p> <p>GDP - Land Division in Rural Areas - DO1</p> <p>GDP - Design in Urban Areas - All Dev PO 4.2</p> <p>Capital City Zone (and other zones too) DTS 4.2</p> <p>PO 4.3 - this PO covers a, c, h covers external clothes drying facilities</p>	<p>a) I can't find anything on north facing windows.</p> <p>aii) Land division that supports correct orientation.</p> <p>b) PO4.2 - buildings sited and designed to maximise env performance and minimise energy consumption and reliance on mechanical systems such as heating and cooling.</p> <p>c) shading is one of three measures that you can use to increase the max height</p> <p>cross ventilation, thermal insulation and draught proofing, light colours lines not covered.</p> <p>Design Techniques not included</p> <p>Ways in which energy reductions can be made should be included as DTS/DPF's within the Code. It is recommended that this policy be incorporated as the following new DTS's in Design in Urban Areas GDP [All Development] under the heading 'Environmental Performance'.</p> <p><i>DTS 4.1</i> None are applicable. Appropriate orientation of the building to:</p> <p>(a) maximise north/south facing facades;</p> <p>(b) ensure the north facade receives good direct solar radiation;</p> <p>(c) minimise east/west facades to protect the building from summer sun and winter winds;</p> <p>(d) narrow floor plates to maximise the amount of floor area receiving good daylight; and/or</p> <p>(e) minimise the ratio of wall surface to floor area.</p>		
107	All development should be designed to promote naturally ventilated and day lit buildings to minimise the need for mechanical ventilation and lighting systems.	2	GDP - Design in Urban Areas - All Dev PO4.2			

Number	Description	Transition category	Where has it been included?	Comments
108	<p>Energy reductions should, where possible, be achieved by the following:</p> <p>(a) appropriate orientation of the building by: (i) maximising north/south facing facades; (ii) designing and locating the building so the north facade receives good direct solar radiation; (iii) minimising east/west facades to protect the building from summer sun and winter winds; (iv) narrow floor plates to maximise the amount of floor area receiving good daylight; and/or (v) minimising the ratio of wall surface to floor area. (b) window orientation and shading; (c) adequate thermal mass including night time purging to cool thermal mass; (d) appropriate insulation by: (i) insulating windows, walls, floors and roofs; and (ii) sealing of external openings to minimise infiltration. (e) maximising natural ventilation including the provision of openable windows; (f) appropriate selection of materials, colours and finishes; and (g) introduction of efficient energy use technologies such as geo-exchange and embedded, distributed energy generation systems such as cogeneration*, wind power, fuel cells and solar photovoltaic panels that supplement the energy needs of the building and in some cases, export surplus energy to the electricity grid. Design Techniques (these are ONE WAY of meeting part of the above Principle) 108.1 In relation to Principle 108(b) (refer Figure 108.1): (a) shading for all windows except for south facing elevation against summer sun penetration, by means such as vegetation, external louvres, external blinds, structural overhangs, low emittance glazing, spectrally-selective glazing and/or window films; (b) maximising natural daylight while limiting glare through the incorporation of narrow floor plates, light shelves, shaded skylights, light shafts and/or atriums with daylight sensing control of electric lighting; Figure 108.1 - appropriate orientation and shading for commercial buildings. (c) integration of solar shading with solar energy collection technology such as solar heat pumps and photovoltaic cells; and/or (d) use of high performance glazing.</p>	5	GDP - Design in Urban Areas - All Dev PO 4.2, 4.3 (photovoltaic cells)	<p>Ways in which energy reductions can be made should be included as DTS/DPF's within the Code. It is recommended that this policy be incorporated as the following new DTS's in Design in Urban Areas GDP [All Development] under the heading 'Environmental Performance'.</p> <p>DTS 4.1 <i>Appropriate orientation of the building to:</i> (a) maximise north/south facing facades; (b) ensure the north facade receives good direct solar radiation; (c) minimise east/west facades to protect the building from summer sun and winter winds; (d) narrow floor plates to maximise floor area receiving good daylight; and/or (e) minimise the ratio of wall surface to floor area.</p> <p>DTS 4.2 <i>Minimise energy consumption by:</i> (a) window orientation and shading; (b) adequate thermal mass including night time purging to cool thermal mass; (c) appropriate insulation by: i. insulating windows, walls, floors and roofs; and ii. sealing of external openings. (d) maximising natural ventilation; (e) appropriate selection of materials, colours and finishes; and (f) introduction of efficient energy use technologies such as geo-exchange and embedded, distributed energy generation systems such as cogeneration, wind power, fuel cells and solar photovoltaic panels that supplement the energy needs of the building.</p>
109	<p>Orientation and pitch of the roof should facilitate the efficient use of solar collectors and photovoltaic cells. Design Techniques (these are ONE WAY of meeting the above Principle) 109.1 A roof incorporating an area of at least 10 square metres which: (a) faces between 30o east and 20o west of north respectively; and (b) has a pitch of greater than 18o.</p>	5		<p>The policy encourages buildings to be designed to facilitate solar panels. Policy should be included that encourages this. It is recommended that the following new PO and DTS is included under the heading 'Environmental Performance' within Design in Urban Areas GDP:</p> <p>PO 4.4 <i>Roofs orientated and pitched to facilitate the efficient use of solar collectors and photovoltaic cells.</i></p> <p>DTS 4.4 <i>Roof incorporating an area of at least 10 m2 that:</i> (a) faces between 30o east and 20o west of north respectively; and (b) has a pitch of greater than 18o</p>
110	<p>Buildings, where practical, should be refurbished, adapted and reused to ensure an efficient use of resources.</p>	5		<p>Buildings should be encouraged to be reused and policy in place should support this. It is recommended that the following PO be included under a new heading 'Building Adaptability within Design in Urban Areas [All Development]:</p> <p>PO <i>Buildings, where practical are refurbished, adapted and reused to ensure an efficient use of resources.</i></p>

Number	Description	Transition category	Where has it been included?	Comments
111	<p>New buildings should be readily adaptable to future alternative uses. Design Techniques (these are ONE WAY of meeting part of the above Principle) 111.1 Design solutions may include:</p> <ul style="list-style-type: none"> (a) a structural grid which accommodates car parking dimensions, retail, commercial and residential uses vertically throughout the building; (b) the alignment of structural walls, columns and service cores between floor levels; (c) minimisation of internal structural walls; (d) higher floor to floor dimensions on the ground and first floor; (e) knock-out panels between dwellings to allow two adjacent dwellings to be amalgamated; (f) design for disassembly by selecting systems/materials that can be deconstructed at the end of the projects useful life; and/or (g) the use of products with high post-consumer recyclable content. 	2	PO 2.2 encourages adaptable buildings to suit a range of resi and non resi uses GDP Design in Urban Areas DO 1b seeks adaptable buildings	<p>Particularly in the Capital City Zone, City Main Streets Zone, Riverbank Zone and other MainStreet Zones it is important to allow for the future adaptation of a range of uses within ground floor tenancies and it is recommended that the following PO and DTS/DPF be incorporated into Design in Urban Areas under a new heading 'Adaptability' and applied through the assessment tables in the relevant Zones: PO "The ground floors of buildings designed to allow for adaptation to a range of land uses including shops, cafés, restaurants or offices without the need for significant alterations to the building." DTS/DPF "The ground floor levels of buildings to have a minimum floor to ceiling height of 3.5 metres."</p>
112	<p>Selection of internal materials for all buildings should be made with regard to internal air quality and ensure low toxic emissions, particularly with respect to paint and joinery products. Design Techniques (these are ONE WAY of meeting part of the above Principle) 112.1 The use of:</p> <ul style="list-style-type: none"> (a) oil based floor sealers; and/or (b) natural materials for floor linings such as plywood flooring, linoleum and wool carpet. 	4		
Residential Development				
113	New residential development and residential extensions should be designed to minimise energy consumption and limit greenhouse gas emissions.	2	Design in Urban Areas [All Development]: PO 4.1	
114	Development is encouraged to avoid heat loss by incorporating treatments, such as double glazing of windows along the southern elevation, or by minimizing the extent of windows facing south.	2	Design in Urban Areas [All Development]: PO 4.2, 4.3	
Office Development				
115	<p>The following principles of sustainable design and construction are required for new office development, and additions and refurbishments to existing office development, to minimise energy consumption and limit greenhouse gas emissions:</p> <ul style="list-style-type: none"> (a) passive solar consideration in the design, planning and placement of buildings; (b) re-using and/or improving existing structures or buildings; (c) designing for the life-cycle of the development to allow for future adaptation; (d) considering low levels of embodied energy in the selection and use of materials; (e) developing energy efficiency solutions including passive designs using natural light, solar control, air movement and thermal mass. Systems should be zoned to minimise use of energy; (f) using low carbon and renewable energy sources, such as Combined Heat and Power (CHP) systems and photovoltaics; and (g) preserving and enhancing local biodiversity, such as by incorporating roof top gardens. <p>Design Techniques (this is ONE WAY of meeting part of the above Principle) 115.1 In relation to Principle 115(d):</p> <ul style="list-style-type: none"> (a) re-using materials and recycled building materials such as: <ul style="list-style-type: none"> (i) recycled and/or plantation timbers; (ii) recycled content in steel reinforcing; (iii) 60 percent or more recycled aggregate in concrete; and (iv) recycled cork and/or rubber flooring; (b) materials derived from renewable resources; and (c) durable and low-maintenance materials to minimise replacement intervals and maintenance requirements. <p>115.2 In relation to Principle 115(e):</p> <ul style="list-style-type: none"> (a) lighting management systems that employ both motion and lighting level sensors that can be updated; (b) mixed mode or hybrid comfort control systems (natural and mechanical ventilation systems) which comprise both manually operable openings and automatically controlled openings, utilising temperature sensors and zoned heating areas; (c) energy efficient fittings; (d) closed or open loop geoexchange systems providing space cooling, space heating and domestic hot water. 	2	Design in Urban Areas [All Development]: PO 4.1, 4.2, 4.3	No Design Techniques have been included
NEW CONTENT IN THE CODE (insert below)

Policy Objectives				
31	The development of renewable energy facilities, such as wind and biomass energy facilities, in appropriate locations.	2	The Dev Plan policy came from the SAPPL.	
32	Renewable energy facilities located, sited, designed and operated to avoid or minimise adverse impacts and maximise positive impacts on the environment, local community and the State.	2	Renewable Energy Facilities (Wind Farm) PO 8.1 and DTS 8.1. There's other sections for solar power, hydropower etc.	
Principles of Development Control				
116	Renewable energy facilities, including wind farms, should be located, sited, designed and operated in a manner which avoids or minimises adverse impacts and maximises positive impacts on the environment, local community and the State.	2	Infrastructure and Renewable Energy Facilities GDP PO 1.1, 8.1, 8.2 - visual impacts of wind turbines	
117	Renewable energy facilities, including wind farms, and ancillary developments should be located in areas that maximise efficient generation and supply of electricity.	4		
118	Renewable energy facilities, including wind farms, and ancillary development such as substations, maintenance sheds, access roads and connecting power-lines (including to the National Electricity Grid) should be located, sited, designed and operated in a manner which: (a) avoids or minimises detracting from the character, landscape quality, visual significance or amenity of the area; (b) utilises elements of the landscape, materials and finishes to minimise visual impact; (c) avoids or minimises adverse impact on areas of native vegetation, conservation, environmental, geological, tourism or built or natural heritage value; (d) does not impact on the safety of water or air transport and the operation of ports, airfields and designated landing strips; (e) avoids or minimises nuisance or hazard to nearby property owners/occupiers, road users and wildlife by way of: (i) shadowing, flickering, reflection and blade glint impacts; (ii) noise; (iii) interference to television and radio signals; (iv) modification to vegetation, soils and habitats; and (v) bird and bat strike.	2	Infrastructure and Renewable Energy Facilities GDP PO 1.1, 2.1, 4.1, 4.2, 7.1,8.2, 8.3, 8.4, 9.1, 9.3	
NEW CONTENT IN THE CODE (insert below)				
The Code is mainly concerned with the visual impacts of wind farms and has changed the policy to separate them from resi areas and take away the provisions that allowed assessment on the nuisance of the turbines. Now if they are prescribed distances away from resi zones, they are DTS.				

Zone	Policy area(s)	1 - Included in the Code and retains same policy intent	2 - Wording changed but policy intent remains (OK)	3 - Included in the Code but policy intent changed (NOT OK)	4 - Not included in the Code but OK to remove	5 - Not included in the Code and should be reinstated

General comments						
Number	Description	Transition category	Where has it been included?	Comments		
Policy Objectives						
OBJ 33	Buildings which are designed and sited to be energy efficient and to minimise micro-climatic and solar access impacts on land or other buildings.	2	General Development Policies - Design in Urban Area [All Development]: PO 4.1, PO 4.2			
OBJ 34	Protection from rain, wind and sun without causing detriment to heritage places, street trees or the integrity of the streetscape.	2	Covered partly in General Development Policies - Design in Urban Area PO 1.2, DTS 9.7	Reference to weather protection has been covered in the zone specific policies		
Principles of Development Control						
119	Development should be designed and sited to minimise micro-climatic and solar access impact on adjacent land or buildings, including effects of patterns of wind, temperature, daylight, sunlight, glare and shadow.	2	General Development Policies - Design in Urban Area [All Development - 4 or More Building Levels]: PO 10.4			
120	Development should be designed and sited to ensure an adequate level of daylight, minimise overshadowing of buildings, and public and private outdoor spaces, particularly during the lunch time hours.	2	General Development Policies - Interface Between Land Uses PO 3.2 and DTS/DPF 3.2			
121	Development should not significantly reduce daylight to private open space, communal open space, where such communal open space provides the primary private open space, and habitable rooms in adjacent City Living Zone, Adelaide Historic (Conservation) Zone and North Adelaide Historic (Conservation) Zone.	2	General Development Policies - Interface Between Land Uses PO 3.2			
122	Glazing on building facades should not result in glare which produces discomfort or danger to pedestrians, occupants of adjacent buildings and users of vehicles. Design Techniques (these are ONE WAY of meeting the above Principle) 122.1 Design solutions may include: (a) reducing the quantity of glass used by having a higher proportion of masonry or other non-reflective materials in the building exterior; (b) recessing glass into the building; (c) shading or angling the glass; (d) selecting glass that has a low level of reflection; and/or (e) avoiding the use of large expanses of highly reflective materials.	2	General Development Policies - Interface Between Land Uses PO 7.1			
123	Buildings within the Core and Primary Pedestrian Areas identified in Map Adel/1 (Overlays 2, 2A and 3), unless specified otherwise within the relevant Zone or Policy Area, should be designed to provide weather protection for pedestrians against rain, wind and sun. The design of canopies, verandahs and awnings should be compatible with the style and character of the building and adjoining buildings, as well as the desired character, both in scale and detail.	5		Development should incorporate weather protection particularly within the Capital City Zone and Main Streets where the comfort of the pedestrian network is vital to the movement system. The following PO should be included within the Capital City Zone, City Main Street Zone and other relevant shopping streets within the City. "Buildings designed to provide weather protection for pedestrians against rain, wind and sun and compatible in scale and detail with the style and character of the building and adjoining buildings."		
124	Weather protection should not be introduced where it would interfere with the integrity or heritage value of heritage places or unduly affect street trees.	2	Covered partly in General Development Policies - Design in Urban Areas PO 1.2, DTS 9.7	Reference to weather protection has been covered in the zone specific policies		

Number	Description	Transition category	Where has it been included?	Comments
125	Development that is over 21 metres in building height and is to be built at or on the street frontage should minimise wind tunnel effect. Design Techniques (these are ONE WAY of meeting the above Principle) 125.1 Methods to reduce the potential for a wind tunnel effect may include: (a) a podium built at the base of a tall tower and aligned with the street to deflect wind away from the street; (b) substantial verandahs around a building to deflect downward travelling wind flows; and/or (c) placing one building windward of another building.	2	General Development Policies - Design in Urban Area PO 11.3

General comments						
Number	Description	Transition category	Where has it been included?	Comments		
Policy Objectives						
OBJ 35	Development which maximises the use of stormwater.	3	Design in Urban Areas PO 22.1	This only applies to residential buildings of 3 building levels or less and renewal housing, it should apply to all development.		
OBJ 36	Development designed and located to protect stormwater from pollution sources. Surface water (inland, marine, estuarine) and ground water has the potential to be detrimentally affected by water run-off from development containing solid and liquid wastes. Minimising and possibly eliminating sources of pollution will reduce the potential for degrading water quality and enable increased use of stormwater for a range of applications with environmental, economic and social benefits.	3	Design in Urban Areas PO 22.1, 22.2, PO 41.1	This only relates to residential development - 3 building levels or less and non-residential development, it should apply to all development. It is recommended the following policies be included in Design in Urban Areas [All Development] under the heading 'Water Sensitive Design': <i>PO 5.2</i> <i>Development likely to result in risk of export of sediment, suspended solids, organic matter, nutrients, oil and grease include stormwater management systems designed to minimise pollutants entering stormwater.</i> <i>DTS/DPF 5.2</i> <i>Development includes stormwater management systems designed to achieve the following gross pollutant outcomes:</i> <i>(a)80% reduction in average annual total suspended solids;</i> <i>(b)60% reduction in average annual total phosphorus;</i> <i>(c)45% reduction in average annual total nitrogen;</i> <i>(d)90%t reduction of litter/gross pollutants compared to untreated stormwater runoff; and</i> <i>(e)no visible oils/grease for flows up to the 1-in-3 month average return interval flood peak flow.</i> <i>PO 5.3</i> <i>Water discharged from a development site to be of a physical, chemical and biological condition equivalent to or better than its pre-developed state.</i> <i>DTS 5.3</i> <i>None are applicable</i> <i>PO 5.4</i> <i>Development includes stormwater management systems to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.</i> <i>DTS/DPF 5.4</i> <i>Development includes stormwater management systems that:</i> <i>(a)maintain a pre-development peak flow rate from the site, based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan;</i> <i>(b)maintains the stormwater runoff time to peak to match that of the pre-development; and</i> <i>(c)manages up to and including the 100-year ARI flood event (1% AEP) to avoid flooding of buildings.</i>		
OBJ 37	Development designed and located to protect or enhance the environmental values of receiving waters.	2	General Development Policies - Design in Urban Areas PO 5.1, PO 22.2 PO 41.1			

Number	Description	Transition category	Where has it been included?	Comments
OBJ 38	Development designed and located to prevent erosion. Development involving soil disturbance may result in erosion and subsequently sedimentation and pollutants entering receiving waters. Design techniques should be incorporated during both the construction and operation phases of development to minimise the transportation of sediment and pollutants off-site.	5	General Development Policies - Design in Urban Areas PO 41.1	Erosion control is an important element that should be considered in the assessment of any application. The is recommended that the following PO be included within Design and Urban Areas GDP [All Development] under a new heading 'Erosion Control': <i>PO</i> <i>Development designed and located to prevent erosion.</i> <i>DTS/DPF</i> <i>None are applicable.</i>
OBJ 39	Development designed and located to prevent or minimise the risk of downstream flooding.	3	General Development Policies - Design in Urban Areas PO 41.3 and DTS/DPF 41.3	"As Above"
Principles of Development Control				
126	Development of stormwater management systems should be designed and located to improve the quality of stormwater, minimise pollutant transfer to receiving waters, and protect downstream receiving waters from high levels of flow. Design Techniques (these are ONE WAY of meeting the above Principle) 126.1 The integrated use of open space for appropriate recreation and stormwater management through the installation of water treatment devices such as wetlands, aquifer storage and recovery, detention and retention basins, gross pollutant traps, trash racks; or 126.2 The reservation, through land division, of drainage channels, drainage easements, watercourses and land within the 1 in 100 year flood event.	3	General Development Policies - Design in Urban Areas PO 41.3 and DTS/DPF 41.3	This only relates to non-residential development, it should apply to all development. It is recommended that the stormwater policies recommended above apply to all development.
127	Development affecting existing stormwater management systems should be designed and located to improve the quality of stormwater, minimise pollutant transfer to receiving waters, and protect downstream receiving waters from high levels of flow. Design Techniques (these are ONE WAY of meeting the above Principle) 127.1 The retention of natural watercourses through: (a) the control of development and activities within the 1 in 100 year flood event, including the placement of fill, excavation, building work, the placement of structures and fences, the storage of materials, the keeping of animals, the piping of watercourses; and (b) the planting of local native flora along watercourses and the replacement of exotic plants. 127.2 The restoration of lined watercourses. 127.3 The maximisation of road frontage onto open space areas in subdivision design.	3	General Development Policies - Design in Urban Areas PO 41.1, DTS/DPF 41.1, PO 42.2 PO 41.3 and PO 22.1, PO 22.2, PO 22.3	"As Above"
128	Development should incorporate appropriate measures to minimise any concentrated stormwater discharge from the site. Design Techniques (these are ONE WAY of meeting the above Principle) 128.1 For residential and non-residential development, rainfall run-off should be retained and used as much as possible through the application of an appropriate range of the following techniques: (a) collection and use of roof run-off in rain saver gutters and rainwater tanks for irrigation (a 500 litre rainwater tank to irrigate 25 square metres of garden), and internal purposes (drinking when considered safe to do so, flushing toilets, washing, and bathing); (b) use of on-site detention tank/s with an appropriately sized orifice; (c) directing rainfall run-off onto landscaped areas; (d) installing appropriate soakage devices (soakage trenches or wells) having regard to the availability of unbuild upon or unsealed areas, the ability of soils to absorb and drain water, the potential impact on building foundations and footings on or adjacent to the site, and the ability to safely direct surplus flows to a public street without causing nuisance to adjoining properties; and (e) use of permeable forms of paving for public and private parking areas, open storage, display, work areas, driveways, vehicle and pedestrian carriageways.	3	General Development Policies - Design in Urban Areas PO 41.1, DTS/DPF 41.1	This only relates to non-residential development, it should apply to all development. It is recommended that the stormwater policies recommended above apply to all development.

Number	Description	Transition category	Where has it been included?	Comments
129	Development should incorporate appropriate measures to minimise the discharge of sediment, suspended solids, organic matter, nutrients, bacteria and litter and other contaminants to the stormwater system and may incorporate systems for treatment or use on site. Design Techniques (these are ONE WAY of meeting the above Principle) 129.1 For residential and non-residential development: (a) rainfall run-off from the roof of any building, where not retained on site, discharged directly to the street water table or to the council stormwater system and not mixed with rainfall run-off originating from surfaces such as car parks, outdoor storage areas and display areas; and (b) rainfall run-off from ground surfaces directed to a stormwater treatment system capable of removing litter, sediment, grease, oil and other substances capable of contaminating stormwater. Also, a high flow bypass provided to enable water from extreme rainfall events to discharge direct to stormwater swales or to council stormwater systems. The stormwater treatment system is to discharge on site to storage; grassed swales; stone filled trenches; small infiltration basins; a constructed water feature; bores approved for aquifer recharge; or off site to the council stormwater system. 129.2 Wastewater from air conditioning units, cooling towers and compressors prevented from discharging into any stormwater drainage system. 129.3 Housing and other building layouts which minimise sewage and water piping with potential for leakage.	3	General Development Policies - Design in Urban Areas PO 41.1	This only relates to non-residential development and should apply to all development. It is recommended that the stormwater policies recommended above apply to all development.
130	Development should not cause deleterious affect on the quality or hydrology of groundwater.	2	General Development Policies- Design in Urban Areas PO 5.1	
131	Development should manage stormwater to ensure that the design capacity of existing or planned downstream systems are not exceeded, and other property or environments are not adversely affected as a result of any concentrated stormwater discharge from the site.	3	General Development Policies - Design in Urban Areas PO 41.1 and PO 41.3.	This only relates to non-residential development and should apply to all development. It is recommended that the stormwater policies recommended above apply to all development.
NEW CONTENT IN THE CODE (insert below)				
DTS / DPF 22.1	Residential development in the form of: (a) detached, semi-detached or row dwellings include a retention rainwater tank storage: i. connected to at least 80% of the roof area of the dwelling (row dwelling), or at least 60% of the roof area of the dwelling (detached and semi-detached dwellings); ii. connected to all toilets and either the laundry cold water outlets or hot water service; iii. that has a minimum total capacity in accordance with Table 1, and iv. the roof is at least 80% of the impervious area; or Table 1: Retention Rainwater Tank (a) hammerhead dwellings have driveways and pathways constructed of a minimum of 50% permeable or porous material and include a retention rainwater tank storage: i. connected to at least 60% of the roof area of the dwelling; ii. connected to all toilets and either the laundry cold water outlets or hot water service; and iii. that has a minimum total capacity in accordance with Table 2.			Supported
DTS 22.2	Development creating 5-19 dwellings is accompanied by an approved Stormwater Management Plan that achieves the following stormwater runoff outcomes: (a) 80 per cent reduction in average annual total suspended solids; (b) 60 per cent reduction in average annual total phosphorus; and (c) 45 per cent reduction in average annual total nitrogen.			Supported
PO 22.3	Development creating 5-19 dwellings includes a stormwater management system designed to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.			Supported
DTS 22.3	Development creating 5-19 dwellings (a) maintains: i. a pre-development peak flow rate from the site based upon a 0.35 runoff coefficient for the 5-year ARI (18.1% AEP) 30 minute storm; and ii. the stormwater runoff time to peak to match that of the pre-development condition; or (b) capture and retain the difference in pre-development runoff volume (based upon a 0.35 runoff coefficient) vs post development runoff volume from the site for a 5-year ARI (18.1% AEP) 30 minute storm; and			Supported

Number	Description	Transition category	Where has it been included?	Comments
	(c) manage site generated stormwater runoff up to and including the 100 –year ARI flood event (1% AEP) to avoid flooding of buildings.			
DTS/DPF 41.	Development includes stormwater management systems designed to achieve the following gross (a) 80 per cent reduction in average annual total suspended solids; (b) 60 per cent reduction in average annual total phosphorus; (c) 45 per cent reduction in average annual total nitrogen; (d) 90 per cent reduction of litter/gross pollutants compared to untreated stormwater runoff; and (e) no visible oils/grease for flows up to the 1-in-3 month average return interval flood peak flow.			Supported
PO 41.2	Water discharged from a development site to be of a physical, chemical and biological condition equivalent to or better than its pre-developed state.			Supported
PO 41.3	Development includes stormwater management systems to mitigate peak flows and manage the rate and duration of stormwater discharges from the site to ensure the carrying capacities of downstream systems are not overloaded.			Supported
DTS / DPF 41.3	Development includes stormwater management systems that: (a) maintain a pre-development peak flow rate from the site, based upon a 0.35 runoff coefficient for the 20-year ARI (5% AEP) 30 minute storm, unless a lower performance measure is specified in an approved catchment based Stormwater Management Plan; (b) maintains the stormwater runoff time to peak to match that of the pre-development; and (c) manages up to and including the 100-year ARI flood event (1% AEP) to avoid flooding of buildings.			Supported

Policy Objectives				
OBJ 40	Minimisation of the visual impact of infrastructure facilities.	2	General Development Policies - Infrastructure and Renewable Energy Facilities PO 2.1	
OBJ 41	Provision of services and infrastructure that are appropriate for the intended development and the desired character of the Zone or Policy Area.	2	General Development Policies - Infrastructure and Renewable Energy Facilities DO 1	
Principles of Development Control				
132	Provision should be made for utility services to the site of a development, including provision for the supply of water, gas and electricity and for the satisfactory disposal and potential re-use of sewage and waste water, drainage and storm water from the site of the development.	5		There are no provisions requiring basic services to a site. It should not always be assumed these services will be provided. To emphasis the importance of incorporating these services the following policy should be incorporated into General Development Policies - Infrastructure and Renewable Energy Facilities under the heading 'General': <i>PO 1.3 Provision made for utility services to the development site, including provision for the supply of water, gas and electricity and for the satisfactory disposal and potential re-use of sewage and waste water, drainage and storm water from the development site. DTS/DPF 1.3 None are applicable.</i>
133	Service structures, plant and equipment within a site should be designed to be an integral part of the development and should be suitably screened from public spaces or streets.	2	General Development Policies - Design in Urban Areas PO 1.4	
134	Infrastructure and utility services, including provision for the supply of water, gas and electricity should be put in common trenches or conduits.	5		Services in common trenches should be encouraged for ease of location and access. The following PO should be included in General Development Policies - Infrastructure and Renewable Energy Facilities under the heading 'General': <i>"Locate infrastructure and utility services including the supply of water, gas, and electricity in common trenches or conduits."</i>
135	Development should only occur where it has access to adequate utilities and services, including: (a) electricity supply; (b) water supply; (c) drainage and stormwater systems; (d) effluent disposal systems; (e) formed all-weather public roads; (f) telecommunications services; and (g) gas services.	5		There are no provisions requiring basic services to a site. It should not always be assumed these services will be provided. To emphasis the importance of incorporating these services the following policy should be incorporated into General Development Policies - Infrastructure and Renewable Energy Facilities under the heading 'General': <i>PO 1.3 Provision made for utility services to the development site, including provision for the supply of water, gas and electricity and for the satisfactory disposal and potential re-use of sewage and waste water, drainage and storm water from the development site. DTS/DPF 1.3 None are applicable.</i>

Policy area(s) Heritage and Conservation				
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
42	Acknowledge the diversity of Adelaide's cultural heritage from pre-European occupation to current time through the conservation of heritage places and retention of their heritage value.	4	Not included	No explicit comment on conservation and retention
43	Objective 43: Development that retains the heritage value and setting of a heritage place and its built form contribution to the locality.	2	PO1.1 and PO1.4	
44	Objective 44: Continued use or adaptive reuse of the land, buildings and structures comprising a heritage place.	2	Covered in LHP Overlay under PO2.2.	Briefly covered in SHP Overlay DO1.
45	Objective 45: Recognition of Aboriginal sites, items and areas which are of social, archaeological, cultural, mythological or anthropological significance.	5	Not included	What is the mechanism that allows Aboriginal heritage sites to be picked up in the Code?
Principles of Development Control				
General				
136	Development of a heritage place should conserve the elements of heritage value as identified in the relevant Tables. Development affecting a State heritage place (Table Adel/1), Local heritage place (Table Adel/2), Local heritage place (Townscape) (Table Adel/3) or Local heritage place (City Significance) (Table Adel/4), including: (a) adaptation to a new use; (b) additional construction; (c) part demolition; (d) alterations; or (e) conservation works; should facilitate its continued or adaptive use, and utilise materials, finishes, setbacks, scale and other built form qualities that are complementary to the heritage place.	2	PO1.1	
137		2	DO1, PO1.5 for materials, nothing for finishes, PO1.4 for setbacks, PO1.2 for scale and PO1.3 for others. Adaptive reuse only covered included in SHP Overlay in DO1. LHP Overlay encourages adaptive reuse.	
138	A local heritage place (as identified in Tables Adel/2, 3 or 4) or the Elements of Heritage Value (as identified in Table Adel/2) should not be demolished unless it can be demonstrated that the place, or those Elements of Heritage Value that are proposed to be demolished, have become so distressed in condition or diminished in integrity that the remaining fabric is no longer capable of adequately representing its heritage value as a local heritage place.	2	LHP Overlay PO6.1b	Demo provisions have been altered. The Code allows demo of elements without heritage value, poor structural integrity or poor condition. The Code adds unacceptable risk and irredeemably beyond repair to the demo criteria which is good. There are some suggestions as to improvements in reworded demo provisions (see suggested text for heritage Overlays)
139	139 Development of Local Heritage Places (Townscape) should occur behind retention depths (as established from the street facade of the heritage place) of 6 metres in non-residential Zones and Policy Areas, and 4 metres in the City Living Zone or the Adelaide Historic (Conservation) Zone or as otherwise indicated in the heritage Tables in respect of frontages and side wall returns.	4	Not included	Should be covered in the SHV - so long as we have written one!
140	Development on land adjacent to a heritage place in non-residential Zones or Policy Areas should incorporate design elements, including where it comprises an innovative contemporary design, that: (a) utilise materials, finishes, and other built form qualities that complement the adjacent heritage place; and (b) is located no closer to the primary street frontage than the adjacent heritage place.	5	Not included	Adjacency not covered

Number	Description	Transition category	Where has it been included?	Comments
141	Development in the City Living Zone or the Adelaide Historic (Conservation) Zone on land adjacent to a heritage place should incorporate design elements that complement the heritage place with regard to the following: (a) the wall height and silhouette of the heritage place as well as the scale of elements comprising the principal facades; (b) the frontage of land containing the heritage place, boundary setbacks to the sides and street face(s) of the place and the nature of vehicular and pedestrian egress; (c) the nature of fencing, walling and gates to boundaries; (d) the materials and finishes; and (e) location of alterations (other than the conservation of heritage fabric) and additional construction behind the street face(s) of the heritage place, without necessarily replicating historical detailing.	5	Not included	As above
142	Development that abuts the built form/fabric of a heritage place should be carefully integrated, generally being located behind or at the side of the heritage place and without necessarily replicating historic detailing, so as to retain the heritage value of the heritage place. The division of land adjacent to, or containing, a heritage place should only occur where it would: (a) create allotments of a size, dimension and pattern that can accommodate new development likely to maintain the built form and setting of the heritage place, and not result in forms of development likely to impair views of the place from a public street, while also achieving the the Desired Character expressed in the relevant Zone and Policy Area provisions;	5 and 2	PO1.6	No comment about integration, replication of historic detailing.
143	(b) retain options for the use, access to, or servicing of the land, structures and buildings that comprise a heritage place; and (c) result in development compatible with the interiors of a State heritage place, Local heritage place (City significance) or Local heritage place as identified in the relevant Tables.	5	a) covered in part by PO4.1b b) not included	Nothing about retaining future options for heritage places Nothing about land division and its relationship with interiors but I'm not sure of what that means anyway.
Advertising				
144	Advertisements or signs on the site of a heritage place should be located to complement, rather than dominate or conceal, the appearance and detailing of the heritage place by being: (a) integrated with architectural elements of the heritage place, including within parapets or wall panels, and at canopy level or within fascias, end panels or windows; and (b) below the silhouette of the heritage place.	5	PO3.3	No comment on integration or parapets, canopy level etc and nothing on the silhouette of the HP.
Fencing and Site Features				
145	Fencing to the street boundary, and returning along the side boundaries to the alignment of the building front of a heritage place, should be compatible with the heritage value of the heritage place and any existing fencing.	5	Not included	Where is fencing?
146	146 Development should seek to protect architectural and natural site features that are valued for the contribution they make to the character and amenity of the area.		Not included	Can these features be protected anyway, if not heritage listed.
Aboriginal Heritage				
147	Development should recognise historical and cultural relationships associated with the past, prior and current use of a place which is of significance to Aboriginal people.	5	Not included	No comment on Aboriginal Heritage. See above comment.
148	148 Development of, adjacent to, or in close proximity to a place which is of significance to Aboriginal people should respect the historical significance of the area or time and reflect the significance of the item within the locality.	5	Not included	see above comments.
NEW CONTENT IN THE CODE (insert below)				

Number	Description	Transition category	Where has it been included?	Comments
	<p>As with all, the detail has been stripped out and any guidance that the detail provided. There is nothing on adjacency, preventing replicas, retaining future options for land use, the location of advertising, fencing and Ab Heritage has gone.</p> <p>Generally, there are several things to note: Demolition of SHPs and LHPs is now performance assessed across the whole of Council area. Previously, it was non complying in most areas of Council. Now, demolition will be tested against the demolition PO which consists of 2 parts for both SHPs and LHPs.</p> <p>However, the demolition test for SHPs is different from LHPs and it is now known if this is significant. One of the tests for a SHP is that the structural condition makes it a risk, is not the owner's fault and is irredeemably beyond repair.</p> <p>For LHPs, the demolition test is that the structural <u>integrity</u> or condition makes the building an unacceptable risk and is irredeemably beyond repair. Why have the words 'integrity' been included? What does it mean? Are they saying that the structural integrity is one thing and condition is another? So if the condition represents a risk, its an argument for demolition? Also why use the word 'irredeemably'and not just 'beyond repair'?</p> <p>The LHP demo test does not include the statement that relates to 'results from actions and unforeseen events beyond the control of the owner'. Does that mean that if the owner actively damages the structural condition of the building so that the structure is at risk and the building is beyond repair, demolition is likely to be approved? Would this allow demolition in a situation where only the front and side walls visible from the street were listed, and the owner demolished everything that wasn't of heritage value beyond that, and therefore made the front wall unstable and structurally risky?</p> <p>Should there be incentives for adaptive reuse such as more flexible land uses, a larger floor area, less parking required etc?</p>

Policy Objectives							
46	Reinforcement of the city's grid pattern of streets through: (a) high rise development framing city boulevards, the Squares and Park Lands (b) vibrant main streets of a more intimate scale that help bring the city to life (c) unique and interesting laneways that provide a sense of enclosure and intimacy.	2	Capital City Zone PO 3.3, PO 3.4, PO 3.7, PO 3.9				
47	Buildings should be designed to: (a) reinforce the desired character of the area as contemplated by the minimum and maximum building heights in the Zone and Policy Area provisions; (b) maintain a sense of openness to the sky and daylight to public spaces, open space areas and existing buildings; (c) contribute to pedestrian safety and comfort; and (d) provide for a transition of building heights between Zone and Policy Areas where building height guidelines differ.	5	a) Capital City Zone PO 4.1, DTS 4.1, City Living Zone DTS 2.2, Medium Density SubZone PO 2.1, Mied Use Subzone PO 2.6, DTS 2.6, City MainStreet Zone PO 4.1, DTS 4.1 c) Design in Urban Areas [All Development]: PO 2.1 d) No mention of height transition between zones generally. Capital City Zone refers to interface with City Living Zone in PO5.2	(b) Maintaining the sense of openness to the sky is important to ensuring a quality pedestrian environment for the City. It is important this is incorporated into the Code. Include this component in the Design in Urban Areas GDP under the heading 'External Appearance'. (d) only in Capital City Zone. The Code changes the policy from land use and built form management to just land use management. The built form components are equally important and should be included. PO 5.1 should be reworded as follows: <i>"Development designed to manage the interface with the City Living Zone in relation to building height, overshadowing, massing, building proportions, traffic impacts and by avoiding land uses, or intensity of land uses, that adversely affect residential amenity."</i> The incorporation of a DTS Building envelop concept plan would also be a suitable way of addressing height at the interface.			
48	Development which incorporates a high level of design excellence in terms of scale, bulk, massing, materials, finishes, colours and architectural treatment.	2	Design in Urban Areas - All Dev 4 or more levels covers scale in PO 9.2, mass in 9.3, bulk in 9.4, materials and finishes in 9.5. No comment on colours or architectural treatment. Design in Urban Areas DO1 would also be argued to cover the main points of the Dev Plan PDC.				
Principles of Development Control							
167	Where development significantly exceeds quantitative policy provisions, it should demonstrate a significantly higher standard of design outcome in relation to qualitative policy provisions including pedestrian and cyclist amenity, activation, sustainability and public realm and streetscape contribution.	4	Capital City Zone PO4.2 and DTS4.2	The Code is an improvement on existing policy. ERROR - Is there an error in DTS 4.2 which says, 'Development not exceeding the max building height specified in ...' Does it mean, 'Dev which exceeds the max building height ...' There are more criteria than listed in the Dev Plan and it is a more comprehensive list. Revise DTS/DPF 4.2 within the Capital City Zone as detailed in the City of Adelaide edited version of the Capital City Zone.			
Height, Bulk and Scale							
Principles of Development Control							

Number	Description	Transition category	Where has it been included?	Comments
168	Development should be of a high standard of design and should reinforce the grid layout and distinctive urban character of the City by maintaining a clear distinction between the following: (a) the intense urban development and built-form of the town acres in the Capital City, Main Street, Mixed Use, City Frame and City Living Zones; (b) the less intense and more informal groupings of buildings set within the landscaped environment of the Institutional Zones; (c) the historic character of the Adelaide and North Adelaide Historic (Conservation) Zones and groups of historic housing within the City Living Zone; and (d) the open landscape of the Park Lands Zone.	5	Capital City Zone - DO2, City Main Street PO 2.1, a) Capital City Zone - DO1, not included b) not included c) Historic Area Overlay DO 1 d) City Park lands Zone DO1	(b) The landscaped setting around the buildings is an important attribute of the Cultural Institutions Subzone within the City Riverbank Zone. The Code promotes public space rather than buildings within a landscaped setting, there is a distinct difference between the two. On this basis it is recommended that DO2 within the Cultural Institutions Subzone be revised as follows: <i>"Well designed and functional buildings set within a landscaped setting that provides pedestrian and cyclist friendly streetscapes and active street frontages that facilitate positive social interaction."</i>
169	The height and scale of development and the type of land use should reflect and respond to the role of the street it fronts as illustrated on Map Adel/1 (Overlay 1).	4		
170	The height, scale and massing of buildings should reinforce: (a) the desired character, built form, public environment and scale of the streetscape as contemplated within the Zone and Policy Area, and have regard to: (i) maintaining consistent parapet lines, floor levels, height and massing with existing buildings consistent with the areas desired character; (ii) reflecting the prevailing pattern of visual sub-division of neighbouring building frontages where frontages display a character pattern of vertical and horizontal sub-divisions; and (iii) avoiding massive unbroken facades. (b) a comfortable proportion of human scale at street level by: (i) building ground level to the street frontage where zero set-backs prevail; (ii) breaking up the building facade into distinct elements; (iii) incorporating art work and wall and window detailing; and (iv) including attractive planting, seating and pedestrian shelter.	5	(a) partly covered in Capital City Zone PO 3.1, 3.2	Include the following new DTS in the GDP Design in Urban Areas [All Dev - 4 or More Building Levels]: <i>"The height, scale and massing of buildings that reflect and reinforce: (a) the consistent parapet lines, floor levels, height and massing with existing buildings; (b) the prevailing pattern of visual sub-division of neighbouring building frontages where frontages display a character pattern of vertical and horizontal sub-divisions; (iii) avoid massive unbroken facades; and ground, middle and rooftop levels"</i> Human scale element plays an important part of the diversity, character and comfort of the pedestrian environment. This element is missing in the Code policy. It would be beneficial if the Code was more prescriptive on what is expected in built form terms in the City.
171	Where possible, large sites should incorporate pedestrian links and combine them with publicly accessible open space.	5	City Riverbank Zone PO 4.1	Needs to be included within the Code. The pedestrian network is vital to the movement system within the City and it is important they are retained and developed upon to improve the accessibility of the City. The following PO should be included within the Capital City Zone, City Living Zone, City Main Street Zone: <i>"Pedestrian movement based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links."</i>
172	Buildings and structures should not adversely affect by way of their height and location the long-term operational, safety and commercial requirements of Adelaide International Airport. Buildings and structures which exceed the heights shown in Map Adel/1 (Overlay 5) and which penetrate the Obstacle Limitation Surfaces (OLS) should be designed, marked or lit to ensure the safe operation of aircraft within the airspace around the Adelaide International Airport.	2	Adelaide Airport Heights (Regulated) Overlay	
173	Development in a non-residential Zone that abuts land in a City Living Zone, the Adelaide Historic (Conservation) Zone or the North Adelaide Historic (Conservation) Zone, should provide a transition between high intensity development and the lower intensity development in the adjacent Zone by focussing taller elements away from the common Zone boundary.	3	Capital City Zone PO 5.1	The Code changes the policy from land use and built form management to just land use management. The built form components are equally important and should be included. It is recommended that PO 5.1 within the Capital Zone under the heading 'Interface' be reworded as follows: PO <i>Development designed to manage the interface with the City Living Zone in relation to building height, overshadowing, massing, building proportions, traffic impacts and by avoiding land uses, or intensity of land uses, that adversely affect residential amenity.</i> DTS/DPF 5.1 <i>Building height does not exceed a maximum height specified in the Building Height Technical and Numeric Variations Overlay.</i> The incorporation of a DTS Building envelop concept plan would also be a suitable way of addressing height at the interface.

Number	Description	Transition category	Where has it been included?	Comments
174	Development in a non-residential Zone that is adjacent to land in the City Living Zone, Adelaide Historic (Conservation) Zone or North Adelaide Historic (Conservation) Zone should minimise overshadowing on sensitive uses by ensuring: (a) north-facing windows to habitable rooms of existing dwellings in the City Living Zone, Adelaide Historic (Conservation) Zone or North Adelaide Historic (Conservation) Zone receive at least 3 hours of direct sunlight over a portion of their surface between 9.00am and 3.00pm on 21 June; (b) ground level open space of existing residential buildings in the City Living Zone, Adelaide Historic (Conservation) Zone or North Adelaide Historic (Conservation) Zone receive direct sunlight for a minimum of 2 hours between 9.00am and 3.00pm on 21 June to at least the smaller of the following: (i) half of the existing ground level open space; (ii) 35 square metres of the existing ground level open space (with at least one of the area's dimensions measuring 2.5 metres).	5	Capital City Zone [Interface]: PO 5.2	This has not been addressed sufficiently by the Code and should be included along with the Building Envelop Concept Plan. It is recommended that the following PO be included in the Capital City Zone under the heading 'Interface': PO 5.3 <i>Development adjacent to land in the City Living Zone designed to minimise overshadowing on sensitive uses.</i> DTS/DPF 5.2 <i>Development adjacent to land in the City Living Zone designed to minimise overshadowing on sensitive uses by ensuring:</i> <i>(a) north-facing windows to habitable rooms of existing dwellings in the City Living Zone receive at least 3 hours of direct sunlight over a portion of their surface between 9.00am and 3.00pm on 21 June;</i> <i>(b) ground level open space of existing residential buildings in the City Living Zone receive direct sunlight for a minimum of 2 hours between 9.00am and 3.00pm on 21 June to at least the smaller of the following:</i> <i>(i) half of the existing ground level open space; or</i> <i>(ii) 35m² of the existing ground level open space (with at least one of the area's dimensions measuring 2.5 metres).</i>
Plot Ratio				
175	Plot ratios have been established for the City Living Zone, Adelaide Historic (Conservation) Zone and North Adelaide Historic (Conservation) Zone for the purpose of ensuring that intensity of development on land is consistent with the desired character. The amount of building floor area that may be permitted on the allotment(s) on which any development is situated should not exceed the area calculated by multiplying the area of the allotment(s) on which the development is situated by the plot ratio applicable to the allotment(s).	4		
Maximum Dwelling Density and Floor Space				
176	In the City Living Zone (other than in relation to sites greater than 1500 square metres in area), the Adelaide Historic (Conservation) Zone and the North Adelaide Historic (Conservation) Zone, the number of dwellings which will be appropriate on a site should not exceed the site area divided by the dwelling unit factor as set out in relevant Zone, and any fractions of the number so calculated should be disregarded.	2	TVN Overlay	
Landscaped Open Space				
177	Landscaped open space should be provided on the site of a development to at least the extent specified in the Principles of Development Control for the relevant Zone or Policy Area for siting, amenity and screening purposes. Where the existing amount of landscaped open space provided is less than the amount specified in the relevant Zone or Policy Area, development should not further reduce this amount. Where landscaped open space is not required, the provision of landscaped pedestrian spaces, planter boxes and in-ground planting is appropriate.	5		Requires further review. The Code has not introduced anything to replace the principle of Landscaped Open Space which plays an important role in maintaining the established character of areas in the residential areas south and north of City of Adelaide.
Building Set-backs				
178	In the City Living Zone, the Adelaide Historic (Conservation) Zone and the North Adelaide Historic (Conservation) Zone, buildings should maintain the prevailing set-back established by adjoining buildings, provided the resultant character reinforces the desired character for the locality.	5	City Living Zone [Building Setbacks]: PO 3.1	The City Living PO 3.1 should be more specific about ensuring the prevailing setbacks are maintained and it is recommended that the PO is reworded as follows: <i>"Buildings setback from primary street boundaries to maintain the prevailing setbacks established by adjoining buildings."</i>
179	Buildings within the Capital City Zone should be built to the street edge to reinforce the grid pattern, create a continuity of frontage and provide definition and enclosure to the public realm whilst contributing to the interest, vitality and security of the pedestrian environment.	2	Capital City Zone DO 2	
Composition and Proportion				

Number	Description	Transition category	Where has it been included?	Comments
180	Development should respect the composition and proportion of architectural elements of building facades that form an important pattern which contributes to the streetscape's distinctive character in a manner consistent with the desired character of a locality by: (a) establishing visual links with neighbouring buildings by reflecting and reinforcing the prevailing pattern of visual sub-division in building facades where a pattern of vertical and/or horizontal sub-divisions is evident and desirable, for example, there may be strong horizontal lines of verandahs, masonry courses, podia or openings, or there may be vertical proportions in the divisions of facades or windows; and (b) clearly defining ground, middle and roof top levels.	5		Include the following new DTS in the GDP Design in Urban Areas [All Dev - 4 or More Building Levels] under the heading 'External Appearance': <i>"The height, scale and massing of buildings that reflect and reinforce: (a) the consistent parapet lines, floor levels, height and massing with existing buildings; (b) the prevailing pattern of visual sub-division of neighbouring building frontages where frontages display a character pattern of vertical and horizontal sub-divisions; (iii) avoid massive unbroken facades; and ground, middle and rooftop levels"</i>
181	Where there is little or no established building pattern, new buildings should create new features which contribute to an areas desired character and the way the urban environment is understood by: (a) frontages creating clearly defined edges; (b) generating new compositions and points of interest; (c) introducing elements for future neighbouring buildings; and (d) emphasising the importance of the building according to the street hierarchy.	5		Include the following new DTS in the GDP Design in Urban Areas [All Dev - 4 or More Building Levels] under the heading 'External Appearance': <i>"Buildings to create new features that contribute to an areas character where there is little or no established building pattern."</i>
Articulation and Modelling				
182	Building facades fronting street frontages, access ways, driveways or public spaces should be composed with an appropriate scale, rhythm and proportion which responds to the use of the building, the desired character of the locality and the modelling and proportions of adjacent buildings. Design Techniques (these are ONE WAY of meeting the above Principle) 182.1 Design solutions may include: (a) defining a base, middle and top related to the overall proportion of the building; (b) expressing key horizontal lines within the townscape by using cornices, a change in materials or building setback; (c) expressing the internal layout of the building by using for example, vertical bays or its structure, such as party wall divisions; (d) expressing the variation in floor to floor height, particularly at the lower levels; (e) articulating building entries with awnings, porticos, recesses, blade walls and projecting bays; (f) using a variety of window types to create a rhythm or express the use of the building; (g) incorporating architectural features which give human scale to the design of the building at street level such as entrance porches, awnings and colonnades; (h) designing facades to reflect the orientation of the site using elements such as sun shading, light shelves and bay windows as environmental controls; (i) expressing important corners by giving visual prominence to parts of the facade, for example, a change of building articulation, material or colour, roof expression or increased height; (j) using a variation of contrasting surface finishes, textures, colours or patterns; or (k) avoiding unbroken building elevations of more than 15 metres on a vertical plan; (l) using recessed balconies and deep windows to create articulation and define shadows thereby adding visual depth to the facade;	5		Other than corner sites, no consideration of articulation and modelling of buildings has been incorporated into the Code. It is recommended that the following PO be included in GDP Design in Urban Areas [All Dev] under the heading 'External Appearance': <i>"Designing building facades fronting street frontages, access ways, driveways or public spaces at an appropriate scale, rhythm and proportion that responds to the use of the building, the desired character of the locality and the modelling and proportions of adjacent buildings."</i>
183	Balconies should be designed to give shelter to the street or public space at first floor levels.	2	General Development Policies - Design in Urban Areas [All Dev]: PO 1.2	
184	Balconies should: (a) respond to the street context and building orientation; and (b) incorporate balustrade detailing to reflect the balcony type and location and the materials and detail of the building facade.	4	Covered partly in Design in Urban Areas GDP [Residential Dev - 4 or More Building Levels] PO 28.2	
185	No part of any fully enclosed building should extend over property boundaries, including streets and public spaces, whether above a balcony at a lower level or not.Design in	5		There should be specific design guidelines in place to address encroachments to provide for public safety and ensure they do not effect the integrity of the National Heritage Listing of the City Layout and ParkLands. It is recommended the Encroachment Policy form a Design Guideline within the P&D Code.

Number	Description	Transition category	Where has it been included?	Comments
186	Building services such as drainage pipes together with security grills/screens, ventilation louvres and car park entry doors, should be coordinated and integrated with the overall facade design.	2	Design in Urban Areas GDP [All Development - 4 or more Building Levels]: PO 9.8, [Supported Accommodation, Housing for Aged Persons and People with Disabilities]: PO 28.7	This provision should be applied at the design stage of the building and applied to All Development within the Design in Urban Areas GDP under a new heading 'Building Services' and should be revised and worded as follows: "Services including gas and water meters conveniently located, screened from public view and integrated with the façade design."
Materials, Colours and Finishes				
187	The design, external materials, colours and finishes of buildings should have regard to their surrounding townscape context, built form and public environment, consistent with the desired character of the relevant Zone and Policy Area.	5		No consideration of surrounding townscapes has been incorporated into the Code. It is recommended that the following PO be included in GDP Design in Urban Areas [All Dev - 4 or More Building Levels] under the heading 'External Appearance': "The design, external materials, colours and finishes of buildings that have regard to their surrounding townscape context, built form and public environment."
188	Development should be finished with materials that are sympathetic to the design and setting of the new building and which incorporate recycled or low embodied energy materials. The form, colour, texture and quality of materials should be of high quality, durable and contribute to the desired character of the locality. Materials, colours and finishes should not necessarily imitate materials and colours of an existing streetscape	3	Partly covered in General Development Policies - Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 9.5	Easy maintenance materials should apply to all development not just buildings with 4 or more building levels. It is recommended this PO 9.5 and DTS/DPF 9.5 apply to 'All Development' in the Design in Urban Areas GDP. In addition, it is recommended that PO 9.5 be revised as follows: Amended PO 9.5 "External quality of materials and finishes are of high quality, durable and age well to minimise ongoing maintenance requirements and contribute to positively to the public realm."
189	Materials and finishes that are easily maintained and do not readily stain, discolour or deteriorate should be utilised.	3	General Development Policies - Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 9.5 and DTS/DPF 9.5.	Easy maintenance materials should apply to all development not just buildings with 4 or more building levels. It is recommended the following new PO and DTS apply to 'All Development' in the Design in Urban Areas GDP under the heading 'External Appearance': PO 1. Buildings that enhance public environment and achieves a high standard of external appearance by: (a) the use of high-quality durable materials and finishes that age well to minimise ongoing maintenance requirements; (b) providing a high degree of visual interest through articulation; and (c) ensuring lower levels are well integrated with and contribute to a vibrant public realm. DTS 1. Buildings designed to: (a) utilise a combination (or thereof) of the following external materials and finishes: i. masonry; ii. natural stone; iii. prefinished materials that minimise staining, discolouring or deterioration, and avoiding painted surfaces particularly above ground level; and (b) avoid large blank facades and incorporate design features within blank walls on side boundaries which have the potential to be built out.
190	Development should avoid the use of large expanses of highly reflective materials and large areas of monotonous, sheer materials (such as polished granite and curtained wall glazing).	2	General Development Policies - Interface Between Land Uses [Solar Reflectivity/Glare] PO 7.1	
Corner Sites				

Number	Description	Transition category	Where has it been included?	Comments
191	<p>New development on major corner sites should define and reinforce the townscape importance of these sites with appropriately scaled buildings that:</p> <ul style="list-style-type: none"> (a) establish an architectural form on the corner; (b) abut the street frontage; and (c) address all street frontages. <p>Design Technique (these are ONE WAY of meeting part of the above Principle)</p> <p>191.1 In relation to Principle 191(a):</p> <ul style="list-style-type: none"> (a) corporation of corner elements such as pediments, turrets, verandahs, balconies and other articulation and modelling into the design of the building; (b) incorporation of prominent entrances and/or windows at the apex; (c) increasing roof expression or building height at the corner to emphasise the importance of the street corner; (d) rotating the building line to create a chamfered edge; (e) projecting corner elements forward; and/or (f) in a change of building articulation, material or colour. 	2	General Development Policies - Design in Urban Areas [All Development]: PO 1.1.	
Sky and Roof Lines				
Policy Objectives				
49	Innovative and interesting skylines which contribute to the overall design and performance of the building	5		Refer to comments in PDC 193 below
Principles of Development Control				
192	Where a prevailing pattern of roof form assists in establishing the desired character of the locality, new roof forms should be complementary to the shape, pitch, angle and materials of adjacent building roofs.	5		<p>The importance of the pattern of roof form is not addressed in the Code. This provision is particularly important in the City living Zone and should be included in the Built Form and Character Provisions. It is recommended that the following PO be included in the City Living Zone under the heading 'Built Form and Character':</p> <p><i>"New roof forms designed to complement the prevailing pattern of roof forms in terms of the shape, pitch, angle and materials of adjacent building roofs."</i></p>
193	<p>Buildings should be designed to incorporate well designed roof tops that:</p> <ul style="list-style-type: none"> (a) reinforce the desired character of the locality, as expressed in the relevant Zone or Policy Area; (b) enhance the skyline and local views; (c) contribute to the architectural quality of the building; (d) provide a compositional relationship between the upper-most levels and the lower portions of the building; (e) provide an expression of identity; (f) articulate the roof, breaking down its massing on large buildings to minimise apparent bulk; (g) respond to the orientation of the site; and (h) create minimal glare. <p>Design Techniques (these are ONE WAY of meeting the above Principle)</p> <p>193.1 Design solutions may include:</p> <ul style="list-style-type: none"> (a) articulating form and surface by large, simple features that can be recognised from a distant view point; (b) tapering towers by stepping back floor plates; (c) integrating plant and fixtures within the roof top design; and/or (d) incorporating an architectural roof feature within the design of the building by: <ul style="list-style-type: none"> (i) creating a feature that forms part of its overall architectural form and composition; (ii) ensuring visual compatibility with nearby towers and other structures whilst maintaining architectural distinction; (iii) providing sky line features capable of being viewed over great distances; (iv) including modelled parapets; (v) ensuring compatibility of podia height at street alignment; and/or (vi) incorporating roof top gardens and terraces. 	5		<p>The importance of roof form has not been included within the Code. It is recommended that the following new PO and DTS/DPF be included within the Capital City Zone under the Heading 'Built Form and Character':</p> <p>PO <i>"Innovative and interesting skylines that contribute to the overall design quality, identity and performance of the building."</i></p> <p>DTS/DPF <i>"Incorporate an architectural roof feature within the design of the building by:</i> (a) creating a feature that forms part of its overall architectural form and composition; (b) ensuring visual compatibility with nearby towers and other structures whilst maintaining architectural distinction; (c) providing sky line features capable of being viewed over great distances; (d) including modelled parapets and compatibility of podia height at street alignment; (e) integrating plant and fixtures within the roof top design; and/or (f) incorporating roof top gardens and terraces."</p>

Number	Description	Transition category	Where has it been included?	Comments
194	Roof top plant and ancillary equipment that projects above the ceiling of the top storey should: (a) be designed to minimise the visual impact; and (b) be screened from view, including the potential view looking down or across from existing or possible higher buildings, or be included in a decorative roof form that is integrated into the design of the building.	5		Roof top plant and equipment can affect the quality and appearance of a building and it is important they incorporated into the design of the building to ensure they have a positive impact on the public realm. It is recommended this principle be included in the Code within Design and Urban Areas GDP [All Development] under a new heading 'Rooftop Plant and Ancillary Equipment' as follows: <i>Roof top plant and ancillary equipment that projects above the ceiling of the top storey that:</i> (a) <i>is designed to minimise the visual impact; and</i> (b) <i>is screened from view, including the potential view looking down or across from existing or possible higher buildings, or included in a decorative roof form that is integrated into the design of the building.</i>
195	Roof design should facilitate future use for sustainable functions such as: (a) rainwater tanks for water conservation; (b) roof surfaces orientated, angled and of suitable material for photovoltaic applications; and/or (c) "green" roofs (ie roof top gardens structurally capable of supporting vegetation) or water features.	2	Design in Urban Areas GDP [All Development - 4 or More Building Levels]: PO 11.2	
Active Street Frontages				
Policy Objectives				
50	Development that enhances the public environment and, where appropriate provides activity and interest at street level, reinforcing a locality's desired character.	2	General Development Policies - Design in Urban Areas PO 9.6 and DTS/DPF 9.6	
51	Development designed to promote pedestrian activity and provide a high quality experience for City residents, workers and visitors by: (a) enlivening building edges; (b) creating welcoming, safe and vibrant spaces; (c) improving perceptions of public safety through passive surveillance; and (d) creating interesting and lively pedestrian environments.	3	General Development Policies - Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 9.6, 9.7, DTS/DPF 9.6, 9.7. General Development Policies -Design in Urban Areas [Residential Dev - 4 or More Building Levels]: PO 28.2 General Development Policies -Design in Urban Areas [All Residential Dev] PO 14.1 General Development Policies -Design in Urban Areas [All Dev]: PO 2.1	General Development Policies - Design in Urban Areas [All Dev - 4 or More Building Levels]: PO 9.6, 9.7, DTS/DPF 9.6, 9.7 should apply to all development. It is recommended that PO 9.6 and DTS/DPF 9.6, PO 9.7, DTS/PDF 9.7 be included under the heading [All Development].
Principles of Development Control				
196	Development should be designed to create active street frontages that provide activity and interest to passing pedestrians and contribute to the liveliness, vitality and security of the public realm. Design Techniques (these are ONE WAY of meeting the above Principle) 196.1 Design solutions may include: (a) Well designed and legible entrances, lobbies and commercial uses at ground level. (b) Window displays of merchandise or open shopfronts, well lit panel displays, corporate identity and/or artworks. (c) Avoiding vast expanses of blank walls presenting flat surfaces without detailing, openings or activity. (d) Orientating active parts of a building to the street frontage. (e) Incorporating uses such as retailing, food and drink outlets, counter services and cafés/restaurants particularly with outdoor seating areas.	3	General Development Policies - Design in Urban Areas PO 9.6 and DTS/DPF 9.6, PO 9.7, DTS/PDF 9.7.	General Development Policies - Design in Urban Areas PO 9.6 and DTS/DPF 9.6, PO 9.7, DTS/PDF 9.7 should apply to all development. It is recommended that PO 9.6 and DTS/DPF 9.6, PO 9.7, DTS/PDF 9.7 be included under the heading [All Development].

Number	Description	Transition category	Where has it been included?	Comments
197	Retail frontages should be designed to provide interest to passing pedestrians at street level and relief to building mass. Design Techniques (these are ONE WAY of meeting the above Principle) 197.1 Design solutions may include: (a) Providing views into and out of buildings. (b) Providing interesting and active window displays. (c) Providing external light fittings, particularly where street lighting is blocked eg under verandahs. (d) Using transparent glass, open mesh or transparent security shutters that allow views into and out of the building. (e) Illuminating shop windows until 12.00pm. (f) Incorporating detailed architectural facade treatment.	3	Covered at very high level Design in Urban Areas GDP [All Development - 4 or More Building Levels]: PO 9.2	The Code speaks at a very high requiring fine-grain detail at street level to reinforce human scale and only applies to buildings of 4 or more building levels. Further detail is required so that the applicant is clear about what is expected. It is recommended that the following new PO and DTS/DPF be included within the Design in Urban Areas GDP [All Non-Residential Development]: PO: <i>"Retail frontages designed to provide interest to passing pedestrians at street level and relief to building mass."</i> DTS/DPF: <i>"Development designed to: (a) provide views into and out of buildings; (b) provide interest and active window displays; (c) provide external light fittings, where street lighting is blocked e.g. under verandahs; (d) use transparent glass, open mesh or transparent security shutters that allow views into and out of the building; and/or (e) incorporate detailed architectural facade treatment."</i>
198	Commercial buildings should be designed to ensure that ground floor facades are rich in detail so they are exciting to walk by, interesting to look at and to stand beside. Design Techniques (these are ONE WAY of meeting the above Principle) 198.1 Design solutions may include: (a) Providing well designed legible entrances and lobbies that address the street. (b) Creating richness and detail at street level through methods such as artwork (including animating spaces with water), use of high quality materials and variation in materials, wall and window detailing and decoration. (c) Locating lively interior activities along street frontages so they are visible from outside e.g. employee canteens or reception areas oriented towards the street; (d) Cafés and restaurants utilising footpath space; and/or (e) Providing designs which incorporate places for people to sit and watch.	3	General Development Policies - Design in Urban Areas PO 9.6 and DTS/DPF 9.6, PO 9.7, DTS/DPF 9.7.	
199	Residential development should be designed to create interesting pedestrian environments and resident surveillance of any street, accessway and driveway. Design Techniques (these are ONE WAY of meeting the above Principle) 199.1 Design solutions may include: (a) Using transparent glass along street frontages. (b) Maximising the number of windows and doors. (c) Enlivening building edges with balconies, bays, porches, awnings or other projections. (d) Designing interesting and innovative fencing and walls. (e) Incorporating transparent fencing and walls that enable presentation of the building to the street eg use of mesh fencing rather than blank solid walls. (f) Avoiding blank high walls and elevations unbroken by architectural detail which prevents community interaction and resident surveillance of the street. (g) Avoiding car parking in front of buildings. (h) Addressing housing on corner sites to both street frontages by establishing prominent entrances and/or windows at the apex of buildings. (i) Incorporating compatible non-residential uses such as home offices, art/craft workshops and galleries at ground floor level.	2	(b) Design in Urban Areas GDP [All Residential Development]: PO 14.1, 14.2 (c) Design in Urban Areas [Residential - 3 Building Levels or Less]: PO 18.2, DTS/DPF 18.2 (d) Design in Urban Areas GDP [All Development]: PO 8.1 (e) Design in Urban Areas GDP [All Development]: PO 8.1, Residential Development - 4 or More Building Levels]: PO 26.1, DTS/DPF 26.1 (f) Residential Development - 4 or More Building Levels]: PO 26.1, DTS/DPF 26.1	
Outdoor Dining				
Policy Objectives				
52	Development that contributes to the vibrancy, activity and desired character of a locality.			
Principles of Development Control				

Number	Description	Transition category	Where has it been included?	Comments
200	Outdoor dining should: (a) be located outside the associated premises; (b) provide sufficient set-backs, such as from kerbs and property boundaries, and clearances, such as from buildings; (c) be located in an area safe for patrons where the security of the building is not compromised; (d) ensure the dining area is set back from the building line at street intersections; (e) ensure unimpeded pedestrian flow through free and uninterrupted pedestrian paths; and (f) ensure wheelchair access to pedestrian ramps is not compromised.	5		There are no provisions within the Code that guide the provision of outdoor dining. It is recommended that the following principle be included into the Design in Urban Areas GDP [All Non-Residential Development] under a new heading 'Outdoor Dining' <i>Outdoor dining that:</i> (a) is located outside the associated premises; (b) provides sufficient set-backs and clearances from kerbs, property boundaries and buildings; (c) is located in an area safe for patrons where the security of the building is not compromised; (d) ensures the dining area is set back from the building line at street intersections; (e) ensures unimpeded pedestrian flow through free and uninterrupted pedestrian paths; and (f) ensures wheelchair access to pedestrian ramps is not compromised.
201	Structures should: (a) be of high quality design and form an integral part of the streetscape; (b) not restrict public access; (c) not detract or restrict views of significant sightlines, buildings and landmarks;	5		There are no provisions within the Code that guide the provision of outdoor dining. It is recommended that the following principle be included into the Design in Urban Areas GDP [All Non-Residential Development] under a new heading 'Outdoor Dining': <i>Structures that:</i> (a) are of high quality design and form an integral part of the streetscape; (b) maintain public access; and (c) maintain views of significant sightlines, buildings and landmarks.
202	Signage that identifies the business name or logo, or advertises goods sold on the premises is only appropriate on glass and canvas screens and umbrellas and should meet the following: (a) signage and advertisements should be designed to improve and complement the amenity of the premises, be of an appropriate design and consistent with the desired character of the locality; (b) advertisements on outdoor dining items such as umbrellas and canvas screens should not exceed a portion that covers 10 percent of the total available space on each outdoor dining item, up to half of which may be commercial advertisements in the form of product logos used or sold by the premises; (c) advertisements should not be illuminated or animated; and (d) third party advertising on outdoor dining items is inappropriate.	5		There are no provisions within the Code that guide the provision of outdoor dining. It is recommended that the following principle be included into the Advertisements GDP under a new heading 'Outdoor Dining': <i>Signage and advertisements associated with outdoor dining identifying the business name or logo, or advertises goods sold on glass and canvas screens and umbrellas that:</i> (a) complement the amenity of the premises; (b) are of an appropriate design and consistent with the desired character of the locality; (c) does not exceed a portion that covers 10% of the total available space on each outdoor dining item, up to half of which can be commercial advertisements in the form of product logos used or sold by the premises; (d) are non illuminated or animated; and (e) does not include third party advertising on outdoor dining items.
Demolition				
Policy Objectives				
53	Where demolition of an existing building is proposed, the replacement building is designed and sited to achieve the purposes of the relevant Zone and Policy Area and to provide for quality urban design.	4		
Principles of Development Control				

Number	Description	Transition category	Where has it been included?	Comments
203	<p>The demolition of any building should not occur unless Development Approval for a replacement development has been granted. Exceptions may only be granted:</p> <p>(a) for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order; or</p> <p>(b) where located within the Park Lands Zone.</p> <p>Should the replacement development not commence within 12 months of the granting of Development Approval, then landscaping of the site should be undertaken.</p>	5		<p>Prior to the introduction of Development Plan policy Council experienced problems with buildings being demolished and land remaining vacant or used as an open lot car park for many years to follow. To address this issue a Development Plan policy was introduced in the General PAR to ensure that demolition of buildings only occurs in circumstances where there is a public health and safety issue, where it is located in the Park Lands or where development approval for a new building has been issued as this shows commitment to building. In addition, the policies in place requiring development that has not commenced landscaping should be undertaken. Since the introduction of the policy there has been a significant reduction in the number of long term vacant sites.</p> <p>In the City, relatively high numbers of consents are granted which, for a number of reasons, do not lead to a development proceeding. Demolition of buildings without proceeding with the intended full development is a significant risk that could leave the City with many vacant sites. A level of control to prevent a proliferation of vacant site is a reasonable policy goal aligned with ongoing vibrancy.</p> <p>On this basis it is important the principle is retained and incorporated into Design in Urban Areas GDP [All Development] under a new heading 'Demolition' or alternatively be included within all Zones except the Park Lands Zone within the City.</p> <p><i>Building demolition is to be refrained unless Development Approval for a replacement development has been granted. Demolition may only be granted for documented reasons of public health or safety agreed by the planning authority or alternatively agreed by a statutory order. If the replacement development has not commenced within 12 months of the granting of Development Approval, landscaping of the site is to be undertaken.</i></p>
Vacant Sites and Buildings				
Policy Objectives				
54	The temporary use of vacant or underdeveloped land which is not likely to be the subject of long term development in the short term.	5		<p>In the City, relatively high numbers of consents are granted which, for a number of reasons, do not lead to a development proceeding. Demolition of buildings without proceeding with the intended full development is a significant risk that could leave the City with many vacant sites. A level of control to prevent a proliferation of vacant site is a reasonable policy goal aligned with ongoing vibrancy.</p> <p>On this basis it is important the principle is retained and incorporated into Design in Urban Areas GDP [All Development] under a new heading 'Land Use' or alternatively be included within all Zones except the Park Lands Zone and City Living Zones within the City.</p> <p><i>Temporary use of vacant or underdeveloped land that is not likely to be the subject of long-term development in the short term. Temporary uses of vacant or underdeveloped land are to be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.</i></p>
Principles of Development Control				
204	Vacant and underdeveloped land and buildings should be brought into use as soon as possible.	5		As Above
205	Where there is no immediate prospect of a long term use, a temporary use for up to 24 months (excluding temporary car parks) is encouraged. Temporary uses of vacant or underdeveloped land should be landscaped, screened and/or treated so that negative impacts to the public realm are minimised.	5		As Above
206	Temporary storage of Council equipment may be appropriate provided measures are incorporated for: (a) dust control; (b) appropriate screening including landscaping; (c) containment of litter and waste; and (d) appropriate securing of the site.	5		This is important for the every day workings for the City and should be listed in the Accepted Development Table for each Zone
Landscaping				

Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
55	Water conserving landscaping that enhances the local landscape character and creates a pleasant, safe and attractive living environment.	2	General Development Policies - Design in Urban Areas PO DO 1(d)	
Principles of Development Control				
207	Landscaping should: (a) be selected and designed for water conservation; (b) form an integral part of the design of development; and (c) be used to foster human scale, define spaces, reinforce paths and edges, screen utility areas and enhance the visual amenity of the area.	2	General Development Policies - Design in Urban Areas PO 3.1(c),(d), PO 21.1 (3 buildings or less)	
208	Landscaping should incorporate local indigenous species suited to the site and development, provided such landscaping is consistent with the desired character of the locality and any heritage place.	5		There isnt anything in the Code that encourages the use of indigenous tree species or refers to the importance of landscaped space around heritage place. Both aspects should be incorporated into the Code. Landscaping should be incorporated into 'Design in Urban Areas and should apply to all development under the heading 'Landscaping'. The PO should be worded as follows: <i>"Landscaping incorporating local indigenous species suited to the site and development."</i> Landscaping of heritage places should be addressed in the Local Heritage and state Heritage Place Overlays under a new heading 'Landscaping' as follows: <i>Landscaping consistent with the character of the Local Heritage Place.</i>
209	Landscaping should be provided to all areas of communal space, driveways and shared car parking areas.	2	General Development Policies - Design in Urban Areas PO 6.4, PO 6.5, PO 34.1, PO 34.2 (GROUP Dwellings)	
210	Landscaping between the road and dwellings should be provided to screen and protect the dwellings from dust and visual impacts of the road.	2	General Development Policies - Design in Urban Areas PO 6.5, DTS/DPF 6.5	
Advertising				
Policy Objectives				
56	Outdoor advertisements that are designed and located to: (a) reinforce the desired character and amenity of the locality within which it is located and rectify existing unsatisfactory situations; (b) be concise and efficient in communicating with the public, avoiding a proliferation of confusing and cluttered displays or a large number of advertisements; and (c) not create a hazard.	2	General Development Policies - Advertisements DO1, PO 2.1	
Principles of Development Control				
211	Advertisements should be designed to respect and enhance the desired character and amenity of the locality by the means listed below: (a) the scale, type, design, location, materials, colour, style and illumination of any advertisements should be compatible with the design and character of the buildings and land to which it is related, and should be in accordance with provisions for the Zone and Policy Area in which it is situated and any relevant adjacent Zones or Policy Areas; (b) advertisements should be integrated with the architectural form, style and colour of buildings and wherever possible, requirements for advertisements should be considered in the design of new buildings; (c) advertisements should be artistically interesting in terms of graphics and construction with intricacy and individuality in design encouraged while maintaining consistency in design and style where co-ordinated advertisements are appropriate; (d) structural supports should be concealed from public view or of minimal visual impact; (e) advertisements on individual premises should be co-ordinated in terms of type and design and should be limited in number to minimize visual clutter; (f) advertisements should be displayed on fascia signs or located below canopy level; (g) advertisements on buildings or sites occupied by a number of tenants should be co-ordinated, complementary and the number kept to a minimum; and (h) advertisements on or adjacent to a heritage place should be designed and located to respect the	2	(a) Advertisements PO 1.1, PO 3.1, PO 4.1 (b) Advertisements PO 1.1 (c) Advertisements PO 2.2, DTS 2.2 (d) Advertisements PO 1.2 (e) Advertisements PO 2.1 (f) Advertisements DTS/DPF 1.1 (a),(b) (g) Advertisement PO 2.2	

Number	Description	Transition category	Where has it been included?	Comments
212	Advertisements are inappropriate on premises used for a dwelling. This does not include business plates associated with a home activity which does not exceed 0.2 square metres.	2	Table 1 - Maximum Size and Height Requirements (City Living Zone)	
213	In the City Living Zone, the Adelaide Historic (Conservation) Zone or the North Adelaide Historic (Conservation) Zone, advertisements should not detrimentally affect residential amenity and advertisements at roof level where the building forms the backdrop (i.e. plant room) are inappropriate.	2	Advertisements DTS/DPF 1.1,	
214	Product advertisements illustrating products sold on the premises in conjunction with the business name should not exceed 25 percent of the area of any advertisement.	2	Advertisements PO 3.1, DTS/DPF 3.1
