Policy area(s)	Pedestrian Access			
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
61	Development that promotes the comfort, enjoyment and security of pedestrians by providing shelter and reducing conflict with motor vehicles.	5 - Not included in the Code and should be reinstated		Much of the pedestrian policy has been deleted. Some is within zones however it is not specifically mentioned. Reinsert policy in transport and access.
62	Objective 62: Development that contributes to the quality of the public realm as a safe, secure and attractive environment for pedestrian movement and social interaction.			
63	Safe and convenient design of and access to buildings and public spaces, particularly for people with disabilities.	3 - Included in the Code but policy intent changed (NOT OK)	PO 4.1	
Principles of Development Control				
226	Development should reflect the significance of the paths and increase the permeability of the pedestrian network identified within Map Adel/1 (Overlay 2) by ensuring: (a) pedestrians are not disrupted or inconvenienced by badly designed or located vehicle access ramps in footpaths or streets; and (b) vehicle and service entry points are kept to a minimum to avoid adverse impact on pedestrian amenity.	5 - Not included in the Code and should be reinstated		Insert into to relevant zone
227	Within the Core, Primary and Secondary Pedestrian Areas identified within Map Adel/1 (Overlays 2, 2A and 3), development should be designed to support the establishment and maintenance of continuous footpaths so that pedestrian flow is free and uninterrupted. Pedestrian access should be provided at ground level mid-block between all streets.	5 - Not included in the Code and should be reinstated		Insert into to relevant zone or overlay
228	228 Development should provide and maintain pedestrian shelter, access and through-site links in accordance with the walking routes identified within Map Adel/1 (Overlays 2, 2A and 3) and the provisions of the Zone or Policy Area in which it is located. Such facilities should be appropriately designed and detailed to enhance the pedestrian environment, have regard to the mobility needs of people with disabilities, and be safe, suitable and accessible.	5 - Not included in the Code and should be reinstated		Insert into to relevant zone or overlay
229	229 Corner buildings in the Central Business Policy Area of the Capital City Zone, buildings adjacent to street intersections and buildings along a high concentration public transport route or along public transport pedestrian routes identified within Map Adel/1 (Overlay 4) should provide weather protection for pedestrians in the form of verandahs, awnings or canopies. Where verandahs or awnings are provided which block street lighting, they should include additional lighting beneath the canopy.	5 - Not included in the Code and should be reinstated		Insert into to relevant zone or overlay
230	230 Permanent structures over a footpath should have a minimum clearance of 3.0 metres above the existing footpath level, except for advertisements which should have a minimum clearance of 2.5 metres and temporary structures and retractable canopies which should have a minimum clearance of 2.3 metres above the existing footpath level.	5 - Not included in the Code and should be reinstated		Insert into design in urban areas or overlay
231	231 Where posts are required to support permanent structures, they should be located at least 600 millimetres from the kerb line.	5 - Not included in the Code and should be reinstated		Insert into design in urban areas or overlay . If the encroachment policy is a design standard it can also resolve this.
232	232 Access for people with disabilities should be provided to and within all buildings to which members of the public have access in accordance with the relevant Australian Standards. Such access should be provided through the principal entrance, subject to heritage considerations and for exemptions under the relevant legislation.	5 - Not included in the Code and should be reinstated	4.1	Insert into design in urban areas or overlay. Add to PO 4.1

General comments	Check the tables for number of bike parks per land uses. For the DTS land			
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
64	Greater use of bicycles for travel to and within the City and the improvement of conditions, safety and facilities for cyclists.		PO 9.1 - 9.3	
65	Objective 65: Adequate supply of secure, short stay and long stay bicycle parking to support desired growth in City activities.			
Principles of Development Control				
233	Development should have regard to the bicycle routes identified within Map Adel/1 (Overlay 3) by: (a) limiting vehicular access points; and (b) ensuring that vehicles can enter and leave the site in a forward direction, thereby avoiding reverse manoeuvres. An adequate supply of on-site secure bicycle parking should be provided to meet the demand generated by the development within the site area of the development. Bicycle parking should be provided in accordance with the requirements set out in Table Adel/6.		PO 9.1 - 9.3	This is not carried over. The map does not reflect current bike routes.
234		5 - Not included in the Code and should be reinstated	table 3.	Insert bicycle rates that have been missed. Insert those that have been missed. To Support cycling beginning and end of trip facilities needs to be provided. The P& D Code only seek Bicycle provisions are only relevant in 'Designated Areas'. This is not suitable to create the convinced needed to support a cycling as genuine mode. Why would someone from Suburban Neighbourhood Zone in Unley ride if they only had bicycle parking at the end of their trip rather than the start of their trip? Regional planning is needed to support cycling. In addition, it is a disadvantage to city developers if they have to provide parking when metropolitan areas do not. Support all people within metro areas to cycle by enabling all metropolitan areas to provide cycle parking to support a network.
235	Onsite secure bicycle parking facilities for residents and employees (long stay) should be: (a) located in a prominent place; (b) located at ground floor level; (c) located undercover; (d) located where passive surveillance is possible, or covered by CCTV; (e) well lit and well signed; (f) close to well used entrances; (g) accessible by cycling along a safe, well lit route; (h) take the form of a secure cage with locking rails inside or individual bicycle lockers; and (i) in the case of a cage have an access key/pass common to the building access key/pass. Onsite secure bicycle parking facilities for short stay users (i.e. bicycle rails) should be: (a) directly associated with the main entrance; (b) located at ground floor level;	3 - Included in the Code but policy intent changed (NOT OK)	PO 9.1 - 9.3	The following should be reinstated as a DTS 9.2 (b) located at ground floor level;(e) well lit and well signed; (f) close to well used entrances;(h) take the form of a secure cage with locking rails inside or individual bicycle lockers; and (i) in the case of a cage have an access key/pass common to the building access key/pass. Reinstate.
236	(c) located undercover; (d) well lit and well signed; (e) located where passive surveillance is possible, or covered by CCTV; and (f) accessible by cycling along a safe, well lit route.	3 - Included in the Code but policy intent changed (NOT OK)	PO 9.1 - 9.3	The following should be reinstated as a DTS 9.2 (b) located at ground floor level;(e) well lit and well signed; (f) close to well used entrances;(h) take the form of a secure cage with locking rails inside or individual bicycle lockers; and (i) in the case of a cage have an access key/pass common to the building access key/pass.

Number	Description	Transition category	Where has it been included?	Comments	
Policy Objectives					
68	Development that supports a shift toward active and sustainable transport modes (i.e. public transport, cycling and walking).	5 - Not included in the Code and should be reinstated		The shift is not represented by the policy. Insert DO to support this policy. Add Mobility as a service. <i>DO XX</i> <i>Development that supports a shift towards active and sustainable transport modes (i.e. public transport, mobility as a service, cycling and walking) in order to promote affordable, healthy and communities.</i>	
69	Objective 69: An enhanced City environment and the maintenance of an appropriate hierarchy of roads to distribute traffic into the City to serve development in preference to through traffic.	5 - Not included in the Code and should be reinstated		The link and place method has not been used nor has the hierarchy of roads.	
70	Objective 70: Adequate off-street facilities for loading and unloading of courier, delivery and service vehicles and access for emergency vehicles.	3 - Included in the Code but policy intent changed (NOT OK)	Vehicle Parking Areas - 6.6	This is more about having the loading area in the site rather than having to have loading areas in the site. In high density areas this may not be achievable nor efficient or appropriate. Shared approaches are needed.	
Principles of Development Control					
241	Development should be designed so that vehicle access points for parking, servicing or deliveries, and pedestrian access to a site, are located to minimise traffic hazards and vehicle queuing on public roads. Access should be safe, convenient and suitable for the development on the site, and should be obtained from minor streets and lanes unless otherwise stated in the provisions for the relevant Zone or Policy Area and provided residential amenity is not unreasonably affected. Facilities for the loading and unloading of courier, delivery and service vehicles and access for emergency vehicles should be provided on-site as appropriate to the size and nature of the development. Such facilities should be screened from public view and designed, where possible, so that vehicles may enter and leave in a forward direction. Design Technique (this is ONE WAY of meeting the above Principle)	3 - Included in the Code but policy intent changed (NOT OK)	PO 1.4	Minor streets need to be emphasised.	
242	242.1 Commercial vehicle facilities in compliance with the requirements recommended in Australian Standard AS 2890.2: Off-Street Parking - Part 2: Commercial Vehicle Facilities.	3 - Included in the Code but policy intent changed (NOT OK)	1.3	The on-site requirements have not been emphasised. The proposed policy does not work in a City Urban Context. Spaces are constrained there is inability to separate all movements. Reinstatement Policy.	
243	Where practicable, development sites should contain sufficient space for the location of construction equipment during the course of building construction, so that development does not rely on the use of Council road reserves to locate such equipment.	4 - Not included in the Code but OK to remove		This is more of a management provision. This can be dealt with as part of their construction management plan rather than a planning condition?	
244	244 Vehicular access to development located within the Core and Primary Pedestrian Areas identified in Map Adel/1 (Overlay 2A) should be limited and designed to minimise interruption to street frontages.	5 - Not included in the Code and should be reinstated		This should be reinstated and expanded to reflect the Smart Move Strategy and or the ADM street hierarchy.	
245	245 Where vehicular access to a development is gained by an existing crossing in the Core Pedestrian Area identified in Map Adel/1 (Overlay 2A), there should be no increase in the number of parking spaces served by the crossing, nor any increase in the number of existing crossings serving that development.	5 - Not included in the Code and should be reinstated		Non-ancillary parking is not explicitly objected against.	
246	246 There is no minimum setback required from a rear access way where the access way is wider than 6.5 metres. Where the access way is less than 6.5 metres in width, a setback distance equal to the additional width required to make the access way 6.5 metres or more, is required to provide adequate manoeuvrability for vehicles.	5 - Not included in the Code and should be reinstated		Add to Design in Urban Areas.	
247	247 The number of access points on primary city access roads identified in Map Adel/1 (Overlay 1) should be limited to minimise traffic and pedestrian inconvenience, interference with public transport facilities and adverse effects on the environment.	5 - Not included in the Code and should be reinstated		Reinstatement policy. Subject roads are O'Connell Street, North Terrace, Front Road, East Terrace/Hutt South Terrace, West Terrace, Melbourne Street, Flinders/Franklin. This might be better in an Overlay in the City.	
248	248 Buildings located along primary and secondary access roads should be sited to avoid the need for vehicles to reverse on to the road (unless the dimensions of the site make this impractical)				

Number	Description	Transition category	Where has it been included?	Comments
249	Access roads within residential development should: (a) provide convenient access for emergency vehicles, visitors and residents; (b) enable vehicles to enter and leave a site in a forward direction; (c) provide a comfortable and safe pedestrian environment; and (d) be well lit.		Pedestrian links PO 6.4 Forward Direction 4.1 Lighting 6.5	Lighting doesn't appear to be required in anything other than parking areas. Add policy to PO 6.5
250	Access roads within residential development for older people and people with disabilities should: (a) include platforms across roadways at pedestrian crossing points; (b) not have steep gradients; and (c) have level surface passenger loading areas.	5 - Not included in the Code and should be reinstated	Access for People with Disabilities	This is universal design . Should this be required everywhere?
NEW CONTENT IN THE CODE (insert below)				
	ERROR page 664 refers to DTS 21.5 - this has been deleted. There doesn't appear to be any requirements for disabled vehicle parking. Where are the multi level car parking design principles?			

Zone		Policy area(s)			Car Parking
General comments		<p>This is in Transport, Access and Parking, Design In Urban Areas and specific policies are in each zone.</p>			
Number	Description	Transition category	Where has it been included?	Comments	
Policy Objectives					
71	To meet community expectation for parking supply while supporting a shift toward active and sustainable transport modes.	4 - Not included in the Code but OK to remove		Add policy to DO.	
72	An adequate supply of short-stay and long-stay parking to support desired growth in City activities without detrimental affect on traffic and pedestrian flows.	4 - Not included in the Code but OK to remove		This is a CoA Management approach rather than Planning policy.	
Principles of Development Control					
251	<p>Car parking areas should be located and designed to:</p> <ul style="list-style-type: none"> (a) ensure safe and convenient pedestrian movement and traffic circulation through and within the car parking area; (b) include adequate provision for manoeuvring and individually accessible car standing areas; (c) enable, where practical, vehicles to enter and leave the site in a forward direction; (d) minimise interruption to the pattern of built form along street frontages; (e) provide for access off minor streets and for the screening from public view of such car parking areas by buildings on the site wherever possible; (f) minimise adverse impacts on adjoining residential properties in relation to noise and access and egress; (g) minimise loss of existing on-street parking spaces arising through crossovers and access; (h) incorporate secure bicycle parking spaces and facilitate convenient, safe and comfortable access to these spaces by cyclists; and (i) provide landscaping, such as semi-mature trees, to shade parked vehicles and reduce the visual impact of the car parking area while maintaining direct sight lines and informal visual surveillance. <p>Design Technique (this is ONE WAY of meeting the above Principle) 251.1 Car parking in compliance with the requirements recommended in Australian Standard AS 2890.1: 'Parking Facilities - Off-street Car Parking' and Australian Standard AS 2890.2: Off-Street Parking - Part 2: Commercial Vehicle Facilities.</p>	3 - Included in the Code but policy intent changed (NOT OK)	Transport, Access and Parking PO3.1-3.9 PO 6.1 - 6.7	Add to PO 6.2	
252	<p>All development should provide car parking spaces for people with disabilities in accordance with the requirements in the Building Code of Australia (BCA). For classes of buildings not covered by the requirements of the BCA, the number of spaces should be provided in accordance with Table Adel/7 and such car parking spaces should comply with Australian Standard 2890.1: 'Parking Facilities - Off-street Car Parking'.</p>	5 - Not Included in the Code and should be reinstated		<p>This has not been included. There is a policy 4.1. that relates to the design of Disabled parking however it does not require it. Insert Policy. <i>DTS/DPF 4.1</i> <i>All development should provide car parking spaces for people with disabilities.</i> <i>DTS/DPF 4.1</i> <i>Disabled car parking should be provided as follows:</i> a) <i>A minimum of 1 car parking space in every 15 spaces provided with any form of development should function as a car parking space suitable for use by people with disabilities and other people with small children and prams so they can easily be loaded/unloaded from vehicle side doors.</i> b) <i>Every second parking space provided for people with special needs shall be reserved for the exclusive use of people with disabilities (i.e. 1 in 30 spaces).</i></p>	

Number	Description	Transition category	Where has it been included?	Comments
253	<p>Within the City Living Zone, Adelaide Historic (Conservation) Zone, North Adelaide Historic (Conservation) Zone, Main Street, Mixed Use and Institutional Zones:</p> <p>(a) adequate car parking should be provided within the site area of the development to meet the demand generated by the development;</p> <p>(b) car parking should be provided in accordance with Table Adel/7; and</p> <p>(c) car parking rates lower than the minimum in Table Adel/7 may be appropriate where there is readily accessible and frequent public transport in the locality or it can be demonstrated that a lower provision is warranted, such as for the following reasons:</p> <p>(i) the nature of development;</p> <p>(ii) existing heritage places on or adjacent to the development site which dictates the development of the site in a manner which hampers the provision of on-site parking;</p> <p>(iii) the opportunity to exploit shared car parking areas between uses based upon compatible hours of peak operation;</p> <p>(iv) use of a car share scheme; or</p> <p>(v) suitable arrangements for any parking shortfall to be met elsewhere or by other means.</p> <p>Off-street parking should:</p>	3 - Included in the Code but policy intent changed (NOT OK)	Vehicle Parking Rates PO 5.1	Car parking rates have changed. Policy Objectives						
66	Development that promotes the use of sustainable transport consistent with State Government objectives and initiatives.	3 - Included in the Code but policy intent changed (NOT OK)		The proposed policy does not support a mode shift which was sought by State Government Objectives. However, the Development Plan Policy was probably not enforable due to it referring to other strategies rather than being a policy. Insert Policy.		
67	Objective 67: Accessible public transport for all metropolitan residents and visitors and safe and attractive facilities for public transport users.	4 - Not included in the Code but OK to remove				
Principles of Development Control						
239	Development along a high concentration public transport route should be designed to ensure that activity and interest for public transport passengers is maximised through the incorporation of active street frontages.		Transport Access and Parking DO 1.	There is some policy around the impact to public transport routes. Insert Policy.		
240	Development along high concentration public transport routes identified in Map Adel/1 (Overlay 4) should: (a) ensure there are pedestrian links through the site if needed to provide access to public transport; (b) provide shelter (e.g. verandahs) for pedestrians against wind, sun and rain; (c) provide interest and activity at street level; and (d) where possible, avoid vehicle access across high concentration public transport routes identified in Map Adel/1 (Overlay 4). Where unavoidable, vehicle access should be integrated into the design of the development whilst retaining active street frontages.	5 - Not included in the Code and should be reinstated		The pedestrain policy seems to be deleted. Access from these major roads seem to be deleted. Need to check the zone policy. Overlay 4 is North Terrace, Curry/Grenfell Stret, Hutt Street, Pultney Street, Morphett Street, Sturt Street west, West Terrace, O'Connell Street. Without the streets specified, it will mean the applicant has to interpret the policy. Insert Policy.

Transition category														
Where has it been included?														
Comments														
Policy Objectives														
OBJ 57	High quality, readily accessible external and internal open spaces in appropriate locations that form an integral part of the public domain, provide sanctuary, visual pleasure and a range of recreational and leisure opportunities and contribute to the City's pedestrian and bicycle network.	4												
OBJ 58	Development that conserves and enhances the City's squares, improves their visual amenity, increases their range of uses, and maximises pedestrian accessibility to their landscaped areas.	2	Capital City Zone PO 3.8											
OBJ 59	A distinctive Adelaide streetscape identity through the use of street furniture, graphics, public art, signs, lighting and landscaping, recognising existing visually significant buildings and trees.	4												
Principles of Development Control														
219	The Squares should be for the relaxation, enjoyment and leisure of the City's workers, residents, students and visitors. The landscaped area of the Squares should where possible, be enlarged to improve visual and functional amenity. Development should: (a) maximise pedestrian convenience, safety and access to the landscaped area of the Squares and reduce conflict between pedestrians and vehicles; (b) contribute to the amenity of the City through the provision of tall trees and other suitable drought tolerant planting; (c) provide facilities such as seating, rest areas, and weather protection to enhance cultural, social and outdoor recreational activity; (d) maintain a high quality of lighting for security and amenity; (e) minimise buildings, structures, utilities and service facilities; and (f) maintain a high quality of design.	5		Although the Code contains provisions on development fronting the squares, there are no provisions in regard to development within the squares. On this basis the PDC should be included within the Capital City Zone under the heading 'Built Form and Character'.										

Number	Description	Transition category	Where has it been included?	Comments
220	<p>Development fronting public spaces should be of a high standard of design and should reinforce the distinctive urban character of the City by:</p> <p>(a) defining and enclosing the City Squares with a continuous edge of peripheral buildings which:</p> <p>(i) are of relatively consistent height and scale as appropriate to the desired character surrounding each of the Squares;</p> <p>(ii) are designed to maintain the continuity of the streetscape;</p> <p>(iii) are situated close to or abutting the Square frontages;</p> <p>(iv) provide ground floor activities that support the public use of the space; and</p> <p>(v) are designed and sited to minimise overshadowing of the Square's garden areas.</p> <p>(b) enhancing interest, use, safety and a range of activities by ensuring:</p> <p>(i) facades abutting public spaces provide visual interest; and</p> <p>(ii) appropriate elements of public art;</p> <p>(c) defining the major streets as important linear public spaces which display a formal townscape character by:</p> <p>(i) ensuring that buildings in the Capital City Zone maintain or re-establish, a continuous edge of built-form abutting or situated close to major street frontages;</p> <p>(ii) emphasising the townscape importance of development at the intersections of major streets, and intersections of major streets with City Squares, with corner buildings of a scale and form appropriate to their location and situated close to or abutting both street frontages;</p> <p>(iii) ensuring that buildings fronting on to such streets are of a shape and orientation which relate to and reinforce the rectilinear grid pattern of the City; and</p> <p>(iv) requiring that any substantial set-back, open space or plaza be behind a built-form or landscape element which maintains or reinforces the continuity and line of the street frontage;</p> <p>(d) maintaining the existing pattern and structure of streets and laneways;</p> <p>(e) restricting building over minor streets and laneways to avoid over-shadowing and preserve the built-form pattern established by traditional land sub-division in the City; and</p> <p>(f) allowing for ease of pedestrian circulation and through access where possible.</p> <p>Design Techniques (these are ONE WAY of meeting parts of the above Principle)</p> <p>220.1 In relation to Principle 220(a), minimising set-back distances from the perimeter of the space to</p>	2	<p>(a) partly covered in Capital City Zone PO 3.6, DTS/DPF 3.6, PO 3.7, PO 3.8</p> <p>(b) Capital City Zone PO 2.1, PO 2.2.</p> <p>(c) partly covered in Capital City Zone PO 3.3, PO 3.4</p> <p>(f) Capital City Zone PO 6.1</p>	<p>There are no provisions within the Code that seek to maintain the structure and pattern of the City's streets which is an essential element of the National Heritage listing of the City Layout. It is recommended that the following policy be included in the Capital City Zone, City Main Street Zone and the City Living Zone, under the heading 'Built Form and Character':</p> <p><i>"Development that maintains the existing built-form pattern and structure of streets and laneways."</i></p>
221	<p>Development on, over, encroaching upon, or opening on to public spaces should not endanger public safety or cause undue inconvenience to either pedestrians, including persons with disabilities, or users of vehicles, and should ensure adequate alignment of building levels to surface levels.</p>	5		<p>There are no provisions regarding encroachments within the Code. It is recommended that encroachment guidelines and standards be incorporated within the Code to ensure public safety.</p>
222	<p>Cornices, sunscreens and hoods should:</p> <p>(a) have a minimum height of 3 metres above the level of the footway or 5 metres above a carriageway;</p> <p>(b) have a maximum projection of 1.2 metres over a public space which exceeds 10 metres in width and a maximum of 600 millimetres over a public space which is 10 metres or less in width; and</p> <p>(c) be constructed to prevent water dripping or running into a public place.</p>	5		<p>There are no provisions regarding encroachments within the Code. It is recommended that encroachment guidelines and standards be incorporated within the Code to ensure public safety.</p>
223	<p>Public spaces should allow good visibility into and across the space to promote security and safety and should provide opportunities for citizens to meet and socialise.</p>	2	<p>General Development Policies - Design in Urban Areas PO 2.1</p>

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
OBJ 73	The role of the City enhanced as: (a) the community, civic and cultural heart of South Australia and as a driving force in the prosperity of the State; (b) the State centre for business, administration, services, employment, education, political and cultural activities, government and public administration; (c) a welcoming, secure, attractive and accessible meeting place for the people of metropolitan Adelaide and beyond for leisure, entertainment, civic and cultural activity, specialty shopping, personal and community services; (d) a centre for education and research built on key academic strengths and on the excellent learning environment and student accommodation available in the City; (e) a supportive environment for the development of new enterprises drawing on the cultural, educational, research, commercial and information technology strengths of the City centre; (f) the gateway to the attractions of South Australia for international and interstate visitors by developing a wide range of visitor accommodation, facilities and attractions, particularly attractions which showcase the particular strengths of South Australia; and (g) a great place to live, with a growing diversity of accommodation for different incomes and lifestyles.	2	Capital City Zone DO 1	
74	A business environment which encourages investment from domestic and foreign sources, business development and employment.	4		
OBJ 75	Development which reinforces clusters and nodes of activity and distinctive local character.	4		Addressed in the Sub-Zones
OBJ 76	A diverse mix of commercial, community, civic and residential activities to meet the future needs of the Capital City of South Australia.	2	Capital City Zone PO 1.1 City Riverbank Zone DO 1	
Principles of Development Control				
266	Development, particularly within the Capital City and Institutional Zones, is encouraged to: (a) provide a range of shopping facilities in locations that are readily accessible; (b) provide for the growth in economic activities that sustain and enhance the variety and mix of land uses and the character and function of the City; (c) maximise opportunities for co-location, multiple use and sharing of facilities; (d) be accessible to all modes of transport (particularly public transport) and safe pedestrian and cycling routes; and (e) have minimal impact on the amenity of residential areas.	2	Capital City Zone DO 1, PO 1.1	
267	The Institutional Zones should develop: (a) with a function and quality in providing leisure, transport, cultural, government, educational and health facilities in an "Institutional" setting on land in public ownership; (b) by being characterised by a transition of fine public buildings in a landscaped setting between the intense built form marking the edge of the Capital City Zone on the southern side of North Terrace to the Torrens Valley in the Park Lands Zone; (c) with commercial activities being ancillary to the cultural and institutional functions of the Zones; and (d) with improved pedestrian movement and integration across North Terrace.	2	(a) (c) City Riverbank Zone PO 1.1 (b) City Riverbank Zone DO 3, PO 2.2, PO 2.4 (d) City Riverbank Zone PO 4.1	
268	Development is encouraged to develop and expand upon the existing or create new tourism activities to maximise employment and the long-term economic, social and cultural benefits of developing the City as a competitive domestic and international tourist destination.	4		
269	Tourist facilities should be compatible with the prevailing character of the area, within close proximity to public transport facilities and well designed and sited.	4		

Number	Description	Transition category	Where has it been included?	Comments
270	Development located either abutting, straddling or within 20 metres of a Zone or Policy Area boundary should provide for a transition and reasonable gradation from the character desired from one to the other.	5		Within the Capital City Zone the provisions focus on land use interface, visually minimising the impact of buildings exceeding the maximum height by centrally locating taller elements within the centre of the Site. There are no requirements ensuring that there is a gradual transition from one zone to the other or the sensitivities associated with the location. It is recommended that zone transition potential impacts be addressed more thoughtfully in the Capital City Zone.
271	Development should not unreasonably restrict the development potential of adjacent sites, and should have regard to possible future impacts such as loss of daylight/sunlight access, privacy and outlook.	5		There is limited policy within the code on minimising the impact of development on adjacent sites. Within the General Development Policies - Design and Urban Areas PO 8.1 requires fences, walls and retaining walls to be of a sufficient height without unreasonably impacting on the visual amenity and adjoining lands access to sunlight however there is no policy within the Code that requires development in general that seeks to daylight/sunlight access, privacy and outlook. This PDC should apply to all development neighbouring residential development and be included in the Design in Urban Areas (All Development)

Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
77	A Capital City that provides the highest order and greatest range of goods and facilities and serves as the principal focus for the economic, social and political life of metropolitan Adelaide, and the State.	2	Capital City Zone DO 1	
78	Main Street Zones along O'Connell, Melbourne, Hutt, Halifax and Sturt Streets: (a) developed with a retail, community and commercial function, providing local services for surrounding residential communities, and accommodating a range of visitor facilities and commercial activity, arising from their centrality and high accessibility by walking, public transport, cycling and car. (b) developed with an increased component of residential accommodation and with enhanced vitality and character while effectively managing their impact in order to protect the amenity of adjacent residential areas. (c) with restricted potential for further expansion or intensification of commercial activity due to car parking demands and the need to protect the amenity of neighbouring residential areas.	2	Urban Corridor (Main Street) Zone DO 1, PO 1.1, DTS/DPF 1.1, PO 1.4	
79	Local community facilities that provide shopping and local facilities to serve day to day needs of the local community.	2	Urban Corridor (Main Street) Zone DO 1, PO 1.2	
Principles of Development Control				
272	Development should: (a) cater for the existing and future shopping needs of the population and community; (b) provide a degree of choice; (c) result in the expansion of the total range of retail goods and services presently available to the community; (d) result in the maintenance of retail employment in the area; (e) be safely and readily accessible to the population they will serve; (f) have minimal adverse impact on surrounding residential uses; (g) have minimal adverse impact on traffic movement; (h) be compatible with adjoining areas in terms of the location of access ways, buffer strips and transitional use areas; (i) not demonstrably lead to the physical deterioration of any designated centre; and (j) incorporate carefully located advertisements that are in scale with the desired character. Illumination from signs or floodlights should not spill over to adjacent areas.	2	Urban Corridor (Main Street) Zone PO 1.2, DTS/DPF 5.1 General Development Policies - Transport Parking and Access PO 3.1 General Development Policies - Advertisements DO 1, PO 1.1 and PO 4.1	
273	Provision for the movement of people and goods should comply with the following: (a) development should not cause inconvenient and unsafe traffic and pedestrian movements or result in the need for significant expenditure on transport and traffic works, or facilities within, or outside the locality; (b) development should be concentrated for pedestrian convenience; (c) access to car parking areas should be designed not to cause congestion or detract from the safety of traffic on abutting roads; (d) development should include adequate and convenient provision for service vehicles and the storage and removal of recyclables, waste goods and materials; (e) parking areas should be consolidated and coordinated into convenient groups, rather than located individually, and access points should be minimised; (f) car parks should be orientated to facilitate direct and convenient access of pedestrians between them and the facilities they serve; and (g) retail showrooms should provide appropriate manoeuvring and circulation areas on the site to accommodate trucks and trailer movements for the carriage of bulky products.	2	General Development Policies - Transport Parking and Access PO 1.2, PO 1.3, PO 1.4, PO 2.1, PO 3.1, PO 3.9, PO 6.4

Number	Description	Transition category	Where has it been included?
Policy Objectives			
82	Telecommunications facilities provided to meet the needs of the community;	4	
83	Telecommunications facilities located and designed to: (a) minimise visual impact on the amenity of the local environment; and (b) take into account the precautionary principle in relation to sensitive land uses.	2	(a) covered in General Development Policies - Infrastructure and Renewable Energy Facilities PO 6.2 (b) General Development Policies - Infrastructure and Renewable Energy Facilities PO 1.1
84	The location and co-location of telecommunication facilities primarily in the Capital City and Main Street Zones.	4	Telecommunication Facilities are not listed as an envisaged use
Principles of Development Control			
274	Telecommunications facilities should be located: (a) to meet the communication needs of the community; (b) primarily in Capital City and Main Street Zones; and (c) to take into account sensitive land uses such as child care centres, schools, aged care centres, hospitals and regional icons.	4	
275	Telecommunications facilities, whether co-located or singular, should be sited and designed to minimise the visual impact on the character and amenity of the local environment, particularly in visually prominent areas, areas of high visitation, and main focal points or significant vistas. Facilities should: (a) take into account existing size, scale, context and characteristics of existing structures, land forms and vegetation so as to complement the local environment; (b) ensure equipment buildings are constructed of materials that contribute to the character and amenity of the locality; and (c) use innovative design concepts, such as sculpture and art, to integrate the facility into the existing character of the area. Design Techniques (these are ONE WAY of meeting the above Principle) 275.1 Design solutions may include: (a) incorporate landscaping to screen the development, in particular, equipment shelters and huts; (b) utilise existing land forms, buildings and topographical features for screening; (c) incorporate a landscape buffer (where facility has frontage to a public road) that has a minimum width of 3 metres, contributes to the streetscape and includes appropriate shrubs and trees; (d) integrate the facility within an existing structure which may serve another purpose (where technically feasible); (e) utilise non-reflective materials and finishes that minimise visual impact; (f) have antennae located as close as practical to the support structure; and (g) use concealed cables where practicable and appropriate.	2	General Development Policies - Infrastructure and Renewable Energy Facilities DO 1, PO 2.1, PO 6.1 and PO 6.2
276	Co-location of telecommunications facilities are encouraged where technical, health and amenity objectives can be achieved. Design Techniques (these are ONE WAY of meeting the above Principle) 276.1 Design solutions may include: (a) the development demonstrates compliance with the ACA regulations regarding maximum human exposure limits for radiofrequency fields; (b) general public access to RF Hazard areas is restricted by a secure barrier; and (c) the co-located facility is sited: (i) a minimum of 200 metres from another telecommunications tower or monopole; and (ii) a minimum of 100 metres from the City Living Zone, Adelaide Historic (Conservation) Zone or North Adelaide Historic (Conservation) Zone.	5	Include the design Techniques as DTS/DPF 6.1. UNSURE HOW TO IMPOSE DISTANCE REQUIREMENTS FROM CITY LIVING ZONE

Number	Description	Transition category	Where has it been included?	Comments
277	Telecommunications facilities should not detrimentally affect the character or amenity of heritage places.	2	General Development Policies - Infrastructure and Renewable Energy Facilities DO 1 and PO 6.2	
278	Telecommunications facilities should: (a) be sited, designed and built in a manner that reinforces and enhances the character of the locality; (b) incorporate design elements such as roof-form, materials, colours, fences and landscape settings, which are compatible with heritage places or their detailing; (c) maintain front, side and rear boundary set-backs; (d) be of a colour that does not detract from the historic character of an area or place; and (e) ensure that equipment shelters have a: (i) total building height that does not exceed a maximum of 2.4 metres unless additional height is required to complement adjoining structures in the immediate locality; and (ii) maximum base area of 7.5 square metres.	2	General Development Policies - Infrastructure and Renewable Energy Facilities DO 1 and PO 2.1	
279	The site on which telecommunications infrastructure has been developed should be restored following construction.	2	General Development Policies - Infrastructure and Renewable Energy Facilities PO 2.3	
280	Telecommunications infrastructure should be removed when it is redundant or no longer being used for transmission.	5		This has not been included within the Code. Infrastructure should be removed when no longer required to avoid the proliferation of telecommunication facilities. Include PDC as a PO under the heading 'Telecommhnication Facilities'.
NEW CONTENT IN THE CODE (insert below)				
General Development Policies - Infrastructure and Renewable Energy Facilities				
Telecommunication Facilities				
PO 6.1	Where technically feasible, telecommunications facilities seek to reduce visual impact by incorporating techniques such as: (a) avoiding proliferation of facilities in a local area; (b) co-locating with other communications facilities; (c) locating antennae as close as practical to support structures ; and (d) screening using landscaping and existing vegetation, particularly for equipment shelters and huts.			Supported

Policy Objectives				
OBJ 85	Protect and enhance the Adelaide Park Lands as: (a) a unique open space system which creates a distinctive image for the City and supports the economic and social life of Adelaide and South Australia, and recognizes the entry of the City of Adelaide Historic Layout in the Register of the National Estate; and (b) an important component of the Metropolitan Open Space System (MOSS).	5 - Not included in the Code and should be reinstated		MOSS has been deleted. There are limitations There are no references to the Adelaide Historic Layout in the Register of the National Estate.
OBJ 86	Establish pedestrian and cycle paths that are sympathetic to the Park Lands desired character to link the paths across Policy Area boundaries and with regional networks in adjacent local government areas as a comprehensive and integrated system.	5 - Not included in the Code and should be reinstated	DO2	The actual paths have not been included.
OBJ 87	Protection and enhancement of vegetation of local provenance wherever possible, particularly in locations specified for predominantly natural landscapes.	5 - Not included in the Code and should be reinstated		Very limited detail about this
OBJ 88	Protect and restore Park Lands waterways and improve water quality.	5 - Not included in the Code and should be reinstated	PO 3.4	
OBJ 89	Enhance the Park Lands through the reduction in building floor areas, fenced and hard paved areas.	5 - Not included in the Code and should be reinstated		Very limited detail about this. This is important when considering the appropriateness of development.
OBJ 90	Progressively return alienated land within the Park Lands for open space and public recreational use.	5 - Not included in the Code and should be reinstated		This concept is not present in the new policy.
OBJ 91	Conserve biodiversity and natural habitat areas, including areas of local native vegetation.	2 - Wording changed but policy intent remains (OK)	PO3.3	There is no mention of biodiversity etc
OBJ 92	Encourage accessibility to the Park Lands through improved public transport and bicycle and pedestrian links.	5 - Not included in the Code and should be reinstated		There is no mentioned on any other modes other than vehicles.
OBJ 93	Reduce the visual, spatial and environmental impact of permanent car parks and other associated infrastructure for recreational facilities within the Park Lands.	3 - Included in the Code but policy intent changed (NOT OK)		This could be further detailed.
OBJ 94	Encourage alternatives to on-site or near-site parking for Special Events located within the Park Lands.	5 - Not included in the Code and should be reinstated		The alternative car parking is not the policy approach.
OBJ 95	Promote and encourage recreational and sporting uses within appropriate areas.	5 - Not included in the Code and should be reinstated		No spatial areas have been outlined.
OBJ 96	Encourage the long term consolidation of sports areas.	5 - Not included in the Code and should be reinstated		
OBJ 97	Enhance the Park Lands to provide a diversity of opportunities for children's play.	5 - Not included in the Code and should be reinstated		
OBJ 98	Provide for exotic plantings and formal gardens with high quality visitor facilities incorporating well designed landscape features and interpretation in areas of predominantly cultural landscapes.		PO 3.1 0	
OBJ 99	Provide sensitively designed adequate base infrastructure including areas for occasional special event car parking, bicycle parking and emergency services, for community, cultural and sporting events within the Park Lands.	5 - Not included in the Code and should be reinstated		
OBJ 100	Encourage the utilisation of non Park Land car park sites in the City or adjoining Council areas supported by expanded public transport and event services.	5 - Not included in the Code and should be reinstated		
OBJ 101	Establish lighting within the Park Lands to provide for safety, security and amenity.	5 - Not included in the Code and should be reinstated		
OBJ 102	Protect, enhance and provide interpretation to areas and items of indigenous and post colonial cultural significance.	3 - Included in the Code but policy intent changed (NOT OK)	PO 3.1	The mapping has been deleted. This should be reinstated.
Principles of Development Control				

Number	Description	Transition category	Where has it been included?	Comments
281	Development should ensure that the desired character and environment of the Park Lands Zone is enhanced and reinforced by: (a) the maintenance of a diversity of landscape with recognition of predominant natural or cultural landscapes identified in Map Adel/1 (Overlay 9) and the desired character of the particular Policy Area; (b) the establishment and maintenance of a continuity of landscape character within and across Policy Area boundaries where similar characteristics exist; (c) the protection and enhancement of the role of the River Torrens/Karrawirra Parri, its valley and tributaries, as a habitat for native fauna and especially native water fowl, associated with the re-establishment of vegetation of local provenance wherever possible; (d) the enhancement of natural creek channels as a major landscape feature and their enhancement through integration into surrounding areas of Park Lands whilst implementing best practice stormwater management where appropriate; (e) management of the Park Lands watercourses through the laying back of creek banks, the creation of natural retention basins where appropriate and the implementation of best practice riparian and urban storm water management whilst maintaining the natural Park Land character; (f) a reduction in building floor areas, fenced and hard paved areas; (g) a high quality of buildings, structures, utilities, roads, artificial land surfaces and service facilities in nominated areas or sites; (h) the maintenance of the delineation and visual distinction between the predominantly open landscape character of the Park Lands Zone and the built-form character of the adjacent Zones; (i) the maintenance of the maximum possible area of the Park Lands as a natural land surface, by restricting the amount of enclosed artificial or paved land surface; (j) adopting best practice water conservation principles; (k) returning alienated land within the Park Lands for open space and public recreational use consistent with Map Adel/1 (Overlay 10); (l) the consolidation of sports areas into locations shown in Map Adel/1 (Overlay 11); (m) ensuring Special Events are contained within the areas shown in Map Adel/1 (Overlay 12); (n) ensuring lighting is consistent with the framework shown in Map Adel/1 (Overlay 13); and (o) protecting and enhancing areas and items of indigenous and post colonial cultural significance shown	3 - Included in the Code but policy intent changed (NOT OK)		This needs to be further reinstated.
282	The use of land or buildings in the Park Lands to house machinery equipment and materials necessary for City and Park Lands' maintenance and management should be minimised.			
283	Utility and supply services, holding tanks, sub-stations, power lines and other utility facilities should be as unobtrusive as possible, and where practicable placed underground.			
284	Development should have regard to and recognise the need for the conservation of those areas of special landscape character.	3 - Included in the Code but policy intent changed (NOT OK)	PO 3.1 - 3.4	It could be further reinstated
285	Development should be sensitive to native biodiversity and where possible incorporate ways to protect and improve biodiversity in its design. Development should not:	3 - Included in the Code but policy intent changed (NOT OK)	PO 3.1 - 3.4	
286	(a) result in noise emissions which adversely affect the amenity of neighbouring premises or other Park Land users, or the emission of atmospheric or liquid pollutants; or (b) introduce, expand or intensify any activity which may detrimentally affect the amenity of premises within any adjacent Zone or adjoining municipality.	5 - Not included in the Code and should be reinstated		This needs to be further reinstated to avoid land use conflicts.
287	Development should not further restrict public access to land within the Park Lands, including access for people with disabilities.	2 - Wording changed but policy intent remains (OK)	PO5.2	
288	A comprehensive bicycle and pedestrian path network shown in Map Adel/1 (Overlay 8) should be provided within the Park Lands to increase the safety, convenience and enjoyment of the Park Lands for the City's workers, residents and visitors.	3 - Included in the Code but policy intent changed (NOT OK)	5.2-5.4	
289	Car parking in the Park Lands Zone should be limited and only serve activities within the Park Lands unless specifically permitted in the relevant Policy Area.	2 - Wording changed but policy intent remains (OK)	5.3	
290	Development should be limited to ensure that car parking sufficient to serve the needs of permanent activities in the Park Lands can be provided on roads through and around the Park Lands unless otherwise described in the relevant Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)		The need to demonstrate alternative parking options has been reduced.
291	Car parking areas should be located and designed to: (a) ensure safe and convenient pedestrian movement and traffic circulation through and within car parking areas; and (b) minimise their visual impact through the incorporation of swales and permeable surfaces.	3 - Included in the Code but policy intent changed (NOT OK)	5.2-5.4	Some of this is in general modules however it is not really fit for purpose for the parklands.

Policy Objectives				
OBJ 103	A clearly defined and linked Metropolitan Open Space System (MOSS) of public and privately owned land of an open or natural character in and around metropolitan Adelaide which will: (a) provide a visual and scenic contrast to the built urban environment; (b) assist in the conservation of natural or semi-natural habitats and sites of scientific or heritage value and re-vegetation; (c) provide corridors for movement of wildlife; (d) accommodate a range of active recreation and sporting facilities of regional or State significance, including facilities which may be used for national and international events; (e) accommodate a range of passive recreation and leisure areas; and (f) provide for the integration of stormwater management in association with recreation, aquifer recharge and water quality management.	5		MOSS is now within the Open Space Zone and outside the perimetres of the City of Adelaide. Adelaide Park Lands have however always been considered as part of Adelaides MOSS and provides important connection to the Zone. The Open Space Zone fails to recognise this area of land as an important component of Adelaide's metropolitan open space system and why it is important. It is more than providing visual relief. This area of open space provides a pedestrian and bicycle route that links with the Park Lands and provides wildlife corridors and areas of natural habitats as well as being of pre-european cultural significance. These elements should be reflected in the desired outcomes of the zone.
OBJ 104	The development of public land within the MOSS for active and passive recreation, sporting facilities and conservation with emphasis on retaining the open, natural or rural character with wide landscaped buffers around the perimeter of areas where appropriate, areas of conservation significance retained in their natural state and buildings located and designed in such a way as to minimise their impact.	2	Open Space Zone PO 1.1, DTS/DPF 1.1, PO 1.2	
OBJ 105	The development of open space recreation reserves through land purchases, contributions of open space, and exchanges of land.	4		
Principles of Development Control				
292	Development should preserve and enhance the character and amenity of land within the MOSS as shown on Map Adell/1 (Overlay 7).	4		
293	Publicly owned land within the MOSS should also be used to conserve wildlife habitats and areas of natural vegetation, to allow for movement of wildlife, to conserve sites of scientific, cultural or heritage interest and for re-vegetation.	5		"As Above"
294	Buildings and structures erected on land within the MOSS should be designed, located and screened so as to be unobtrusive and not detract from the open natural or landscaped character of these areas.	2	Open Space Zone PO 2.1	
295	The width of reserves abutting watercourses within the MOSS should be sufficient to allow for flood control, stormwater management, retention of the riverine ecosystem and to provide areas of open space which can be used to accommodate a range of recreational and sporting facilities.	4

Policy area(s)	Regulated Trees		
General Comments	REGULATED TREE OVERLAY		
Number	Description	Transition category	Where has it been included?
Policy Objectives			
106	The conservation of regulated trees that provide important aesthetic and environmental benefit.	1	Regulated Tree Overlay DO 1.
107	Development in balance with preserving regulated trees that demonstrate one or more of the following attributes: (a) significantly contributes to the character or visual amenity of the local area (b) indigenous to the local area (c) a rare or endangered species (d) an important habitat for native fauna.	4	Addressed in the PDI Act
Principles of Development Control			
296	Development should have minimum adverse effects on regulated trees.	2	Regulated Tree Overlay DO 1.
297	A regulated tree should not be removed or damaged other than where it can be demonstrated that one or more of the following apply: (a) the tree is diseased and its life expectancy is short; (b) the tree represents a material risk to public or private safety; (c) the tree is causing damage to a building; (d) development that is reasonable and expected would not otherwise be possible; (e) the work is required for the removal of dead wood, treatment of disease, or is in the general interests of the health of the tree.	2	Regulated Tree Overlay PO 1.3
298	Tree damaging activity other than removal should seek to maintain the aesthetic appearance and structural integrity of the tree.	2	Regulated Tree Overlay PO 1.3
NEW CONTENT IN THE CODE (insert below)			
REGULATED TREE OVERLAY			
PO 1.2	Regulated trees listed as rare or endangered under the National Parks and Wildlife Act 1972 are conserved.		Supported
DTS / DPF 1.2	A tree not listed as rare or endangered.		Supported
PO 1.4	A tree damaging activity in connection with other development is undertaken to accommodate the reasonable development of land in accordance with the relevant zone or subzone where it might not otherwise be possible and, in the case of a significant tree, all reasonable development options and design solutions have been considered to prevent substantial tree-damaging activity occurring.		Supported
PO 2.1	Ground work affecting trees Regulated trees, including their root systems, are not unduly compromised by excavation and / or filling of land, or the sealing of surfaces within the vicinity of the tree to support their retention and health.		Supported
PO 3.1	Land Division Land division results in an allotment configuration that enables its subsequent development and the retention of regulated trees as far as is reasonably practicable.		Supported
DTS/DPF 3.1	Land division where: (a) there are no regulated trees located within or adjacent to the plan of division; or the application demonstrates that an area exists to accommodate subsequent development of proposed allotments after an allowance has been made for a tree protection zone around any regulated tree within and adjacent to the plan of division.		Supported

Zone			1 - Included in the Code and retains same policy intent	0%	
Policy area(s)			2 - Wording changed but policy intent remains (OK)	22%	
Significant Trees				3 - Included in the Code but policy intent changed (NOT OK)	0%
				4 - Not included in the Code but OK to remove	11%
				5 - Not included in the Code and should be reinstated	67%
General comments	PARK LANDS - IS BETH DEALING WITH THIS? What is happening with Significant Trees? They are listed but there are limited policies in place to back up Significant Trees. Significant trees listed have been assessed by a suitably qualified aborist and should be given equal weight as a regulated tree.				
Number	Description	Transition category	Where has it been included?	Comments	
Policy Objectives					
108	The conservation of significant trees which provide important aesthetic and environmental benefit to Metropolitan Adelaide.	5		Apply PO 1.1 from the Regulated Tree Overlay to Significant Trees	
Principles of Development Control					
299	Development should be designed and sited to retain: (a) any existing tree of substantial size and merit; and (b) existing street-trees, and accommodating and protecting their normal growth pattern.	5		This principle is important and should be applied to all development. It is therefore recommended that this PDC is included within General Development Policies - Design in Urban Areas (all Development) under the heading "Landscaping"	
300	Where a significant tree or group of trees: (a) makes an important contribution to the character or amenity of the local area; or (b) is indigenous to the local area and its species is listed under the National Parks and Wildlife Act as a rare or endangered native species; or (c) represents an important habitat for native fauna; or (d) is part of a wildlife corridor of a remnant area of native vegetation; or (e) is important to the maintenance of biodiversity in the local environment; or (f) forms a notable visual element to the landscape of the local area; development should preserve these attributes. Note: Trees or groups of trees are declared as significant in Table Adel/5. A tree not listed or identified in Table Adel/5 may also be significant if it falls within the class of trees declared to be significant by the Development Regulations 2008.	4		This criteria for listing is in the Development Act. Has it been transferred into the PDI ACT?	
301	Development should be undertaken with the minimum adverse affect on the health of a significant tree.	5		Apply DO 1 within the Regulated Tree Overlay to Significant Trees. Significant trees listed have been assessed by a suitably qualified aborist and should be given equal weight as a regulated tree.	
302	Significant trees should be preserved and tree-damaging activity should not be undertaken unless: (1) (i) the tree is diseased and its life expectancy is short; or (ii) the tree represents an unacceptable risk to public or private safety; or (iii) the tree is shown to be causing or threatening to cause substantial damage to a substantial building or structure of value; or (iv) the tree is known to cause health problems; and all other reasonable remedial treatments and measures have been determined to be ineffective; or (2) it is demonstrated that all reasonable alternative development options and design solutions have been considered to prevent substantial tree-damaging activity occurring. (b) in any other case; (i) the work is required for the removal of dead wood, treatment of disease, or is in the general interests of the health of the tree; or (ii) the work is required due to unacceptable risk to public or private safety; or (iii) the tree is shown to be causing, or threatening to cause damage to a substantial building or structure of value; or (iv) the aesthetic appearance and structural integrity of the tree is maintained; or (v) it is demonstrated that all reasonable alternative development options and design solutions have been considered to prevent substantial tree-damaging activities occurring.	2	Regulated Tree Overlay PO 1.4		
303	Where a significant tree is proposed for removal, such tree should be replaced on the same site within three months of Development Approval, subject to the season, by: (a) a mature tree of appropriate species and sufficient size when fully grown; or (b) landscaping of equivalent landscape value in accordance with a comprehensive landscaping plan for the site and the desired character for the locality.	5		Include within the Regulated Tree Overlay and include its application to Significant Trees.	

Number	Description	Transition category	Where has it been included?	Comments
304	Development involving ground work activities such as excavation, filling, and sealing of surrounding surfaces (whether such work takes place on the site of a significant tree or otherwise) should only be undertaken where the aesthetic appearance, health and integrity of a significant tree, including its root system, will not be adversely affected.			
305	Where development is to take place in close proximity to a significant tree, that tree should be protected by appropriate measures during the course of the development. In particular, the area in which the tree's branches and roots are located should be protected by the erection of a secure fence prior to commencement of any work on site to prevent any disturbance to such area, for example by compaction, excavation, filling or contact causing damage to branches, trunks, or root systems.	5		
306	Fencing erected for the protection of a tree designated as a significant tree should: (a) consist of a 2.0 metre high solid, chain mesh, steel or similar fabrication with posts at 3 metre intervals; (b) incorporate on all sides a clearly legible sign displaying the words "Tree Protection Area"; and (c) not be erected closer to the tree than a distance equal to half of the height of the tree or the full width of the branch spread (whichever is lesser).	5		This PDC should apply to significant and regulated trees. This provision is important as it provides clarity on what is expected when development is proposed in close proximity to a Significant or Regulated tree. On this basis, the PDC should be included within the Regulated Tree Overlay under the heading "Tree Retention and Health"
307	Land should not be divided or developed where the division or development would be likely to result in a substantial tree-damaging activity occurring to a significant tree.	2	General Development Policies - Land Division in Urban Areas PO 2.8

Interpretation			
	Where the Objectives and/or Principles of Development Control that apply in relation to this Overlay are in conflict with the relevant Council wide, Zone or Policy Area Objectives and/or Principles of Development Control in the Development Plan, the Overlay will prevail.	4	
Policy Objectives			
OBJ 1	Affordable housing that is integrated with residential and mixed use development.	2	Affordable Housing Overlay DO 1
OBJ 2	Development that comprises a range of affordable dwelling types that cater for a variety of household structures.	2	Affordable Housing Overlay DO 2
OBJ 3	Affordable housing that deliver whole-of-life cost savings to the occupants.	4	
OBJ 4	Affordable housing that is provided in a wide range of locations and integrated into the City.	4	
Principles of Development Control			
1	Development comprising 20 or more dwellings should include a minimum of 15 percent affordable housing.	2	Affordable Housing Overlay DTS/DPF 1.1
2	Where development includes affordable housing, then the quantitative provisions in respect to the following elements are not applicable to the affordable housing component provided the qualitative outcomes can be achieved: (a) allotment area and dimensions; (b) building height; (c) site area and dimensions; (d) site coverage; (e) front, side and rear setbacks to boundaries; (f) area and dimensions of private open space; (g) minimum unit sizes; (h) minimum storage areas; (i) plot ratio; (j) dwelling unit factor; and (k) landscaped open space.	4	
NEW CONTENT IN THE CODE (insert below)			
Affordable Housing Overlay			
PO 1.1	Land Division Development comprising 20 or more dwellings provides housing suited to a range of incomes including households with low – moderate incomes.		Supported.
DTS/DPF 1.1	Development comprising 20 or more dwellings or residential allotments includes a minimum of 15% affordable housing except where: (existing) a. it can be demonstrated that any shortfall in affordable housing has been provided in a previous stage of development; or (new)e housing except where: (included) b. it can be demonstrated that any shortfall in affordable housing will be accommodated in a subsequent stage or stages of development. (new)		Supported.
PO 1.2	Affordable housing is distributed throughout the development to avoid an overconcentration of affordable housing.		Supported.
Built Form and Character			
PO 2.1	Affordable housing is designed to complement the design and character of residential development within the development area.		Supported.
Affordable Housing Incentives			

Number	Description	Transition category	Where has it been included?	Comments
PO 3.1	Allotments created for affordable housing are a suitable size and dimension that provide a high standard of occupant amenity and integrate with residential neighbourhoods.			Supported.
DTS/DPF 3.1	Where constituting affordable housing, the minimum site area specified for a dwelling can be reduced by up to 20%.			Supported.
PO 3.2	To support the provision of affordable housing building heights may be increased above the maximum specified in the Building Heights Technical and Numeric Variations Data Overlay.			FURTHER REVIEW REQUIRED, the proposal would need to ensure it is consistent with the character of the area and should be subject to bulk, scale and micro-climatic impact assessment.
DTS/DPF 3.2	Where a mixed-use development or apartment building includes at least 15% affordable housing, the maximum building height specified can be increased by 1 storey in City Living, General Neighbourhood, Housing Diversity Neighbourhood Greenfield Neighbourhood, Masterplanned Suburban Neighbourhood zones, and up to 30% in any other zone.			"As Above"
Movement and Car Parking				
PO 4.1	Sufficient car parking is provided to meet the needs of occupants of affordable housing.			Supported.
DTS/DPF 4.1	Dwellings constituting affordable housing are provided with car parking in accordance with the following: a. 0 carpark for an apartment; and b. 1 carpark per dwelling for any other dwelling.			Supported.

Desired Character					
Statement of Heritage Value					
	North Adelaide is part of the historic plan of the City of Adelaide. The historic character of North Adelaide provides strong cultural and historic evidence of the creation of the colony, the establishment and consolidation of early settlement and the subsequent development of South Australia's capital city over time.	4		This information provides an important historical background and should be included within the City Plan.	
	South Australia was established as a semi-commercial venture later taken over by the British government. North Adelaide formed a distinctive part of the plan for Adelaide drawn up in advance of settlement by Colonel William Light, who was appointed Surveyor-General by the South Australian Colonisation Commission. North Adelaide repeats the grid land division pattern created by Light's plan in South Adelaide, and comprises three small grids now described as Upper North Adelaide, Lower North Adelaide and the Cathedral area. The Town Acres were disposed in a regular grid layout around Wellington Square, the only public open space incorporated within the initial plan for North Adelaide other than the Park Lands belt. The location of the three distinct areas reflects Light's understanding of the local topography. The layout of one acre blocks with large frontages to unusually wide streets around the Square and Park Lands maximised views to the open spaces and the Adelaide Hills in the distance.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
	North Adelaide is essentially a group of three residential villages separated from the square mile of the City by the belt of Park Lands. It has developed in parallel with the southern part of the City but with a greater emphasis on residential growth and the provision of local services in each area for the immediate residents. Although the original Town Acres have been divided and further developed over time, Light's Plan has been preserved essentially as he conceived it.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
	Following survey and settlement, the natural landscape was converted to a cultural landscape which now reflects the divisions of wealth and influence in the early colony. The built form of North Adelaide is indicative of the social divisions and occupations of Adelaide society from early settlement. It retains many buildings and sites of State and local heritage value ranging from large mansions to simple row cottages, corner shops and hotels to major churches and institutional buildings that reflect the different periods of development. The diversity of scale and integrity of the remaining historic built form is a microcosm of development periods and traditional housing styles in the State as a whole.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
	North Adelaide also retains strong physical evidence of the historical stages of the development of the colony, most particularly the typical 1850s to 1880s village type settlement pattern, with shops and other services. These remain in Kermodie Street, Melbourne Street and Tynne Street particularly, as these streets served as the local main streets for the three discrete sections of North Adelaide. As the colony grew, North Adelaide became the location for a number of major religious and institutional organisations and their buildings, and for the residences of many notable Adelaide community members.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
	North Adelaide has historically developed a role in the health and education sectors through established public and private organisations on large land holdings. Many of the organisations are on prominent sites and provide an important range of education, student accommodation, health and aged care services.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
	Upper North Adelaide, Lower North Adelaide and the Cathedral area each display unique characteristics that contribute to the understanding of the heritage value of the Zone, as follows:	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.	
Upper North Adelaide					

Number	Description	Transition category	Where has it been included?	Comments
	This area contains Policy Areas 1 to 7 and is the largest of the three North Adelaide areas. Tynte Street originally served as the local main street for Upper North Adelaide and major community buildings reflect its early function, including the school, post office, institute, fire station, Baptist church, and early shops. The introduction of the horse-drawn tramway along O'Connell Street in 1878 drew commercial development away from Tynte Street but also made the western Town Acres which were previously sparsely settled, more accessible and construction of substantial houses soon followed. Prior to this period the area of Upper North Adelaide west of Wellington Square was the least desirable place to live in the City. Several religious orders were able to afford to buy land here, such as St Lawrence's in Buxton Street in 1867 and St Dominic's Priory in Molesworth Street in 1893 (during an economic recession when land prices were low). These large institutions create a contrast to the more intense residential subdivisions and housing development around them. The 1883-4 City Land Investment Company subdivision of Town Acres along Barnard and Molesworth Streets resulted in a sequence of large residences which form an important part of the physical character of Upper North Adelaide. A number of these still remain as State Heritage Places between Hill Street and Wellington Square.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The elevated land adjacent the Park Lands, such as along Lefevre Terrace, Mills Terrace and Strangways Terrace, provided prestigious residential addresses. Narrower streets, such as Margaret and Curtis Streets retain characteristic small scale worker housing. A range of one and two storey villas characterises the most common built form throughout the rest of the area.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The advent of the electric tramways public transport system in 1909 established O'Connell Street as the main link to the northern suburbs and it became a major hub of activity, providing a commercial and services focus for residential development. The street retains examples of traditional commercial architecture of one and two storeys, attached rows and single shops, forming a linear shopping strip. Heritage Places have been identified in the Main Street Policy Area MS1, although the Policy Area is not within the North Adelaide Historic (Conservation) Zone.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
Lower North Adelaide				
	This area contains Policy Areas 10–12. The Main Street Zones - Melbourne East and Melbourne West, service this area. Lower North Adelaide sits at an oblique angle to the City, encompassing 86 Town Acres and surrounded by Park Lands. Its topography is characterised by the escarpment of the Torrens Valley, known as the North Adelaide scarp, a steep rise from Melbourne Street to Stanley Street, below which the area is relatively flat, towards the River Torrens.	1		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The ridge of the scarp along Kingston Terrace/Stanley Street and the frontages to the Park Lands provided for prestigious residential addresses. The higher concentration of small cottages in the lower section below the scarp reflects the early subdivision of these Town Acres into estates providing workers housing following the establishment of local manufacturing industries such as the Lion Brewery. The creation of the road through Brougham Place in the 1860s and the introduction of horse drawn trams along Melbourne Street in 1878 gave this section of North Adelaide closer links with the rest of the City and made the area an attractive location for workers to live.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	Melbourne Street was originally the village centre for the area, which included small shops, businesses and other uses such as St Cyprians Church interspersed with housing. The central node of the village was at the Melbourne Street/Jerningham Street intersection, where major two storey structures, including the Lion Hotel, brewery buildings and former ANZ bank remain.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The original character of Melbourne Street is still evident, although most of the original housing that remains has been converted to commercial use.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
Cathedral Area				
	The Cathedral area sits immediately north of the City at an angle to Upper North Adelaide and contains Policy Areas 8 and 9. Comprised of 24 Town Acres on land sloping upward to the north and west, it is the smallest of the three areas and serves as an entry point to Upper North Adelaide.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	St Peter's Cathedral, dating from 1869, is a major landmark and visually dominates this area which is characterised by large institutional buildings, with residential development located primarily to the west. St Mark's College, much of which is comprised of new buildings, is grouped around substantial early residences along Pennington Terrace.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.

Number	Description	Transition category	Where has it been included?	Comments
	Until 1856, Kermode Street was the 'High Street' of North Adelaide. The characteristic collection of shops, a police station, a church and hotel (the still trading Queens Head) were located along this street, and there are several pre 1850s buildings remaining in this area.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	Small cottages and worker housing, such as in Brougham Court, provide a contrast with the more substantial villas with Park Lands frontage around Palmer Place and along Pennington Terrace and are indicative of the diverse social composition of the early resident population.	4		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
Policy Objectives				
1	Conservation of the heritage values and historic character of North Adelaide established by areas of intact and architecturally diverse historic townscapes in a series of wide streets and other roads laid out according to Colonel William Light's original 1837 town plan.	5	Not included	This is a key objective of the Development Plan for North Adelaide and is fundamental to the character of North Adelaide. It is missing from the Code. INSERT the policy as a DO in the City Living Zone.
2	Development compatible with the heritage values and historic character of the Zone achieved by: (a) supporting and reinforcing the Statement of Heritage Value for North Adelaide and the desired character for each Policy Area; (b) maintaining a regular allotment pattern and orientation of buildings to public roads and incorporates high standards of design, building materials and landscaping to complement the: (i) pattern of land division established by Heritage Places, particularly the width of frontage; (ii) bulk and scale of residential Heritage Places; (iii) front and side boundary building set-back patterns of adjacent Heritage Places in each Policy Area; and (iv) established environmental quality of public and private landscaped open spaces and the adjacent Park Lands; (c) buildings interspersed with open space and landscaped front gardens forming a distinct edge to the majority of the perimeter of the Zone, visually defining the interface with the Park Lands; (d) a high degree of pedestrian amenity and safety achieved through landscaping, paving and streetscape works, with convenient access to the Park Lands, Wellington Square and the Main Street Policy Areas; and (e) managing vehicle access and parking to conserve and enhance the heritage value of North Adelaide.	5	City Living Zone b) PO5.1 in part City Living Zone b) PO 3.1, PO2.3 in part City Living Zone c) edge to PL	a) - not included at all bi) land division to create the housing pattern consistent to the locality bii) no reference to heritage places biii) no reference to heritage places iv) no reference to established quality of public and private LOS or adj PL d & e) not included The City Living Zone covers some of the objectives in the Development Plan but not all. Reference is not made to heritage places and the part they play in determining the character of and future development in North Adelaide. INSERT policy on the importance of landscaped open space within the City Living Zone under the heading 'Built Form and Character'. INSERT policy on the importance of respecting surrounding subdivision pattern within City Living Zone under the heading ' Site Dimensions and Land Division'. INSERT the following policy on vehicle access and parking within the
3	A Zone where the existing housing stock is maintained through the retention of Heritage Places and the number of dwellings increased primarily through: (a) the replacement of buildings that are not identified Heritage Places; (b) the development of vacant or under-utilised sites that does not compromise the established residential amenity and the identified heritage value of the Zone and Heritage Places; and (c) a change in use of non-residential buildings for residential purposes.	2	City Living Zone PO2.1 City Living Zone DTS/DPF2.1a City Living Zone DTS/DPF2.1b	
4	A Zone which continues to support the development of the role of the long established health and education sectors whilst reinforcing the heritage value of the Zone and maintaining residential amenity.	3	City Living Zone PO1.5	No comment on reinforcing heritage value. Talks about dev on the site of institution and <u>any directly adjoining site</u> . INSERT policy on non residential land uses within the City Living Zone under the heading 'Land use and Intensity'.
Principles of Development Control				
1	Development should: (a) retain and conserve Heritage Places; (b) reflect the historic built form and its visual character through residential development of complementary design, form and density consistent with the desired character for each Policy Area; and (c) contribute to the landscape character of private and public open spaces and incorporate attractive landscaping to street frontages where building set-backs permit.	5		Elements of the existing Development Plan policy which have been omitted including retaining heritage places, reflecting historic built form and landscaping should be reinstated. INSERT policy on the importance of landscaped open space within the City Living Zone under the heading 'Built Form and Character'.

Number	Description	Transition category	Where has it been included?	Comments
2	Development should increase the amount of residential accommodation in the Zone by: (a) a change in use of non-residential buildings to residential uses; (b) development of vacant and under-utilised sites that can be achieved without adverse impact on the established residential amenity and the historic character of the Zone or relevant Policy Area; and (c) the redevelopment of sites containing buildings that are not Heritage Places which are presently incompatible with the historic character of the Zone or the desired character of the Policy Area, particularly buildings that are visible from public roads.	2	City Living Zone DTS/DPF2.1 in part 2c) City Living Zone DTS/DPF2.1 reference to 'poor quality' and 'in discord' but no comment on heritage places or visibility from public roads.	
3	Development of new buildings or building additions of innovative and contemporary design should demonstrate a compatible visual relationship with adjacent Heritage Places and other buildings prevailing in the Policy Area that reinforce the desired character by compatible: (a) bulk and scale; (b) width of frontage and the front and side boundary building set-back patterns; (c) proportions and vertical and/or horizontal emphasis, exhibiting vertical openings and a high solid to void ratio in the composition of the principal building facade and other elevations presenting to a public road; and (d) form and level of visual interest as determined by length and size of unbroken walling, articulated and modulated frontages, treatment of openings and depths of reveals, roofline and silhouette, colour and texture of materials used, as well as detailing (without excessive use or mimicry of decorative elements and ornamentation) and design elements such as porches, verandahs and balconies where appropriate.	3	Historic Area Overlay PO1.1 and PO1.2 Historic Area Overlay PO1.4 Historic Area Overlay PO1.3 Historic Area Overlay PO1.5 Design in Urban Areas PO18.2	Refers to development visible from the public realm, not the whole thing. 3a) No specific reference to bulk and scale. 3b) No specific reference to width of frontage. 3c) Briefly dealt with in PO1.3 but no reference to proportions, vertical/horizontal emphasis, vertical openings, high solid to void ratio in the principal facade or other elements visible from the public realm. 3d) Briefly dealt with in PO1.3 but no reference to visual interest, unbroken walling, treatment of openings, roofline, silhouette, detailing, mimicry, or design elements. Materials dealt with in PO1.5. INSERT policy within Design in Urban Areas GDP and City Living Zone where relevant
4	New buildings should utilise stone, brick and/or brick render as the main external finish to walls to complement the historic built form in the Zone. Coated surfaces that are visible from the street should be finished in natural render, limewash, cement or mineral paints, not plastic coatings or renders. Buildings with brightly coloured or highly reflective surfaces should not be developed.	3	Historic Area Overlay PO1.5	Materials briefly dealt with. Bright colours and reflective materials not covered. INSERT policy as a DTS within the City Living Zone under the heading 'Built Form and Character'.
5	Development should achieve the minimum landscaped open space requirements prescribed for each Policy Area.	3	Nth Ad LIS PO2.1, DTS2.1 Design in Urban Areas PO20.1 and DTS/DPF20.2, PO20.3, DTS20.3. Design in Urban Areas DTS/DPF21.1 - DTS21.2	FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. Subzone talks about new buildings having a consistent footprint with the locality and total roofed area (excluding eaves) to be less than 50%. There is POS in the Code - no LOS. The reader is referred to Table 1 which is called 'Outdoor Open Space' not POS which will be confusing. The amount of OOS that must be provided depends on the dwelling type and the site area and ranges from a percentage for the bigger sites to an area for the smaller sites. There is also a portion that must be provided adjacent to a habitable room that is either a percentage or area and must have a minimum dimension. There is 'Landscaping' and soft landscaping which is to shade etc. This depends on the site area and is a percentage but also a percentage of the land between the road boundary and the primary building line (25% with a min dimension of 0.5m). Tree planting is required as well depending on the lot size and with discounts if there are trees on site already. Some POS can be in the front yard, if behind a 1.8m high fence. This doesn't work with current policy that calls for traditional low and visually permeable fences in historic areas.
6	Development should not introduce building styles that are out of character with the desired character of the relevant Policy Area.	4	Historic Area Overlay PO1.1 and PO1.3.	

Number	Description	Transition category	Where has it been included?	Comments
7	Development should not exceed the height prescribed for each Policy Area. The height of new buildings, including the floor to ceiling clearances of each level, should take reference from the prevailing building heights within the locality, with particular reference to adjacent Heritage Places.	2	Historic Area Overlay PO1.2	The Overlay refers to prevailing heights being the guide, but not specifically heritage places. It doesn't refer to floor to ceiling clearances for each level. Code refers to development being consistent with prevailing heights. Building heights are included in the TNV.
8	In a locality where single storey development prevails or is desired in accordance with the relevant desired character, low profile solutions to two storey development that are located to the rear of an existing building, may be appropriate subject to no adverse impacts on the historic character of the streetscape and overshadowing and privacy impacts on neighbouring land.	5	Historic Area Overlay PO2.1 Historic Area Overlay DTS2.1	Code doesn't refer to single storey dev being required, just that alts and adds don't dominate the primary façade. There is no comment about overshadowing or privacy. INSERT policy within City Living Zone under the heading 'Built Form and Character'.
9	Where consistent building set-backs from front, side and rear allotment boundaries prevail, new development should be consistent with these established setbacks. Where a consistent building setback is not evident in a particular locality, new buildings should not project forward of Heritage Places adjacent the development site. Building to side boundaries (other than for party walls in semi-detached, row dwellings or residential flat buildings) or to a rear boundary is generally inappropriate, but may be considered where it is demonstrated that there will be no detrimental effect on residential amenity or adjacent Heritage Place(s).	5	Historic Area Overlay PO1.4 NALIS DTS2.1, PO2.2 and 2.3, DTS 2.3 City Living Zone 3.1, DTS3.1, PO3.2, DTS 3.2, PO3.3, DTS3.3, PO3.4, DTS 3.4,	Guidance is given re the second part of PDC (which is where a consistent setback pattern is not evident) for heritage places in the SHP and SHA and LHP Overlays. No reference within the Code on building to side or rear boundaries being inappropriate, except when ok re resi amenity and heritage places. INSERT policy Subzone states that setback should be the average of the 2 on either side and secondary street should maintain the pattern. Side boundary setback should be average of adjoining. Zone provides numerical figures to guide development ie a setback that's either 6m or the average of the 2 on either side, whichever is the lesser. 900mm setback for the secondary street 3m high walls being setback 900 from the boundary. Taller walls have further setbacks. 3m setbacks from rear for ground floor and 5m for first floor 3m high walls on boundaries that can be 8m long if less than 45% of all walls on the boundary But it is not clear whether the setback of 3m is from any existing or proposed boundary walls.
10	Redevelopment of corner sites containing buildings that are not Heritage Places should provide facades to each street frontage and should only be sited on or close to the corner frontages where the development complements the siting of Heritage Places on adjacent corner sites.	3	Design in Urban Areas PO1.1	Code refers to reinforcing corners but not by locating facades on each street frontage, if appropriate. North Adelaide has buildings that address the corners of streets and terminate the built form row on that street. This should continue for important corner sites. INSERT policy on corner sites
11	Appropriately pitched roofs to visibly reinforce the prevailing character of historic roof forms in the Zone should be incorporated in development rather than mono-pitch or flat roof forms falling to the street frontage or asymmetrically to a side boundary	3	Historic Area Overlay PO1.1 and PO1.3 and PO2.1	There is no specific reference to appropriately pitched roofs or mono pitch or flat roofs. This policy is no longer relevant or appropriate. INSERT policy within City Living Zone under the heading 'Built Form and Character' to ensure development reflects the prevailing roof form.
12	Residential flat buildings or group dwellings should be designed to have the appearance of a detached dwelling as viewed from the primary street frontage.	5	Not included	Residential flat buildings are constructed in North Adelaide and this principle is important. INSERT policy on appearance of residential flat buildings within City Living Zone under a new heading 'Residential Flat Buildings'.

Number	Description	Transition category	Where has it been included?	Comments
13	Row dwellings should only be developed where vehicle access can be provided from laneways or minor streets. Row dwellings should not incorporate garaging for vehicles in the building elevation to the primary street frontage and should not be comprised of more than six attached dwellings in any one group.	5	City Living Zone PO6.1 and PO6.2 and DT/DPF6.2	The new Zone policy relates to all resi whereas in the Dev Plan, it's about row dwellings only. DTS 6.2A says provide access to parking from minor streets etc but only if road width is ok and traffic generation does not unreasonably impact on resi amenity. No comment on row dwellings having garaging in the principal elevation although alluded to in DTS6.2b. No comment about how many dwellings can be in one group. Code Design in Urban Areas says 5-19 dwellings. In the SW and SE, the construction of row dwellings occurs so it is important that driveways and access are carefully considered for their impact on the streetscape. INSERT policy on row dwellings within City Living Zone under a new heading 'Row Dwellings'.
Fencing				
14	Fencing to a street frontage (including any secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, should: (a) be of traditional style and detailing that is compatible with the style of the building, or in the case of a new building, its design should reflect historically sympathetic fencing styles evident in the particular streetscape; (b) on the primary street frontage, comprise low fencing or fencing with an open character combined with solid pillars and plinths or other similar fencing styles that allow views of the associated building, by their height and design; (c) comprise materials compatible with traditional fencing materials such as stone and cast iron, brick, stone or rendered pillars and plinths or other traditional materials such as timber or well detailed masonry, but should not include metal sheeting; and (d) not include solid masonry fences on the primary street frontage other than where it is required to be consistent with fencing of identified heritage value on the development site.	5	Historic Area Overlay 3.4	In a HCZ, the fencing to properties is very important in establishing and reinforcing the historic value of the locality. The Code deals with fencing and gates very briefly and not in the detail needed in the City and Nth Ad. Recommended for inclusion within the Historic Area Statements.
15	On corner sites, the front fence should return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage should be constructed of traditional materials such as brick, rendered masonry and timber and should not be higher than 1.8 metres above ground level.	5		Code does not include reference to fencing on corner sites. INSERT policy on fencing on corner sites within the City Living Zone under a new heading 'Fences'.
16	Fences on rear and side property boundaries (behind the main face of the building), should not be higher than 2 metres above ground level and should be constructed of traditional materials, including corrugated metal sheeting. Side fences or walls above 1.2 metres are generally inappropriate forward of the main face of a building. Forward of the main face of the building, fences should be of a scale that allows oblique views of buildings.	5		Code does not refer to this. INSERT policy on fencing on corner sites within the City Living Zone under a new heading 'Fences'.
Access and Parking				
17	Vehicle access to land should be via minor streets, rear lanes and existing crossovers wherever possible. In a street where vehicle access does not prevail on the primary street frontage, new crossovers should be avoided.	5	City Living Zone DTS/DPF6.2	Code makes no comment about what to do if the street does not have vehicle access - ie no new crossovers. INSERT policy on crossovers in the City Living Zone under the heading 'Movement and Access'.
18	New vehicle crossovers required for development should be: (a) of minimum width to preserve and enhance street character; (b) designed to narrow the crossover width towards the road pavement and located to avoid the need to remove historic kerbing and significant trees; (c) separated from each other and located so that as many on-street car parking spaces as possible are retained; and (d) placed to avoid relocation of utility and infrastructure inspection points, poles and equipment.	5	Historic Area Overlay PO5.1 and PO 5.2	Code says width of driveways are to be consistent - not minimum width. No specific comment on narrowing the width but covered by PO 5.1 and PO 5.2 generally, except see proviso. No specific comment on separation or retaining on-street car parking spaces or relocation implications. Driveway locations are particularly important for North Adelaide and the City in terms of historic patterns (many sites don't have them), on street parking, trees and kerbing. INSERT policy within City Living Zone under the heading 'Movement and Access'.

Number	Description	Transition category	Where has it been included?	Comments
19	Vehicle access points to development should be consolidated and located to minimise the impact on residential amenity from parking, loading and access.	5	City Living Zone PO6.1 and PO6.2.	No comment on consolidation. INSERT policy within the City Living Zone under the heading 'Movement and Access'.
20	Vehicle parking arrangements should not incorporate undercroft parking (unless specifically expressed in a Policy Area as a possible development option in a particular street) or other parking or access arrangements that are not in keeping with the heritage character of the Zone.	5	Historic Area Overlay PO5.2. Design in Urban Areas PO6.1 does not preclude undercroft. Transport Access and Parking GDP PO7.1	Code generally refers to maintaining valued landscape patterns. Undercroft parking is acceptable but there are Pos in the HAO that say keep the access arrangements consistent with hv. City Living Zone says minimise visual impact on character. INSERT policy as part of PO 6.1 within the City Living Zone.
21	Other than low scale residential development, car parking should be provided at basement level to optimise the use of land and to limit the visual impact on the amenity and historic street character of the Zone.	4	Not included	
22	Low scale residential development should provide on-site car parking and open car parks and buildings for parking vehicles that are: (a)located at the rear of sites wherever possible; (b)designed and sited to ensure garage doors do not visually dominate the primary street frontage; and (c)be located behind the main face of the associated building.	3	City Living Zone PO6.2 and DTS/DPF6.2 Design in Urban Areas	Code covers this is a general way but does not refer specifically to parking being at the rear of sites, garage doors. The location of car parking is important in determining and reinforcing the character of an area. REVISE PO 18.1 within Design in Urban Area to ensure garaging does not visually dominate the primary frontage
23	Driveways commencing from a primary street frontage and terminating at or near the rear of a site, such as in hammerhead allotments and shared driveways in group dwelling developments, should be located, landscaped and fenced to minimise detrimental impact on the streetscape appearance and the amenity of neighbouring residential properties.	5	Design in Urban Areas DTS/DPFPO34	Code refers to improving the appearance of driveways with landscaping, but doesn't address the streetscape or resi amenity. INSERT policy as a PO within Design in Urban Areas GDP [All development] under the heading 'External Appearance'
Land Division				
24	The division of land should take reference from the established allotment frontages in the relevant street and aim to create regularly proportioned allotments capable of containing dwelling types consistent with the desired character of development fronting the street.	2	Historic Area Overlay PO4.1 City Living Zone PO5.1	HA Overlay addresses creating lots to accommodate building of a bulk and scale that reflect the area. Zone addresses lots created to be of a suitable size and dimension that are compatible with the housing pattern.
25	The division of land in the form of a hammerhead allotment or similar allotment arrangement, such as a community title land division that includes a shared driveway, should: (a)have a frontage to a public road and a 'handle' width of not less than five metres and not more than six metres to enable the provision of landscaping on both sides of a driveway for its full length and a driveway pavement of not more than 3.5 metres in width; (b)locate allotment boundaries to provide a separation distance of 2 metres from the future driveway pavement and a bedroom window of a neighbouring dwelling; (c)ensure that on-site car parking can be accommodated on the site of an existing dwelling in a manner that is consistent with other principles of development control for the zone; (d)avoid the repetition of driveways immediately adjacent to each other; and (e)include fencing treatment along the length of the driveway that is consistent with other principles of development control for the zone.	5	Design in Urban Areas 33.3	Code allows a width of 3m plus. No comment on separation distance of 2m and a bed window of neighbouring dwelling. No comment on car parking on the site of the original dwelling. No comment on lining up driveways next to each other. No comment on fencing common driveways. The location of driveways is critical in establishing the character of areas. Specific policy should be developed. INSERT policy within the City Living Zone under the heading ' Site Dimensions and Land Division'.
Procedural Matters				
Complying Development				
26	The following kinds of development are complying: (a)Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i)dust control; (ii)screening, including landscaping; (iii)containment of litter and water; and (iv)securing the site.	5		Accepted Dev includes internal building work to non LHPs etc and underground water tanks. DTS includes - nothing PA includes carport, consulting room, demo of SHP or LHP or anything in the HO, adds, detached dwelling, education est,fence, land division (but only in the Nth Ad Low Density Subzone), office, garage, outbuilding, resi flat building, retirement facility, row dwelling, semi detached dwelling, shop, student accomm, supported accomm and all other code assessed dev. It is recommended that a Temporary Council depot is included in the Accepted Development Table for the City Living Zone.
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
27	<p>The following kinds of development are non-complying:</p> <p>(a)A change of use to any of the following:</p> <ul style="list-style-type: none"> Adult entertainment premises Adult products and services premises Amusement machine centre Art gallery except in Policy Areas 4 and 8 Auditorium Backpackers hostel except: (i)in Policy Areas 3, 4, 9 and 15 (ii)on King William Road frontages in Policy Area 8 Bank except: (i)on Tynte Street frontages in Policy Area 4 (ii)on King William Road frontages in Policy Area 8 (iii)on Melbourne Street frontages in Policy Area 11 (iv)in Policy Area 15 Car park except where ancillary to an approved or existing use Cinema Clinic except: (i)where directly associated with the Calvary Hospital site on Fig HS/1 (ii)from an existing non-residential premises in Policy Area 5 and 15 (iii)in Policy Area 9 Community centre except: (i)in Policy Area 4 and 15 (ii)east of Jeffcott Street in Policy Area 5 Conference centre except in Policy Area 15 Consulting room except: (i)where directly associated with the Calvary Hospital site on Fig HS/1 (ii)from an existing non-residential premises in Policy Area 5 (iii)on King William Road frontages in Policy Area 8 	5	City Living Zone DO1, PO1.1, DTS/DPF1.1, PO1.2, DTS/DPF 1.2, PO1.3, PO1.4, Tables 1 2 and 3.	<p>Code calls for resi use but includes non resi land uses to provide a range of services to the local community inc offices, consulting rooms, education, worship, preschools, child care and other health and welfare plus services for supported or retirement accomm and open space and rec facilities. Non res land uses to be compatible with the resi character and amenity.</p> <p>Restricted includes Dev associated with the insitutions or an adj site, as identified on the Concept Plans. Shop - except if lawfully used as shop, office or consulting room, or with a glfa of less than 200m2 or located on a site with a frontage to an arterial or collector road or adj a Main Street Zone with a glfa of less than 1000m2. Also restaurants are PA.</p> <p>So, all the non complying list is now PA, including advertisements. Assuming that some of the land uses in the non complying list are not desirable (car park, transport depot),are the policies strong enough to allow refusal?</p> <p>What is to stop consulting rooms, offices or restaurants from being approved in former residential properties in resi areas but in proximity to the hospitals or major streets?</p> <p>INSERT policy on the former non complying land uses being land uses that are not envisaged.</p> <p>Demo of SHPs and LHPs has gone from being non complying to PA. It appears that the demolition policies in the Overlays will protect from</p>
Public Notification				
28	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a)Category 1, public notification not required:</p> <ul style="list-style-type: none"> (i)advertisements (except those classified as non-complying); (ii)development, which, in the opinion of the relevant authority, is of a minor nature and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development. <p>(b)Category 2, public notification required, third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights:</p> <ul style="list-style-type: none"> (i)all development, other than development classified as non-complying or which falls within Part (a) of this provision. <p>Note: For Category 3 development, public notification is required. Third parties may make written representations, appear before the relevant planning authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>		Procedural Matters	<p>All classes are excluded from notification except where; site is adj to land in another zone 'All other code assessed dev' in the City Living Zone - that means anything other than carport, consulting room, demo of SHP or LHP or anything in the HAO, adds, detached dwelling, education est, fence, land division (but only in the Nth Ad Low Density Subzone), office, garage, outbuilding, resi flat building, retirement facility, row dwelling, semi detached dwelling, shop, student accomm, supported accomm and all other code assessed dev. So all the former non complying land uses would be notified. Also, dev exceeding the height in the TNV.</p>
NEW CONTENT IN THE CODE (insert below)				

Number	Description	Transition category	Where has it been included?	Comments
	<p>HA Overlay Historic Area Statement will be very important in determining the form of development as the detail of the existing policies in respect of design, materials, fencing, land division, car parking arrangements has been removed. It is only the visible part of the building that needs to meet the Code. Poor design outcomes? A contextual design response is called for. What will the criteria be to judge whether the new design is appropriate? tests for demolition (buildings must demonstrate the historic character) and performance assessed. Economic, contribution and structural or condition test now applies.</p> <p>Subzone Site coverage is now a percentage of site area.</p> <p>Zone non resi development envisaged at a much greater level than in Dev Plan. Setbacks from boundaries are now precise numbers. Catalyst sites - Can this be right? Does this only apply on land more than 1500m2 with a frontage to East Terrace? TNVs for height, site areas and site frontages and concept plans. Public notification greatly expanded as a result of the relatively short list of Performance Assessed Classes of Dev and the All other inclusion.</p>

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The Hill Street Policy Area should remain one of the lowest density residential areas in Upper North Adelaide and should be protected and enhanced as one of the most historically intact residential areas in South Australia.	5	Subzone DO1, DO2, PO1.1	Recommended for inclusion within the Historic Area Statement.
	The variety of dwelling types should be retained by the conservation of Heritage Places characterised by nineteenth and early twentieth century elegant and finely detailed mansions and other large villas set on large allotments, together with low and medium density cottages, villas and terrace houses of one and two storeys.	5		Recommended for inclusion within the Historic Area Statement.
	Helping Hand Aged Care will be a valuable multi-functional aged care facility providing a variety of levels of care and accommodation for the elderly community. St Dominic's Priory College will continue to be associated with educational land uses. Calvary Hospital will provide hospital uses such as patient care, research, consulting rooms, visitor accommodation and ancillary services. Development of these long established institutions should meet the community needs and future requirements whilst reinforcing the heritage values and amenity of the Policy Area.	5	Zone PO1.5	INSERT policy on non residential land uses within the City Living Zone under the heading 'Land use and Intensity'.
	New development should respect the low scale, environmental quality character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5	Subzone DO1, DO2, PO1.1, PO2.1	INSERT as a PO within the North Adelaide Low Intensity Subzone within the City Living Zone under the heading 'Built Form and Character'.
	The character of new residential development should be established by low density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	5	Zone PO1.1, DTS1.1	Retirement facilities and supported accomm could be considered to be included because of the Institutions. Heights are not known. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
	(a) Mills Terrace and Strangways Terrace (west of Hill Street): New residential buildings addressing the primary street frontage should comprise detached dwellings, group dwellings or residential flat buildings of one or two storeys that contribute to the imposing townscape character of these Park Lands frontages established by various styles of detached dwellings of identified heritage value. Built form character will be reinforced through new development incorporating articulation, bay windows, hip or hip-gable roof profiles, verandahs, balconies and porches, and set within landscaped grounds.	5		Recommended for inclusion within the Historic Area Statement.
	(b) Gibbon Lane: There should be little change in the townscape character established by primarily attached and detached two storey dwellings and a single storey detached dwelling of local heritage value. Future residential buildings addressing the primary street frontage should be detached dwellings. Roofs should be pitched or incorporated behind parapets and the design and composition of facades should reflect traditional proportions of Heritage Places in the locality.	5		Recommended for inclusion within the Historic Area Statement.
	(c) Hill Street: This attractive townscape is formed by the many one storey local heritage places and several two storey State Heritage Places comprising large detached and semi-detached dwellings, as well as other prominent corner sites containing St. Lawrence's Church and Calvary Hospital. New residential buildings should be detached or semi-detached dwellings with a frontage to and access from the street. The siting of buildings should continue the regular building set-back from the primary street frontage and the established regular pattern of siting of Heritage Places on individual allotments relevant to the particular section of the street.	5		Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	<p>(d)Buxton Street: The townscape character is established by several highly cohesive frontages of single storey detached dwellings of local heritage value and other one and two storey State heritage places, including examples of finely detailed Italianate villas with intact stone and cast-iron fencing. A traditional corner shop which abuts the north-western corner of Buxton Street and Jeffcott Street frontages is an exception to the prevailing building set-back but complements the scale and character of the adjoining group of detached cottages on the northern frontage of Buxton Street.</p> <p>The siting of new development at the Helping Hand Aged Care should complement the setback of Heritage Places and avoid unbroken frontages. The use of landscaped open space should be incorporated to break up building mass.</p> <p>Additional residential accommodation should be located on under-utilised land to the side or behind existing buildings provided the value of Heritage Places is not compromised.</p> <p>New residential buildings with frontage to the street should comprise single storey detached or group dwellings.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(e)Molesworth Street: The residential townscape east of Hill Street is almost exclusively Heritage Places comprising semi-detached dwellings of similar architectural design on the southern side, and detached Victorian Italianate houses and other detached dwellings of local heritage value on the northern side.</p> <p>In other parts of the street development opportunities for additional residential accommodation should be limited to under-utilised land behind or adjacent existing buildings where the value of Heritage Places is not compromised.</p> <p>All dwelling types should be considered within established institutional sites. Development adjacent the primary street frontage will reinstate or reinforce the building set-back and subdivision pattern established by Heritage Places.</p> <p>The Church of Perpetual Adoration makes a valuable contribution to the historic character of the area. Development of St Dominic's Priory College should maintain the visual prominence of the Church of Perpetual Adoration by retaining views and vistas with suitable building setbacks from the side and street frontages of the Church. The use of landscaped open space should be incorporated to break up</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(f)Barnard Street: The residential townscape east of Hill Street is almost exclusively Heritage Places and will remain intact through the conservation of Heritage Places characterised by detached and semi-detached dwellings.</p> <p>New buildings should complement and, where necessary, reinstate the generally consistent building set-back established by one and two storey Heritage Places.</p> <p>The Calvary Hospital Chapel forms an important part of the character of Barnard Street Development should be compatible with the Heritage Places and maintain the heritage value and prominence of the Chapel by retaining views and vistas to the Chapel.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(g)Jeffcott Street: The diversity of traditional dwelling types and the generally consistent character of large dwellings should be conserved through the retention of Heritage Places. Buildings that are not identified Heritage Places may be replaced with new buildings that should not necessarily repeat distinctive historic elements (such as bay windows). Such replacement development should be large, single storey detached dwellings adjacent the primary street frontage, and should reinstate the prevailing building set-back established by Heritage Places relevant to the particular locality, which on corner sites may comprise buildings set on or close to the primary street frontage.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(h) Childers Street: The historic townscape is established by primarily large, low density, single storey local heritage places comprising detached dwellings. Buildings that are not identified Heritage Places should be replaced by development that has the appearance of single storey detached dwellings adjacent the primary street frontage. Development should reinstate the prevailing building set-back established by Heritage Places relevant to the particular locality.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(i) Barton Terrace West: The diversity of dwelling types and building set-backs has eroded the former heritage townscape. Development that replaces buildings that are not identified Heritage Places should comprise detached, semi-detached and group dwellings or residential flat buildings that reinstate the building set-back and orientation of the main face of dwellings to the Park Lands established by the remaining Heritage Places.</p>	5		Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	(j)Ward Street and Strangways Terrace (east of Hill Street): The Calvary Hospital is a prominent corner site that contributes to the character of the area. The visual prominence of Calvary Hospital should be retained. New development should be compatible with the Heritage Places and should maintain the orientation and frontage of the hospital to Strangways Terrace. The use of landscaped open space should be incorporated to break up building mass. Car parking and access areas should be consolidated and landscaping established. East of Calvary Hospital, the existing townscape along Ward Street is characterised by a number of single storey detached residences of consistent architectural style, form and siting.	5		Recommended for inclusion within the Historic Area Statement.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Policy Area for residential purposes at low density with landscaped setbacks to retain and reinforce the traditional character.	4	Subzone PO1.1, PO2.1	INSERT policy as a PO within the City Living Zone under the heading 'Building Setbacks'.
3	Development of the Policy Area that maintains residential amenity by limiting non-residential development to institutional uses within existing sites.	5		Given that the Code will allow non residential land uses, INSERT policy to limit non residential land uses.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	4	Zone PO1.1, DTS 1.1	REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. Reference to discouraging row dwellings has been recommended for inclusion within the Historic Area Statement.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building (except for land identified as the Calvary Hospital site on Fig HS/1, the St Dominic's Priory College site on Fig HS/2 and the Helping Hand Aged Care site on Fig HS/3).	3	TNV	TNV says max height 2 storeys. No comments on height depends on context or res amenity. INSERT policy within the City Living Zone on adjacent development responding to context in terms of height.
4	The bulk and density of development should satisfy the following: (a)Basic and maximum plot ratio: 0.6 (except for land identified as the Calvary Hospital site on Fig HS/1, the St Dominic's Priory College site on Fig HS/2 and the Helping Hand Aged Care site on Fig HS/3). (b)Dwelling Unit Factor: (i)600 square metres - detached dwelling and group dwelling; (ii)450 square metres - semi-detached dwelling; (iii)500 square metres - residential flat building not contained within an existing building; (iv)250 square metres - residential flat building contained within an existing building; (v)350 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2	TNV	No plot Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm. Generally the Code and Dev Plan provisions align with regard to minimum lot sizes.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a)on land greater than 2000 square metres; or (b)on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c)in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Not included	INSERT policy for minimum lot sizes on larger sites in the City Living Zone.

Number	Description	Transition category	Where has it been included?	Comments
6	The land for a dwelling should have a primary street frontage to a public road not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 14 metres; (b) Semi-detached dwelling: 12 metres; (c) Group dwelling or residential flat building: 18 metres.	1	TNV	Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m. Generally the Dev Plan and the Code align.
7	A minimum of 50 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3	Design in Urban Areas DTS20.1	Specified 50% max site coverage, excluding the eaves. Depends on site are and dwelling type. This topic needs further consideration. FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
Non-residential Development				
8	Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries.	5	Not included	INSERT policy regarding transition within the City Living Zone.
9	Development of Calvary Hospital should: (a) be in accordance with Concept Plan Fig HS/1; (b) not exceed a plot ratio of 1.5 (c) ensure new buildings up to a maximum of 5 building levels or 15 metres above the median natural or finished ground level at any or any part of a building are designed to: (i) be located in central areas of the site and in areas identified as Taller Built Form; (ii) ensure buildings up to 4 building levels are located along Hill Street and in areas identified as Taller Built Form; (iii) ensure buildings up to 3 building levels are in areas identified as Low Scale Built Form; (v) provide a compatible set back from the street, adjoining residential allotments and State and Local Heritage Places; and (vi) minimise building mass at the interface from an adjoining boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods.	3	Zone PO1.5 and PO7.1	No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement.
10	Development of St Dominic's Priory College should: (a) be in accordance with Concept Plan Fig HS/2; and should: (b) not exceed a plot ratio of 1.1; (c) ensure new buildings up to a maximum of 3 building levels and 9 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i) be located in areas identified as Taller Built Form; (ii) locate Low Scale Built Form up to 2 building levels/6 metres in height along the Barnard Street, Hill Street, Molesworth Street and Priory Lane frontages; (iii) provide a compatible set back from the street, adjoining residential allotments and State and Local Heritage Places; and (iv) minimise building mass at the interface from an adjoining boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods. (d) minimise the impact of vehicular access and student pick up and drop off on residential amenity.	3	Zone PO1.5 and PO7.1	No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
11	Development of Helping Hand Aged Care should: (a) be in accordance with the Concept Plan Fig HS/3; (b) not exceed a plot ratio of 1.7 (North of Kermod Street) and 2.3 (South of Kermod Street); (d) ensure new buildings up to a maximum of 4 building levels or 12 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i) be located in areas identified as 'Taller Built Form'; (ii) locate Low Scale Built Form between 1 to 2 building levels along the Molesworth Street, Buxton Street and Childers Street; (iii) provide a compatible set back from the street, adjoining residential allotments and State and Local Heritage Places; (iv) minimise building mass at the interface from an adjoining boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods. (f) improve the pedestrian environment and access particularly across Buxton Street.	3	Zone PO1.5 and PO7.1	No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement.
Non-residential Development				
12	The maximum size of advertisements should be 0.2 square metres.	5	Not included	INSERT policy under a new heading "Advertisements" in the City Living Zone.
13	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	Not included	"As Above"
14	Advertisements which project from the wall of a building are inappropriate.	5	Not included	"As Above"

General comments	In NALIS												
Number	Description	Transition category	Where has it been included?	Comments									
Desired Character													
	The Childers East Policy Area should remain one of the lowest density residential areas in Upper North Adelaide.	5	NALIS DO1 and DO2 and PO1.1	Recommended for inclusion within the Historic Area Statement.									
	The variety of dwelling types should be retained by the conservation of Heritage Places characterised by nineteenth and early twentieth century elegant and finely detailed mansions, large villas set on large allotments and low and medium density detached and semi-detached residences of one and two storeys, such as the typical cottages and terrace houses on narrower frontages.	5		Recommended for inclusion within the Historic Area Statement.									
	Development should complement the low scale and generally cohesive townscapes of the Policy Area. The character of new residential development should be established by low density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	3	NALIS DO1 and DO2 and PO1.1	<p>The NALIS refers to low density. The TNV refers to the number of storeys. The type of dwellings is not included but can be omitted. A lower height being required as policy is necessary as in North Adelaide to fit in with single storey streetscape, single storey is often required with 2 storey behind. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ. INSERT policy for when part single storey solutions may be required in City Living Zone in the NALIS. INSERT policy on adjacent development responding to context in terms of height in the City Living Zone..</p>									
	(a) Childers Street: There should be little change in the historic townscape established by primarily single storey local heritage places, including consistently sited single-storey row cottages, detached cottages and the occasional terrace houses with narrow frontages on the northern side and on the southern side detached and attached cottages with varying set-backs. On the northern side, new residential buildings adjacent the primary street frontage should be single storey detached or semi-detached dwellings, and the continuity of parapets, verandahs and roof profiles may be reproduced in new development. On the southern side new residential buildings adjacent the primary street frontage should be single storey detached or semi-detached dwellings that reinstate the character of detached and attached cottages.	5		Recommended for inclusion within the Historic Area Statement.									
	(b) Gover Street: The townscape is established by primarily single storey detached dwellings. On the northern side, new residential buildings with frontage to the street should be single storey detached or semi-detached dwellings that reinstate the historic pattern of development, and should not result in built elements such as garages being developed on or close to the primary street frontage or forward of the main face of a dwelling. On the southern side, west of Mansfield Street, development should comprise single storey detached dwellings that complement the more generous scale and siting patterns of Heritage Places. On the southern side, east of Mansfield Street, development should comprise single storey detached dwellings.	5		Recommended for inclusion within the Historic Area Statement.									

Number	Description	Transition category	Where has it been included?	Comments
	(c) Jeffcott Street: This street comprises a diversity of traditional dwelling types reflecting the different stages of early residential development. Existing development includes the low scale character of row cottages with a consistent and intensive built form edge to the eastern frontage north of Childers Street and elsewhere larger detached bay window and gable-fronted villas on individual sites. North of Childers Street the townscape should remain largely unchanged, but where opportunities exist, new residential buildings should be single storey detached or semi-detached dwellings sited on or close to the primary street frontage and designed to complement the established continuity of roof and verandah profiles. South of Childers Street new residential buildings should be single storey detached dwellings sited close to the primary street frontage.	5		Recommended for inclusion within the Historic Area Statement.
	(d) Barton Terrace West The character of development fronting the Park Lands on Barton Terrace West has been highly modified over time and few development opportunities remain that will increase the number of dwellings. New residential development should replace buildings that are not identified Heritage Places and should comprise one or two storey detached or semi-detached dwellings. Development should reinstate a more cohesive edge along Barton Terrace West and remove non-contributory elements such as garages from the primary street frontage. Development should utilise existing vehicle access points where possible.	5		Recommended for inclusion within the Historic Area Statement.
	(e) Hack Street: The intimate character of this narrow street, which is established by single storey cottages, should be maintained. Opportunities to develop additional dwellings should generally be limited to the eastern side of the street and buildings should be single storey detached dwellings with single width carparking where appropriate.	5		Recommended for inclusion within the Historic Area Statement.
	(f) Mansfield Street: The character of this street, which is established by single storey cottages, should remain largely unchanged through the conservation of Heritage Places. Where opportunities for replacement development exist, buildings should be single storey detached dwellings.	5		Recommended for inclusion within the Historic Area Statement.
	(g) in other minor streets: Where opportunities for replacement or infill development exist, buildings should be single storey detached dwellings.	5		Recommended for inclusion within the Historic Area Statement.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Childers East Policy Area for residential purposes at low densities.	4	NALIS DO1 and DO2 and PO1.1	
3	Residential amenity maintained by restricting the introduction, expansion or intensification of non-residential uses.	5	Zone PO1.2, DTS1.2, PO1.3, PO1.4, D	The new Zone encourages resi uses, though of small scale are encouraged as well as the Institutions. INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	4	Zone PO1.1, DTS 1.1	The new Zone also allows retirement facility and supported accomm. Row dwellings still excluded. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ.
3	Development should not exceed two building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building. Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	3	Zone PO2.2, DTS2.2	TNV says max height 2 storeys. No comments on height depends on context or res amenity. INSERT policy on adjacent development responding to context in terms of height in the City Living Zone.
	The bulk and density of development should satisfy the following: (a)Basic and maximum plot ratio: 0.8; and	4		Plot ratio has been removed and replaced with minimum lot sizes, total roofed area, site frontages and setbacks.

Number	Description	Transition category	Where has it been included?	Comments
4	(b) Dwelling Unit Factor: (i) 600 square metres – detached dwelling and group dwelling; (ii) 450 square metres – semi-detached dwelling; (iii) 500 square metres – residential flat building not contained within an existing building; (iv) 250 square metres – residential flat building contained within an existing building; (v) 350 square metres – residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2	Zone DTS 5.1	The Code does not include DUF but has a minimum lot size for a detached dwelling of 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm No mention of resi flat within existing building, non complying use or heritage. Generally, the existing DUFs align with the Code's minimum lot sizes.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (e.g. single storey detached dwellings) and only in the following circumstances: (a) on land greater than 2000 square metres; or (b) on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c) in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Not included	INSERT policy on minimum allotment sizes on larger land parcels in the City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 14 metres; (b) Semi-detached dwelling: 12 metres; (c) Group dwelling or residential flat building: 18 metres.	1	Zone DTS 5.1	Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m. Generally the Dev Plan and the Code align.
7	A minimum of 40 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control.	3		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
Advertising				
8	The maximum size of advertisements should be 0.2 square metres and limited to one advertisement per premises.	5	HA Overlay PO3.3	INSERT policy under a new heading "Advertisements" in the City Living Zone.
9	Illumination of advertisements will only be considered where it will not detrimentally affect residential amenity.	5	Not included	"As Above"
10	Advertisements more than 3.0 metres above natural ground level or an abutting footpath or street are inappropriate.	5	Not included	"As Above"
11	Advertisements which project from the wall of a building are inappropriate.	5	Not included	"As Above"

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	Wellington Square is one of the City's most important and historical public spaces and the Policy Area should be maintained as one of the most attractive residential areas in North Adelaide. The townscape is contiguous with and complementary to the townscape character of the major streets which lead into the Square.	5		Recommended for inclusion within the Historic Area Statement.
	Development should create a more cohesive built form edge to the Square through selective and sensitive infill development of buildings that are sited with particular regard to the prevailing setbacks of adjacent development. New buildings should complement the historic built form comprising large, single storey local heritage places and one or two storey State heritage places.	5		Recommended for inclusion within the Historic Area Statement.
	Development should preserve and enhance the Square's informal character and unity by appropriate landscaping, paving, planting, lighting and street furniture. Pedestrian paths and informal recreation areas should provide attractive and safe shelter and seating. Vehicle access to and through the Policy Area should be maintained together with a safe, pleasant pedestrian environment within Wellington Square and on the adjacent footpaths.	4		Recommended for inclusion within the Historic Area Statement. Many of these activities are not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	The Wellington Square Policy Area developed for residential purposes at low densities and residential amenity maintained by development associated with existing non-residential uses contained within existing site boundaries.	5	Zone	Low to med density envisaged and non resi land uses also. Should be included in the Historic Area Statement. INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
3	The continued use of the Square as a relaxed and pleasant environment for passive recreation and an informal civic space for local activities and events.	4		Not 'development'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	5	Zone PO1.1, DTS 1.1	Retirement facility and supported accommodation allowed as is non resi development. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
3	Buildings should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building. Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	3	TNV	Max height 2 storeys INSERT policy on height being guided by context in City Living Zone under the heading Built Form and Character.

Number	Description	Transition category	Where has it been included?	Comments
4	The bulk, density and height of buildings should not exceed the following: (a)Basic and maximum plot ratio: 1.0; and (b)Dwelling Unit Factor: (i)600 square metres - detached dwelling and group dwelling; (ii)450 square metres - semi-detached dwelling; (iii)500 square metres - residential flat building not contained within an existing building; (iv)250 square metres - residential flat building contained within an existing building; (v)350 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2		TNV on plot Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm No comment on resi flat building contained within existing building and resi dev of site occupied by a non complying use or heritage considerations. Generally, the Code and Dev Plan align with regard to minimum lot sizes.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a)on land greater than 2000 square metres; or (b)on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c)in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Not included	INSERT policy on land division on larger sites in the City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a)Detached dwelling: 14 metres; (b)Semi-detached dwelling: 12 metres; (c)Group dwelling or residential flat building: 18 metres.	1	Zone DTS 5.1	TNV for site frontages Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m. Generally the Code and Development Plan align.
7	A minimum of 50 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3	GDP Design in Urban Areas - DTS20.1	FURTHER INVESTIGATION REQUIRED. Depends on lot size and type of development. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. 50% max of roofed area exc eaves.
8	Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and provides a transition of built form at site boundaries.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Height'.
9	Development should not result in additional vehicle access on the Wellington Square frontage.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Access'.
10	Residential buildings addressing the Wellington Square frontage should be one or two storey detached or semi-detached dwellings that enclose the open space of the Square through the close siting of buildings to side boundaries.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Building Form'
11	Buildings should be sited close to the Square or other street frontage, whichever is applicable, provided it is not forward of any adjoining Heritage Place.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Siting'
12	Proposed redevelopment of corner sites comprising buildings that are not identified Heritage Places should provide an attractive facade to each street frontage and emphasise the historic townscape of the junction of Square and street by their siting, scale and shape.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Building Form'
13	Balconies or verandahs should not be developed over the footpaths of Wellington Square.	5	Not included	Recommended for inclusion within the Historic Area Statement under the heading 'Building Form'
Advertising				
14	The maximum size of advertisements should be 0.2 square metres with the exception of the Wellington Square frontages of non-residential sites in the south eastern part of the Policy Area (sited between 2 and 38 Wellington Square, where larger advertisements may be appropriate.	5	HAO - PO3.3 makes general reference	INSERT policy under a new heading "Advertisements" in the City Living Zone.
15	Illumination of advertisements should be discreet and should not adversely affect residential amenity.	5	see above	"As Above"
16	Advertisements more than 3.7 metres above natural ground level or an abutting footpath or street are inappropriate.	5	see above	"As Above"
17	Advertisements which project from the wall of a building are inappropriate.	5	see above	"As Above"

Attachment A.2 Audit of Adelaide (City) Development Plan into Draft Code

Number	Description	Transition category	Where has it been included?	Comments		
Desired Character						
	The Tynte Policy Area should continue as an area for low and medium density residential development characterised by a range of dwelling types as well as providing community facilities for North Adelaide. The formal and dignified historic character of Tynte Street derived from its traditional community uses such as the post office, library, hotel, church and kindergarten, and its wide tree-lined streetscape should be conserved. Quality landscaping, paving and street furniture should complement its historic context, with the wide footpaths used for outdoor dining and cafes where appropriate.	2	Zone DO1, PO1.1, DTS 1.1, PO1.2, DTS 1.2, PO1.3, PO1.4, DTS 1.5. HA Overlay PO5.2	HA Overlay talks about landscape patterns and characteristics that contribute to the historic area but not outdoor dining land uses.		
	The variety of dwelling types should be retained by the conservation of Heritage Places. An increase in the amount of residential accommodation should be achieved by redevelopment of buildings and sites that are not identified Heritage Places and may also be achieved by converting or redeveloping non-residential premises to either residential or mixed use residential and office uses.	3	Zone PO2.2	Zone talks about adapting buildings but not increase in resi. Other uses see box above. INSERT policy on retaining heritage places and redeveloping non listed or non resi land uses in the City Living Zone in the NALIS and MHISZ.		
	Development in Archer Street should create a gradual transition from the more contemporary building forms and townscape character of the Main Street Policy Area (O'Connell Street) to the east. The attractive streetscape should be maintained and enhanced by landscaping of adjacent development.	5		This should be included in the Historic Area Statement.		
	Development on Tynte Street should reinforce the dignity and quality of the public buildings in the street.	5		Recommended for inclusion within the Historic Area Statement.		
	Development off Tynte and Archer Streets should reflect the more intimate scale and siting of historic and established built form.	5		Recommended for inclusion within the Historic Area Statement.		
	The site identified in Concept Plan Fig T/1, formerly occupied by Channel 9, provides the opportunity for an integrated redevelopment with low to medium scale residential development which may be complemented by small restaurants and cafes that activate Tynte Street. Medium rise dwellings up to 6 building levels will be centrally located within the site to limit impacts to residential amenity and historic streetscapes. Medium rise dwellings will transition down in scale to provide a suitable built form interface to sensitive development including existing low scale dwellings and Heritage Places.	5	Zone PO1.5	No map in the Code for this area as per the Dev Plan. Is this a mistake? Further information required.		
	Development to the Mansfield Street frontage will be low-scale and create a cohesive streetscape that enhances the historic pattern of development. Development should retain and enhance the low scale historic built-form around the perimeter of Wellington Square.	5		Recommended for inclusion within the Historic Area Statement.		
	The 1960s store building located within the hatched area on Concept Plan Fig T/1 on Gover Street will be replaced with low scale dwellings. The built form of dwellings on this portion of the site will reinforce the character of the historic development pattern of detached dwellings and complement the more generous scale and siting patterns of Heritage Places within Gover Street.	5		Recommended for inclusion within the Historic Area Statement.		
	The Policy Area should maintain a high level of pedestrian safety with convenient access to the Main Street (O'Connell) Zone to the east, particularly to the North Adelaide Village Centre, and should remain highly accessible for local vehicle access needs.	4	Not included.	This policy covers activities that are not 'development'.		
Policy Objectives						
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4	Not included.			
2	Development of the Tynte Policy Area for residential purposes at low and medium densities and community facilities for North Adelaide that complement the established small scale traditional community uses in Tynte Street.	5	Zone PO2.2, DTS 2.2	Recommended for inclusion within the Historic Area Statement.		
Principles of Development Control						
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4				

Number	Description	Transition category	Where has it been included?	Comments
2	Residential development should be in the form of detached, semi-detached, row or group dwellings, residential flat buildings, or alterations and additions to existing buildings. Row dwellings should only occur where: (a) vehicle access can be provided from laneways or minor streets; (b) garaging is not incorporated into the principal street frontage of the building; and (c) there is a maximum of six dwellings in any one group.	5	Zone PO1.1, DTS 1.1 Design in Urban Areas PO18.1	No comment about row dwellings and max number in one group. Design in Urban Areas talks about garaging not detracting from the streetscape but no comment specific to row houses. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building (except as provided for by Principle 15).	1	Zone DTS 2.2	Max height is 2 storeys
4	Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	5	Not included.	INSERT policy on adjacent development responding to context in terms of height in the City Living Zone.
5	Except on land both north of Tynte Street and west of Mansfield Street, the bulk and density of development should satisfy the following: (a) Basic and maximum plot ratio: 1.0 and (b) Dwelling Unit Factor: (i) 450 square metres - detached dwelling, semi-detached dwelling and group dwelling; (ii) 450 square metres - row dwelling; (iii) 450 square metres - residential flat building not contained within an existing building; (iv) 250 square metres - residential flat building contained within an existing building; (v) 300 square metres - residential redevelopment of a site occupied by an existing non-complying use. In relation to Principle 5(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 5(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	1	Zone DTS 5.1	No plot Minimum lot size for a detached dwelling is 450 sqm; semi-detached dwelling is 450 sqm; row dwelling is 450 sqm; group dwelling is 450 sqm; residential flat building is 450 sqm No resi flat in building, non complying or heritage. Generally the Code and the Development Plan align.
6	Except on land both north of Tynte Street and west of Mansfield Street, the land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment, where the frontage to a public road should be no less than five metres): (a) detached dwelling: 14 metres; (b) semi-detached dwelling: 12 metres; (c) row dwelling: 7 metres; (d) group dwelling or residential flat building: 18 metres.	1	Zone DTS 5.1	Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; row dwelling is 7m; group dwelling is 18m; residential flat building is 18m. Generally the Code and Development Plan policies align.
7	A minimum of 30 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 6, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3	Design in Urban Areas?	FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
8	There should be no expansion of retail activities, other than in accordance with the Desired Character.	3	Zone PO1.2, DTS1.2, PO1.4,	INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.

Number	Description	Transition category	Where has it been included?	Comments
9	Limited non-residential activities such as community facilities, small scale offices and consulting rooms are appropriate in Tynte Street provided they complement rather than duplicate existing non-residential uses that currently include a post office, library, hotel and child care centre.	5	Zone PO1.2, DTS1.2, PO1.4	Non resi activities now allowed across the whole PA not just Tynte St. REQUIRES FURTHER REVIEW. INSERT policy on non residential land uses by either of the following options: • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 – Land Use Concept Plan based on existing Policy Area boundaries
10	In Tynte Street, verandahs or balconies should only be established across footpaths where street tree growth permits. Development should maintain the continuity of built form by ensuring that new buildings are two storeys in height, and abut or are sited close to the Tynte Street frontage.	5	Not included	Recommended for inclusion within the Historic Area Statement.
11	Development should maintain existing views to the prominent landmark buildings in the adjacent Carclew Policy Area.	5	Not included	Recommended for inclusion within the Historic Area Statement.
12	Through-site pedestrian links to the North Adelaide Village Centre should be incorporated in development where practicable.	5	Not included	INSERT policy on links through sites in the City Living Zone in the MHISZ.
13	Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries.	5	Not included	INSERT policy on transition of buildings within a Zone in the City Living Zone in the MHISZ.
14	Development on land both north of Tynte Street and west of Mansfield Street except in the hatched area on Concept Plan, Fig T/1 should: (a)be primarily for residential use; (b)be in accordance with the Concept Plan, Fig T/1 and the Desired Character; (c)not exceed a plot ratio of 1.7; (d)ensure new buildings or built form up to a maximum of 6 building levels are: (i)located within the area identified as Taller Built Form in Concept Plan Fig T/1; and (ii)designed to minimise building mass at the interface with adjoining low-scale residential development by siting buildings within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, unless a variation to the building envelope demonstrates minimal adverse impacts upon adjacent residential development in terms of massing and overshadowing through alternative design methods. (e)locate low scale built form of up to 2 building levels along the Mansfield Street frontage; (f)locate low scale built form of up to 2 building levels on the Tynte Street frontage with upper level buildings set back from the street in order to maintain the prominence of the former North Adelaide Primitive Methodist Church building and the streetscape pattern of Tynte Street. (g)incorporate a number of individual buildings that are separated to break up building mass and avoid long sections of continuous buildings; (h)ensure new vehicle access points on Mansfield Street are: (i)located away from the northern boundary of the Former Channel 9 site identified on Concept Plan Fig T/1 to provide adequate sight line distances to the north; and (ii)located to avoid conflict with existing vehicle access points in the street (i)provide an area along the northern boundary to accommodate landscaping to soften and relieve any large building mass at the interface with low scale residential premises.	5	Zone PO1.5 and PO7.1	Recommended for inclusion within the Historic Area Statement. The map doesn't appear to be in the TNV Concept plans which may be a mistake. INCLUDE CONCEPT PLAN
15	Development on land in the hatched area on Concept Plan Fig T/1 should: (a)be primarily for residential use; (b)be in accordance with the Concept Plan Fig T/1 and the Desired Character; (c)not exceed a plot ratio of 0.8; and (d)not exceed a maximum of 2 building levels or 6 metres above the median natural or finished ground level at any point or any part of a building.	5	Not included	The map doesn't appear to be in the TNV Concept plans which may be a mistake. INCLUDE CONCEPT PLAN
Advertising				
16	Advertisements should be restrained and discreet and relate principally to pedestrians.	5	HAOverlay PO3.3	The new Zone does not address all the existing policy. INSERT policy to cover existing policy in the City Living Zone in the NALIS and MHISZ.
17	Advertisements should be sensitively designed, located and scaled to provide an overall consistency within the townscape.	5		see above

Number	Description	Transition category	Where has it been included?	Comments
18	Illumination of advertisements will only be considered where it is discreet and does not affect the amenity of residential premises.	5		see above
19	Advertisements more than 3.7 metres above natural ground level or an abutting footpath or street are inappropriate.	5		see above

General comments	In NALIS												
Number	Description	Transition category	Where has it been included?	Comments									
Desired Character													
	The Carclew Policy Area should be conserved as one of the most attractive and historically significant residential areas in the City. The Policy Area is characterised by intact and generally cohesive townscapes of nineteenth and twentieth century detached houses set in landscaped grounds and imposing two-storey terrace houses.	5		Recommended for inclusion within the Historic Area Statement.									
	Aquinas College will provide student accommodation, educational activities and associated support services. Development should meet the community needs and future requirements whilst reinforcing the heritage values of the Policy Area.	1	Zone PO1.5 - Concept Plan	Concept plan as per Dev Plan. Otherwise no comment.									
	New development should respect the low scale, environmental quality, character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5		Recommended for inclusion within the Historic Area Statement.									
	The character of new residential development should be established by low density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	5	NALIS - DO1, PO1.1 Zone - DTS2.2 TNV	No comment on lower heights being desirable. REQUIRES FURTHER INVESTIGATION. INSERT policy on on adjacent development responding to context in terms of height. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.									
	(a)Montefiore Hill, Palmer Place and Brougham Place: New development at Aquinas College should retain the prominence of the State Heritage Places by retaining the views and vistas of those places from Palmer Place and Montefiore Hill. The use of landscaped open space should be incorporated to break up building mass. There should be little change to the unique historic townscapes derived from the setting of large mansions set in landscaped grounds. Heritage Places exhibit variations in architectural style but are generally articulated and modelled, and constructed of stone and brick with intricate detailing and ornamentation. Typical fencing defining property frontages is constructed of brick, stone or stone and cast-iron boundary walls and new fencing should unify the townscape through the use of traditional materials. Development along these frontages should be subordinate to the prevailing and traditional built form and should be generously proportioned one or two storey detached or semi-detached dwellings or residential flat buildings set in landscaped grounds. However, infill development opportunities should be limited due to the need to conserve an appropriate landscape setting to Heritage Places. Development of ancillary buildings associated with existing uses should be set back from the road frontage in order to be subordinate to Heritage Places. Development of similar height and building levels may be appropriate provided it does not detract from the heritage value of a place or adversely affect the high quality streetscapes and settings.	5		Recommended for inclusion within the Historic Area Statement.									

Number	Description	Transition category	Where has it been included?	Comments
	(b)Strangways Terrace: The imposing townscape character is established by the large detached Victorian villas situated on the western part of the Terrace. With the exception of the conflict in scale and character created by 1960s flat development, a cohesion is derived from the pattern of detached houses, the consistency of masonry facades, vertically proportioned windows, pitched roofs, verandahs and porches. Development within this townscape should reinforce the traditional character of detached and semi-detached dwellings set on large allotments and may accommodate more contemporary residential styles towards the southern part of Strangways Terrace. Infill development opportunities should be very limited due to the need to conserve an appropriate landscape setting to Heritage Places.	5		Recommended for inclusion within the Historic Area Statement.
	(c)Jeffcott Street: North of Ward Street the residential character is derived from the low scale and close grouping of small cottages and row dwellings sited close to the street frontage. South of Ward Street, the townscape character is derived from detached residences, institutional buildings and a large contemporary apartment building. Unifying elements include articulated masonry facades, gable frontages, pitched roofs, verandahs and cast iron decoration. Development should be low density residential development in the form of detached and semi-detached dwellings with new buildings primarily limited to the replacement of non-contributory buildings of a height and form established by Heritage Places. Development should reinstate the character of residential buildings close to the street frontage where it is compatible with adjacent Heritage Places. Redevelopment of the squash courts on Jeffcott Street, incorporating detached or semi-detached residential buildings of sympathetic design, proportions and building set-backs to adjacent Heritage Places is desired. Boundary fencing to Jeffcott Street is desirable and should utilise traditional materials.	5		Recommended for inclusion within the Historic Area Statement.
	(d)Ward Street (east of Jeffcott Street): Development on Ward Street should be domestic in scale and should contribute to the creation of a cohesive townscape, comprising primarily detached and semi-detached dwellings and residential flat buildings that respect and interpret existing nineteenth century building forms in a sensitive, contemporary manner.	5		Recommended for inclusion within the Historic Area Statement.
	(e)Ward Street (west of Jeffcott Street): The existing townscape along Ward Street is characterised by single-storey detached residences of consistent architectural style, form and siting. Development opportunities on the northern side should generally be limited to the replacement of buildings are not identified Heritage Places, in which case the building set-back established by Heritage Places addressing the street frontage should be reinstated. On the southern frontage a more intimate development pattern should be maintained, derived from the close grouping of smaller detached cottages of local heritage value located on or near the street. The prominence of the early limestone walls and outbuildings should be maintained. New residential development should reinforce the plain or articulated gabled frontages with a high proportion of solid to void in the composition of facades of these existing dwellings.	5		Recommended for inclusion within the Historic Area Statement.
	(f)in minor streets: Development should be primarily single storey.	5	No specific comment on height included	Recommended for inclusion within the Historic Area Statement.
	Development should retain vistas to major landmark buildings, particularly in the vicinity of Bishops' Court, where a distinctive silhouette is created by the juxtaposition of steeply pitched roof profiles, gables and tall narrow chimneys, and on Montefiore Hill by the distinctive roof forms of the prominent mansion, Carclew.	5	not included	Recommended for inclusion within the Historic Area Statement.
	Ward Street, east of Jeffcott Street, should continue to develop as a mixed use residential, office and consulting room area.	5		REQUIRES FURTHER REVIEW. INSERT policy on non residential land uses by either of the following options: <ul style="list-style-type: none"> • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 - Land Use Concept Plan based on existing Policy Area boundaries

Number	Description	Transition category	Where has it been included?	Comments
	The Policy Area should maintain a safe, pleasant and attractive pedestrian environment, with complementary landscaping in public places to complement the character of Palmer Gardens and the Park Lands below Montefiore Hill south of the Policy Area.	4		Not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Carclew Policy Area for residential purposes at low densities that contributes positively to the diverse character of one of Adelaide's most historically significant residential areas located adjacent the Park Lands.	5	NALIS - DO1, DO2, PO1.1, PO2.1	Recommended for inclusion within the Historic Area Statement. and/or INSERT policy on land use and density.
3	Non-residential development comprising institutional and community uses compatible with residential amenity.	1	Zone PO1.3	
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	4	NALIS - DO1, DO2, PO1.1, PO2.1,	
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building (except for land identified as Aquinas College on Fig C5/1). Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	3	Zone DTS 2.2 TNV	No comments on lower heights being appropriate. INSERT policy on adjacent development responding to context in terms of height in the City Living Zone.
4	The bulk and density should satisfy the following basic and maximum plot ratio: (a)0:8 – sites with a boundary with Palmer Place, Brougham Place, Montefiore Hill, Strangways Terrace; (b)1.0 – elsewhere (except for land identified as the Aquinas College site on Fig C5/1).	2	NALIS DTS 2.1	Plot is not addressed in the Code.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (e.g. single storey detached dwellings) and only in the following circumstances: (a)on land greater than 2000 square metres; or (b)on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c)in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Zone DTS 5.1	See TNV for min lot sizes. Dev Plan does not have min lot sizes like for the other Pas. Mistake? Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm. INSERT policy on minimum lot sizes on larger allotments in City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a)Detached dwelling: 14 metres; (b)Semi-detached dwelling: 12 metres; (c)Group dwelling or residential flat building: 18 metres.	1	Zone DTS 5.1	Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m. The Code and Dev Plan align.
7	A minimum of 50 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3	NALIS DTS 2.1	FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. 50% max roofed area exc eaves. Further research required.
8	Development on the Palmer Place frontage should maintain the prominence of the Heritage Places and the visual integrity of the street.	5	not included	Recommended for inclusion within the Historic Area Statement.
9	Residential buildings addressing the street frontage should be generously proportioned detached or semi-detached dwellings or residential flat buildings up to two storeys set in landscaped grounds.	5	not included	Recommended for inclusion within the Historic Area Statement.
10	Development of ancillary buildings associated with existing residential uses should be well set back from the principal road frontage	5	not included	Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
11	Institutional and community uses compatible with residential amenity should only be developed in Ward Street, east of Jeffcott Street.	5	not included	REQUIRES FURTHER REVIEW. INSERT policy on non residential land uses by either of the following options: • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 – Land Use Concept Plan based on existing Policy Area boundaries
12	Development of Aquinas College should: (a) be in accordance with the Concept Plan as Fig C5/1; (b) not exceed a plot ratio of 1.0; (c) ensure new buildings up to a maximum of 3 building levels or 9 metres above the median natural or finished ground level at any point or any part of a building are located and designed to: (i) be located in areas identified as 'Taller Built Form'; (ii) provide compatible setbacks with adjoining residential allotments and State and Local Heritage Places; and (iii) minimise building mass at the interface from an adjoining boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing through alternative design methods.	3	Zone PO1.5 - Concept Plan	No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement under the heading 'Height'.
Advertising				
13	The maximum size of advertisements should be 0.2 square metres and advertising displays should be limited to one advertising display per premises.	5	not included	INSERT policy under a new heading 'Advertisements' in the City Living Zone.
14	Illumination of advertisements will only be considered where it is discreet and does not affect the amenity of residential premises.	5	not included	"As Above"
15	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	not included	"As Above"

Desired Character					
	The Margaret Street Policy Area should be conserved as one of the most historically intact residential areas in South Australia. Residential development should be in the form of low and medium density detached or semi-detached dwellings, residential flat buildings, or small groups of row dwellings or terrace housing where it should complement or reinstate a continuous built form edge in an historic streetscape.	5	Zone DO1, PO1.1, DTS1.1,	Recommended for inclusion within the Historic Area Statement.	
	The character of new residential development should be established by low and medium density detached dwellings, semi-detached and row dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing a primary street frontage, to reinforce the character of the historic built form as described below:	5	Zone DO1, PO1.1, DTS1.1	REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ. INSERT policy on development responding to context in the City Living Zone in the NALIS and MHISZ.	
	(a)Gover Street: Medium density residential development of one and two storeys in Gover Street should continue the regular pattern of Heritage Places addressing the principal road frontage with a consistent building set-back from the street. On the northern side development opportunities, other than alterations and additions to the rear of Heritage Places, should be limited to the replacement of buildings that are not identified Heritage Places as there are few allotments with under-utilised land that are suitable for the development of new buildings. On the southern side, the majority of allotments contain Heritage Places addressing the street frontage. The development of existing allotments with under-utilised land at the rear should be appropriate subject to suitable access arrangements that do not require the creation of new crossovers on Gover Street. There are several vacant allotments that should be suitable for the development of new buildings. Residential development should be designed with the appearance of detached or semi-detached dwellings or residential flat buildings as viewed from the primary street frontage.	5		Recommended for inclusion within the Historic Area Statement.	
	(b)Tynte Street: Development along Tynte Street should respond to the areas of historic townscape which give it charm and distinction, and buildings may be larger in scale and frontage than that prevailing elsewhere in the Policy Area. Development adjacent to the intersection of Tynte and Margaret Streets should be two-storey in height, abut the street frontage and be compatible with the corner shop and row dwelling form of existing historic buildings. Development west of Margaret Street should comprise a mixture of dwelling types up to two-storeys in height, and be set close to the street frontage. East of Margaret Street development should conserve the mixture of dwelling types characterised by more generous landscaped grounds and deeper set-backs.	5		Recommended for inclusion within the Historic Area Statement.	
	(c)Archer Street: The distinctive townscape of Archer Street, which is characterised by a predominance of Victorian terrace housing, Victorian institutional buildings, a former traditional corner hotel and Victorian detached houses situated close to the street frontage, should be reinforced by one and two storey dwellings.	5		Recommended for inclusion within the Historic Area Statement.	

Number	Description	Transition category	Where has it been included?	Comments
	(d)Ward Street: The Ward Street townscape comprises mainly single-storey detached cottages. Development opportunities should generally be limited to the replacement of non-contributory buildings. New buildings should maintain the pattern of frontages established by individual dwellings set close to the street and establish a cohesive built form character by sympathetic interpretation of traditional residential forms.	5		Recommended for inclusion within the Historic Area Statement.
	(e)Ralston Street: The Ralston Street townscape comprising single-storey semi-detached dwellings should be conserved. Those on the eastern side provide a cohesive group of Edwardian historic houses of brick construction, while the western side provides a more varied townscape in terms of scale, siting and character. Development will preserve the single storey character of the street.	5		Recommended for inclusion within the Historic Area Statement.
	(f)Beviss Street: The Beviss Street townscape comprising consistently sited, detached and semi-detached single-storey cottages should be conserved.	5		Recommended for inclusion within the Historic Area Statement.
	(g)Curtis Street: Development along Curtis Street should complement the consistent townscape of detached and semi-detached nineteenth century houses built close to the street frontage. Given the number of local heritage places, opportunities for infill development will be limited primarily to the rear of existing allotments.	5		Recommended for inclusion within the Historic Area Statement.
	(h)Murray Street: The Victorian style row housing built in the form of closely sited semi-detached pairs should be conserved. The street is almost exclusively comprised of local heritage places, hence development opportunities will be limited to alterations and additions to the rear of Heritage Places. Consistent roof forms and verandahs contribute to a cohesive townscape which should be maintained and enhanced.	5		Recommended for inclusion within the Historic Area Statement.
	(i)Margaret Street: Local heritage places addressing this street are generally single storey detached or semi-detached buildings. Development opportunities should generally be limited to the replacement of buildings that are not identified Heritage Places and alterations and additions to the rear of Heritage Places. Single storey detached or semi-detached buildings addressing the Margaret Street frontage should be developed as part of any site redevelopment, with the provision of rear access where it can be accommodated within the existing street network.	5		Recommended for inclusion within the Historic Area Statement.
	Pedestrian amenity and shelter should continue to be provided by street trees and a consistently high standard of paving and other landscaping should be maintained. Vehicle access to and through the Policy Area should cater primarily for local and visitor needs.	4	HAOverlay PO5.2	Pedestrian amenity and shelter not included nor paving or landscaping. Many of these activities are not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4	Not included.	
2	Development of the Margaret Street Policy Area for residential purposes at low and medium densities.	5	Zone DO1, PO1.1, DTS 1.1	Recommended for inclusion within the Historic Area Statement.
3	Residential amenity maintained by restricting the introduction, expansion or intensification of non-residential uses.	5	Not included.	INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached, group dwellings, residential flat buildings, or alterations and additions to existing buildings. Row dwellings should only occur where: (a)vehicle access can be provided from laneways or minor streets; (b) garaging is not incorporated into the principal street frontage of the building; and (c)there is a maximum of six dwellings in any one group.	5	Zone DO1, PO1.1, DTS 1.1	Nothing on row dwellings. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building. Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	3	Zone DTS 5.1	Max height 2 storeys INSERT policy on adjacent development responding to context in terms of height in the City Living Zone.

Number	Description	Transition category	Where has it been included?	Comments
4	The bulk and density of development should satisfy the following: (a)Basic and maximum plot ratio: 0.8. (b) Dwelling Unit Factor: (i)350 square metres - detached dwelling, semi-detached dwelling and group dwelling; (ii)350 square metres - row dwelling; (iii)350 square metres - residential flat building not contained within an existing building; (iv)250 square metres - residential flat building contained within an existing building; (v)300 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	1	Zone DTS5.1	Minimum lot size for a detached dwelling is 350 sqm; semi-detached dwelling is 350 sqm; row dwelling is 450 sqm; group dwelling is 350 sqm; residential flat building is 350 sqm. Generally, Code policy aligns with Dev Plan policy.
5	The site for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a)Detached dwelling: 12 metres; (b)Semi-detached dwelling: 10 metres; (c)Row dwelling: 7 metres; (d)Group dwelling or residential flat building: 18 metres.	2	Zone DTS 5.1	Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; row dwelling is 7m; group dwelling is 18m Note - site frontages are larger in the Code than in the Dev Plan.
6	A minimum of 30 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 6, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
7	Verandahs or balconies should not be developed over footpaths, other than alterations to those on existing non-residential corner buildings.	5	Not included.	INSERT policy on verandahs in the City Living Zone under the heading 'Built Form and Character'.
8	Two storey development which abuts street frontages may be appropriate at corners of major streets and minor street junctions.	5	Not included.	REQUIRES FURTHER INVESTIGATION. How is to be achieved under the structure so that it doesn't apply to all of north or south Adelaide?Or INSERT policy on corner sites in the City Living Zone in the NALIS and MHISZ.
9	Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and should provide a transition of built form at site boundaries.	5	Not included.	INSERT policy on transitions with in the Zone in the City Living Zone.
Advertising				
10	Advertisements should not exceed 0.2 square metres and should be limited to one advertising display per premises.	5	Not included.	INSERT policy under a new heading 'Advertisements' in the City Living Zone.
11	Illumination of advertisements will only be considered where it is discreet and does not affect the amenity of residential premises.	5	Not included.	"As Above"
12	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	Not included.	"As Above"
13	Advertisements which project from the wall of a building are inappropriate.	5	Not included.	"As Above"

Desired Character				
	The Lefevre Policy Area should maintain a prime residential frontage overlooking the Park Lands comprising large low density residential buildings designed in a grand manner and set in generous landscaped grounds.	5	NALIS DO1, DO2, PO1.1, PO2.1	Recommended for inclusion within the Historic Area Statement.
	The variety of dwelling types should be retained by the conservation of Heritage Places.	5	not included	Recommended for inclusion within the Historic Area Statement.
	Lincoln College will provide student accommodation and educational activities. Development should meet the community needs and future requirements whilst reinforcing the heritage value of the Policy Area.	3	Zone PO1.5	GDP - Concept Plan needs to be included in Same as in Dev Plan No comment on heritage value INSERT policy on non residential activities reinforcing the heritage value of the locality.
	New development should respect the low scale, environmental quality, character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5		Recommended for inclusion within the Historic Area Statement.
	The character of new residential development should be established by low density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below.	3	NALIS DO1, DO2, PO1.1, PO2.1	No comment on lower heights being desirable. REQUIRES FURTHER INVESTIGATION. INSERT policy on on adjacent development responding to context in terms of height. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
	(a)Lefevre Terrace: The cohesive townscape character of Lefevre Terrace is established by the grand style and setting of nineteenth century terrace houses and Italianate villas, groupings of smaller early twentieth century villas and bungalows. The terraces and Italianate villas exhibit a high degree of facade articulation and modelling, with richly detailed masonry and cast iron ornamentation. Associated stone and cast-iron boundary walling reinforces the built form qualities of these residences. In contrast, the architectural character and detailing of the adjacent twentieth century villas and bungalows is more restrained. Development should comprise large detached and semi-detached dwellings or residential flat buildings set in generous landscaped grounds.	5		Recommended for inclusion within the Historic Area Statement.
	(b)Brougham Place: The historical significance of Brougham Place requires that new development along these frontages should be subordinate to the prevailing character of the historic built form. New buildings on the Brougham Place frontage are not desired other than where it should replace non-contributory buildings. Row or terrace housing is inappropriate. New development should comprise large detached and semi-detached dwellings or residential flat buildings that should complement the existing historic houses set in landscaped grounds. New development at Lincoln College should retain the visual prominence of the State Heritage Places by retaining the views and vistas of the former houses from Brougham Place and the Park Lands.	5		Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	(c)Barton Terrace East: Along the Barton Terrace East frontage the townscape comprises late nineteenth and early twentieth century residences. The detached and semi-detached cottages and villas are typically constructed of stone and brick and are generally single storey. The siting of new buildings should complement the regular pattern of detached dwellings fronting existing public roads with a building set-back complementing existing Heritage Places. Development should maintain the present scale, heights, setbacks and low density character of the street.	5		Recommended for inclusion within the Historic Area Statement.
	(d)Ward Street Ward Street comprises of historic single storey cottages and a mix of dwellings of varied architectural form and height. Ward Street will be improved by the redevelopment of buildings which are incompatible with the historic streetscape. New development will be orientated to the street, enhance the pedestrian environment and provide a compatible and enhanced streetscape. The siting of new development at Lincoln College along Ward Street should comprise a number of separate buildings to avoid long sections of unbroken buildings. The use of landscaped open space should be incorporated to break up building mass.	5		Recommended for inclusion within the Historic Area Statement.
	The Policy Area should maintain safe and attractive conditions for pedestrians and convenient access to the adjacent Park Lands with pedestrian shelter and amenity provided by trees and a high standard of paving and other landscaping.	4		Not 'development'.
	Landscaping in public places along Lefevre Terrace, Barton Terrace East and Brougham Place should provide a transition between the Policy Area's built form and the informal planting of the Park Lands.	4		Not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Lefevre Policy Area for residential purposes at low densities that conserves and enhances the established character of historically significant buildings overlooking the Park Lands.	4	NALIS DO1, DO2, PO1.1, PO2.1	No comment on the historic character
3	Residential amenity maintained by restricting the introduction, expansion or intensification of non-residential uses.	5	NALIS DO1, DO2, PO1.1, PO2.1	NALIS refers to res only. Zone allows broader commercial uses. INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	4		The new Zone also allows retirement facility and supported accomm. Row dwellings still excluded. EQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building (except on land identified as the Lincoln College site on Fig LF/1).	1	TNV	2 storeys

Number	Description	Transition category	Where has it been included?	Comments
4	The bulk and density of development should satisfy the following: (a)Basic and maximum plot ratio: 0.8 (except for land identified as the Lincoln College site on Fig LF/1); and (b)Dwelling Unit Factor: (i)600 square metres - detached dwelling and group dwelling; (ii)450 square metres - semi-detached dwelling; (iii)500 square metres - residential flat building not contained within an existing building; (iv)250 square metres - residential flat building contained within an existing building; (v)350 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2	TNV	Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm. The Code and Development Plan align.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a)on land greater than 2000 square metres; or (b)on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c)in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	not included	INSERT policy on minimum allotment sizes on larger land parcels in the City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a)Detached dwelling: 14 metres; (b)Semi-detached dwelling: 12 metres; (c)Group dwelling or residential flat building: 18 metres.	1		Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m
7	A minimum of 50 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. Total roofed area to not exceed 50% excluding the eaves.
8	Development of Lincoln College should: (a)be in accordance with the Concept Plan Fig LF/1; (b)not exceed a plot ratio of 1.6; (c)ensure new buildings or additions up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i)be located in areas identified as Taller Built Form; (ii)achieve an orderly transition in scale from the adjoining Main Street (O'Connell) Zone to the historic low scale built form; (iii)locate Low Scale Built Form up to 3 building levels along Ward Street and Margaret Street; and (iv)enhance the streetscapes with high quality visually interesting building frontages with a high level of fenestration, detailing and clear orientation to the streetscape; (d)improve passive surveillance of walk ways both internally and external to the College.	3		No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement under the heading 'Height'.
Advertising				
9	The maximum size of advertisements should be 0.2 square metres and should be limited to one advertisement per premises.	5	not included	INSERT policy under a new heading "Advertisements" in the City Living Zone.
10	Illumination of advertisements will be considered only where it is discreet and does not adversely affect residential amenity.	5	not included	"As Above"
11	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate	5	not included	"As Above"
12	Advertisements which project from the wall of a building are inappropriate.	5	not included	"As Above"

Number	Description	Transition category	Where has it been included?	Comments		
Desired Character						
	The Cathedral Policy Area should be maintained as a predominantly residential area and its unique character which is established by its distinctive topography, diverse range of nineteenth century architecture and its extensive Park Lands frontages, should be conserved.	5	not included	Zone doesn't emphasise predominately resi land use. It puts equal emphasis on commercial. INSERT policy on retaining residential land uses in the City Living Zone in the NALIS and MHISZ..		
	The variety of dwelling types should be retained by the conservation of Heritage Places. Cohesive lines of buildings set behind attractive landscaping should be maintained to visually define the perimeter of the Policy Area.	5	Zone PO1.1, DTS1.1	Variety to dwelling types to be retained but nothing to do with HPs or townscapes. Cohesive buildings recommended for inclusion within the Historic Area Statement. INSERT policy on retaining heritage places.		
	St Mark's College will provide student accommodation and educational activities. Development should meet the community needs and future requirements whilst reinforcing the heritage value of the Policy Area.	5	Zone PO 7.1	INSERT policy on appropriate land uses in the City Living Zone.		
	New development should respect the low scale, environmental quality, character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5	not included	Recommended for inclusion within the Historic Area Statement.		
	The character of new residential development should be established by low and medium density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	5	Zone DO1, PO1.1, DTS 1.1 (in part), DTS5.1	REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ. INSERT policy on development responding to context in the City Living Zone in the NALIS and MHISZ.		
	(a) Brougham Place, Palmer Place: The Brougham Place and Palmer Place frontages should retain a low scale, late nineteenth century detached housing character in contrast to the larger mansion buildings along the northern (opposite) edge of Brougham and Palmer Places in Upper North Adelaide.	5		Recommended for inclusion within the Historic Area Statement.		
	(b) Brougham Court: Development along Brougham Court should complement the existing townscape, characterised almost exclusively by closely sited semi-detached and detached local heritage places, with consistent set-backs. The strong built form definition at the junction of Brougham	5		Recommended for inclusion within the Historic Area Statement.		

Number	Description	Transition category	Where has it been included?	Comments
	<p>(c) Kermode Street: The prevailing character west of Bagot Street is characterised by late nineteenth century detached residences on individual allotments, although there are examples of semi-detached buildings of local heritage value in the historic streetscape. The appearance of development as viewed from the primary street frontage should take the form of single storey detached or semi-detached buildings or residential flat buildings.</p> <p>East of Bagot Street unsympathetic development has disrupted the traditional residential character of the townscape. On the northern side, development involving the replacement of buildings that are not identified Heritage Places should respectfully interpret the traditional residential forms and subdivision pattern of individual one or two storey dwellings addressing the public road.</p> <p>To the south of Kermode Street, development at St Mark's College should retain the visual prominence of St Peter's Anglican Cathedral when viewed from the surrounding locality. Development should retain the visual prominence of the State Heritage Places and should conserve the open landscaped setting and curtilage to Pennington Terrace. Development should avoid long sections of unbroken buildings and maintain the existing pattern of development characterised by freestanding buildings within landscaped grounds.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(d) Pennington Terrace: There should be little change in this townscape which mostly consists of State heritage places (including those forming part of St Marks College) with considerable siting, set-back, scale and character variation.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(e) Lakeman Street: The intimate character and enclosure of this narrow street is derived from the small cottages and other single storey dwellings sited on the street frontage. The side boundary walling of larger residences with frontages to Pennington Terrace and Kermode Street should also remain a dominant feature. Development should maintain the low scale character of the townscape. Two-storey development should be set back so they are not readily visible from the street.</p>	5		Recommended for inclusion within the Historic Area Statement.
	<p>(f) King William Road: St Peters Cathedral and the grand, spacious character of the townscape and its environs should be conserved. No new buildings should be developed on this site.</p> <p>Redevelopment of the shops at the corner of Kermode Street would restore continuity and architectural cohesion to the townscape while preserving the important view of the north-east elevation of the Cathedral. Shelter in the form of balconies or verandahs over footpaths to the south-west corner of King William Road and Kermode Street intersection may be developed.</p> <p>On the eastern side of King William Road new buildings should acknowledge the scale, siting and character of the adjacent Cathedral Hotel and the Anglican Church Offices.</p>	5		Recommended for inclusion within the Historic Area Statement.
	The Policy Area should retain major traffic flows on King William Road and Sir Edwin Smith Avenue and maintain high levels of pedestrian safety and accessibility to adjacent Park Lands and public gardens adjacent the existing public road network.	4	not included	Many of these are not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Cathedral Policy Area for residential purposes at low and medium densities.	5	Zone DO1	INSERT policy on appropriate land uses in the City Living Zone in the NALIS and MHISZ.
3	The maintenance of residential amenity through limiting non-residential development to existing sites.	5	not included	INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		

Number	Description	Transition category	Where has it been included?	Comments
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	5	Zone PO1.1, DTS1.1	No reference to retirement facility or supported accomm. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building, (except for land identified as the St Mark's College site indicated on Fig C8/1).	1	TNV	max height 2 storeys
4	The bulk and density of development should satisfy the following: (a) Basic and maximum plot ratio: 1.0; (except for land identified as the St Mark's College site indicated on Fig C8/1); and (b) Dwelling Unit Factor: (i) 450 square metres - detached dwelling, semi-detached dwelling and group dwelling; (ii) 450 square metres - residential flat building not contained within an existing building; (iii) 250 square metres - residential flat building contained within an existing building; (iv) 300 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2	TNV	No plot Minimum lot size for a detached dwelling is 450 sqm; semi-detached dwelling is 450 sqm; row dwelling is 450 sqm; group dwelling is 450 sqm; residential flat building is 450 sqm No mention of resi flat in building, non complying or heritage. Generally, the Code and Development Plan align.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a) on land greater than 2000 square metres; or (b) on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c) in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	not included	INSERT policy on minimum allotment sizes on larger land parcels in the City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 12 metres; (b) Semi-detached dwelling: 12 metres; (c) Group dwelling or residential flat building: 18 metres.	2		Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; row dwelling is 7m; group dwelling is 18m; residential flat building is 18m Note - Code frontages are wider for detached dwelling than Dev Plan
7	A minimum of 50 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
8	Along Brougham Court, Brougham Place west of Brougham Court, and Palmer Place north of Kermode Street, two-storey development should be confined to the rear of properties away from street frontages, subject to overshadowing and privacy constraints.	5	not included	Recommended for inclusion within the Historic Area Statement under the heading 'Height'.
9	Shelter in the form of verandahs over footpaths should be confined to existing verandahs, and new balconies or verandahs to the south-west corner of King William Road and Kermode Street.	5	not included	Recommended for inclusion within the Historic Area Statement under the heading 'Setting and Public Realm'.
10	Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries.	5	not included	INSERT policy on transition within a Zone in the City Living Zone in the NALIS and MHISZ.

Number	Description	Transition category	Where has it been included?	Comments
11	Development of St Mark's College should: (a) be in accordance with the Concept Plan Fig C8/1; (b) not exceed a plot ratio of 1.3; (c) ensure new buildings up to a maximum of 3 building levels or 9 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i) ensure the height, scale and siting of any new building does not detract from the landmark significance of St Peters Cathedral; and (ii) ensure Low Scale Built Form up to 2 building levels is located along Abbott Lane.	1	Zone PO7.1	
12	Development should not detract from the prominence of the following landmark Heritage Places: (a) St Peter's Anglican Cathedral; (b) sandstone dwelling at the junction of Kermodie Street and Palmer Place; (c) bluestone terrace house at the junction of Kermodie Street and Lakeman Street; (d) former North Adelaide Church of Christ Chapel; and (e) Queens Head Hotel.	5	not included	Recommended for inclusion within the Historic Area Statement.
Advertising				
13	Advertisements should be restrained in size, number and illumination and should be carefully designed and sited so as not to detract from the residential amenity of the Zone.	5	HA Overlay PO3.3	INSERT policy under a new heading "Advertisements" in the City Living Zone.
14	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	not included	"As Above"

General comments
 Now a Community Facilities Zone - CFZ - not City Living Zone.
 No historic area overlay applies.

Number	Description	Transition category	Where has it been included?	Comments
--------	-------------	---------------------	-----------------------------	----------

Desired Character				
			DTS/DPF 1.1	Now a Community Facilities Zone - CFZ - not City Living Zone Ads are DTS. These land uses are envisaged: • Consulting room • Educational establishment • Indoor recreation facility • Office • Place of worship • Pre-school • Recreation area • Shop Performance Assessed includes ads, demo of SHP and LHP, demo within the HAO or SHO, tree damaging activity and all other Code assessed dev. Restricted is None. No mention of h places. Note - no mention of hospital as a desired land use which is odd given the presence of the Memorial Hospital INSERT policy that reconsiders appropriate land uses and includes hospitals if that is what is envisaged as the land uses listed above would appear to be able to be approved in a number of zones. Zone purpose is range of public and private community, educational, recreational and health care facilities. The land use focus has shifted from hospitals so the intent of the previous policy area has changed considerably
	The Policy Area should be retained as a key institutional enclave. The State Heritage Places are representative of traditional institutional architecture the most significant historic townscape elements within the Policy Area. These Heritage Places complement the low scale townscape character of the adjacent Cathedral Policy Area.	5		
	The Policy Area is generally fully developed for uses associated with the Women's and Children's Hospital and the Memorial Hospital. Development associated with these health care facilities should include the replacement of buildings that are not identified Heritage Places. Development north of Kermode Street may expand the footprints of existing buildings to allow the upgrade of facilities. The scale of new development should reinforce the existing scale of development.	5		
	Development should improve the streetscape of Kermode Street by providing land uses and building facades that activate the street and contribute to a high quality public realm.	5	Not included	INSERT policy on built form and scale issues. INSERT policy on Kermode Street.
	New development should conserve these individual historic elements as viewed from the public road frontages, although it is recognised that existing and future development within the central parts of the north and south sections of the Policy Area may include taller buildings.	4		Not necessary as heritage places will be protected.
	Development should ensure the visual prominence of St Peter's Anglican Cathedral is maintained.	5		INSERT policy on landmark buildings and views in the locality.
	Development should complement and not detract from the architectural quality of the locality, particularly when viewed from key vistas including the Riverbank and Park Lands.	5	Zone PO2.1, PO3.1, DTS 3.1, DTS 3.2	Note - talks about resi dev within a neighbourhood zone?
	Development incorporating buildings at the edges of the Policy Area should, where practicable, achieve a scale and character more compatible with the lower scale and historical residential character of Lower North Adelaide to the north-east.	5		INSERT policy on built form transition to adjoining zones if specific to this location.
	Progressive enhancements of the landscape character and amenity by street tree planting and on-site landscaping to frontage of King William Street, Kermode Street, and Sir Edwin Smith Avenue. In particular, improvements to the frontage of the Memorial Hospital, and the outlook over the Park Lands on three sides of the Policy Area is desired.	4	Not included	Not 'development'.
	The Policy Area should maintain a high degree of pedestrian amenity and shelter provided by street trees and on-site landscaping, with pedestrian safety and ease of access to the adjacent Park Lands maintained.	4		Not 'development'.

Number	Description	Transition category	Where has it been included?	Comments
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Development north of Kermode Street should not exceed a height of 14 building levels or locate a ceiling more than 43 metres above the median natural or finished ground level at any point or any part of a building.	5	Zone PO2.1, PO3.1, DTS 3.1, DTS 3.2	Maximum building height is 6 storeys Note - significant height drop
3	Development along King William Road (north of Kermode Street) should not exceed two buildings levels or locate a ceiling more than six metres above the median natural or finished ground level at any point or part of a building.	5		Maximum building height is 6 storeys Note - significant height lift from 2 to 6 storeys.
4	4 A minimum of 20 percent of the total site area should be provided for landscaped open space on the site of development.	5	Design in Urban Areas	Depends on site areas. Further analysis required.
5	5 Development should be complemented by landscaping to soften and relieve any large building mass and provide quality spaces. Development south of Kermode Street should be in accordance with Concept Plan Fig WC/1; and should: (a) not exceed a plot ratio of 3.2; (b) retain the set back and sense of address and open character to the Park Lands; (c) ensure new buildings up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i) be located in areas identified as 'Taller Built Form'; (ii) locate Low Scale Built Form up to 4 building levels in areas identified as 'Low Scale Built Form' except where located on Sir Edwin Smith Avenue and Pennington Terrace where built form will be up to two storeys to be compatible with State Heritage Places; (iii) ensure that long ranging views and vistas of St Peter's Anglican Cathedral are maintained; (iv) complement and enhance the skyline which incorporates key land marks including St Peter's Anglican Cathedral and Adelaide Oval; (v) minimise building mass at the interface from an adjoining boundary by locating Taller elements siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods; (vi) ensure the building fronting Kermode Street has a high proportion of windows, fine grain appearance and a dynamic pedestrian environment; (vii) ensure buildings are sited off of side and rear boundaries and avoid blank walls that will be visible from the surrounding locality; (viii) incorporate the use of landscaped open space to break up building mass; (ix) provide an activated building interface to Kermode Street; (x) provide high quality spaces to the street; and (xi) provide a visually interesting streetscape with buildings having a high level of fenestration, detailing and orientation towards the street; and (d) remove the visual impact of existing car parking, vehicle access and egresses to the area by siting any new car parking away from the street frontages.	5	Design in Urban Areas DTS 10.4 Not included	INSERT policy on landscaping if specific to this locality. No Concept Plan in Code. Is this an oversight? No plot. Further analysis required.
6		5		
Transport and Movement				
7	Development should facilitate the use of all modes of transport including cycling, walking, public transport, car share and vehicular access.	4		This policy is obvious to say the least.
Advertising				
8	Advertisements should be restrained, discreet and limited to those required for directional purposes.	5		INSERT policy on advertising.
9	9 The restrained illumination of advertisements may be appropriate but should not detrimentally affect the skyline, streetscape environment or residential amenity of this Policy Area or the adjacent Cathedral Policy Area.	5		see above
NEW CONTENT IN THE CODE (insert below)				
All devs on the boundary with the neighbouring zone and all other Code dev must be publicly notified.

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The Stanley West Policy Area should remain one of the lowest density residential areas in Upper North Adelaide with a distinctive and cohesive character derived from its townscapes. These are established by large nineteenth and early twentieth century dwellings comprising more substantial Victorian, Edwardian and Georgian Revival villas, and other low density detached and semi-detached dwellings in a variety of forms and styles.	5		Recommended for inclusion in the Historic Area Statement.
	St Ann's College will provide student accommodation and education activities. Development should meet the community needs and future requirements whilst reinforcing the heritage value of the Policy Area.	5		INSERT policy on non residential land uses and a heading specific to St Ann's College
	New development should respect the low scale, environmental quality, character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5		Recommended for inclusion in the Historic Area Statement.
	The character of new residential development should be established by low density detached dwellings, semi-detached dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	3		The NALIS refers to low density. The TNV refers to the number of storeys. The type of dwellings is not included but can be omitted. A lower height being required as policy is necessary as in North Adelaide to fit in with single storey streetscape, single storey is often required with 2 storey behind. INSERT policy for when part single storey solutions may be required. INSERT policy on the need for cohesive townscapes. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
	(a) Kingston Terrace; The townscape character is established by large one and two storey detached residences on individual allotments set close to the street with a Park Lands frontage. Towards Lefevre Terrace, the townscape is dominated by the imposing rear elevations of two large mansions with frontages to Stanley Street. New dwellings should complement existing residences, which are modelled and articulated, constructed of masonry, with a high proportion of solid to void in the composition of facades and often feature verandahs and balconies. Building set-backs from the Park Lands frontage should be consistent with the alignment of the main face of adjacent Heritage Places. Where a site is between two Heritage Places, the greater of the two set-backs should be applied to the new dwelling. Development opportunities, other than alterations or additions to the rear of Heritage Places, are likely to be limited to the replacement of buildings that are not identified Heritage Places or the development of vacant land held in an existing Certificate of Title.	5		Recommended for inclusion in the Historic Area Statement.
	(b) Stanley Street (northern side): The townscape features two large mansions set well back from the northern frontage on elevated ground above Stanley Street. The remainder of the townscape comprises large detached and semi-detached residences. Development opportunities, other than alterations or additions to the rear of Heritage Places, are likely to be limited to the replacement of buildings that are not identified Heritage Places or the development of detached or semi-detached buildings on vacant land held in an existing Certificate of Title.	5		Recommended for inclusion in the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	(c) Stanley Street (southern side) and Brougham Place (where it is a visual continuation of Stanley Street): Because of the sloping topography two-storey residences on the southern frontage present a single-storey appearance to Stanley Street and Brougham Place. West of New Street the close subdivision pattern and consistent set-back of stone Victorian villas typified by rich detailing and cast-iron ornamentation, contribute to a distinctive and cohesive built form. This elegant character is reinforced by stone and cast iron boundary fencing along the street frontage. Development opportunities, other than alterations or additions to the rear of Heritage Places, are likely to be limited to the replacement of buildings that are not identified Heritage Places. Replacement development should reinstate the traditional built form comprising detached or semi-detached dwellings presenting as single storey to the street frontage, with front and side boundary building set-backs consistent with those of adjoining Heritage Places.	5		Recommended for inclusion in the Historic Area Statement.
	(d) Brougham Place (western Policy Area boundary): The townscape comprises the imposing and finely detailed Brougham Place Uniting Church with its dominant central tower, and the closely developed group of low scaled St Ann's College buildings which step down the Brougham Place frontage reflecting the topography of the locality and the Policy Area generally. Development opportunities should be limited to the conservation of the Uniting Church, with the height and scale of new development at St Ann's College not detracting from the landmark significance of the Brougham Place Uniting. New development at St Ann's College should be designed to address to the Park Lands, Brougham Place and Melbourne Street. Development should respect the topography, scale, massing, materials and colours of domestic architectural form in and near the Policy Area and avoid the use of brightly coloured, black or highly reflective surfaces. New development at St Ann's College should take advantage of the landfall to provide semi-basement floors and views from the upper levels southwards over the City. High quality landscape open space should be incorporated to break up building mass.	5		Recommended for inclusion in the Historic Area Statement.
	The imposing residential built-form edge to Brougham Gardens and the Park Lands along the Brougham Place frontage should be preserved.	5		Recommended for inclusion in the Historic Area Statement.
	Views of the City from Stanley Street and Brougham Place properties should be protected. Buildings on Stanley Street, Kingston Terrace and Brougham Place may be constructed to take advantage of the landfall to provide semi-basement floors and views from upper levels southwards over the City, provided overlooking is adequately addressed through appropriate design.	5		Recommended for inclusion in the Historic Area Statement.
	Protection of the landscape qualities of public and private open space, including avenue and adjacent Park Lands planting and vistas to the Park Lands, Brougham Place and the eastern end of Stanley Street, should further distinguish the Policy Area's character.	4		Not 'development'.
	Pedestrian amenity and shelter should be provided by street trees and other landscaping and a high standard of paving. Pedestrian safety and accessibility to the adjacent Park Lands and Brougham Gardens should be maintained.	4		Not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Stanley West Policy Area for residential purposes at low densities, compatible with the built form and landscape character of one of the City's most historically significant residential areas.	4		The new Zone also allows retirement facility and supported accomm. Row dwellings still excluded. INSERT policy on non residential land uses.
3	Residential amenity maintained by restricting the introduction, expansion or intensification of non-residential uses.	3		INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	3		The new Zone also allows retirement facility and supported accomm. Row dwellings still excluded. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.

Number	Description	Transition category	Where has it been included?	Comments
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building except for: (a) Jerningham Street, where development should not exceed 1 building level or locate a ceiling more than 3 metres above the median natural or finished ground level at any point or any part of a building; (b) Old Street west of New Street, where development should not exceed two building levels built above one level of undercroft parking or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building; and (c) land identified as the St Ann's College site on Fig SW/1.	3	TNV	Max height is 2 storeys Recommended for inclusion in the Historic Area Statement.
4	The bulk and density of development should satisfy the following: (a) Basic and maximum plot ratio: 0.7, (except on land identified as the St Ann's College site in Fig SW/1 where); and (b) Dwelling Unit Factor: (i) 600 square metres - detached dwelling and group dwelling; (ii) 450 square metres - semi-detached dwelling; (iii) 500 square metres - residential flat building not contained within an existing building; (iv) 250 square metres - residential flat building contained within an existing building; (v) 120 square metres - any dwelling fronting Old Street; (vi) 350 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2		No comment on plot. Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm. The Code and Development Plan align.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a) on land greater than 2000 square metres; or (b) on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c) in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Not included	INSERT policy on minimum allotment sizes on larger land parcels.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 14 metres; (b) Semi-detached dwelling: 12 metres; (c) Group dwelling or residential flat building: 18 metres.	1		Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m. The Code and Development Plan align.
7	A minimum of 50 percent of the total site should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. 50% max of roofed area exc eaves.

Number	Description	Transition category	Where has it been included?	Comments
8	Development of St Ann's College should: (a) be in accordance with the Concept Plan Fig SW/1; (b) not exceed a plot ratio of 2.5; (c) ensure new buildings up to a maximum of 4 building levels or 12 metres above the median natural or finished ground level at any point or any part of a building are designed to: (i) be located in areas identified as 'Taller Built Form'; (ii) ensure that Low Scale Built Form up to 2 building levels is located near adjacent properties of Stanley Street; (iii) retain the character of the natural landfall; (iv) protect views of the City from Stanley Street and Brougham Place properties and protect views to Brougham Place Uniting Church; (v) be set back 3.5 metres from Melbourne Street consistent with the setback of Melbourne Street (Mixed Use (Melbourne West) Zone); (vi) provide a compatible setback with adjoining residential allotments and State and Local Heritage Places; and (vii) minimise building mass at the interface from an adjoining residential boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods; (viii) ensure higher levels of activity are designed to protect residential amenity at the interface with of residential dwellings.	3		No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement under the heading 'Height'.
9	Buildings on Stanley Street, Kingston Terrace, Melbourne Street and Brougham Place may be constructed to take advantage of the landfall to provide semi-basement floors and views from upper levels southwards over the City, provided overlooking is adequately addressed through appropriate design.	5	Not included	INSERT policy on views.
10	On the southern frontages of Brougham Place and Stanley Street, west of New Street, the level of the top-most floor should not exceed that of existing adjacent development.	5	Not included	INSERT policy on view and building heights.
11	The height, scale and siting of any new building should not detract from the landmark significance of the Brougham Place Uniting Church.	5	Not included	Recommended for inclusion in the Historic Area Statement. INSERT policy on landmark buildings.
Advertising				
12	The maximum size of advertisements should be 0.2 square metres and should be limited to one advertisement for each premises.	5	Not included	INSERT policy under a new heading "Advertisements" in the City Living Zone.
13	Only discreet advertisements required to identify the location of premises may be appropriate.	5	Not included	"As Above"
14	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate	5	Not included	"As Above"
15	Advertisements which project from the wall of a building are inappropriate.	5	Not included	"As Above"
NEW CONTENT IN THE CODE (insert below)

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The varied character of the Kentish Arms Policy Area should be conserved as a residential area reflecting the townscapes of large nineteenth and early twentieth century substantial Victorian and Edwardian villas, and other low density detached and semi-detached dwellings in a variety of forms and styles, row cottages, detached cottages and small attached cottages. There are a small number of two storey heritage places, although most of the buildings identified as Heritage Places are single storey.	5	Zone DO1	Recommended for inclusion within the Historic Area Statement. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to encourage residential land uses in the City Living Zone in the NALIS and MHISZ.
	The variety of dwelling types should be retained by the conservation of Heritage Places.	5	Not included	Recommended for inclusion within the Historic Area Statement.
	The character of new residential development should be established by low and medium density detached dwellings, semi-detached or row dwellings, group dwellings or residential flat buildings, all up to a maximum of two storeys, unless a particular dwelling type(s) and/or a lower building height is prescribed for development addressing the primary street frontage, to reinforce the character of the historic built form as described below:	5	Zone DO1,PO1.1, DTS 1.1	Zone allows retirement facility and supported accomm too and non resi. REQUIRES FURTHER INVESTIGATION. INSERT policy on on adjacent development responding to context in terms of height. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
	Stanley Street (south side), East and West Pallant Streets: These streets contain some of Adelaide's earliest residential buildings and are characterised by allotments containing closely sited single-storey buildings. New two-storey development should be set back behind single storey frontages and not readily visible from the street. The lowering of eaves may be necessary along these frontages to be consistent with adjoining buildings of heritage value.	5		Recommended for inclusion within the Historic Area Statement.
	(b) Stanley Street (north side): This townscape consists of single-storey detached, semi-detached and row housing of the Victorian and Edwardian periods. Close siting of houses, verandahs along the street frontages and hipped roofs or parapets to front facades should be reflected in new buildings. Redevelopment of the North Adelaide School of Art should create a more sympathetic built form on the primary street frontage, with scale, siting and design which is consistent with the otherwise cohesive character of the northern side of Stanley Street established by closely sited detached and semi-detached dwellings. Development should retain or reinforce the essentially single storey historic character of the street.	5		Recommended for inclusion within the Historic Area Statement.
	(c) Sussex Street: Sussex Street contains a wide variety of building types including early German settler cottages, Victorian row dwellings, blocks of flats and recent row dwellings, as well as commercial premises and sites used for car parking behind Melbourne Street frontages. As a result the townscape of Sussex Street is fragmented, but does contain sections at its eastern and western ends of small scale, closely sited and cohesive development which formerly characterised the entire street. Early settler cottages on the northern side and Victorian row houses on the southern side, indicate the scale, character and rhythm of residential buildings which should be re-established by infill development of single storey detached dwellings on smaller frontages. Two storey development may be appropriate if not readily seen from Sussex Street or other streets and if designed in a traditional form using traditional materials.	5		Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	(d) Kingston Terrace: The townscape from Jerningham Street to Francis Street (west) contains a mixture of single-storey row housing and detached and semi-detached houses of the late Victorian to Edwardian periods, with more recent detached houses and contemporary three storey row houses. Although the townscape contains a diversity of architectural styles and housing types, it still presents a cohesive townscape because of its relationship to the Park Lands, the predominance of traditional building stock and the absence of dominating structures. Between Fuller Street and Francis Street (west) residential buildings should continue to be single storey. Elsewhere buildings should be one and two storey detached, semi-detached or residential flat buildings subject to their compatibility with adjoining development.	5		Recommended for inclusion within the Historic Area Statement.
	(e) Jerningham Street: Jerningham Street provides the solitary major north-south axis in Lower North Adelaide. Its intersections with Stanley Street and Melbourne Street (outside of the Policy Area) are bounded by examples of commercial buildings which emphasise its early significance in the street pattern as the original major north-south route through the centre of Lower North Adelaide. Single storey nineteenth century detached and semi-detached dwellings predominate. All buildings are of heritage value and therefore development opportunities will generally be limited to alterations and additions to the rear of Heritage Places.	5		Recommended for inclusion within the Historic Area Statement.
	(f) MacKinnon Parade: The townscape east of Dunn Street should remain largely unchanged as it contains numerous detached and semi-detached houses of similar scale and design that are of identified heritage value. Other than alterations and additions to the rear of existing Heritage Places, development opportunities should be limited to the replacement of buildings that are not identified Heritage Places. Development should reinforce the scale and siting established by the single storey Heritage Places and not take reference from buildings of two or more storeys that are seriously at conflict with the historic character. West of Dunn Street, the several sites have been redeveloped and include a built form that has eroded the established cohesive streetscape pattern evident elsewhere on the Park Lands frontage. New development should comprise detached or semi-detached dwellings presenting to the primary street frontage replacing buildings that are not identified Heritage Places.	5		Recommended for inclusion within the Historic Area Statement.
	(g) Mann Terrace: South of Melbourne Street the townscape comprises a group of identical villas, all of local heritage value. The articulated and gabled facades, pitched roof profiles and verandahs create a highly cohesive character. Development should conserve these buildings and, other than alterations and additions to the rear of Heritage Places, development opportunities should be limited to the replacement of buildings that are not identified Heritage Places. North of Melbourne Street there is also a cohesive townscape established by closely developed detached and semi-detached dwellings most of which have local heritage value and a regular building set-back from the street. Development involving the replacement of buildings on the primary street frontage should continue the scale and siting established by these Heritage Places. Other than alterations and additions to the rear of Heritage Places, development opportunities should be limited to the replacement of buildings that are not identified Heritage Places.	5		Recommended for inclusion within the Historic Area Statement.
	(h) Hart Street: Detached stone cottages of a consistent scale, built form character and siting comprise the townscape on both sides of Hart Street. The intensity of development, masonry construction, fenestration, pitched roofs and verandahs establish a cohesive built form and should be maintained through the conservation of Heritage Places and single storey dwellings to the rear of sites where opportunities permit.	5		Recommended for inclusion within the Historic Area Statement.
	(i) Bower Street/Provost Street: Small detached cottages and row dwellings set on or close to the street characterise the townscape. Development should reinforce the character of the detached dwellings of local heritage value.	5		Recommended for inclusion within the Historic Area Statement.
	(j) Arthur Street: Two storey development should be contained within the roof space or located at the rear of site away from the primary street frontage to retain the low scale character of these townscapes.	5		Recommended for inclusion within the Historic Area Statement.
	Development should conserve or reinstate a strong residential built-form edge to the Park Lands and Mann Terrace through the regular siting and pattern of buildings addressing the principal road frontage.	5	Not included	Recommended for inclusion within the Historic Area Statement.

Number	Description	Transition category	Where has it been included?	Comments
	The landscape qualities of public and private open space and the adjacent Park Lands should continue to have an important and complementary role in contributing to the character and amenity of the Policy Area.	4		Much of this is not 'development'.
	The Policy Area should maintain a high degree of pedestrian amenity and shelter provided by street trees, other landscaping and a high standard of paving, with pedestrian safety and ease of access to the Park Lands and Melbourne Street.	4		Much of this is not 'development'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development of the Kentish Arms Policy Area for residential purposes at low and medium densities compatible with the distinctive but varied historic character and maintenance of residential amenity.	5	Zone DO1	Recommended for inclusion within the Historic Area Statement.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development should be in the form of detached, semi-detached, row or group dwellings, residential flat buildings, or alterations and additions to existing buildings. Row dwellings should only occur where: (a) vehicle access can be provided from laneways or minor streets; (b) garaging is not incorporated into the principal street frontage of the building; (c) there is a maximum of six dwellings in any one group; and (d) they are not located overlooking the Park Lands or along the frontage of a major street.	5	Zone PO1.1, DS1.1	Also includes retirement facility and supported accomm. Nothing about row dwellings. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings and include policy parameters for row dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all. INSERT policy to determine dwelling types in the City Living Zone in the NALIS and MHISZ.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building. Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	3	TNV	No comments on lower heights being appropriate. INSERT policy on adjacent development responding to context in terms of height in the City Living Zone.
4	The bulk and density of development should satisfy the following: (a) Basic and maximum plot ratio: 0.8; and (b) Dwelling Unit Factor: (i) 350 square metres – detached dwelling, semi-detached dwelling and group dwelling; (ii) 350 square metres – row dwelling; (iii) 350 square metres – residential flat building not contained within an existing building; (iv) 250 square metres – residential flat building contained within an existing building; (v) 300 square metres – residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	2		No plot Minimum lot size for a detached dwelling is 350 sqm; semi-detached dwelling is 350 sqm; row dwelling is 450 sqm; group dwelling is 350 sqm; residential flat building is 350 sqm Note - row dwelling sizes are larger in the Code than in the Dev Plan. No comment on resi flat within a building, non complying or heritage
5	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 12 metres; (b) Semi-detached dwelling: 10 metres; (c) Row dwelling: 7 metres; (d) Group dwelling or residential flat building: 18 metres.	2		Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; row dwelling is 7m; group dwelling is 18m Note - frontage for detached dwellin, semi d, g is bigger in Code than Dev Plan
6	A minimum of 30 percent of the total site area should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 6, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.

Number	Description	Transition category	Where has it been included?	Comments
7	Along Jerningham Street, Stanley Street, MacKinnon Parade, Sussex Street, Hart Street, Arthur Street and East and West Pallant Streets, two-storey development, including additions to existing buildings, should be located at the rear of the site away from the street frontage to retain the low scale single storey character of these townscapes. Two storey development should not be readily seen from the streets in the Policy Area.	5	Not included	Recommended for inclusion within the Historic Area Statement. Or INSERT policy on appropriate height in the City Living Zone in the NALIS.
8	Car parking should be located behind buildings on the frontages to Kingston Terrace, Mann Terrace, MacKinnon Parade, Melbourne Street and Sussex Street and behind or beside buildings on the Stanley Street and Jerningham Street frontages.	5	Not included	Recommended for inclusion within the Historic Area Statement. Or INSERT policy on appropriate location of car parking in the City Living Zone in the NALIS and MHISZ.
Advertising				
9	Advertisements should not exceed 0.2 square metres and should be minimal in number.	5	Not included	INSERT policy under a new heading 'Advertisements' in the City Living Zone.
10	Illumination of advertisements will only be appropriate where it is discreet and does not affect the amenity of residential premises.	5	Not included	"As Above"
11	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	Not included	"As Above"
12	Advertisements which project from the wall of a building are inappropriate.	5	Not included	"As Above"

Number	Description	Transition category	Where has it been included?	Comments		
Desired Character						
	The Finnis Policy Area creates a distinctive built form edge between the Park Lands and Lower North Adelaide. The predominantly low scale residential character of the Policy Area will be maintained by new residential development which complements the predominantly one and two storey buildings.	5		Recommended for inclusion within the Historic Area Statement.		
	The heritage value of the area should be retained by the conservation of Heritage Places and sensitively designed infill development.	5		Recommended for inclusion within the Historic Area Statement.		
	New development should respect the low scale, environmental quality, character and historic value of the Policy Area, incorporating high standards of design, materials and landscaping.	5		Recommended for inclusion within the Historic Area Statement.		
	Kathleen Lumley College will provide student accommodation and educational activities. Development should meet the community needs and future requirements whilst reinforcing the heritage value of the Policy Area.	5		INSERT policy on non residential land uses in City Living Living Zone under the heading 'Land Use and Intensity'		
	The landscape qualities of private open space, the adjacent Park Lands and the established avenue planting in Finnis Street and MacKinnon Parade should remain important elements in the Policy Area's character.	4		Recommended for inclusion within the Public Realm setting in the Historic Area Statements.		
	Pedestrian safety and accessibility within the Policy Area and to the adjacent Park Lands should be maintained.	4		Not 'development'.		
	(a) Finnis Street (north side): Development should contribute to the historic character of the Finnis Street townscape through conserving and complementing the consistent siting and scale of the Victorian and Edwardian villas and, towards the eastern part, the terraces and cottages. New residential buildings should be single storey, detached and semi-detached dwellings. Verandahs facing the street, gable roofs, bay window frontages, open style fences or the simple facades of the early vernacular are appropriate in new development forms. Facades should be constructed with a high solid to void ratio. The prominence of the British Hotel with its fine detailing and cantilevered balcony should be maintained by the careful design and set-back of adjacent development.	5		Recommended for inclusion within the Historic Area Statement.		
	(b) Finnis Street (south side): Development should comprise detached and semi-detached dwellings that present to the street as single storey buildings, complementing the scale and siting of the Victorian and Edwardian villas on the northern side of Finnis Street. Development at Kathleen Lumley College should avoid long sections of unbroken buildings and unarticulated facades and incorporate the use of landscaped open space to break up building mass. Development should retain the visual prominence of the State Heritage Place of Kathleen Lumley College.	5		Recommended for inclusion within the Historic Area Statement.		
	(c) MacKinnon Parade: New development should comprise contemporary residential buildings that reflect the shape and form of traditional buildings styles, with particular reference to roof pitch, verandahs, eaves, materials, setbacks and fencing. Facades should be constructed with a high solid to void ratio. New residential buildings should comprise detached and semi-detached dwellings of one or two storeys, with the exception of existing large amalgamated sites of no heritage value, where the introduction of residential flat buildings may be appropriate provided such development is designed to reinforce the traditional siting pattern of individual detached dwellings. Development adjacent the street frontage should not take references from buildings of two or more storeys that are seriously at conflict with the historic character of the Policy Area. Development should retain the visual prominence of the State Heritage Place of Kathleen Lumley College.	5		Recommended for inclusion within the Historic Area Statement.		

Number	Description	Transition category	Where has it been included?	Comments
	(d) Brougham Place: Additional dwellings on the Brougham Place frontage are not desired.	5		Recommended for inclusion within the Historic Area Statement or INSERT policy on location of new development.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development primarily for residential purposes at low densities providing a distinctively lower scale built form edge to the Park Lands frontages.	5		INSERT policy on built form.
3	The maintenance of residential amenity by restricting the introduction, expansion or intensification of non-residential uses.	5		The new Zone encourages resi uses, though of small scale are encouraged as well as the Institutions. INSERT policy to limit non residential land uses within the City Living Zone under the heading 'Land Use and Intensity'.
Principles of Development Control				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4		
2	Residential development in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. New residential buildings in the form of row dwellings should not be developed.	3		The new Zone also allows retirement facility and supported accomm. Row dwellings still excluded. REQUIRES FURTHER INVESTIGATION. INSERT policy on desired types of dwellings. Can we use the TNV Overlay to in relation to the type of dwellings that are appropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
3	Development should not exceed 2 building levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or any part of a building (except for land identified as the Kathleen Lumley College site on Fig F/1). Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity.	1	TNV	Max height 2 storeys
4	The bulk and density of development should not exceed the following: (a) Basic and maximum plot ratio: 0.8 (except for land identified as the Kathleen Lumley College site on Fig F/1); and (b) Dwelling Unit Factor: (i) 600 square metres - detached dwelling and group dwelling; (ii) 450 square metres - semi-detached dwelling; (iii) 500 square metres - residential flat building not contained within an existing building; (iv) 250 square metres - residential flat building contained within an existing building; (v) 350 square metres - residential redevelopment of a site occupied by a non-complying use. In relation to Principle 4(b), satisfying the minimum site area for a dwelling (described as the Dwelling Unit Factor) may not be sufficient to address heritage considerations relevant to a particular place or streetscape. In relation to Principle 4(b), in the case of a hammerhead allotment or similar allotment design where the only public road frontage represents the proposed vehicle access, the area of the 'handle' or right of way is excluded from the site area when performing the calculation of Dwelling Unit Factor.	1		No plot Minimum lot size for a detached dwelling is 600 sqm; semi-detached dwelling is 450 sqm; group dwelling is 600 sqm; residential flat building is 500 sqm. The Code and Development Plan align.
5	Residential development at a greater density than that prescribed for desired dwelling types should only occur where buildings which will be visible from the primary street frontage are consistent with the desired character for the Policy Area or the street where prescribed (eg single storey detached dwellings) and only in the following circumstances: (a) on land greater than 2000 square metres; or (b) on land where the existing dwelling unit factor is 250 square metres or less and the development replaces a building that is not an identified Heritage Place; and (c) in either case, the resultant Dwelling Unit Factor should not vary more than 20 percent from that required.	5	Not included	INSERT policy for minimum lot sizes on larger sites in the City Living Zone.
6	The land for a dwelling should have a primary street frontage not less than the following (other than in the case of a hammerhead allotment, where the frontage to a public road should be no less than five metres): (a) Detached dwelling: 14 metres; (b) Semi-detached dwelling: 12 metres; (c) Group dwelling or residential flat building: 18 metres.	1		Minimum frontage for a detached dwelling is 14m; semi-detached dwelling is 12m; group dwelling is 18m; residential flat building is 18m

Number	Description	Transition category	Where has it been included?	Comments
7	A minimum of 40 percent of the total site should be provided for landscaped open space on the site of development. Each dwelling in a development should provide as part of the landscaped open space, a private open space area in accordance with the Council Wide principles of development control. In relation to Principle 7, in the case of a hammerhead allotment, the area of the "handle" or right of way is excluded from the calculation of landscaped open space.	3		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
8	Additional buildings on the Brougham Place frontage should not be developed.	5		Recommended for inclusion within the Historic Area Statement under the heading 'Building Form'.
9	Development should preserve and, where possible, reinstate a strong residential built-form edge to the Park Lands through the regular siting and pattern of single storey buildings addressing the primary street frontage.	5		Recommended for inclusion within the Historic Area Statement.
10	Non-residential development should only occur in Finnis Street and in Jerningham Street, north of Finnis Street. Non-residential development comprising new buildings should respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries.	5		REQUIRES FURTHER REVIEW. INSERT policy on non residential land uses by either of the following options: <ul style="list-style-type: none"> • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 – Land Use Concept Plan based on existing Policy Area boundaries
11	Development of Kathleen Lumley College should: (a) be in accordance with the Concept Plan Fig F/1; (b) not exceed a plot ratio of 1.0; (c) ensure new buildings up to a maximum of 4 building levels or 12 metres above the median natural or finished ground level are designed to: (i) be located in areas identified for Taller Built Form and set back from the Finnis Street frontage; (ii) ensure that only Low Scale Built Form between 1 to 2 storeys is located along Finnis Street; and (iii) minimise building mass at the interface with adjoining boundaries by locating Taller elements in the centre of the site and within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods.	1		No reference to plot ratio. Maximum height covered in TNV numerical overlay. The built form elements are recommended for inclusion within the Historic Area Statement under the heading 'Height'.
12	Development of Kathleen Lumley College may involve sympathetically designed alterations of up to 4 building levels to the existing State Heritage place.	5		Recommended for inclusion within the Historic Area Statement.
Advertising				
13	Advertisements should not exceed 0.2 square metres and should be limited in number.	5	Not included	INSERT policy under a new heading "Advertisements' in the City Living Zone.
14	Illumination of advertisements will only be appropriate where it is discreet and does not adversely affect residential amenity.	5	Not included	"As Above"
15	Advertisements more than 3 metres above natural ground level or an abutting footpath or street are inappropriate.	5	Not included	"As Above"
16	Advertisements which project from the wall of a building are inappropriate.	5	Not included	"As Above"
NEW CONTENT IN THE CODE (insert below)				

Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The Policy Area will be an attractive locality with a high level of amenity accommodating residential and community land uses.	5	not included	REQUIRES FURTHER REVIEW. INSERT policy on desired land uses by either of the following options: <ul style="list-style-type: none"> Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. Option 2 - TNV Overlay identifying where the land use variation applies. Option 3 – Land Use Concept Plan based on existing Policy Area boundaries.
	A mix of residential uses including dwellings, student accommodation and supported accommodation will be developed. The residential uses will include a variety of dwelling types and building forms that respond to their context.	3	MHIS DO1, DO2, PO1.1, DTS 1.1, PO	Land uses under the Code to be low to med rise housing inc supported accomm, with non resi and mixed use on existing non resi sites. Retirement facility and supported accommodation allowed as is non resi development. REQUIRES FURTHER REVIEW. INSERT policy on desired land uses by either of the following options: <ul style="list-style-type: none"> Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. Option 2 - TNV Overlay identifying where the land use variation applies. Option 3 – Land Use Concept Plan based on existing Policy Area boundaries.
	East of Walter Street a greater mix of land uses will continue acknowledging the proximity to the Main Street (O'Connell) Zone. Non-residential land uses such as a place of worship, community centre, offices consulting rooms, library and museum are appropriate.	5	not included	REQUIRES FURTHER REVIEW. INSERT policy on desired land uses by either of the following options: <ul style="list-style-type: none"> Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. Option 2 - TNV Overlay identifying where the land use variation applies. Option 3 – Land Use Concept Plan based on existing Policy Area boundaries.
	West of Walter Street, any expansion of non-residential land uses such as consulting rooms or offices will be of a scale that does not impact the core commercial role of the Mainstreet (O'Connell) Zone or detrimentally impact on the amenity of nearby residents. Retail land uses are not envisaged in order to maintain the primacy of the Mainstreet (O'Connell) Zone as the focus for shopping, commercial and entertainment activities in North Adelaide.	5	City Living Zone PO 1.4	REVISE PO 1.4 within the City Living Zone to ensure non-residential land uses do not prejudice the role of the City Main Streets.
	The Policy Area contains a number of large land parcels that will be progressively developed with contextually designed high quality developments.	4		This is not achievable. How can the planning system ensure this policy objective is complied with?

Number	Description	Transition category	Where has it been included?	Comments
	Opportunities exist on large and consolidated land parcels for development that is greater in scale and intensity than its surrounding Policy Areas. Low scale streetscapes will be reinforced and taller built form is appropriate when located away from street frontages and sited to limit impacts to residential amenity. Size, proportions and orientation of new buildings will reinforce the historic grid pattern and smaller building footprints.	5	not included	INSERT policy on maximum height limits. INSERT policy on built form and transition within the City Living Zone under the heading 'Built Form and Character'.
	The amalgamation of small land parcels presents opportunities to further improve the fragmented character of the area and strengthen the overall historic character of the Policy Area and Zone.	4		This is not achievable. How can the planning system ensure this policy objective is complied with?
	Development will occur in a coordinated and orderly manner with design responses complementary to the areas historic context and contributing positively to the public realm and residential amenity.	4		
	Development within the Policy Area will be designed in context and will provide compatible visual relationships with the broader Zone by reinforcing the heritage values and character of the Zone and reinforcing the landmark Hebart Hall.	5		Recommended for inclusion within the Historic Area Statement.
	Development to the street frontages will be low scale create cohesive townscapes with buildings respecting the existing nineteenth and early twentieth century building forms in a responsive, sensitive and contemporary manner. New development should reinforce the character of the historic built form as described below:	3	MHIS PO2.2, DTS 2.2, PO2.3	Recommended for inclusion within the Historic Area Statement.
	(a) Archer Street Development will achieve a gradual transition from the contemporary building forms and townscape character of the Main Street (O'Connell) Zone to the low scale and historic built form surrounding Wellington Square. New buildings fronting the Square should continue the prevailing setbacks and be low scale so as to not exceed the existing height of buildings fronting the Square.	5		Recommended for inclusion within the Historic Area Statement.
	(b) Jeffcott Street This townscape comprises the Lutheran Seminary buildings and a number of detached single and two storey Heritage Places of consistent architectural style, form and siting. Development will maintain the historic character derived from the prominent historic buildings of Hebart Hall and nearby Bishops Court. Development opportunities are limited to alterations to these existing buildings that respect and interpret these in a sensitive, contemporary manner.	5		Recommended for inclusion within the Historic Area Statement.
	(c) Ward Street This townscape comprises the Lutheran Seminary buildings, a number of single storey detached and semi-detached dwellings and former dwellings as well more recent two and three storey buildings. At the western end of Ward Street, development will maintain the historic character derived from the prominent historic buildings of Hebart Hall (former Whinham College) and nearby Bishops Court. At the eastern end of Ward Street there are opportunities to redevelop under-utilised land with contextually designed new buildings and additions.	5		Recommended for inclusion within the Historic Area Statement.
	(d) Walter Street Walter Street will be enhanced by development that responds to the more intimate scale and siting of the historic and established built form.	5		Recommended for inclusion within the Historic Area Statement.
	Throughout the Policy Area, buildings will provide an interesting pedestrian environment and human scale. Buildings will have articulation and fenestration, frequent openings in building facades, verandahs, balconies, and other features to provide development that is complementary to the areas historic development pattern. Development will maintain residential amenity by providing a suitable built interface to sensitive development including existing low scale residential development and Local and State Heritage Places. Improved design of both public and private spaces will enhance amenity for residents and visitors, including pedestrians and cyclists.	5		INSERT as as PO within the City Living Zone under the heading 'Built Form and Character'. INSERT policy within the City Living Zone on maintaining residential amenity.
	Opportunities for shared car parking arrangements should be utilised to support development of the Policy Area. For redevelopment of larger consolidated parcels, new car parking should be at basement level to optimise the use of land and to limit the visual impact on the amenity of the area. Additional surface car parking and above ground car parking should be avoided except in the case of low scale residential development.	5	Transport , Access and Parking GDP PO 5.1, PO 6.3	INSERT policy on parking arrangements within the City Living Zone under the heading 'Catalyst Sites'.
Policy Objectives				

Number	Description	Transition category	Where has it been included?	Comments
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
2	Development primarily for residential purposes at a variety of densities that respond to the site context.	2	City Living Zone PO 1.1	
3	Non-residential development will contribute to a liveable community with places of employment and community services whilst maintaining high residential amenity and not impacting the primary role of the Mainstreet (O'Connell) Zone.	3	City Living Zone PO 1.4	REVISE PO 1.4 within the City Living Zone to ensure non-residential land uses do not prejudice the role of the City Main Streets. REQUIRES FURTHER REVIEW. INSERT policy on desired land uses by either of the following options: <ul style="list-style-type: none"> • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 – Land Use Concept Plan based on existing Policy Area boundaries.
Principles of Development Control				
Land Use				
1	Development should be consistent with the Desired Character for the Zone and Policy Area.	4		
2	The following types of development or combinations thereof are envisaged: Consulting Room Community Centre Dwelling Dwelling addition Library Office Museum Nursing home Place of worship Residential flat building Retirement living Student Accommodation	3	Covered in MHIS Also in Zone DTS 1.2	The Code also allows child care, preschool, education est, recreation area. REQUIRES FURTHER REVIEW. INSERT policy on desired land uses by either of the following options: <ul style="list-style-type: none"> • Option 1 - Inclusion of additional subzones listing land uses that are appropriate within certain areas based on existing Policy Area boundaries and land use policies. • Option 2 - TNV Overlay identifying where the land use variation applies. • Option 3 – Land Use Concept Plan based on existing Policy Area boundaries.
3	Non-residential land-uses should be of small scale and intensity so as to not prejudice development of the Mainstreet (O'Connell) Zone and to be compatible with residential amenity.	3	City Living Zone PO 1.4	REVISE PO 1.4 within the City Living Zone to ensure non-residential land uses do not prejudice the role of the City Main Streets.
4	Development should ensure a high quality living environment is achieved.	4		
5	Where small scale shops are provided, they should: (a) serve the users of the site only; (b) be well integrated into the built form on the site; (c) be of a nature and scale consistent with the character of the locality; (d) not be of a type or scale likely to generate traffic volumes; (e) not detrimentally impact on the amenity of nearby residents; and (f) be located on Archer Street.	5	not included	REQUIRES FURTHER REVIEW. Due to the structure of the Zone, how can this policy be applied if it only applies to a small area of land within the North Adelaide?
Form and Character				
6	Development should be in accordance with the Concept Plan Fig 15/1.	1		Going by the map we have used, the Concept plan is the same as in the Dev Plan but the southern half of the area is now in the NALIS and the Concept Plan shows buildings up to 6 levels.
7	The bulk and density of development in the policy area should not exceed a plot ratio of 2.6. To ensure built form is compatible with the low scale streets and heritage places, lower plot ratios are envisaged in these areas.	2		No plot. Further analysis of the removal of plot ratio required.
8	Re-development of sites that are presently incompatible with the historic character of the Zone and Policy Area are encouraged.	2	City Living Zone DTS 2.1	
9	A minimum of 40 percent landscaped open space should be provided on the site of any development.	3		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.

Number	Description	Transition category	Where has it been included?	Comments
10	Development fronting Ward Street, Jeffcott Street and Archer Street should complement the established low scale streetscape and should not exceed 2 building levels or the height of an existing building fronting the street, whichever is greater.	5		Max height is 6 storeys. Note - significant uplift from 2 to 6 storeys. INSERT policy within the City Living Zone on adjacent development responding to context in terms of height.
11	Development in Walter Street (North-South section) should be more intimate in scale and character and may incorporate two-storey elements away from the street frontage behind a single storey façade.	5		Max height is 6 storeys. Note - significant uplift from 2 to 6 storeys. Recommended for inclusion within the Historic Area Statement.
12	Development in Walter Street (East- West section) should be responsive to the existing Heritage Places and transition to the medium scale development of the adjoining Mainstreet (O'Connell) Zone.	5		Max height is 6 storeys. Note - significant uplift from 2 to 6 storeys. Recommended for inclusion within the Historic Area Statement.
13	Development should preserve the visual prominence and landscaped setting of Hebart Hall including the centre clock tower spire and cast iron and stone walling along the Jeffcott and Ward Street frontages.	5	not included	Recommended for inclusion within the Historic Area Statement.
14	Development around Hebart Hall should be set back and low scale to provide visual relief and maintain the setting of the Heritage Place.	5		Recommended for inclusion within the Historic Area Statement.
15	Development should maintain views to Heritage Places.	5		Recommended for inclusion within the Historic Area Statement.
16	Development up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building may be appropriate where buildings are designed to: (a) taller built form is located on large and consolidated sites; (b) be compatible to the zone context and heritage values and contribute positively to the public realm; (c) incorporate appropriately sited and orientated forms to reflect the predominant historic grid pattern and reinforce the linear streetscape form; (d) be sited away from existing street frontages to retain the low scale historic streetscape character and preserve the visual prominence of State and Local Heritage Places; (e) comprise a series of smaller building footprints that are adequately separated by high quality landscaped open space to provide views through the built form to the sky beyond and non-contiguous shadows in adjoining areas and which optimise privacy, light and air ; (f) incorporate well-proportioned architectural treatments and rhythm in the built form through modulation and articulation to create small components and elements in the appearance of buildings to reinforce the human scale and historic character of the streetscape; (g) provide a high ratio of solid to void; (h) be sited off side and rear boundaries and avoid blank walls; and (i) occur in a coordinated manner.	3		Concept plan as per Dev Plan Recommended for inclusion within the Historic Area Statement.
17	Development should utilise stone, brick, render, galvanized steel and terracotta that are characteristic and complementary to the historic built form of the area.	5	not included	Recommended for inclusion within the Historic Area Statement.
18	Development should be consistent with the building envelope as shown in Figure 1, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent low scale housing in terms of massing and overshadowing through alternative design methods: (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment	5		INSERT policy on building envelopes within City Living Zone under the heading 'Building Setbacks'.
19	Buildings fronting internal streets and spaces should create an intimacy and enclosure of the spaces. Where possible, planting should be incorporated to reinforce the human scale of these spaces.	5		Recommended for inclusion within the Historic Area Statement under the heading 'Setting and Pubic Realm'.
20	Development should be orientated to provide passive surveillance of walkways both internal and externally to sites and to the street environment.	4		Should be addressed by CPTD principles in the Code.
Transport and Movement				
21	Development should facilitate the use of all modes of transport including cycling, walking, public transport, car share and vehicular access.	2	Transport , Access and Parking GDP DO 1	INSERT new DO policy on specific transport requirements within Transport, Access and Parking GDP.
22	Development should establish a clear hierarchy of movement corridors through large sites to create a legible and permeable street pattern.	5		INSERT policy on specific transport requirements under the heading 'Catalyst Sites'.
23	Development should create new pedestrian linkages and a high degree of permeability through the Policy Area to improve connection with adjoining areas. A north – south connection should be established to facilitate ease of movement from Ward Street to Cambridge Street through to Tynte Street and to the Main Street (O'Connell) Zone.	5		REQUIRES FURTHER REVIEW. Uncertain as to how this policy is to be incorporated into the current structure of the City Living Zone. INSERT policy on specific access requirements for this locality as required.

Number	Description	Transition category	Where has it been included?	Comments
24	Opportunities for shared parking should be utilised for the Policy Area.	2	Transport , Access and Parking GDP PO 5.1, PO 6.3	INSERT policy on specific transport requirements for this locality as required.
25	Except for low scale buildings car parking should be located in the basement to provide for the maximum utilisation of land and limit the visual impact on the amenity and Historic character of the Policy Area.	5		INSERT policy on specific transport requirements for this locality as required. Recommended for inclusion within the Historic Area Statement 15.
26	Access points should: (a) be narrow and consolidated to minimise the impacts to pedestrian environments and maintain the residential scale and pattern of development; (b) for parking, servicing or deliveries for development with high traffic volumes be from Ward Street to minimise traffic and vehicle queuing on Archer Street; and (c) remove the visual impact of existing car parking, access and egresses to the area by siting any new car parking away from street frontages.	5		INSERT policy on specific transport requirements for this locality as required. Recommended for inclusion within the Historic Area Statement 15.
NEW CONTENT IN THE CODE (insert below)				
	Boundary as well as upper level set backs are prescribed.		MHIS DTS 2.2,DTS 2.3, DTS 2.4, DTS 2.5	

Zone Adelaide Historic (Conservation) Zone	1 - Included in the Code and retains same policy intent	4%
	2 - Wording changed but policy intent remains (OK)	13%
	3 - Included in the Code but policy intent changed (NOT OK)	9%
	4 - Not included in the Code but OK to remove	11%
	5 - Not included in the Code and should be reinstated	64%

General comments
 The AHZ is now a City Living Zone with an Historic Area Overlay applying to it. There are no Subzones.
 Look in Car parking, access and manoeuvrability in Design and Urban Areas (why is called Cp etc in the tables and not Design in Urban Areas?)
 Also look at Transport Access and Parking GDP

Number	Description	Transition category	Where has it been included?	Comments
Statement of Heritage Value				
	The historic character of the south-east corner of the City provides strong cultural and historic evidence of the creation of the colony and the consolidation of early settlement in Adelaide.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	South Australia was established as a semi-commercial venture later taken over by the British government. The plan for Adelaide was drawn up in advance of settlement by Colonel William Light, who was appointed Surveyor-General by the South Australian Colonisation Commission.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	Light's plan utilised a regular grid pattern, and although the original Town Acres within the south-east corner of the City have been divided and further developed, Light's Plan has been preserved essentially as he conceived it.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	Adelaide was once predominantly a residential City. The existing late nineteenth century character of the south-east corner of the City continues to reflect this. The area retains a broad range of residential stock, from nearby grand villas on South and East Terraces overlooking the Park Lands to humble cottages lining the smaller streets, established during the course of successive subdivisions. The area also includes a collection of building types important for any community. These include St John's Anglican Church — first established in 1841, but rebuilt in its present form in 1887 — and hotels and retail premises nearby in Hutt Street.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The subdivision of town acres in the south-east into a network of streets and lanes lined with cottages occurred in distinct phases, most rapidly during the later 1870s and 1880s, although small cottages were built from the 1850s. These cottages were built on small allotments, on the smaller streets, and fronted directly onto the footpath.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The South Australian Company held title to many town acres, and until the 1860s leased them for grazing and hay-making. On 4 January 1870, the Register newspaper noted that, particularly in the south-eastern portion of the City, the company had released allotments for sale and that this 'led to the erection of numerous cottages, many if not most of which have been built and are owned by the occupants'. The surviving cottages built in those years are typically small-scale, low-set with high-pitched roofs, small casement windows, low ceilings, and built close to neighbours.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	Killua Place (now Ada Street) forms part of the land originally comprising Town Acres 578 and 589 and illustrates several phases of development, typical of the area. One house was built in 1857, with all houses on the western side of Ada Street built between 1874 and 1884 and five houses built on the eastern side in 1907.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The more elaborate dwellings in the south-east corner of the City were erected for prosperous residents. Most of these grand residences were built during the economic boom period of the late 1870s and 1880s. Other substantial developments occurring during this period include row terraces and additional cross streets.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The main shopping centres in Adelaide were located further to the north and west, but a small retail precinct developed along the nearby Hutt Street, with corner shops in the residential streets serving local residents' needs.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.
	The south-east corner of the City has remained devoid of industry and heavy trades which were concentrated in the western portion of the City. This has further served to preserve the residential and relatively uniform character in the south-east.	5		This information provides an important historical background and should be included within the City Plan. Specific information relevant to the settlement patterns and built form elements have been recommended for inclusion within the Historic Area Statements.

Desired Character

Number	Description	Transition category	Where has it been included?	Comments
	The Zone will provide good quality living environments, with a range of dwelling types, high level amenity and attractive streetscapes.	3	City Living Zone DO1, PO1.1, DTS1.1	City Living Zone also allows a range of other non residential uses in PO1.2 and DTS 1.2, PO1.3, PO1.4. INSERT policy to encourage residential land uses in the City Living Zone.
	The Zone comprises historic and appealing residential areas located either side of Hutt Street in the heart of the City's south east corner. The Zone's historic character is established by the many cohesive groups of nineteenth century buildings many of which are individually of historic significance. Those buildings are to be conserved and the historic character supported and enhanced by the redevelopment and replacement of discordant buildings; the careful attention to the subdivision pattern, siting, form and composition of new and replacement dwellings, also of building alterations and additions.	5		Recommended for inclusion within the Historic Area Statement. INSERT policy about building elements into the the City Living Zone under the heading 'Built Form and Character'.
	Established commercial land uses will be progressively redeveloped for residential purposes, enhancing the living conditions, residential amenity, and historic character of the Zone.	3	Not included	Code policy has been changed to allow and encourage commercial land uses where now they are not encouraged. This will change the residential nature of the area. Council is trying to encourage the residential land uses as a means of giving the City a 24 hour population base. INSERT policy to encourage residential land uses in the City Living Zone.
	A high quality public environment, with appropriate planting, will complement and contribute to the Zone's amenity. Traffic management will maintain accessibility for local traffic and visitors while emphasising pedestrian and cyclist safety and convenience.	4	Not included	Planting is not development and hence Council controlled. Ok to remove this policy. Pedestrian etc safety is not covered apart from generally in Design in Urban Areas GDP. In that GDP it's not about the quality of the public realm, rather it's general principles about surveillance.
	In particular, the character of the following streets should be conserved and reinforced as follows: (a) Ada Street A variety of dwellings, including row cottages, small semi-detached cottages and detached bay window cottages make up this historic townscape. A sense of intimacy and enclosure is derived from the narrowness of the street and the largely single-storey scale and close development pattern of residences. Consistent pitched roof profiles, verandahs, fenestration and materials establish a cohesive built form character which should be maintained. (b) Carrington Street (east of Marion Street) This cohesive historic townscape comprises single-storey detached, semi-detached and row cottages, terrace houses and contemporary attached dwellings. Dwellings constructed of stone and brick with vertically proportioned openings, pitched roofs and verandahs comprise the streets character which is to be maintained and reinforced. (c) Carrington Street (west of Marion Street) This residential townscape is contiguous with and complementary to the historic commercial character of the adjoining Hutt Street townscapes. It comprises closely sited single-storey cottages, row cottages, and terrace houses. The cohesive built form character established by the window proportions, pitched roof profiles, verandahs and materials is to be maintained and reinforced. (d) Castle Street The established character comprises small semi-detached and detached cottages and the single terrace. Dwellings are closely sited to the street with narrow frontages, verandahs along the street and pitched roofs. These elements are to be reflected in any infill development. (e) Corryton Street (north of Halifax Street) This townscape comprises single-storey semi-detached and detached cottages sited close to the street frontage. Development is to maintain the cohesive built form character established by the rhythm of narrow dwelling facades, fenestration, pitched roof profiles and verandahs. (f) Corryton Street (south of Halifax Street) The distinctive townscape established by a long single-storey row of cottages, with a horizontal emphasis created by the common roof, verandah profiles and continuous picket fencing is to be maintained	5		Recommended for inclusion within the Historic Area Statement.
Policy Objectives				
1	Conservation of the heritage values and historic character of the remaining intact residential districts of south-east Adelaide and its architecturally diverse historic townscapes.	5		It is recommended that this be included in the Historic Area Statements.
2	Development compatible with the historic character of the Zone.	2	Historic Area Overlay DO1, PO1.1, PO1.2, PO1.3, PO1.4, PO1.5	

Number	Description	Transition category	Where has it been included?	Comments
3	Development that contributes to the heritage value and desired character.	2	Historic Area Overlay DO1, PO1.1, PO1.2, PO1.3, PO1.4, PO1.5	
Principles of Development Control				
Land Use				
1	Development should be consistent with the desired character for the Zone.	4	Not included	
2	The following types of development, or combinations thereof, are envisaged: Affordable housing Community Centre Domestic outbuilding in association with a dwelling Domestic structure Dwelling Dwelling addition	5	City Living Zone DO1, PO1.1, DTS1.1	City Living Zone also allows a range of other non residential uses in PO1.2 and DTS 1.2, PO1.3, PO1.4 INSERT policy to encourage residential land uses in the City Living Zone.
3	Development listed as non-complying is generally inappropriate.	4		
Form and Character				
4	Development should: (a) retain and conserve heritage places; (b) reflect the historic built form and its visual character through residential development of complementary design, form and density consistent with the desired character for the Zone; and (c) contribute to the landscape character of private and public open spaces and incorporate attractive landscaping to street frontages where appropriate and available within building set-backs.	2	a) Historic Area Overlay PO6.1 retains buildings that demonstrate heritage value. b) Historic Area Overlay DO1, PO1.1, PO1.2, PO1.3, PO1.4, PO1.5 c) Historic Area Overlay PO5.2	Elements of the existing Development Plan policy which have been omitted including retaining heritage places, reflecting historic built form and landscaping should be reinstated. INSERT policy on the importance of landscaped open space within the City Living Zone under the heading 'Built Form and Character'.
5	Development should increase the amount of residential accommodation in the Zone by: (a) adapting or redeveloping non-residential buildings for residential purposes; (b) developing vacant and under-utilised sites; and (c) the redevelopment of sites containing buildings that are presently incompatible with the historic character of the Zone or the desired character, particularly buildings that are visible from public roads.	1	a) City Living Zone PO2.1, DTS 2.1b, a, Historic Area Overlay PO6.1, PO6.2, PO6.3	
Design and Appearance				
6	Development of new buildings or building additions including those of innovative and contemporary design should demonstrate a compatible visual relationship with adjacent heritage places and other buildings that reinforce the desired character in terms of its: (a) bulk and scale; (b) width of frontage and the front and side boundary building set-back patterns; (c) proportions and vertical and/or horizontal emphasis, exhibiting vertical openings and a high solid to void ratio in the composition of the principal building facade and other elevations presenting to a public road; and (d) form and level of visual interest as determined by length and size of unbroken walling, treatment of openings and depths of reveals, roofline and silhouette, colour and texture of materials used, as well as detailing (without excessive use or mimicry of decorative elements and ornamentation) and design elements such as porches, verandahs and balconies where appropriate; and (e) public and private landscaped open spaces.	5	Historic Area Overlay PO1.1 and PO1.2 Historic Area Overlay PO1.4 Historic Area Overlay PO1.3 Historic Area Overlay PO1.5 Design in Urban Areas PO18.2	Refers to development visible from the public realm, not the whole thing. 3a) No specific reference to bulk and scale. 3b) No specific reference to width of frontage. 3c) Briefly dealt with in PO1.3 but no reference to proportions, vertical/horizontal emphasis, vertical openings, high solid to void ratio in the principal facade or other elements visible from the public realm. 3d) Briefly dealt with in PO1.3 but no reference to visual interest, unbroken walling, treatment of openings, roofline, silhouette, detailing, mimicry, or design elements. Materials dealt with in PO1.5. INSERT policy within Design in Urban Areas GDP and City Living Zone where relevant
7	New buildings should utilise stone, brick and/or brick render as the main external finish to walls to complement the historic built form in the Zone. Coated surfaces that are visible from the street should be finished in natural render, limewash, cement or mineral paints, not plastic coatings or acrylic renders. Buildings with brightly coloured or highly reflective surfaces should not be developed.	2	Historic Area Overlay PO1.5	4 Materials briefly dealt with. Bright colours and reflective materials not covered. It is recommended that this be included in the Historic Area Statements or alternatively within the City Living Zone under the heading 'Built Form and Character'.
8	Overhanging verandahs or balconies extending over the public road verge should only occur where development is sited on property boundaries to the major street frontages, and particularly on street corners.	5	Not included	INSERT policy re verandah/balcony suitable locations in the City Living Zone.
9	Development should complement the characteristic features and any distinctive, architectural elements and forms as described in the desired character and avoid discordant, foreign and uncharacteristic building styles.	5	Not included	It is recommended that this be included in the Historic Area Statements.

Number	Description	Transition category	Where has it been included?	Comments
10	Where consistent building set-backs from front, side and rear allotment boundaries prevail, development should be consistent with these established setbacks. Where a consistent building set-back is not evident in a locality, buildings should not project forward of heritage places adjacent the development site. Building to side boundaries (other than for party walls in semi-detached, row dwellings or residential flat buildings) or to a rear boundary is generally inappropriate, but may be considered where it is demonstrated that there will be no detrimental effect on residential amenity or adjacent heritage place(s).	5	Historic Area Overlay PO1.4 City Living Zone PO3.1, DTS3.1, PO3.2, DTS3.2, PO3.3, DTS3.3 , PO3.4, DTS 3.4, PO3.5, DTS 3.5	Historic Area Overlay calls for new development to be consistent with the prevailing front and side setback pattern. No comment on building to the rear boundary. Zone provides numerical figures to guide development ie a setback that's either 6m or the average of the 2 on either side, whichever is the lesser. 900mm setback for the secondary street 3m high walls being setback 900 from the boundary. Taller walls have further setbacks. 3m setbacks from rear for ground floor and 5m for first floor 3m high walls on boundaries that can be 8m long if less than 45% of all walls on the boundary But is setback 3m from any existing or proposed boundary walls. I don't understand this. This approach will not work in the AH(C)Zone when the setbacks pattern is very tight. INSERT policy on contextual setbacks in the City Living Zone.
11	Except for heritage places, corner sites should provide facades to each street frontage and should only be sited on or close to the corner frontages where the development complements the siting of heritage places.	3	Design in Urban Areas PO1.1	Code refers to reinforcing corners but not by locating facades on each street frontage, if appropriate. Code refers to reinforcing corners but not by locating facades on each street frontage, if appropriate. North Adelaide has buildings that address the corners of streets and terminate the built form row on that street. This should continue for important corner sites. INSERT policy on corner sites
12	Appropriately pitched roofs which visibly reinforce the prevailing character of historic roof forms should be incorporated in development rather than mono-pitch or flat roof forms falling to the street frontage or asymmetrically to a side boundary.	4	Historic Area Overlay PO1.1 and PO1.3	There is no specific reference to appropriately pitched roofs or mono pitch or flat roofs. This policy is no longer relevant or appropriate. INSERT policy within City Living Zone under the heading 'Built Form and Character' to ensure development reflects the prevailing roof form.
13	The height of new buildings, including the floor to ceiling clearances should take reference from the prevailing building heights within the locality, with particular reference to adjacent Heritage Places. Where single storey development prevails or is desired in accordance with the relevant desired character, low profile solutions to two storey development that are located to the rear of an existing building may be appropriate subject to no adverse impacts on the historic character of the streetscape and overshadowing, bulk and privacy impacts on neighbouring land.	5	Historic Area Overlay PO1.2 Historic Area Overlay PO2.1 Historic Area Overlay DTS2.1	Refers to prevailing heights being the guide, but specifically heritage places. Doesn't refer to floor to ceiling clearances for each level. Code doesn't refer to single storey dev being required, just that alts and adds don't dominate the primary façade. There is no comment about overshadowing or privacy. INSERT policy within City Living Zone under the heading 'Built Form and Character'.
14	Buildings should not exceed 2 storeys or 8.5 metres in building height.	1	City Living Zone DTS 2.2	TVN says max building height is 2 storeys and 8.5m high
15	The plot ratio of development should not exceed 0.8.	4	Not included	No plot ratio
16	The dwelling unit factor of development is: (a) Carrington, Halifax and Gilles Streets: 200 square metres; (b) Elsewhere: 120 square metres.	5	City Living Zone DTS 5.1	TVN says the Minimum lot size for a detached dwelling is 120 sqm; semi-detached dwelling is 120 sqm; row dwelling is 120 sqm; group dwelling is 120 sqm; residential flat building is 120 sqm The min lot size of 200m2 for Carrington Halifax and Gilles has gone. INCORRECT - Ensure correct lot sizes are reflected within the TVN Overlay.

Number	Description	Transition category	Where has it been included?	Comments
17	Landscaped open space on the site of the development should be provided as follows: (a) In areas where single storey development at the street frontage prevails – 15 percent; (b) In other areas: (i) East of Hutt Street – 25 percent; (ii) West of Hutt Street – 20 percent.	5	Design in Urban Areas PO20.1, DTS 2	FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide. There is POS in the Code - no LOS. Table 1 prescribes 'Outdoor Open Space' not POS which will be confusing. The amount of OOS to be provided depends on the dwelling type and the site area and ranges from a percentage for the bigger sites to an area for the smaller sites. There is also a portion that must be provided adjacent to a habitable room that is either a percentage or area and must have a minimum dimension. There is also 'Landscaping' and soft landscaping which is to shade etc. The amount depends on the site area and is a percentage but also a percentage of the land between the road boundary and the primary building line (25% with a min dimension of 0.5m). Tree planting is required as well depending on the lot size and with discounts if there are trees on site already. Some POS can be in the front yard, if behind a 1.8m high fence. This doesn't work with current policy that calls for traditional low and visually
18	Landscaped open space should be arranged and planted in a manner which will provide for the retention of existing significant vegetation and maintain and enhance the established predominant amenity and landscape character of the locality.	2	Historic Area Overlay PO5.2	HAO calls for dev to maintain valued landscape patterns that contribute to the HAO.
19	Residential flat buildings or group dwellings should be developed in a manner such that it presents to its visible street frontages in a manner consistent with the predominant dwelling and building forms found in the locality.	3	Historic Area Overlay PO1.1 to PO1.5	Contains brief statements about development being consistent, respecting the heritage value etc but nothing specific on the form of resi flat buildings. INSERT policy on appropriate built form in the City Living Zone under a new heading 'Residential Flat Buildings and Group Dwellings'.
20	Row dwellings should only be developed where vehicle access can be provided from laneways or minor streets. Row dwellings should not incorporate garaging for vehicles in the building elevation to the primary street frontage and should not be comprised of more than six attached dwellings in any one group.	5	City Living Zone PO6.1 and PO6.2 and	This is about all resi whereas Dev Plan about row dwellings only. DTS 6.2A says provide access to parking from minor streets etc but only if road width is ok and traffic generation does not unreasonably impact on resi amenity. No comment on row dwellings having garaging in the principal elevation although aluded to in DTS6.2b.. No comment about how many dwellings can be in one group. Code Design in Urban Areas says 5-19 dwellings. INSERT policy on row dwellings within City Living Zone under a new heading 'Row Dwellings'.
Fencing				
21	Fencing to a street frontage (including any secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, should: (a) be of a traditional style and detailing that is compatible with the style of the building, or in the case of a new building, its design should reference and complement fencing styles historically associated in the particular streetscape; (b) on the primary street frontage, comprise low fencing or fencing with an open character combined with solid pillars and plinths or other similar palisade fencing styles that allow views of the associated building, by their height and design; (c) comprise materials compatible with traditional fencing materials such as stone and cast iron, brick, stone or rendered pillars and plinths or other traditional materials such as timber or well detailed masonry, but should not include metal sheeting; and (d) not include solid masonry fences on the primary street frontage other than where it is required to be consistent with fencing of identified heritage value on the development site.	5	Historic Area Overlay 3.4	In a HCZ, the fencing to properties is very important in establishing and reinforcing the historic value of the locality. The Code deals with fencing and gates very briefly and not in the detail needed in the City and Nth Ad. Recommended for inclusion within the Historic Area Statements or alternatively should be included within the City Living Zone under a new heading 'Fences'.
22	On corner sites, the front fence should return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage should be constructed of traditional materials such as brick, rendered masonry and timber and should not be higher than 1.8 metres above ground level.	5	Not included	Code does not include reference to fencing on corner sites. INSERT policy on fencing on corner sites within the City Living Zone under a new heading 'Fences'.

Number	Description	Transition category	Where has it been included?	Comments
23	Fences on rear and side property boundaries (behind the main face of the building and other than on a corner allotment), should not be higher than 2 metres above ground level and should be constructed of traditional materials, including corrugated metal sheeting. Side fences or walls above 1.2 metres are generally inappropriate forward of the main face of a building. Forward of the main face of the building, fences should be of a scale that allows oblique views of buildings.	5	Not included	Code does not refer to this. INSERT policy on fencing on corner sites within the City Living Zone under a new heading 'Fences'.
Car Parking				
24	Vehicle access should be via minor streets, side or rear lanes and existing crossovers wherever possible. In a street where vehicle access does not prevail on the primary street frontage, new crossovers should be avoided and on-site car parking is not required.	5	City Living Zone DTS/DPF6.2	Code makes no comment about what to do if the street does not have vehicle access - ie no new crossovers. INSERT policy on crossovers in the City Living Zone under the heading 'Movement and Access'.
25	New vehicle crossovers required for development should be: (a) kept to a minimum width necessary for safe and convenient access but so as to preserve and enhance street character; (b) designed to narrow the crossover width towards the road pavement and located to avoid the need to remove historic kerbing and significant trees; and (c) separated from each other to minimise visual impact on the street character.	5	Transport Access and Parking GDP DTS3.6 Design in Urban Areas GDP DTS 23.3 Transport Access and Parking GDP DTS 3.5	The Transport GDP says min widths of driveways to be 3.5m. Design says 3.2m. Transport GDP says don't 'remove mature street trees. Nothing about kerbing. Transport GDP does not require driveways to be separated from each other ie 2x3.5m driveways could be adjacent ie a width of 7m on a frontage greater than 20m. Driveway locations are particularly important for North Adelaide and the City in terms of historic patterns (many sites don't have them), on street parking, trees and kerbing. INSERT policy within City Living Zone under the heading 'Movement and Access'.
26	Vehicle parking arrangements should not incorporate undercroft parking or other parking or access arrangements that are not in keeping with the Zone's historic character.	5	Transport Access and Parking GDP PO7.1 City Living Zone PO6.1 Historic Area Overlay PO5.1	Undercroft parking is acceptable but there are Pos in the HAO that say keep the access arrangements consistent with hv. City Living Zone says minimise visual impact on character. INSERT policy as part of PO 6.1 within the City Living Zone.
27	Development should provide on-site car parking and open car parks and buildings for parking vehicles that are: (a) located at the rear of sites wherever possible; (b) designed and sited to ensure garage doors do not visually dominate the primary street frontage; and (c) located behind the main face of the associated building.	5	a) Not included b) Not included c) Historic Area Overlay PO3.2	Code covers this is a general way but does not refer specifically to parking being at the rear of sites, garage doors. The location of car parking is important in determining and reinforcing the character of an area. REVISE PO 18.1 within Design in Urban Area to ensure garaging does not visually dominate the primary frontage
Land Division				
28	The division of land should conform with the established historic allotment pattern and in particular the allotment frontages of dwellings in the relevant street and achieve regularly proportioned allotments capable of containing dwelling types consistent with the desired character.	2	Historic Overlay PO4.1	HA Overlay addresses creating lots to accommodate building of a bulk and scale that reflect the area. Zone addresses lots created to be of a suitable size and dimension that are compatible with the housing pattern.
29	The division of land in the form of a hammerhead allotment or similar allotment should not be undertaken.	5	Not included but Historic Area Overlay PO4.1 says make lots that allow buildings that reflect the buildings and setbacks in the area.	REQUIRES FURTHER INVESTIGATION. INSERT policy on hammerheads not being envisaged in South Adelaide. Can we use the TNV Overlay to in relation to the type of allotments (e.g. hammerheads) that are appropriate or inappropriate within particular areas of the City living Zone? Given the historic nature of many of the areas one size does not fit all.
Procedural Matters				
Complying Development				
30	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008.			
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
31	<p>The following kinds of development are non-complying:</p> <p>(a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Auditorium Car park except where ancillary to an approved or existing use Cinema Conference centre Hospital Industry Hotel Licensed Premises Licensed entertainment premises Restaurant Service trade premises not within a building Theatre Warehouse</p> <p>(b) A change of use to any of the following except: (i) within the site of a lawfully existing non-residential use (ii) within the site of a heritage place originally constructed for non-residential use: Consulting room Office Shop</p> <p>(c) Total demolition of a Local Heritage Place or portion of a Local Heritage Place being the frontage and side wall returns which are visible from the street, where the elements of the heritage value of that place are so limited</p> <p>(d) Total demolition of a State Heritage Place (as identified in Table Adel/1)</p> <p>(e) Advertisements involving any of the following:</p>			<p>General Comments Code calls for resi use but includes non resi land uses to provide a range of services to the local community inc offices, consulting rooms, education, community centres, worship, preschools, child care, library and other health and welfare plus services for supported or retirement accomm and open space and rec facilities. Non resi land uses to be compatible with the resi character and amenity.</p> <p>Restricted includes Dev associated with the insitutions or an adj site, as identified on the Concept Plans. There are none in the AHCZ. Shop - except if lawfully used as shop, office or consulting room, or with a glfa of less than 200m2 or located on a site with a frontage to an arterial or collector road or adj a Main Street Zone with a glfa of less than 1000m2. Also restaurants are excluded and are now PA.</p> <p>So, all the non complying list is now PA. Assuming that some of the land uses in the non complying list are not desirable in this area ie auditorium, conference centre, hospital, industry, licensed entertainment centres), are the policies strong enough to allow refusal?</p> <p>What is to stop consulting rooms, offices or restaurants from being approved in former residential properties in resi areas but in proximity to the hospitals or major streets?</p> <p>Demo of SHPs and LHPs.</p> <p>Plot and height and ads</p>
Public Notification				
32	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification not required: (i) The following forms of development: Carport, domestic outbuilding, garage, pergola, shade sail (or the like) or verandah, in association with a dwelling Domestic structure Dwelling addition (single storey) Dwelling (single storey) Fence</p> <p>(ii) Advertisements (except those classified as non-complying); (iii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p> <p>(b) Category 2, public notification required, third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights: (i) all development, other than development classified as non-complying or which falls within Part (a) of this provision.</p> <p>Note: For Category 3 development, public notification is required. Third parties may make written representations, appear before the relevant planning authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>			
NEW CONTENT IN THE CODE (insert below)				
Does POS replace LOS and PLOS?				

Number	Description	Transition category	Where has it been included?	Comments
	<p>HA Overlay</p> <p>Historic Area Statement will be very important in determining the form of development as the detail of the existing policies in respect of design, materials, fencing, land division, car parking arrangements has been removed.</p> <p>It is only the visible part of the building that needs to meet the Code. Poor design outcomes?</p> <p>A contextual design response is called for. What will the criteria be to judge whether the new design is appropriate?</p> <p>tests for demolition (buildings must demonstrate the historic character) and performance assessed.</p> <p>Economic, contribution and structural or condition test now applies.</p> <p>Zone</p> <p>non resi development envisaged at a much greater level than in Dev Plan.</p> <p>Setbacks from boundaries are now precise numbers and this will not suit the locality.</p> <p>Catalyst sites - Can this be right? Does this only apply on land more than 1500m2 with a frontage to East Terrace?</p> <p>TNVs for height, site areas and site frontages and concept plans. The min lot size of 200m2 for Carrington Halifax and Gilles has been removed.</p> <p>Public notification greatly expanded as a result of the relatively short list of Performance Assessed Classes of Dev and the All other inclusion.</p> <p>There is POS in the Code - no LOS. You are referred to Table 1 which is called 'Outdoor Open Space' not POS which will be confusing. The amount of OOS that must be provided depends on the dwelling type and the site area and ranges from a percentage for the bigger sites to an area for the smaller sites. There is also a portion that must be provided adjacent to a habitable room that is either a percentage or area and must have a minimum dimension.</p> <p>There's also something called 'Landscaping' and soft landscaping which is to shade etc. That amount depends on the site area and is a percentage but also a percentage of the land between the road</p>			

Zone		City Living Zone		1 - Included in the Code and retains same policy intent	0%
Policy area(s)				2 - Wording changed but policy intent remains (OK)	29%
				3 - Included in the Code but policy intent changed (NOT OK)	13%
				4 - Not included in the Code but OK to remove	25%
				5 - Not included in the Code and should be reinstated	33%
General comments					
Number	Description	Transition category	Where has it been included?	Comments	
Desired Character					
	The Zone is spread across the southern half of Adelaide, flanked to the north by the City's central business area. Mixed use apartment and commercial corridors frame much of the southern and western margins of the Zone which is also bisected by the Hutt Street main street strip, and corridors of core business areas centred on the Squares and the City's main north-south axis roads, Morphett, King William and Pulteney Streets.	4			
	The Zone comprises Adelaide's main residential living districts which have developed with a range of stand-alone and paired cottages, terrace or row housing, and low to medium scale contemporary apartment buildings, and with remnant workshops, service trades, offices and mixed uses, particularly west of Hutt Street.	5		Include with the City Living Zone as a Desired Outcome and worded as follows: <i>"Adelaide's main residential living districts with a range of stand-alone and paired cottages, terrace or row housing, and low to medium scale contemporary apartment buildings."</i>	
	The City Living Zone will provide high amenity residential living environments along with related non-residential uses compatible with residential amenity, as articulated in the Policy Areas. Carefully executed high quality residential infill is envisaged and opportunities are presented for comprehensive redevelopment on larger, particularly non-residential sites, and also on catalyst sites fronting South Terrace and East Terrace. The desired increase in the City's resident population relies, in part, on realising infill housing opportunities with high regard to their context and achieving overall, higher dwelling densities in this Zone.	4			
Policy Objectives					
Objective 1	A Zone comprising a range of dwelling types and tenures, including affordable housing.	2	City Living Zone PO 1.1 and DTS/DPF 1.1		
Objective 2:	Increased dwelling densities in appropriate locations.	2	City Living Zone PO 2.1		
Objective 3:	Non-residential activities that support city living and amenity with minimal impact on the environmental quality or amenity of living conditions.	2	City Living Zone PO 1.2, PO 1.3, PO 1.4		
Objective 4:	Development having regard to the potential impacts of building height and activities from land in the adjoining zones.	3	General Development Policies Interface between Land Uses PO 1.1 and PO 1.2	The Built Form component is missing from the Interface Between Land Uses GDP which is more land use based. It is recommended that the built form elements are addressed within the Interface between Land Uses GDP.	
Principles of Development Control					
Form of Development					
1	Development should make a positive contribution to the desired character as expressed by its respective Policy Area.	4			
2	The following types of development, or combinations thereof, are envisaged: Affordable housing Community Centre Domestic outbuilding in association with a dwelling Domestic structure Dwelling Dwelling addition Residential Flat Building	2			

Number	Description	Transition category	Where has it been included?	Comments
3	Non-residential land uses should be limited to land lawfully used for non-residential purposes and should comprise land uses more in conformity with the intended residential amenity, except where envisaged in the relevant Policy Area. Non-residential land uses should be of a scale and role to not prejudice the envisaged development of non-residential zones.	3	City Living Zone PO 1.4 and DTS/DPF 1.4	The intent of the policy has changed and the wording of DTS/DPF is confusing and not clear. The POs and DTS are essentially allowing for non-residential uses in residential areas which will essentially erode the residential hub of the City in terms of land use and built form character. These areas are historically the residential heart of the City and should be protected and maintained. It is recommended that the City Living Zone DTS/DPF 1.4 is DELETED and PO 1.4 is REPLACED by the following: <i>Non-residential land uses limited to land lawfully used for non-residential purposes and to comprise land uses more in conformity with the intended residential amenity. Non-residential land uses should be of a scale and role to not prejudice the envisaged development of non-residential zones.</i>
4	Development listed as non-complying is generally inappropriate.	4		
5	The number of dwellings should be increased by: (a) the redevelopment of poor quality and underutilised buildings or sites which are in discord with the desired character of the Policy Area, provided maintenance of residential amenity and the values of heritage places; (b) the adaptation and conversion of non-residential buildings to residential uses; or (c) development in upper levels of existing buildings, or by increasing the height of buildings or roof volumes, or on sites behind existing buildings.	2	City Living Zone DTS/DPF 2.1	
6	Buildings or additions, including those of innovative and contemporary design, should reinforce the Policy Area and demonstrate a compatible visual relationship with adjacent heritage places or the Adelaide Historic (Conservation) Zone in terms of its: (a) bulk, height and scale (i.e. the length and size of unbroken walling and the roof volume and form); (b) width of frontage and the front and side boundary building set-back patterns; (c) overall building proportions and massing (by maintaining the desired horizontal [and/or vertical] emphasis, exhibiting vertical openings and a high solid to void ratio); (d) modelling and articulation of facades; and (e) incorporation of key architectural elements and detailing where a particular construction era and building style prevails as expressed in the desired character (without excessive use or mimicry of decorative elements and ornamentation) i.e. with the inclusion of elements such as porches, verandahs, balconies and fences where appropriate.	5		The Code does not provide this level of detail and guidance to ensure buildings and additions are compatible. The current policy provides clear direction on what is expected from a built form perspective. This policy should be incorporated into the General development Policies Design in Urban Areas - All Development of the Code under a new heading 'Heritage Adjacency'. HERITAGE OVERLAYS!!!!!!
7	Development should not exceed the height prescribed for each Policy Area. The height of new buildings, including the floor to ceiling clearances of each level, should take reference from the prevailing building heights within the locality, with particular reference to adjacent heritage places.	5	Height TNV Overlay	Ensure the second half of the principle is included. This is not captured in the City Living Zone or General Dev policies Design in Urban Areas. This principle should continue to exist in the City Living Zone and worded as follows: GDP APPLIED ACCROSS ALL ZONES <i>"The height of new buildings, including the floor to ceiling clearances of each level, are to take reference from the prevailing building heights within the locality, with particular reference to adjacent heritage places."</i>
8	Where development proposes a building higher than the prevailing building heights that contribute to the desired character of a locality, the taller building elements should be setback from street frontages to avoid a detrimental impact on the prevailing character.	5		The Code does not provide for buildings higher than the envisaged height for the area except if it is a catalyst site. There may be times where this policy might be relevant to sites less than 1500m2, therefore application of this policy is important. <i>"Development proposing a building higher than the prevailing building heights that contribute to the character of a locality to ensure that the taller building elements are setback from street frontages to avoid a detrimental impact on the prevailing character."</i>
9	Where consistent building set-backs from front, side and rear allotment boundaries prevail in a locality, new development should be consistent with these setbacks.	2	City Living Zone PO 3.1, PO 3.3 and PO 3.4	This overlying principle should continue to exist in the City Living Zone and worded as follows: <i>"Development consistent with the front, side and rear allotment boundaries where a consistent setback prevails in the locality."</i>

Number	Description	Transition category	Where has it been included?	Comments
10	The finished ground floor level of buildings should be at grade and/or level with the footpath to provide direct pedestrian access and street-level activation.	5		This has not been included or addressed within the Zone or General Development Policies. It is important the ground floor level of buildings are at grade or level with the footpath to ensure accessibility into buildings. Include the following PO within General Development Policy - Design in Urban Areas [Access for People with Disabilities] <i>"Development that ensures the finished ground floor level of buildings are at grade and/or level with the footpath to provide direct pedestrian access and street-level activation."</i>
Car Parking				
11	Access to parking and service areas should be located so as to minimise the interruption to built form on street frontages and to minimise conflict with pedestrians. Access, where possible, should be from minor streets, or side or rear lanes provided road width is suitable and the traffic generation does not unreasonably impact residential amenity.	2	City Living Zone PO 6.2 and DTS/DPF 6.2 (a)	
Advertising				
12	Internal illumination of advertisements should only occur in the major streets and limited to projecting advertising displays located beneath verandahs or awnings extending over the footpath. Otherwise only external illumination of advertisements will be appropriate. Illumination of advertisements should not detrimentally affect residential amenity.	5	General Development Policies - Advertisements [Amenity Impacts] PO 4.1 DTS/DPF 4.1	This policy varies from Advertisements General Development Policies. Include the following POs under the new heading 'Advertisements' within the City Living Zone. <i>Projecting advertising displays located beneath verandahs or awnings extending over the footpath.</i> <i>Internal illumination of advertisements only envisaged in the major streets otherwise external illumination of advertisements is envisaged will be appropriate.</i>
13	Advertisements more than 3 metres above natural ground level or an abutting footpath or street should not occur.	5		This policy varies from Advertisements General Development Policies. Include the following PO under the new heading 'Advertisements' within the City Living Zone. <i>"Advertisements that do not exceed 3 metres above natural ground level or an abutting footpath or street."</i>
14	Advertisements which project from a wall of a building should not occur in minor streets.	5		This policy varies from Advertisements General Development Policies. Include the following PO under the new heading 'Advertisements' within the City Living Zone. <i>"Advertisements that do not project from a wall of a building.."</i>
Procedural Matters				
Complying Development				
15	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following kinds of development are designated as complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site.	3		This was included as a complying form of development in the 2006 General PAR to allow for Council to carry out its activities. It is recommended that it is included as an accepted development classification.
Non-Complying				

Number	Description	Transition category	Where has it been included?	Comments
16	<p>The following kinds of development are non-complying:</p> <ul style="list-style-type: none"> (a) A change of use to any of the following: <ul style="list-style-type: none"> Adult entertainment premises Adult products and services premises Amusement machine centre Auditorium Car park except where ancillary to an approved or existing use Cinema Conference centre Hospital Industry Hotel Licensed Premises Licensed entertainment premises Service trade premises not within a building Theatre Warehouse (b) A change of use to any of the following except: <ul style="list-style-type: none"> (i) within the site of a lawfully existing non-residential use (ii) within the site of a heritage place originally constructed for non-residential use (iii) in East Terrace Policy Area 29 or South Terrace Policy Area 30 on sites greater than 1500 square metres in area, which may include one or more allotment (iv) in East Terrace Policy Area 29 fronting Wakefield Street (v) in South Terrace Policy Area 30 (vi) in South East Policy Area 31 on a key development area on Figure SE/1 (vii) in South Central Policy Area 32 (viii) in South West Policy Area 33 fronting Sturt Street Consulting Room Office 	4		
Public Notification				
17	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <ul style="list-style-type: none"> (a) Category 1, public notification not required: <ul style="list-style-type: none"> (i) The following forms of development: <ul style="list-style-type: none"> Carport, domestic outbuilding, garage, pergola, shade sail (or the like) or verandah, in association with a dwelling Domestic structure Dwelling addition (single storey) Dwelling (single storey) Fence (ii) Advertisements (except those classified as non-complying) (iii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development. (b) Category 2, public notification required, third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights: <ul style="list-style-type: none"> (i) all development, other than development classified as non-complying or which falls within Part (a) of this provision. <p>Note: For Category 3 development, public notification is required. Third parties may make written representations, appear before the relevant planning authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>	4		
NEW CONTENT IN THE CODE (insert below)				
CITY LIVING ZONE				

Number	Description	Transition category	Where has it been included?	Comments
PO 1.2	Non-residential development provides a range of services to the local community primarily in the form of small scale commercial uses, community services:			Not supported. Non-residential uses are discouraged within the zone. And the PO and DTS should be deleted.
	(a) commercial uses including small scale offices, consulting rooms and personal or domestic services establishment;			Not supported. The prevailing use of these areas is residential and residential purpose of the area should be protected and maintained and reference to commercial uses should be deleted.
	(b) community services such as educational establishments, community centres, places of worship, pre-schools, childcare and other health and welfare services;			Not Supported. The prevailing use of these areas is residential and residential purpose of the area should be protected and maintained and reference to community uses should be deleted.
	(c) services and facilities ancillary to the function or operation of supported accommodation or retirement housing;			Supported
	(d) open space and recreation facilities.			Not supported. Recreational facilities are a use that is not supported in the City living zone and reference to this use should be deleted. The prevailing use of these areas is residential and residential purpose of the area should be protected and maintained.
PO 1.5	Development associated with or ancillary to any existing non-residential or institutional activity identified on any relevant Concept Plan contained in the Concept Plan Technical and Numeric Data Overlay is contained within the site identified on the Concept Plan, or any directly adjoining site, to avoid detrimental impact on adjacent residential amenity.			Supported
PO 2.2	Development contributes to a predominantly low-rise residential character.			Supported
PO 2.3	Development designed to provide a strong built-form edge to the Park Lands and Wellington Square through the regular siting and pattern of buildings addressing the primary street frontage.			Supported
DTS/DPF 3.1	Building setbacks at least (whichever is the lesser): a. 6m; or b. the average of existing buildings on the adjoining sites that face the same street.			Not Supported. There is no justification or studies undertaken to justify this change to setbacks. The maximum setback of 6 metres could jeopardise the established character of many streets within the City
PO 3.2	Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce a streetscape character.			Supported
DTS/DPF 3.2	Buildings no closer than 900mm to the secondary street boundary.			Supported
PO 3.3	Buildings set back from side boundaries to provide: a. separation between dwellings in a way that complements the established character of the locality; and			Supported
	b. access to natural light and ventilation for neighbours.			Supported
DTS/DPF 3.3	Other than walls located on a side boundary, buildings are set back from side boundaries:			Supported
	(a) at least 900mm where the wall is up to 3m measured from the top of the footings;			Supported
	(b) other than for a wall facing a southern side boundary, at least 900mm plus 1/3 of the wall height above 3m measured from the top of the footings; and			Supported
	(c) at least 1900mm plus 1/3 of the wall height above 3m measured from the top of the footings for walls facing a southern side boundary.			Supported
PO 3.4	Buildings are setback from rear boundaries to provide:			Supported
	a. access to natural light and ventilation for neighbours; and			Supported
	b. open space recreational opportunities; and			Supported
	c. space for landscaping and vegetation.			Supported
DTS/DPF 3.4	Buildings are set back from the rear boundary at least: a. 3m for the ground floor level; and b. 5m for first floor building level.			Supported
PO 3.5	Boundary walls are limited in height and length to manage impacts on adjoining properties.			Supported
DTS/DPF 3.5	For buildings that do not have a common wall, any wall sited on a side boundary: (a) does not exceed 3m in height from the top of the footings; (b) does not exceed 8m in length; (c) when combined with other walls on the boundary, does not exceed 45% of the length of the boundary; and (d) is setback at least 3 metres from any existing or proposed boundary walls.			Supported
PO 5.1	Site Dimensions and Land Division Allotments created for residential purposes that are of suitable size and dimension and are compatible with the housing pattern consistent to the locality.			Supported

Number	Description	Transition category	Where has it been included?	Comments
DTS/DPF 5.1	Development, except on Catalyst Sites, accords with the following: a) site areas (or allotment areas in the case of land division) not less than: i. the minimum allotment size specified in the Minimum Allotment Size Technical and Numeric Variation Overlay; or			Supported
	ii. the average site area of the adjoining allotments where the Minimum Allotment Size Technical and Numeric Variation Overlay does not apply; and	?		Supported
	b) site frontages not less than: a. the minimum specified in the Minimum Allotment Frontage Technical and Numeric Variation Overlay; or	?	The TNV Overlay is not showing this data	Supported
	the frontage of the adjoining sites where the Minimum Allotment Frontage Technical and Numeric Variation Overlay does not apply.	?	The TNV Overlay is not showing this data	Supported
PO 6.1	Movement and Access Car parking located and designed to provide for the maximum utilisation of land and minimise the visual impact on the residential amenity and character of the zone.			Supported however unclear about what is to be gained from the terminology "maximum utilisation of land." It is recommended the PO be revised as follows: <i>Car parking located and designed to minimise the visual impact on the residential amenity and character of the zone.</i>
DTS/DPF 6.2	Access to parking and service areas that: (b) remove the visual impact of existing car parking, access and egresses to the area by siting any new car parking away from street frontages.			Supported
PO 7.1	Concept Plans Development is compatible with the outcomes sought by any relevant Concept Plan contained within the Concept Plans Technical and Numeric Variation Overlay.			Reinstate Concept Plans for South Adelaide have not been included in the Code. Neds TO BE SPATIALLY RECOGNISED
FOR CITY LIVING ZONE - Errors or Feedback				
Table 1 - Accepted Development Classification			Error/Comments	Recommendation
	Carports	CRITERIA	MISSING classification criteria that should be applied to carports to enable them to be Accepted Development	Within the Classification Criteria include the following criteria: "The access point does not involve the removal or relocation of mature street trees, street furniture or utility infrastructure services."

Policy area(s)	PA29 East Terrace Policy Area											
General comments	Within the City Living Zone - This area is quite different to the other areas within the residential areas of South Adelaide as are the policies. It is recommended that this Policy Area have its own subzone to reflect the pattern of development expected for the area											
Number	Description	Transition category	Where has it been included?	Comments								
Desired Character												
	The Policy Area will be developed in a manner which reinforces the existing character of grand buildings set on attractive, landscaped grounds in a Park Lands edge setting. Development will continue to provide a high level of amenity and with a mix of residential dwelling types and styles, including the continued development of residential flat buildings which are complementary in design to the many State and Local Heritage Places. Wakefield Street will continue to provide a mix of uses, either wholly residential or non-residential land uses on lower levels with residential at upper levels.	5		<p>Landscape setting around the buildings along East Terrace and the eastern corner of South Terrace are important and are a well valued unique character of the area. This setting should be retained and the first half of the policy should be included as DOs within a new 'East Terrace Subzone' as follows:</p> <p><i>DO1</i> Grand buildings set on attractive, landscaped grounds in a Park Lands edge setting.</p> <p><i>DO2</i> Development will continue to provide a high level of amenity with a mix of residential dwelling types and styles, that are complementary in design to the many State and Local Heritage Places.</p>								
	Development will continue to provide for substantial, high quality landscaped open spaces in order to frame East Terrace and provide a distinct edge to the City. Private properties will be defined by formal fencing which allows for views to, and an appreciation of, the distinctive garden setting and spacious character at-ground underpinned by the rhythm of front and side boundary setbacks.	5		<p>High quality landscaped open spaces are important to the character of this area. Retain policy and include as POs under a 'Built Form and Character' heading within a new East Terrace SubZone within the City Living Zone as follows.</p> <p><i>PO 2.1</i> "Development will continue to provide for substantial, high quality landscaped open spaces in order to frame East Terrace and provide a distinct edge to the City."</p> <p><i>PO 2.2</i> "Private properties will be defined by formal fencing which allows for views to, and an appreciation of, the distinctive garden setting and spacious character at-ground underpinned by the rhythm of front and side boundary setbacks."</p>								
	Buildings will be massed vertically or comprise narrow frontage elements with generous front and side setbacks with building façades that are well articulated with finer details that contribute positively to the public realm and residential character.	5		<p>Aspects of this policy particularly the role of a buildings contribution and its affect on the public realm is important to the look and feel of the City It is recommended the following PO is included within the Capital City Zone under the heading 'Built Form and Character':</p> <p><i>PO</i> "Buildings designed to ensure tall façades are well articulated with finer details that contribute positively to the public realm, including modelled façades, canopies, fenestration and balconies."</p>								
	Vehicle movement will be primarily for local and visitor traffic, although East Terrace will continue to act as a strong pedestrian and cyclist link between the City and the Park Lands.	4										
	Catalyst sites provide opportunities for integrated developments on large sites that respond to the development's context and provide opportunities to increase the residential population of the City. Such sites will generally be developed for housing, but may include a small amount of non-residential development such as cafés, restaurants or small-scale shops that create a greater level of activity fronting the Park Lands. Non-residential developments that provide additional community services and facilities may also occur.	2	City Living Zone PO 4.2									

Number	Description	Transition category	Where has it been included?	Comments
	Developments on catalyst sites will exemplify quality contemporary design that is generally of greater intensity than their surroundings. However, development will be designed to carefully manage the interface with any residential development, particularly with regard to massing; proportions; overshadowing; and traffic and noise-related impacts.	4	City Living Zone PO 4.3	
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
Principles of Development Control				
Land Use				
1	The Policy Area will primarily comprise detached and semi-detached dwellings and residential flat buildings.	2	City Living Zone DTS.DPF 1.1	DTS/DPF 1.1 within the City Living Zone be revised to include after the word Dwelling " <i>(detached and semi-detached)</i> "
2	Non-residential development should only be developed fronting Wakefield Street or on a catalyst site, where non-residential development is appropriate at the ground and or first floor and residential development above.	5		It is recommended that this policy be included as the following PO under the heading "Land Use and Intensity" within a new East Terrace SubZone within the City Living Zone as follows to ensure that non-residential uses are located in appropriate locations with minimal impact quality or amenity of living conditions. <i>PO 1.1</i> <i>"Non-residential development is only envisaged on sites fronting Wakefield Street or on a catalyst site, where non-residential development is appropriate at the ground and or first floor and residential development above."</i>
Form and Character				
3	Development should be consistent with the Desired Character for the Policy Area.	4		
Design and Appearance				
4	Development should maintain the traditional siting patterns of large buildings set in generous landscaped grounds with substantial front and side boundary set-backs.	5		High quality landscaped open spaces are important to the character of this area. Retain policy and include within a new Subzone 'East Terrace Subzone' and include the following PO under the heading Built Form and Character: <i>Development to continue the traditional siting patterns of large buildings set in generous, high quality landscaped grounds with substantial front and side boundary set-backs to frame East Terrace and provide a distinct edge to the City.</i>
5	A minimum of 30 percent landscaped open space should be provided on the site of any development.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
6	Landscaped open space should be arranged and planted in a manner which will: (a) provide for the retention of existing significant vegetation; (b) reasonably maintain and enhance the established predominant amenity and landscape character of the locality; and (c) respect the amenity of abutting residential allotments to the rear.	5		High quality landscaped open spaces are important to the character of this area. Retain policy and include within a new Subzone 'East Terrace Subzone' and include the following PO under the heading Built Form and Character: <i>DTS/DPF 2.1</i> <i>"Landscaped open space arranged and planted in a manner that: (a) provides for the retention of existing significant vegetation; (b) reasonably maintains and enhances the established predominant amenity and landscape character of the locality; and (c) respects the amenity of abutting residential allotments to the rear."</i>
7	Except on sites greater than 1500 square metres in area (which may include one or more allotment), plot ratio should not exceed 1.8.	2		Requires further review. Plot ratio has been removed and replaced with minimum lot sizes, total roofed area, site frontages and setbacks.
8	Development should not exceed 4 storeys or 14 metres building height except where one of the following applies: (a) on sites greater than 1500 square metres in area (which may include one or more allotment); or (b) within the areas indicates on policy area Maps Adel/51, 57 and 63 where development should not exceed 2 storeys.	5	Consistent with TNV Overlay for maximum building height for part of the areas (4 storeys/15 metres).	ERROR - TNV Building Height Overlay for south eastern corner of the PA should be 2 storeys. The TNV Overlay sets it at 15 metres and 3-4 storeys. This is inconsistent with the current height requirements.
9	Except within the areas indicated on Policy Area Maps Adel/51, 57 and 63, development should have a minimum building height of 3 storeys to provide optimal height and floor space yields that activate and frame the Park Lands.	2	Consistent with TNV Overlay for minimum building height (3 storeys).	

Number	Description	Transition category	Where has it been included?	Comments
Catalyst Sites				
10	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should include medium to high scale residential development.	1	City Living Zone PO 4.1	
11	Small-scale shops, cafés or restaurants on catalyst sites should generally be integrated with residential development and located at ground or first floor level to increase street level activity facing the Park Lands.	1	City Living Zone PO 4.2	
12	Catalyst sites should be developed to manage the interface with residential development with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	2	City Living Zone PO 4.3	
13	Parts of a development on a catalyst site that exceed the prescribed maximum building height that applies to non-catalyst sites in the Policy Area, and that are directly adjacent to the Adelaide Historic (Conservation) Zone boundary should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	2	City Living Zone PO 4.4 and DTS/DPF 4.4	
14	The scale of development on a catalyst site should respond to its context, particularly the nature of the adjacent land uses and the interface treatments required to address impacts on sensitive uses.	2	Similarly addressed within City Living Zone PO 4.4 and DTS/DPF 4.4	
15	Where there is an apparent conflict between the catalyst site principles and Zone, Policy Area or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	4		No longer required
NEW CONTENT IN THE CODE (insert below)				
DO2	Redevelopment of existing non-residential sites into integrated mixed use developments to increase the residential population and vibrancy of the area.			Supported
PO 1.1	Redevelopment of existing non-residential sites into integrated mixed use developments to increase the residential population and vibrancy of the area.			Supported
DTS/DPF 1.1	Residential development in the form of detached, semi-detached or row dwellings, or alterations and additions to existing buildings			Supported
PO 2.2	Buildings setback from primary street boundaries to complement the existing streetscape character.			Supported
DTS/DPF 2.2	Building setbacks at least (whichever is the lesser):			Supported
	a. 3m; or			Needs review
	b. the average of existing buildings on the adjoining sites that face the same street			Supported
PO 2.3	Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce a streetscape character.			Supported
DTS/DPF 2.3	Buildings no closer than 600mm to the secondary street boundary.			Supported
PO 2.4	Buildings are setback from rear boundaries to provide:			Supported
	(a) access to natural light and ventilation for neighbours;			Supported
	(b) open space recreational opportunities; and			Supported
	(c) space for landscaping and vegetation.			Supported
DTS/DPF 2.4	Buildings are set back from the rear boundary at least:			Supported
	(a) 3m for the ground and first floor level; and			Supported
	(b) an additional 3m for each level above the first floor level.			Supported
PO 2.5	Boundary walls are limited in height and length to mitigate adverse impacts on the amenity of adjoining land users, include through an unreasonable loss of natural sunlight and ventilation.			Supported
DTS/DPF 2.5	For buildings that do not have a common wall, any wall sited on a side boundary:			Supported
	a. does not exceed 3m in height from the top of the footings;			Supported
	b. does not exceed 8m in length;			Supported
	c. when combined with other walls on the boundary, does not exceed 45% of the length of the boundary; and			Supported
	d. is setback at least 3 metres from any existing or proposed boundary walls.			Supported

General comments				
This Policy Area is proposed to be located within the Capital City Zone - City Frame Subzone - all new policies now apply				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The Policy Area will primarily contain medium scale residential development that takes advantage of the frontage to the Park Lands. The lower levels of buildings may be developed for non-residential uses where they are of a type, nature and size that make a positive contribution to residential amenity and the street level interface with the Park Lands.	2	Capital City Zone - City Frame SubZone DO 1, PO 1.1	Revise City Frame SubZone DO 1 and PO 1.1 to ensure the non-residential uses apply at ground level particularly as the SubZone primarily accommodates residential development.
	The location and scale of buildings will achieve high quality urban design outcomes with the highest built form along South Terrace facing the Park Lands. Development at the entrance to the City grid on the corner of Hutt Street will create landmark buildings.	2	Capital City Zone PO 3.3.	
	Buildings will have minimal or no setback and provide tall walls when viewed from the main road frontage to achieve a consistent built form façade and a sense of address to the Park Lands. Landscaping and small variations in front setback will assist in softening the continuous edge of new built form and provide a higher amenity streetscape and pedestrian environment which is shaded by street trees and other mature vegetation.	2	Capital City Zone PO 3.3 and City Frame SubZone PO 2.1	
	Buildings will have a strong horizontal emphasis with clearly defined and segmented vertical elements. At street level, the use of solid materials will be appropriately balanced with glazed areas to provide visual interest and activity. Building façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades, canopies, fenestration and balconies that make use of light and shade. An interesting pedestrian environment and human scale at ground level which integrates well with the Park Lands will be created.	5		Articulation of buildings and horizontal and vertical elements are an important part of the underlying character of the City and it important it is included within the Code. On this basis it is recommended the following POs are included within Capital City Zone under the heading 'Built Form and Character': <i>PO</i> <i>"Buildings designed to have a strong horizontal emphasis with clearly defined and segmented vertical elements. At street level, the use of solid materials will be appropriately balanced with glazed areas to provide visual interest and activity."</i> <i>PO</i> <i>"Buildings designed to ensure tall façades are well articulated with finer details that contribute positively to the public realm, including modelled façades, canopies, fenestration and balconies."</i>
	Catalyst sites provide opportunities for integrated developments on large sites that respond to the development's context and provide opportunities to increase the residential population of the City. Such sites will generally be developed for housing, but may include a small amount of non-residential development such as cafés, restaurants or small-scale shops that create a greater level of activity fronting the Park Lands. Non-residential developments that provide community services and facilities may also occur.	4		
	Developments on catalyst sites will exemplify quality and contemporary design that is generally of greater intensity than their surroundings. However, development will be designed to carefully manage the interface with any residential development, particularly with regard to massing; proportions; overshadowing; and traffic and noise-related impacts.	4		
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
Principles of Development Control				
Land Use				
1	The Policy Area will primarily comprise residential development or mixed use buildings where non-residential development is appropriate at the ground and or first floor.	2	Capital City Zone - City Frame SubZone DO 1, PO 1.1	
Form and Character				
2	Development should be consistent with the Desired Character for the Policy Area.	4		

Number	Description	Transition category	Where has it been included?	Comments
Design and Appearance				
3	Except where located on a site greater than 1500 square metres (which may include one or more allotment, building height should not exceed 22 metres	2	Consistent with TNV Overlay for maximum building height of 6 storeys	
4	Development should have a minimum building height of 4 storeys, except where adjacent to a heritage place, to provide optimal height and floor space yields that activate and frame the Park Lands.	2	Consistent with TNV Overlay for minimum building height	
5	Buildings (excluding verandahs, porticos and the like) should be built to the primary road frontage with landscaping to maintain and enhance the pattern of development in the locality.	2	Capital City Zone PO 3.3	
6	The ground floors of buildings should have a minimum floor to ceiling height of 3.5 metres to allow for adaptation to a range of land uses including shops, cafés, restaurants or offices without the need for significant alterations to the building.	5		This policy is important as it allows for the future adaption of a range of uses within ground floor tenancies and should be included within the Code. Should be included in the Design in Urban Areas
7	Buildings on sites with a frontage greater than 10 metres should be articulated through variations in forms, materials, openings and colours.	5		Include within the General Development Policies - Design in Urban Areas (All Development). Articulation through building form, materials opening and colours are important elements of good building design and should be applied to all development.
8	Development on land directly abutting the South East Policy Area should avoid tall, sheer walls at the interface by ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper levels.	4		This policy is no longer relevant as the area of land no longer abuts the south east policy area boundaries.
Catalyst Sites				
9	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium to high scale residential.	4		
10	Small-scale shops, cafés or restaurants on catalyst sites should generally be integrated with residential development and located at ground or first floor level to increase street level activity facing the Park Lands.	4		
11	Catalyst sites should be developed to manage the interface with the residential development with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	4		
12	Parts of a development on a catalyst site that exceed the prescribed maximum building height that applies to non-catalyst sites should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	4		
13	The scale of development on a catalyst site should respond to its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	4		
14	Where there is an apparent conflict between the catalyst site principles and Zone, Policy Area or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	4		No longer required

Number	Description	Transition category	Where has it been included?	Comments	
Desired Character					
	The Policy Area will be enhanced as an attractive residential locality with a high level of residential amenity. The Policy Area contains a large number of State and Local Heritage Places.	4			
	Development will comprise residential buildings that are consistent with the existing palette of primarily street-fronting dwellings (detached, semi-detached and row dwellings) and the prevailing building scale and character. Residential flat buildings may be appropriate where they are developed on larger sites to provide an increase in dwelling density. Further development of land for non-residential uses is limited to land and buildings in non-residential use.	2	City Living Zone DTS/DPF 1.4 and Medium-High Intensity SubZone DO 2, DTS/DPF 1.1		
	Development will be designed to complement the existing streetscape comprising the more spacious settings on the main east-west streets, Carrington, Halifax and Gilles Streets, and the intimacy of the smaller streets and laneways.	5		<p>Include the following PO within the City Living Zone under the heading 'Built Form and Character' as the policy provides important guiding principles for new development in these specific areas:</p> <p>PO <i>"Within the south-east of the City, development designed to complement the existing streetscape comprising the more spacious settings on the main east-west streets, Carrington, Halifax and Gilles Streets, and the intimacy of the smaller streets and laneways."</i></p>	
	Dwellings will be varied but will be consistent with the prevailing rhythm of buildings and spaces. Infill development will take particular reference from the siting, form and key elements of existing buildings to ensure a highly attractive and compatible streetscape. The predominant building scale and heritage places in the immediate locality will be referenced by new buildings/additions, particularly as they address public streets. Opportunities may be available for carefully composed and sited second and third building levels which are suitably removed from street view, and with limited impact on the low scale setting of such places.	5		<p>Include the following PO within the City Living Zone under the heading 'Built Form and Character' as the policy provides important guiding principles for new development in the these well established areas:</p> <p>PO 2. <i>"Residential development in the form of dwellings designed to maintain a low scale at street level to complement the existing character established by the original, historic dwelling stock. Dwellings will be varied but will be consistent with the prevailing rhythm of buildings and space."</i></p> <p>PO 2. <i>"Infill development will take particular reference from the siting, form and key elements of existing buildings to ensure a highly attractive and compatible streetscape."</i></p> <p>PO 2. <i>"The predominant building scale and heritage places in the immediate locality will be referenced by new buildings/additions, particularly if they address public streets."</i></p>	

Number	Description	Transition category	Where has it been included?	Comments
	The high quality of landscaping, of both public and private space will provide a high level of pedestrian and cyclist amenity. Vehicle movement will be primarily for local and visitor traffic, with an increasing facilitation of pedestrian and cycling links to both the inner City and Park Lands.	2	Addressed sufficiently in General Development Policies Design in Urban Areas PO 3.1	
	The key development area indicated on Figure SE/1 afford significant opportunities for integrated developments which increase the residential population within the Policy Area. The area will generally be developed for housing, but may include a small amount of non-residential uses sited to support street activation and providing residential amenity is maintained. Development will exemplify quality contemporary design that is generally of greater intensity than its surrounding and will comprise a number of individual buildings in a spacious, well landscaped setting designed to carefully manage the interface with adjacent residential development, particularly with regard to massing, proportions, overshadowing, traffic and noise. High regard is to be had to reflecting each key development areas context, in particular with regard to state and local heritage places, subdivision pattern and movement.	5		ERROR - Figure SE/1 is missing from the Code as well as the relevant guiding policies. Figure SE/1 and the guiding principle should be included within the City Living Zone Medium -High Intensity SubZone under a new heading 'Key Development Area' to guide the form of development appropriate for this site: PO 3. <i>Development within the key development area indicated on Figure SE/1 to:</i> <i>(a)provide a wide variety of housing types and tenures;</i> <i>(b)site small scale non-residential development to assist activating public realm spaces, in particular Regent Street North;</i> <i>(c)maintain the existing role in provision of affordable housing;</i> <i>(d)occur in a coordinated manner with innovative design responses that complement the areas context and contribute positively to the public realm;</i> <i>(e)be developed in a manner consistent with the built form, street character and interface relationships indicated on Figure SE/1;</i> <i>(f)comprise a variety of building forms in a number of separate buildings of between 2 and 8 storeys separated by landscaped open space areas for residents and visitors;</i> <i>(g)locate taller building forms in proximity to the Capital City Zone to provide an orderly transition from the generally lower scale residential context;</i> <i>(h)incorporate appropriately sited, orientated, scaled and proportioned buildings to street frontages that reflect the historic pattern and rhythm of development in the locality; and</i> <i>(i)contribute to a residential appearance to the street frontages by design treatments and by minimal and shared vehicle access points</i>
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4		
Principles of Development Control				
Land Use				
1	The Policy Area will primarily comprise detached and semi-detached dwellings and residential flat buildings.	2	City Living Zone - Medium-High Intensity SubZone DTS/DPF 1.1	
Form and Character				
2	Development should be consistent with the Desired Character for the Policy Area.	4		
Design and Appearance				
3	The plot ratio should not exceed 0.8, except for the key development area indicated on Figure SE/1.	4		Requires further review. Plot ratio has been removed and replaced with minimum lot sizes, total roofed area, site frontages and setbacks.
4	The dwelling unit factor of development is 120 square metres, except for the key development area indicated on Figure SE/1.	2	Consistent with minimum lot size TNV Overlay.	
5	A minimum of 20 percent landscaped open space should be provided on the site of any development.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
6	Development should not exceed 3 storeys or 11 metres building height except where one of the following applies: (a) within the key development area indicated on Figure SE/1; or (b) within the areas indicated on Policy Area Maps Adel/56, 57 and 63 where development should not exceed 2 storeys.	4	Consistent with Height TNV Overlays	

Number	Description	Transition category	Where has it been included?	Comments
7	<p>Development to a maximum building height of 3 storeys or 11 metres is appropriate where:</p> <p>(a) the scale relationship of the proposed building with neighbouring buildings is satisfactory; and</p> <p>(b) the amenity impacts on adjacent sites acceptable.</p> <p>except where located on land within the areas indicated on Policy Area Maps Adel/56, 57 and 63, where development up to 2 storeys is appropriate.</p>	2	Consistent with Height TNV Overlays	<p>Include parts a, b and c of the policy as a PO within the City Living Zone under the heading 'Built Form and Character':</p> <p>PO</p> <p>"Development up to the maximum building is appropriate where:</p> <p>a.the scale of the proposed building is compatible with scale and siting of adjacent buildings; and</p> <p>b.there is no adverse impacts on the established residential amenity ."</p>
Key Development Area				
8	<p>Development on the key development area indicated on Figure SE/1 should:</p> <p>(a) comprise a wide variety of housing types and tenures. Number	Description	Transition category	Where has it been included?	Comments								
Desired Character												
	The Policy Area will provide for medium scale residential development supported by a range of uses that provide valued local services, including shops, offices and consulting rooms, as well as community service and education, that maintain the area's residential amenity. Development will provide an increase in dwelling density in order to increase residential population.	2	City Living Zone DO 1, PO 1.2, PO 2.1									
	Non-residential land uses such as shops, consulting rooms and offices are appropriate at the ground level of buildings. Education facilities will continue to be established. The Policy Area will gradually provide a shift in dwelling form from detached and semi-detached dwellings to moderately scaled residential flat buildings providing relief in scale from the adjoining Capital City, Main Street and City Frame Zones. Wholesale redevelopment of non-residential sites should be for ground level non-residential and with residential above.	2	City Living Zone PO 1.2									
	Buildings will have a strong horizontal emphasis with clearly defined and segmented vertical elements. Façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades, verandahs, fenestration and balconies that make use of light and shade.	5		These important design elements are an important to the character of the City Living Zone and it is important they are include within the Code. Include the following PO within the City Living Zone under the heading 'Built Form and Character': <i>"Buildings designed to have a strong horizontal emphasis with clearly defined and segmented vertical elements. Façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades, verandahs, fenestration and balconies."</i>								
	At street level, visual interest and activity will be enhanced through considered design approaches, including buildings that contribute towards activating the street, by the careful treatment of driveways and access areas, and by avoiding blank walls at street level.	2	General Development Policies PO 1.2, PO 1.3, PO 6.6									
	The high quality of landscaping, of both public and private space, will provide the Policy Area a high level of amenity. Vehicle movement within the Policy Area will be primarily for local and visitor traffic, with an increasing promotion of pedestrian and cycling links through the City.	2	Addressed sufficiently in General Development Policies Design in Urban Areas PO 3.1									
Policy Objectives												
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4										
Principles of Development Control												
Land Use												
1	The Policy Area will primarily comprise residential development or mixed use buildings where non-residential development is appropriate at the ground or first floor.	2	City Living Zone - Medium-High Intensity SubZone DO 1, DO 2	Revise PO 1.2 to include non-residential uses to be located at ground level and worded as follows: <i>"Non-residential development at ground level provides a range of services to the local community primarily in the form of small scale commercial uses, community services:"</i>								
Form and Character												
2	Development should be consistent with the Desired Character for the Policy Area.	4										
Design and Appearance												
3	The plot ratio of development should not exceed 2.0.	4		Requires further review. Plot ratio has been removed and replaced with minimum lot sizes, total roofed area, site frontages and setbacks.								
4	Development should not exceed 4 storeys or 14 metres building height except where located within the areas indicated on Policy Area Maps Adel/56, 57, 61 and 63. Development within these areas should not exceed 2 storeys.	2	Consistent with maximum Height TNV Overlay									
5	Buildings should have a minimum building height of 2 storeys except where located within the areas indicated on Policy Area Maps Adel/56, 57, 61 and 63.	2	Consistent with minimum Height TNV Overlay

Desired Character														
	The Policy Area will continue as a primarily low scale residential environment with an eclectic mix of non-residential land uses interspersed that maintain the area's residential amenity. Development will comprise residential buildings that reinforce the current character, including detached, semi-detached and row dwellings. Residential flat buildings may be appropriate where they are developed on larger sites to provide an increase in dwelling density. Sturt Street will continue as the focus for non-residential activities which serve the needs of the local community.	2	City Living Zone - Medium-High Intensity SubZone DO 1, DTS/DPF 1.1											
	The Policy Area contains a number of land parcels occupied by non-residential activities that provide the opportunity for integrated developments and opportunities to increase the residential population with contextual and exemplary contemporary design.	2	City Living Zone - Medium-High Intensity SubZone DO 2											
	Residential development in the form of dwellings will maintain a low scale at street level and will be designed to complement the existing character established by the original, historic dwelling stock. Dwellings will be varied but will be consistent with the prevailing rhythm of buildings and space. Infill development will take particular reference from the siting, form and key elements of existing buildings to ensure a highly attractive and compatible streetscape.	5		<p>Include the following PO within the City Living Zone under the heading "Built Form and Character" as the policy provides important guiding principles for new development in the these well established areas.</p> <p>PO <i>"Residential development in the form of dwellings designed to maintain a low scale at street level to complement the existing character established by the original, historic dwelling stock. Dwellings will be varied but will be consistent with the prevailing rhythm of buildings and space."</i></p> <p>PO <i>"Infill development will take particular reference from the siting, form and key elements of existing buildings to ensure a highly attractive and compatible streetscape."</i></p>										
	Improved landscaping of both public and private space will enhance amenity for residents and visitors, and also pedestrians and cyclists. Vehicle movement within the Policy Area will be primarily for local and visitor traffic, with an increasing promotion of pedestrian and cycling links to both the inner City and Park Lands.	2	Addressed sufficiently in General Development Policies Design in Urban Areas PO 3.1											
Policy Objectives														
1	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.	4												
Principles of Development Control														
Land Use														
1	Development should comprise primarily residential buildings.	2	City Living Zone PO 2.1	<p>Revise City Living Zone PO 2.1 to read as follows to better reflect the primary use of the Zone for Residential purposes:</p> <p>PO <i>"Primarily residential development accommodating a range of housing choices."</i></p>										
2	Non-residential development should only be developed where it has a frontage to Sturt Street or is on the site of an existing lawfully established non-residential land use	3	City Living Zone DTS/DPF 1.4	Sturt St is now listed in City Main Streets Zone										
Form and Character														
3	Development should be consistent with the Desired Character for the Policy Area.	4												
Design and Appearance														

Number	Description	Transition category	Where has it been included?	Comments
4	Development to a maximum building height of 3 storeys or 11 metres is appropriate where: (a) the scale relationship of the proposed building with neighbouring buildings is satisfactory; and (b) the amenity impacts on adjacent sites acceptable except where located on land within the areas indicated on Policy Area Maps Adel/56, 57 and 63, where development up to 2 storeys is appropriate.	3	Consistent with maximum building height TNV of 3 storeys	The relationship of new buildings with adjoining buildings is important and should be considered within the Code. On this basis, include parts a and b as a PO within the City Living Zone under the heading 'Built Form and Character' as follows: PO 2. "Development up to the maximum building is appropriate where: a.the scale of the proposed building is compatible with scale and siting of adjacent buildings; and b.there is no adverse impacts on the established residential amenity."
5	The plot ratio should not exceed 1.0.	4		Requires further review. Plot ratio has been removed and replaced with minimum lot sizes, total roofed area, site frontages and setbacks.
6	The dwelling unit factor of development is 100 square metres.	2	Consistent with Minimum TNV lot size is 100m2	
7	A minimum of 20 percent landscaped open space should be provided on the site of any development.	5		FURTHER INVESTIGATION REQUIRED. There are no policies within the code that address the importance of Landscaped Open Space. This is important to the character and setting of many buildings within North Adelaide and South Adelaide.
NEW CONTENT IN THE CODE (insert below)				
	Medium-High Intensity SubZone			
PO 1.1	Development of medium density accommodation types for living, including dwellings and supported accommodation.			Supported
PO 2.2	Buildings setback from primary street boundaries to complement the existing streetscape character.			Supported
DTS/DPF 2.2	Building setbacks at least (whichever is the lesser): a. 3m; or b. the average of existing buildings on the adjoining sites that face the same street			Needs review - delete Supported
PO 2.3	Buildings set back from secondary street boundaries to maintain a pattern of separation between building walls and public thoroughfares and reinforce a streetscape character.			Supported
DTS/DPF 2.3	Buildings no closer than 600mm to the secondary street boundary.			Supported
PO 2.4	Buildings are setback from rear boundaries to provide: (a) access to natural light and ventilation for neighbours; (b) open space recreational opportunities; and (c) space for landscaping and vegetation.			Supported Supported Supported Supported
DTS/DPF 2.4	Buildings are set back from the rear boundary at least: (a) 3m for the ground and first floor level; and (b) an additional 3m for each level above the first floor level.			Supported Supported
PO 2.5	Boundary walls are limited in height and length to mitigate adverse impacts on the amenity of adjoining land users, include through an unreasonable loss of natural sunlight and ventilation.			Supported
DTS/DPF 2.5	For buildings that do not have a common wall, any wall sited on a side boundary: a. does not exceed 3m in height from the top of the footings; b. does not exceed 8m in length; c. when combined with other walls on the boundary, does not exceed 45% of the length of the boundary; and d. is setback at least 3 metres from any existing or proposed boundary walls.			Supported Supported Supported

Zone Capital City Zone	1 - Included in the Code and retains same policy intent		15%	
	2 - Wording changed but policy intent remains (OK)		45%	
Policy area(s)	3 - Included in the Code but policy intent changed (NOT OK)		4%	
	4 - Not included in the Code but OK to remove		9%	
	5 - Not included in the Code and should be reinstated		27%	
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	This Zone is the economic and cultural focus of the State and includes a range of employment, community, educational, tourism and entertainment facilities. It is anticipated that an increased population within the Zone will complement the range of opportunities and experiences provided in the City and increase its vibrancy.	2	Capital City DO 1	
	The Zone will be active during the day, evening and late night. Licensed entertainment premises, nightclubs and bars are encouraged throughout the Zone, particularly where they are located above or below ground floor level to maintain street level activation during the day and evening.	2	Capital City Zone PO 2.2	
	High-scale development is envisaged in the Zone with high street walls that frame the streets. However an interesting pedestrian environment and human scale will be created at ground floor levels through careful building articulation and fenestration, frequent openings in building façades, verandahs, balconies, awnings and other features that provide weather protection.	2	Capital City Zone DO 2 and PO 2.1	Human scale element plays an important part of the diversity, character and comfort of the pedestrian environment. This element is missing in the Code policy. It would be beneficial if the Code was more prescriptive on what is expected in built form terms in the City. it would be beneficial to be more prescriptive. It is recommended the following DTS/DFP 2.1 be included under the heading 'Activation' in the Capital City Zone: <i>"Buildings designed to provide ground floor activation and incorporate a comfortable pedestrian environment and human scale through: (a) building articulation and fenestration; (b) frequent window openings; (c) land uses that spill out onto the footpath; and/or (d) verandahs, balconies awnings and other features that provide weather protection."</i>

Number	Description	Transition category	Where has it been included?	Comments
	In important pedestrian areas, buildings will be set back at higher levels above the street wall to provide views to the sky and create a comfortable pedestrian environment. In narrow streets and laneways the street setback above the street wall may be relatively shallow or non-existent to create intimate spaces through a greater sense of enclosure. In the Central Business Policy Areas, upper level setbacks are not envisaged.	5	Capital City Zone PO 2.1, PO 3.9	Podiums are an important element of the City and contribute to the comfort of the pedestrian environment. This has not been addressed by the code. It is recommended the following DTS/DDF 3.4 be included under the heading 'Built Form and Character' in the Capital City Zone: "Buildings be designed to include a podium/street wall height and upper level setback (in the order of 3-6 metres) that: (a)relates to the scale and context of adjoining built form; (b)provides a human scale at street level; (c)creates a well-defined and continuity of frontage; (d)gives emphasis and definition to street corners to clearly define the street grid; (e)contributes to the interest, vitality and security of the pedestrian environment; (f)maintains a sense of openness to the sky for pedestrians and brings daylight to the street; and (g)achieves pedestrian comfort by minimising micro climatic impacts (particularly shade/shelter, wind tunnelling and downward drafts); other than (h) or (i): (h)the areas identified in Concept Plan ## (land within Dev Plan Policy Area 13); (i)where a lesser (or zero) upper level setback and/or podium height is warranted to correspond with and complement the form of adjacent development, in which case alternative design solutions should be included to achieve a cohesive streetscape, provided parts (b) to (g) are still achieved.."
	Non-residential land uses at ground floor level that generate high levels of pedestrian activity such as shops, cafés and restaurants will occur throughout the Zone. Within the Central Business Policy Area, residential land uses at ground level are discouraged. At ground level, development will continue to provide visual interest after hours by being well lit and having no external shutters. Non-residential and / or residential land uses will face the street at the first floor level to contribute to street vibrancy.	2	Capital City Zone PO 2.1	
	New development will achieve high design quality by being:	1	Covered in Design in Urban Areas DO 1	
	(a) Contextual – so that it responds to its surroundings, recognises and carefully considers the adjacent built form, and positively contributes to the character of the immediate area.	1	Covered in Design in Urban Areas DO 1	
	(b) Durable – by being fit for purpose, adaptable and long lasting, and carefully considers the existing development around it.	1	Covered in Design in Urban Areas DO 1	
	(c) Inclusive – by integrating landscape design to optimize pedestrian and cyclist usability, privacy, and equitable access, and also promote the provision of quality spaces integrated with the public realm that can be used for access and recreation and help optimize security and safety both internally and into the public realm, for occupants and visitors alike.	1	Covered in Design in Urban Areas DO 1	
	(d) Sustainable – by integrating sustainable systems into new buildings and the surrounding landscape design to improve environmental performance and minimise energy consumption.	2	Covered in Design in Urban Areas DO 1	
	(e) Amenable – by providing natural light and ventilation to habitable spaces.	2	Intent include in 'sustainable' in Design in Urban Areas DO 1	
	Contemporary juxtapositions will provide new settings for heritage places. Innovative design is expected in areas of identified street character with an emphasis on contemporary architecture that responds to site context and broader streetscape, while supporting optimal site development. The addition of height, bulk and massing of new form should be given due consideration in the wider context of the proposed development.	5		Include the following PO under the heading 'Built Form and Character' within the Capital City Zone as follows: "Contemporary architecture that incorporate innovative design approaches and respond to the site context and broader streetscape such as height, bulk and massing, while supporting the optimal site development."

Number	Description	Transition category	Where has it been included?	Comments
	There will also be a rich display of art that is accessible to the public and contextually relevant.	5		Include the following PO under the heading 'Built Form and Character' within the Capital City Zone: <i>Development incorporating art that is accessible to the public and contextually relevant.</i>
	The distinctive grid pattern of Adelaide will be reinforced through the creation of a series of attractive boulevards as shown on Concept Plan Figures CC/1 and 2. These boulevards will provide a clear sense of arrival into the City and be characterised by buildings that are aligned to the street pattern, particularly at ground level.	2	Capital City Zone DO 2 and PO 3.4	
	Views to important civic landmarks, the Park Lands and the Adelaide Hills will be retained as an important part of the City's charm and character.	2	Capital City Zone PO 3.5	New Policy seeks to maximise views to Park lands and retain view corridors to the Hills. The PO could better address our Civic landmarks such as the the Adelaide Town Hall and Post Office as well as the Squares. Capital City Zone PO 3.5 should be revised to reflect these important elements of the City. Revise PO 3.5 under the heading 'Built Form and Character' within the Capital City Zone as follows: <i>Development along the City's boulevards (as identified in Capital City Zone Table 5.1) designed to maximise views to the Park Lands and civic landmarks and not clutter existing view corridors to the Adelaide Hills as when viewed from the public realm.</i>
	The City's boulevards, terraces and Squares will be developed as follows: (a) North Terrace will be reinforced as an important pedestrian promenade and cultural boulevard that provides an important northern edge to the City square mile.	5		North Terrace plays as an important role as the cultural boulevard of the City and this should be reflected within the Code. It is recommended the following policy be included within the land use policies of the Capital City Zone: <i>"Development that reinforces North Terrace as an important pedestrian promenade and cultural boulevard."</i>
	(b) King William Street will be enhanced as the City's principal north-south boulevard and will be reinforced as the City's commercial spine.	5		King William Street is the commercial spine of the City and policy within the zone should reflect this. It is recommended the following policy be included within the land use policies of the Capital City Zone: <i>"Development that reinforces King William Street as the commercial spine of the City."</i>
	(c) Grote Street-Wakefield Street will be enhanced as the City's principal east-west boulevard and will be developed to provide a strong frame that presents a sense of enclosure to the street.	2	Capital City Zone PO 3.5	
	(d) East Terrace will be characterised by buildings that maximise views through to the Park Lands and provide a distinct City edge.	2	Capital City Zone PO 3.5	
	(e) West Terrace will be reinforced as the western 'gateway' to the City centre and will form an imposing frontage to the western City edge. Buildings will be constructed to the front and side boundaries, and designed to maximise views through to the Park Lands. Corner sites at the junctions of West Terrace and the major east-west streets will be developed as strongly defined visual gateways to the City. This will provide an imposing frontage to the western edge of the City, which comprises a mixture of commercial, showroom and residential development.	2	Capital City Zone PO 3.4	
	(f) Pulteney and Morphett streets are key north-south boulevards. A sense of activation and enclosure of these streets will be enhanced through mixed use development with a strong built form edge. Pulteney Street will include residential, office and institutional uses, and retail activities. These boulevards will become important tree-lined commercial corridors.	5		The role of Pulteney and Morphett Street should be included within the Capital City Zone and it is recommended the policy be included within the land use policies of the Capital City Zone: <i>"Development along Pulteney Street and Morphett Street that includes mixed use commercial land uses."</i>
	(g) Currie, Grenfell, Franklin and Flinders streets, as wider east-west boulevards provide important entry points to the City. Currie and Grenfell streets will become a key focus for pedestrians, cycling and public transport. These streets also provide long views to the hills as their closing vistas and these view corridors should remain uncluttered.	2	Capital City Zone PO 3.5	
	(h) Victoria, Hindmarsh and Light Squares will have a continuous edge of medium to high-scale development that frames the Squares and increases ground level activity.	2	Capital City Zone PO 3.7 and PO 3.8	

Number	Description	Transition category	Where has it been included?	Comments
	The Zone also includes a number of Main Street areas, encompassing Rundle Mall, Rundle Street, Hindley Street and Gouger Street, which are envisaged to have a wide range of retail, commercial and community uses that generate high levels of activity. These areas will have an intimately scaled built form with narrow and frequent building frontages. These areas are shown on Concept Plan Figures CC/1 and 2.	2	Home City Main Street Zone DO 1 and PO 2.2	
	Development fronting North Terrace, King William Street, Wakefield Street, Grote Street, the Squares, and in the Main Street Policy Area, will reflect their importance though highly contextual design that reflects and responds to their setting and role.	4		
	Minor streets and laneways will have a sense of enclosure (a tall street wall compared to street width) and an intimate, welcoming and comfortable pedestrian environment with buildings sited and composed in a way that responds to the buildings' context. There will be a strong emphasis on ground level activation through frequent window openings, land uses that spill out onto the footpath, and control of wind impacts.	2	Capital City Zone PO 3.9	Although the policy intent is the same, the new policy is non-descriptive and doesn't outline how an intimate, active, inclusive and walkable public realm can be achieved. It is recommended the following DTS/DFP 2.1 be included under the heading 'Activation' in the Capital City Zone: <i>"Buildings designed to provide ground floor activation and incorporate a comfortable pedestrian environment and human scale through: (a) building articulation and fenestration; (b) frequent window openings; (c) land uses that spill out onto the footpath; and/or (d) verandahs, balconies awnings and other features that provide weather protection."</i>
Policy Objectives				
OBJ 1	The principal focus for the economic, social and political life of metropolitan Adelaide and the State.	1	Capital City Zone DO 1	
OBJ 2	A vibrant mix of commercial, retail, professional services, hospitality, entertainment, educational facilities, and medium and high density living.	1	Capital City Zone DO 1 and PO 1.1	
OBJ 3	Design and management of City living to ensure the compatibility of residential amenity with the essential commercial and leisure functions of the Zone.	5		Land use co-existence is an important part of the diversity and success of the City. It is important that this is reinforced through policy. It is recommended that the following wording be included within the Land Use PO's within the Capital City Zone. <i>"Residential development designed to ensure the residential amenity is protected and has regard to the commercial and leisure functions of the Zone."</i>
OBJ 4	City streets that provide a comfortable pedestrian environment.	2	Capital City Zone PO 6.1	
OBJ 5	Innovative design approaches and contemporary architecture that respond to a building's context.	5		Include the following PO under the heading 'Built Form and Character' within the Capital City Zone. <i>"Contemporary architecture that incorporate innovative design approaches and respond to the site context and broader streetscape such as height, bulk and massing, while supporting the optimal site development."</i>
OBJ 6	Buildings that reinforce the gridded layout of Adelaide's streets and respond to the underlying built-form framework of the City.	2	Capital City Zone DO 2	
OBJ 7	Large sites developed to their full potential while ensuring a cohesive scale of development and responding to a building's context.	2	Capital City Zone PO 4.3	
OBJ 8	Development that contributes to the Desired Character of the Zone.	4		
Principles of Development Control				
Land Use				

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combinations thereof, are envisaged: Affordable housing Aged persons accommodation Community centre Consulting room Convention centre Dwelling Educational establishment Emergency services facility Hospital Hotel Indoor recreation centre Licensed entertainment premises Library Motel Office Pre-school Personal service establishment Place of worship Serviced apartment Restaurant Residential flat building Student accommodation Shop or group of shops Tourist accommodation	2	Capital City Zone PO 1.1 and DTS/DPF 1.1	Retain as is. Now includes childcare centre. No longer includes specific reference to Affordable housing, Aged persons accommodation, Community centre, Emergency services facility, Indoor recreation centre, Motel, Pre-school Personal service establishment, Place of worship, Serviced apartment. Aged persons housing replaced by supported accommodation. The intent of the policy is retained by the DO 1 and PO 1.1 and DTS/DPF 1.1
2	Land uses that are typically closed during the day should be designed to maximise daytime and evening activation at street level and be compatible with surrounding land uses, in particular residential development.	1	Capital City Zone PO 2.2	
3	Low impact industries should be located outside the Central Business Policy Area and have minimal off-site impacts with respect to noise, air, water and waste emissions, traffic generation and movement.	2	General Development Policies - Interface Between Land Uses DO 1, PO 1.2, PO 4.1, PO 4.2, PO 5.1 General Development Policies - Transport and Planning PO1.2, PO 1.3, PO 1.4, PO 3.1 and PO 3.3	
4	Development listed as non-complying is generally inappropriate.	4		
Form and Character				
5	Development should be consistent with the Desired Character for the Zone.	4		
Design and Appearance				
6	Development should be of a high standard of architectural design and finish which is appropriate to the City's role and image as the capital of the State.	2	Partly covered in Capital City Zone DO 2	

Number	Description	Transition category	Where has it been included?	Comments
7	<p>Buildings should achieve a high standard of external appearance by:</p> <p>(a)the use of high quality materials and finishes. This may be achieved through the use of materials such as masonry, natural stone, prefinished materials that minimise staining, discolouring or deterioration, and avoiding painted surfaces particularly above ground level;</p> <p>(b)providing a high degree of visual interest through articulation, avoiding any large blank facades, and incorporating design features within blank walls on side boundaries which have the potential to be built out;</p> <p>(c)ensuring lower levels are well integrated with, and contribute to a vibrant public realm; and</p>	3		<p>Applies only to development greater than 4 building levels in General Development Policies Design in Urban Areas PO 9.4 and 9.5. This policy should apply to 'Design in Urban Areas - All Development' General Development Policies. It is recommended that the following PO and DTS be included within Design in Urban Area [All Development - External Appearance]:</p> <p>PO <i>Buildings that enhance public environment and achieve a high standard of external appearance by:</i> <i>(a)the use of high quality materials and finishes.</i> <i>(b)providing a high degree of visual interest through articulation,</i> <i>(c)ensuring lower levels are well integrated with, and contribute to a vibrant public realm</i></p> <p>DTS <i>Buildings designed to:</i> <i>(a)utilise a combination (or thereof) of the following external materials and finishes:</i> <i>i.masonry;</i> <i>ii.natural stone;</i> <i>iii.prefinished materials that minimise staining, discolouring or deterioration, and avoiding painted surfaces particularly above ground level;</i> <i>(b)avoid large blank facades, and incorporating design features within blank walls on side boundaries which have the potential to be built out.</i></p>
7	<p>(d)ensuring any ground and first floor level car parking elements are sleeved by residential or non-residential land uses (such as shops, offices and consulting rooms) to ensure an activated street frontage.</p>	3		<p>Applies only to development greater than 4 building levels in General Development Policies Design in Urban Areas PO 13.1 and DTS/DPF 13.1. This policy should apply to generally to all development within the Capital City Zone.It is recommended the following PO by included within the Capital City Zone under the heading 'Activation':</p> <p>PO <i>"Ground and first floor level car parking elements are sleeved by residential or non-residential land uses (such as shops, offices and consulting rooms) to ensure an activated street frontage."</i></p>
8	<p>Buildings should present an attractive pedestrian-oriented frontage that adds interest and vitality to City streets and laneways.</p>	5		<p>There is an emphasis on land use activation however the design of a building particularly at ground level is equally important. Reference should also be made to buildings being designed to provide attractive pedestrian orientated frontages. It is recommended the following DTS/DPF 2.1 be included under the heading 'Activation' in the Capital City Zone:</p> <p>DTS/DPF 2.1 <i>"Buildings designed to provide ground floor activation and incorporate a comfortable pedestrian environment and human scale through:</i> <i>(a)building articulation and fenestration;</i> <i>(b)frequent window openings;</i> <i>(c)land uses that spill out onto the footpath; and/or</i> <i>(d)verandahs, balconies awnings and other features that provide weather protection."</i></p>
9	<p>The finished ground floor level of buildings should be at grade and/or level with the footpath to provide direct pedestrian access and street level activation.</p>	5		<p>This has not been included or addressed within the Capital City Zone or General Development Policies. It is important the ground floor level of buildings are at grade or level with the footpath to ensure accessibility into buildings. It is recommended the policy is included within Capital City Zone under the heading 'Movement' or included within the The Transport, Access and Parking GDP under the heading 'Access for People with Disabilities'.</p>

Number	Description	Transition category	Where has it been included?	Comments
10	Providing footpath widths and street tree growth permit, development should contribute to the comfort of pedestrians through the incorporation of verandahs, balconies, awnings and/or canopies that provide pedestrian shelter.	2	General Development Policies - Design in Urban Areas PO 1.2	
11	Buildings should be positioned regularly on the site and built to the street frontage, except where a setback is required to accommodate outdoor dining or provide a contextual response to a heritage place.	5		Buildings built to the street edge is an important and embedded built form characteristic of the Capital City Zone and it is important policy is in place to support this. Include the policy to read as follows: "Buildings aligned and built to the street frontage (excluding verandahs, porticos and the like), except where a setback is required to provide a contextual response to a heritage place."
12	Buildings should be designed to include a podium/street wall height and upper level setback (in the order of 3-6 metres) that: (a)relates to the scale and context of adjoining built form; (b)provides a human scale at street level; (c)creates a well-defined and continuity of frontage; (d)gives emphasis and definition to street corners to clearly define the street grid; (e)contributes to the interest, vitality and security of the pedestrian environment; (f)maintains a sense of openness to the sky for pedestrians and brings daylight to the street; and (g)achieves pedestrian comfort by minimising micro climatic impacts (particularly shade/shelter, wind tunnelling and downward drafts); other than (h) or (i): (h)in the Central Business Policy Area; (i)where a lesser (or zero) upper level setback and/or podium height is warranted to correspond with and complement the form of adjacent development, in which case alternative design solutions should be included to achieve a cohesive streetscape, provided parts (b) to (g) are still achieved.	3	Capital City Zone PO 3.2	The role of podiums in certain areas of the City are important to ensure appropriate built form outcomes in terms of scale and context to adjoining buildings, the provision of human scale continuity of built form and minimising micro-climatic impacts such as wind and sunlight. On this basis the policy must be reinstated as a DTS for PO 3.2 within the Capital City Zone as follows: Buildings be designed to include a podium/street wall height and upper level setback (in the order of 3-6 metres) that: (a)relates to the scale and context of adjoining built form; (b)provides a human scale at street level; (c)creates a well-defined and continuity of frontage; (d)gives emphasis and definition to street corners to clearly define the street grid; (e)contributes to the interest, vitality and security of the pedestrian environment; (f)maintains a sense of openness to the sky for pedestrians and brings daylight to the street; and (g)achieves pedestrian comfort by minimising micro climatic impacts (particularly shade/shelter, wind tunnelling and downward drafts); other than (h) or (i): (h)the areas identified in Concept Plan ## (land within Dev Plan Policy Area 13); (i)where a lesser (or zero) upper level setback and/or podium height is warranted to correspond with and complement the form of adjacent development, in which case alternative design solutions should be included to achieve a cohesive streetscape, provided parts (b) to (g) are still achieved.
13	Buildings north of Rundle Mall, Rundle Street, Hindley Street and Gouger Street should have a built form that incorporates slender tower elements, spaces between buildings or other design techniques that enable sunlight access to the southern footpath.	2	Capital City Zone PO 3.10 and DTS/DPF 3.10	
14	Buildings, advertisements, site landscaping, street planting and paving should have an integrated, coordinated appearance and should enhance the urban environment.	4		
15	Building façades should be strongly modelled, incorporate a vertical composition which reflects the proportions of existing frontages, and ensure that architectural detailing is consistent around corners and along minor streets and laneways.	5		Façade composition and articulation is a long established important part of the character of the City. Include the following PO under the heading 'Built Form and Character' within the Capital City Zone. Strongly modelled building façades that incorporate a vertical composition that reflect the proportions of existing frontages, and ensure that architectural detailing is consistent around corners and along minor streets and laneways.
16	Development that exceeds the maximum building height shown in Concept Plan Figures CC/1 and 2, and meets the relevant quantitative provisions should demonstrate a significantly higher standard of design outcome in relation to qualitative policy provisions including site configuration that acknowledges and responds to the desired future character of an area but that also responds to adjacent conditions (including any special qualities of a locality), pedestrian and cyclist amenity, activation, sustainability, and public realm and streetscape contribution.	2	Capital City Zone PO 4.2 and Height TNV Overlay	

Number	Description	Transition category	Where has it been included?	Comments
17	The Squares (Victoria, Hindmarsh and Light) Outdoor eating and drinking facilities associated with cafés and restaurants are appropriate ground floor uses and should contribute to the vitality of the Squares and create a focus for leisure.	1	Capital City Zone PO 3.8	Now also includes Whitmore Square which reflects what is already happening around the Square.
18	Buildings fronting the Squares should: (a) provide a comfortable pedestrian and recreation environment by enabling direct sunlight to a minimum of 75 percent of the landscaped part of each Square at the September equinox; and (b) reinforce the enclosure of the Squares with a continuous built-form with no upper level set-backs.	1	Capital City Zone PO 3.6 and DTS/DPF 3.6	
		1	Capital City Zone PO 3.7	
19	The Terraces (North, East and West) Development along the terraces should contribute to a continuous built form to frame the City edge and activate the Park Lands.	1	Capital City Zone PO 3.3	
20	Development along North Terrace should reinforce the predominant scale and 'City wall' character of the Terrace frontage.	4		
Building Height				
21	Development should not exceed the maximum building height shown in Concept Plan Figures CC/1 and 2 unless; (a) it is demonstrated that the development complements the context (having regard to adjacent built form and desired character of the locality) and anticipated city form in Concept Plan Figures CC/1 and 2, and (b) only if: (i) at least two of the following features are provided: (1) the development provides an orderly transition up to an existing taller building or prescribed maximum building height in an adjoining Zone or Policy Area; (2) the development incorporates the retention, conservation and reuse of a building which is a listed heritage place; (3) high quality universally accessible open space that is directly connected to, and well integrated with, public realm areas of the street; (4) universally accessible, safe and secure pedestrian linkages that connect through the development site as part of the cities pedestrian network on Map Adel/1 (Overlay 2A); (5) on site car parking does not exceed a rate of 0.5 spaces per dwelling, car parking areas are adaptable to future uses or all car parking is provided underground; (6) residential, office or any other actively occupied use is located on all of the street facing side of the building, with any above ground car parking located behind; (7) a range of dwelling types that includes at least 10% of 3+ bedroom apartments; (8) more than 15 per cent of dwellings as affordable housing. (ii) plus all of the following sustainable design measures are provided: (1) a rooftop garden covering a majority of the available roof area supported by services that ensure ongoing maintenance; (2) a green roof, or green walls / façades supported by services that ensure ongoing maintenance; (3) innovative external shading devices on all of the western side of a street facing façade; and (4) higher amenity through provision of private open space in excess of minimum requirements, access to natural light and ventilation to all habitable spaces and common circulation areas.	2	PO 4.2 and DTS/DPF 4.2	Reflects the current Ministerial DPA
22	Development should have optimal height and floor space yields to take advantage of the premium City location and should have a building height no less than half the maximum shown on Concept Plan Figures CC/1 and 2, or 28 metres in the Central Business Policy Area, except where one or more of the following applies: (a) a lower building height is necessary to achieve compliance with the Commonwealth Airports (Protection of Airspace) Regulations; (b) the site is adjacent to the City Living Zone or the Adelaide Historic (Conservation) Zone and a lesser building height is required to manage the interface with low-rise residential development; (c) the site is adjacent to a heritage place, or includes a heritage place; (d) the development includes the construction of a building in the same, or substantially the same, position as a building which was demolished, as a result of significant damage caused by an event, within the previous 3 years where the new building has the same, or substantially the same, layout and external appearance as the previous building.	2	Capital City Zone PO 4.3 and DTS 4.3	
Interface				

Number	Description	Transition category	Where has it been included?	Comments
23	Development should manage the interface with the City Living Zone or the Adelaide Historic (Conservation) Zone in relation to building height, overshadowing, massing, building proportions and traffic impacts and should avoid land uses, or intensity of land uses, that adversely affect residential amenity.	2	Capital City Zone PO 5.1	
24	Development on all sites on the southern side of Gouger Street - Angus Street and adjacent to a northern boundary of the City Living Zone or the Adelaide Historic (Conservation) Zone should not exceed 22 metres in building height unless the Council Wide overshadowing Principles of Development Control are met.	5	Capital City Zone 3.10 and DTS/DPF 3.10	ERROR - The TVN Overlay for this area is incorrect.
25	Parts of a development that exceed the prescribed maximum building height shown on Concept Plan Figures CC/1 and 2 that are directly adjacent to the City Living, Main Street (Adelaide) or the Adelaide Historic (Conservation) Zone boundaries should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	5	Capital City Zone PO 5.2 and DTS/DPF 5.2	ERROR - Refers to height specified in DTS/DPF 5.1 however no height is specified in this DTS. Is this an error?
Movement				
26	Pedestrian movement should be based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links.	5		Needs to be reinstated. The pedestrian network is vital to the movement system within the City and it is important they are retained as they all link together. To remove one link on a site has a domino affect on other established links. The following PO should be included within the Capital City Zone, City Riverbank Zone, City Living Zone, City Main Street Zone: <i>"Pedestrian movement based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links."</i>
27	Development should provide pedestrian linkages for safe and convenient movement with arcades and lanes clearly designated and well-lit to encourage pedestrian access to public transport and areas of activity. Blank surfaces, shutters and solid infills lining such routes should be avoided.	2	Broadly addressed in Capital City Zone (Movement) PO 6.1	
28	Development should ensure existing through-site and on-street pedestrian links are maintained and new pedestrian links are developed in accordance with Map Adel/1 (Overlay 2A).	5		Needs to be included. The pedestrian network is vital to the movement system within the City and it is important they are retained as they all link together. To remove one link on a site has a domino affect on other established links. The following PO should be included within the Capital City Zone, City Riverbank Zone, City Living Zone, City Main Street Zone: <i>"Pedestrian movement based on a network of pedestrian malls, arcades and lanes, linking the surrounding Zones and giving a variety of north-south and east-west links."</i>
29	Car parking should be provided in accordance with Table Adel/7.	5		No reference has been made to the car parking requirements. Include Car parking Table
30	Multi-level car parks should locate vehicle access points away from the primary street frontage wherever possible and should not be located: (a) within any of the following areas: (i) the Core Pedestrian Area identified in Map Adel/1 (Overlays 2, 2A and 3) (ii) on frontages to North Terrace, East Terrace, Rundle Street, Hindley Street, Currie Street, Waymouth Street (east of Light Square), Victoria Square or King William Street; (b) where they conflict with existing or projected pedestrian movement and/or activity; (c) where they would cause undue disruption to traffic flow; and (d) where it involves creating new crossovers in North Terrace, Rundle Street, Hindley Street, Currie Street and Waymouth Street (east of Light Square), Grenfell Street and Pirie Street (west of Pulteney Street), Victoria Square, Light Square, Hindmarsh Square, Gawler Place and King William Street or access across primary City access and secondary City access roads identified in Map Adel/1 (Overlay 1).	5		Reference to Core Pedestrian Area has been removed. Vehicle access points should also not be located along Pirie Street (to the west of Pulteney), Light Square, Hindmarsh Square or Grenfell Street. Policy should be revised to reflect this.
31	Multi-level, non-ancillary car parks are inappropriate within the Core Pedestrian Area as shown on Map Adel/1 (Overlays 2, 2A and 3).	5		NEEDS FURTHER REVIEW. Reference to Core Pedestrian Area has been removed. The purpose of the policy was to ensure that the pedestrian network was given priority and ease over the dominance of the use of vehicles.

Number	Description	Transition category	Where has it been included?	Comments
32	Vehicle parking spaces and multi-level vehicle parking structures within buildings should: (a)enhance active street frontages by providing land uses such as commercial, retail or other non-car park uses along ground floor street frontages; (b)complement the surrounding built form in terms of height, massing and scale; and (c)incorporate façade treatments along major street frontages that are sufficiently enclosed and detailed to complement neighbouring buildings consistent with the Desired Character of the locality.	2	Transport, Access and Parking PO 13.1, DTS/DPF 13.1, PO 13.2 and DTS 13.2	Vehicle access points should also not be located along Pirie Street (to the west of Pulteney), Light Square, Hindmarsh Square, Grenfell Street. Revise DTS/DPF 7.2 to include <i>Pirie Street (to the west of Pulteney), Light Square, Hindmarsh Square, Grenfell Street.</i>
Advertising				
33	Other than signs along Hindley Street, advertisements should use simple graphics and be restrained in their size, design and colour.	2	Capital City Zone PO 8.1	
34	In minor streets and laneways, a greater diversity of type, shape, numbers and design of advertisements are appropriate provided they are of a small-scale and located to present a consistent message band to pedestrians.	2	General Development Policy - Advertisements DO 1	
35	There should be an overall consistency achieved by advertisements along individual street frontages.	2	General Development Policy - Advertisements PO 1.1	
36	In Chesser Street, French Street and Coromandel Place advertisements should be small and preferably square and should not be located more than 3.7 metres above natural ground level or an abutting footpath or street. However, advertisements in these streets may be considered above 3.7 metres at locations near the intersections with major streets.	2	Capital City Zone PO 8.1	
37	Advertisements on the Currie Street frontages between Topham Mall and Gilbert Place and its north-south prolongation should be of a size, shape and location complementary to the desired townscape character, with particular regard to the following: (a)On the southern side of Currie Street, advertisements should be fixed with their underside at a common height, except where the architectural detailing of building façades precludes it. At this 'canopy' level advertisements should be of a uniform size and fixed without the support of guy wires. Where architectural detailing permits, advertisements may mark the major entrances to buildings along the southern side of Currie Street with vertical projecting advertisements 1.5 metres high by 1.2 metres wide at, or marginally above, the existing canopy level. Painted wall or window signs should be restrained. (b)On the northern side of Currie Street, advertisements should be of a uniform fixing height and consistent dimensions to match those prevailing in the area.	2	General Development Policy - Advertisements DO 1, PO 1.1, DTS 1.1	General Development Policy - Advertisements DO 1
Procedural Matters				
Complying Development				
38	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following forms of development are assigned as complying: (a)Other than in relation to a State heritage place, Local heritage place (City Significance), or Local heritage place, work undertaken within a building which does not involve a change of use or affect the external appearance of the building; (b)Temporary depot for Council for a period of no more than 3 months where it can be demonstrated that appropriate provision has been made for: (i)dust control; (ii)screening, including landscaping; (iii)containment of litter and water; and (iv)securing of the site. (c)Change in the use of land from a non-residential use to an office, shop or consulting room (excluding any retail showroom, adult entertainment premises, adult products and services premises or licensed premises).	5		B should be included within the Accepted Development Table or at least included in the DTS table for the Capital City Zone
Non-Complying				

Number	Description	Transition category	Where has it been included?	Comments
39	<p>The following kinds of development are non-complying: A change in use of land to any of the following: Amusement machine centre Advertisements involving any of the following: (a)third party advertising except on Hindley Street, Rundle Mall or on allotments at the intersection of Rundle Street and Pulteney Street, or temporary advertisements on construction sites; (b)advertisements located at roof level where the sky or another building forms the background when viewed from ground level; (c)advertisements in the area bounded by West Terrace, Grote Street, Franklin Street and Gray Street; (d)animation of advertisements along and adjacent to the North Terrace, King William Street and Victoria Square frontages. Total demolition of a State Heritage Place (as identified in Table Adel/1). Vehicle parking except: (a)where it is ancillary to an approved or existing use; (b)it is a multi-level car park located outside the Core Pedestrian Area as indicated on Map Adel/1 (Overlay 2, 2A and 3); or (c)it is within an existing building located outside the Core Pedestrian Area as indicated on Map Adel/1 (Overlay 2, 2A and 3).</p>			
Public Notification				
40	<p>Categories of public notification are prescribed in Schedule 9 of the Development Regulations 2008. In addition, the following forms of development, or any combination of (except where the development is non-complying), are assigned: (a)Category 1, public notification not required: All forms of development other than where it is assigned Category 2. (b)Category 2, public notification required. Third parties do not have any appeal rights. Any development where the site of the development is adjacent land to land in the City Living Zone or Adelaide Historic (Conservation) Zone and it exceeds 22 metres in building height.</p>	4		
NEW CONTENT IN THE CODE (insert below)				
PO 3.1	Capital City Zone A contextual design response that manages differences in scale and building proportions to maintain a cohesive streetscape and frame city streets.			Supported

Desired Character			
	The Central Business Policy Area is the pre-eminent economic, governance and cultural hub for the State. This role will be supported by educational, hospitality and entertainment activities and increased opportunities for residential, student and tourist accommodation.	2	Capital City Zone DO 1
	Buildings will exhibit innovative design approaches and produce stylish and evocative architecture, including tall and imposing buildings that provide a hard edge to the street and are of the highest design quality. A wide variety of design outcomes of enduring appeal are expected. Complementary and harmonious buildings in individual streets will create localised character and legible differences between streets, founded on the existing activity focus, building and settlement patterns, and street widths.	4	Include within the Capital City Zone Built Form and Character. This has been recommended within a number of different policies within the Capital City Zone.
Policy Objectives			
1	A concentration of employment, governance, entertainment and residential land uses that form the heart of the City and central place for the State.	2	Capital City Zone DO 1
2	Development of a high standard of design and external appearance that integrates with the public realm.	2	Capital City Zone DO 2
3	Development that contributes to the Desired Character of the Policy Area.	4	
Principles of Development Control			
Land Use			
1	Development should contribute to the area's role and function as the State's premier business district, having the highest concentration of office, retail, mixed business, cultural, public administration, hospitality, educational and tourist activities.	2	Capital City Zone DO 1
2	Buildings should be of a height that ensures airport operational safety is not adversely affected.	2	Airport Building Heights (Regulated) Overlay PO 1.1 and DTS/DPF 1.1
3	To enable an activated street level, residential development or similar should be located above ground floor level.	2	Capital City Zone PO 2.1

Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	Main streets provide an important shopping, hospitality and gathering place that are a vital part of the City's identity and image.	2	City Main Street Zone DO 1	
	An atmosphere of bustle, excitement and activity is created by a vibrant mixture of land uses that support a strong retail base and a continuing program of on-street arts and activities. Activities including retail, restaurants, cafés and licensed premises will contribute to the day and evening economies and be managed to ensure a positive contribution to the character of the precinct. Licensed entertainment premises, nightclubs and bars will contribute to activation during the day and evening by generally being small in scale and located above or below ground floor level.	2	Gouger and Grote Street SubZone PO 1.2	
	Development will abut the footpath and continue the established width, rhythm and pattern of façades to generally support a variety of tenancies with narrow frontages. Horizontally massed buildings will be broken into smaller façade elements. Above street level fenestration, balconies, parapets, architectural detailing and ornamentation will be used to contribute to a rich visual texture.	2	City Main Street Zone PO 2.2, DTS/DPF 2.3	
	Upper levels of buildings are to be recessed behind a moderately scaled building street wall to maintain a sense of spaciousness and openness to the sky. At lower levels, the continuity of verandahs and other canopies or pedestrian shelters, and ceiling heights is desired to maintain a sheltered, high amenity pedestrian environment at a human scale.	3	City Main Streets Zone PO 2.1	The incorporation of verandahs to provide pedestrian shelter and sense of openness to the sky and the treatment of upper floor levels are important components of achieving human scale at street level within the City's Main Streets. It is recommended that PO 2.1 (b) under the heading 'Built Form and Character' within City Main Street Zone be revised and an additional part to the policy be included as follows: <i>b. designed to include a podium/street wall and upper level setback that responds to local context, including the scale and context of adjacent built form, to ensure a cohesive and consistent streetscape and maintain a sense of spaciousness and openness to the sky to achieve human scale at street level positively contribute to a sense of enclosure;</i> <i>c. designed to incorporate verandahs, canopies or pedestrian shelters to contribute towards a continuity of verandahs and maintain a sheltered, high amenity pedestrian environment;</i>
	Rundle Street is a main street characterised by generally consistent built form and heritage buildings that will be retained and where possible enhanced. Development will be consistent with the intimate scale and intricate and diverse architectural features of Rundle Street and will reinforce the existing two and three storey built scale. This is derived from buildings of relatively uniform height and scale, mostly built in the nineteenth and early twentieth century. Any new development will be carefully designed so that the historic main street character is retained and where possible enhanced.	2	Rundle Street Sub-Zone PO 2.34 (a) (b)	
	Existing façades typically encompass a high proportion of solid to void and a high level of architectural detail (including ornamentation and fenestration and through a combination of materials).	2	Rundle Street Sub-Zone DO 2	
	Horizontal emphasis is achieved through the integration of masonry coursing, parapets, verandahs and balconies. The subtle variety of scale and massing adds texture to the streetscape.	2	Rundle Street Sub-Zone DO 2	
	Upper levels of buildings will be well-articulated and utilise architectural expressions that result in reduced visual mass, and carefully scaled to avoid overbearing height. Podium elements will be utilised to reconcile the scale relationships between the taller elements and the existing streetscape.	2	Rundle Street Sub-Zone PO 2.3 (a), PO 2.4 (e) and DO 2	
	Rundle Mall will be enhanced as Adelaide's premier retail area incorporating a wide range of specialty and larger scale shops and mixed business. Rundle Mall will continue to grow and evolve in response to the needs of the retail and business sectors and the wider public, and enhance its iconic reputation as an important public space for a range of retail, business and cultural purposes. A range of activities will contribute to the day and evening economies.	2	Rundle Mall Sub-Zone PO 1.1	

Number	Description	Transition category	Where has it been included?	Comments
	Rundle Mall offers a strong and unique character and sense of place, established by a pedestrian space framed by a long enclosure of visual interest and vitality which is reached with a sense of arrival from King William Street and Pulteney Street and the adjoining minor streets, arcades and laneways.	2	Rundle Mall Sub-Zone DO 2	
	Hindley Street (east of Morphett Street) will be the City's focus for late night entertainment and will be carefully designed and managed to integrate effectively with day time and evening land use activities.	2	Hindley Street Sub-Zone DO 1 (a) and PO 1.1	
	Hindley Street (west of Morphett Street) will comprise a range of mixed business, educational, cultural, hospitality and retail activities. Activities, including licensed premises, will contribute to the day and evening economies.	2	Hindley Street Sub-Zone DO 1 (b) and PO 1.3	
	The refurbishment of nineteenth century buildings in Hindley Street will be complemented by sensitive new development and will provide a colourful and cohesive character and intimate, human scale.	2	Hindley Street Sub-Zone DO 2 and PO 2.3	
	Gouger Street will be characterised by a mix of retail, restaurant, commercial and mixed business uses, including professional services, wholesaling and community activities. Activities including restaurants, cafés and licensed premises will contribute to the vibrancy of the street during the day and evening.	2	Gouger and Grote Street Sub-Zone DO 1(a)	
	Gouger and Grote streets will continue to develop as a colourful and active restaurant and shopping precinct which complements the liveliness of the Central Market and supports the retail, community, cultural and legal functions in this part of the City. 'Chinatown' around Moonta Street will be reinforced, and opportunities for new precincts, such as in minor streets and lanes, established.	2	Gouger and Grote Street SubZone PO 1.1 and PO 1.3	
Policy Objectives				
1	Rundle Street enhanced as an important shopping, leisure and gathering place for metropolitan Adelaide.	2	City Main Street Zone DO 1 and PO 1.1	
2	Rundle Mall enhanced as the State's premier shopping destination around an attractive public space.	2	Rundle Street Sub-Zone DO 1	
3	Hindley Street (east of Morphett Street) as the pre-eminent evening and late night entertainment hub for metropolitan Adelaide, with complementary shopping, hospitality and mixed business together with high density living.	2	Hindley Street Sub-Zone DO 1(a) and PO 1.2	
4	Hindley Street (west of Morphett Street) reinforced as a main street with a mix of retail, educational, restaurant and business uses, together with high density living.	2	Hindley Street Sub-Zone DO 1(b)	
5	Gouger Street reinforced as a colourful, intimate and active restaurant and shopping street which complements the vibrancy of the Central Market and supports the retail, community and cultural functions of the area.	2	Gouger and Grote Street Sub-Zone DO 1(a) and PO 1.3	
6	Development that contributes to the Desired Character of the Policy Area.	4		
Principles of Development Control				
Land Use				
1	At ground level along any main street (including Rundle Mall) and in minor streets leading to them, development should provide active and vibrant frontages that contribute to continuous interest at street level.	2	Rundle Mall Sub-Zone DO 2	
2	Land uses that add to the vitality of the area and extend activities outside shop hours are envisaged, including restaurants; educational, community and cultural facilities; and visitor and residential accommodation.	2	City Main Street Zone PO 1.1	
3	To enable an activated street level, residential development or similar should be located above ground floor level.	2	City Main Street Zone DTS/DPF 1.4, PO 1.6, DTS 1.6	
4	Licensed entertainment premises, night clubs or bars should contribute to activation during the day and evening by generally being small in scale and located above or below ground floor level.	2	Gouger and Grote Street Sub-Zone PO 1.2	
Design and Appearance				
5	The ground level street frontage of buildings should be designed as activate street frontages, provide pedestrian interest, and maximise passive surveillance by: (a) providing at least 70 percent of the frontage as a non-residential use; and (b) 50 percent of the frontage as visually permeable, transparent or clear glazed and may include an entry/foyer or display window to a shop (including a café or restaurant).	2	City Main Street Zone - PO 2.3	
Form and Character				
6	Development should conserve, enhance and complement the colourful and visually rich and intimate character of the area.	2	City Main Street Zone PO 2.2	
7	Development should include a variety of architectural expression and finishes compatible with the many existing older buildings. Verandahs, balconies, awnings and parapets should be designed to complement those existing.	2	City Main Street Zone PO 2.2	
8	Development should strengthen the established character of narrow building frontage widths, vertical massing and above street level fenestrations, balconies, parapets, architectural detailing and ornamentation.	2	City Main Street Zone DO 2, PO 2.2	

Number	Description	Transition category	Where has it been included?	Comments
9	Buildings with frontage to Gouger Street, Hindley Street or Rundle Street, west of Frome Street, should be designed to: (a)reinforce the prevailing datum heights and parapet levels of the street through design elements that provide a clear distinction between levels above and below the prevailing datum line; and (b)include a maximum podium/street wall height in the order of 6 storeys, with an upper level setback, measured from the street wall in the order of 3 metres.	? West of frome a problem should be same throughout Rundle St	Gouger and Grote Street Sub-Zone PO 2.2 and DTS/DPF 2.1 Hindley Street Sub-Zone PO 2.1, DTS/DPF 2.1 and PO 2.1 Rundle Street Sub-Zone DTS/DPF 2.1	REQUIRES FURTHER REVIEW. Policy relating to building west of Frome should be the same applied to east of from. A podium height of 6 metres destroys the co-existence with existing heritage buildings and the prevailing historic character of Rundle St
10	Buildings with frontage to Rundle Mall should have a maximum podium/street wall height of 6 storeys with upper building levels set back from the street in the order of 3 metres.	2	Rundle Mall Sub-Zone DTS/DPF 2.1	
11	Buildings with frontage to Rundle Street, east of Frome Street should be designed to reinforce the prevailing datum heights and parapet levels of the street through: (a)a maximum podium/street wall height that is consistent with one of the adjacent buildings facing the street and does not exceed 13 metres; (b)an upper level setback, measured from the street wall, of at least 3 metres stepping up to a height of 6 storeys, then a further setback of at least 3 metres stepping up to the maximum overall height shown on Concept Plan Figures CC/1 and 2; and (c)design elements that create a clear distinction between the 13 metre and 22 metre datum lines.	2	Rundle Street Sub-Zone PO 2.2, PO 2.3 and DTS/DPF 2.3	
12	Development of both internal and external spaces on Rundle Street should maintain an environment which is intimately scaled, intricate and diverse.	2	Rundle Street Sub-Zone PO 2.4 (b)	
Movement				
13	Additional vehicle cross-overs to provide access should be avoided in Hindley Street, Bank Street and Leigh Street. Access for on-site servicing and deliveries should be from minor streets and private lanes wherever possible, rather than from Rundle Mall.	2	Rundle Mall SubZone PO 3.2	
14	Pedestrian movement should be based on a network of pedestrian malls, arcades and lanes, linking the surrounding areas and giving a variety of north to south routes to Rundle Mall and east to west links for people moving between buildings.	2	Rundle Mall Sub-Zone PO 3.1	
NEW CONTENT IN THE CODE (insert below)				
PO 1.2	Retail, office, entertainment and recreation related uses supplemented by other businesses that provide a range of goods and services to the city and the surrounding district.			Supported.
DTS/DPF 1.2	Shops, office or consulting rooms do not exceed 2,000m ² total gross leasable floor area in a single building.			Supported.
PO 1.3	Small-scale licensed entertainment premises, night clubs or bars and lands uses typically closed during the day designed to not to detract from the vitality of the area when closed.			Supported, however it is important these uses contribute to the daytime activation of the City and recommended the policy be revised as follows: <i>"Small scale licensed entertainment premises, night clubs or bars and land uses typically closed during the day designed to contribute to day and evening street activation."</i>
DTS/DPF 1.3	None are applicable.			Supported
PO 1.4	Dwellings developed in conjunction with non-residential uses to support business, entertainment and recreational activities that contribute to making the main street locality and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places.			Supported
DTS/DPF 1.4	Dwellings developed in conjunction with non-residential uses sited: a. at upper levels of buildings with non-residential uses located at ground level; or INCLUDED b. behind non-residential uses on the same allotment.			Supported
PO 1.5	Development of well-designed and diverse medium to high density accommodation options, including dwellings, supported accommodation, student accommodation, short term accommodation, either as part of a mixed use development or wholly residential development.			Supported
DTS/DPF 1.5	None are applicable.			Supported
PO 2.1	Buildings: a. designed to reinforce the street edge and grid pattern of the city streets; b. designed to include a podium/street wall and upper level setback that responds to local context, including the scale and context of adjacent built form, to ensure a cohesive and consistent streetscape and positively contribute to a sense of enclosure; c. with a rich visual design that has regard to above street level fenestration, balconies, parapets, architectural detailing and ornamentation.			Supported Supported Supported
PO 2.3	Buildings designed to create visual connection between the public realm and ground level interior, to ensure an active interface with the main street and maximise passive surveillance.			Supported

Number	Description	Transition category	Where has it been included?	Comments
DTS/DPF 2.3	The ground floor primary frontage of buildings provide at least 5 metres or 60% of the street frontage (whichever is greater) as an entry / foyer or display window to a shop or other community or commercial use that provides pedestrian interest and activation.			Supported
PO 2.5	Buildings are adaptable and flexible to accommodate a range of land uses.			Supported
DTS/DPF 2.5	The ground floor of buildings contain a minimum floor to ceiling height of 3.5m.			Supported
PO 2.6	Building heights where the height is commensurate with the scale of development along the main street			Supported
PO 2.7	Buildings sited on the primary street boundary to achieve a continuity of built form frontage to the main street, with the occasional section of building set back to create outdoor dining areas, visually interesting building entrances and intimate but vibrant spaces.			Supported, however setbacks to create outdoor dining is not characteristic to the historic character or layout of the City there is also the preference that building entrances are not setback unless they are original shop frontages. It is recommended the policy is reworded as follows: <i>"Buildings sited on the primary street boundary to achieve a continuity of built form frontage to the main street."</i>
DTS/DPF 2.7	Buildings with a 0m setback from the primary street boundary, with the exception of minor setbacks to accommodate outdoor dining areas.			Supported however setbacks to create outdoor dining is not characteristic to the historic character or layout of the City. It is recommended that the DTS be reworded as follows: <i>"Buildings with a 0m setback from the primary street boundary."</i>
PO 2.8	In secondary streets and laneways (off the main street) building setbacks above the street wall may be relatively shallow or non-existent to create intimate spaces through a greater sense of enclosure.			Supported
DTS/DPF 2.8	Buildings with a 0m setback from the secondary street boundary.			Supported
Access and Movement				
PO 4.1	Development does not result in additional crossovers on the main street, except where rationalising existing crossovers on consolidated sites and is designed to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form.			Supported in part. Driveway crossovers are not characteristic to the City's main Street. It is recommended the policy is revised as follows: <i>"Development does not result in additional crossovers on the main street to minimise conflicts with pedestrians and cyclists and minimise disruption to the continuity of built form."</i>
DTS/DPF 4.1	Vehicular access to be provided: (a) via side streets or rear lanes provided there is no negative impact on residential amenity within the zone and in adjacent zones; or (b) where it consolidates or replaces existing crossovers.			Supported
PO 4.2	Development is designed to ensure car parking is located avoid negative impacts on the main street rhythm and activation.			Support Supported
DTS/DPF 4.2	Vehicle parking garages located behind buildings away from the primary main street frontage.			Supported
CITY MAIN STREET ZONE - ASSESSMENT TABLES				
Table 1 - Accepted Development Classification			Error/Comments	Recommendation
	Temporary Storage of Council Equipment	NEW FUTURE Class of Development in Accepted Development Classification Criteria or DTS Table	MISSING - 'Temporary Storage of Council Equipment' that is necessary for Council to undertake works and upgrades.	INSERT 'Temporary Storage of Council Equipment' as a Class of Development and the following words as Accepted Development or DTS Classification Criteria: <i>1. Appropriate measures are incorporated for: (a) dust control; (b) appropriate screening including landscaping; (c) containment of litter and waste; and (d) appropriate securing of the site.</i>
Table 2 - Deemed to Satisfy Development Classification			Error/Comments	Recommendation

			5 - Not included in the Code and should be reinstated	
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	<p>The Zone will be enhanced as the focus for neighbourhood shopping, leisure, commercial activity and community facilities primarily to service the needs of the lower North Adelaide residential community.</p> <p>The mix of complementary land uses will extend activity into the evening to enhance the vibrancy and safety of the area and provide visual interest after hours, including by having no external shutters.</p> <p>Small licensed premises will occur in limited numbers where they are designed and sited to maintain day and evening activation at street level and minimise impacts on nearby residential development. Development should complement the attractive linear shopping centre and its visual character. Development should be in the form of buildings up to two storeys in height sited on or close to the street boundary complementing the intimate commercial townscape and pedestrian environment with higher elements set away from the street frontage and the adjacent North Adelaide Historic (Conservation) Zone. Development on corner sites should present a strong built form edge to the secondary street boundary. Development should continue the established identity of the street through incorporating vines, verandahs and pergolas where appropriate. A high degree of accessibility for local and through traffic, public transport and for cyclists should be maintained. The Zone should maintain a high level of pedestrian accessibility, safety and amenity with a high quality, consistent approach to landscaping, footpath treatments (such as kerb protuberances) attractive street furniture and public art. Further street tree planting enhancing pedestrian amenity and landscape character is desired. The impacts of development will be carefully managed to ensure the enhancement of amenity for residential development within the Zone and in adjacent Zones to ensure the achievement of a high quality residential living environment. Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate an increase in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of service and shopping facilities within the main street. Development on catalyst sites will exemplify quality and contemporary design that is generally greater in intensity than its surroundings. However, development will be designed to carefully manage the interface with sensitive uses in the North Adelaide Historic (Conservation) Zone, particularly with regard to massing; proportions; overshadowing; traffic and noise related impacts.</p>	<p style="background-color: #d9ead3;">2 - Wording changed but policy intent remains (OK)</p> <p style="background-color: #d9ead3;">3 - Included in the Code but policy intent changed (NOT OK)</p> <p style="background-color: #d9ead3;">5 - Not included in the Code and should be reinstated</p> <p style="background-color: #d9ead3;">2 - Wording changed but policy intent remains (OK)</p> <p style="background-color: #d9ead3;">4 - Not included in the Code but OK to remove</p> <p style="background-color: #d9ead3;">5 - Not included in the Code and should be reinstated</p> <p style="background-color: #d9ead3;">4 - Not included in the Code but OK to remove</p> <p style="background-color: #d9ead3;">4 - Not included in the Code but OK to remove</p> <p style="background-color: #d9ead3;">4 - Not included in the Code but OK to remove</p>	<p>Various places. Key policies include: DO1, DO2</p> <p>DTS 1.1</p> <p>Built form and Character</p> <p>PO4.1</p>	<p>City Mainstreet Zone - This is covered by the DO1.</p> <p style="color: red;">The external Shutters should be reinstated. Insert Policy.</p> <p>Licensed Entertainment premises and Licensed Premises are now DTS. Rather than on merit. Policy effect is the same. In that how do you control overconcentration? The Development Plan is unrealistic. However Council previously had reservations about Melbourne Street and small bars. Insert Policy into City Mainstreet Sub Zone. City Mainstreet Zone - DO 2 Covers this.</p> <p>Pedestrian and cycling emphasis removed. City Mainstreet Zone - Insert Policy in Access and Movement.</p> <p>Licensed Premises may have an adverse impact on the street. Reinstated previous policy.</p> <p>Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.</p> <p>Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.</p>
Policy Objectives				
1	A shopping and commercial main street supported by medium density residential development.	2 - Wording changed but policy intent remains (OK)	DO1, DO2	
2	Objective 2: A visually interesting streetscape with buildings having a high level of fenestration and detail, and balconies oriented towards the street.	2 - Wording changed but policy intent remains (OK)	DO1, DO2	
3	An intimate public realm with active frontages created by buildings designed with frequently repeated forms and narrow tenancy footprints.	5 - Not included in the Code and should be reinstated		The detail has been replaced with "traditional main street buildings". This wording should be amended in line with the previous policy. Rundle Street Policy could be used.
4	Objective 4: An interesting and varied skyline as viewed from the street and afar, provided by modulation in roof forms and/or the use of parapets.	5 - Not included in the Code and should be reinstated	DTS 2.1	The DTS doesn't seek modulation in roof forms or use of parapets.
5	Objective 5: Development that contributes to the Desired Character of the Zone.	4 - Not included in the Code but OK to remove		

Number	Description	Transition category	Where has it been included?	Comments
Principles of Development Control				
Land Use				
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Office Pre-school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	5 - Not included in the Code ar	DTS 1.1	What are apartments? These are now DTS. The following have been added: Child care centre Hotel Licensed Entertainment Premises Licensed Premises Student Accomodation
2	A mix of land uses should exist which primarily provide services to the local residential community.			PDC 3 had sought small licensed premises. However, the DTS doesn't give a size threshold.
3	3 Land uses that add to the vitality of the area and extend activities into the evening should occur, including restaurants, shops, small licensed premises, educational, community and cultural facilities, and visitor and residential accommodation.	5 - Not included in the Code ar		Policy should be strengthened reflect the current non-complying list.
4	4 Consulting rooms, dwellings and offices are appropriate except at ground floor level on frontages to Melbourne Street west of 59 and 60 Melbourne Street.	5 - Not included in the Code ar	DTS 1.3	Generally ok. However in relation to licensed premises the DTS1.1. doesn't give a size threshold. This should be considered.
5	5 Licensed premises should be secondary to the primary land use mix, small in scale, not detract from the streets daytime or evening activation, and have minimal impact on residential amenity. Further licensed premises or entertainment activities late at night are not appropriate. Restaurants and outdoor cafes are appropriate provided they maintain pedestrian flow and have minimal impact on residential amenity in the adjacent North Adelaide Historic (Conservation) Zone.	5 - Not included in the Code ar		The DTS enables shops, restuarants, offices and consulting rooms on the ground floor level of buildings. This is not in accordance with the current policy. PO 1.3 helps however doesnt ensure day time vibrancy.
6	6 Development listed as non-complying is generally inappropriate.	4 - Not included in the Code but OK to remove		
Form and Character				
7	7 Development should be consistent with the Desired Character for the Zone.	4 - Not included in the Code but OK to remove		
8	8 Development should be in accordance with Concept Plan Figure MS(ME)/1.	4 - Not included in the Code but OK to remove		It would be helpful however the P&D Code does seem to provide this detail.
9	9 Development should ensure a high quality living environment is achieved for residential development within the Zone and in the adjacent North Adelaide Historic (Conservation) Zone.	4 - Not included in the Code but OK to remove		In practice this is achieved in the same way. However the policy emphasis has been deleted.
Design and Appearance				
10		5 - Not included in the Code ar		The residential architecture references have been deleted.
11	11 Buildings should reflect the intimate pedestrian scale and informal character of the shopping environment.	2 - Wording changed but polic	PO 2.1-2.11	
12	12 Buildings along Melbourne Street should incorporate modelled facades and verandahs or balconies. Blank, unarticulated facades to the street frontage are inappropriate and should be avoided.	5 - Not included in the Code ar	PO 2.1-2.11	
13	13 The street wall height of buildings fronting Melbourne Street or Jerningham Street should be designed to reinforce the prevailing datum heights and parapet levels of the street through incorporating two storey podium elements on the street frontage and with upper storeys setback to provide a clear distinction between the levels below and above the prevailing datum line.	5 - Not included in the Code ar	PO2.1, PO2.2	This element should be reinstated "designed to reinforce the prevailing datum heights and parapet levels of the street through incorporating two storey podium elements on the street frontage and with upper storeys setback to provide a clear distinction between the levels below and above the prevailing datum line."
14	Except on sites greater than 1500 square metres in area (which may include one or more allotment), development may be built to the following maximum building height: (a) 22 metres on the south side of Melbourne Street; (b) 14 metres on the north side of Melbourne Street.	4 - Not included in the Code but OK to remove		The mapping provides the policy. It is the same.

Number	Description	Transition category	Where has it been included?	Comments
15	Development adjacent to the North Adelaide Historic (Conservation) Zone should be consistent with the building envelope as shown in Figures 1 and 2, except where a variation to the building envelope demonstrates minimal impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods: (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an allotment within the North Adelaide Historic (Conservation) Zone (except where this boundary is the southern boundary), as illustrated in Figure 1. (b) to minimise overshadowing of sensitive development outside of the zone, buildings should be constructed within a building envelope provided by a 30 degree plane grading north, measured from a height of 3 metres above natural ground level at the southern zone boundary, as illustrated in Figure 2. Where a site has frontage to a road that forms a zone boundary with the North Adelaide Historic (Conservation) Zone, any part of the building exceeding two storeys should:	2 - Wording changed but policy	PO3.1, PO3.2	Refers to neighbourhood zone. Does this mean the City Living Zone (or the previous North Adelaide Historic Conservation Zone)?
16	(a) be setback from the street frontage; (b) incorporate design treatments to reduce the visual presence of the higher components and to achieve an orderly visual transition between the different zones.	5 - Not included in the Code and		There is no transitional policy proposed. Reinsert policy to manage adjacency.
17	Development should use building forms, colour and materials of a more domestic nature to provide a suitable transition to the adjoining North Adelaide Historic (Conservation) Zone.	5 - Not included in the Code and		The "domestic" nature is not picked up.
18	18 Buildings should have a minimum building height of 2 storeys.	5 - Not included in the Code and		The minimum building height is not picked up.
19	19 Development may incorporate landscaping in planter tubs or window boxes, or in-ground vine planting where appropriate.	5 - Not included in the Code and		Green infrastructure is not picked up.
Catalyst Sites				
20	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium scale residential development that is carefully integrated with non-residential development.	4 - Not included in the Code but	PO4.1	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
21	21 Catalyst sites should be developed to manage the interface with the North Adelaide Historic (Conservation) Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity. Catalyst sites should contribute to the vibrancy of the main street through building designs that:	4 - Not included in the Code but OK to remove		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
22	(a) include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b) create the appearance of narrow frontages and enhance visual interest; (c) are vertically massed; and (d) include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	4 - Not included in the Code but	PO4.1	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
23	The scale of development on a catalyst site should depend on its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	4 - Not included in the Code but OK to remove		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
24	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	5 - Not included in the Code and		It is not clear how the Significant Development Site policies are to be interpreted.
Car Parking				
25	Access to sites should preferably be via the minor streets or lanes within or abutting the Zone provided there is no unreasonable impact on residential amenity.	2 - Wording changed but policy	Movement, parking and access	
26	26 Development should not result in additional crossovers on Melbourne Street. Access from Melbourne Street should be designed to minimise conflict with pedestrians and to minimise disruption to the continuity of built form.	2 - Wording changed but policy	Movement, parking and access	
27	27 Parking should be provided away from the primary frontages and be designed to minimise its impacts on residential amenity.	2 - Wording changed but policy	Movement, parking and access	
Advertising				
28	Advertisements should be designed to complement the desired townscape character and should be principally directed at a pedestrian audience.	3 - Included in the Code but policy	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.

Number	Description	Transition category	Where has it been included?	Comments
29	29 Illumination of advertisements is appropriate provided the residential amenity of surrounding residences is not adversely affected.	3 - Included in the Code but p	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.
Procedural Matters				
Complying Development				
30	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following kinds of development are designated as complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site.	5 - Not included in the Code ar	DTS	Minor applications should be reinstated as accepted development.
Non-Complying Development				
31	The following kinds of development are non-complying: (a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Car park except: (i) where ancillary to an approved or existing use (ii) a multi-level car park Industry Licensed entertainment premises exceeding 120 patrons (b) Total demolition of a Local Heritage Place or portion of a Local Heritage Place being the frontage and side wall returns which are visible from the street, where the elements of heritage value of that place are so limited. (c) Total demolition of a State Heritage Place (as identified in Table Adel/1). (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.		Not transferable.	The approach has changed to reduce the restricted development classification. The only land use that is restricted is Industry. It would be helpful for more detail policy around what is inappropriate.
Public Notification				

Number	Description	Transition category	Where has it been included?	Comments
32	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification not required:</p> <p>(i) the following forms of development, or any combination of (except those classified as non-complying):</p> <ul style="list-style-type: none"> Advertisement All forms of development that are ancillary and in association with residential development Consulting room Dwelling Office Restaurant Residential flat building Shop or group of shops Tourist accommodation <p>(ii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p> <p>(b) Category 2, public notification required. Third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights:</p> <p>(i) all development, other than where the development is assigned Category 1 or where the development is classified as non-complying.</p> <p>(ii) any development assigned as Category 1 where the site of the development is adjacent land to land in the North Adelaide Historic (Conservation) Zone and it exceeds two storeys in building height.</p> <p>(iii) any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds two storeys in building height.</p>	2 - Wording changed but policy intent remains (OK)		The proposed level of notification reflects and or exceeds the current notification.

Policy area(s)				
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	<p>The Zone will be enhanced as the focus for neighbourhood shopping, leisure, commercial activity and community facilities primarily to service the needs of the lower North Adelaide residential community.</p> <p>The mix of complementary land uses will extend activity into the evening to enhance the vibrancy and safety of the area and provide visual interest after hours, including by having no external shutters.</p> <p>Small licensed premises will occur in limited numbers where they are designed and sited to maintain day and evening activation at street level and minimise impacts on nearby residential development. Development should complement the attractive linear shopping centre and its visual character. Development should be in the form of buildings up to two storeys in height sited on or close to the street boundary complementing the intimate commercial townscape and pedestrian environment with higher elements set away from the street frontage and the adjacent North Adelaide Historic (Conservation) Zone. Development on corner sites should present a strong built form edge to the secondary street boundary. Development should continue the established identity of the street through incorporating vines, verandahs and pergolas where appropriate. A high degree of accessibility for local and through traffic, public transport and for cyclists should be maintained. The Zone should maintain a high level of pedestrian accessibility, safety and amenity with a high quality, consistent approach to landscaping, footpath treatments (such as kerb protuberances) attractive street furniture and public art. Further street tree planting enhancing pedestrian amenity and landscape character is desired. The impacts of development will be carefully managed to ensure the enhancement of amenity for residential development within the Zone and in adjacent Zones to ensure the achievement of a high quality residential living environment. Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate an increase in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of service and shopping facilities within the main street. Development on catalyst sites will exemplify quality and contemporary design that is generally greater in intensity than its surroundings. However, development will be designed to carefully manage the interface with sensitive uses in the North Adelaide Historic (Conservation) Zone, particularly with regard to massing; proportions; overshadowing; traffic and noise related impacts.</p>	<p>2 - Wording changed but policy intent remains (OK)</p> <p>3 - Included in the Code but policy intent changed (NOT OK)</p> <p>5 - Not included in the Code and should be reinstated</p> <p>2 - Wording changed but policy intent remains (OK)</p> <p>4 - Not included in the Code but OK to remove</p> <p>5 - Not included in the Code and should be reinstated</p> <p>4 - Not included in the Code but OK to remove</p> <p>4 - Not included in the Code but OK to remove</p> <p>4 - Not included in the Code but OK to remove</p>	<p>Various places. These are better than catalyst sites however they remain the approach remains questionable.</p>
Policy Objectives				
1	A shopping and commercial main street supported by medium density residential development.	2 - Wording changed but policy intent remains (OK)	DO1, DO2	
2	Objective 2: A visually interesting streetscape with buildings having a high level of fenestration and detail, and balconies oriented towards the street.	2 - Wording changed but policy intent remains (OK)	DO1, DO2	
3	An intimate public realm with active frontages created by buildings designed with frequently repeated forms and narrow tenancy footprints.	5 - Not included in the Code and should be reinstated		The detail has been replaced with "traditional main street buildings". This wording should be amended in line with the previous policy. Rundle Street Policy could be used.
4	Objective 4: An interesting and varied skyline as viewed from the street and afar, provided by modulation in roof forms and/or the use of parapets.	5 - Not included in the Code and should be reinstated	DTS 2.1	The DTS doesn't seek modulation in roof forms or use of parapets.
5	Objective 5: Development that contributes to the Desired Character of the Zone.	4 - Not included in the Code but OK to remove		

Number	Description	Transition category	Where has it been included?	Comments
Principles of Development Control				
Land Use				
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Office Pre-school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	5 - Not included in the Code ar	DTS 1.1	What are apartments? These are now DTS. The following have been added: Child care centre Hotel Licensed Entertainment Premises Licensed Premises Student Accomodation
2	A mix of land uses should exist which primarily provide services to the local residential community.			PDC 3 had sought small licensed premises. However, the DTS doesn't give a size threshold.
3	3 Land uses that add to the vitality of the area and extend activities into the evening should occur, including restaurants, shops, small licensed premises, educational, community and cultural facilities, and visitor and residential accommodation.	5 - Not included in the Code ar		Policy should be strengthened reflect the current non-complying list.
4	4 Consulting rooms, dwellings and offices are appropriate except at ground floor level on frontages to Melbourne Street west of 59 and 60 Melbourne Street.	5 - Not included in the Code ar	DTS 1.3	Generally ok. However in relation to licensed premises the DTS1.1. doesn't give a size threshold. This should be considered.
5	5 Licensed premises should be secondary to the primary land use mix, small in scale, not detract from the streets daytime or evening activation, and have minimal impact on residential amenity. Further licensed premises or entertainment activities late at night are not appropriate. Restaurants and outdoor cafes are appropriate provided they maintain pedestrian flow and have minimal impact on residential amenity in the adjacent North Adelaide Historic (Conservation) Zone.	5 - Not included in the Code ar		The DTS enables shops, restuarants, offices and consulting rooms on the ground floor level of buildings. This is not in accordance with the current policy. PO 1.3 helps however doesnt ensure day time vibrancy.
6	6 Development listed as non-complying is generally inappropriate.	4 - Not included in the Code but OK to remove		
Form and Character				
7	Development should be consistent with the Desired Character for the Zone.	4 - Not included in the Code but OK to remove		
8	8 Development should be in accordance with Concept Plan Figure MS(ME)/1.	4 - Not included in the Code but OK to remove		It would be helpful however the P&D Code does seem to provide this detail.
9	9 Development should ensure a high quality living environment is achieved for residential development within the Zone and in the adjacent North Adelaide Historic (Conservation) Zone.	4 - Not included in the Code but OK to remove		In practice this is achieved in the same way. However the policy emphasis has been deleted.
Design and Appearance				
10		5 - Not included in the Code ar		The residential architecture references have been deleted.
11	Buildings should reflect the intimate pedestrian scale and informal character of the shopping environment.	2 - Wording changed but polic	PO 2.1-2.11	
12	12 Buildings along Melbourne Street should incorporate modelled facades and verandahs or balconies. Blank, unarticulated facades to the street frontage are inappropriate and should be avoided.	5 - Not included in the Code ar	PO 2.1-2.11	
13	13 The street wall height of buildings fronting Melbourne Street or Jerningham Street should be designed to reinforce the prevailing datum heights and parapet levels of the street through incorporating two storey podium elements on the street frontage and with upper storeys setback to provide a clear distinction between the levels below and above the prevailing datum line.	5 - Not included in the Code ar	PO2.1, PO2.2	This element should be reinstated "designed to reinforce the prevailing datum heights and parapet levels of the street through incorporating two storey podium elements on the street frontage and with upper storeys setback to provide a clear distinction between the levels below and above the prevailing datum line."
14	Except on sites greater than 1500 square metres in area (which may include one or more allotment), development may be built to the following maximum building height: (a) 22 metres on the south side of Melbourne Street; (b) 14 metres on the north side of Melbourne Street.	4 - Not included in the Code but OK to remove		The mapping provides the policy. It is the same.

Number	Description	Transition category	Where has it been included?	Comments
15	Development adjacent to the North Adelaide Historic (Conservation) Zone should be consistent with the building envelope as shown in Figures 1 and 2, except where a variation to the building envelope demonstrates minimal impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods: (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an allotment within the North Adelaide Historic (Conservation) Zone (except where this boundary is the southern boundary), as illustrated in Figure 1. (b) to minimise overshadowing of sensitive development outside of the zone, buildings should be constructed within a building envelope provided by a 30 degree plane grading north, measured from a height of 3 metres above natural ground level at the southern zone boundary, as illustrated in Figure 2. Where a site has frontage to a road that forms a zone boundary with the North Adelaide Historic (Conservation) Zone, any part of the building exceeding two storeys should:	2 - Wording changed but policy	PO3.1, PO3.2	Refers to neighbourhood zone. Does this mean the City Living Zone (or the previous North Adelaide Historic Conservation Zone)?
16	(a) be setback from the street frontage; (b) incorporate design treatments to reduce the visual presence of the higher components and to achieve an orderly visual transition between the different zones.	5 - Not included in the Code and		There is no transitional policy proposed. Reinsert policy to manage adjacency.
17	Development should use building forms, colour and materials of a more domestic nature to provide a suitable transition to the adjoining North Adelaide Historic (Conservation) Zone.	5 - Not included in the Code and		The "domestic" nature is not picked up.
18	18 Buildings should have a minimum building height of 2 storeys.	5 - Not included in the Code and		The minimum building height is not picked up.
19	19 Development may incorporate landscaping in planter tubs or window boxes, or in-ground vine planting where appropriate.	5 - Not included in the Code and		Green infrastructure is not picked up.
Catalyst Sites				
20	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium scale residential development that is carefully integrated with non-residential development.	4 - Not included in the Code but	PO4.1	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
21	21 Catalyst sites should be developed to manage the interface with the North Adelaide Historic (Conservation) Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity. Catalyst sites should contribute to the vibrancy of the main street through building designs that:	4 - Not included in the Code but OK to remove		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
22	(a) include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b) create the appearance of narrow frontages and enhance visual interest; (c) are vertically massed; and (d) include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	4 - Not included in the Code but	PO4.1	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
23	The scale of development on a catalyst site should depend on its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	4 - Not included in the Code but OK to remove		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
24	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	5 - Not included in the Code and		It is not clear how the Significant Development Site policies are to be interpreted.
Car Parking				
25	Access to sites should preferably be via the minor streets or lanes within or abutting the Zone provided there is no unreasonable impact on residential amenity.	2 - Wording changed but policy	Movement, parking and access	
26	26 Development should not result in additional crossovers on Melbourne Street. Access from Melbourne Street should be designed to minimise conflict with pedestrians and to minimise disruption to the continuity of built form.	2 - Wording changed but policy	Movement, parking and access	
27	27 Parking should be provided away from the primary frontages and be designed to minimise its impacts on residential amenity.	2 - Wording changed but policy	Movement, parking and access	
Advertising				
28	Advertisements should be designed to complement the desired townscape character and should be principally directed at a pedestrian audience.	3 - Included in the Code but policy	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.

Number	Description	Transition category	Where has it been included?	Comments
29	29 Illumination of advertisements is appropriate provided the residential amenity of surrounding residences is not adversely affected.	3 - Included in the Code but p	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.
Procedural Matters				
Complying Development				
30	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following kinds of development are designated as complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site.	5 - Not included in the Code ar	DTS	Minor applications should be reinstated as accepted development.
Non-Complying Development				
31	The following kinds of development are non-complying: (a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Car park except: (i) where ancillary to an approved or existing use (ii) a multi-level car park Industry (b) Licensed entertainment premises exceeding 120 patrons (c) Total demolition of a Local Heritage Place or portion of a Local Heritage Place being the frontage and side wall returns which are visible from the street, where the elements of heritage value of that place are so limited. (d) Total demolition of a State Heritage Place (as identified in Table Adel/1). (e) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level.		Not transferable.	The approach has changed to reduce the restricted development classification. The only land use that is restricted is Industry. It would be helpful for more detail policy around what is inappropriate.
Public Notification				

Number	Description	Transition category	Where has it been included?	Comments
32	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification not required:</p> <p>(i) the following forms of development, or any combination of (except those classified as non-complying):</p> <ul style="list-style-type: none"> Advertisement All forms of development that are ancillary and in association with residential development Consulting room Dwelling Office Restaurant Residential flat building Shop or group of shops Tourist accommodation <p>(ii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p> <p>(b) Category 2, public notification required. Third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights:</p> <ul style="list-style-type: none"> (i) all development, other than where the development is assigned Category 1 or where the development is classified as non-complying. (ii) any development assigned as Category 1 where the site of the development is adjacent land to land in the North Adelaide Historic (Conservation) Zone and it exceeds two storeys in building height. (iii) any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds two storeys in building height. 	2 - Wording changed but policy intent remains (OK)		The proposed level of notification reflects and or exceeds the current notification.

Amend to City Mainstreet Zone. Insert Subzone					
General comments					
Number	Description	Transition category	Where has it been included?	Comments	
Desired Character					
	The Zone will be enhanced as the focus for neighbourhood shopping, leisure, commercial activity and community facilities primarily to service the needs of the City's south eastern residential community. The Zone will continue as a convenient, attractive and vibrant Main Street primarily providing services to the adjoining residential areas, as well as passing traffic and visitors from further afield. A sensitive mix of uses, built form and development intensity is required in order to preserve residential amenity in adjacent areas.	2 - Wording changed but policy intent remains (OK)	DO 1 and DO 2 and PO1.1-1.6	This is covered off with a number of policies.	
		2 - Wording changed but policy intent remains (OK)	DO 1 and DO 2 and PO1.1-1.6	This is covered off with a number of policies.	
	The mix of complementary land uses will extend activity into the evening to enhance the vibrancy and safety of the area and provide visual interest after hours, including by having no external shutters. Small licensed premises will occur in limited numbers where they are designed and sited to maintain day and evening activation at street level and minimise impacts on nearby residential development.	3 - Included in the Code but po	DO 1 and DO 2 and PO1.1-1.6	External Shutters should be reinstated. Insert Pol	
	The 'high street' townscape comprises terrace shops and houses, corner pubs and a group of single-storey Victorian villas. Many of these buildings are heritage places and are to continue as prominent landmarks at the junctions of Hutt Street with major streets. The horizontal emphasis of the townscapes, particularly in the commercial areas of Hutt Street, is established by the close pattern of development and by the continuity of street facades, parapet lines, verandahs and balconies. Between Halifax Street and Cairns Street, a group of finely detailed stone residences with articulated and gabled facades and rich cast-iron ornamentation form a distinctive group. The design of buildings should reinforce the continuity of street facades, parapet lines and verandahs derived from the solid masonry character of the existing traditional buildings.	5 - Not included in the Code ar	PO 2.1 - PO 2.11	This detail has been removed. Risk to policy intent.	
	The Zone's character will be reinforced by a well-defined low to medium scale built form edge abutting its tree lined public space, enlivened by the attractive street environment and outdoor eating areas.. Hutt Street will remain highly accessible for local and through traffic, and for public transport. Provision for cyclists and a high level of pedestrian accessibility, safety and amenity will be maintained. The impact of through traffic will be reduced.	4 - Not included in the Code but OK to remove			
	The impact of development on the amenity of neighbouring Zones will be carefully controlled and managed.	4 - Not included in the Code but OK to remove			
	Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate growth in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of services and shopping facilities within the main street.	2 - Wording changed but policy intent remains (OK)		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.	
	Developments on catalyst sites will exemplify quality and contemporary design that is generally greater in intensity than their surroundings. However, development will be designed to carefully manage the interface with sensitive uses in residential zones, particularly with regard to massing; proportions; overshadowing; traffic and noise related impacts.	4 - Not included in the Code bu	PO4.1	Replaced with Significant Development Sites. 2	A visually interesting streetscape with buildings having a high level of fenestration and detail, and balconies oriented towards the street.	2 - Wording changed but polic	DO1, DO2		
3	An intimate public realm with active streets created by buildings designed with frequently repeated frontage form and narrow tenancy footprints.	2 - Wording changed but polic	DO1, DO2		
4	Development that contributes to the Desired Character of the Zone.				
Principles of Development Control					
Land Use					

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Office Pre-school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	5 - Not included in the Code ar	DTS 1.1	What are apartments? These are now DTS. The following have been added: Child care centre Hotel Licensed Entertainment Premises Licensed Premises Student Accomodation PDC 3 had sought small licensed premises. However, the DTS doesn't give a size threshold. Policy should be strengthened reflect the current non-complying list and what is not appropriate in the Zone.
2	A mix of land uses should exist which primarily provide services to the local residential community.	5 - Not included in the Code ar	PO1.2	Insert Policy area what is inappropriate. DTS 1.2 Introduce a policy around 2000m2 GLA floor cap. This assist with this. However, there has not been any rational provided. Is there a economic development study to support this? Or a retail study? Delete retail hierarchy policy
3		5 - Not included in the Code ar	DTS 1.3	The DTS enables shops, restuarants, offices and consulting rooms on the ground floor level of buildings. This is not in accordance with the current policy. Reinstate policy on ground floor retail.
4	3 Consulting rooms, dwellings and offices are appropriate except at ground floor level. 4 Land uses that add to the vitality of the area and extend activities into the evening should occur, including restaurants, small licensed premises, educational, community and cultural facilities; and visitor and residential accommodation.	5 - Not included in the Code ar	PO 1.3.	PO 1.3 helps however doesnt ensure day time vibrancy. Insert policy to support vibrancy.
5	5 Licensed premises should be secondary to the primary land use mix, small in scale, not detract from the streets daytime or evening activation, and have minimal impact on residential amenity. Further licensed premises or entertainment activities late at night are not appropriate. Restaurants and cafes with outdoor dining are appropriate provided they maintain pedestrian flow and have minimal impact on residential amenity.	5 - Not included in the Code ar	PO1.3	PO 1.3 helps however doesnt ensure day time vibrancy. Insert policy to support vibrancy.
6	6 Development listed as non-complying is generally inappropriate.	4 - Not included in the Code but OK to remove		
Form and Character				
7	Development should be consistent with the Desired Character for the Zone.	4 - Not included in the Code but OK to remove		
8	8 Development should be in accordance with Concept Plan Figure MS(H)1.	4 - Not included in the Code but OK to remove		It would be helpful however the P&D Code does seem to provide this detail. In practice this is achieved in the same way. However the policy emphasis has been deleted.
9	9 Development should ensure a high quality living environment is achieved for residential development within the Zone and in the adjacent City Living Zone and Adelaide Historic (Conservation) Zone.	4 - Not included in the Code but OK to remove		
Built Form and Public Environment				
10	Development should protect and enhance the traditional nineteenth and early twentieth century retail and residential townscape character of Hutt Street.	5 - Not included in the Code ar	PO 2.1-2.11	The emphasis on traditional nineteenth and early twentieth central retail and residential townscape has been deleted. This needs to be reinstated. Insert Policy on heritage.
11	A 'high street' commercial terrace design approach with continuous ground floor retailing and other uses at upper levels should occur north of Halifax Street to complement the eastern side of Hutt Street.	5 - Not included in the Code ar	PO 2.1-2.11	The ground floor retailing has been deleted and needs to be reinstated. No retail study has been prepared to suggest otherwise. Insert Policy on heritage.
12	12 Development should respect the design features of the long established townscapes. Roofs should be hipped or gabled and employ parapets on street frontages. Blank elevations unrelieved by architectural detail should be avoided. Above street level, windows should complement the proportions of the existing fenestration, and roofing materials and colour should be compatible with those traditionally used.	5 - Not included in the Code ar	PO 2.1-2.11	There is no policy in zone in relation to roof form. Insert policy on Built form
13	13 The street wall height of buildings fronting Hutt Street should be designed to reinforce the prevailing datum heights and parapet levels of the street through incorporating two storey podium elements on the street frontage and with upper storeys setback to provide a clear distinction between the levels below and above the prevailing datum line.	5 - Not included in the Code ar	PO 2.1 and DTS 2.1	This is included in a DTS however it needs to be a PO. Insert policy on Built form
14	14 Except on sites greater than 1500 square metres in area (which may include one or more allotment), building height should not exceed 14 metres	4 - Not included in the Code but OK to remove	PO 4.1 - 4.2	This has been replaced with Significant Development Sites.
15	15 On Hutt Street, development should achieve a minimum height of 2 storeys.	5 - Not included in the Code ar		The minimum building height is not picked up. Insert minimum building height policy

Number	Description	Transition category	Where has it been included?	Comments
16	Development adjacent to the City Living Zone or the Adelaide Historic (Conservation) Zone should be consistent with the building envelope as shown in Figures 1 and 2, except where a variation to the building envelope demonstrates minimal impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods: (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an allotment within the City Living Zone or the Adelaide Historic (Conservation) Zone, as illustrated in Figure 1:	2 - Wording changed but policy	Interface Height PO 3.1 - 3.2	There is opportunity to reconsider this approach where located near the City Living Zone. The City Living Zone allows buildings higher than single storey in this zone. It doesn't make clear sense that you have to have a lower height in the Mainstreet Zone. This generic policy approach is not fit for purpose. Agree with proposed policy however allow nuance at adjacent zones. Amend proposed interface policy.
17	Where a site has frontage to a road that forms a zone boundary with the City Living Zone or the Adelaide Historic (Conservation) Zone, any part of the building exceeding two storeys should: (a) be setback from the street frontage; (b) incorporate design treatments to reduce the visual presence of the higher components and to achieve an orderly visual transition between the different zones.	5 - Not included in the Code as		Transition between zones should be reinstated "(b) incorporate design treatments to reduce the visual presence of the higher components and to achieve an orderly visual transition between the different zones."
18	Development should use building forms, colour and materials of a more domestic nature to provide a suitable transition to the adjoining City Living Zone or Adelaide Historic (Conservation) Zone.	5 - Not included in the Code as		The "domestic" nature is not picked up. Reinstated domestic nature.
19	19 Buildings should have little or no set-backs from front and side boundaries, and should achieve a continuity of street facade.	2 - Wording changed but policy	PO 2.1 - 2.11	
20	20 Development on corner sites should be built to street alignments, emphasising the importance of traditional corner buildings.	2 - Wording changed but policy	PO 2.1 - 2.11	Whilst the no side boundary set back has been retained, there is a need to have a policy about blank walls and roof forms. Insert policy to manage impact
21	21 Continuous pedestrian shelter in the form of verandahs or balconies should be provided along the eastern side of Hutt Street. On the western side of Hutt Street, pedestrian shelter in the form of verandahs, awnings or balconies should be provided by all new non-residential buildings.	2 - Wording changed but policy	PO2.4 - DTS 2.4	Whilst there are veranda design standard, it does not explicitly require pedestrian shelters. Nor does it seek a different design response on either side of the street.
Catalyst Sites				
22	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium scale residential development that is carefully integrated with non-residential development.	4 - Not included in the Code but	PO 4.1 - PO 4.2	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable. Retain policy approach
23	23 Catalyst sites should be developed to manage the interface with adjacent Zones with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	4 - Not included in the Code but	PO 4.1 - PO 4.2	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable. Retain policy approach
24	Catalyst sites should contribute to the vibrancy of the main street through building designs that: (a) include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b) create the appearance of narrow frontages and enhance visual interest; (c) are vertically massed; and (d) include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	4 - Not included in the Code but	PO 4.1 - PO 4.2	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable. Retain policy approach
25	25 The scale of development on a catalyst site should respond to its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	4 - Not included in the Code but	PO 4.1 - PO 4.2	Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable. Retain policy approach
26	26 Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	5 - Not included in the Code as	PO 4.1 - PO 4.2	It is not clear how the Significant Development Site policies are to be interpreted. Retain policy approach
Car Parking				
27	27 Access should minimise any disruption to the continuity of existing streetscapes. Access should be obtained from minor streets or lanes within or abutting the Zone provided there is no unreasonable impact on residential amenity.	2 - Wording changed but policy	PO 5.1 - 5.2	It is not clear how "negative impact" will be determined. City Mainstreet Zone policies 4.1-4.2 are adequate.
28	28 Parking should be provided away from the primary frontages and be designed to minimise its impacts on residential amenity.	2 - Wording changed but policy	PO 5.1 - 5.2	It is not clear how "negative impact" will be determined. City Mainstreet Zone policies 4.1-4.2 are adequate.
Advertising				
29	Advertisements should be scaled, located, designed and illuminated to be sympathetic with the built form.	3 - Included in the Code but policy	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level. Insert Policy into Subzone

Number	Description	Transition category	Where has it been included?	Comments
30	30 The discreet illumination of advertisements is appropriate.	3 - Included in the Code but p	Advertising General Modules	Policy needs to be strengthened to be able to refuse the following: (d) Advertisements involving any of the following: Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level. Insert Policy into Subzone
Procedural Matters				
Complying Development				
31	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following kinds of development are designated as complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site.	5 - Not included in the Code an		Insert policy for deemed to satisfy
Non-Complying Development				
32	The following kinds of development are non-complying: (a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Auditorium Car park except: (i) where ancillary to an approved or existing use (ii) a multi-level car park Industry Licensed entertainment premises exceeding 120 patrons (b) Total demolition of a Local Heritage Place (City Significance) or of the frontage and side wall returns visible from the street of a Local Heritage Place (Townscape). (c) Total demolition of a Local Heritage Place, or that portion of a Local Heritage Place comprising its Elements of Heritage Value. (d) Total demolition of a State Heritage Place (as identified in Table Adel/1). (e) Advertisements involving any of the following: (i) Animation (ii) Third party advertising (iii) Advertisements at roof level where the sky or another building forms the background when viewed from ground level.	5 - Not included in the Code an		The approach has changed to reduce the restricted development classification. The only land use that is restricted is Industry. It would be helpful for more detail policy around what is inappropriate to provide a clear direction to applicants. Insert policy around what is inappropriate.
Public Notification				

Number	Description	Transition category	Where has it been included?	Comments
33	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification not required:</p> <p>(i) the following forms of development, or any combination of (except those classified as non-complying):</p> <ul style="list-style-type: none"> Advertisement All forms of development that are ancillary and in association with residential development Consulting room Dwelling Office Restaurant Residential flat building Shop or group of shops Tourist accommodation <p>(ii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p> <p>(b) Category 2, public notification required. Third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights:</p> <p>(i) all development, other than where the development is assigned Category 1 or where the development is classified as non-complying.</p> <p>(ii) any development assigned as Category 1 where the site of the development is adjacent land to land in the City Living Zone or the Adelaide Historic (Conservation) Zone and it exceeds two storeys in building height.</p> <p>(iii) any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotments) that exceeds two storeys in building height.</p>	2 - Wording changed but policy intent remains (OK)		<p>The proposed level of notification reflects and or exceeds the current notification.</p> <p>Amend to support same level of notification.</p>

General comments					
Number	Description	Transition category	Where has it been included?	Comments	
Desired Character					
	<p>Sturt and Halifax streets will be enhanced as recognisable 'main streets' and development will add to the lively mix of specialist retail outlets; personal services; restaurants; cafés; hospitality, community and mixed businesses; and medium to high scale residential developments.</p> <p>The mix of complementary land uses will extend activity into the evening to enhance the vibrancy of the area. Small-scale licensed entertainment premises, nightclubs or bars may occur in limited numbers along Sturt and Halifax streets where they are designed and sited to maintain day time and evening activation at street level and minimise impacts on nearby residential development. Development will continue to provide visual interest after hours by having no external shutters.</p> <p>Active street frontages will be promoted through the pattern of narrow-fronted shop and business fronts of varied and interesting displays, frequent individualised frontages and pedestrian entrances. Development should maintain the continuity of buildings sited on or close to both front and side boundaries and on corner frontages. Limited setbacks may be appropriate to emphasise pedestrian entries and to accommodate space for outdoor dining.</p> <p>A pedestrian scale is to be maintained by buildings that enclose the street space along Sturt, Halifax and Wright streets yet maintain openness to the sky and the streets' intimate, main street feel. Pedestrian shelter and comfort is to be provided through continuous verandahs and awnings that are complemented by a canopy of street trees.</p> <p>Buildings will respond to heritage places through contemporary designs that include variations in façade treatments and building materials, as well as the use of modulated roof forms and parapets that contribute to a varied and interesting pedestrian environment. Balconies overlooking the street are also encouraged to provide a connection for residents to the street and achieve passive surveillance.</p> <p>Vehicle access points will be located on side streets or grouped where possible so that safe and efficient pedestrian movement along the main streets is achieved. Parking will be located away from street frontages and shared where possible. Priority will be given to pedestrian movement, with ease of access by public transport and cycling enhanced.</p> <p>Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate growth in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of services and shopping facilities within the main street.</p> <p>Development on catalyst sites will exemplify quality and contemporary design that is generally greater in intensity than their surroundings. However, development will be designed to carefully manage the interface with sensitive uses in the City Living Zone, particularly with regard to massing and proportions, overshadowing, overlooking, traffic and noise related impacts.</p>	2 - Wording changed but policy intent remains (OK)	Various places. Key policies include: DO1, DO2, PO.1.1, PO1.2, PO 4.1		
		2 - Wording changed but policy intent remains (OK)	Various places. Key policies include: DO1, DO2, PO.1.1, PO1.2, PO 4.1	Insert policy around day time activation in Sub Zone	
		2 - Wording changed but policy intent remains (OK)	PO 1.1 -1.6		Narrow fronted shops need to be strengthened. Insert policy detail.
		2 - Wording changed but policy intent remains (OK)	PO 1.1 -1.6		
		3 - Included in the Code but policy intent changed (NOT OK)	PO 2.1 - 2.11		Continuous awnings need to be strengthened. Insert policy detail.
		5 - Not included in the Code and should be reinstated	PO 2.1 - 2.11		Approach to heritage adjacency should be reinstated. Insert policy detail.
		3 - Included in the Code but policy intent changed (NOT OK)	PO 5.1 - 5.2		Priority to pedestrian movement needs to be reinstated. Insert policy detail.
		2 - Wording changed but policy intent remains (OK)	PO 4.1 - 4.2		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
		4 - Not included in the Code and should be reinstated	PO4.1		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
Policy Objectives					
1	A shopping and commercial main street supported by medium and high density residential development.	2 - Wording changed but policy intent remains (OK)	DO1, DO2		
2	A visually interesting streetscape with buildings having a high level of fenestration and detail, and balconies oriented towards the street.	2 - Wording changed but policy intent remains (OK)	DO1, DO2		
3	Objective 3: An intimate public realm with active streets created by buildings designed with frequently repeated frontage form and narrow tenancy footprints.	2 - Wording changed but policy intent remains (OK)	DO1, DO2		
4	Objective 4: An interesting and varied skyline as viewed from the street and afar, provided by modulation in roof forms and/or the use of parapets.	2 - Wording changed but policy intent remains (OK)	DO1, DO2		
5	Objective 5: Development that contributes to the Desired Character of the Zone.				
Principles of Development Control					
Land Use					

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Licensed entertainment premises Office Pre-school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	3 - Included in the Code but policy intent changed (NOT OK)		What are apartments? These are now DTS. The following have been added: Child care centre Hotel Licensed Entertainment Premises Student Accommodation Delete the policies inconsistent with the existing policies. Must consider the non-complying list
2	The Zone should be developed to include a range of land uses that are high pedestrian-generators, directly promote public transport use and provide opportunities for multi-purpose trips. Non-residential development should comprise uses that:	5 - Not included in the Code and	PO1.3 PO1.4 PO 3.1. - 3.2.	DTS 2.10 seeks a greater set back. This should be retained to enable development on small sites. Insert policy detail. Interface policies are more about built form. Significant developments sites need to have something about amenity to adjoining zones. Reinsert policy.
3	(a) are of a role and function appropriate for the Zone; (b) encourage walking and cycling to local shopping, community services and other activities; and (c) do not detrimentally impact on the amenity of nearby residents.	5 - Not included in the Code and		
4	Licensed entertainment premises, nightclubs or bars should be small in scale, secondary to the primary land use mix in each street and not detract from the street's daytime activation.	5 - Not included in the Code and	PO1.3 PO1.4	This needs to be reinstated. Reinsert policy around scale.
5	5 Development on Wright, Sturt or Halifax streets should include non-residential land uses on the ground floor level to provide a continuity of shops, offices or other uses that enable activation of the street.	3 - Included in the Code but policy intent changed (NOT OK)		
6	6 Development listed as non-complying is generally inappropriate.			It is not clear how inappropriate land uses will be assessed.
Form and Character				
7	Development should be consistent with the Desired Character for the Zone.			
Design and Appearance				
8	Development should incorporate design measures that provide a transition between the high intensity development in this Zone and the lower intensity development in the adjacent City Living Zone.	4 - Not included in the Code but OK to remove		
9	9 The finished ground floor level of buildings should be at grade and/or level with the footpath to provide direct pedestrian access and street-level activation.	5 - Not included in the Code and		This should be reinstated. This may be in design in urban areas.
10	10 Pedestrian shelter and shade should be provided over footpaths through continuous structures such as awnings, canopies and verandahs.	5 - Not included in the Code and		Pedestrian comfort through design is not strong.
11	11 The ground floors of buildings should have a minimum floor to ceiling height of 3.5 metres to allow for adaptation to a range of land uses including shops, cafés, restaurants or offices without the need for significant alterations to the building.	2 - Included in the Code but policy intent changed (OK)	DTS 2.5	
12	The ground level street frontage of buildings should be designed to activate street frontages, provide pedestrian interest and maximise passive surveillance by: (a) providing at least 70 percent of the frontage for a non-residential use; and (b) 50 percent of the frontage being visually permeable, transparent or clear glazed. This may include an entry/foyer or display window to a shop (including a café or restaurant).	5 - Not included in the Code and		This absolutely needs to be reinstated.
Building Height				
13	Except where the airport's operations require a lesser height or the development is located on a site greater than 1500 square metres (which may include one or more allotment), building height should not exceed 22 metres.	2 - Included in the Code but policy intent changed (OK)		Replaced with Significant Development Sites. These are better than catalyst sites however they remain the approach remains questionable.
14	14 Development on Sturt Street or Halifax Street should have a minimum building height of 3 storeys to provide optimal height and floor space yields that activate and frame the main street.	5 - Not included in the Code and		There are no minimum building heights.
Setbacks				
15	Buildings (excluding verandahs, porticos and the like) on Sturt Street or Wright Street should generally be built to the primary road frontage.	2 - Included in the Code but policy intent changed (OK)	PO 2.7-2.8	
16	16 Development on land directly abutting the City Living Zone should avoid sheer and tall walls at the interface, through walls greater than 3 metres in height being setback at least 2 metres from the rear boundary with further articulation at upper levels.	3 - Included in the Code but policy intent changed (NOT OK)	PO 3.1 PO 2.10 and DTS 2.10	DTS 2.10 seeks a greater set back. This should be retained to enable development on small sites.
Catalyst Sites				

Number	Description	Transition category	Where has it been included?	Comments
17	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium to high scale residential development that is carefully integrated with non-residential development.	2 - Included in the Code but policy intent changed (OK)		
18	18 Catalyst sites should be developed to manage the interface with the City Living Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	5 - Not included in the Code ar	PO 4.1	Amenity and traffic are not necessarily resolved through the policy.
19	Catalyst sites should contribute to the vibrancy of the main street through building designs that: (a) include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b) create the appearance of narrow frontages that enhance visual interest; (c) are vertically massed; and (d) include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	5 - Not included in the Code ar	PO 4.1	These are good policies that could be reinstated.
20	Parts of a development on a catalyst site that exceed the prescribed maximum building height that applies to non-catalyst sites in the zone, and that are directly adjacent to the City Living Zone boundary should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	5 - Not included in the Code ar	PO 4.1	These are good policies that could be reinstated.
21	21 The scale of development on a catalyst site should respond to its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	5 - Not included in the Code ar	PO 4.1	these are good policies that could be reinstated.
22	22 Where there is an apparent conflict between the catalyst site principles and zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.			It is not clear how this is related. The Significant Development site policy is not that detail so will there be a conflict?
Car Parking				
23	Car parking should be provided in accordance with Table Adel/7 and be ancillary to an approved or existing use.		This is in the general model	This needs to be reinstated. Reinsert policy non-ancillary
Land Division				
24	Land division should occur only where new allotments are of a size and configuration that will ensure the objectives of the Zone can be achieved.	4 - Not included in the Code but OK to remove		This is not described in the zone.
Procedural Matters				
Complying Development				
25	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following forms of development are designated as complying, subject to the conditions contained in Table Adel/7 – On-site Car Parking Provisions: (a) change in the use of land from residential to office on the ground or first floor of a building (b) change in the use of land from residential to a shop (other than a retail showroom or licensed premises) with a gross leasable area less than 250 square metres on the ground floor of a building.	2 - Included in the Code but pc	DTS table.	This has been replaced with the Deemed to Satisfy Criteria for change of use. It has been extended . Transport and car parking needs to be considered. Residentail quality needs to be considered.
Non-Complying Development				
26	The following kinds of development are non-complying: (a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Fuel depot Industry Public service depot Road transport terminal Service trade premises Store Third party advertising Transport depot Vehicle parking except where it is ancillary to an approved or existing use Warehouse Waste reception, storage, treatment or disposal (b) Total demolition of a State Heritage Place (as identified in Table Adel/1).	3 - Included in the Code but pc	DTS 1.1	Industry is restricted development. All other land uses are performance assessed. Vehicle Parking other than ancillary is not specifically dealt with. All of the other land uses are not identified as land uses. What does that mean? Where not listed how are these refused?
Public Notification				

Number	Description	Transition category	Where has it been included?	Comments
27	<p>Categories of public notification are prescribed in Schedule 9 of the Development Regulations 2008. In addition, the following forms of development, or any combination thereof (except where the development is classified as non-complying) are assigned:</p> <p>(a) Category 1, public notification not required:</p> <ul style="list-style-type: none"> Advertisement Aged persons accommodation All forms of development that are ancillary and in association with residential development Consulting room Dwelling Educational establishment Hotel Indoor recreation facility Nursing home Office Pre-school Primary school Restaurant Residential flat buildings Retirement village Shop or group of shops Supported accommodation Tourist accommodation <p>(b) Category 2, public notification required. Third parties do not have any appeal rights.</p> <p>(i) All forms of development not listed as Category 1.</p> <p>(ii) Any development assigned Category 1 where the site of the development is adjacent land to land in the City Living Zone and it exceeds 22 metres in building height.</p> <p>(iii) Any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds 22 metres in building height.</p> <p>Note: For Category 3 development, public notification is required. Third parties may make written</p>			Reinstate same level of notification.
NEW CONTENT IN THE CODE (insert below)				

Zone	Mixed Use (Melbourne West) Zone			1 - Included in the Code and retains same policy intent	0%
Policy area(s)				2 - Wording changed but policy intent remains (OK)	6%
				3 - Included in the Code but policy intent changed (NOT OK)	3%
				4 - Not included in the Code but OK to remove	13%
				5 - Not included in the Code and should be reinstated	78%
General comments	The Suburban Centre Activity Zone is not the right fit for Melbourne West. This is not a typical suburban centre and many of the land use and built form outcomes are not what would be desired for this portion of Melbourne street. A better suited zone would be Business Neighbourhood Zone, although it does list a shop as an appropriate use.				
Number	Description	Transition category	Where has it been included?	Comments	
Desired Character					
	Development should reinforce the role and image of the Zone as an attractive mixed use area of low to medium scale, innovatively designed buildings set within landscaped grounds. Development should reinforce the historic siting pattern of buildings set back from boundaries in a landscaped setting.	3	Suburban Activity Centre Zone covered partly in PO 3.1	Covers the height of development however no mention is made to reinforce the historic siting pattern of buildings set back from boundaries in a landscaped setting which is an important part of the character of Melbourne St West.	
	The Zone should maintain a high level of pedestrian accessibility, safety and amenity with a high quality, consistent approach to landscaping, footpath treatments (such as continuous footpaths), attractive street furniture and public art. Further street tree planting enhancing pedestrian amenity and landscape character is desired.	5			
	A high degree of vehicle accessibility for local and through traffic, public transport, and for cyclists should be maintained.	2	Suburban Activity Centre Zone DO 1 and PO 2.2		
	The impacts of development will be carefully managed to ensure the enhancement of amenity for residential development within the Zone and in the North Adelaide Historic (Conservation) Zone so as to ensure the achievement of a high quality residential living environment.	5			
	Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate an increase in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of service and shopping facilities within the main street.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies	
	Development on catalyst sites will exemplify quality and contemporary design that is generally greater in intensity than its surroundings. However, development will be designed to carefully manage the interface with sensitive uses in the North Adelaide Historic (Conservation) Zone, particularly with regard to massing; proportions; overshadowing; traffic and noise related impacts.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies	
Policy Objectives					
1	A mixed use environment accommodating offices, consulting rooms and low to medium density residential development.	5		The land uses support by the Desired Outcomes of Suburban Activity Centre Zone are very different the Mixed Use (Melb West) Zone. The SACV provides for neighbourhood scale shopping, business, entertainment and recreation facilities. It is a focus for business and community life and provides for most daily and weekly shopping needs of the community. While the current zone encourages offices, consulting rooms and low to medium scale dwellings. The land uses do not align and this zone does not appear to be the best fit for the area which has a strong presence of office, consulting rooms and residential use.	
Objective 2:	A visually interesting streetscape characterised by contemporary architecture and landscaped setting complementing the historic built form.	5			
Objective 3:	An attractive and high quality public environment.	5			
Objective 4:	Development that contributes to the Desired Character of the Zone.	4			
Principles of Development Control					
Form of Development					

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Office Pre-school Residential flat building Retirement village Supported accommodation Tourist accommodation	5		Now includes Emergency Services Facility, Health Facility, Hospital, Hotel, Indoor Recreation Facility, Library, Place of Worship, PublicTransport Terminal, Recreation Area, Restaurant, Retail Fuel Outlet, Service Trade Premises and Shop, all of these uses are not considered appropriate to the character of the Zone as they are large uses of which many would have considerable impact on such a intimate scaled street. No longer includes specific reference to Affordable housing, Aged persons accommodation, Dwelling, Residential flat building, Retirement Village Supported accommodation.
2	The Zone should accommodate offices, consulting rooms and low to medium density dwellings. An increase in the amount of residential development is desirable by means of conversion and redevelopment of non-residential premises to either residential or mixed residential and office uses and by infill residential development.	5		The land uses support by the Desired Outcomes of Suburban Activity Centre Zone are very different the Mixed Use (Melb West) Zone. The SACV provides for neighbourhood scale shopping, business, entertainment and recreation facilities. It is a focus for business and community life and provides for most daily and weekly shopping needs of the community. While the current zone encourages offices, consulting rooms and low to medium scale dwellings. The land uses do not align and this zone does not appear to be the best fit for the area which has a strong presence of office, consulting rooms and residential use.
3	Development listed as non-complying is generally inappropriate.	4		
Form and Character				
4	Development should be consistent with the Desired Character for the Zone.	4		
5	Development should be in accordance with Concept Plan Figure MU(MW)/1.	5		
6	Development should ensure a high quality living environment is achieved for residential development within the Zone and in the adjacent North Adelaide Historic (Conservation) Zone.	5		
Built Form and Public Environment				
7	Development should maintain the prevailing low to medium scale of built form and be consistent with, and avoid the further erosion of, the historic pattern of buildings set-back from front and side boundaries in a landscaped setting.	5		???
8	Buildings should be of contemporary design that includes variations in façade treatments and building material, as well as the use of modulated roof forms and parapets that contribute to a varied and interesting pedestrian environment. Balconies overlooking the street are encouraged to provide a connection for occupiers to the street and assist passive surveillance. The use of brightly coloured, black, or highly reflective surfaces should be avoided.	5		
9	Development should provide attractive landscaping to the Melbourne Street frontages and should provide a buffer area along Old Street. Development should provide a landscaped set-back from Melbourne Street of 3.5 metres.	5		
10	A minimum of 20 percent landscaped open space should be provided on the site of any development.	?		Review
11	Except on sites greater than 1500 square metres in area, which may include one or more allotment, development may be built to 14 metres in building height.	5		Height TNV Overlay is missing.
12	Except on sites greater than 1500 square metres in area, which may include one or more allotment, parts of buildings above two storeys should be set-back from Melbourne Street: (a) a minimum of 6 metres on the southern side of the street; (b) in order to emphasise the landfall from Stanley Street to Melbourne Street, development should incorporate a greater setback than the prevailing 6 to 10 metre set-backs.	5		
13	Set-backs from Old Street should be sufficient to respect the character of the adjacent North Adelaide Historic (Conservation) Zone.	5		

Number	Description	Transition category	Where has it been included?	Comments
14	Development adjacent to the North Adelaide Historic (Conservation) Zone should be consistent with the building envelope as shown in Figures 1 and 2, except where a variation to the building envelope demonstrates minimal impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods: (a) to minimise building mass at the interface, buildings should be constructed within a building envelope provided by a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an allotment within the North Adelaide Historic (Conservation) Zone (except where this boundary is the southern boundary), as illustrated in Figure 1: (b) to minimise overshadowing of sensitive development outside of the zone, buildings should be constructed within a building envelope provided by a 30 degree plane grading north, measured from a height of 3 metres above natural ground level at the southern zone boundary, as illustrated in Figure 2:	2	Suburban Activity Centre Zone PO 3.2, DTS/DPF 3.2, PO 3.3, DTS/DPF 3.3	
15	Where a site has frontage to a road that forms a zone boundary with the North Adelaide Historic (Conservation) Zone, any part of the building exceeding two storeys should: (a) be setback from the street frontage (b) incorporate design treatments to reduce the visual presence of the higher components and to achieve an orderly visual transition between the different zones.	5		
16	Development should use building forms, colour and materials of a more domestic nature to provide a suitable transition to the adjoining North Adelaide Historic (Conservation) Zone.	5		
17	Buildings should have a minimum building height of 2 storeys.	5		Height TNV Overlay is missing.
18	Verandahs, awnings or balconies over the footpath should not occur.	5		
Catalyst Sites				
19	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium scale residential development that is carefully integrated with non-residential development.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies
20	Catalyst sites should be developed to manage the interface with the North Adelaide Historic (Conservation) Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies
21	Catalyst sites should contribute to the vibrancy of the street through building designs that: (a) include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b) create the appearance of narrow frontages and enhance visual interest; (c) are vertically massed; and (d) include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies
22	The scale of development on a catalyst site should depend on its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	Catalyst Sites Where does this fit?		Is there anything that replaces the catalyst site policies
23	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	4		No longer relevant
Car Parking				
24	Access to sites should be via minor streets or lanes provided there is no unreasonable impact on residential amenity.	5		
25	Access from Melbourne Street should minimise disruption to the pattern of built form and landscaping.	5		
26	Parking should be located behind buildings away from the landscaped Melbourne Street frontages and be designed to minimise its impacts on residential amenity.	5		
Advertising				
27	Advertisements should be restrained in size, design and illumination, and limited in number to one principal identifying advertisement for each site.	5		
28	Illumination of advertisements should be discreet and should not affect residential amenity.	5		
Procedural Matters				
Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
29	<p>Complying developments are prescribed in Schedule 4 of the Development Regulations 2008.</p> <p>In addition, the following kinds of development are designated as complying:</p> <p>(a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for:</p> <ul style="list-style-type: none"> (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site. 	5		<p>This was included as a complying form of development in the 2006 General PAR to allow for Council to carry out its activities. It is recommended that it is included as an accepted development classification.</p>
Non-Complying Development				
30	<p>The following kinds of development are non-complying:</p> <p>(a) A change of use involving any of the following:</p> <ul style="list-style-type: none"> Adult entertainment premises Adult products and services premises Amusement machine centre Car park except: <ul style="list-style-type: none"> (i) where ancillary to an approved or existing use. (ii) multi-level car park. Hotel Industry Licensed entertainment premises Licensed premises Primary school Restaurant (except on sites greater than 1500 square metres in area, which may include one or more allotment) Shop (except on sites greater than 1500 square metres in area, which may include one or more allotment). <p>(b) Total demolition of a Local Heritage Place or portion of a Local Heritage Place being the frontage and side wall returns which are visible from the street, where the elements of heritage value of that place are so limited.</p> <p>(c) Total demolition of a State Heritage Place (as identified in Table Adel/1)</p> <p>(d) Advertisements involving any of the following:</p> <ul style="list-style-type: none"> Animation Third party advertising Advertisements at roof level where the sky or another building forms the background when viewed from ground level. 			
Public Notification				

Number	Description	Transition category	Where has it been included?	Comments
31	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification not required:</p> <p>(i) the following forms of development, or any combination of (except those classified as non-complying):</p> <ul style="list-style-type: none"> d Use (Melbourne West) Zone Advertisement All forms of development that are ancillary and in association with residential development Consulting room Dwelling Office Residential flat building Tourist accommodation. <p>(ii) a kind of development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p> <p>(b) Category 2, public notification required. Third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights:</p> <p>(i) all development, other than where development is assigned Category 1 or where the development is classified as non-complying.</p> <p>(ii) any development assigned as Category 1 where the site of the development is adjacent land to land in the North Adelaide Historic (Conservation) Zone and it exceeds two storeys in building height.</p> <p>(iii) any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds two storeys in building height.</p>			
NEW CONTENT IN THE CODE (insert below)				
DO 1	<p>An active retail precinct that includes neighbourhood scale shopping, business, entertainment and recreation facilities. It is a focus for business and community life and provides for most daily and weekly shopping needs of the community. The precinct includes buildings that are well integrated with pedestrian and cycle networks as well as public transport, and sit within a high quality and well activated public realm.</p>			<p>Not supported. This is not a retail area and this DO should not apply to Melbourne Street West</p>
PO 1.1	<p>Shops, office, entertainment, health and recreation related uses supplemented by other businesses that provide a range of goods and services to the surrounding neighbourhood and district.</p>			<p>Not supported. This is not a retail area and this DO should not apply to Melbourne Street West</p>
DTS/DPF 1.1	<p>Development comprises one or more of the following land uses:</p> <ul style="list-style-type: none"> Cinema Educational establishment Emergency services facility Health facility Hospital Hotel Indoor recreation facility Library Place of worship Pre-school Public transport terminal Recreation area Restaurant Retail fuel outlet Service trade premises Shop 			<p>Not Supported. Emergency Services Facility, Health Facility, Hospital, Hotel, Indoor Recreation Facility, Library, Place of Worship, PublicTransport Terminal, Recreation Area, Restaurant, Retail Fuel Outlet, Service Trade Premises and Shop are all uses not considered appropriate to the character of the Zone as they are large uses of which many would have considerable impact on such a intimate scaled street and the residential properties that adjoin the sites within this Zone..</p>
PO 1.2	<p>Residential development does not prejudice the operation of existing non-residential development and the long term provision of services and facilities for wider community benefit.</p>			<p>Supported.</p>

Number	Description	Transition category	Where has it been included?	Comments
PO 1.3	Dwellings developed only in conjunction with non-residential uses to support business, entertainment and recreational activities DTS 1.3 Dwellings are developed only in conjunction with non-residential uses and sited: (a) at upper levels of buildings with non-residential uses located at ground level; or (b) behind non-residential uses on the same allotment.			Entertainment uses are not considered appropriate for this side of Melbourne Street.
PO 1.4	Where residential development is appropriate having regard to other performance outcomes of the zone, residential development achieves medium-to-high densities.			Not Supported. Medium to high densities are not appropriate to the historic character of this portion of Melbourne Street
PO 1.4	Residential development achieves a minimum net density of 35 dwelling units per hectare.			Supported, however landscaped settings contribute to the strong character of some sites within Melbourne Street.
PO 1.5	Bulky goods outlets are sited and designed to achieve or maintain a vibrant and interesting streetscape within retail areas. DTS/DPF 1.5 Bulky goods outlets with a gross leaseable area of 500m2 or more are located towards the periphery of the zone.			Not Supported. Not an appropriate use for this street
PO 2.1	Development throughout the zone that integrates with desired development through building scale, connections and complementary land uses.			Supported.
PO 2.3	Vehicular access points and car parks are coordinated and consolidated to enable the shared use of parking spaces.			Not Supported. Contrary to PDC 24, 25 and 26
PO 2.4	Development promotes the use of pedestrian and cyclist connections to centre facilities and services.			Supported.
PO 2.5	Non-residential buildings and facilities are sited and designed to create streetscapes and spaces that encourage social interaction.			The policy itself is supported however not best suited to the character of this portion of Melbourne Street where most buildings are set off the front property boundary
PO 3.1	A range of low to medium rise buildings, with the highest intensity of built form at the centre of the zone and lower scale at the peripheral zone interface.			Supported.
PO 4.1	Land division that creates allotments that vary in size and are suitable for a variety of business and community facilities.			Not Supported. Fails to address the character of the area, pattern of development, building setbacks.
PO 5.1	Freestanding advertisements that identify the associated business without creating a visually dominant element within the locality. DTS 5.1 Freestanding advertisements that: a) do not exceed 8m in height; and b) do not have a sign face that exceeds 6m2 per side			Not Supported. Contrary to current advertising policies. Height is too high for the area and sign face is too large for the prevailing character of the area.
PO 6.1	Development is compatible with the outcomes sought by any relevant Concept Plan contained within the Concept Plans Technical and Numeric Variation Overlay			Supported

General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	This Zone will primarily contain medium to high scale residential development supported by a mix of shops, personal services, restaurants, cafés, and community and hospitality uses.	2	City Frame Sub-Zone DO 1	
	The mix of complementary land uses will extend activity into the evening to enhance the vibrancy and safety of the area, particularly the adjacent Park Lands and Whitmore and Hurtle Squares, which offer a high level of amenity. Small-scale licensed entertainment premises, nightclubs or bars may occur in limited numbers where they are designed and sited to maintain day and evening activation at street level. Development will include residential and mixed use residential buildings that are well connected to nearby public transport networks, including the tramline.	2	City Frame Sub-Zone PO 1.3	City Frame Sub-Zone PO 1.3 should be reworded as follows to better suit the scale of land use in the area. "Small-scale licensed entertainment premises, nightclubs or bars may occur in limited numbers where it is located and or designed in a manner that does not unreasonably impact negatively upon adjacent residential land uses."
	The location and scale of buildings will achieve high quality urban design outcomes, with the highest built form located along South Terrace facing the Park Lands with a slightly lower built form framing the Squares. Development on key corner sites at the entrances to the City grid and Squares will create landmark buildings that provide a strong built form edge and pedestrian scale detailing to both street frontages.	5		Important design elements that form an important part of the character of the City. This policy is not addressed anywhere else in the Code and should be included within the Built Form and Character policies of the Capital City Zone.
	Buildings will have minimal or no setback and provide tall walls when viewed from the main road frontage to achieve a consistent built form façade. Landscaping and small variations in front setback will assist in softening the continuous edge of new built form and provide a higher amenity streetscape and pedestrian environment which is shaded by street trees and other mature vegetation.	2	City Frame Sub-Zone PO 2.1	
	Buildings will have a strong horizontal emphasis with clearly defined and segmented vertical elements. At street level, the use of solid materials will be appropriately balanced with glazed areas to provide visual interest and activity. Tall façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades, canopies, fenestration and balconies that make use of light and shade. An interesting pedestrian environment and human scale at ground level which integrates well with the Park Lands and Squares will be created.	5		
	Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate growth in the residential population of the City, while also activating the public realm and creating a vibrant main street feel. A range of land uses will be provided that add to the range of local employment opportunities and the availability of services and shopping facilities within the main street.	?		Is there anything that replaces the catalyst site policies
	Development on catalyst sites will exemplify quality and contemporary design that is generally greater in height, or intensity, than its surroundings. However, development will be designed to carefully manage the interface with sensitive uses in the City Living Zone, particularly with regard to massing; proportions; overshadowing; traffic and noise related impacts.	?		Is there anything that replaces the catalyst site policies
Policy Objectives				
1	Development that contains a mix of uses including shops, offices and commercial development at lower floors with residential land uses above with views to the Park Lands and Squares.	2	City Frame Sub-Zone DO 1 and DTS/DPF 1.1	
2	Development that creates a strong edge to the Park Lands and Squares.	2	Capital City Zone PO 3.3, PO 3.7	
3	A uniform streetscape established through a largely consistent front setback and tall, articulated building façades.	2	City Frame SubZone PO 2.1	
4	Development that creates a high quality public realm that promotes walking, cycling, public transport patronage and social interaction.	2	Capital City Zone PO 6.1	
5	An area that allows people to work, shop and access a range of services close to home.	2	City Frame SubZone DO 1	
6	Adaptable and flexible building designs that can accommodate changes in use and respond to changing economic and social conditions.	5		Include building adaptability is important for the sustainable re-use of our city buildings.

Number	Description	Transition category	Where has it been included?	Comments
7	A built form that provides a transition down in scale and intensity at the Zone's boundaries to maintain the amenity of properties located within the adjoining City Living Zone.	5	Capital City Zone PO 5.1	The Code changes the policy from land use and built form to just land use. PO 5.1 should be reworded as follows: "Development designed to manage the interface with the City Living Zone in relation to building height, overshadowing, massing, building proportions and traffic impacts and by avoiding land uses, or intensity of land uses, that adversely affect residential amenity."
8	Development that contributes to the Desired Character of the Zone.	4		
Principles of Development Control				
Land Use				
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Hotel Indoor recreation centre Licensed entertainment premises Office Pre-school Primary school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	2	Capital City Zone PO 1.1 and City Frame SubZone DTS/DPF 1.1	Retain as is. Now includes Personal or domestic Service establishment. No longer includes specific reference to Affordable housing, Aged persons accommodation, Community centre, Dwelling, Educational establishment, Pre-school, Primary school, Residential flat building, Supported accommodation Tourist accommodation. Aged persons housing replaced by supported accommodation. Dwelling, Tourist accommodation, Residential Flat Building and an, Education Establishment has been included in the Capital City Zone. The intent of the policy is retained
2	Development should comprise wholly residential buildings or mixed use buildings with non-residential development at the ground/first floor level and residences above.	2	City Frame Sub-Zone DTS/DPF 1.1(a)	
3	Development should reinforce the area as predominantly residential, with non-residential land uses comprising no more than 40 percent of any new building.	2	City Frame Sub-Zone DTS/DPF 1.1(a) and (b)	
4	Non-residential development should occur as part of a mixed use building and comprise uses that: (a)are of a role and function appropriate for the Zone; (b)encourage walking and cycling to local shopping, community services and other activities; and (c)do not detrimentally impact on the amenity of nearby residents.	2	City Frame Sub-Zone DTS/DPF 1.1(a) and (b)	
5	Licensed entertainment premises, nightclubs or bars should be small in scale, secondary to the primary land use mix in each street and not detract from the street's daytime activation.	2	City Frame Sub-Zone PO 1.3	
6	Development listed as non-complying is generally inappropriate.	4		
Form and Character				
7	Development should be consistent with the Desired Character for the Zone.	4		
Design and Appearance				
8	The finished ground floor level of buildings should be at grade and/or level with the footpath to provide direct pedestrian access and street-level activation.	5		This has not been included or addressed within the Zone or General Development Policies. It is important the ground floor level of buildings are at grade or level with the footpath to ensure accessibility into buildings.
9	Pedestrian shelter and shade should be provided over footpaths through the use of continuous structures such as awnings, canopies and verandahs.	2	General Development Policies - Design in Urban Areas PO 1.2	
10	The ground floors of buildings should have a minimum floor to ceiling height of 3.5 metres to allow for adaptation to a range of land uses including shops, cafés, restaurants or offices without the need for significant alterations to the building.	5		This policy is important as it allows for the future adaption of a range of uses within ground floor tenancies and should be included within the Code.
11	A minimum of 70 percent of the ground floor primary frontage of buildings should be visually permeable, transparent or clear glazed to help create active street frontages and maximise passive surveillance.	2	City Frame SubZone DTS/DPF 2.2	
12	Buildings on sites with a frontage greater than 10 metres should be articulated through variations in forms, materials, openings and colours.	2	General Development Policies - Design in Urban Areas PO 1.1	
13	Buildings should be designed to overlook or be orientated towards the Park Lands and Squares and pedestrian and cycle routes.	2	City Frame SubZone PO 2.2	
Building Height				

Number	Description	Transition category	Where has it been included?	Comments
14	Except where the airport's operations require a lesser height or the development is located on a site greater than 1500 square metres (which may include one or more allotment), building height should not exceed: (a)36 metres south of Gilles and Gilbert streets; and (b)29 metres north of Gilles and Gilbert streets.	2	Consistent Maximum Height TNV Overlay	
15	Development should have the following minimum building height to provide optimal height and floor space yields that activate and frame the Park Lands and Squares: (a)4 storeys or more south of Gilles and Gilbert streets; (b)3 storeys or more north of Gilles and Gilbert streets.	5	TNV Overlay	Minimum heights are not specified in Height TNV Overlay?
Setbacks				
16	Buildings (excluding verandahs, porticos and the like) should generally be built to the primary road frontage.	5		Include within Capital City Zone under Built Form and Character heading.
17	Development on land directly abutting the City Living Zone should avoid tall, sheer walls at the interface by ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper levels.	2	Partly covered in Capital City Zone PO 5.2 and DTS/DPF 5.2	Where are provisions made for the setback? e.g ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper level
Catalyst Sites				
18	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium to high scale residential development that is carefully integrated with non-residential development.	?		Is there anything that replaces the catalyst site policies
19	Catalyst sites should be developed to manage the interface with the City Living Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	?		Is there anything that replaces the catalyst site policies
20	Parts of a development on a catalyst site that exceed the prescribed maximum building height that applies to non-catalyst sites in the zone, and that are directly adjacent to the City Living Zone boundary (or site boundaries with respect to the City Living Zone South and East Terrace Policy Areas) should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	?		Is there anything that replaces the catalyst site policies
21	Catalyst sites should contribute to the vibrancy of the main street through building designs that: (a)include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b)create the appearance of narrow frontages and enhance visual interest; (c)are vertically massed; and (d)include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	?		Is there anything that replaces the catalyst site policies
22	The scale of development on a catalyst site should respond to its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	?		Is there anything that replaces the catalyst site policies
23	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	?		Is there anything that replaces the catalyst site policies
Car Parking				
24	Car parking should be provided in accordance with Table Adel/7 and be ancillary to an approved or existing use.	5		No reference has been made to the car parking requirements. Include Car parking Table
Land Division				
25	Land division should occur only where new allotments are of a size and configuration that will ensure the objectives of the Zone can be achieved.	2	General Development Policies - Land Division in Urban Area PO 1.1	
Procedural Matters				
Complying Development				
26	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following forms of development are designated as complying subject to the conditions contained in Table Adel/7 – On-site Car Parking Provisions: (a)change in the use of land from residential to office on the ground or first floor of a building; or (b)change in the use of land from residential to a shop (other than a licensed premises) with a gross leasable floor area of less than 250 square metres on the ground floor of a building.	4		
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
27	<p>The following forms of development are non-complying:</p> <p>(a)A change of use to any of the following: Adult entertainment premises Adult products and services premises Industry Fuel depot Office not in association with residential development Petrol filling station Public service depot Road transport terminal Service trade premises Store Transport depot Vehicle parking except where it is ancillary to an approved or existing use Warehouse Waste reception storage treatment and disposal (b)Total demolition of a State Heritage Place (as identified in Table Adel/1).</p>	4		
Public Notification				
28	<p>Categories of public notification are prescribed in Schedule 9 of the Development Regulations 2008. In addition, the following forms of development, or any combination thereof (except where the development is non-complying) are assigned:</p> <p>(a)Category 1, public notification not required: Advertisement Aged persons accommodation All forms of development that are ancillary and in association with residential development Consulting room Community centre Dwelling Educational establishment Office in association with residential development Pre-school Primary school Restaurant Residential flat building Retirement village Shop or group of shops Supported accommodation Tourist accommodation</p> <p>(b)Category 2, public notification required. Third parties do not have any appeal rights: (i)All forms of development not assigned Category 1. (ii)Any form of development assigned Category 1 where the site of the development is adjacent land to land in the City Living Zone or Adelaide Historic (Conservation) Zone and it exceeds 22 metres in building height. (iii)Any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds 36 metres in building height south of Gilles and Gilbert streets, or 29 metres in building height north of Gilles and Gilbert streets.</p> <p>Note: For Category 3 development, public notification is required. Third parties may make written</p>	4

Include the following new policy within Design in Urban Areas GDP [All Development] under a new heading 'Building Adaptability'.</p> <p><i>PO</i> Buildings designed to be adaptable and flexible to allow for a range of land uses without the need for significant alterations to the building and respond to changing economic and social conditions.</p> <p><i>DTS/DPF</i> Ground floor level of buildings have a minimum floor to ceiling height of 3.5 metres.</p>
7	A built form that provides a transition down in scale and intensity at the Zone's boundaries to maintain the amenity of properties located within the adjoining City Living Zone.	5	Capital City Zone PO 5.1	<p>The Code changes the policy from land use and built form to just land use. PO 5.1 of the Capital City Zone should be amended as follows:</p> <p><i>"Development designed to manage the interface with the City Living Zone in relation to building height, overshadowing, massing, building proportions and traffic impacts and by avoiding land uses, or intensity of land uses, that adversely affect residential amenity."</i></p>
8	Development that contributes to the Desired Character of the Zone.	4		
Principles of Development Control				
Land Use				
1	The following types of development, or combinations thereof, are envisaged in the Zone: Affordable housing Aged persons accommodation Community centre Consulting room Dwelling Educational establishment Hotel Indoor recreation centre Licensed entertainment premises Office Pre-school Primary school Residential flat building Restaurant Retirement village Shop or group of shops Supported accommodation Tourist accommodation.	2	Capital City Zone PO 1.1 and City Frame SubZone DTS/DPF 1.1	<p>Retain as is.</p> <p>Now includes Personal or domestic Service establishment.</p> <p>No longer includes specific reference to Affordable housing, Aged persons accommodation, Community centre, Dwelling, Educational establishment, Pre-school, Primary school, Residential flat building, Supported accommodation Tourist accommodation. Aged persons housing replaced by supported accommodation. Dwelling, Tourist accommodation, Residential Flat Building and an, Education Establishment has been included in the Capital City Zone.</p> <p>The intent of the policy is retained</p>
2	Development should comprise wholly residential buildings or mixed use buildings with non-residential development at the ground/first floor level and residences above.	2	City Frame Sub-Zone DTS/DPF 1.1(a)	
3	Development should reinforce the area as predominantly residential, with non-residential land uses comprising no more than 40 percent of any new building.	2	City Frame Sub-Zone DTS/DPF 1.1(a) and (b)	
4	Non-residential development should occur as part of a mixed use building and comprise uses that: (a)are of a role and function appropriate for the Zone; (b)encourage walking and cycling to local shopping, community services and other activities; and (c)do not detrimentally impact on the amenity of nearby residents.	2	City Frame Sub-Zone DTS/DPF 1.1(a) and (b)	

Number	Description	Transition category	Where has it been included?	Comments
5	Licensed entertainment premises, nightclubs or bars should be small in scale, secondary to the primary land use mix in each street and not detract from the street's daytime activation.	2	City Frame Sub-Zone PO 1.3	
6	Development listed as non-complying is generally inappropriate.	4		
Form and Character				
7	Development should be consistent with the Desired Character for the Zone.	4		
Design and Appearance				
8	The finished ground floor level of buildings should be at grade and/or level with the footpath to provide direct pedestrian access and street-level activation.	5		This has not been included or addressed within the Zone or General Development Policies. It is important the ground floor level of buildings are at grade or level with the footpath to ensure accessibility into buildings and it is recommended the following: <i>The finished ground floor level of buildings designed to be at grade and/or level with the footpath to provide direct pedestrian access and street level activation.</i>
9	Pedestrian shelter and shade should be provided over footpaths through the use of continuous structures such as awnings, canopies and verandahs.	2	General Development Policies - Design in Urban Areas PO 1.2	
10	The ground floors of buildings should have a minimum floor to ceiling height of 3.5 metres to allow for adaptation to a range of land uses including shops, cafés, restaurants or offices without the need for significant alterations to the building.	5		This policy is important as it allows for the future adaption of a range of uses within ground floor tenancies and should be included within the Code. <i>PO</i> <i>Buildings designed to be adaptable and flexible to allow for a range of land uses without the need for significant alterations to the building and respond to changing economic and social conditions.</i> <i>DTS/DPF</i> <i>Ground floor level of buildings have a minimum floor to ceiling height of 3.5 metres.</i>
11	A minimum of 70 percent of the ground floor primary frontage of buildings should be visually permeable, transparent or clear glazed to help create active street frontages and maximise passive surveillance.	2	City Frame SubZone DTS/DPF 2.2	
12	Buildings on sites with a frontage greater than 10 metres should be articulated through variations in forms, materials, openings and colours.	2	General Development Policies - Design in Urban Areas PO 1.1	
13	Buildings should be designed to overlook or be orientated towards the Park Lands and Squares and pedestrian and cycle routes.	2	City Frame SubZone PO 2.2	
Building Height				
14	Except where the airport's operations require a lesser height or the development is located on a site greater than 1500 square metres (which may include one or more allotment), building height should not exceed: (a)36 metres south of Gilles and Gilbert streets; and (b)29 metres north of Gilles and Gilbert streets.	2	Consistent Maximum Height TNV Overlay	
15	Development should have the following minimum building height to provide optimal height and floor space yields that activate and frame the Park Lands and Squares: (a)4 storeys or more south of Gilles and Gilbert streets; (b)3 storeys or more north of Gilles and Gilbert streets.	5	TNV Overlay	ERROR - Minimum heights are not specified in Height TNV Overlay?
Setbacks				
16	Buildings (excluding verandahs, porticos and the like) should generally be built to the primary road frontage.	5		Buildings built to the front property boundary are an important characteristic of the City and this characteristic should be reinforced through policy. It is recommended the following policy be included within Capital City Zone under the heading 'Built Form and Character': <i>Buildings aligned and built to the street frontage (excluding verandahs, porticos and the like), except where a setback is required to provide a contextual response to a heritage place.</i>
17	Development on land directly abutting the City Living Zone should avoid tall, sheer walls at the interface by ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper levels.	2	Partly covered in Capital City Zone PO 5.2 and DTS/DPF 5.2	Where are provisions made for the setback? e.g ensuring walls greater than 3 metres in height are set back at least 2 metres from the rear allotment boundary with further articulation at the upper level

Number	Description	Transition category	Where has it been included?	Comments
Catalyst Sites				
18	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be comprised of medium to high scale residential development that is carefully integrated with non-residential development.	?		Is there anything that replaces the catalyst site policies
19	Catalyst sites should be developed to manage the interface with the City Living Zone with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	?		Is there anything that replaces the catalyst site policies
20	Parts of a development on a catalyst site that exceed the prescribed maximum building height that applies to non-catalyst sites in the zone, and that are directly adjacent to the City Living Zone boundary (or site boundaries with respect to the City Living Zone South and East Terrace Policy Areas) should be designed to minimise visual impacts on sensitive uses in the adjoining zones and to maintain the established or desired future character of the area. This may be achieved through a number of techniques such as additional setback, avoiding tall sheer walls, centrally locating taller elements, providing variation of light and shadow through articulation to provide a sense of depth and create visual interest, and the like.	?		Is there anything that replaces the catalyst site policies
21	Catalyst sites should contribute to the vibrancy of the main street through building designs that: (a)include a mix of land uses that create activity and overlooking of the street, particularly at the ground and first floor; (b)create the appearance of narrow frontages and enhance visual interest; (c)are vertically massed; and (d)include above street level fenestration, balconies, parapets, architectural detailing and ornamentation which contribute to the rich visual texture.	?		Is there anything that replaces the catalyst site policies
22	The scale of development on a catalyst site should respond to its context, particularly the nature of adjacent land uses and the interface treatments required to address impacts on sensitive uses.	?		Is there anything that replaces the catalyst site policies
23	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	?		Is there anything that replaces the catalyst site policies
Car Parking				
24	Car parking should be provided in accordance with Table Adel/7 and be ancillary to an approved or existing use.	4		
Land Division				
25	Land division should occur only where new allotments are of a size and configuration that will ensure the objectives of the Zone can be achieved.	2		General Development Policies - Land Division in Urban Area PO 1.1
Procedural Matters				
Complying Development				
26	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following forms of development are designated as complying subject to the conditions contained in Table Adel/7 – On-site Car Parking Provisions: (a)change in the use of land from residential to office on the ground or first floor of a building; or (b)change in the use of land from residential to a shop (other than a licensed premises) with a gross leasable floor area of less than 250 square metres on the ground floor of a building.	4		
Non-Complying Development				
27	The following forms of development are non-complying: (a)A change of use to any of the following: Adult entertainment premises Adult products and services premises Industry Fuel depot Office not in association with residential development Petrol filling station Public service depot Road transport terminal Service trade premises Store Transport depot Vehicle parking except where it is ancillary to an approved or existing use Warehouse Waste reception storage treatment and disposal (b)Total demolition of a State Heritage Place (as identified in Table Adel/1).	4

Public Notification				
28	<p>Categories of public notification are prescribed in Schedule 9 of the Development Regulations 2008. In addition, the following forms of development, or any combination thereof (except where the development is non-complying) are assigned:</p> <p>(a)Category 1, public notification not required:</p> <ul style="list-style-type: none"> Advertisement Aged persons accommodation All forms of development that are ancillary and in association with residential development Consulting room Community centre Dwelling Educational establishment Office in association with residential development Pre-school Primary school Restaurant Residential flat building Retirement village Shop or group of shops Supported accommodation Tourist accommodation <p>(b)Category 2, public notification required. Third parties do not have any appeal rights:</p> <ul style="list-style-type: none"> (i)All forms of development not assigned Category 1. (ii)Any form of development assigned Category 1 where the site of the development is adjacent land to land in the City Living Zone or Adelaide Historic (Conservation) Zone and it exceeds 22 metres in building height. (iii)Any development on a catalyst site (a site greater than 1500 square metres, which may include one or more allotment) that exceeds 36 metres in building height south of Gilles and Gilbert streets, or 29 metres in building height north of Gilles and Gilbert streets. <p>Note: For Category 3 development, public notification is required. Third parties may make written</p>	4		
NEW CONTENT IN THE CODE (insert below)				
City Frame SubZone - no new policy different to existing policy.				

Zone	I1 Insttutional (St Andrew's) Zone		1 - Included in the Code and retains same policy intent	6%
Policy area(s)			2 - Wording changed but policy intent remains (OK)	6%
			3 - Included in the Code but policy intent changed (NOT OK)	3%
			4 - Not included in the Code but OK to remove	35%
			5 - Not included in the Code and should be reinstated	48%
General comments	Now a Community Facilities Zone (CFZ) There are no subzones. The DPTI map we were supplied indicates that the boundary of the former I1 Zone and the new CFZ are the same.			
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The zone will primarily accommodate medical related activity, including a major city hospital supported by a range of medical services and other uses that provide services and facilities for staff, patients and visitors, along with independent medical and allied health facilities. The zone may also accommodate residential development and small scale shops and cafes, primarily as part of mixed use buildings.	3	Zone DO1, PO1, DTS 1.1	The new Zone calls for public and private community, educational, recreational and health care facilities.
	The Zone will be developed with buildings of medium scale which are suitable for the intended use. The location and scale of buildings will achieve high quality urban design outcomes.	2	Zone PO2.1 DTS 2.1 refers to the TNV	There is a shift in emphasis in the new zone from mainly health with residential and mixed use, to a broader range of commercial land uses as well as educational and recreational land uses. New Zone seeks low to medium rise buildings. TNV says max building height is 15m. TNV says max building height in storeys is 4 storeys. High quality outcomes would be covered in the Design in Urban Areas GDP.
	Development will respect the setting and form of the prevailing built form character within the Zone. Buildings will have a strong horizontal emphasis with clearly defined and segmented vertical elements. At street level, the use of solid materials will be appropriately balanced with glazed areas to provide visual interest and activity. Tall façades will be well articulated with finer details that contribute positively to the public realm, including modelled façades and fenestration that make use of light and shade. An interesting pedestrian environment and human scale at ground level which integrates well with the Park Lands will be created.	2	PO3.1	The new Zone states that buildings mitigate visual impacts of building massing on residential development within a neighbourhood zone. Is the reference to a neighbourhood zone a mistake? INSERT policy on built form if specific to this locality.
	Buildings will respond to heritage places through contemporary designs that include variations in façade treatments and building materials, as well as the use of modulated roof forms and parapets that contribute to a varied and interesting pedestrian environment. The location and scale of buildings will achieve high quality urban design outcomes.	5	Not included	INSERT policy on built form and its response to heritage places if specific to this locality.
	Non residential land uses will be located on the ground and lower levels of new buildings. Any residential uses will primarily be located on the upper levels of a building.	5	Not included	As residential is not an envisaged land use, no guidance is provided on where the residential should be supplied.
	Vehicle access will be primarily for local traffic and visitors. Pedestrian amenity will be maintained through provision of street trees and landscaping. An interesting pedestrian environment and human scale at ground level which integrates well with the Park Lands will be created. Access to the South Park Lands will continue to be readily available and safe.	4		The first sentence is not achievable in the planning system. The remainder is not 'development'.
	Catalyst sites provide opportunities for integrated developments on large sites to assist in the transformation of a locality. Such developments will facilitate investment and expansion of City services. Development on catalyst sites will exemplify quality and contemporary design that is generally greater in height, or intensity, than its surroundings. However, development will be designed to carefully manage the interface with sensitive uses in adjoining zones, particularly with regard to massing, proportions, overshadowing, and traffic and noise related impacts.	4	Not included	Catalyst site provisions are not included in the new CFZ. There were in the Institutional I1 Zone, but have been deleted.
		4	Not included	Catalyst site provisions are not included in the new CFZ. There were in the Institutional I1 Zone, but have been deleted.
Policy Objectives				
1	A Zone primarily accommodating a hospital, clinical and health training, and allied research and educational facilities, along with independent medical and allied health facilities.	4	Zone DO1, PO1, DTS 1.1	Desired land uses have been covered in earlier new Zone policy.
2	Development that strengthens, achieves and is consistent with the desired character of the Zone.	4		
Principles of Development Control				
Land Use				

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combinations thereof, are envisaged in the Zone: Aged Persons Accommodation Child Care Facility Consulting room Dwelling Educational establishment Health Centre Hospital Office Restaurant, café or kiosk Shop	5	Zone DO1, PO1, DTS 1.1	The new Zone land uses have been identified in the nominated Pos etc and this makes clear that residential land uses, child care facilities, educational establishment, shops, restaurant have been deleted. Do we agree with that shift in desired land uses? The history is that it was part of the Residential/Mainstreet DPA but then underwent a Ministerial DPA to become an Institutional Zone. There is disagreement in the team as to whether residential land uses should be re-established or not.
2	Development listed as non-complying is generally inappropriate.	4		
3	Development may include small-scale shops, cafés restaurants or kiosks, located at ground or lower building floor levels to increase street level activity facing the Park Lands and service the local community.	5		This policy only applies with residential land uses. The above comments apply.
4	New residential development should primarily be part of a mixed use building, and be located on the upper floors.	5		As above.
Design and Appearance				
5	Development should incorporate design measures that provide a transition between the higher intensity development in this Zone and the lower intensity development in the City Living Zone or Adelaide Historic (Conservation) Zone.	1	DTS3.1, PO3.2, DTS3.2	The new Zone incorporates the overshadowing drawings found in the Dev Plan.
Built Form				
6	Development should have regard to the siting of existing buildings. Development on sites greater than 1500 square metres (which may include one or more allotment) in area can be greater in intensity and scale of built form.	4	Not included	As stated Catalyst site provisions have been deleted.
7	Buildings should be articulated to reduce the apparent bulk of large scale development. Development should be massed, and detailed, so as not to produce monumental or imposing forms and achieve a more intimate and human-scaled environment.	5	Not included	INSERT policy on built form.
8	Except for the St Andrew's Hospital site (incorporating Town Acres 657, 658, 665, 666, together with past Town Acres 659 and 664) or development on sites greater than 1,500 square metres in area (which may include one or more allotment), buildings should not exceed 15 metres in building height. For the St Andrew's Hospital site (incorporating Town Acres 657, 658, 665, 666 together with part Town Acres 659 and 664), the following design elements should be created:	1	Zone PO2.1 DTS 2.1 refers to the TNV	INSERT policy on built form on the St Andrews site.
9	(a)A unifying urban design theme of a hospital complex set in landscaped grounds, with increasing building height being set away from boundaries in order to manage the interface with residential development with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity. (b)Facades of buildings with street frontage should be articulated and detailed and avoid highly reflective finishes. The redevelopment or the upgrading of discordant facades should be undertaken concurrent with new development. (c)The design of buildings adjacent to Gilles Street, Vincent Street and St John's Lane should complement the streetscape character with regard to scale, massing, siting, composition and architectural detail. (d)Any multi-decked car park facades should be designed to complement and integrate with the hospital complex when viewed from adjacent streets, restrict noise levels at the boundary, minimise light spill into adjacent residential properties and minimise overlooking. (e)Fencing should be a consistent and unifying theme around the site. Hedges may be preferable along Gilles Street and unification of the style of stone walling along South Terrace is appropriate. (f)No further building encroachments into the curtilage of Waverly House should occur.	5		
Catalyst Sites				
10	Development on catalyst sites (sites greater than 1500 square metres, which may include one or more allotment) should be medium to high scale.	4	Not included	
11	Catalyst sites should be developed to manage the interface with residential development with regard to intensity of use, overshadowing, massing, building proportions and traffic to minimise impacts on residential amenity.	4	Not included	As stated Catalyst site provisions have been deleted.
12	The scale of development on a catalyst site should respond to its context, particularly the nature of the adjacent land uses and the interface treatments required to address impacts on sensitive uses.	4	not included	As stated Catalyst site provisions have been deleted.
13	Where there is an apparent conflict between the catalyst site principles and Zone or Council Wide objectives and principles (including the quantitative provisions) the catalyst site principles will take precedence.	4	not included	As stated Catalyst site provisions have been deleted.

Number	Description	Transition category	Where has it been included?	Comments
Car Parking and Access				
14	Vehicle access should minimise any disruption to the continuity of footpaths and street trees and maintain existing streetscapes.	5	not included	INSERT policy on specific vehicle access arrangements for this locality.
15	Except for the St Andrew's Hospital site (incorporating Town Acres 657, 658, 665, 666 together with part Town Acres 659 and 664), vehicle access should be obtained from South Terrace where possible. Access to the St Andrew's Hospital site (incorporating Town Acres 657, 658, 665, 666 together with part Town Acres 659 and 664) resulting from any additional traffic generation associated with an expansion or intensification of development should be provided off South Terrace or Gilles Street. This should not be through the curtilage of Waverly House. Access from Vincent Street and additional access or intensification of access from or to St John Lane is inappropriate.	5	not included	INSERT policy on specific vehicle access arrangements for this locality.
16	Car parking should be provided to serve all non-residential development and located behind buildings wherever possible.	5	not included	INSERT policy on specific vehicle access arrangements for this locality.
17	A lesser car parking rate than prescribed for the zone in Table Adel/7 may be applied where justified based on local circumstances, for example where: (a)sites are located within 200 metres walking distance of a convenient and frequent service fixed public transport stop (including a bus stop); (b)mixed use development including residential and non-residential development has respective peak demands for parking occurring at different times; (c)the proposed development is on or adjacent to the site of a heritage place, or includes retention of a desired traditional building and its features, which hinders the provision of on-site parking (d)suitable and conveniently located parking is available elsewhere, for example through: (i)existing or proposed on-street parking; (ii)an existing or proposed parking station, multi-level car park or similar; (iii)an integrated and/or shared parking arrangement with other land.	5	not included	INSERT policy on specific vehicle access arrangements for this locality.
18		5	not included	INSERT policy on specific vehicle access arrangements for this locality.
Advertising				
19	Advertisements should be restrained in design and simple in use of colour and should seek to achieve a coherent and complementary image for the zone.	5	not included	INSERT policy on advertising for commercial premises in this locality.
20	Illumination of advertisements and directional signs should be restricted to the level necessary to achieve identification at night and not detract from residential amenity.	5	not included	see above
Procedural Matters				
Complying Development				
21	Complying developments are prescribed in Schedule 4 of the Development Regulations 2008. In addition, the following kinds of development are designated as complying: (a)Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i)dust control; (ii)screening, including landscaping; (iii)containment of litter and water; and (iv)securing the site.			Table 1 - Accepted development (with exceptions) includes building work on railway land, internal building work, private bushfire shelters, shade sail, solar panels, spas and swimming pools and water tanks (above and below ground.) Table 2 - DTS includes ads. As there is no HAO, ads will be DTS but for when occurring on the SHP or any LHPS in the locality. There may be concerns about the impacts of illuminated advertising on the Gilles St residents. Table 3 - PA includes ads, demo of a SHP or LHP, demo in a HAO or SHO (which won't apply) , tree damaging and all other Code assessed dev. Therefore most of the development likely to occur will be PA and publicly notified.
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
22	<p>The following kinds of development are non-complying:</p> <p>(a)A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Car park except where ancillary to an approved or existing use Cinema Hotel Indoor recreation centre Industry Licensed entertainment premises Licensed premises Service trade premises Tourist Accommodation Theatre Warehouse</p> <p>(b)Total demolition of a State Heritage Place (as identified in Table Adel/1). (c)Total demolition of a Local Heritage Place (City Significance) or of the frontage and side wall returns visible from the street of a Local Heritage Place (Townscape). (d)Total demolition of a Local Heritage Place, or that portion of a Local Heritage Place comprising its Elements of Heritage Value. (e)Advertisements involving any of the following: (i)Animation (ii)Third party advertising (iii)Advertisements at roof level where the sky or another building forms the background when viewed from ground level.</p>			<p>Table 4 - Restricted development. None are specified.</p> <p>Are the policies strong enough to refuse the land uses that have previously been non complying?</p> <p>INSERT policy on desired and not desired land uses for this Zone.</p> <p>INSERT policy on advertising if not covered in the GDP.</p>
Public Notification				
23	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a)Category 1, public notification not required: Advertisements (except those classified as non-complying) Aged Persons Accommodation Child Care Facility Consulting room Dwelling Educational establishment Health Centre Hospital Office Restaurant Shop Temporary accommodation for hospital workers and family members of hospital patients.</p> <p>(b)Category 2, public notification required, third parties may, at the discretion of the relevant planning authority, appear before the relevant planning authority on the matter. Third parties do not have appeal rights: (i)all forms of development not assigned Category 1; (ii)any form of development assigned Category 1 where it exceeds 15 metres in building height.</p> <p>Note: For Category 3 development, public notification is required. Third parties may make written representations, appear before the relevant authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>			<p>The new Zone says all classes of development are excluded from notification except where it involves any of the following: (a) the site of the development is adjacent land to land in a different zone (b) development identified as "all other code assessed development" in Community Facilities Zone Table 3</p>
NEW CONTENT IN THE CODE (insert below)				
	<p>PO 1.2 Integration and coordination of adjoining land uses to enhance accessibility and efficiency in service delivery.</p>			

Number	Description	Transition category	Where has it been included?	Comments
	PO 1.3 Development avoids inhibiting or prejudicing future delivery of community, educational, recreational or health care services. The major change is that residential is not a desired land use in the zone anymore. Catalyst site provisions are not included in the new CFZ. There were in the Institutional I1 Zone, but have been deleted.			

Zone Policy area(s)	I2 Institutional (Government House) Zone	1 - Included in the Code and retains same policy intent	0%	
		2 - Wording changed but policy intent remains (OK)	31%	
		3 - Included in the Code but policy intent changed (NOT OK)	38%	
		4 - Not included in the Code but OK to remove	0%	
		5 - Not included in the Code and should be reinstated	31%	
General comments	This zone does not exist in the Draft Code. The spatial extent of this zone is now part of the overall Cultural and institutions Subzone of the Riverbank Zone. Recommend that this zone become the Government House Sub-Zone of the City Riverbank zone as what can occur on the site is quite different to any other area within the City Riverbank Zone.			
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	The Zone will continue to serve vice-regal functions and accommodate uses ancillary to that function. The environmental character of the Zone will remain predominantly landscaped, with no further major development taking place.	5		The vice regal functions of Government House, nor the War Memorial are not recognised in the Cultural Institutions Subzone nor in the Riverbank Zone. Recommend creation of Government House Sub-Zone, or failing that, a Government House subzone of the Riverbank Zone, excluding development types as necessary to accurately replicate the intention of the existing zone. INSERT POLICY as a DO within the new Government House Sub-Zone. Create Government House Sub-Zone which specifically recognises the Vice-Regal functions of Government House and clearly defines the spatial boundaries of Government House. The new Sub-zone should limit land uses which are not ancillary to Vice-Regal e.g. reintroduce Development Plan policy which states "Government House and its ancillary uses are the only desired activities"
	Prince Henry Gardens will continue to provide significant pedestrian shelter and amenity. This avenue of trees and other plantings will be maintained as a contrast to the built form south of North Terrace, through replacement planting wherever necessary. Improvements to the street treatment in this section will be made in the overall context of the concept plan for North Terrace.	5		Prince Henry Gardens are not mentioned in the Cultural Institutions Subzone nor the City Riverbank Zone. INSERT POLICY as a PO within new Government House Sub-Zone under the heading 'Built Form and Character'. There is potential to introduce similar reference to ANZAC memorial on the corner of North Terrace/Kintore Avenue and the Gallipoli Walk along the western side of Kintore Avenue.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Zone.	2		
Principles of Development Control				
Form of Development				
1	Development should strengthen, achieve and be consistent with the desired character for the Zone.	2		
2	Government House and its ancillary uses are the only desired activities.	5		Government House and ancillary uses not mentioned in the City Riverbank Zone nor the Cultural Institutions Subzone. INSERT POLICY as a PO within new Government House Sub-Zone under the heading 'Land Use and Intensity'
Built Form and Public Environment				
3	There should be no substantial or visually intrusive development.	5		The proposed policies for this location are a major departure from this provision. INSERT POLICY as a PO within new Government House Sub-Zone under the heading 'Built Form and Character'.

Number	Description	Transition category	Where has it been included?	Comments
4	Alterations or minor additions to Government House itself and other outbuildings are appropriate, subject to their deference to and conformity with the character of existing buildings in the Government House grounds.	5		The policies in the Cultural Institutions Subzone "Built Form and Character" section are inappropriate and incorrect if there were to be applied to the Government House portion of the Subzone. Potential to delete the phrase ", including the predominant: a) red brick or masonry walls; and b) Slate, shingles, terracotta tiles or copper for exposed roofs" as this is highly inappropriate to be included as a Performance Outcome in the portion of the Subzone which is currently the Institutional (Government House Zone). INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Built Form and Character'
5	Small garden-associated structures such as pavilions, gazebos, or greenhouses are appropriate.	3		This is not specifically included but is addressed in Riverbank Zone PO 2.2 and PO 2.4 and 2.6 INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Built Form and Character'.
6	The establishment and growth of the landscape features of the Zone should not be detrimentally affected by any development.	5		The proposed policies for this location are a major departure from this provision. INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Built Form and Character'.
7	The environmental character of the Zone should continue to be that of a landscaped park as it is the only remaining landscape element of the original Park Lands between the River Torrens and North Terrace.	5		Whole title is understood to be part of the heritage listing. It is concerning that the Riverbank Zone anticipates land division as a "land use". INSERT POLICY - as a DO within a new Government House Sub-Zone.
8	Prince Henry Gardens with its avenue of street trees, high quality paving and lighting along the North Terrace frontage should continue to provide significant pedestrian shelter and amenity. This avenue of trees and other plantings should be maintained as a contrast to the built form south of North Terrace, through replacement planting wherever necessary.	2		Include a PO that recognises the importance of Prince Henry Gardens. INSERT POLICY - Government House Zone - transfer this provision to INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Built Form and Character'
Car Parking and Access				
9	No additional vehicle access points into the Zone should be established.	5		INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Car Parking and Access'.
10	Parking adequate to serve the needs of Government House should be provided on-site, but no other parking should be developed in the Zone.	5		Provisions for parking specific to Government House are not included in the Riverbank Zone nor in the Cultural Institutions Subzone. INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Car Parking and Access'.
Advertising				
11	All advertisements are inappropriate with the exception of integrated free-standing and low free-standing signs, which must be non-illuminated and of minimal size and number.	5		Possibly addressed via the General Development Policies, but the general policies do not specify that all advertisements are inappropriate. Riverbank Zone and Cultural and Institutions subzone does not explicitly exclude this either. Would it be possible to introduce the following Class of Development in Table 2 - Deemed-to-Satisfy Development Classification: "Advertisements which are independently supported and permanently fixed to the ground which are less than 1.5 metres in total height, measured from the mean level of the ground adjacent to the advertisement" - OR Advertisement in this table, with reference in the Cultural and Institutions (or new) Subzone column to a new PO and DTS provision. INSERT POLICY as a PO within a new Government House Sub-Zone under the heading 'Avertisements'.
Procedural Matters				
Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
12	No kinds of development are complying.	5		<p>The Riverbank Zone and Cultural Institutions Subzone introduces many development types, and includes accepted development (internal building work, shade sail, solar panels and underground water tanks, plus deemed to satisfy (change in use in an existing building from a shop to an office or consulting room, and from an office or consulting room to a shop).</p> <p>A government house-specific subzone should be created to enable a clear statement of envisaged land uses, or clear statement of exceptions to envisaged land uses. This could include "all types of development, other than Government House and its ancillary uses" as exceptions to the list of envisaged land uses for the Zone (and apply this to the existing spatial extent of the Insitutional (Government House) Zone. The State and Local heritage aspects of the current policy might be adequately addressed by the State and Local Heritage overlay. Consideration might also be given to a Character Statement for the Riverbank Zone.</p> <p>INSERT THE FOLLOWING POLICY as a PO within a new Government House Sub-Zone under the heading 'Land Use and Intensity':</p> <p><i>"Government House and its ancillary uses are the only desired activities envisaged. All other uses are not envisaged."</i></p>
Non-Complying Development				
13	<p>The following kinds of development are non-complying:</p> <p>(a)All uses other than Government House and its ancillary uses. (b)Total demolition of a State Heritage Place (as identified in Table Adel/1). (c)Total demolition of a Local Heritage Place (City Significance). (d)All advertisements except for independently supported advertisements permanently fixed to the ground which are less than 1.5 metres in total height, measured from the mean level of the ground adjacent to the advertisement.</p>	5	Total demolition of a State and Local heritage place is included in State and Local Heritage overlays?	<p>See comments above. Advertisement provision possibly? addressed via the General Development Policies, but the general policies do not specify that all advertisements are inappropriate. Riverbank Zone and Cultural and Institutions subzone does not explicitly exclude this either.</p> <p>INSERT THE FOLLOWING POLICY as a PO within a new Government House Sub-Zone under the heading 'Land Use and Intensity':</p> <p><i>"Government House and its ancillary uses are the only desired activities envisaged. All other uses are not envisaged."</i></p>
Public Notification				
14	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a)Category 1, public notification is not required: (i)all development, except that classified as non-complying; (ii)non-complying development which, in the opinion of the relevant planning authority, is of a minor nature only and is unlikely to be the subject of reasonable objection from the owners or occupiers of land in the locality of the site of the development.</p> <p>Note: For Category 3 Development, public notification is required. Third parties may make written representations, appear before the relevant authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>	5	Appeal rights are different under the new legislation. Categories of development are different.	<p>Table 1 - Accepted Development - does not require any notification (consistent with current policy - need to check if what is in the table is consistent) Table 2 - Deemed to Satisfy does not require any notification (reasonably consistent with current policy) Table 3 - Applicable Policies for Performance Assessed Development (includes all other Code Assessed Development) - no notification is required if relevant authority considers it minor in nature, otherwise notification of adjacent land by giving notice and by sign on the land - this excludes listing on the Planning Portal Table 4 - Restricted Development - general public by sign on land and planning portal and affected neighbours in writing (The Riverbank Zone does not identify any restricted development)</p> <p>INSERT POLICY - Government House Zone - transfer this provision to new policy format.</p>
NEW CONTENT IN THE CODE (insert below)				
Cultural Institutions Subzone				

Number	Description	Transition category	Where has it been included?	Comments
DO 1	A vibrant cluster of cultural and institution uses including tertiary education, research, libraries and museums that attract students, professionals, workers and visitors to the city.	5		Major change of policy direction, but acceptable that these uses occur nearby. INSERT POLICY - create Government House Sub-Zone which specifically recognises the Vice-Regal functions of Government House and clearly defines the spatial boundaries of Government House. The new zone should limit land uses which are not ancillary to Vice-Regal e.g. reintroduce Development Plan policy which states "Government House and its ancillary uses are the only desired activities"
DO 2	Well designed and functional buildings and public spaces that provide pedestrian and cyclist friendly streetscapes and active street frontages that facilitate positive social interaction.	5		Major change of policy direction, as development is not anticipated. DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone
<i>Land Use and Intensity</i>				
PO 1.1	A diverse range of cultural and institutional uses including tertiary education, research, library, museums and galleries.	3		Current policy is for ONLY government house and vice-regal uses. The proposed policy is a significant departure from current policy. DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Zone
DTS/DPF 1.1	The types of development envisaged in the zone, except: a) convention centre b) entertainment venue c) helicopter landing facility d) hospital e) motel f) serviced apartments g) tourist accommodation	3		The proposed Code introduces the following new development types to this location: advertisement, community centre, consulting room, office, educational establishment, hotel, licensed premises in association with hotel, restaurant, shop or the like, land division, light industry (including high technology and research-based activity), restaurant, shop. INSERT POLICY - as described above
<i>Built Form and Character</i>				
PO 2.1	Development that emphasises the horizontal grouping of building elements and uses vertical proportions in projections and in the disposition openings.	3		This policy doesn't make sense as applied to the Government House buildings and land. The current desired character for this area is for no further major development taking place. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone
DTS/DPF 2.1	None are applicable			
PO 2.2	Buildings with modelled and textured facades of predominantly masonry appearance similar to the early buildings that contribute to the established historical character of the zone.	3		This performance outcome is not consistent with the current zoning and is contradictory to the needs of this location. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Zone
DTS/DPF 2.2	None are applicable			
PO 2.3	Buildings that complement the form, appearance, materials and finishes of existing buildings in the locality, including the predominant: a) red brick or masonry walls; and b) slate, shingles, terra cotta tiles or copper for exposed roofs	3		This policy is a significant change from current policy and is incompatible with the desired character of Government House buildings and land. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone.
DTS/DPF 2.3	None are applicable			

Number	Description	Transition category	Where has it been included?	Comments
PO 2.4	Building heights within the zone that transition down to the Park Lands from the height of existing buildings established along North Terrace.			This policy is not relevant in this location - the built form of government house is set back from north terrace. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone.
DTS/DPF 2.4	Buildings located: a) along road and Park Lands frontages not exceeding 3 building levels and 11.5m in building height; and b) away from road and Park Lands frontages not exceeding 6 building levels and 22m in building height.	3		The current policy doesn't specify maximum building heights and the proposed maximum heights are a significant change from what is currently envisaged in the Institutional (Government House) zone. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone.
PO 2.5	Pleasant and interesting lawn and paved landscaped areas that create spaces suitable for a variety of activities ranging from those suitable for group meetings and social activities to those for quiet retreat and relaxation.	3		This policy appears to be similar, but isn't. The current policy states the establishment and growth of landscape features of the zone should not be detrimentally affected by any development. The new policy, whilst supporting landscaped areas, does not have the same emphasis on protection of existing landscape features from development. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House Sub-Zone.
DTS/DPF 2.5 None are applicable.				
City Riverbank Zone				
Table 1 - Accepted Development Classification				
Table 2 - Deemed-to-Satisfy Development Classification				
Table 3 - Applicable Policies for Performance Assessed Development				
Table 4 - Restricted Development Classification				
		RED MEANS Significant Change		INSERT POLICY - as described above - introduction of restricted development could be needed as it applies to the proposed Government House Sub-Zone INSERT POLICY - introduce new subzone as described above INSERT POLICY - introduce new subzone as described above No classes of development have been classified as restricted in the City Riverbank Zone. Current Government House zone states that all uses other than government house and its ancillary uses are non-complying. INSERT POLICY - as described above - introduction of restricted development is needed as it applies to the proposed Government House Subzone. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
Assessment Provisions (AP)				
Desired Outcome (DO)				
DO 1	Exemplary design quality and architecture that is contemporary and innovative, respectful of the heritage buildings, Park Lands setting and civic functions of the locality. A fine grained precinct with a quality public realm that is inviting and comfortable for pedestrians.	2		
DO 2		NEW		This DO relating to a fine-grained precinct is inconsistent with the Government House Zone policy. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DO 3	Strong visual and physical connections between important buildings, public spaces, the Park Lands and other key destinations.	NEW		
Performance Outcomes and Deemed to Satisfy/Designed Performance Outcome Criteria				
Land Use and Intensity				

Number	Description	Transition category	Where has it been included?	Comments
PO 1.1	A diverse range of land uses that connect the city centre to the natural environment of the River Torrens and Park Lands with clusters of related activities, such as: (a) clinical health, training, education and research; (b) entertainment, tourism and accommodation; (c) education and administration; (d) innovative science and employment; and (e) Community and cultural institutions.	3		These policies introduce a significant range of new development types anticipated in this zone. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
	Development comprises one or more of the following land uses:			
DTS/DPF 1.1	(a) Advertisement	5		Significant change from existing policy which states that all advertisements are inappropriate, except for certain integrated free-standing and low free-standing signs of minimal size and number and non-illuminated.
	(b) Community centre	3		Significant change from existing policy.
	(c) Consulting room	3		Significant change from existing policy.
	(d) Office	3		Significant change from existing policy.
	(e) Convention centre	2		Cultural Institutions subzone states that this use is not envisaged.
	(f) Educational establishment	3		Significant change from existing policy.
	(g) Entertainment venue	2		Cultural Institutions subzone states that this use is not envisaged.
	(h) Helicopter landing facility	2		Cultural Institutions subzone states that this use is not envisaged.
	(i) Hospital	2		Cultural Institutions subzone states that this use is not envisaged.
	(j) Hotel	3		Significant change from existing policy.
	(k) Licensed premises in association with hotel, restaurant, shop or the like	3		Significant change from existing policy.
	(l) Land division	3		Significant change from existing policy.
	(m) Light industry (including high technology and research based activity)	3		Significant change from existing policy.
	(n) Motel	2		Cultural Institutions subzone states that this use is not envisaged.
	(o) Restaurant	3		Significant change from existing policy.
	(p) Shop	3		Significant change from existing policy.
	(q) Serviced apartments	2		Cultural Institutions subzone states that this use is not envisaged.
	(r) Tourist accommodation.	2		Cultural Institutions subzone states that this use is not envisaged.
	Built Form and Character			
PO 2.1	Building heights within the zone providing an orderly transition in scale, with lower buildings located towards the Adelaide Park Lands, Adelaide Botanic Garden and River Torrens and taller buildings towards North Terrace and other City Boulevards identified in City Riverbank Zone Table 5.1.	3		The proposed zone policy is a significant departure from the existing policy in this location and would be likely to result in inappropriate development in this location. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DTS/DPF 2.1	None are applicable			
PO 2.2	Development a) contributes to the activation of the public realm by presenting an attractive human scaled pedestrian-oriented frontage at ground level that adds interest and vibrancy b) contributes to pedestrian comfort by minimising micro climatic impacts c) maintains a sense of openness to the sky for pedestrians and allow sunlight access to the public realm, particularly plaza areas during the Spring and Autumn; and d) provides a clear sense of address to each building.	3		Development is not anticipated in this Zone. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DTS/DPF 2.2	None are applicable			
PO 2.3	Development reinforces the grand boulevard character of North Terrace and King William Road, by reflecting the patterns of landscaped spaces and built form, building proportions and scale.	5		Development is not anticipated in this Zone. INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DTS/DPF 2.3	None are applicable			

Number	Description	Transition category	Where has it been included?	Comments
PO 2.4	Coordinated development providing public spaces and landscaping, including deep plantings, that soften the dominance of buildings, provide a range of spaces that are suitable for group meetings and social activities and spaces for passive enjoyment.	5		Development is not anticipated in this Zone, although this provision is somewhat consistent with PDC 5, 6, 7 and 8.
DTS/DPF 2.4	None are applicable			
PO 2.5	Pedestrian shelter and public art designed as an integral part of built form, open space and landscaping.	2		INSERT POLICY - introduce new subzone as described above
DTS/DPF 2.5	None are applicable			
PO 2.6	The contribution of heritage buildings enhanced by ensuring:	5		The new policy doesn't recognise Government House building and its landscaped setting. It also doesn't recognise the significance and ceremonial use of the War Memorial, and the new Gallipoli Walk is also not recognised.
	(a) buildings can be adapted and reused for modern purposes while protecting important heritage fabric	2		INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
	(b) views and physical connections to heritage buildings and their important heritage features is maintained	5		Reasonably consistent with PDC 4
	(c) the ground level interface with heritage buildings incorporates publicly accessible spaces and active land uses that support public access where appropriate.	2		This would be consistent with PDC 1, however the desired character for this zone has not been transitioned.
DTS/DPF 2.6	None are applicable			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
Advertising				Reasonably consistent with PDC 4
PO 3.1	Advertisements designed to achieve an overall consistency of appearance and be of a type, scale and image that complement the zone.	2		Noting however, that this is a significant change from existing policy which states that all advertisements are inappropriate, except for certain integrated free-standing and low free-standing signs of minimal size and number and non-illuminated.
DTS/DPF 3.1	None are applicable			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
Movement Parking and Access				
PO 4.1	Development designed to encourage pedestrian/bicycle circulation at the North Terrace level and create or maintain:	2		Not included in this zone, but consistent with Council-wide policy direction.
	(a) connections between North Terrace and the River Torrens linear park at key pedestrian focal points;	2		Not included in this zone, but consistent with Council-wide policy direction.
	(b) east-west connections through the city; and	2		Not included in this zone, but consistent with Council-wide policy direction.
	(c) existing pedestrian and cycling connections, including the Gawler Greenway, Outer Harbor Greenway and River Torrens Linear Park trail to be maintained.	2		Not included in this zone, but consistent with Council-wide policy direction.
DTS/DPF 4.1	None are applicable			
PO 4.2	A central pedestrian pathway designed as a single plane surface and maintained to:			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
	(a) allow people to walk and ride through and within the Zone from East to West and connect with the North to South pathways; and			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone

Number	Description	Transition category	Where has it been included?	Comments
	(b) link key buildings and public areas within the Zone.			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DTS/DPF 4.2	None are applicable			
PO 4.3	Pedestrian movement prioritised and designed to be free from vehicle conflict.			INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
DTS/DPF 4.2	None are applicable			
PO 4.4	Development to provide a safe night-time environment along streetscapes, pedestrian and cycle paths and building surrounds by the arrangement of buildings and active building frontages that enhance casual surveillance and provide appropriate lighting and clear lines of sight.			New provision. This proviison attempts to bring in Council-wide CPTED principles.
DTS/DPF 4.4	None are applicable			
Table 5.1 – City Boulevards				INSERT POLICY - introduce new subzone as described above
				Should this table also include Frome Road and Port Road to be consistent with Primary City Access roads in City Road Network Map Adel/1 (Overlay 1)?
	North Terrace, Morphett Street and King William Road.	3		INSERT POLICY - DO NOT INCLUDE GOVERNMENT HOUSE IN CULTURAL INSTITUTIONS SUBZONE - Create new Government House SubZone
Procedural Matters				
	Notification of Performance assessed development Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.	2		
	All classes of development are excluded from notification except where it involves any of the following:			
	(a) the site of the development is adjacent land to land in a different zone	3		All uses other than Government House and ancillary uses are currently non-complying. Category 1 notification applies to development which is not classified as non-complying, or non-complying but minor.
	(b) development identified as “all other code assessed development” in Riverbank Zone Table 3	3		All uses other than Government House and ancillary uses are non-complying. Category 1 notification applies to development which is not classified as non-complying, or non-complying but minor.
	(c) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Health sub zone			Not applicable to I2 Zone
	(d) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Entertainment sub zone			Not applicable to I2 Zone
	(e) development exceeding the maximum building height specified in DTS/DPF 2.3 of the Innovation sub zone			Not applicable to I2 Zone
	(f) development exceeding the maximum building height specified in DTS/DPF 2.4 of the Entertainment sub zone			Not applicable to I2 Zone

Zone	13 Institutional (University/Hospital) Zone		1 - Included in the Code and retains same policy intent	
Policy area(s)			2 - Wording changed but policy intent remains (OK)	
			3 - Included in the Code but policy intent changed (NOT OK)	
			4 - Not included in the Code but OK to remove	
			5 - Not included in the Code and should be reinstated	
Number	Description	Transition category	Where has it been included?	Comments
General Comments	Note that the Hospital portion of the existing zone is currently subject to a Development Plan Amendment for Lot Fourteen which take in the proposed Innovation Subzone.			
Desired Character				
	The Zone will be maintained and enhanced as the cultural and institutional heart of the City. It is South Australia's primary centre for tertiary education, research, medical and cultural institutions and also provides significant leisure and tourism opportunities. Expansion of existing activities will be accommodated by means of sensitive infill development with the construction of new buildings within present sites or on vacant land currently used for car parking, in accordance with coordinated master plans of the major institutions.	5	Cultural Institutions Subzone DO 1	Reference to cultural and institutions heart of the City is not included in City Riverbank Zone. INSERT POLICY - City Riverbank Zone - Cultural Institutions Subzone - to reinforce the desired character statements from the current policy
	The built form and environment of the Zone will maintain a transition between the intense urban form of the Central Business Area and the open landscape of the Torrens Valley. The succession of both landscaped and paved open spaces around and between buildings, the largely pedestrian orientation of the area, the askew siting of buildings as well as their low scale, and consistent style and materials corresponding to major periods of development, has produced a townscape character and quality unlike anything existing or ever likely to be developed within the Town Acres.	2	City Riverbank PO 2.1 to a limited extent. Cultural Institutions Zone PO 2.4	
	The North Terrace frontage is a prime section of the City's 'cultural boulevard' in which the improvement of pedestrian amenity and ease of pedestrian movement across North Terrace will be a priority. Improvements to the northern footpaths will be integrated with redevelopments of the Museum, State Library, Royal Adelaide Hospital and university forecourts to provide greater levels of visibility and access to these buildings. A high level of accessibility will be maintained by public transport and from public car parks off North Terrace.	5		Not sufficiently communicated or reinforced in proposed policy. Cultural Institutions Built Form and Character provisions do not support this desired character statement. INSERT POLICY as a PO within the Cultural Institutions subzone under a new heading 'Access, Car Parking and Movement'.
Policy Objectives				
1	Development that strengthens, achieves and is consistent with the desired character for the Zone.	1		
Principles of Development Control				
Form of Development				
1	Development should strengthen, achieve and be consistent with the desired character for the Zone.	1		

Number	Description	Transition category	Where has it been included?	Comments
2	Desirable uses include art galleries, community centres, conference centres, educational establishments, museums, pre-schools, public libraries, and research laboratories. East of Frome Road, clinics, hospitals and veterinary surgeries are also appropriate.	2	Cultural Institutions SubZone PO 2.1	Convention centre and entertainment venue are currently anticipated in this zone & should be reinstated. The City Riverbank Zone is silent on the following uses which should be reinstated: art gallery, museums, preschool, public library, research laboratory. East of Frome road is currently subject to a DPA to enable Lot Fourteen. Suggest clinics, hospitals and veterinary surgeries are not appropriate for the Innovation Subzone, but could be retained in the Cultural Institutions subzone if this is intended to extend across Frome Road (not currently proposed in P&DC but is proposed in current DPA).
Built Form and Public Environment				
3	Development should be compatible in design with existing buildings and their siting, and should not be detrimental to the amenity of the Zone frontages. Development should maintain the established set-back pattern of alternating buildings and landscaped spaces along North Terrace.	3	City Riverbank PO 2.2 and 2.3	New policy doesn't specifically address established set-back pattern of alternating buildings and landscaped spaces along North Terrace - suggest reinforcing this. INSERT POLICY as a PO within Cultural Institutions Subzone - to reinforce existing PDC 3.
4	Buildings should be dignified and emphasise the horizontal grouping of building elements, although within the design of facades the use of vertical proportions in projections and in the disposition of openings is appropriate.	3	Cultural Institutions SubZone PO 2.1	Cultural Institutions Subzone PO 2.1 rephrases this but misses key information - reinstate. INSERT POLICY: <i>City Riverbank Zone - Cultural Institutions Subzone - PO 2.1 "Development that emphasises the horizontal grouping of building elements, although the use of vertical proportions is appropriate within the design of facades."</i>
5	Buildings should have modelled and textured facades and a predominantly masonry appearance similar to the early university buildings which give the campus its established historical character.	3	Subzone PO 2.2	reinstate reference to university buildings/campus INSERT POLICY: <i>PO 2.2 Buildings with modelled and textured facades of predominantly masonry appearance similar to the early university buildings that contribute to the established historical character of the zone.</i>
6	Building materials should be red brick or masonry for walls and slate, shingles, terra cotta tiles or copper for exposed roofs. The use of ornament and decoration in building facades and roof forms is desirable to ensure that additions are compatible with nearby buildings in form and appearance.	5	Subzone PO 2.3	INSERT Policy to ensure transition of PDC 6 to the P&D Code: INSERT POLICY - City Riverbank Zone Insert after PO 2.3: <i>PO 2.* "Buildings that appropriately use ornament and decoration in building facades and roof forms to ensure that additions are compatible with nearby buildings in form and appearance."</i>

Number	Description	Transition category	Where has it been included?	Comments
7	Within the Hospital area of the Zone, buildings should be articulated to reduce the apparent bulk of large scale development. Development fronting North Terrace should maintain the existing pattern of building form and open space, providing greater grassed or landscaped areas at grade to North Terrace, and should ensure architectural compatibility with the red brick and stucco buildings which extend east from the Frome Road/North Terrace intersection. Development should be less monumental in scale and design than the large buildings constructed in the area in recent decades, and achieve a more intimate and human-scaled environment.	5	Innovation Subzone and City Riverbank Zone	INSERT POLICY - City Riverbank Zone - Innovation Subzone - review policy to ensure the proposed DPA policy and P&DC policy are aligned to achieve the goals sought for this location.
8	Along the North Terrace frontage there should be no diminution of existing landscaped open space between the buildings and the street boundary, unless greater pavement area is required for pedestrians.	5		This policy needs to be reinstated - not currently reinforced in either City Riverbank Zone nor the subzones. INSERT POLICY as a PO within the Cultural Institutions Subzone under the heading 'Built Form and Character'.
9	External additions and infill development between or in front of existing buildings along the frontages of North Terrace, Frome Road (western side), Kintore Avenue and Victoria Drive are generally inappropriate.	5		If this is achieved via provisions relating to "views and physical connections" then OK, but this is not expressly included in the new policies. Consider INSERT POLICY: " <i>Retain open space between or in front of existing buildings along the frontages of North Terrace, Frome Road (western side), Kintore Avenue and Victoria Drive.</i> "
10	The pattern and ratio of building form and open space prevailing in the Hospital area should be maintained.	4		
11	A high level of pedestrian amenity should be maintained in the Zone and night time safety should be improved by additional lighting to pedestrian thoroughfares and major buildings.	1		Addressed via Zone PO 4.4
12	Pedestrian dominance and priority should be maintained west of Frome Road, while in the Hospital area improved separation of pedestrians from vehicle traffic should be achieved.	4		
13	Pedestrian shelter should utilise a combination of planting, through-building links and canopies integrated with buildings. Free-standing pedestrian shelter is undesirable.	1	Zone PO 2.5	Also suggest re-wording as per comment for PDC 14
14	A variety of pleasant and interesting landscaped spaces - both lawned and paved - should be created, ranging from those suitable for group meetings and social activities to those for quiet retreat and relaxation. Such spaces, the pedestrian links between them, and internal access roads within the Zone, should be landscaped with trees and other plantings	2	Zone PO 2.5	
15	The landscaped edge of the Zone, created by North Terrace west of Frome Road should provide shade for pedestrians while enhancing northward views from North Terrace. North of this, landscape design should become less formal and incorporate large, high-crowned trees which allow views through to the forecourt spaces of the many significant cultural and institutional buildings	5		This policy hasn't been transitioned into either subzone or zone. INSERT POLICY: as a PO within the Cultural Institutions Subzone.
16	East of Frome Road, the North Terrace frontage to the Royal Adelaide Hospital should be landscaped with suitable tree plantings, landscaping and grassed areas, to reduce the impact of Hospital buildings and to replace open lot parking areas.	4		This policy hasn't been transitioned into either subzone or zone - need to check if this is included in Lot 14 DPA.

Number	Description	Transition category	Where has it been included?	Comments
17	On the Victoria Drive frontage the plantings between the boundary fence and the University buildings should be conserved.	5		INSERT POLICY as a PO within the Cultural Institutions Subzone.
18	The avenues of street trees on the North Terrace, Kintore Avenue, Frome Road and Victoria Drive frontages form important landscaped edges to the Zone's built form, and should be maintained as part of the essential character of the Zone.	4		
Height				
19	To minimise further visual impact on the Park Lands, the height of new buildings should scale down from that established by the existing buildings fronting onto North Terrace to buildings at the boundaries of the Zone that: (a) do not exceed 3 building levels; or (b) locate a ceiling more than 10.5 metres above the median natural or finished ground level at any point or any part of a building.	5	Cultural Institutions Subzone 2.4 DTS/DPF 2.4 (a)	REQUIRES FURTHER REVIEW - Difference in ceiling height in existing policy vs Building Height in Code.
20	Away from the frontages to roads or frontages to the Park Lands Zone, the height of new buildings should not: (a) exceed 6 building levels; or (b) locate a ceiling more than 21 metres above the median natural or finished ground level at any point or any part of a building. Development up to 6 building levels should be designed to minimise the visual and environmental impact of such larger development by sensitive design and	3	Cultural Institutions Subzone 2.4 DTS/DPF 2.4 (b)	REQUIRES FURTHER REVIEW - Difference in ceiling height in existing policy vs Building Height in Code.
Car Parking and Access				
21	Pedestrian links in north-south and east-west directions should be maintained and further developed, as indicated on Map Adel/1 (Overlay 2A), Maps Adel/45 and 50 and Figure I/3.	5		INSERT POLICY as a PO within the Cultural Institutions SubZone under a new heading 'Movement Car Parking and Access' and incorporate mapping from Map Adel/1 (Overlay
Advertising				
22	Advertisements should mainly provide information and direction in relation to the cultural, educational and medical functions of the Zone.	1		Does this need to be incorporated into new Cultural Insitution Subzone?
23	Advertisements should be sober in design and simple in use of colour, and should seek to achieve a consistent image for the Zone while ensuring clear advice to visitors.	4		See also - Advertising general development policies
24	The discreet illumination of advertisements is generally appropriate.	1		See also - Advertising general development policies
25	Temporary banners may be appropriate based on their individual merits. The number of banners should be limited on each site to ensure the buildings remain	1		See also - Advertising general development policies
Procedural Matters				
Complying Development				
26	The following kind of development is complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site.	5		(a) No specific policy relating to Temporary depot for Council (potential to include this provision in Table 1 - Accepted Development Classification) INSERT POLICY: City Riverbank Zone - temporary depot policy as used in other zones
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
27	<p>The following kinds of development are non-complying:</p> <p>(a)A change of use to any of the following: Adult entertainment premises Adult products and services premises Amusement machine centre Backpackers hostel Car park except: (i)where ancillary to an approved or existing use. (ii)a multi-level car park. Conference centre east of Frome Road Day centre (other than a child care centre) west of Frome Road Educational establishment east of Frome Road Emergency shelter west of Frome Road Hospital west of Frome Road) Hotel Industry Motel Nursing home west of Frome Road Passenger terminal Road transport terminal Service Trade Premises Serviced apartment Transport depot</p> <p>(b)Total demolition of a State Heritage Place (as identified in Table Adel/1). (c)Total demolition of a Local Heritage Place (City Significance). (e)Advertisements involving any of the following: (i)Animation (ii)Third party advertising</p>	5		INSERT POLICY: TBC
Public Notification				
28	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a)Category 1, public notification is not required: (i)all development, except that classified as non-complying; (ii)non-complying development which, in the opinion of the relevant planning authority, is of a minor nature only and is unlikely to be the subject of reasonable objection from the owners or occupiers of land in the locality of the site of the development.</p> <p>Note: For Category 3 Development, public notification is required. Third parties may make written representations, appear before the relevant authority on the matter, and may appeal against a development consent. This includes any development not classified as either Category 1 or Category 2.</p>			TBC
NEW CONTENT IN THE CODE (insert below)				

Number	Description	Transition category	Where has it been included?	Comments
Table 1	Accepted Development Classification			
Table 2	Deemed-to-Satisfy Development Classification			
Table 3	Applicable Policies for Performance Assessed Development			INSERT POLICY - City Riverbank Zone - Table 3 - amend to include all GDPs potentially relevant to Riverbank Zone.
Table 4	Restricted Development			
New Riverbank Zone				No reference to Figure I3 - suggest including this.
Desired Outcome (DO)				INSERT POLICY - City Riverbank Zone - <i>include reference to Figure I3 and create the equivalent of Figure I3 within P&DC.</i>
DO 1	Exemplary design quality and architecture that is contemporary and innovative, respectful of the heritage buildings, Park Lands setting and civic functions of the locality.			
DO 2	A fine grained precinct with a quality public realm that is inviting and comfortable for pedestrians.	OK		This provision is suitable for some portions of the Riverbank Zone, but doesn't really assist areas such as government house portion of Cultural Institutions Subzone.
DO 3	Strong visual and physical connections between important buildings, public spaces, the Park Lands and other key destinations.	OK		
Performance Outcomes and Deemed to Satisfy/Designed Performance Outcome Criteria				
Land Use and Intensity				
PO 1.1	A diverse range of land uses that connect the city centre to the natural environment of the River Torrens and Park Lands with clusters of related activities, such as: (a) clinical health, training, education and research; (b) entertainment, tourism and accommodation; (c) education and administration; (d) innovative science and employment; and (e) Community and cultural institutions.			OK but would be strengthened by inclusion of Concept Plans for each subzone in the Riverbank Zone.
DTS/DPF 1.1	Development comprises one or more of the following land uses: (a) Advertisement (b) Community centre (c) Consulting room (d) Office (e) Convention centre (f) Educational establishment (g) Entertainment venue (h) Helicopter landing facility (i) Hospital (j) Hotel (k) Licensed premises in association with hotel, restaurant, shop or the like (l) Land division (m) Light industry (including high technology and research based activity)	CHANGE		Refer to comments against PDC 26 and 27 - this DTS seeks land uses that the current Development Plan lists as non-complying - significant change.

Number	Description	Transition category	Where has it been included?	Comments
	(n) Motel (o) Restaurant (p) Shop (q) Serviced apartments (r) Tourist accommodation.			
Built Form and Character				
PO 2.1	Building heights within the zone providing an orderly transition in scale, with lower buildings located towards the Adelaide Park Lands, Adelaide Botanic Garden and River Torrens and taller buildings towards North Terrace and other City Boulevards identified in City Riverbank Zone Table 5.1.	ERROR	OK other than drafting error with incorrect reference.	Table 5.1 CONTAINS AN ERROR - (F) refers to Entertainment Zone (again - duplicating (d). (f) should be a reference to the Cultural Institutions Subzone.
DTS/DPF 2.1	None are applicable			
PO 2.2	Development a) contributes to the activation of the public realm by presenting an attractive human scaled pedestrian-oriented frontage at ground level that adds interest and vibrancy b) contributes to pedestrian comfort by minimising micro climatic impacts c) maintains a sense of openness to the sky for pedestrians and allow sunlight access to the public realm, particularly plaza areas during the Spring and Autumn; and d) provides a clear sense of address to each building.	NEW/SIMILAR		Supported
DTS/DPF 2.2	None are applicable			
PO 2.3	Development reinforces the grand boulevard character of North Terrace and King William Road, by reflecting the patterns of landscaped spaces and built form, building proportions and scale.	NEW/SIMILAR		Supported
DTS/DPF 2.3	None are applicable			
PO 2.4	Coordinated development providing public spaces and landscaping, including deep plantings, that soften the dominance of buildings, provide a range of spaces that are suitable for group meetings and social activities and spaces for passive enjoyment.			suggest: Well designed and functional buildings set within a landscaped setting that provides pedestrian and cyclist friendly streetscapes and active street frontages that facilitate positive social interaction
DTS/DPF 2.4	None are applicable			
PO 2.5	Pedestrian shelter and public art designed as an integral part of built form, open space and landscaping.	NEW/SIMILAR		Supported
DTS/DPF 2.5	None are applicable			
PO 2.6	The contribution of heritage buildings enhanced by ensuring: (a) buildings can be adapted and reused for modern purposes while protecting important heritage fabric (b) views and physical connections to heritage buildings and their important heritage features is maintained (c) the ground level interface with heritage buildings incorporates publicly accessible spaces and active land uses that support public access where appropriate.	NEW/SIMILAR NEW/SIMILAR NEW/SIMILAR NEW/SIMILAR		Not currently in University/Hospital Zone, but draws from Council-wide Heritage and Conservation provisions. Doesn't pick up on Aboriginal heritage - is the wording intended to be inclusive?
DTS/DPF 2.6	None are applicable			
Advertising				

Number	Description	Transition category	Where has it been included?	Comments	
PO 3.1	Advertisements designed to achieve an overall consistency of appearance and be of a type, scale and image that complement the zone.	OK		Are additional policies needed here to better reflect current policy? For discussion	
DTS/DPF 3.1	None are applicable				
Movement Parking and Access					
PO 4.1	Development designed to encourage pedestrian/bicycle circulation at the North Terrace level and create or maintain: (a) connections between North Terrace and the River Torrens linear park at key pedestrian focal points; (b) east-west connections through the city; and (c) existing pedestrian and cycling connections, including the Gawler Greenway, Outer Harbor Greenway and River Torrens Linear Park trail to be maintained.			Is this intended to apply across the entire zone? If so a Concept Plan would assist.	
DTS/DPF 4.1	None are applicable				
PO 4.2	A central pedestrian pathway designed as a single plane surface and maintained to: (a) allow people to walk and ride through and within the Zone from East to West and connect with the North to South pathways; and (b) link key buildings and public areas within the Zone.				
DTS/DPF 4.2	None are applicable				
PO 4.3	Pedestrian movement prioritised and designed to be free from vehicle conflict.	OK			
DTS/DPF 4.2	None are applicable				
PO 4.4	Development to provide a safe night-time environment along streetscapes, pedestrian and cycle paths and building surrounds by the arrangement of buildings and active building frontages that enhance casual surveillance and provide appropriate lighting and clear lines of sight.	OK			
DTS/DPF 4.4	None are applicable				
Table 5.1 – City Boulevards					
North Terrace, Morphett Street and King William Road.		ERROR			Referencing in the Table is incorrect
Procedural Matters					
Notification of Performance assessed development Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.					
All classes of development are excluded from notification except where it involves any of the following: (a) the site of the development is adjacent land to land in a different zone (b) development identified as “all other code assessed development” in Riverbank Zone Table 3 (c) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Health sub zone					

Number	Description	Transition category	Where has it been included?	Comments
	(d) development exceeding the maximum building height specified in DTS/DPF 2.1 of the Entertainment sub zone (e) development exceeding the maximum building height specified in DTS/DPF 2.3 of the Innovation sub zone (f) development exceeding the maximum building height specified in DTS/DPF 2.4 of the Entertainment sub zone	ERROR		This should be "Cultural Institutions Zone"
Overlays	Applicable Overlays vary, but in this zone include: Design Overlay Airport Building Heights (Regulated) Overlay Noise and Air Emissions Overlay Building Near Airfields Overlay Regulated Trees Prescribed Wells Area Overlay

Zone I3 Institutional (University/Hospital) Zone Policy area(s) City Riverbank Zone - Cultural Institutions				
		1 - Included in the Code and retains same policy intent		
		2 - Wording changed but policy intent remains (OK)		
		3 - Included in the Code but policy intent changed (NOT OK)		
		4 - Not included in the Code but OK to remove		
		5 - Not included in the Code and should be reinstated		
General Comments City Riverbank Zone - Cultural Institutions Subzone There is no subzone in the Institutional (University/Hospital) Zone that applies to the Cultural Institutions Subzone spatial extent.				
NEW CONTENT IN THE CODE (insert below)				
Cultural Institutions Subzone Assessment Criteria (AC) Desired Outcome (DO) DO 1 A vibrant cluster of cultural and institution uses including tertiary education, research, libraries and museums that attract students, professionals, workers and visitors to the city.				
		2		
DO 2 Well designed and functional buildings and public spaces that provide pedestrian and cyclist friendly streetscapes and active street frontages that facilitate positive social interaction.		1	Cultural Institutions Subzone DO 2	
Performance Outcomes and Deemed to Satisfy/Designated Performance Outcome Criteria Land Use and Intensity PO 1.1 A diverse range of cultural and institutional uses including tertiary education, research, library, museums and galleries.				
		2		see comments for zone

Number	Description	Transition category	Where has it been included?	Comments
DTS/DPF 1.1	The types of development envisaged within the zone, except: (a) Convention centre (b) Entertainment venue (c) Helicopter landing facility (d) Hospital (e) Motel (f) Serviced apartments (g) Tourist accommodation.	5		INSERT POLICY - City Riverbank Zone - Cultural Institutions Subzone - Amend DTS 1.1 to exclude the following, or the equivalent of the following (from PDC 27): Adult Entertainment Premises Adult produce and services premises Amusement machine centre Backpackers hostel Carpark except i) where ancillary to an approved or existing use, ii) a multi-level car park Conference centre east of Frome Road Day centre (other than a child care centre) west of Frome Road Educational establishment east of Frome Road Emergency shelter west of Frome Road Hospital west of Frome Road Hotel Industry Motel Nursing home west of Frome Road Passenger terminal Road transport terminal Service Trade Premises Serviced apartment Transport depot
<i>Built Form and Character</i>				
PO 2.1	Development that emphasises the horizontal grouping of building elements and uses vertical proportions in projections and in the disposition of openings.	3		PDC 4 also states that buildings should be dignified - retain? INSERT POLICY - City Riverbank Zone - amend PO 2.1 to better reflect original intent of PDC 4
DTS/DPF 2.1	None are applicable.			
PO 2.2	Buildings with modelled and textured facades of predominantly masonry appearance similar to the early buildings that contribute to the established historical character of the zone.	3		"similar to the early university buildings which give the campus its established historical character"
DTS/DPF 2.2	None are applicable.			INSERT POLICY- City Riverbank Zone -

Number	Description	Transition category	Where has it been included?	Comments
PO 2.3	Buildings that complement the form, appearance, materials and finishes of existing buildings in the locality, including the predominant: (a) Red brick or masonry walls; and (b) Slate, shingles, terra cotta tiles or copper for exposed roofs.	3		reinstate reference to ornament and decoration in building facades and roof forms.....? INSERT POLICY- City Riverbank Zone - Cultural Institutions Subzone - reintroduce reference to ornament and decoration in building facades and roof forms
DTS/DPF 2.3 PO 2.4	None are applicable. Building heights within the zone that transition down to the Park Lands from the height of existing buildings established along North Terrace.	3		the wording here focuses only on transitioning down to parklands - PDC 19 refers to "height of new building should scale down from that established by the existing buildings fronting onto North Terrace to buildings at the boundaries of the Zone that a) do not exceed 3 building levels or locate a ceiling more than 10.5 metres above the median natural finished ground level at any point or any part of a building" Would the new policy be better worded to refer to zone boundary instead of road boundary? INSERT POLICY- City Riverbank Zone - Cultural Institutions Subzone - consider whether to use zone boundary or road boundary?
DTS/DPF 2.4	Buildings located: (a) along road and Park Lands frontages not exceeding 3 building levels and 11.5m in building height; and (b) away from road and Park Lands frontages not exceeding 6 building levels and 22m in building height.	3		see comment above for context
PO 2.5	Pleasant and interesting lawn and paved landscaped areas that create spaces suitable for a variety of activities ranging from those suitable for group meetings and social activities to those for quiet retreat and relaxation.	3		This wording is OK but could also bring back the words around "Such spaces, the pedestrian links between them, and internal access roads within the Zone should be landscaped with trees and other plantings".
DTS/DPF 2.5	None are applicable.			

Zone	I3 Institutional (University/Hospital) Zone		1 - Included in the Code and retains same policy intent		
Policy area(s)	City Riverbank Zone - Innovation Subzone		2 - Wording changed but policy intent remains (OK)		
			3 - Included in the Code but policy intent changed (NOT OK)		
			4 - Not included in the Code but OK to remove		
			5 - Not included in the Code and should be reinstated		
			6 - New policy in DPA		
Number	Description	Transition category	Where has it been included?	Comments	
General Comments	City Riverbank Zone - Innovation subzone				
<p>There is no subzone in the Institutional (University/Hospital) Zone that applies to the Innovation Subzone spatial extent. The current policy is relevant to the former Royal Adelaide Hospital and is currently the subject of a DPA to change the policy to a Mixed Use (Innovation) Subzone.</p>					
NEW CONTENT IN THE CODE (insert below)					
Innovation Subzone					
<i>Desired Outcome (DO)</i>					
DO 1	An innovation precinct accommodating a range of commercial, educational and research activities supported by a mix of compatible employment generating land uses including tourism, hospitality, cultural, entertainment and retail activities.	6 - New policy in DPA			New policy - see comments on DPA (included at the bottom of this tab)
DO 2	A range of low to high rise buildings within a landscaped setting that respond to heritage buildings on the site and transition down in height and scale towards the Adelaide Park Lands and the Adelaide Botanic Garden.	6 - New policy in DPA			New policy - see comments on DPA
Performance Outcomes and Deemed to Satisfy/Designated Performance Outcome Criteria					
<i>Land Use and Intensity</i>					
PO 1.1	Development of innovative commercial, educational and research activities supported by a mix of compatible employment generating land uses.	6 - New policy in DPA			New policy - see comments on DPA
DTS/DPF 1.1	The types of development envisaged within the zone.				
PO 1.2	Small scale retail development to meet the day to day needs of workers and visitors to the precinct.	6 - New policy in DPA			New policy - see comments on DPA
DTS/DPF 1.2	Shops not exceeding 250m2 total gross leasable floor area.	6 - New policy in DPA			New policy - see comments on DPA
PO 1.3	A range of small to medium scale services and facilities serving the area such as child care facilities, personal services establishment and the like.	6 - New policy in DPA			New policy - see comments on DPA
DTS/DPF 1.3	None are applicable.				
PO 1.4	Higher impact land uses such commercial development (including high technology and research based activity) clustered in key nodes where compatible with adjoining uses.	6 - New policy in DPA			New policy - see comments on DPA
DTS/DPF 1.4	None are applicable.				
<i>Built Form and Character</i>					
PO 2.1	A high standard of contemporary architectural design, which incorporates vertical rhythms, proportions, compositions, materials, parapet or balcony heights. A combination of solid and glass finishes used to produce visual interest on all sides.	6 - New policy in DPA			Is heritage addressed in this zone via Zone policies?
DTS/DPF 2.1	None are applicable.				

Number	Description	Transition category	Where has it been included?	Comments
PO 2.2	Buildings adjacent to the Adelaide Botanic Garden or Park Lands sited and designed to create view corridors to and from the Adelaide Botanic Garden.	6 - New policy in DPA		New policy - see comments on DPA. Concept plan should be included.
DTS/DPF 2.2	None are applicable.			INSERT POLICY - City Riverbank Zone - Innovation Subzone - State Government to include Concept Plan as requested in Council's feedback to the Ministerial Lot Fourteen Development Plan Amendment.
PO 2.3	Buildings of a height and scale that minimise impacts on the Adelaide Botanic Garden and Park Lands as well as referencing the scale of buildings facing North Terrace and Frome Road.	6 - New policy in DPA		OK
DTS/DPF 2.3	Buildings not exceeding 15 building levels and 53m in building height.	6 - New policy in DPA		OK
PO 2.4	Where buildings exceed 15 building levels or 53m in building height they will be of exemplary design, located centrally within the site and meet the Commonwealth Airports (Protection of Airspace) Regulations.	6 - New policy in DPA		OK
DTS/DPF 2.4	None are applicable.			
Open Space PO 3.1	Development on the eastern portion of the site: (a) results in an open park like setting complementary to the Adelaide Botanic Garden; (b) carefully managed to sensitively balance its interaction with surrounding uses such as the Adelaide Zoo, Adelaide Botanic Garden and the Adelaide Park Lands; (c) minimises uses or activities that would alienate the area from public usage; (d) provides opportunities for tourism, education, research, informal recreation and cultural enjoyment; (e) improves pedestrian links through the area, and improve the public realm and use and enjoyment of the Adelaide Park Lands; and (f) provides greater exposure and accessibility for the Adelaide Botanic Garden and North Terrace frontage.	6 - New policy in DPA		New policy - see comments on DPA INSERT POLICY - City Riverbank Zone - Innovation Subzone - State Government to include Concept Plan as requested in Council's feedback to the Ministerial Lot Fourteen Development Plan Amendment.
DTS/DPF 3.1	None are applicable.			
				<p>Key recommendations from response to Ministerial Lot Fourteen DPA:</p> <p>Improve how the policy reinforces the integration of Lot Fourteen with the City and Botanic Gardens landscape.</p> <p>Extend the proposed Mixed Use (Innovation) Zone to include the University of Adelaide land on the eastern side of Frome Road.</p> <p>Introduce a Concept Plan to support the proposed redevelopment of the site which clearly supports the implementation of the Renewal SA Master Plan. Page 49 of the DPA report states that a concept plan will be provided to identify the location and use of land to be set aside for open space.</p>

Number	Description	Transition category	Where has it been included?	Comments
				<p>Strengthen provisions to ensure innovative and sustainable land uses and development of the site. Achievement of key innovation and sustainability outcomes for the site are not sufficiently supported by the proposed DPA amendment. Further, there is no guarantee these outcomes would be in the future Planning and Design Code when it is implemented on 1 July 2020.</p> <p>Strengthen policies in the DPA to ensure this site does not inadvertently become an extension to the existing Capital City Zone without adding something new to the city, or reinforcing the creation of an innovative, new precinct.</p> <p>Improve and formalise connections with the East End of the City.</p> <p>Provide for the inclusion of the Park Lands Trail through the site, and also identify an east-west link through the site to support connections across the Riverbank Precinct.</p>

Zone	Park Lands Zone		1 - Included in the Code and retains same policy intent	
Policy area(s)			2 - Wording changed but policy intent remains (OK)	
		3 - Included in the Code but policy intent changed (NOT OK)		
		4 - Not included in the Code but OK to remove		
		5 - Not included in the Code and should be reinstated		
General comments				
Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	<p>The desired character for the Zone is comprised of:</p> <ul style="list-style-type: none"> (a) a unique open space system which is the most valued characteristic of the historic layout of the City providing a distinctive image for the City; (b) conservation and enhancement for the relaxation, enjoyment and leisure of the City's workers, (c) open publicly accessible landscaped park setting for the built-form of South Adelaide and North (d) a balance of both formal and informal recreational activities including sporting clubs, walking and (e) enhancement of the Park Lands through the reduction in building floor areas, fenced and hard (f) public infrastructure, including schools and other education facilities, roads, railways, tramways and 	3 - Included in the Code but policy intent changed (NOT OK)		
Objective 1:	<p>(g) a well connected pedestrian and cycle network throughout the Park Lands. Development that strengthens, achieves and is consistent with the desired character for the Zone and its relevant Policy Areas.</p>	3 - Included in the Code but policy intent changed (NOT OK)		
Objective 2:	<p>The Park Lands as a model of excellence for the provision, maintenance and development of: (a)a sustainable environment; (b)an integrated open space system; (c)a diverse range of recreational opportunities and cultural experiences; and (d)indigenous, European and other landscapes</p>	3 - Included in the Code but policy intent changed (NOT OK)		
Objective 3:	<p>Protect remnant vegetation or local native species and establish landscape features and habitat corridors, including appropriately treated watercourses.</p>			
Objective 4:	<p>Ensure that new buildings or redevelopment of existing buildings in the Park Lands result in: (a)buildings that deliver public benefit, respond to the surroundings and incorporate the highest quality of design and materials; (b)the enhancement of buildings used for sport, recreation and cultural purposes; (c)a net reduction in total floor area through the removal of unsuitable or under-utilised structures or facilities; (d)the enhancement or redevelopment of heritage places for public use; (e)buildings that have minimal environmental impact; and (f)provision being made for cyclists.</p>	3 - Included in the Code but policy intent changed (NOT OK)		
Objective 5:	<p>Establish landscape design, planting, management and maintenance regimes to reflect the character identified within the specific Policy Areas.</p>	3 - Included in the Code but policy intent changed (NOT OK)		
1	Development should strengthen, achieve and be consistent with the desired character for the Zone and			
2	The Park Lands should be used for a diversity of outdoor recreation uses, the nature of which is specified in the relevant Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)		
3	Indoor recreation is considered to be contrary to the open character desired for the Park Lands and should be restricted to specific existing or proposed buildings.	5 - Not included in the Code and should be reinstated		
4	Development of new and the expansion of existing formal outdoor recreation uses should be restricted except where specified in the relevant Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)		

Number	Description	Transition category	Where has it been included?	Comments
Form of Development				
5	Special events and formal recreation uses of a temporary or transient nature may be appropriate throughout the Park Lands Zone on a temporary basis provided that the existing surface and landscape features of the land affected can be subsequently reinstated without change to its physical and visual condition and character. The setting up or preparing for the event and the dismantling after the event should be done in an expeditious manner.	3 - Included in the Code but policy intent changed (NOT OK)		
6	Development should not diminish the indigenous cultural value of the locality, with particular respect to the areas identified in Map Adel/1 (Overlay 14).	3 - Included in the Code but policy intent changed (NOT OK)		
7	Development for the purpose of public infrastructure may be undertaken within the Golf Links Policy Area 16, River Torrens East Policy Area 18, Botanic Park Policy Area 19, Rundle and Rymill Parks Policy Area 20 and River Torrens West Policy Area 24 including: (a)the infrastructure, equipment, structures, works and other facilities used in or in connection with the supply of water or electricity, gas or other forms of energy, or the drainage of waste water or sewage; (b)roads and their supporting structures and works; (c)railways, tramways and busways; (d)schools and other education facilities (only within Botanic Park Policy Area 19); and (e)all other facilities that have traditionally been provided by the State (but not necessarily only by the State) as community or public facilities; where undertaken: (i)by a State agency (whether or not in partnership or joint venture with a person or body that is not a State agency); and/or (ii)by a person or body (that is not a State agency) where the development is specifically endorsed by a State agency.	4 - Not included in the Code but OK to remove		
Built Form and Public Environment				
8	The number and extent of buildings in the Park Lands should be reduced.	5 - Not included in the Code and should be reinstated		
9	Additional or replacement buildings and structures should only be established, and existing buildings should only be enlarged, if the development rationalises or improves the appearance of undesirable or intrusive existing buildings or uses, or provides facilities for public purposes.	5 - Not included in the Code and should be reinstated		
10	Buildings should: (a)where intended to be visible from a distance or to form the termination of a view or vista, have a pavilion design character incorporating verandahs, pergolas, or colonnades on all sides, unless an alternative design character can be shown to be more responsive to the character of the relevant Policy Area in which the building is situated; (b)be designed to be as unobtrusive as possible, complement and blend with their surrounds, and be suitably screened by landscaping; and (c)be sited and designed to enable multiple use by different user groups wherever practicable.	5 - Not included in the Code and should be reinstated		
11	Mobile Kiosks may be considered appropriate where they: (a)are ancillary to the use of the Park Lands; (b)provide a range of goods and services: (i) for the users of activities in the Park Lands; (ii) where such goods and services would not otherwise be conveniently accessible; (iii) for such period of time to serve the Park Lands users; (c)maintain the open Park Lands character by the following: (i) being sited sensitively to the relevant desired character; (ii) not being stored in the Park Lands when not being used to serve Park Lands users.	5 - Not included in the Code and should be reinstated		
Advertising				
12	Permanent advertisements are inappropriate, except: (a)temporary advertisements promoting events in the Park Lands; (b)interpretative or directional advertisements relating to features and facilities within the Park Lands, subject to conformity with a consistent design theme.	3 - Included in the Code but policy intent changed (NOT OK)		

Number	Description	Transition category	Where has it been included?	Comments
13	<p>Advertisements should relate to a local event of a religious, educational, cultural, social or recreational character or to an event of a political character, and should comply with the following:</p> <p>(a)the total advertisement area of all advertisements displayed on a building or site should be no more than two square metres;</p> <p>(b)except for an advertisement that relates to a federal, State or local government election, the advertisement should not be displayed for more than one month prior to the event and one week after the conclusion of the event; and</p> <p>(c)the advertisement should not:</p> <p>(i) move or flash;</p> <p>(ii) reflect light so as to be an undue distraction to motorists;</p> <p>(iii) be internally illuminated; or</p> <p>(iv) be used to principally advertise brands or products.</p>			
14	<p>Interpretative or directional advertisements relating to features and facilities within the Park Lands are appropriate, subject to conformity with a consistent design theme.</p>			
15	<p>Permanent advertisements are inappropriate and existing permanent advertisements should be removed.</p>			
Temporary Depots or Site Compounds				
16	<p>Temporary depots or site compounds associated with construction works may be considered appropriate where the following is achieved:</p> <p>(a)land occupied is kept to a minimum to minimise the impact on the public enjoyment of the Park Lands;</p> <p>(b)land will suitably be reinstated to the same standard as prior to its temporary use or to an improved standard that is consistent with the Desired Character of the relevant policy area;</p> <p>(c)construction timelines are minimised to limit the impact to the public users of Park Lands;</p> <p>(d)safe and convenient alternatives are provided to any disrupted movement patterns;</p> <p>(e)impacts from construction waste and excavated soil are minimised on the Park Lands; and</p> <p>(f)car parking is restricted to vehicles necessary to be located on the site to support construction works.</p>			
Complying Development				
17	<p>The following kinds of development are complying:</p> <p>(a)Demolition and removal of a building or structure providing:</p> <p>(i) the demolition does not involve or affect a State heritage place or Local heritage place; and</p> <p>(ii) the land affected is returned to Park Lands and/or is landscaped in accordance with the desired landscape character of the Policy Area.</p> <p>(b)Special Events except in the Golf Links, Northern Park Lands, River Torrens East, Southern Park Lands and Brougham and Palmer Gardens Policy Areas providing the special event will not be held over more than 3 consecutive days, excluding any additional period required for setting up or preparing for the event or after the event for dismantling the event; and</p> <p>(c)Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for:</p> <p>(i) dust control;</p> <p>(ii) screening, including landscaping;</p> <p>(iii) containment of litter and water; and</p> <p>(iv) securing the site.</p>			
Non-Complying Development				
18	<p>All kinds of development are non-complying except:</p> <p>Bridges and associated structures providing pedestrian and cycle access over the River Torrens located in the Golf Links Policy Area 16, the River Torrens East Policy Area 18, Botanic Park Policy Area 19, River Torrens West Policy Area 24, and over Hackney Road into Botanic Park Policy Area 19</p> <p>Bridge and associated structures providing pedestrian and bicycle access over Park Terrace to the River Torrens West Policy Area 24, from North Terrace to the River Torrens West Policy Area 24 (in the area marked F as shown on Map Adel/48) and over Torrens Lake between the Adelaide Festival Centre and Adelaide Oval Policy Area 25</p> <p>Cafes:</p> <p>(a) that do not increase the building foot print;</p> <p>(b) with a gross leasable area not exceeding 50 square metres; and</p> <p>(c) located in the Botanic Park, Eastern Park Lands, Southern Park Lands or the Western Park Lands Policy Areas.</p>	<p>4 - Not included in the Code but OK to remove</p>

Desired Character									
	<p>The desired character for the Policy Area is comprised of:</p> <ul style="list-style-type: none"> (a) formal outdoor recreation, primarily in the form of a public golf course set in an irrigated and unfenced landscaped park environment; (b) a landscape where indigenous trees predominate and the theme of significant exotic tree species is strengthened; (c) good quality facilities and services to encourage public access and increased usage of the golf (d) improvement of the existing built form and car parking associated with the golf courses in a manner that does not result in an increase in total floor area or hard paved area. Relocation of the facilities adjacent to War Memorial Drive may be appropriate in the long term, with impacts on the amenity of the adjoining residential area minimised; and (e) public infrastructure, including roads, railways, tramways and busways, and their supporting 	3 - Included in the Code but po		This policy area has been deleted. Much of the policy has been removed and brought up to a very high level. Council didn't not support this level of public infrastructure generally. The removal of the Public Infrastructure components should be supported. INSERT Policy to reflect intent					
Objective 1:	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.								
1	Development should strengthen, achieve and be consistent with the desired character for the Policy								
2	<p>Development may include the following:</p> <ul style="list-style-type: none"> (a) Golf Course; (b) Informal Recreational Area; and (c) Refurbishment of the existing clubhouse or a new replacement clubhouse (which may incorporate 	3 - Included in the Code but po	PO 1.7	The PO 1.7 implies restaurants are current uses. The current shop/resturant are ancillary to the club houses i.e. would not need a DA in their own right.					
3	Development of retail services, social activities and facilities for the provision of meals and refreshment to the public in association with golfing purposes should preferably occur in those parts of the Policy Area which do not adjoin the North Adelaide Historic (Conservation) Zone.			INSERT Policy to reflect intent. However, policies need to reflect that the buildings should be a public and adaptable buildings					
4	Consideration should be given in the longer term to the relocation of the existing country club/golf clubhouse complex and associated car parking situated near the corner of Ward Street and Strangways Terrace, North Adelaide.	4 - Not included in the Code but OK to remove		This policy is quite weak. It hasn't been transferred to the P&D Code. General reduction in parking as per the DP should be sought. INSERT POLICY to reflect intent.					
5	A replacement building (incorporating club house, retail areas and licensed premises) located in the vicinity of War Memorial Drive is appropriate to consolidate the functions associated with golfing into a discrete area of the Policy Area provided there is no increase in total floor area within the Policy Area	3 - Included in the Code but po		INSERT Policy to reflect intent. Include a map.					
6	Perimeter areas should continue to be used for informal recreation.			INSERT Policy to reflect intent. Include a map.					
7	Existing public conveniences located on the golf courses should be replaced with structures designed in accordance with the Council Wide Principles.								
8	Advertising hoardings are not appropriate.	3 - Included in the Code but po	PO 4.1	The new policy enables advertising in association with a building. Rather than the Development Plan policy which outlines that it is not appropriate.INSERT Policy to reflect intent.					
Planting, Character and Landscaping									
9	The irrigated character should be maintained by best practice water conservation and water recycling. The overall Park Lands theme of Australian native and significant exotic tree species should be strengthened. Additional tree planting should be undertaken to improve the environmental character and outlook from each of the adjacent Terraces and War Memorial Drive, while maintaining existing views into the park. Highly polluting exotic tree species with a heavy leaf drop along the river banks should be replaced with local native species to provide a safe habitat for native fauna.	4 - Not included in the Code but OK to remove		Whilst it may be ok to remove the entire landscaped character of the Park Lands is poorly represented. It may be difficult to determine the appropriateness of the siting of building due lack of policy to determine the importance of the landscaped character. INSERT Policy to reflect intent. Include a map.					
10		4 - Not included in the Code but OK to remove							

Number	Description	Transition category	Where has it been included?	Comments
11	Items of significant landscape interest include: (a) Avenue of Moreton Bay Figure trees along War Memorial Drive. These trees should be retained to maintain the environmental character of those parts of the Policy Area.	5 - Not included in the Code and		The significance of stands of trees should be supported by policy to assist in retaining the landscaped values. INSERT Policy to reflect intent. Include a map.
Car Parking and Access				
12	Public pedestrian and bicycle access through the park should be maintained.	3 - Included in the Code but po	PO 5.2 - 5.4	INSERT Policy to reflect intent. Include a map.
13	Existing car parks for golfers and country club patrons within the golf courses should be removed, and the area returned to Park Lands as open space, upon relocation of the country club/golf clubhouse complex. Car parking should be provided adjacent to any new facility without increasing net hard paved area in the Policy Area.	3 - Included in the Code but po		The policy direction has changed by enabling limited car parking. This policy was aiming to remove the volume of car parking the Park Lands. The generic General Modules are also not specific to the Park Lands. Insert new policy <i>Rationalisation and reconfiguring of existing car parking should result in no increase to existing parking in Park 1, Park 2, Park 13 and Park 14, Park 16 and Park 23.</i>

Desired Character					
	<p>The desired character for the Policy Area is comprised of:</p> <p>(a) informal and formal outdoor recreation characterised by grassed areas and peripheral woodland planting;</p> <p>(b) olive groves in Parks 7 and 8, these being of State heritage value used for passive outdoor recreation activities;</p> <p>(c) a landscape of predominantly Eucalyptus species, woodland and open grassed playing fields;</p> <p>(d) views from LeFevre Terrace over the Klemzig Valley towards Mount Lofty Ranges framed with tall growing tree species; and</p> <p>(e) preserved areas of remnant vegetation.</p> <p>Objective 1: Development that strengthens, achieves and is consistent with the desired character for the Policy Area.</p>	3 - Included in the Code but policy intent changed (NOT OK)		<p>This policy area has been deleted. Much of the policy has been removed and brought up to a very high level. INSERT Policy to reflect intent.</p> <p>Is the state heritage place detailed enough?</p> <p>Do we have records of this in the CLMP?</p>	
Land Use, Built Form and the Public Environment					
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	4 - Not included in the Code but OK to remove		This policy area has been deleted. Much of the policy has been removed and brought up to a very high level.	
2	Development may include the following: (a) Informal Recreational Area; (b) Formal Recreational Area; (c) Renovations to the Adelaide Aquatic Centre within the existing site; and (d) Horse Agistment, within the area marked B as shown on Maps Adel/35, 36 and 39.	4 - Not included in the Code but OK to remove			
3	The area defined as the Olive Grove within Parks 7 and 8 on Maps Adel/40 and 41 should maintain its informal outdoor recreation usage in addition to the harvesting of olives.	5 - Not included in the Code and should be reinstated		Public infrastructure would be restricted development. The removal of this policy results in a lot of ambiguity in the assessment of this type of development. INSERT Policy to reflect intent.	
4	Expansion of the electricity substation and water reservoir at the corner of Barton Terrace East and O'Connell Street is inappropriate. Ultimately, both facilities should be removed and the areas returned to Park Lands usage.	5 - Not included in the Code and should be reinstated	PO1.8	<i>The electricity substation and water reservoir at the corner of Barton Terrace East and O'Connell Street should be returned to park lands usage.</i>	
5	Extensions to or new buildings at the Adelaide Aquatic Centre should be restricted unless they consolidate and replace existing buildings with structures more appropriate to the Park Lands environment and with no increase in total floor area. Other than this, no additional buildings should be permitted.	5 - Not included in the Code and should be reinstated		The new built form policy doesn't specific seek the no increase in building footprint. The proposed policy opens the land uses to "sporting club rooms, facilities and associated administrative functions". This would be a potential change of land use to the existing land use. Like other changes there has not been any rationale for this amendment. Reinstatement previous policy. INSERT Policy to reflect intent.	
Planting, Character and Landscaping					
6	The existing character of olive groves between Mann and Park Roads should be conserved and managed, both for the heritage value of the olive plantations and their importance as a visual buffer between Lower North Adelaide and adjoining suburbs.	4 - Not included in the Code but OK to remove		Whilst it may be ok to remove the entire landscaped character of the Park Lands is poorly represented. It may be difficult to determine the appropriateness of the siting of building due lack of policy to determine the importance of the landscaped character	
7	The existing character of Eucalyptus species, woodland and open grassed playing fields along Barton Terrace West and Barton Terrace East and the open grassland along LeFevre Terrace and Kingston Terrace should be maintained and reinforced with additional planting.	4 - Not included in the Code but OK to remove		Whilst it may be ok to remove the entire landscaped character of the Park Lands is poorly represented. It may be difficult to determine the appropriateness of the siting of building due lack of policy to determine the importance of the landscaped character	

Number	Description	Transition category	Where has it been included?	Comments
8	Items of significant landscape interest include: (a) a group of trees at the north west corner of Park No 2; (b) the Casuarinas in Park 3 adjacent to Main North Road; (c) the Pinus canariensis in Park 4; (d) the Araucarias in Parks 4 and 5 adjacent to LeFevre Road; (e) a stand of trees in Park 6 along LeFevre and Kingston Terraces; (f) the avenue of Palms along Robe Terrace; and (g) the olive groves in Parks 7 and 8 between Mann Road and Park Road. These trees should be retained to maintain the environmental character of the locality.	5 - Not included in the Code and should be reinstated		Whilst it may be ok to remove the entire landscaped character of the Park Lands is poorly represented. It may be difficult to determine the appropriateness of the siting of building due lack of policy to determine the importance of the landscaped character. INSERT Policy to reflect intent.
Car Parking and Access				
9	Existing car parking facilities in the Aquatic Centre may be retained, but no additional area of Park Lands should be used for car parking purposes. Public vehicle access into the Park Lands should be restricted.	3 - Included in the Code but po	PO 5.2 - 5.4	The policy direction has changed by enabling limited car parking to Park Lands uses. With scope to expand the Aquatic Centre this could result in the addition of car parking. The generic General Modules are also not specific to the Park Lands. INSERT Policy to reflect intent.

	<p>The desired character for the Policy Area is comprised of:</p> <ul style="list-style-type: none"> (a) a centre for important outdoor civic, leisure and cultural functions for the City based on Elder Park, Adelaide Oval and Memorial Drive tennis courts (b) the environment of 'Light's Vision'; (c) Torrens Lake being used for formal and informal boating activities and events; (d) the area adjacent the Torrens Lake including Elder Park serving as a centre for important outdoor civic, leisure and cultural functions, with development of the River Bank identifying this part of the Policy Area as the premier cultural and tourism area of the City; (e) the area being developed as open space with manicured lawns and a riverbank garden area (f) additional pedestrian access provided between North Terrace and the south bank of the Torrens Lake; (g) a shared pedestrian and cycling footbridge between the Adelaide Festival Centre and Adelaide Oval; (h) gardens containing the Cross of Sacrifice as an area for informal outdoor recreation activities within a formal garden setting; and (i) an area marked I as shown on Map Adel/49 developed for a range of informal and formal outdoor <p>Objective 1: Development that strengthens, achieves and is consistent with the desired character for the Policy Area.</p>	3 - Included in the Code but policy intent changed (NOT OK)	PO 1.7	This policy area has been deleted. Much of the policy has been removed and brought up to a very high level. Council didn't not support this level of public infrastructure generally. INSERT Policy to reflect intent
Land Use, Built Form and the Public Environment				
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)	PO 2.1 - 2.4	
2	<p>Development may include the following:</p> <ul style="list-style-type: none"> (a) Informal Recreational Area; (b) Formal Recreational Area; (c) Formal and Informal boating facilities, activities and events; (d) Community, Cultural and Tourism uses in association with the conservation of the Torrens Training Depot and Parade Ground; (e) Adelaide Oval contained within its existing site boundaries, as shown on Map Adel/44; (f) Memorial Drive Tennis Centre contained within its existing site boundaries, as shown on Map Adel/44; (g) The existing indoor recreational facility, "Memorial Drive Leisure Centre" contained within its existing site boundaries and with no increase in total floor area, within the area marked J as shown on Map Adel/44; (h) Special Events, within the areas marked A as shown on Map Adel/44; (i) Footbridge and associated structures and landscaping providing pedestrian and cycling access over the Torrens Lake between the Adelaide Festival Centre and Adelaide Oval; and (j) Community, Cultural, Tourism, Café, Restaurant or licensed premises where located in area marked I as shown on Map Adel/49. 	3 - Included in the Code but policy intent changed (NOT OK)		
3	Existing buildings and structures in the Park should be retained and their appearance improved where necessary to be more sympathetic to the Park Lands setting.			

Number	Description	Transition category	Where has it been included?	Comments
4	Any development of Adelaide Oval should: (a) protect and maintain the cultural significance and heritage value of Adelaide Oval; (b) continue the open setting and informal built form character of Adelaide Oval as a series of pavilions around the oval, surrounded by visible Park Lands; (c) not enclose or encircle the oval as a stadium space; (d) maintain the view of: (i) the Adelaide hills escarpment and profile to the east when viewed from the west, south and north sides of the oval when viewed from the upper half of the western grandstand. 20 percent obscurity is appropriate; (ii) the skyline of the City centre from the north, east and west Oval edges and grandstands including the tree canopy through to the top of the building outline. 20 percent obscurity is appropriate; and (iii) the Morton Bay Figure profile and canopy and ensure that a minimum of 75 percent of panorama remains open, free of any structures. Significant fabric should be conserved and the current integrity of the place should be maintained.	3 - Included in the Code but policy intent changed (NOT OK)		This policy is out of date.
5	Additional buildings should only be permitted for the continuation of the formal recreational uses associated with Adelaide Oval and Memorial Drive, and the provision of pedestrian and cycling access in the form of a footbridge to the southern side of the Torrens Lake.	3 - Included in the Code but policy intent changed (NOT OK)	PO4.1 - 4. 2	INSERT Policy to reflect intent
6	Advertisements are not appropriate within Adelaide Oval or the Memorial Drive tennis complex where they would be readily visible from outside the ground.	3 - Included in the Code but policy intent changed (NOT OK)		Reinstate Policy.
7	Existing buildings associated with the Torrens Parade Ground should be retained for public and community use.	4 - Not included in the Code but OK to remove		This should be a generic park lands approach.
8	Buildings associated with the boat sheds should be maintained and enhanced to allow for the continued use of the Torrens Lake for formal and informal boating activities.			
Planting, Character and Landscape				
9	The Adelaide Oval should be retained in its setting, and the adjacent existing character of gardens preserved and enhanced.	3 - Included in the Code but policy intent changed (NOT OK)	PO 3.1 - 3.4	This policy area has been deleted. Much of the policy has been removed and brought up to a very high level. INSERT Policy to reflect intent.
10	The theme of mixed deciduous and evergreen tree species should be continued.	3 - Included in the Code but policy intent changed (NOT OK)		
11	The formal historical character with carefully designed planting beds should be maintained. The area adjacent to the Torrens Lake, should be:	3 - Included in the Code but policy intent changed (NOT OK)		
12	(a)maintained and developed as open space with manicured lawns and the riverbank garden area, supported by additional red gum planting to strengthen the riverside theme; and (b)developed with a pedestrian footbridge spanning the Torrens Lake connecting the Adelaide Festival Centre precinct with the Adelaide Oval/Memorial Drive precinct.	3 - Included in the Code but policy intent changed (NOT OK)		
13	The Policy Area should retain its soft landscape character and be carefully integrated with the Adelaide Railway Station Environs Redevelopment. North Terrace should be linked to the River Torrens/Karrawirra Parri banks over the railway lines by terraces Items of significant landscape interest include:	3 - Included in the Code but policy intent changed (NOT OK)		
14	(a)the trees, particularly the Moreton Bay Figs on the northern side of the Adelaide Oval, together with buildings of heritage value, which should be conserved and enhanced; (b)the Pioneer Women's Memorial Garden in Park 12; (c)the Palm trees surrounding the Parade Ground in Park 12; (d)the Women's War Memorial Gardens; (e)the avenue of Elms along Victoria Drive; (f)the Pennington Gardens (west); and (g)the Creswell Gardens. These plantings should be retained to maintain and enhance the character of those parts of the Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)		
Car Parking and Access				
15	Car parking along King William Road should be removed to improve street tree health and to enhance the appearance of the northern entrance to the City from North Adelaide.	5 - Not included in the Code and should be reinstated	PO 5.2-5.3	INSERT Policy to reflect intent.
16	Temporary car parking on Pinky Flat should only be permitted as an overflow area when both the northern and southern car parks adjoining Adelaide Oval are likely to be filled to capacity.	5 - Not included in the Code and should be reinstated	PO 5.2-5.3	INSERT Policy to reflect intent.
NEW CONTENT IN THE CODE (insert below)				

Zone		1 - Included in the Code and retains same policy intent	
Policy area(s)	PA26	2 - Wording changed but policy intent remains (OK)

General comments			
Number	Description	Transition category	Where has it been included?
Desired Character			
	The desired character for the Policy Area is comprised of an area for informal outdoor recreation activities within a formal garden setting.	3 - Included in the Code but policy intent changed (NOT OK)	This policy area has been deleted. Much of the policy has been removed and brought up to a very high level.
Objective 1:	Development that strengthens, achieves and is consistent with the desired character for the Policy Area.		
Land Use, Built Form and the Public Environment			
1	Development should strengthen, achieve and be consistent with the desired character for the Policy Area.	3 - Included in the Code but policy intent changed (NOT OK)	INSERT Policy to reflect intent.
2	Development may include the following: (a) Informal Recreational Area.		
3	The Brougham/Palmer Parks function as urban parks for informal outdoor recreation activities and should be maintained for such uses.		
4	No buildings or structures should be developed in the Park.		
Planting, Character and Landscaping			
5	The formal historical character with carefully designed planting beds should be maintained.	3 - Included in the Code but policy intent changed (NOT OK)	
NEW CONTENT IN THE CODE (insert below)			

Number	Description	Transition category	Where has it been included?	Comments
Desired Character				
	Reference to Council wide provisions and assigning greatest weight to the desired character of the Riverbank Zone	4		The subzone and overlay policies now have greater weight than the City Riverbank Zone policies
	Reference to Maps Adel/12, 16, 17 and 18 and Figures Rb1, 2 and 3.	5		Zone Boundary is now different, but still includes the extent of the Entertainment Policy Area 28. Montefiore Road boundary has anomaly, as described in comments for Policy Area 28. INSERT POLICY - Amend P&DC mapping to correct potential error in the location of the Entertainment Subzone boundary adjacent Montefiore Road. INSERT POLICY - Amend City Riverbank Zone and/or Entertainment Subzone to include appropriate spatial mapping and references to incorporate the contents of Figures Rb1, 2 and 3 from Adelaide (City) Development Plan.
	This Zone is part of Adelaide's great park. The Zone punctuates the change from the high intensity and defined edge of the City Centre, to the natural environment of the Torrens Valley. The Zone connects the City to the Park Lands and provides an active edge to the River Torrens that enhances its use for recreation and leisure activities.	5	Riverbank Zone DO 3 and PO 1.1	The new policy does not acknowledge the Park Lands location of this zone and subzone. DO 3 refers to strong visual and physical connections between important buildings, public spaces, and Park Lands and other key destinations but no spatial indication of what these are. The visual connections between the City and the Park Lands is picked up to a limited extent in Riverbank Zone PO 1.1, but the focus of that provision appears to be land use, and not built form and character. INSERT POLICY as a PO within the City Riverbank Zone under the heading 'Built Form and Character' and include specific reference to Park Lands and River Torrens in Riverbank Zone, including multiple functions of River Torrens and environs. FURTHER WORK REQUIRED. City Riverbank Zone - include any available floodplain mapping and/or provision for inclusion of future floodplain mapping in line with current and future P&DC wide approaches.

Number	Description	Transition category	Where has it been included?	Comments
	The Zone will accommodate a range of land uses including parliamentary and administrative activities, cultural facilities, entertainment venues, conference facilities, offices, shops, hotels, serviced apartments, tourist accommodation, consulting rooms, public transport hubs, public open spaces, reserves and pedestrian and cycling networks.	5	Most of the land uses have been included in Assessment Provisions - Land Use and Intensity DTS/DPF 1.1 Entertainment Subzone PO 1.1	Parliament House and associated land uses are not recognised. Public transport hub (Adelaide Railway Station) not recognised, nor public open spaces, reserves, pedestrian and cycling networks. INSERT POLICY: City Riverbank Zone - recognise Parliament House, Adelaide Railway Station and associated uses. Recognise public open spaces, reserves, pedestrian and cycling networks potentially via incorporation of Figures Rb1, 2 and 3 in P&DC
	Buildings in the Zone will be exemplary in their design quality and will enhance their setting among landscaped public spaces, heritage buildings and culturally significant activities and not diminish their contribution and character. Buildings will contribute significantly and positively to the City skyline through contemporary and innovative design. Buildings will be significant in their own right but also complement existing development and allow the significance of the heritage buildings to continue to be appreciated from public areas. Development in this Zone will have an emphasis on sustainable design principles including energy efficiency and water sensitive urban design.	4		No reference to sustainable design principles, energy efficiency nor water sensitive urban design in Riverbank Zone nor in Entertainment Subzone. These aspects are addressed in General Development Policies - need confirmation of whether these will always be applied to development in this zone. No reference to City skyline.
	There will be a general transition in height through the Zone with taller buildings closer to North Terrace and along Montefiore Road (between North Terrace and the central pathway shown in Figures Rb/2 and 3) and lower buildings at the interface with the River Torrens.	2	City Riverbank ZonPO 2.1	
	The ground floors of buildings will be visually interesting, active, allow views into and out of the buildings, well lit, of human scale and provide opportunities for passive surveillance.	2	City Riverbank Zone PO 2.2 (a)	INSERT POLICY: City Riverbank Zone PO 2.2 (a) amend to include specific reference to passive surveillance.
	Well defined and accessible public spaces will provide civic entries to the Zone and include active and visually permeable frontages to create a sense of address, destination and identity at the pedestrian level. Key physical and visual connections through the Zone and views of heritage buildings including those depicted in Figures Rb/2 and 3 will be maintained and respected.	3	Riverbank Zone PO 2.6 and Entertainment Subzone 2.4.	No reference to Figures Rb/2 and 3 nor any equivalent. No reference or acknowledgement of civic entries or visually permeable frontages. Views of heritage buildings not addressed, although there is reference to enhancing contribution of heritage buildings in Riverbank Zone PO 2.6. Entertainment Subzone PO 2.4 requires buildings along King William Road to be designed to enable views through to important State Heritage buildings and public plaza area. INSERT POLICY - City Riverbank Zone - - include reference to information in Figures Rb/2 and 3, and insert
	Public spaces will be responsive to the local climate and include features that provide both shade and solar access at appropriate times. Public art, landscaping, surfaces and materials will be exemplary in quality and appearance and inviting for the public to visit and remain comfortable for extended periods of time.	4	Riverbank Zone PO 2.2, 2.4 and 2.5	Partially addressed by PO 2.2 but policy has slightly different focus. Public art and landscaping included in PO 2.5 REQUIRES FURTHER REVIEW: to ensure the assessment tables will include GDP provisions relating to

Number	Description	Transition category	Where has it been included?	Comments
	The formal avenue planting along North Terrace and King William Road will be maintained and reinforced, while elsewhere in the Zone the informal planting character on the edge of the Torrens Valley along Festival Drive will be further developed and extended.	4		This is a management issue.
	Pedestrian and cycling access and permeability are paramount to the successful activation and vibrancy of the Zone and will be separated from vehicle movement. Existing pedestrian and cycling connections, including the Gawler Greenway, Outer Harbor Greenway and River Torrens Linear Park trail, should not be compromised particularly those connections shown on Figures Rb/2 and 3. These connections will link the Zone with the city and the River Torrens. A central pathway will allow people to walk and ride through and within the Zone from East to West and connect with the North to South pathways. The central pathway will be a single plane surface designed primarily for pedestrians and will link key buildings and public areas within the Zone.	3	DO 3 requires "strong visual and physical connections". PO 4.1 addresses bicycle and pedestrian connections, but without any spatial link to key locations.	Figures Rb/2 and 3 are not included in the new policy. Location of connections and central pathway are not shown. INSERT POLICY: City Riverbank Zone - Entertainment Subzone - reference to information in Figures Rb/2 and 3 needed.
	A footbridge over the Torrens Lake between the Adelaide Festival Centre and Adelaide Oval, including pedestrian and cycling access paths, stairs and ramps and associated landscaping, as shown on Figure Rb/1 will provide pedestrian linkages to the north and south of the zone. Importantly it will provide connections from the Adelaide Oval through to North Terrace and beyond to the Adelaide Markets capitalising on existing laneways such as Gray, Leigh and Bank streets.	2		The footbridge is already developed. Existing development plan is out of date. Might be potential to have footbridge recognised in any future concept plans or figures for this location to show pedestrian/cycling movement etc.
	Service roads, loading areas vehicle entry points to car parking areas will give priority to and not obstruct the movement of pedestrian and cyclists throughout the Zone.	3	City Riverbank Zone PO 4.3	
	Parts of the Zone are known to be contaminated and may require further assessment as part of development proposals particularly where it involves sensitive uses.	4	Site Contamination GDP	Need to establish what the statutory link is in the P&DC system to ensure this policy is covered. REQUIRES FURTHER REVIEW: Confirm whether there is sufficient linkages between P&DC policies to ensure adequate assessment of contaminated land when more sensitive land uses are proposed.
Policy Objectives				
1	High quality design with contemporary and innovative architecture that is respectful of the heritage buildings, parklands character and civic functions of the locality.	1	City Riverbank Zone DO 1	
2	A fine grained precinct with a quality public realm that is inviting and comfortable for pedestrians.	1	City Riverbank Zone DO 2	
3	Strong visual and physical connections between important buildings, public spaces and the River Torrens and Park Lands.	3		INSERT POLICY as a PO within the City Riverbank Zone - Entertainment Subzone under the heading 'Buildt Form and Character'.
Principles of Development Control				
Land Use				

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development, or combination thereof, are envisaged in the Zone: Accommodation including temporary accommodation Child care facility Cafe Consulting room Hotel Motel Office Open space Restaurant Passenger rail facility Passenger tram facility Serviced apartments Shop Stormwater and rainwater capture, storage, treatment and re-use Tourist accommodation	3	City Riverbank Zone PO 1.1 and DTS/DPF 1.1, and Entertainment Subzone PO 1.1 and DTS/DPF 1.1	There is significant change to envisaged land uses - removal of some and introduction of new land uses without substantiation or justification. P&DC includes the following new development types in this Subzone: advertisement convention centre entertainment venue licensed premises in association with hotel, restaurant, shop or the like land division There are also a number of land uses which have been excluded from the proposed subzone.
2	Development at ground level should include active uses such as cafes, restaurants and shops that contribute to the vibrancy of the public realm.	3	City Riverbank Zone PO 2.2 (a)	The new policy doesn't include reference to cafes restaurants and shops. INSERT POLICY: City Riverbank Zone - Entertainment Subzone - include specific reference to cafes, restaurants and shops to contribute to active uses/vibrance of the public realm.
Form and Character				
3	Development should be consistent with the desired character for the Zone.	4		
4	Development should be designed to respect the landscape setting and biodiversity provided by the Torrens Valley and Adelaide Park Lands.	3		No reference to Torrens Valley or biodiversity. INSERT POLICY as part of PO 2.2 within the City Riverbank Zone - to reintroduce policy to provide specific reference to "respecting the landscape setting and bioiversity provided by the Torrens Valley and Adelaide Park Lands".
5	Development should be compatible with the topography of the site and change in character from a strong city edge on the southern side of North Terrace to the landscaped setting provided by the River Torrens and Adelaide Park Lands.	3		No reference to compatibility with topography and change in character as described in this provision. INSERT POLICY as part of PO 2.2 within the City Riverbank Zone - to reintroduce policy to provide specific reference to "development to be compatible with the topography of the site and change in character from a strong city edge on the southern side of North Terrace to the landscaped setting provided by the River Torrens and Adelaide Park Lands."
6	Development should reinforce the grand boulevard character of North Terrace and King William Road.	1	PO 2.1, PO 2.3	PO 2.1 provision only relates to building height, not overall nature of development. PO 2.3 specifically addresses this provision.
Design and Appearance				
7	Buildings should be of a high design quality and provide contemporary architectural responses to their setting.	2	DO 1, but not explicitly included in any Performance Outcomes for this Zone.	

Number	Description	Transition category	Where has it been included?	Comments
8	Development should: (a) contribute to the activation of the public realm by presenting an attractive human scaled pedestrian-oriented frontage at ground level that adds interest and vibrancy; (b) contribute to pedestrian comfort by minimising micro climatic impacts; (c) maintain a sense of openness to the sky for pedestrians and allow sunlight access to the public realm, particularly plaza areas during the Spring and Autumn; and (d) provide a clear sense of address to each building.	1	City Riverbank Zone PO 2.2 a,b,c and d	
9	Development should be coordinated within the precinct to include a variety of pleasant and interesting landscaped spaces among and adjacent to buildings, ranging from those suitable for group meetings and social activities to those for quiet retreat and relaxation. These spaces, the pedestrian links between them, and internal access roads should be landscaped with trees and other plantings to create pleasant environments and soften the built form.	2	City Riverbank Zone PO 2.4	Similar wording and not as effectively conveyed & might be interpreted differently.
10	Pedestrian shelter should be achieved through a combination of trees and canopies attached to buildings. Any free-standing form of pedestrian shelter should be designed as an integral part of open space and landscaping.	1	City Riverbank Zone PO 2.5.	Public art has been added to this provision - this is a policy change but OK.
11	Development should provide a safe night-time environment along streetscapes, pedestrian and cycle paths and building surrounds by the arrangement of buildings and active building frontages that enhance casual surveillance and provide appropriate lighting and clear lines of sight.	1	City Riverbank Zone PO 4.4	
Movement				
12	Pedestrian movement should be based on a network of pedestrian access ways or thoroughfares, linking the surrounding Zones and giving a variety of north-south and east-west links, as indicated on Map Adel/1 (Overlay 2A), Map Adel/49 and Figures Rb/1, 2 and 3.	3	Partially addressed in City Riverbank Zone PO 4.1 b and c	An attempt has been made to reflect this provision in PO 4.1 and 4.2 but not sufficiently achieved. Map Adel/1 (Overlay 2A, Map Adel/49 and Figures Rb/1, 2, and 3) not included. INSERT POLICY: City Riverbank Zone - include reference to information in Map Adel/1 (Overlay 2A, Map Adel/49 and Figures Rb/1, 2, and 3) via most appropriate mechanism in the P&DC.
13	Development should be designed to encourage pedestrian/bicycle circulation at the North Terrace level and create connections between North Terrace and the River Torrens linear park at key pedestrian focal points.	1	City Riverbank Zone PO 4.1 (a)	
14	Pedestrian movement should be a priority within the Zone and designed to be free from vehicle conflict.	1	City Riverbank Zone PO 4.3	
15	Development should provide the vast majority of car parking spaces in undercroft/basement areas.	5		INSERT POLICY as a PO within the City Riverbank Zone - under the heading 'Movement Car Parking and Access' for majority of car parking to be in undercroft/basement areas.
16	Where vehicle parking is provided at ground level or above, it should be designed to: (a) minimise the extent of parking that is visible from public areas to that which is required for emergency service vehicles, temporary event parking and set down (drop off) functions; (b) not be located at ground floor street frontages or detract from the provision of active street frontages; and (c) incorporate façade treatments along major street frontages that are sufficiently enclosed and detailed to complement neighbouring buildings and screen vehicle parking from view from public areas and other buildings.	5		INSERT POLICY as a PO within the City Riverbank Zone - under the heading 'Movement Car Parking and Access'.
Stormwater				

Number	Description	Transition category	Where has it been included?	Comments
17	Development should incorporate a range of water sensitive urban design measures that minimise water quality impacts on the River Torrens, such as stormwater treatment, harvesting and reuse.	5		Not included in City Riverbank Zone - important policy for health of key visual and environmental asset for the City of Adelaide. Policy should continue to require the incorporation of a range of water sensitive urban design measures that minimise water quality impacts on the River Torrens, such as stormwater treatment, harvesting and reuse. INSERT POLICY as a PO within the City Riverbank Zone under a new heading 'Water Management'.
Advertising				
18	Advertisements should be designed to achieve an overall consistency of appearance and be of a type, scale and image that complement the zone.	2	City Riverbank Zone	
19	Temporary banners and illuminated advertisings are appropriate in the Zone.	2		
Procedural Matters				
Complying Development				
20	The following kind of development is complying: (a) Temporary depot for Council for a period of no more than 3 months provided appropriate provision is made for: (i) dust control; (ii) screening, including landscaping; (iii) containment of litter and water; and (iv) securing the site. (b) Other than for State Heritage Buildings, work undertaken within a building which does not involve a change of use or affect the external appearance of the building. (c) Within the Health Policy Area: (i) advertisements, including associated structures: (A) relating to a use located or proposed to be located in the Policy Area; (B) relating to the development of a hospital; (C) displaying public service messages; (D) promoting events in the Adelaide Park Lands; (E) providing interpretive or directional information relating to features and facilities within the Adelaide Park Lands. (ii) Advertising hoarding.	3		INSERT POLICY: City Riverbank Zone - amend zone policy to include policy for temporary depot for Council activities, similar to other zones & potentially within Table 1 - Accepted Development.
Non-Complying Development				

Number	Description	Transition category	Where has it been included?	Comments
21	<p>The following kinds of development are non-complying:</p> <p>(a) A change of use to any of the following: Adult entertainment premises Adult products and services premises Industry (except where ancillary to medical research and development) Road transport terminal Service Trade Premises Warehouse</p> <p>(b) Building work involving the demolition of a State Heritage Place except: (i) in relation to the establishment of a pedestrian footbridge between the north and south banks of the Torrens Lake, including: (A) construction and associated infrastructure works (plant and equipment facilities); (B) integrated plaza areas and landscaping; (C) bistro and office facilities integrated with the pedestrian footbridge and Adelaide Festival Centre, within the area represented on Figure Rb/1. (ii) the following components of the Adelaide Festival Centre (A) Southern Plaza (as indicated on Figure Rb/3); (B) car parking (as located below the Southern Plaza); (C) art work, sculptures and landscaping on the Southern Plaza. (iii) development which, in the opinion of the relevant planning authority, is of a minor nature.</p>	3		<p>Adult entertainment premises: - not listed in Table 1 - Accepted Development, Table 2 - Deemed to satisfy or Table 4 - Restricted Development. - the land use and intensity provisions of the City Riverbank Zone includes "Entertainment Venue" however this is not defined in P&DC Part 7 - Land Use Definitions. - the Adelaide (City) Development Plan defines Adult Entertainment Premises as "the use of land for the exhibition, display or performance of any entertainment or act which is sexually explicit such as nude dancing or lap dancing, and to which admittance by minors is restricted by law". - requires definition in the P&DC and potential inclusion in Table 4 - Restricted Development, or additional policy provisions then referenced in Table 3 - Performance Assessed, if appropriate. Adult products and services premises - not included in Tables 1, 2, 3, or 4 in P&DC nor is it defined in P&DC land use definitions. This land use requires definition and inclusion in Table 4 - Restricted Development. The Adelaide (City) Development Plan defines (Schedule 1 Definitions) Adult products and services premises as "the use of land or premises for a tattooist, or for the sale, exchange hire, exhibition, loan, delivery or display, or to otherwise render accessible or available to the public, sexually explicit material including: a) publications classified as restricted or prohibited under the Classification (Publications, Films and Computer Games) Act 1995; and/or b) material compounds, objects or devices (other</p>
Public Notification				
22	<p>For the purposes of public notification in accordance with the procedures and rights established by the Development Act 1993, development is assigned to the specified categories as follows:</p> <p>(a) Category 1, public notification is not required for: (i) all development, except that classified as non-complying (ii) non-complying development which, in the opinion of the relevant planning authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</p>	2		include comment consistent with other zones
NEW CONTENT IN THE CODE (insert below)				
City Riverbank Zone Table 1 - Accepted Development Classification		OK		OK for local and heritage places. Internal building work

Number	Description	Transition category	Where has it been included?	Comments
Table 2 - Deemed-to-Satisfy Development Classification		NEW		INSERT POLICY - City Riverbank Zone - Table 2 should nominate relevant zone, GDPs, subzone and overlays that apply for shops and/or office or consulting rooms.
Table 3 - Applicable Policies for Performance Assessed Development		NEW		City Riverbank Zone - Table 3 - Applicable Policies for Performance Assessed Development - <i>Update table to include all General Development Policies, except where clearly not relevant to the City of Adelaide context.</i>
Table 4 - Restricted Development Classification		NEW		No classes of development have been classified as restricted in the City Riverbank Zone. Noting that restricted development is not equivalent to non-complying, this table requires review and updating to identify land uses which should follow a "restricted development" pathway to maintain policy equivalency with current Development Plan policy. REQUIRES FURTHER REVIEW
Assessment Provisions (AP)				
Desired Outcome (DO)				
DO 1	Exemplary design quality and architecture that is contemporary and innovative, respectful of the heritage buildings, Park Lands setting and civic functions of the locality.	MODIFIED		Desired outcomes for the Riverbank Zone should recognise parliamentary and administrative activities, cultural facilities, entertainment venues,
DO 2	A fine grained precinct with a quality public realm that is inviting and comfortable for pedestrians.	OK		
DO 3	Strong visual and physical connections between important buildings, public spaces, the Park Lands and other key destinations.	OK		
Performance Outcomes and Deemed to Satisfy/Designed Performance Outcome Criteria				
Land Use and Intensity				

Number	Description	Transition category	Where has it been included?	Comments
PO 2.1	Building heights within the zone providing an orderly transition in scale, with lower buildings located towards the Adelaide Park Lands, Adelaide Botanic Garden and River Torrens and taller buildings towards North Terrace and other City Boulevards identified in City Riverbank Zone Table 5.1	OK		
DTS/DPF 2.1	None are applicable			
PO 2.2	Development a) contributes to the activation of the public realm by presenting an attractive human scaled pedestrian-oriented frontage at ground level that adds interest and vibrancy b) contributes to pedestrian comfort by minimising micro climatic impacts c) maintains a sense of openness to the sky for pedestrians and allow sunlight access to the public realm, particularly plaza areas during the Spring and Autumn; and d) provides a clear sense of address to each building.	OK		Could be reworded to "designed to maximise microclimatic benefits to contribute to pedestrian comfort"
DTS/DPF 2.2	None are applicable			
PO 2.3	Development reinforces the grand boulevard character of North Terrace and King William Road, by reflecting the patterns of landscaped spaces and built form, building proportions and scale.	MODIFIED		new wording "by reflecting the patterns of landscaped open spaces and built form, building proportions and scale"
DTS/DPF 2.3	None are applicable			
PO 2.4	Coordinated development providing public spaces and landscaping, including deep plantings, that soften the dominance of buildings, provide a range of spaces that are suitable for group meetings and social activities and spaces for passive enjoyment.	MODIFIED		original wording was "coordinated within the precinct", the words "pleasant and interesting" have been removed, change from "soften the built form" to "soften the dominance of buildings" is possibly inaccurate - suggest
DTS/DPF 2.4	None are applicable			
PO 2.5	Pedestrian shelter and public art designed as an integral part of built form, open space and landscaping.	MODIFIED		Introduction of public art to the zone policy.
DTS/DPF 2.5	None are applicable			
PO 2.6	The contribution of heritage buildings enhanced by ensuring: (a) buildings can be adapted and reused for modern purposes while protecting important heritage fabric (b) views and physical connections to heritage buildings and their important heritage features is maintained (c) the ground level interface with heritage buildings incorporates publicly accessible spaces and active land uses that support public access where appropriate.	NEW NEW NEW NEW		Supported
DTS/DPF 2.6	None are applicable			
Advertising				
PO 3.1	Advertisements designed to achieve an overall consistency of appearance and be of a type, scale and image that complement the zone.			
DTS/DPF 3.1	None are applicable	OK		
Movement Parking and Access				
PO 4.1	Development designed to encourage pedestrian/bicycle circulation at the North Terrace level and create or maintain: (a) connections between North Terrace and the River Torrens linear park at key pedestrian focal points; (b) east-west connections through the city; and	MODIFIED MODIFIED MODIFIED		Links to Figures Rb/1, 2, and 3 have been removed. Suggest reinstating concept plans for area including pedestrian and cycle links. See above See above

Number	Description	Transition category	Where has it been included?	Comments
DTS/DPF 4.1	(c) existing pedestrian and cycling connections, including the Gawler Greenway, Outer Harbor Greenway and River Torrens Linear Park trail to be maintained. None are applicable	MODIFIED		See above
PO 4.2	A central pedestrian pathway designed as a single plane surface and maintained to:	MODIFIED		The desired character statement states that the central pathway should be designed primary for pedestrians - this is lost a little in the proposed wording. Suggest rewording to "A central pedestrian pathway designed as a single plane surface and maintained to:...."
	(a) allow people to walk and ride through and within the Zone from East to West and connect with the North to South pathways; and	OK		from Desired Character of current Riverbank Zone
	(b) link key buildings and public areas within the Zone.	OK		from Desired Character of current Riverbank Zone
DTS/DPF 4.2	None are applicable			
PO 4.3	Pedestrian movement prioritised and designed to be free from vehicle conflict.	OK		
DTS/DPF 4.2	None are applicable			
PO 4.4	Development to provide a safe night-time environment along streetscapes, pedestrian and cycle paths and building surrounds by the arrangement of buildings and active building frontages that enhance casual surveillance and provide appropriate lighting and clear lines of sight.	OK		
DTS/DPF 4.4	None are applicable			
Table 5.1 – City Boulevards North Terrace, Morphett Street and King William Road.		OK		Referenced in PO 2.1
Procedural Matters				
Notification of Performance assessed development Note: For public notification requirements refer to Practice Direction: Notification for Performance Assessed Development.				
All classes of development are excluded from notification except where it involves any of the following:				
(a) the site of the development is adjacent land to land in a different zone		NEW		REQUIRES FURTHER REVIEW - Consider as part of overall response to Code.
(b) development identified as "all other code assessed development" in Riverbank Zone Table 3		NEW		REQUIRES POLICY REVIEW: This may result in many more public notifications than anticipated and/or needed - provide feedback as part of overall response to the P&DC.

General comments				
Number	Description	Transition category	Where has it been included?	Comments
	The Objectives and Principles of Development Control that follow apply to the Policy Area as shown on Maps Adel/43, 47, 48 and 49. They are additional to those expressed for the Zone and, in cases of apparent conflict, take precedence over the Zone provisions. In the assessment of development, the greatest weight is to be applied to satisfying the Desire Character for the Policy Area.	4		
Desired Character				
	The Health Policy Area will accommodate a range of medical and health facilities including a hospital, medical research, training and education as well as a range of ancillary land uses that provide services for staff, students, researchers, patients and visitors; including temporary accommodation.	2	Health Subzone PO 1.1/DTS 1.1	The current desired character anticipates temporary accommodation, however the new Health Subzone of the City Riverbank Zone excludes hotel, serviced apartments and tourist accommodation - no reference is made to temporary accommodation, although the City Riverbank Zone anticipates accommodation as a land use. INSERT POLICY - to Health Subzone of City Riverbank Zone to include hotel, serviced apartments and tourist accommodation UNLESS A POLICY CHANGE IS PREFERRED AND CONSULTED ON APPROPRIATELY
	Buildings along North Terrace will be designed to be viewed from all sides, promoting open spaces between adjacent buildings in contrast to the strong built form edge in the Capital City Zone.	2	Health Subzone PO 2.1, DO 1	Not a complete replication of policy but addressed some of the policy intent.
	Buildings along Montefiore Road (between North Terrace and the central pathway shown in Figures Rb/2 and 3) will contain a range of uses that are complementary to both the Health Policy Area and the adjoining Entertainment Policy Area and will include temporary accommodation, tourist accommodation, conference facilities, hotels and serviced apartments and be designed to integrate and activate the street frontage and provide direct pedestrian access from Montefiore Road, Festival Drive and North Terrace.	3 & 5		FOR DISCUSSION - re: accommodation in this location. The current Desired Character for this zone is very different from the proposed policy in the Health Subzone which specifically excludes hotel, serviced apartments, and tourist accommodation. Refer to comments above about potential policy change. There is no specific reference in the Subzone to pedestrian or other access, and no spatial reference to the "central pathway" which is currently defined via Figures Rb/2 and 3. Figures and mapping need to be reinstated. INSERT POLICY - to the City Riverbank Zone - incorporate Figure Rb/2 and 3 in most appropriate manner to suit new Code structure and refer to this in Health Subzone.
Objectives				
1	A health precinct that creates an identifiable and unified city precinct with strong connections to the Torrens River, North Terrace, the Royal Adelaide Hospital and wider city.	1	Health Subzone DO 1	
2	A Policy Area accommodating a hospital, clinical and health training, research and educational facilities and associated uses such as accommodation, cafes, small-scale shops selling convenience goods and helicopter landing areas.	1	Riverbank Zone DTS	
Principles of Development Control				
Land Use				

Number	Description	Transition category	Where has it been included?	Comments
1	The following types of development or combination thereof, are envisaged in the Policy Area and are additional to those envisaged for the Zone: Clinical and health training, research, manufacturing and educational facilities Consulting room Educational establishment Health centre Helicopter landing areas, lighting for night operations and associated communication equipment Hospital	5	Health Subzone DPO 1.1 and DTS 1.1	Health Centre is not specifically included in P&DC, lighting for night operations and associated communication equipment for helicopter landing facility is not specifically envisaged in P&DC policy. INSERT POLICY as DTS/DPF 1.1 within the Health Subzone to include the following envisaged land uses: health centre, lighting for night operations and associated communication equipment for helicopter landing facility.
Form and Character				
2	Buildings fronting North Terrace should generally be up to 15 storeys in height, subject to compliance with the Commonwealth Airports (Protection of Airspace) Regulations, to reinforce the boulevard character of North Terrace and to have a relationship, appropriate in scale with buildings in the Policy Area and along the North Terrace edge of the Capital City Zone.	1	Health Subzone PO 2.1, PO 2.2 DTS 21. and DTS 2.2	
3	Buildings taller than 15 storeys may be contemplated where design excellence can be demonstrated and the Commonwealth Airports (Protection of Airspace) Regulations can be met.	1	Health Subzone PO2.2	
4	Buildings north of the central pathway should be designed to provide an active edge to the River Torrens and should be of a low scale commensurate with the landscape setting.	1	Health Subzone PO 2.3	No spatial reference to location of "central pathway" which is currently clearly defined in the Adelaide (City) Development Plan. INSERT POLICY - to the City Riverbank Zone - incorporate Figure Rb/2 and 3 in most appropriate manner to suit new Code structure and refer to this in Health Subzone.
5	Development should incorporate landscaped forecourts and/or public meeting spaces as transition spaces between North Terrace and buildings within the Zone.	1	City Riverbank Zone PO 2.4 and	
6	Development should be serviced by vehicular access points from North Terrace and Port Road that provide for convenient, safe and legible controlled access for ambulances, emergency drop-off for the public and general goods and services vehicles, as well as vehicle access for patient drop-off, and visitor and staff parking.	5		This policy should be reinstated. Include policy which refers specifically to providing vehicular access points to provide for convenient, safe and legible controlled access for ambulances, emergency drop-off for the public and general goods and services vehicles, as well as vehicle access for patient drop-off and visitor and staff parking. INSERT POLICY as a PO within Health Subzone under a new heading 'Movement, Parking and Access'.
7	Development should provide for a satisfactory interface to roads and railways by addressing issues of access, safety, security, noise, air emissions and vibration so that: (a) the effective and efficient operation of the road system and rail service adjacent to the Zone is not detrimentally affected; and (b) the potential for adverse impacts on hospital occupants and activities as a result of road traffic and the operation of rail services adjacent to the Zone is minimised.	1	Health Subzone PO 2.4	
8	Development should be sited and designed to enable the continued operation of rail and road services within and adjacent to the Zone.	1	Health Subzone PO 2.5

Desired Character				
	The Objectives and Principles of Development Control that follow apply to the Policy Area as shown on Maps Adel/49. They are additional to those expressed for the Zone and, in cases of apparent conflict, take precedence over the Zone provisions. In the assessment of development, the greatest weight is to be applied to satisfying the Desired Character for the Policy Area.	1		
	DESIRED CHARACTER	5		Consideration should be given to creating character statements for the Entertainment Subzone. INSERT POLICY - Entertainment Subzone - introduce policy to better reflect current "Desired Character statements"

Number	Description	Transition category	Where has it been included?	Comments
	<p>The Entertainment Policy Area, will showcase, respect and build on existing landmark and heritage buildings including the Festival Centre, Parliament Houses, Convention Centre, Adelaide Railway Station and Casino. A range of Parliamentary and civic activities, including tourist accommodation, auditoriums, conference centres, cultural facilities, licensed premises, cafes, restaurants, shops and offices are envisaged. Development will include a vibrant mix of land uses that support a continuing program of public arts and cultural activities, particularly around the Festival Plaza.</p>	5	City Riverbank Zone - partially DO1 and DTS 1.1	<p>No reference to Festival Centre, Parliament Houses, Convention Centre, Adelaide Railway Station nor Casino. Civic activities are not mentioned in the Subzone, but are anticipated in the City Riverbank Zone. Cultural activities are not mentioned. Cafes, restaurants, shops are not mentioned but are included in the City Riverbank Zone. No reference is made to "continuing program of public arts and cultural activities, particularly around the Festival Plaza". DISCUSS with particularly reference to policy needing to enable temporary uses e.g. for festivals, and public art.</p> <p>INSERT POLICY - Riverbank Zone - Entertainment Subzone under the heading 'Built Form and Character' that refers to Festival Centre, Parliament House, Convention Centre, Adelaide Railway Station, Casino etc. Refer to cultural activities, continuing program of public arts and cultural activities (including temporary uses) within PO 1.1.</p>
	<p>The civic nature of the precinct should be acknowledged and connect the public realm to the wider precinct both physically and visually. Strong visual permeability through the site will be important in maintaining the legibility of this place as part of the City and Riverbank. The architectural expression of the built form will respond to the rich character of the local setting with contemporary juxtapositions providing new settings for heritage places.</p>	5		<p>City Riverbank Zone DO 1, 2 and 3 insufficiently addresses this provision. Reword this provision and strengthen inclusion of existing provisions</p> <p>INSERT POLICY as a DO and Po within the Entertainment Subzone.</p>
	<p>The regeneration of the existing Festival Plaza (Southern Plaza) and car park to address structural and functional deficiencies will help reinforce and enhance this area as the primary cultural and entertainment hub and provide high quality spaces for public use, including significant public events. This will include a principal public space that will be able to cater for large numbers of visitors and events but also be safe and convivial when lesser numbers of people may be present. It is anticipated that the public space and nearby land uses will be active during the day and night and will be a space that is adaptable for a range of purposes. The space should be built on a single plane.</p>	5	Entertainment Subzone PO 2.5	<p>There is an opportunity to create and introduce a Concept Plans for key areas such as the Entertainment Subzone of City Riverbank Policy Area. Only the single plane element of this provision has been included in the P&DC Policy.</p> <p>INSERT POLICY as a DO and Po within the Entertainment Subzone.</p>
	<p>King William Road will be reinforced as a principal boulevard flanked by high quality buildings that allow views and access through to the public plaza area and heritage buildings as shown on Figure Rb/3 including Parliament House, the Adelaide Railway Station, the Festival Centre and the nearby Adelaide Oval.</p>	3	City Riverbank Zone PO 2.1 Entertainment Subzone 2.4 Entertainment Subzone 2.6	<p>Figures are not included in the P&DC and should be.</p>
Objectives				

Number	Description	Transition category	Where has it been included?	Comments
1	A Policy Area accommodating a range of cultural, parliamentary, office entertainment, retail and conference facility land uses with exemplary buildings and public spaces that generate activity during the day and night.	1	Riverbank Zone Entertainment Subzone PO 1.1	Possible typo from "conference facility land uses" to "conference and ancillary land uses" in the P&DC CORRECTION: City Riverbank Zone - Entertainment Policy Area - EDIT "conference facility land uses" to "conference and ancillary land uses" or "conference facility and ancillary land uses".
2	A prominent, vibrant and safe public plaza that provides a focal point for the Riverbank precinct and is supported by a vibrant mix of land uses that encourage use by city workers, residents, families, students, youth, children and tourists.	1	Riverbank Zone Entertainment Subzone DO 1	
Principles of Development Control				
Land Use				
1	The following types of development, or combination thereof, are envisaged in the Policy Area and are additional to those envisaged for the Zone: Auditoriums Casino Carparking Cinemas Concert halls Conference centres Cultural facility Licensed entertainment premises Licensed premises Motels Public spaces Theatres Tourist accommodation	5		INSERT POLICY - City Riverbank Zone - Entertainment Subzone - include the following development types : Auditorium, Casino, car parking, cinemas, concert halls, conference centre (unless convention centre is sufficient), cultural facility, Licensed entertainment premises (unless "licensed premises in association with hotel, restaurant, shop or the like" is sufficient), public spaces, theatres. REQUIRES FURTHER REVIEW: to consider why "hotel" is not an envisaged land use in this subzone "hotel" isn't defined, and tourist accommodation IS included in the overall Riverbank Zone - is this intentional or is this an accidental exclusion?
2	Land uses at ground level will activate public spaces during the day and evening such as through cafes, restaurants and small-scale specialty shops.	5		Partially addressed in City Riverbank Zone PO 2.2 but no specific reference to land uses which will activate public spaces during the day and evening - no acknowledgement that the mix of particularly types of land uses can achieve this outcome. Introduce wording which references land uses which contribute to activation - not simply physically interesting and vibrant built form. INSERT POLICY as a PO within the Entertainment Policy Area under the heading 'Land Use and Intensity'.

Number	Description	Transition category	Where has it been included?	Comments
3	Residential development should only occur where it is demonstrated that noise, light spill and other impacts on residential amenity associated with the envisaged mix of uses and a vibrant public plaza can be adequately addressed.	1	Entertainment Subzone PO 1.2	
Form and Character				
4	Development in the Policy Area should generally be up to 20 storeys in height to the south of the central pathway.	1	Entertainment Subzone PO 2.1 DTS 2.1	
5	Buildings taller than 20 storeys may be contemplated to the south of the central pathway where design excellence can be demonstrated and the Commonwealth Airports (Protection of Airspace) Regulations can be met.	1	Entertainment Subzone PO 2.1 and PO 2.2	
6	Buildings north of the central pathway should be designed to provide an active edge to the River Torrens and should be of a low scale commensurate with its landscape setting.	1	Entertainment Subzone PO 2.3	
7	Buildings along King William Road should be designed to enable views through to important State Heritage buildings and the public plaza area.	1	Entertainment Subzone PO 2.4	
8	A new public plaza should be developed on a single plane minimising grade changes across the site to as to maximise pedestrian connectivity.	1	Entertainment Subzone 2.5	
9	Development should ensure the contribution of existing heritage buildings is not significantly diminished and can continue to be appreciated by the public by: (a) ensuring the new development is designed and located to maintain views of important heritage buildings as shown on Figure Rb/3. (b) incorporating public areas, safe and convenient pedestrian paths and active land uses such as cafes, shops and entertainment facilities at the interface with the heritage buildings.	3	City Riverbank Zone PO 2.6 -	There isn't any mention of heritage buildings in the Entertainment Subzone. City Riverbank Zone PO 2.6 doesn't specifically reference Figure Rb/3, but if the Heritage Overlay is used the new policy may address this adequately. REQUIRES FURTHER REVIEW - Future investigations to update the equivalent of Figure Rb/1-3 to reflect desired future concept plans for the City Riverbank Zone - Entertainment Subzone INSERT POLICY as a PO within the Entertainment SubZone that includes maintaining views of prominent heritage buildings and ensures safe and convenient pedestrian paths.
10	Development should not compromise the visual and physical connections to heritage buildings including views of the prominent heritage features shown on Figure Rb/3.	4	City Riverbank Zone PO 2.6 -	Appears to replicate this provision, as discussed for PDC 9.
11	Development will make provision for a footbridge over the Torrens Lake between the Adelaide Festival Centre and Adelaide Oval, including pedestrian and cycling access paths, stairs and ramps and associated landscaping, as shown on Figure Rb/1.	4		No reference to access or movement across River Torrens at footbridge which has been constructed. The Footbridge has now been constructed and the policy is no longer required.

Attachment A.3

Code testing using City of Adelaide examples

Attachment A.3 contains fifteen examples of City of Adelaide development applications which have been tested against the Draft Code.

The Code tests identify area where policies contained within the Draft Code are considered appropriate and applicable and/or where improvements are required. The front of the attachment contains a key findings review, considering all 15 Code tests.

CoA CODE TESTING - METHODOLOGY & KEY FINDINGS

Methodology

A number of development applications previously assessed under the Development Plan have been selected for Code testing. A total of 13 development applications and 2 theoretical applications have been tested. These have been chosen to capture a variety of assessments in the City of Adelaide.

The following Table refers to the types of applications that have been tested, the existing Development Plan zoning and the proposed Code zoning:

Code Tests		
Proposed Development	Development Plan Zoning	Proposed Code Zoning
New Dwelling	North Adelaide Historic (Conservation) Zone Hill Street Policy Area 1	City Living Zone North Adelaide Low Intensity Subzone
Dwelling Addition	North Adelaide Historic (Conservation) Zone Kentish Arms Policy Area 11	City Living Zone
Demolition of Local Heritage Place & Construction of New Dwelling	City Living Zone South West Policy Area 33	City Living Zone Medium-High Intensity Subzone
Change of Use to Shop	Main Street (Hutt) Zone	Urban Corridor (Main Street) Zone
	North Adelaide Historic (Conservation) Zone Carclew Policy Area 5	City Living Zone North Adelaide Low Intensity Subzone
Change of Use to Consulting Room	Mixed Use (Melbourne West) Zone	Suburban Activity Centre Zone
Change of Use to Licensed Entertainment Premises (Nightclub)	Capital City Zone Main Street Policy Area 14	City Main Street Zone Hindley Street Subzone
Change of use to Licensed Premises (Bar)	Main Street (Melbourne East) Zone	Urban Corridor (Main Street) Zone
Installation of Public Art	Park Lands Zone Adelaide Oval Policy Area 38	City Park Lands Zone Adelaide Oval Subzone
Installation of LED sign	Capital City Zone	Capital City Zone
Construction of New Building in Park Lands	Park Lands Zone Eastern Park Lands Policy Area 23	City Park Lands Zone
Construction of Canopy	Capital City Zone Main Street Policy Area 14	City Main Street Zone Rundle Mall Subzone
Ancillary Car Parking	North Adelaide Historic (Conservation) Zone Cathedral Policy Area 8	City Living Zone
Regulated Tree Removal	North Adelaide Historic (Conservation) Zone Hill Street Policy Area 1	City Living Zone North Adelaide Low Intensity Subzone

Where possible, complicated or controversial applications have been used to test how these would be assessed under the Code. Applications have been tested across most of the proposed Code Zones and Subzones.

Tests were undertaken using:

- The DPTI Planning and Design Code Consultation Map Viewer which highlights the zoning and relevant overlays for each site.
- The Draft Planning and Design Code – City of Adelaide Council Specific Code Extract October 2019 to determine assessment pathways and relevant provisions¹
- The Adelaide (City) Development Plan, consolidated 17 October 2019 to compare with the proposed Code provisions
- Assessment reports, approval plans and other documentation relevant to the each of the example applications

Key Findings

Testing has identified issues associated with undertaking the assessment of applications under the proposed Code compared with the Development Plan. Key findings are listed as follows:

- Overall there are less relevant provisions for each form development.
 - Relevant provisions are identified for each class of development in the Code.
 - These provisions have been reduced in number when compared with the more extensive number of provisions provided in the Development Plan.
 - Whilst reducing the number of provisions can streamline an assessment, it can also make the assessment more complicated particularly for unusual forms of development that are often assessed in the City of Adelaide.
- Code provisions are not as comprehensive in terms of specific streetscape and locality character details. This is reflective of the Code being implemented across the State as opposed to individual Council areas.
 - Assessments outside of the residential area in North Adelaide (which do not include the Historic Area Overlay) have minimal locality specific details that are currently provided in the Desired Characters for each Zone and Policy Area in the Development Plan
 - This makes it difficult to undertake detailed locality/character assessments as there are limited references to these specific details.
- Assessments are likely to be compromised by shorter assessment timeframes, particularly in terms of complicated applications. Examples are provided as follows:
 - Assessments involving acoustic reports would be compromised by Council not having enough assessment time to have these reports peer reviewed
 - Assessments involving demolition of a Local Heritage Place for structural reasons could be compromised by Council not having enough assessment time to have structural engineering reports peer reviewed.
 - DPTI is not usually a referral body for developments in the City of Adelaide as roads in the city are under the care and control of Council. LED sign applications

¹ Updates to the Draft Code released by DPTI in late December 2019 have not been reviewed. The large volume of additional material released unexpectedly and without extension to the consultation timeframe has made review of this material impracticable in terms of the resources required to consider the volume of content, and the council's internal processes for endorsement of submissions.

near intersections would usually not be referred to DPTI and instead Council relies on internal traffic referrals. However, there is no change to assessment timeframes in the City of Adelaide that allows for this additional time.

- Many applications within the city will default to a 20 business day performance assessed timeframe, however this does not align with the level of complexity of an application, for example, a multi-storey building within the Capital City Zone.
- Not all applications for State Heritage Places trigger a Heritage South Australia referral as the developments listed for referral are not broad enough to capture more unusual forms of development
- A number of applications that do not require public notification under the Development Plan do require notification under the Code. This is largely a result of the adjacent to a different zone trigger for notification which currently does not apply in all zones
- Uses defined in the Development Plan are not defined in the Code as follows:
 - adult products and services premises
 - licensed entertainment premises
- There is no Australian Height Datum reference for the Obstacle Limitation Surface which is crucial for assessment purposes and determining if referrals to Adelaide Airport Limited are required
- Determining whether an application is 'Deemed to Satisfy' requires significant assessment at the verification stage to determine if the application truly is 'Deemed to Satisfy'
- Parking, hours of operation and waste management details are not assessed for commercial 'Deemed to Satisfy' applications such as shops and consulting rooms. This is an issue, particularly when adjacent residential areas.
- A shop is no longer non-complying in the North Adelaide Historic (Conservation) Zone nor is it restricted under the Code when less than 200m² in floor area. This has the potential to drastically change the predominantly residential character of this area
- The provisions for regulated trees appear to be strengthened as significant tree provisions have been used but with only a reference to regulated trees
- Waste provisions are minimal, particularly for non-residential development

Attachment A.4

Low Risk Application Study

Attachment A.4 contains a study undertaken by the City of Adelaide in 2015. The study looks at a primary intent of the planning reform; to reduce the volume of development applications in the planning system. The study looks at common, 'low risk' or 'minor' applications which the City of Adelaide commonly receives and investigates how amendments to planning policies could assist with streamlining these development applications in the new planning system.

It is provided with this submission, as not all matters have been addressed in the Draft Code and the City of Adelaide seeks further discussion with the State Planning Commission on how additional policy improvements could be made to assist with streamlining further development types within the Planning and Design Code.

LOW RISK APPLICATIONS STUDY

1. A primary purpose for the planning reform process is to significantly reduce the volume of development applications in the State planning system that are subject to a full assessment process with the stated aim to improve the overall efficiency of the planning system. The Expert Panel on Planning Reform suggested that a new 4 stream approach to development be adopted consisting of: Exempt, Prohibited, Standard assessment and Performance-based assessment.
2. The Development Indicators work presented to Council in March 2015 identified a number of current applications that were deemed to be of minor impact (see Figure 1 below). These could be suitable candidates for consideration of a simpler approval path without significant risk of not adequately assessing important planning considerations.

Figure 1: Applications deemed 'minor' works lodged in F.Y. 2013/14 in the City of Adelaide (not including change of land use applications)

3. Generally the complying category of development is designated by the Development Plan as comprising of internal building work and fit-outs.

Figure 2: All Development by Category: F.Y. 2013/14

4. The March report identified that given the distinctive range of applications lodged within the City of Adelaide, that any proposed legislative change that is aimed broadly at the State may not necessarily identify the low impact applications undertaken in the City of Adelaide. For example, the Residential Code changes that sought to simplify approvals processes for a range of residential applications had no real impact within the City of Adelaide given the type and number of residential applications received.
5. Under the current planning system, the trigger point for determining what works require approval is set by the definition of 'development' in the Development Act, 1993, as well as through a number of other parts of the Act which either exempt from approval or specifically identify certain works as requiring approval. The planning reform process will review these trigger points.
6. Further opportunities for streamlining applications processes may occur with review of future draft legislation as well as through further discussion on a State Planning Code (the topic of **Attachment B** to this report).
7. Further analysis of the 'minor' applications types identified above has been undertaken to assist Council's participation in next stage of planning reform process, being the release of draft legislation.
8. The table below identifies those application types that could be considered for exemption from the need to obtain a consent or for a simplified assessment process. To date the focus has been on those application types that are of high volume or are unique in the City of Adelaide so as to lead to the greatest possible efficiency improvement.

Topic	Current Situation	Recommended Direction
<p>Change of Land Use</p> <ul style="list-style-type: none"> ➤ The current legislation defines that a change in land use is 'development' requiring planning consent. ➤ The current trigger for when an application is required takes a cautious approach with regard to considering impact. For example approval for a change of use is required for a change between an office and consulting room. 	<ul style="list-style-type: none"> ➤ Changes of use applications (excluding those combined with associated building work) comprise 8% of total applications in the City of Adelaide. ➤ Current trigger point means that a high volume of applications lodged have no, or very limited, planning consequence. ➤ Currently change of use proposals are merit or non-complying¹ in nature in all zones with the following exceptions where they are complying: <ul style="list-style-type: none"> - Capital City Zone: non-residential to office, shop or consulting room². - Main Street (Adelaide) Zone and City Frame Zone: residential to office on ground or first floor; residential to shop less than 250 square metres³. <p><u>Notes</u></p> <ol style="list-style-type: none"> 1. Where the Development Plan currently identifies a particular use as non-complying it is envisaged that these situations would continue in 'performance-based' assessment pathway. 2. Excludes any retail showroom, adult entertainment premises, adult products and services premises or licensed premises 3. Excludes retail showroom or licensed premises. 	<ul style="list-style-type: none"> ➤ Make exempt or complying change of use applications for changes to and between; office, consulting rooms, shop, bank in those zones which support a mix of land uses. It is envisaged that this could include the following existing zones; <ul style="list-style-type: none"> - Capital City Zone - City Frame - Main Street zones - Mixed Use (Melbourne West) Zone - Institutional (University/Hospital) Zone ➤ Review of land use definitions for 'shop' to better control specific activities that have varying levels of impact such as: <ul style="list-style-type: none"> - retail showroom - bulky goods outlet - adult entertainment premises - adult products and services premises - personal services establishment - café - restaurant - licensed premises. ➤ Consider greater use of 'umbrella' definitions which capture a number of land uses under a single definition to remove the need for change of use between uses within the grouping.

Topic	Current Situation	Recommended Direction
<p>Signage/Advertising Displays</p> <ul style="list-style-type: none"> ➤ The Development Regulations defines what forms of signage require approval. It defines in detail the kinds of displays, lighting, lettering and structures that are included within the definition of a sign. ➤ The regulations contain a number of specific instances which are more stringent for the City, taking into account the intense density of development and character which distinguish the City from the rest of the state. This allows Council to exercise a considered assessment of the impacts of signs through the planning assessment process. ➤ In the City changes to the content of signs, their type, size and addition of illumination or animation are included as requiring approval in addition to murals, screens, projections, illumination (globes, lamps, floodlights), banners, bunting and streamers. 	<ul style="list-style-type: none"> ➤ 14% of all applications lodged are exclusively for signs⁴. ➤ Through a review of a sample of these applications, 59% are deemed minor in nature or simple in terms of planning assessment; being fascia signs, replacement signs, banners, artistic displays and under canopy signs. These applications are processed on average within 8 days. ➤ 9% of sign applications in 2013/14 would not require consent if they were located outside of the City of Adelaide. ➤ There is no place-based distinction for when approval is required – i.e. the same approach applies within the central city area as the residential zones. ➤ Banners, artistic displays, hoardings and event/festival signs are temporary in nature and are deemed to be low-risk in terms of impact upon the public realm and general amenity due to their temporary nature. <p><u>Notes</u></p> <p>4. Figures based on calendar years 2006 to 2014</p>	<ul style="list-style-type: none"> ➤ Amend Part 8 of Schedule 2 of the Development Regulations 2008 to remove current City specific requirements that makes change in the content of a sign development. ➤ Amend Regulation 9 of Schedule 2 of the Regulations to remove current city specific requirements that makes addition of illumination or animation development (subject to place specific controls). ➤ Adopt more place-based response to the need to obtain approval for minor signage, supported by a signage code to streamline assessment for low risk signage. ➤ Recommend Planning Consent codification for low-risk types of signs in the central business area (excluding heritage places), possibly including: <ul style="list-style-type: none"> - signs on hoardings - replacement signs (like for like) - under canopy signs - canopy fascia signs - parapet signs. ➤ Signage for events, temporary activities and similar on public land be dealt with solely under the Local Government Act which provides a more responsive legislative framework to appropriately manage the impact of such activities (provided ability to consider structural matters is retained)

Topic	Current Situation	Recommended Direction
<p>Internal Building Works / Fit-outs</p> <ul style="list-style-type: none"> ➤ The Development Regulations define that building work is 'development' and requires approval. Building Work includes non-structural changes to the inside of a building in the nature of 'fit-outs'. ➤ The Development Regulations require all internal building works to gain planning consent in the City of Adelaide, unlike the rest of the state where only building rules consent is required. ➤ The majority of internal building works consist of non-structural internal fit-outs to offices, consulting rooms and shops. 	<ul style="list-style-type: none"> ➤ Comprise 19% of all applications approved from 2005-2015, representing a significant proportion of activity in the City. The value of internal works and fit outs from financial year 2005/06 to-2014/15 is \$1.47 billion dollars. ➤ Current trigger point means that high volume of applications lodged have no, or very limited, planning consequence. ➤ Internal Alterations and Fit-outs typically have planning impacts only if located on ground floor at street interfaces, thereby impacting on presentation to the street. ➤ Currently internal alterations and fit-outs are only complying development in the Capital City and Riverbank zones (exempting heritage places). ➤ The majority of internal building works occurs within the Capital City Zone and the Institutional (University/Hospital) Zone, and to a lesser extent in the Main Street Zones within commercial premises. 	<ul style="list-style-type: none"> ➤ Make complying internal alterations and fit-outs by deleting Development Regulation Schedule 1A, Part 11. Consent would still be required for works within State and Local heritage places ➤ Recommend Building Rules Consent codification for limited building classes representing the majority of applications: office, shop, assembly building, health care building and laboratory/production/assembly premises (5,6,8,9)⁵. ➤ Ensure as a minimum, that such works will be complying in the Capital City Zone, Mixed Use Zone (Melbourne Street), Main Street Zones and City Frame Zones. <p><u>Notes</u></p> <p>5. Subject to exceptions where full assessment against the National Construction Code is required to ensure minimum requirements of internal amenity, equitable access, fire safety are met. [For example limitations may be based around (a) maximum floor area limit or (b) limited to single storey buildings or (c) maximum internal population numbers.]</p>

Topic	Current Situation	Recommended Direction
<p>Festivals and Special Events</p> <ul style="list-style-type: none"> ➤ The City receives a high number of applications for Festivals and Events, all of which are temporary in nature and many of which are located in the Park Lands or Squares. 	<ul style="list-style-type: none"> ➤ In the 2014/15 financial year 480 small events and 95 medium/large events were held in the City. Of these many were located in the Park Lands and Squares. Many of these events require some form of development approval – either for land and/or building approval for associated structures. ➤ Festival activities and special events where located on public land currently undergo a double assessment process whereby assessment against the Development Plan occurs as well as assessment under relevant Council Events policies and guidelines for events occurs. ➤ Section 6 of the Development Act, 1993 exempts the requirement to obtain approval for land uses deemed to be ‘trifling and insignificant’. Through case law and practice, there is some ambiguity when this clause can be used for temporary occupation of land. 	<ul style="list-style-type: none"> ➤ Streamline assessment process for temporary changes of land use for community, cultural, arts, entertainment, recreational and sporting uses in the Park Lands Zone, Riverbank Zone, Institutional Zones and in the City Squares. This may include making complying temporary events over 30 days provided they are for public or community purpose ➤ Investigate alternative building rules assessment processes for moveable / temporary structures such as use of external certification from recognised engineers. ➤ Temporary activities such as festivals and special events on public land be dealt with solely under the Local Government Act which provides a more responsive legislative framework to appropriately manage the impact of such activities and negotiate a satisfactory outcome.

Topic	Current Situation	Recommended Direction
<p>Temporary Building Occupation</p> <ul style="list-style-type: none"> ➤ There is increasing demand to use vacant buildings for temporary or short term occupation to accommodate cultural and artistic events and for temporary 'pop-up' businesses. ➤ Such short term occupation can only occur if the approved land use and building class is not changing. ➤ Established case law indicates that even temporary use of a building for a single event requires a change of land use application. ➤ Proposals for temporary use which change the building occupant population and building class often trigger the requirement for significant building upgrades relating to emergency egress, disabled access, toilet provision and fire safety. 	<ul style="list-style-type: none"> ➤ Applications for temporary events in existing buildings are trending upwards, being driven by initiatives from Renew Adelaide. ➤ Given that the proposals often involve the use of a small proportion of a building's total floor space and/or are for limited lengths of time, the National Construction Code requirement for building upgrade limits opportunities for temporary revitalisation. ➤ Assessment times for temporary changes of land use within buildings impacts upon timelines for applicants and acts as a disincentive for entrepreneurial start-ups and event organisers. ➤ For example many start-up businesses established through Renew Adelaide are on 30-day rolling leases which enables businesses to 'test the water' regarding business viability. How this needs to be aligned with need to initially obtain and extend temporary development approvals. 	<ul style="list-style-type: none"> ➤ Examine strategies to fast-track planning and building assessment for temporary land uses. ➤ Examine broadening discretionary powers for qualified Building Surveyors to determine required compliance against the National Construction Code for temporary building occupation⁶. ➤ And/or alternatively, seek that temporary changes of land use within buildings be deemed 'trifling' or insignificant' (subject to caveats regarding matters such as maximum floor area, maximum occupant population limit, maximum periods of time and location). Locations would most likely be limited to the following zones which do not contain a high proportion of sensitive land uses (i.e. residential) – e.g. limited to: <ul style="list-style-type: none"> - Institutional zones - Capital City Zone - Riverbank Zone - Park Land Zone <p><u>Notes</u></p> <p>6. Will require the ability to address unsuitable building classification and lack of certificate of occupancy.</p>

Attachment A.5

City of Adelaide proposed Historic Area Statements

Attachment A.5 contains a copy of the Historic Area Statements that were submitted to the State Planning Commission on 27 November 2019.

On 23 December 2019, the State Planning Commission released their Historic Area Statements. When compared to the City of Adelaide versions, it is considered that the content of these Historic Area Statements has been reduced – this is illustrated in this attachment by the yellow highlighted content.

Significant content, relating to materials, fencing and building heights have been omitted from the Historic Area Statements released by the State Planning Commission and the City of Adelaide requests that these matters be reinstated. The City of Adelaide welcomes the opportunity to discuss these Statements further with DPTI, to ensure that these very unique and critically important areas are appropriately protected by the new Planning and Design Code.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Hill Street (Policy Area 1)

Heritage Characteristics	Examples
Townscape	<p>19th century and early 20th century elegant and finely detailed mansions and large villas set on large allotments and low and medium density cottages, villas and terrace houses of 1 and 2 storeys.</p> <p><u>Mills Terrace and Strangways Terrace</u> (west of Hill Street)</p> <ul style="list-style-type: none"> - Imposing townscape character of the Park Lands frontages established by various styles of detached dwellings of heritage value. <p><u>Gibbon Lane</u></p> <ul style="list-style-type: none"> - Primarily detached and semi-detached 2 storey dwellings and a single storey detached dwelling of local heritage value. <p><u>Hill Street</u></p> <ul style="list-style-type: none"> - 1 and 2 storey large detached and semi-detached Local and State heritage places. - Prominent corner sites containing St. Lawrence's Church and Calvary Hospital. <p><u>Buxton Street</u></p> <ul style="list-style-type: none"> - Highly cohesive frontages of single storey detached dwellings of local heritage value and 1 and 2 storey State heritage places, including finely detailed Italianate villas. - Prevailing building set-back except for traditional corner shop. <p><u>Molesworth Street</u></p> <ul style="list-style-type: none"> - South side - semi-detached Heritage Places of similar architectural design. - North side - detached Victorian Italianate houses and detached dwellings of local heritage value. - Church of Perpetual Adoration makes a valuable contribution to the historic character of the area. <p><u>Barnard Street</u></p> <ul style="list-style-type: none"> - Detached and semi-detached Heritage Places. - Calvary Hospital Chapel forms an important part of the street character. <p><u>Jeffcott Street</u></p> <ul style="list-style-type: none"> - Diversity of traditional dwelling types and the consistent character of large dwellings will be conserved through the retention of Heritage Places. <p><u>Childers Street</u></p> <ul style="list-style-type: none"> - Large, low density, single storey detached local heritage places.

Attachment A.5 CoA proposed Historic Area Statements

	<p><u>Ward Street and Strangways Terrace (east of Hill Street)</u></p> <ul style="list-style-type: none"> - Single storey detached residences of consistent architectural style, form and siting. - Calvary Hospital is a prominent corner site that contributes to the character of the area.
Architectural Buildings	<ul style="list-style-type: none"> - Mansions and large villas. - Victorian Italianate villas. - Cottages, villas and terraces. - Detached and semi-detached dwellings. - Helping Hand Aged Care - multi-functional aged care facility. - St Dominic's Priory College - educational land uses. - Calvary Hospital and Chapel. - Church of Perpetual Adoration. - St. Lawrence's Church.
Building Materials	<ul style="list-style-type: none"> - Stone and cast-iron fencing.
Setting and Public Realm	<ul style="list-style-type: none"> - Landscape grounds.
Building Form	<ul style="list-style-type: none"> - Detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. - New row dwellings are not envisaged. <p><u>Mills Terrace and Strangways Terrace (west of Hill Street)</u></p> <ul style="list-style-type: none"> - Detached dwellings, group dwellings or residential flat buildings of 1 or 2 storeys that contribute to the imposing townscape character of these Park Lands frontages established by various styles of detached dwellings of heritage value. - Reinforce built form character by incorporating articulation, bay windows, hip or hip-gable roof profiles, verandahs, balconies and porches and set within landscaped grounds. <p><u>Gibbon Lane</u></p> <ul style="list-style-type: none"> - Limited change in the townscape character. - Detached dwellings with a frontage to the street. - Pitched roofs or incorporated behind parapets. - Design and composition of facades to reflect traditional proportions of surrounding Heritage Places. <p><u>Hill Street</u></p> <ul style="list-style-type: none"> - Detached or semi-detached dwellings with frontage and access to the street. <p><u>Buxton Street</u></p> <ul style="list-style-type: none"> - Single storey detached or group dwellings with a street frontage. - Helping Hand - additional residential accommodation on under-utilised land to the side or behind existing buildings provided the value of Heritage Places is retained. <p><u>Molesworth Street</u></p> <ul style="list-style-type: none"> - Development for additional residential accommodation is limited to under-utilised land behind or adjacent existing buildings where the value of Heritage Places is not compromised. - All dwelling types should be considered within established institutional sites. - Development adjacent the primary street frontage that reinstates or reinforces the building set-back and subdivision pattern established by Heritage Places. - Development of St Dominic's Priory College to incorporate the use of landscaped open space to break up building mass. <p><u>Barnard Street</u></p> <ul style="list-style-type: none"> - Complement and reinstate the building set-backs established by 1 and 2 storey Heritage Places. - Development compatible with Heritage Places. - Maintain heritage value and prominence of the Chapel by retaining views and vistas to the Chapel. <p><u>Jeffcott Street</u></p> <ul style="list-style-type: none"> - Development limited to the replacement of non-Heritage Places.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Replacement development comprising large, single storey detached dwellings that reinstate the prevailing building set-back established by Heritage Places. - Corner sites may comprise buildings set on or close to the primary street frontage. <p><u>Childers Street</u></p> <ul style="list-style-type: none"> - Development limited to the replacement of non-Heritage Places. - Development that is a single storey detached dwelling in appearance to the street and reinstates the prevailing building set-back established by Heritage Places. <p><u>Barton Terrace West</u></p> <ul style="list-style-type: none"> - Development limited to the replacement of non-Heritage Places. - Development comprising detached, semi-detached and group dwellings or residential flat buildings that reinstate the building set-back and orientation to the Park Lands established by Heritage Places. <p><u>Ward Street and Strangways Terrace (east of Hill Street)</u></p> <ul style="list-style-type: none"> - Retain the visual prominence of Calvary Hospital. - Maintain the orientation and frontage of the hospital to Strangways Terrace. - Incorporate the use of landscaped open space to break up building mass. - Consolidate car parking and access areas and establish landscaping.
Siting	<p><u>Calvary Hospital, St Dominic's Priory College, Helping Hand</u></p> <ul style="list-style-type: none"> - provide a compatible set back from the street, adjoining residential allotments and State and Local Heritage Places. <p><u>Hill Street</u></p> <ul style="list-style-type: none"> - Continue the regular building set-back from the primary street frontage and the established regular pattern of siting of Heritage Places. <p><u>Buxton Street</u></p> <ul style="list-style-type: none"> - Helping Hand Aged Care - complement the setback of Heritage Places and avoid unbroken frontages and incorporate the use of landscaped open space to break up building mass.
Interface	<ul style="list-style-type: none"> - Non-residential development to respect the generally lower scale of residential buildings and provide a transition of built form at site boundaries. - <u>Calvary Hospital, St Dominic's Priory College, Helping Hand</u> - minimise building mass at the interface from an adjoining boundary by siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods.
Height	<ul style="list-style-type: none"> - Development of Calvary Hospital that: <ul style="list-style-type: none"> (a) is in accordance with Concept Plan Fig HS/1; (b) ensures new buildings up to a maximum of 5 building levels or 15 metres above the median natural or finished ground level at any or any part of a building are designed to: <ul style="list-style-type: none"> (i) be located in central areas of the site and in areas identified as Taller Built Form; (ii) ensure buildings up to 4 building levels are located along Hill Street and in areas identified as Taller Built Form; (iii) ensure buildings up to 3 building levels are in areas identified as Low Scale Built Form. - Development of St Dominic's Priory College that: <ul style="list-style-type: none"> (a) is in accordance with Concept Plan Fig HS/2; and should; (b) ensures new buildings up to a maximum of 3 building levels and 9 metres above the median natural or finished ground level at any point or any part of a building are designed to: <ul style="list-style-type: none"> (i) be located in areas identified as Taller Built Form;

Attachment A.5 CoA proposed Historic Area Statements

	<p>(ii) locate Low Scale Built Form up to 2 building levels/6 metres in height along the Barnard Street, Hill Street, Molesworth Street and Priory Lane frontages.</p> <ul style="list-style-type: none"> - Development of Helping Hand Aged Care that: <ul style="list-style-type: none"> (a) is in accordance with the Concept Plan Fig HS/3; (b) ensures new buildings up to a maximum of 4 building levels or 12 metres above the median natural or finished ground level at any point or any part of a building-are designed to: <ul style="list-style-type: none"> (i) be located in areas identified as 'Taller Built Form'; (ii) locate Low Scale Built Form between 1 to 2 building levels along the Molesworth Street, Buxton Street and Childers Street.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Views/Vistas/Visually prominent places	<ul style="list-style-type: none"> - Maintain the visual prominence of the Church of Perpetual Adoration by retaining views and vistas with suitable building setbacks from the side and street frontages of the Church. - Maintain the heritage value and prominence of the Calvary Hospital Chapel by retaining views and vistas. - Retain the visual prominence of Calvary Hospital.
Access	<ul style="list-style-type: none"> - St Dominic's Priory College - minimise impact of vehicular access and student pick up and drop off on residential amenity. - Helping Hand - improve the pedestrian environment and access across Buxton Street.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Childers East Policy Area 2

Heritage Characteristics	Examples
Townscape	<p>19th century and early 20th century elegant and finely detailed mansions, large villas set on large allotments and 1 and 2 storeys low and medium density detached and semi-detached residences of cottages and terrace houses on narrower frontages.</p> <p><u>Childers Street</u></p> <ul style="list-style-type: none"> - North side - single storey local heritage places, including row cottages, detached cottages and the occasional terrace houses with narrow frontages. - South side - detached and semi-detached cottages. <p><u>Gover Street</u></p> <ul style="list-style-type: none"> - Primarily single storey detached dwellings. <p><u>Jeffcott Street</u></p> <ul style="list-style-type: none"> - Diversity of traditional dwelling types reflecting the different stages of early residential development. - North of Childers Street - low scale row cottages. - Elsewhere - larger detached bay window and gable-fronted villas on individual sites. <p><u>Barton Terrace West</u></p> <ul style="list-style-type: none"> - Character highly modified over time. - Limited opportunities to increase the number of dwellings. <p><u>Hack Street</u></p> <ul style="list-style-type: none"> - Intimate character established by single storey cottages. <p><u>Mansfield Street</u></p> <ul style="list-style-type: none"> - Single storey detached dwellings.
Architectural Buildings	<ul style="list-style-type: none"> - Mansions - Villas - Detached and semi-detached - Cottages - Terrace houses, row cottages
Building Materials	<p><u>Front fences</u></p> <ul style="list-style-type: none"> - Stone and cast iron, brick, stone or rendered pillars and plinths, timber or well detailed masonry, but not metal sheeting. - Solid masonry fences not appropriate except where consistent with fencing of identified heritage value. <p><u>Side fences on secondary street frontage</u></p>

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Brick, rendered masonry and timber. <u>Rear and side property boundary fences (behind main face of the building)</u> - Corrugated metal sheeting.
Setting and Public Realm	<ul style="list-style-type: none"> - Street trees. - High quality paving and landscaping. - Tall trees at the Barton Terrace West and Jeffcott Street intersection to create an imposing 'gateway' entrance to North Adelaide.
Building Form	<p>Residential development in the form of detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings.</p> <p>Row dwellings are not appropriate.</p> <p><u>Childers Street</u></p> <ul style="list-style-type: none"> - Little change to the historic townscape. - North side - single storey detached or semi-detached dwellings, and the continuity of parapets, verandahs and roof profiles. - South side - single storey detached or semi-detached dwellings. <p><u>Gover Street</u></p> <ul style="list-style-type: none"> - North side - single storey detached or semi-detached dwellings. - South side - single storey detached dwellings. <p><u>Jeffcott Street</u></p> <ul style="list-style-type: none"> - North of Childers Street - townscape to remain unchanged. Where opportunities exist, development comprising of single storey detached or semi-detached dwellings. - Complement the established continuity of roof and verandah profiles. - South of Childers Street - single storey detached dwellings. <p><u>Barton Terrace West</u></p> <ul style="list-style-type: none"> - Replace non-Heritage Places with 1 or 2 storey detached or semi-detached dwellings. - Remove non-contributory elements from the primary street frontage e.g. garages <p><u>Hack Street</u></p> <ul style="list-style-type: none"> - East side - additional single storey detached dwellings. <p><u>Mansfield Street</u></p> <ul style="list-style-type: none"> - Retain single storey cottages character through conservation of Heritage Places. <p><u>Other minor streets</u></p> <ul style="list-style-type: none"> - Single storey detached dwellings.
Siting	<p><u>Childers Street</u></p> <ul style="list-style-type: none"> - North side - consistently sited row cottages. - South side - dwellings with varying set-backs <p><u>Gover Street</u></p> <ul style="list-style-type: none"> - North side - reinstate the historic pattern of development. - Locate garages behind the main face of a dwelling. - South side (west of Mansfield Street) - complement the generous scale and siting patterns of Heritage Places. <p><u>Jeffcott Street</u></p> <ul style="list-style-type: none"> - North of Childers Street - consistent and intensive built form edge to the eastern frontage sited on or close to the primary street frontage. - South of Childers Street - dwellings sited close to the primary street frontage. <p><u>Barton Terrace West</u></p> <ul style="list-style-type: none"> - Reinststate a more cohesive edge along terrace.
Height	<ul style="list-style-type: none"> - Buildings may be allowed to the maximum height or number of levels where compatible with the scale and siting of adjacent buildings and there is no adverse impact on established residential amenity. - Childers Street, Gover Street, Jeffcott Street, Hack Street and Mansfield Street – single storey built scale to the streetscape.

Attachment A.5 CoA proposed Historic Area Statements

<p>Fencing</p>	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
<p>Access</p>	<ul style="list-style-type: none"> - Barton Terrace West - utilise existing vehicle access points. - Hack Street (east side) - single width carparking where appropriate.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Wellington Square Policy Area 3

Heritage Characteristics	Examples
Townscape	<ul style="list-style-type: none"> - Important historical public space. - The townscape is contiguous with and complementary to the townscape character of the major streets which lead into the Square.
Architectural Buildings	<ul style="list-style-type: none"> - Detached dwellings. - Semi-detached dwellings.
Building Materials	<p><u>Front fences</u></p> <ul style="list-style-type: none"> - Stone and cast iron, brick, stone or rendered pillars and plinths, timber or well detailed masonry, but not metal sheeting. - Solid masonry fences not appropriate except where consistent with fencing of identified heritage value. <p><u>Side fences on secondary street frontage</u></p> <ul style="list-style-type: none"> - Brick, rendered masonry and timber. <p><u>Rear and side property boundary fences (behind main face of the building)</u></p> <ul style="list-style-type: none"> - Corrugated metal sheeting.
Setting and Public Realm	<ul style="list-style-type: none"> - Pedestrian paths and informal recreation areas provide attractive and safe shelter and seating. - Preserve and enhance the Square's informal character and unity by appropriate landscaping, paving, planting, lighting and street furniture.
Building Form	<ul style="list-style-type: none"> - Cohesive built form edge to the Square through sensitive infill development of buildings that reflect the prevailing setbacks of adjacent development. - 1 or 2 storey detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. - Row dwellings are not appropriate. - Complement the historic built form comprising large, single storey local heritage places and 1 or 2 storey State heritage places. - Redevelop corner sites not identified as Heritage Places and provide an attractive facade to each street frontage that emphasise the historic townscape of the junction of Square and street by their siting, scale and shape. - Balconies or verandahs over Wellington Square footpaths are not appropriate.
Siting	<ul style="list-style-type: none"> - Enclose the Square with buildings sited close to side boundaries provided they are not forward of any adjoining Heritage Place.

Attachment A.5 CoA proposed Historic Area Statements

Interface	<ul style="list-style-type: none"> - Development that respects the lower scale of residential buildings and provides a transition of built form at site boundaries.
Height	<ul style="list-style-type: none"> - Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting and where there is no adverse impact on established residential amenity.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Access	<ul style="list-style-type: none"> - Maintain a safe, pleasant pedestrian environment within Wellington Square and on the adjacent footpaths. - No additional vehicle access on the Wellington Square frontage.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Tynte Policy Area 4

Heritage Characteristics	Examples
Townscape	Formal and dignified historic character derived from its traditional community uses and its wide tree-lined streetscape.
Architectural Buildings	<ul style="list-style-type: none"> - Post Office - Library - Hotel, - Church - Kindergarten
Building Materials	<p><u>Front fences</u></p> <ul style="list-style-type: none"> - Stone and cast iron, brick, stone or rendered pillars and plinths, timber or well detailed masonry, but not metal sheeting. - Solid masonry fences not appropriate except where consistent with fencing of identified heritage value. <p><u>Side fences on secondary street frontage</u></p> <ul style="list-style-type: none"> - Brick, rendered masonry and timber. <p><u>Rear and side property boundary fences (behind main face of the building)</u></p> <ul style="list-style-type: none"> - Corrugated metal sheeting.
Setting and Public Realm	<ul style="list-style-type: none"> - Wide tree lined streets - Wide footpaths. - Quality landscaping, paving and street furniture that complement its historic context. - Attractive streetscape of Archer Street enhanced by landscaping of adjacent development.
Building Form	<p><u>Tynte Street</u></p> <ul style="list-style-type: none"> - Reinforce the dignity and quality of public buildings. - Verandahs or balconies established across footpaths where street tree growth permits. - Maintain the continuity of 2 storey built form. - Development off Tynte and Archer Streets that reflects the more intimate scale and siting of historic and established built form. - The site identified in Concept Plan Fig T/1, formerly occupied by Channel 9, provides the opportunity for an integrated redevelopment with low to medium scale residential development complemented by small restaurants and cafes that activate Tynte Street.

Attachment A.5 CoA proposed Historic Area Statements

	<p><u>Mansfield Street</u></p> <ul style="list-style-type: none"> - Low-scale development along the street frontage. <p><u>Wellington Square</u></p> <ul style="list-style-type: none"> - Low scale historic built-form around the perimeter of Wellington Square.
Siting	<ul style="list-style-type: none"> - Within the site identified in Concept Plan Fig T/1, medium rise dwellings up to 6 building levels will be centrally located within the site to limit impacts to residential amenity and historic streetscapes. <p><u>Tynte Street</u></p> <ul style="list-style-type: none"> - Buildings on or sited close to the street frontage. <p><u>Mansfield Street</u></p> <ul style="list-style-type: none"> - Cohesive streetscape that enhances the historic pattern of development. <p><u>Wellington Square</u></p> <ul style="list-style-type: none"> - Replace 1960s store building within the hatched area on Concept Plan Fig T/1 on Gover Street with low scale dwellings that reinforce the historic development pattern of detached dwellings and complement the more generous scale and siting patterns of Heritage Places. - North of Tynte Street and west of Mansfield Street (excluding hatched area on Concept Plan, Fig T/1) incorporate separate individual buildings to break up building mass and avoid long sections of continuous buildings.
Interface	<ul style="list-style-type: none"> - New buildings that respects the lower scale of residential buildings and provide a transition of built form at site boundaries. - Development in Archer Street that creates a gradual transition from the more contemporary building forms and townscape character of O'Connell Street to the east. - Within the site identified in Concept Plan Fig T/1, medium rise dwellings will transition down in scale to provide a suitable built form interface to sensitive development including existing low scale dwellings and Heritage Places.
Height	<ul style="list-style-type: none"> - New buildings or built form up to a maximum of 6 building levels are located within the area identified as Taller Built Form in Concept Plan Fig T/1; and - designed to minimise building mass at the interface with adjoining low-scale residential development by siting buildings within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, unless a variation to the building envelope demonstrates minimal adverse impacts upon adjacent residential development in terms of massing and overshadowing through alternative design methods. - provide an area along the northern boundary to accommodate landscaping to soften and relieve any large building mass at the interface with low scale residential premises.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ol style="list-style-type: none"> - of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; - on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.

Attachment A.5 CoA proposed Historic Area Statements

Views/Vistas/Visually prominent places	<ul style="list-style-type: none"> - Maintain views to the prominent landmark buildings of Bishops Court and Carclew.
Access	<ul style="list-style-type: none"> - Locate new vehicle access points on Mansfield Street: <ul style="list-style-type: none"> (a) away from the northern boundary of the Former Channel 9 site identified on Concept Plan Fig T/1 to provide adequate sight line distances to the north; and (b) to avoid conflict with existing vehicle access points. - Maintain a high level of pedestrian safety with convenient access to O'Connell Street to the east. - Incorporate through-site pedestrian links to the North Adelaide Village Centre where practicable.

Historic Area Statements

Lefevre Policy Area 7

Heritage Characteristics	Examples
Townscape	<p><u>Lefevre Terrace</u></p> <ul style="list-style-type: none"> - Cohesive townscape character established by the grand style and setting of 19th century terrace houses and Italianate villas, groupings of smaller early 20th century villas and bungalows. - Terraces and Italianate villas exhibit a high degree of facade articulation and modelling, with richly detailed masonry and cast-iron ornamentation. - Stone and cast-iron boundary walling reinforces the built form qualities of these residences. - Architectural character and detailing of the 20th century villas and bungalows are more restrained. <p><u>Barton Terrace East</u></p> <ul style="list-style-type: none"> - Late 19th and early 20th century residences comprising of single storey detached and semi-detached cottages and villas. <p><u>Ward Street</u></p> <ul style="list-style-type: none"> - Historic single storey cottages and a mix of dwellings of varied architectural form and height.
Architectural Buildings	<ul style="list-style-type: none"> - 19th century terrace houses and Italianate villas, - Early 20th century villas and bungalows. - Late 19th and early 20th century residences. - Detached and semi-detached cottages and villas.
Building Materials	<ul style="list-style-type: none"> - Stone, brick, detailed masonry and cast-iron ornamentation. - Stone and cast-iron boundary walling.
Setting and Public Realm	<ul style="list-style-type: none"> - Park Lands. - Street trees. - High standard of paving and landscaping. - Landscaping along Lefevre Terrace, Barton Terrace East and Brougham Place . - Large low density grand residential buildings overlooking the Park Lands set in generous landscaped grounds.
Building Form	<p><u>Lefevre Terrace</u></p> <ul style="list-style-type: none"> - Large detached and semi-detached dwellings or residential flat buildings set in generous landscaped grounds. <p><u>Brougham Place</u></p> <ul style="list-style-type: none"> - Development subordinate to the prevailing historic built form character.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - New buildings not desired unless non-contributory buildings are replaced. - Large detached and semi-detached dwellings or residential flat buildings that complement existing historic houses set in landscaped grounds. - Row or terrace housing is inappropriate. <p>Barton Terrace East</p> <ul style="list-style-type: none"> - Maintain the scale, heights, setbacks and low-density character of the street. <p>Ward Street</p> <ul style="list-style-type: none"> - Redevelop buildings incompatible with the historic streetscape. - Orientate development to the street, enhance the pedestrian environment and provide a compatible and enhanced streetscape. - Incorporate landscaped open space to break up building mass.
Siting	<ul style="list-style-type: none"> - Development at Lincoln College along the Ward Street frontage to comprise of a number of separate buildings to avoid long sections of unbroken buildings. - Barton Terrace East – New buildings sited to complement the regular pattern and setback of existing Heritage Place detached dwellings.
Height	<p>Height of development at Lincoln College that:</p> <ul style="list-style-type: none"> (a) is in accordance with the Concept Plan Fig LF/1; (b) ensures new buildings or additions up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building are designed to: <ul style="list-style-type: none"> - be located in areas identified as Taller Built Form; - achieve an orderly transition in scale from O'Connell Street to the historic low scale built form. - locate Low Scale Built Form up to 3 building levels along Ward Street and Margaret Street. - enhance the streetscapes with high quality visually interesting building frontages with a high level of fenestration, detailing and clear orientation to the streetscape.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Views/Vistas/Visually prominent places	<p>Retain the visual prominence of the Lincoln College State Heritage Places by retaining views and vistas of the former houses from Brougham Place and the Park Lands.</p>

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Cathedral Policy Area 8

Heritage Characteristics	Examples
Townscape	<p>A predominantly residential area and its unique character is established by its distinctive topography, diverse range of 19th century architecture and its extensive Park Lands frontages.</p> <p><u>Brougham Place, Palmer Place</u> - Low scale 19th century detached housing character.</p> <p><u>Brougham Court</u> - Closely sited semi-detached and detached local heritage places.</p> <p><u>Kermode Street</u> - West of Bagot Street -late 19th century detached residences on individual allotments and semi-detached buildings of local heritage value.</p> <p><u>Pennington Terrace</u> - State heritage places with considerable siting, set-back, scale and character variation.</p> <p><u>Lakeman Street</u> - Small cottages and single storey dwellings sited on the street frontage.</p> <p><u>King William Road</u> - St Peters Cathedral and the grand, spacious character of the townscape and its environs.</p>
Architectural Buildings	<ul style="list-style-type: none"> - St Peters Anglican Cathedral - 19th Century Mansions - Detached, semi-detached, cottages
Setting and Public Realm	<ul style="list-style-type: none"> - Park Lands. - Balcony or verandah shelter over footpaths on the south-west corner of King William Road and Kermode Street.
Building Form	<p><u>Brougham Place, Palmer Place</u> - Retain the low scale, detached housing character.</p> <p><u>Brougham Court</u> - Complement existing townscape of closely sited semi-detached and detached dwelling with consistent set-backs. - Maintain the strong built form definition at the junction of Brougham Place and Brougham Court.</p>

Attachment A.5 CoA proposed Historic Area Statements

	<p><u>Kermode Street</u></p> <ul style="list-style-type: none"> - West of Bagot Street - single storey detached or semi-detached buildings or residential flat buildings when viewed from the street. - North side (east of Bagot Street) - development replacing non-Heritage Places that respectfully interprets the traditional residential forms and subdivision pattern of individual 1 or 2 storey dwellings. - Development at St Mark's College to retain the visual prominence of St Peter's Anglican Cathedral when viewed from the surrounding locality. - Retain the visual prominence of the State Heritage Places. - Conserve the open landscaped setting and curtilage to Pennington Terrace. - Avoid long sections of unbroken buildings. <p><u>Pennington Terrace</u></p> <ul style="list-style-type: none"> - Little change to the townscape. <p><u>Lakeman Street</u></p> <ul style="list-style-type: none"> - Retain the side boundary walling of larger residences with frontages to Pennington Terrace and Kermode Street as a dominant feature. - Maintain the low-scale character of the townscape. - Setback 2-storey development so they are not readily visible from the street. <p><u>King William Road</u></p> <ul style="list-style-type: none"> - No new buildings developed on this site. - Opportunity to redevelop the shops on the Kermode Street corner to restore the townscapes continuity and architectural cohesion while preserving the important view of the north-east elevation of the Cathedral. - East side - new buildings should acknowledge the scale, siting and character of the Cathedral Hotel and Anglican Church Offices.
Siting	<ul style="list-style-type: none"> - Maintain the cohesive lines of buildings set behind attractive landscaping. - Kermode Street - maintain the existing pattern of development characterised by freestanding buildings within landscaped grounds. - Brougham Court - closely sited dwellings with consistent set-backs. - Pennington Terrace - State heritage places with considerable siting and set-back - Lakeman Street - dwellings sited on the street frontage.
Height	<ul style="list-style-type: none"> - Brougham Court, Brougham Place (west of Brougham Court) and Palmer Place (north of Kermode Street - confine 2-storey development to the rear of properties away from street frontages, subject to overshadowing and privacy constraints. - Height of development at St Mark's College that: <ul style="list-style-type: none"> (a) is in accordance with the Concept Plan Fig C8/1; (b) ensures new buildings up to a maximum of 3 building levels or 9 metres above the median natural or finished ground level at any point or any part of a building are designed to: <ul style="list-style-type: none"> (i) ensures the height, scale and siting of any new building does not detract from the landmark significance of St Peters Cathedral; and (ii) ensure Low Scale Built Form up to 2 building levels is located along Abbott Lane.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Views/Vistas/Visually prominent places	<p>Retain the visual prominence of the following landmark Heritage Places:</p> <ul style="list-style-type: none"> - St Peter's Anglican Cathedral; - sandstone dwelling at the junction of Kermode Street and Palmer Place; - bluestone terrace house at the junction of Kermode Street and Lakeman Street; - former North Adelaide Church of Christ Chapel; and - Queens Head Hotel.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Women's and Children's Policy Area 9

Heritage Characteristics	Examples
Townscape	State Heritage Places representative of traditional institutional architecture are the most significant historic townscape elements. The Heritage Places complement the low scale townscape character of the adjacent Cathedral area.
Architectural Buildings	<ul style="list-style-type: none"> - Women's and Children's Hospital. - Memorial Hospital.
Setting and Public Realm	<ul style="list-style-type: none"> - High quality spaces to the street. - High degree of pedestrian amenity. - Shelter provided by street trees and on-site landscaping. - Street tree planting and on-site landscaping to frontage of King William Street, Kermode Street, and Sir Edwin Smith Avenue. - Activated building interface to Kermode Street. - Improve Kermode Street streetscape by providing land uses and building facades that activate the street and contribute to a high-quality public realm.
Building Form	<ul style="list-style-type: none"> - Replacement of buildings not identified as Heritage Places. - Conserve individual historic elements viewed from the public road frontages. - Reinforce the existing scale of development. - North of Kermode Street - development may expand building footprints to allow for facility upgrades. - Buildings fronting Kermode Street to have a high proportion of windows, fine grain appearance. - Provide a visually interesting streetscape with buildings having a high level of fenestration, detailing and orientation towards the street. - Incorporate taller buildings within Development within the central parts of a site. - Complement the architectural quality of the locality, particularly when viewed from key vistas including the Riverbank and Park Lands. - Where practicable incorporate buildings at the street edges that achieve a scale and character compatible with the lower scale and historical residential character of Lower North Adelaide to the north-east. - Improve the frontage of the Memorial Hospital and the outlook over the Park Lands. - Avoid visible blank walls.
Siting	<ul style="list-style-type: none"> - Buildings sited off side and rear boundaries and - Incorporate landscaped open space to break up building mass.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Development complemented by landscaping to soften and relieve any large building mass and provide quality spaces.
Interface	<ul style="list-style-type: none"> - Minimise building mass at the interface from an adjoining boundary by locating Taller elements siting built form within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods.
Height	<ul style="list-style-type: none"> - North of Kermode Street development not exceeding 14 building levels or locate a ceiling more than 43 metres above the median natural or finished ground level at any point or any part of a building. - King William Road (north of Kermode Street) development not exceeding 2 buildings levels or locate a ceiling more than 6 metres above the median natural or finished ground level at any point or part of a building. - South of Kermode Street development in accordance with Concept Plan Fig WC/1; and <ul style="list-style-type: none"> (a) retain set back and sense of address and open character to the Park Lands; (b) ensure new buildings up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building are designed to: <ul style="list-style-type: none"> (i) be located in areas identified as 'Taller Built Form'; (ii) locate Low Scale Built Form up to 4 building levels in areas identified as 'Low Scale Built Form' except where located on Sir Edwin Smith Avenue and Pennington Terrace where built form will be up to 2 storeys to be compatible with State Heritage Places; (iii) complement and enhance the skyline that incorporates key land marks including St Peter's Anglican Cathedral and Adelaide Oval.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Views/Vistas/Visually prominent places	<ul style="list-style-type: none"> - Maintain long ranging views, vistas and visual prominence of St Peter's Anglican Cathedral.
Access	<ul style="list-style-type: none"> - Maintain pedestrian safety and ease of access to the adjacent Park Lands. - Remove visual impact of existing car parking, vehicle access and egresses by siting car parking away from the street frontages. - Facilitate the use of all modes of transport including cycling, walking, public transport, car share and vehicular access.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Kentish Arms Policy Area 11

Heritage Characteristics	Examples
Townscape	<p>Townscapes of large 19th and early 20th century substantial Victorian and Edwardian villas, and other low density detached and semi-detached dwellings in a variety of forms and styles, row cottages, detached cottages and small attached cottages.</p> <p><u>Stanley Street (south side), East and West Pallant Streets</u> - Comprises of some Adelaide's earliest single-storey residential buildings.</p> <p><u>Stanley Street (north side)</u> - Single-storey detached, semi-detached and row housing of the Victorian and Edwardian periods.</p> <p><u>Sussex Street</u> - Variety of building types including early German settler cottages, Victorian row dwellings, blocks of flats, row dwellings and commercial premises. - Eastern and western ends of the street contain small scale, closely sited and cohesive development which formerly characterised the street. - North side - early settler cottages. - South side - Victorian row houses.</p> <p><u>Kingston Terrace</u> - Single-storey row housing and detached and semi-detached houses of the late Victorian to Edwardian periods, with more recent detached houses and contemporary 3 storey row houses. - Diversity of architectural styles and housing types, while presenting a cohesive townscape.</p> <p><u>Jerningham Street</u> - Single-storey 19th century detached and semi-detached dwellings.</p> <p><u>Mackinnon Parade</u> - East of Dunn Street - detached and semi-detached houses of similar scale and design of heritage value. - West of Dunn Street - a built form that has eroded the established cohesive streetscape pattern evident elsewhere on the Park Lands frontage.</p> <p><u>Mann Terrace</u> - South of Melbourne Street - a group of identical villas of local heritage value. The articulated and gabled facades, pitched roof profiles and verandahs create a highly cohesive character.</p>

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - North of Melbourne Street – a cohesive townscape with closely developed detached and semi-detached dwellings mostly of local heritage value and regular building set-back from the street <p><u>Hart Street</u></p> <ul style="list-style-type: none"> - Detached stone cottages of consistent scale, built form character and siting. - The intensity of development, masonry construction, fenestration, pitched roofs and verandahs establish a cohesive built form. <p><u>Bower Street/Provost Street</u></p> <ul style="list-style-type: none"> - Small detached cottages and row dwellings set on or close to the street.
Architectural Buildings	<ul style="list-style-type: none"> - Early German settler cottages. - Victorian row dwellings. - Blocks of flats. - Row dwellings. - Victorian and Edwardian villas. - Detached and semi-detached dwellings. - Row cottages and detached cottages.
Building Materials	<ul style="list-style-type: none"> - Masonry
Setting and Public Realm	<ul style="list-style-type: none"> - Street trees and landscaping. - High standard of paving.
Building Form	<p><u>Stanley Street (south side), East and West Pallant Streets</u></p> <ul style="list-style-type: none"> - 2-storey development setback behind single storey frontages and not readily visible from the street may be appropriate and the lowering of eaves may be necessary along these frontages to be consistent with adjoining buildings of heritage value. <p><u>Stanley Street (north side)</u></p> <ul style="list-style-type: none"> - Reflect the close siting of houses, verandahs along the street frontages and hipped roofs or parapets to front facades. - Redevelopment of the North Adelaide School of Art that creates a built form consistent with the scale, siting and design of the northern side of Stanley Street established by closely sited detached and semi-detached dwellings is sympathetic with the character . - Retain or reinforce the single storey historic character of the street. <p><u>Sussex Street</u></p> <ul style="list-style-type: none"> - Infill development consisting of single storey detached dwellings on smaller frontages that re-establishes the scale, character and rhythm of residential buildings. - 2 storey development that is designed in a traditional form using traditional materials and not visible from the street. <p><u>Kingston Terrace</u></p> <ul style="list-style-type: none"> - Between Fuller Street and Francis Street (west) – single storey residential buildings. - Elsewhere - 1 and 2 storey detached, semi-detached or residential flat buildings subject to their compatibility with adjoining development. <p><u>Jerningham Street</u></p> <ul style="list-style-type: none"> - Development limited to alterations and additions to the rear of Heritage Places <p><u>MacKinnon Parade</u></p> <ul style="list-style-type: none"> - Development limited to replacing non-Heritage Places and alterations and additions to the rear of Heritage Places. - Reinforce the scale and siting established by the single storey Heritage Places. - East of Dunn Street - townscape to remain largely unchanged. - West of Dunn Street - detached or semi-detached dwellings. <p><u>Mann Terrace</u></p> <ul style="list-style-type: none"> - Development limited to replacing non-Heritage Places and alterations and additions to the rear of Heritage Places. <p><u>Hart Street</u></p> <ul style="list-style-type: none"> - Opportunity for single storey dwellings located to the rear of sites.

Attachment A.5 CoA proposed Historic Area Statements

	<p>Bower Street/Provost Street</p> <ul style="list-style-type: none"> - Reinforce the character of the detached dwellings of local heritage value. <p>Arthur Street</p> <ul style="list-style-type: none"> - Contain 2 storey development within the roof space or locate the second level to the rear of site away from the primary street frontage to retain the low scale character townscape. <p>Row dwellings</p> <ul style="list-style-type: none"> - Maximum of 6 dwellings in any one group. - Garaging not incorporated into the principal street frontage.
Siting	<ul style="list-style-type: none"> - Conserve or reinstate a strong residential built-form edge to the Park Lands and Mann Terrace through the regular siting and pattern of buildings addressing the principal road frontage. - Stanley Street (south side), East and West Pallant Streets - allotments containing closely sited single-storey buildings.
Height	<ul style="list-style-type: none"> - Buildings may be allowed up to the maximum height or number of levels where such buildings are compatible with adjacent buildings and their settings in respect of their scale and siting, and where there is no adverse impact on established residential amenity. - Jerningham Street, Stanley Street, MacKinnon Parade, Sussex Street, Hart Street, Arthur Street and East and West Pallant Streets - 2 storey development, including additions to existing buildings, located at the rear of the site away from the street frontage and not visible from the street. - Kingston Terrace - single storey residential buildings between Fuller Street and Francis Street (west).
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ol style="list-style-type: none"> of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Access	<ul style="list-style-type: none"> - Vehicle access to row dwellings provided from laneways or minor streets. - Car parking located behind buildings on the frontages to Kingston Terrace, Mann Terrace, MacKinnon Parade, Melbourne Street and Sussex Street and behind or beside buildings on the Stanley Street and Jerningham Street frontages.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Finniss Policy Area 12

Heritage Characteristics	Examples
Townscape	<p><u>Finniss Street (north side)</u></p> <ul style="list-style-type: none"> - Victorian and Edwardian villas and the terraces and cottages to the east. <p><u>Finniss Street (south side)</u></p> <ul style="list-style-type: none"> - Detached and semi-detached dwellings.
Architectural Buildings	<ul style="list-style-type: none"> - Victorian and Edwardian villas, terraces and cottages. - Detached and semi-detached dwellings.
Building Materials	<ul style="list-style-type: none"> - High standard of materials.
Setting and Public Realm	<ul style="list-style-type: none"> - Landscaped private open space. - Adjacent Park Lands. - Avenue planting in Finniss Street and MacKinnon Parade.
Building Form	<ul style="list-style-type: none"> - Respect the low scale, environmental quality, character and historic value of the area, incorporating high standards of design, materials and landscaping. - Development comprising detached, semi-detached or group dwellings, residential flat buildings, or alterations and additions to existing buildings. - Row dwellings are not be developed. <p><u>Finniss Street (north side)</u></p> <ul style="list-style-type: none"> - Single storey, detached and semi-detached dwellings. - Conserve and complement the consistent siting and scale of the Victorian and Edwardian villas and the terraces and cottages to the east. - Incorporation of verandahs, gable roofs, bay window frontages, open style fences or simple facades of the early vernacular. - Facades constructed with a high solid to void ratio. <p><u>Finniss Street (south side)</u></p> <ul style="list-style-type: none"> - Detached and semi-detached dwellings presenting as single storey buildings to the street. - Complement the scale and siting of the Victorian and Edwardian villas on the northern side of Finniss Street. - Kathleen Lumley College - avoid long sections of unbroken buildings and unarticulated facades and incorporate landscaped open space to break up building mass. - Retain the visual prominence of the State Heritage Place of Kathleen Lumley College.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Maintain the prominence of the British Hotel through careful design and set-back of adjacent development. <p>MacKinnon Parade</p> <ul style="list-style-type: none"> - Contemporary residential buildings reflecting the shape and form of traditional buildings styles including roof pitch, verandahs, eaves, materials, setbacks and fencing. - Facades constructed with a high solid to void ratio. - Detached and semi-detached dwellings of 1 or 2 storeys, excluding existing large amalgamated sites of no heritage value, where residential flat buildings may be appropriate provided development reinforces the traditional siting pattern of individual detached dwellings. - Development should not take reference from buildings of 2 or more storeys that conflict with the historic character of the area. - Kathleen Lumley College - incorporate sympathetically designed alterations of up to 4 building levels to the existing State Heritage place. - Retain visual prominence of the State Heritage Place of Kathleen Lumley College. <p>Brougham Place:</p> <ul style="list-style-type: none"> - Additional dwellings on the frontage is not desired.
<p>Siting</p>	<ul style="list-style-type: none"> - Reinstate the strong built-form edge to the Park Lands through the regular siting and pattern of single storey buildings addressing the street. - Finnis Street - siting and scale consistent with the Victorian and Edwardian villas and the terraces and cottages to the east.
<p>Height</p>	<ul style="list-style-type: none"> - Height of new buildings at Kathleen Lumley College up to a maximum of 4 building levels or 12 metres above the median natural or finished ground level are designed to: <ul style="list-style-type: none"> (a) be located in areas identified for Taller Built Form and set back from the Finnis Street frontage; (b) ensure that Low Scale Built Form between 1 to 2 storeys is located along Finnis Street; and (c) minimise building mass at the interface with adjoining boundaries by locating Taller elements in the centre of the site and within a building envelope consisting of a 45 degree plane, measured from a height of 3 metres above natural ground level at the allotment boundary of an adjoining residential allotment, except where a variation to the building envelope demonstrates minimal adverse impacts upon adjacent housing in terms of massing and overshadowing through alternative design methods.
<p>Fencing</p>	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
<p>Views/Vistas/Visually prominent places</p>	<ul style="list-style-type: none"> - Retain the visual prominence of the State Heritage Place of Kathleen Lumley College and the British Hotel.

Historic Area Statements

Version 2 – 13 November 2019

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Archer West Policy Area 15

Heritage Characteristics	Examples
Townscape	<p><u>Archer Street</u> - Contemporary building forms and townscape character of O'Connell Street that transitions to the low scale historic built form surrounding Wellington Square.</p> <p><u>Jeffcott Street</u> - Lutheran Seminary buildings, detached 1 and 2 storey Heritage Places of consistent architectural style, form and siting. - Historic character derived from the prominent historic buildings of Hebart Hall and nearby Bishops Court.</p> <p><u>Ward Street</u> - Lutheran Seminary buildings, single storey detached and semi-detached dwellings and recent 2 and 3 storey buildings.</p> <p><u>Walter Street</u> - Intimate scale and siting of the historic and established built form.</p>
Building Materials	- Stone, brick, render, galvanized steel and terracotta.
Setting and Public Realm	- Lutheran Seminary – new buildings fronting internal streets and spaces to create intimacy and enclosure of spaces.
Building Form	<p>- Low scale development to street frontages to create cohesive townscapes that respect the 19th and early 20th century building forms in a responsive, sensitive and contemporary manner. - Low scale development around Hebart Hall set back to provide visual relief and maintain the setting of the Heritage Place.</p> <p><u>Archer Street</u> - Achieve a gradual transition from the contemporary building forms and townscape character of O'Connell Street to the low scale historic built form surrounding Wellington Square.</p> <p><u>Jeffcott Street</u> - Maintain the historic character derived from the prominent historic buildings of Hebart Hall and nearby Bishops Court. - Development limited to alterations to existing buildings that respect and interpret the buildings in a sensitive, contemporary manner.</p> <p><u>Ward Street</u></p>

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - West - maintain the historic character derived from the prominent historic buildings of Hebart Hall and nearby Bishops Court. - East - opportunities to redevelop under-utilised land with contextually designed new buildings and additions. <p><u>Walter Street</u></p> <ul style="list-style-type: none"> - Development that responds to the more intimate scale and siting of the historic and established built form. - East-West section - development responsive to Heritage Places and provides a transition to the medium scale development of O'Connell Street.
Siting	<ul style="list-style-type: none"> - Size, proportions and orientation of development to reinforce the historic grid pattern and smaller building footprints. - Continue the prevailing setbacks of buildings fronting Wellington Square.
Interface	<ul style="list-style-type: none"> - Provide a suitable built interface to sensitive development including existing low scale residential development and Local and State Heritage Places.
Height	<ul style="list-style-type: none"> - Ward Street, Jeffcott Street and Archer Street - development should complement the established low scale streetscape and not exceed 2 building levels or the height of an existing building fronting the street, whichever is greater. - Walter Street (North-South section) development should be more intimate in scale and character and may incorporate 2-storey elements away from the street frontage behind a single storey façade. - New buildings fronting the Square should be low scale and not exceed the existing height of buildings fronting the Square. - Development up to a maximum of 6 building levels or 18 metres above the median natural or finished ground level at any point or any part of a building may be appropriate where buildings are designed to: <ul style="list-style-type: none"> (a) locate taller built form is located on large and consolidated sites; (b) be compatible to the zone context and heritage values and contribute positively to the public realm; (c) incorporate appropriately sited and orientated forms to reflect the predominant historic grid pattern and reinforce the linear streetscape form; (d) be sited away from existing street frontages to retain the low scale historic streetscape character and preserve the visual prominence of State and Local Heritage Places; (e) comprise a series of smaller building footprints that are adequately separated by high quality landscaped open space to provide views through the built form to the sky beyond and non-contiguous shadows in adjoining areas and which optimise privacy, light and air; (f) incorporate well-proportioned architectural treatments and rhythm in the built form through modulation and articulation to create small components and elements in the appearance of buildings to reinforce the human scale and historic character of the streetscape; (g) provide a high ratio of solid to void; (h) be sited off side and rear boundaries and avoid blank walls; and (i) occur in a coordinated manner.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres.

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
<p>Views/Vistas/Visually prominent places</p>	<ul style="list-style-type: none"> - Maintain views to Heritage Places. - Preserve the visual prominence and landscaped setting of landmark Hebart Hall including the centre clock tower spire and cast iron and stone walling along the Jeffcott and Ward Street frontages.
<p>Access</p>	<ul style="list-style-type: none"> - Except for low scale buildings car parking should be located in the basement to provide for the maximum utilisation of land and limit the visual impact on the amenity and Historic character of the area. - Redevelopment of larger consolidated parcels, new car parking should be at basement level to optimise the use of land and to limit the visual impact on the amenity of the area. Additional surface car parking and above ground car parking should be avoided except in the case of low scale residential development. - Access points that: <ul style="list-style-type: none"> (a) are narrow and consolidated to minimise the impacts to pedestrian environments and maintain the residential scale and pattern of development; (b) are from Ward Street for parking, servicing or deliveries for development with high traffic volumes to minimise traffic and vehicle queuing on Archer Street; and (c) remove the visual impact of existing car parking, access and egresses to the area by siting any new car parking away from street frontages.

Historic Area Statements

Historic Area Statement for North Adelaide HCZ and Adelaide HCZ

Historic Area Overlays identify areas that comprise unified, consistent streetscape characteristics of an identifiable historic, economic or social theme associated with an earlier era of development. They comprise built form characteristics, and at times natural features and sub-division patterns that provide a legible connection to the historic development of the local area. Development within the Overlay will preserve these attributes.

The redevelopment of existing places, through refurbishment or adaptive reuse, will maintain, and where possible enhance or reinforce this unified, consistent historic streetscape character.

New development will generally be limited to the replacement of places that either do not contribute towards this unified, consistent historic streetscape character, or toward the rear of sites that do, so as to not adversely impact the legibility and interpretation of the prevailing historic, economic or social themes as viewed from the public realm.

Adelaide Historic (Conservation) Area

Heritage Characteristics	Examples
Townscape	<p>Cohesive groups of nineteenth century buildings of historic significance.</p> <p><u>Ada Street</u></p> <ul style="list-style-type: none"> - Variety of dwellings, including row cottages, small semi-detached cottages and detached bay window cottages. <p><u>Carrington Street (east of Marion Street)</u></p> <ul style="list-style-type: none"> - A cohesive townscape comprising of single-storey detached, semi-detached and row cottages, terrace houses and contemporary attached dwellings. <p><u>Carrington Street (west of Marion Street)</u></p> <ul style="list-style-type: none"> - Closely sited single-storey cottages, row cottages, and terrace houses. <p><u>Castle Street</u></p> <ul style="list-style-type: none"> - Small semi-detached and detached cottages and a single terrace. <p><u>Corryton Street (north of Halifax Street)</u></p> <ul style="list-style-type: none"> - Single-storey semi-detached and detached cottages sited close to the street frontage. <p><u>Corryton Street (south of Halifax Street)</u></p> <ul style="list-style-type: none"> - Long single-storey row of cottages. <p><u>Gilles Street</u></p> <ul style="list-style-type: none"> - Single storey attached and detached cottages in a close pattern of development and exhibit a variety of architectural forms. - East of St John Street - an open subdivision pattern of large detached residences set in landscaped grounds that create a transition from the intimate cottage character of Gilles Street to the grand mansion character of East Terrace. <p><u>Gladstone Street</u></p> <ul style="list-style-type: none"> - Single-storey row and semi-detached cottages sited close to the street frontage. <p><u>Halifax Street (east of Hutt Street)</u></p> <ul style="list-style-type: none"> - Single-storey detached and semi-detached cottages of a consistent built form character and the occasional terrace house. - St John's Church is a prominent landmark. <p><u>Halifax Street (west of Hutt Street)</u></p> <ul style="list-style-type: none"> - Single-storey attached and detached cottages, a large bay window residence and a two-storey Victorian former corner shop.

Attachment A.5 CoA proposed Historic Area Statements

	<p><u>Kate Court</u></p> <ul style="list-style-type: none"> - Single-storey semi-detached cottages, detached gable-fronted cottages and terrace house sited close to the street frontage. <p><u>Marion Street</u></p> <ul style="list-style-type: none"> - Close grouping of 19th century small semi-detached and detached cottages and row cottages. <p><u>McLaren Street and Regent Street South</u></p> <ul style="list-style-type: none"> - Closely sited, single-storey scale cottages and row houses. <p><u>Royal Avenue</u></p> <ul style="list-style-type: none"> - Single single-storey cottages and villas in a close pattern of development. <p><u>St. John Street</u></p> <ul style="list-style-type: none"> - The north east townscape is dominated by the substantial scale and richly detailed character of St John's Church, Meeting Hall and Rectory. - Western frontage - group of consistently sited, gable-fronted villas. - Eastern frontage - small group of narrow fronted cottages. <p><u>Tomsey Street</u></p> <ul style="list-style-type: none"> - Single-storey semi-detached and detached cottages.
<p>Architectural Buildings</p>	<ul style="list-style-type: none"> - Single-storey detached, semi-detached and row cottages. - Terrace houses. - Contemporary attached dwellings. - Large detached residences. - Victorian former corner shop - St John's Church, Meeting Hall and Rectory - Villas. - Late 1870's and 1880's grand residences. - 1850's, 1870's and 1880's small cottages.
<p>Building Materials</p>	<ul style="list-style-type: none"> - Stone, brick and/or brick render. - Coated surfaces visible from the street finished in natural render, limewash, cement or mineral paints, not plastic coatings or acrylic renders. - Brightly coloured or highly reflective surfaces are not appropriate. <p><u>Front fences</u></p> <ul style="list-style-type: none"> - Traditional materials such as stone and cast iron, brick, stone or rendered pillars and plinths, timber or well detailed masonry, but not metal sheeting. - Solid masonry fences not appropriate except where consistent with fencing of identified heritage value on the site. <p><u>Rear and side property boundary fences (behind main face of the building)</u></p> <ul style="list-style-type: none"> - Traditional materials such as corrugated metal sheeting. <p><u>Side fences on secondary street frontage</u></p> <ul style="list-style-type: none"> - Traditional materials such as brick, rendered masonry and timber.
<p>Setting and Public Realm</p>	<ul style="list-style-type: none"> - Attractive streetscapes. - High quality public environment, with appropriate planting. - Landscaped open space arranged and planted for the retention of existing significant vegetation and enhancement of the established landscape character of the locality. - Private and public open spaces incorporating attractive landscaping to street frontages where appropriate and available within building set-backs.
<p>Building Form</p>	<ul style="list-style-type: none"> - Redevelop and replace discordant buildings and enhance the historic character through careful attention to the subdivision pattern, siting, form and composition of new and replacement dwellings and building alterations and additions. - Retain and conserve heritage places. - Reflect the historic built form and its visual character through residential development of complementary design, form and density. - Increase the amount of residential accommodation by: <ul style="list-style-type: none"> (a) adapting or redeveloping non-residential buildings for residential purposes; (b) developing vacant and under-utilised sites; and

Attachment A.5 CoA proposed Historic Area Statements

<p>(c) redevelop sites containing buildings that are incompatible with the historic character of the Zone.</p> <ul style="list-style-type: none">- Overhanging verandahs or balconies extending over the public road verge should only occur where development is sited on property boundaries to the major street frontages, and particularly on street corners.- Complement the characteristic features and any distinctive, architectural elements and forms and avoid discordant, foreign and uncharacteristic building styles.- Corner sites (excluding heritage places) that provide facades to each street frontage and are sited on or close to the corner frontages where the development complements the siting of heritage places.- Pitched roofs that reinforce the prevailing character of historic roof forms. Mono-pitch or flat roof forms falling to the street frontage or asymmetrically to a side boundary are not appropriate. <p><u>Ada Street</u></p> <ul style="list-style-type: none">- Largely single-storey scale and close development pattern of residences.- Consistent pitched roof profiles, verandahs, fenestration and materials establish a cohesive built form character. <p><u>Carrington Street</u> (east of Marion Street)</p> <ul style="list-style-type: none">- Dwellings with vertically proportioned openings, pitched roofs and verandahs comprise the streets character. <p><u>Carrington Street</u> (west of Marion Street)</p> <ul style="list-style-type: none">- Maintain and reinforce window proportions, pitched roof profiles, verandahs and materials. <p><u>Castle Street</u></p> <ul style="list-style-type: none">- Dwellings closely sited to the street with narrow frontages, verandahs along the street and pitched roofs and reflected in any infill development. <p><u>Corryton Street</u> (north of Halifax Street)</p> <ul style="list-style-type: none">- Cohesive built form character established by the rhythm of narrow dwelling facades, fenestration, pitched roof profiles and verandahs. <p><u>Corryton Street</u> (south of Halifax Street)</p> <ul style="list-style-type: none">- Horizontal emphasis created by the common roof, verandah profiles and continuous picket fencing. <p><u>Gilles Street</u></p> <ul style="list-style-type: none">- Variety of architectural forms.- Cohesive character established by consistent fenestration, pitched roof profiles and verandah styles.- East of St John Street - open subdivision pattern of large detached residences set in landscaped grounds creating a transition from the intimate cottage character of Gilles Street to the grand mansion character of East Terrace. <p><u>Gladstone Street</u></p> <ul style="list-style-type: none">- Intimacy and sense of enclosure derived from the low scale character and horizontal form of dwellings sited close to the street frontage. <p><u>Halifax Street</u> (east of Hutt Street)</p> <ul style="list-style-type: none">- Dwellings sited close to the street frontage with minimal side boundary set-backs.- Consistent window proportions, high proportion of solid to void, pitched roof profiles and verandahs.- Development to present as single storey to the street. <p><u>Halifax Street</u> (west of Hutt Street)</p> <ul style="list-style-type: none">- Interpret and reinforce the patterns and forms established by the elements of traditional character. <p><u>Kate Court</u></p> <ul style="list-style-type: none">- Sited close to the street frontage, with consistent window proportions, roof forms and verandah styles. <p><u>Marion Street</u></p> <ul style="list-style-type: none">- Close grouping of dwellings.
--

Attachment A.5 CoA proposed Historic Area Statements

	<ul style="list-style-type: none"> - Low horizontal emphasis established by the front parapet line of the row cottages and by the consistent roof and verandah forms of other dwellings. <p><u>McLaren Street and Regent Street South</u></p> <ul style="list-style-type: none"> - Reinforce the prevailing subdivision pattern, vertically proportioned openings and the consistent form of pitched roofs and verandahs. <p><u>Royal Avenue</u></p> <ul style="list-style-type: none"> - Maintain close pattern of development.
Siting	<ul style="list-style-type: none"> - Development consistent with the established building set-backs from front, side and rear allotment boundaries prevail. - Where no consistent building set-back, buildings are not to project forward of heritage places adjacent to the site. - Building to side boundaries (except party walls in semi-detached, row dwellings or residential flat buildings) or to a rear boundary is not appropriate, unless demonstrated that it will not detrimentally effect residential amenity or adjacent heritage place(s). - Division of land to conform with the established historic allotment pattern in particular the allotment frontages of dwellings in the relevant street and achieve regularly proportioned allotments capable of containing dwelling types consistent with the desired character. - The division of land in the form of a hammerhead allotment or similar allotment is not appropriate.
Height	<ul style="list-style-type: none"> - Height of new buildings, including the floor to ceiling clearances that take reference from the prevailing building heights within the locality, particularly adjacent Heritage Places. - Where single storey development prevails, low profile two storey additions to the rear of an existing building may be appropriate provided it does not impact on the historic character of the streetscape or have overshadowing, bulk and privacy impacts on neighbouring land.
Fencing	<ul style="list-style-type: none"> - Fencing to a street frontage (including secondary street frontage) and returning along the side boundaries to the alignment of the main face of the principal building on the land, that are: <ul style="list-style-type: none"> (a) of traditional style and detailing compatible with the style of the building, or for new buildings, its design should reflect historic fencing styles evident in the streetscape; (b) on the primary street frontage, comprise low fencing or open character fencing combined with solid pillars and plinths or similar fencing styles that allow views of the associated building, by their height and design. - Fences on corner sites - front fence that return on the secondary street frontage at the same height up to the alignment of the main face of the building on the land. The remaining rear section of side fences on a secondary street frontage are no higher than 1.8 metres. - Rear and side property boundary fences (behind the main building face) - no higher than 2 metres. - Side fences or walls (forward the main building face) - of a scale that allows oblique views of buildings and no higher than 1.2 metres.
Views/Vistas/Visually prominent places	<ul style="list-style-type: none"> - St John's Church, Meeting Hall and Rectory.
Access	<ul style="list-style-type: none"> - Vehicle access via minor streets, side or rear lanes and existing crossovers. - Avoid new crossovers on streets and on-site car parking is not required where vehicle access does not prevail on the primary street frontage. - New vehicle crossovers that: <ul style="list-style-type: none"> (a) are kept to a minimum width necessary for safe and convenient access and to preserve and enhance street character; (b) designed to narrow the crossover width towards the road pavement and located to avoid the need to remove historic kerbing and significant trees; and (c) separated from each other to minimise visual impact on the street character - Undercroft parking or parking or access arrangements not in keeping with the Zone's historic character are not appropriate.

Attachment A.6

Commentary on Draft Practice Directions / Guidelines

Attachment A.6A – Feedback on: Draft Practice Guideline – Interpretation of Local Heritage Place Overlay, Historic Area Overlay and Character Area Overlay 2019.

Attachment A.6B –Feedback on: Draft Practice Direction – Site Contamination Assessment.

State Planning Commission Practice Guideline – (Interpretation of the Local Heritage Places Overlay, Historic Area Overlay and Character Area Overlay) 2019

Overview:

The Practice Guideline has been prepared to provide guidance with respect to the interpretation, use or application of the provisions of the Planning and Design Code. Specific policy guidance is provided for the demolition provisions in the Local Heritage Places Overlay and the Historic Area Overlay.

Note: The Guideline does not address the State Heritage Place Overlay or the State Heritage Area Overlay.

Note: Council does not have Character Areas or contributory items.

Council has the following concerns:

For LHPs, if the **extent of heritage listing** is not set in the Code or the original survey information, the applicant should provide expert advice to identify the extent of listing. This will add to the cost of lodging a development application and may require Council to engage experts to verify the claims made.

Demolition policy for LHPs. As stated in the Summary Sheet for LHP Overlay, Council believes that in order to ensure that owner neglect does not become a valid argument for demolition, the PO should be changed to reflect the demolition provisions for SHPs.

A **LHP Impact Statement** must be submitted for any proposed part or total demolition for a LHP. While expert reports are required for similar applications now, they are not mandated. This requirement will add additional cost to lodging a development application for both the applicant and Council, who will need to verify the claims made.

Design in Historic Areas. As stated in the Summary Sheet for Historic Areas, Council believes that additional statements should be included in the Historic Area Statements that make it clear that design of new development should be driven by responding to the context with a design that references the old, but does not mimic it.

Regarding **demolition in Historic Areas**, as stated in the Summary Sheet for Historic Areas, Council has the following concerns:

- Demolition will also be supported if the façade of the building has been substantially altered and cannot be reasonably, economically restored in a manner consistent with the building's original style. The term 'reasonably, economically restored' needs to be defined.
- A criterion for demolition is that the façade of the building does not contribute to the Historic Area Statement. What will occur if a building has a tall fence to the street or vegetation blocking the view? Will that enable demolition to occur?
- Another criterion for demolition is based on an assessment of the 'structural integrity or condition of the building being beyond economic repair'. The Practice Guideline instructs that the economic cost of repair should be balanced against replacement costs, but no further guidance is provided.

An application for the demolition of any building within the HA Overlay will require a **Heritage Area Impact Assessment** to be submitted. This is a justification for demolition and must be accompanied by appropriately qualified experts ranging from heritage professionals to structural engineers and quantity surveyors. The provision of these reports will be expensive for the applicant and for Council to seek independent expert advice or review of the report.

Definitions.

- Conservation works – The definition includes ‘explaining and campaigning’. The term ‘conservation’ should have the same meaning as that contained in the Burra Charter.
- ‘Heritage Significance’ has been applied to SHPs and ‘Heritage Value’ to LHPs. If so, use the definitions consistently in SPC documents.
- Heritage Impact Statement – Attachment 1 seems to contradict the Practice Direction – Part 3, second point 2. There it is stated that an HIS is required for minor applications and it is implied (by comparison to the following paragraph) that an expert opinion is not required. Is the average applicant equipped to comment on the impact of works on the heritage significance (sic) of the place?
- ‘Like for like’ maintenance provides no guidance when the repairs to be replaced are undesirable ie later cement mortar repairs on and originally lime mortared building.
- Substantially altered – The second paragraph appears to be a mistake.
- Additional definitions are required including;
 - The term ‘reasonably, economically restored’.
 - Explain the accepted circumstance when ‘the façade of the building does not contribute to the Historic Area Statement’.
 - Guidance should be provided when the economic cost of repair should be outweighed by the replacement cost.

State Planning Commission Draft Practice Direction – Site Contamination

Questions / Comments / Recommendations:

Part of Draft Practice Direction	Specific reference	Question / Comment / Recommendation
Part 2 (6)(1)	Uses the word 'adjacent'	Q. Assume this will take definition of PDI Act and mean we will need to check within a 60m radius from the subject site?
Part 2 (6)(2)		Q. Do we use the preliminary site investigation to inform us of any potential site contamination matters?
Part 2 (7)(4)	'detailed site investigation'	Q. Who does this? The applicant?

Attachment A.7

Legal advice obtained by City of Adelaide relating to public realm matters

Attachment A.7 contains two letters of legal advice obtained by the City of Adelaide relating to public realm matters.

The first, received 20 March 2019 outlines the legal interpretation of the amendments that the *Planning, Development and Infrastructure Act* makes to sections 221 and 222 of the *Local Government Act*. It also outlines scenarios of the impacts and procedural problems with the amendments which are of significant concern to the City of Adelaide.

The second letter, received 9 December 2019 outlines the legal interpretation of the State Planning Commission's Practice Direction 6 – Scheme to Avoid Conflicting Regimens 2019 and explains that this Practice Direction does not deal with the matters that are required to alleviate concerns with the amendments that the *Planning, Development and Infrastructure Act* makes to sections 221 and 222 of the *Local Government Act*.

The City of Adelaide have been meeting with DPTI staff about this matter, and seek to continue to progress this matter which must be addressed prior to implementation of the Planning and Design Code.

Attention: Ms Maddie Frew

Dear Maddie

Alteration and business use of public roads – Amendments to sections 221 and 222 of the Local Government Act, 1999 by the Planning, Infrastructure Development Act, 2017

You have sought our advice about amendments to sections 221 and 222 of the *Local Government Act, 1999 (LG Act)* by the *Planning, Infrastructure and Development Act, 2017 (PDI Act)*.

Executive Summary

1. Currently (with limited exceptions) an alteration of a public road, or use of a public road for business purposes, in association with an approved development requires a separate permission from the council. So, for example:
 - 1.1 a person proposing to change the use of land to a cafe with outdoor dining on the adjoining footpath requires development approval under the *Development Act, 1993 (D Act)* and a permit under the LG Act; and
 - 1.2 a developer proposing to construct balconies associated with residential apartments that cantilever above a council road reserve, or grounds anchors that penetrate below the surface of a road reserve, would require development approval under the D Act and a permit under the LG Act.
2. Permits granted under ss 221 and 222 of the LG Act typically include conditions imposing obligations to hold insurance, to maintain public access, to maintain the condition and appearance of buildings or structures, to remove buildings or structures at the end of the term, and to comply with reasonable directions given by the Council. The Council also has certain statutory immunities from liability. Further, breach of such conditions can result in cancellation of a permit, which acts as a strong incentive for compliance.
3. The current arrangements as described above will change on the commencement of Part 7 in Schedule 6 to the PDI Act.
4. Significantly, the Council's role in the assessment of, and its ability to regulate, such matters will be diminished. In particular:

- 4.1 where alteration of a public road, or use of a public road for business purposes, is approved as part of a development authorisation under the PDI Act, a separate permission under the LG Act will not be required; and
- 4.2 the Council's role under the LG Act will be limited to one of "concurrence" (in the case of a development authorisation issued by an accredited professional), or one of "consultation" (in the case of a development authorisation issued by anyone else other than a Council assessment panel).
5. The more limited role of councils under the LG Act means many important matters currently dealt with under the LG Act permit system will need to be "brought forward" and dealt with during the development assessment process. This is particularly so given the variety of persons and bodies who will be empowered to assess and approve development under the PDI Act.
6. To date, we have not seen any draft instruments under the PDI Act that will do this. While we do not yet have a clear line of sight as to what (if anything) the Department of Planning Transport and Infrastructure (DPTI) or the State Planning Commission (**Commission**) may have in mind in this regard, the concern is that it may be overlooked or given insufficient attention.
7. Ideally, under the PDI Act, the Commission should produce Design Standards and Practice Directions which impose obligations on assessing authorities to have regard to certain matters when assessing proposed alterations to, or business use of, public roads and, if approval is granted, to impose certain conditions that properly regulate those activities on an ongoing basis for as long as is necessary.
8. The PDI Act will also change the way that building encroachments on or over public land are dealt with. No longer will the Council's consent as the owner of the land be required. Conversely, the Council won't be able to refuse to grant landlord consent.
9. It will, however, be able to impose a "*reasonable charge on account of the encroachment when the relevant development is undertaken*". The details of this mechanism remain unclear and should be clarified with DPTI.

More detailed advice in relation to the specific questions posed follows below.

1. **Could you please explain the operation and implications of the amendments to Section 221 and 222 of the LG Act which will be made pursuant to Schedule 6 of the PDI Act using the following examples:**
 - a. **A development authorisation is granted for an application which includes a balcony overhanging Council land. Our understanding is that the balcony would not require a 222 permit.**

Yes.

Where a balcony overhanging Council land is being used for business purposes, whether a s 222 permit is currently required will depend on a number of matters which are not addressed in this advice.

However, where the business use is identified on a plan which is granted development authorisation (e.g. use of balcony for tables and chairs associated with a hotel), we agree that if a s 222 permit would otherwise have been required, it will

no longer be required pursuant to new s 222(6a) which will come into operation as part of the PDI Act.

- b. **A development authorisation is granted which will require the placement of a crane and hoarding on a Council road. If these details aren't specifically included in the details of the development authorisation, would a permit still need to be issued?**

In this example, where a crane, hoarding or other obstruction is placed on a road, our advice is that if the item was shown on the application plans or within the supporting documents, then neither a s 221 permit, nor a s 222 permit, would be required pursuant to the amendment to new s 221(3)(b) and s 222(6a) respectively (which will come into operation as part of the PDI Act). This would remain the case whether or not the item was specifically 'picked up' as a condition of development authorisation.

However, if the obstruction is not identified on the plans, or articulated in the supporting documents, then s 221 and 222 permits would still be required, as it would not have been approved as part of the development authorisation.

- c. **What if a condition or advisory note is placed on a development authorisation requiring a construction environmental management plan (CEMP) be provided with no checks or balances? In this instance, if a traffic management plan is submitted with the CEMP, will it form part of the development authorisation and therefore not require any permits?**

No.

If a CEMP is provided pursuant to a condition with no checks (i.e. the CEMP does not require any "approval" by the authority) then it would be difficult to say that the relevant alteration (installation of a hoarding, crane etc) or use of public road, has been "approved as part of development authorisation". In this scenario, under new ss 221(3)(b) and 222(6a), permits would be required.

The situation may be different, and more difficult, if a condition requires a CEMP to be provided and approved to the Council's (or some other authority's) reasonable satisfaction (assuming such conditions are permissible under the PDI Act). Arguably, approval of the CEMP by the Council or other authority would mean that the substance of the CEMP (including, for example, use of public road for a crane or hoarding) would have been "approved as part of a development authorisation under the *Planning, Development and Infrastructure Act, 2016*" so as to obviate the need for a s 221 or 222 permit. We say "arguably" because there may be an argument that new ss 221(3)(b) and 222(6a) are confined to where the proposed alteration or use is included in the development application, as opposed to where it forms part of a CEMP provided pursuant to a condition. However, on the face of it, the language in new s 221(3)(b) and 222(6a) appears broad enough to include an alteration or use of a public road approved as part of a CEMP that is submitted pursuant to a condition.

- 2. What does ‘consult’ mean in new Sections 221(7)(b) and 222(6b)(b) of the LG Act? If the State Commission Assessment Panel (“SCAP”) is the relevant authority, must it genuinely consult with the Council? Council is aware of a lot of sensitivities and local knowledge that other agencies would benefit from being made aware of to enable them to take a balanced approach to determining applications.**

The requirement to ‘consult’ in the amendments to ss 221 and 222 only requires that the relevant authority ask the Council for its views and provide it with a reasonable opportunity to express its views.

However, once the Council provides its views, the relevant authority must take those views into consideration when making a decision, as they become a relevant consideration, such that failure to consider them might be a ground on which the decision could be challenged (via judicial review). If, after considering the Council’s views, the decision of the relevant authority is contrary to the views of the Council, it could only be successfully challenged if it was found to have been improperly made (i.e. the Council could point to an irrelevant consideration that was considered) or if the decision was so unreasonable that no reasonable decision-maker would have made it. In this way, the requirement to consult the Council in the amendments to ss 221 and 222 can be roughly equated to referral reports to which the Council must “have regard”.

- 3. Council currently has several internal policies to guide decisions which involve development within its road reserves and community land, such as an encroachment policy and outdoor dining policy. Would these policies need to be within the Planning and Design Code (“the Code”) to be effective, as per s 102(1)(e) of the PDI Act?**

Yes, s 102(1)(e) of the PDI Act is more prescriptive in terms of the matters to take into account when considering an encroachment than s 33(1)(e) of the D Act.

As you will be aware, the D Act simply requires the relevant authority be satisfied that the encroachment has been dealt with in a “satisfactory manner”. This enables an assessment under s 33(1)(e) to involve consideration of internal Council policies.

Section 102(1)(e) in the PDI Act now specifies that the relevant authority be satisfied the encroachment is acceptable having regard to the Code or a Design Standard. Therefore, if the Council wishes for its internal policies to continue to guide assessments of authorisations involving encroachments, these documents will need to be included within the Code or a Design Standard issued by the Commission pursuant to s 69 of the PDI Act (and we note that the latter might be more easily achieved).

- 4. The City of Adelaide also follows the Adelaide Design Manual which provides strict guidelines on materials and specifications for development within the public realm. At what point could this document be referenced in an assessment under the PDI Act?**

If the Council wishes the Adelaide Design Manual to be considered in assessments under s 102(1) of the PDI Act, it would ideally be included either as part of the Code or, more easily, as a design standard (as a design standard forms part of the “Planning Rules” under the PDI Act, and would then form part of an assessment pursuant to s 102(1)(a), (c), (d) and (e)).

We note that pursuant to s 69(4) of the PDI Act, a design standard may be accompanied by advisory material in the form of design manuals or guidelines. This provision would enable the Commission, if it so chose, to adopt the Adelaide Design Manual in full as an accompaniment to a design standard.

5. Does Council still have a role in granting its consent to encroachments within the public realm pursuant to Section 102(10) of the PDI Act?

Relevantly, s 102(10) provides that a building encroachment under s 102(1)(e) must not interfere with a property right without the consent of the holder of that property right.

However, s 102(10) is limited by subsection (11) which provides that subsection (10) does not apply in relation to an encroachment over “public land”, except that the entity with the care, control and management of the public land may impose a reasonable charge.

Otherwise, what amounts to a “reasonable” charge might be set by regulation.

The effect of these provisions is that under s 102(1)(e), the Council’s consent (in its capacity as the owner of the public land) is not required for building encroachments. In this context, it is important to note that “public land” is not confined to a public road, but may include other kinds of public place such as reserves or community land in the Council’s care, control and management (such as the Parklands).

Importantly, however, s 102(1) does not oust, or override, ss 221 or 222, which apply in respect of public roads (as distinct from other kinds of public place). That is to say, where a building encroachment involves the alteration and/or use of a public road, then the Council will still have a consent or concurrence role if the proponent wants to take the advantage of new ss 221(3)(b) and 222(6a) so as to avoid the need for a permit under those sections.

6. How will Section 102(11)(b) of the PDI Act operate? If a s 221 or 222 permit isn’t required, how can fees still be charged?

The practical implementation of s 102(11)(b) is as yet unclear. It may be that the charge is a one-off charge that is incorporated within the application fees. Or it may be that the Council will be required to impose and collect the charge under s 188(a) of the LG Act.

We note that s 102(11)(b) enables the charge to be imposed “when the relevant development is undertaken”. On its face, it would therefore appear that the fee cannot be charged prior to the development being commenced (i.e., the relevant authority may not be able to withhold development approval until the fee is paid). However, it might operate in a similar manner to a requirement to satisfy a condition, such that a developer would be in breach of the PDI Act should the fee not be paid. To this end, it may be that the Council is required to commence enforcement action to obtain payment under s 102(11)(b) where the fee is not paid upon request.

Presumably future regulations will provide further clarity.

7. How will the obligations for a relevant authority to ‘consult’ with the Council, or obtain the ‘concurrence’ of the Council in new Sections 221(7) and 222(6b) of the Local Government Act interplay with the assessment timeframes currently proposed in draft Regulation 56 of the *Planning, Development and Infrastructure (General) (Development Assessment) Regulations 2019* (“Regulations”)?

Operation of Regulation 56

As you have identified, the assessment timeframes are set out in r 56 of the Regulations.

Regulations 56(1)(a)-(d) identify specific timeframes for the assessment of planning and building consents. Regulation 56(1)(e) provides that “in any other case”, the timeframe is 60 business days. Regulation 56(1)(f)-(k) then identify circumstances in which additional time periods will be included in the total time within which a decision must be made (for

example, where SCAP or CAP is the relevant authority, where public notification is required or where the application must be referred to another agency or body).

None of the additional time periods in r 56(1)(f)-(j)) relate to consultation with the Council pursuant to the amendments to s 221 or 222 (while r 56(1)(j) relates to “other” reporting requirements, those are limited to reporting requirements *under the regulations* (i.e., not under the LG Act).

Further, Regulation 56(4)(b) provides that where an applicant has sought more than one consent, other than planning and building consent from the same relevant authority (for example, where an applicant has sought planning consent and an encroachment consent from the same relevant authority), the total time within which the application should be dealt with is the longest time that applies to any one consent.

When encroachment consent is required

When a separate encroachment consent is required under Section 102(1)(e) of the PDI Act, the consultation and/or concurrence for this consent would need to occur within the 60 business days allowable in r 56(1)(e). Pursuant to Regulation 24(2) of the Regulations, it may be that the Council’s Assessment Manager is the relevant authority for this consent. Unless the same relevant authority was also assessing the application for another consent under Section 102(1) and the time within which that consent must be determined was longer, the application, as a whole, should be determined within this 60 business day timeframe. It would be the responsibility of the relevant authority to manage this timeframe, whilst still providing the Council sufficient time to form a reasonable, considered opinion and relate that to the relevant authority. We note, for completeness, that even where the Council’s Assessment Manager is the relevant authority, the requirement to consult with the Council pursuant to ss 221(7)(b) and 222(6b)(b) remains.

The circumstances in which an encroachment consent will be required pursuant to s 102(1)(e) is, in our opinion, open to interpretation.

On both interpretations, the consent will only be required if the encroachment is of a building, as defined in s 3 of the PDI Act (i.e., a building or a “structure”).

Further, in ordinary parlance, an encroachment is where a building (or structure) extends onto or into neighbouring land. That is to say, ordinarily, an encroachment will occur where the primary building (or structure) is situated on a site, with a minor portion of the building extending over the boundary onto adjoining land. With this in mind, s 102(e) is probably intended to deal with things such as ground anchors, balcony overhangs or verandah canopies, but not things like cranes or construction hoardings (which are more likely to be wholly on the adjoining road reserve), or the mere “use” of adjoining land (for outdoor dining, say, without any associated building or structure in the relevant sense).

On one interpretation, the consent would be required in limited circumstances only, where the encroachment has not been considered as part of any other consent, including planning consent. This would limit its operation to circumstances such as applications for building consent only, or some deemed-to-satisfy developments.

On another interpretation, it would be required in all circumstances except where the relevant authority has specifically considered the encroachment as part of a community title land division consent pursuant to Section 102(1)(d)(iii), which requires consideration of “*any encroachment of a lot or unit over other land...*”

On balance, we prefer the latter interpretation, in part because if an encroachment consent was only required in limited circumstances, s 102(11)(b), which enables a council to

impose a charge for an encroachment over public land would have very limited operation, which we do not consider to be the intent of the section.

On this analysis, where the encroachment is of a “building” (as defined in s 3), and has not been specifically considered pursuant to s 102(1)(d)(iii) of the PDI Act, an encroachment consent will be required pursuant to s 102(1)(e) of the Act. Therefore, the time within which the relevant authority must make its decision is 60 business days (unless the time within which another consent should be determined by the same relevant authority is longer).

Where no encroachment consent is required

In a situation where an encroachment consent is not required under s 102(1)(e), the time within which the other consent(s) must be determined by the relevant authority will be as set out in Regulation 56(1). This will be the time within which the relevant authority must consult with the Council and make its decision on the consent. Again, it would be the responsibility of the relevant authority to manage this timeframe, whilst still providing the Council sufficient time to form a reasonable, considered, opinion and relate that to the relevant authority.

- 8. A s 221 or 222 permit issued by the Council will require public indemnity insurance be in place, and set out liabilities. How will these matters be dealt with if s 221 and 222 permits are not required pursuant to new ss 221(3)(b) and 222(6a) of the LG Act? It seems unlikely that the Code will have matters of this nature as a consideration. What could the impacts of this be to Council?**

Where Council concurrence is required for a development authorisation (under new s 221(7)(a) and s 222(6b)(a) of the LG Act), the Council may refuse to concur in the absence of an adequate level of insurance. However, that may not assist where insurance may be in place at the time that concurrence is given, but the policy is later cancelled, voided or allowed to lapse.

Where SCAP is the relevant authority for a development authorisation, it must only consider the Council’s response to consultation pursuant to the new Sections 221(7)(b) and 222(6b)(b) of the LG Act when considering whether to grant the development authorisation.

Sections 221 and 222 do not limit the matters which the Council’s response can address. If the Council’s response identifies that an applicant has not provided any details of its public indemnity insurance, this will be a relevant consideration for the relevant authority when considering granting a development authorisation. Again, however, that may not assist where an insurance policy is lapsed, cancelled or voided.

As such, it seems to us there is a gap in the statutory scheme which ought to be plugged. Ideally, this would be addressed in the following ways:

- a. ensuring that the Code, or a design standard, contains sufficient provisions dealing the kinds of things that are currently included within a s 221 or 222 permit, against which an encroachment can be assessed under s 102(1)(e); and
- b. ensuring that a Practice Direction is issued which specifies that certain standard conditions must be imposed where an encroachment is approved as part of a development approval in circumstances where the requirement for a s 221 or 222 permit is avoided.

We note with some regret that the Council's legal position in this respect (with regard to liability) is further weakened because the Council will not be able to rely on the statutory immunity against liability provided for under s 221(5) of the LG Act that applies to structures erected under a s 221 authorisation. In the absence of a s 221 authorisation the immunity will not automatically arise. This is a matter that ought to be cured by legislative amendment and appears to be a critical oversight in the legislative drafting process. The Council should pursue this matter vigorously with DPTI. If a fix can be applied via the Code, a design standard or Practice Direction then this should be considered – but we have some doubt as to whether such instruments can provide the same level of immunity that the Council currently enjoys under s 221(5) of the LG Act.

9. Under a s 222 permit, the Council can require a permit holder carry out maintenance of an encroachment. In the absence of a s 222 permit, how can Council hold an encroachment owner accountable if an encroachment falls into disrepair?

Again, this would be assisted were there to be a Practice Direction dealing with encroachments onto public roads. Indeed, a Practice Direction ought to prescribe that any encroachment onto public land should be subject to a specific condition on the relevant development authorisation requiring the applicant to comply with any reasonable direction of the Council regarding the repair and/or maintenance of encroachments onto its road reserves or community land.

Failing that, assuming that any development authorisation issued by SCAP would contain standard condition 1 requiring that the development be developed, used and maintained in accordance with its approval, the Council could seek to require the maintenance or repair of any encroachment approved as part of the authorisation through enforcement of condition 1.

Alternately (subject to our observations below), the Council could rely on s 217(1)(a) of the LG Act which, subject to the exceptions in s 217(3), enables it to, by order in writing to the owner of a structure or equipment (including pipes, wires, cables, fittings and other objects) installed in, on, across, under or over a road, require the owner to carry out specified work by way of maintenance or repair. Pursuant to s 217(2), if the order is not complied with, the Council may take the action itself and recover its costs of doing so against the owner, and the owner will be guilty of an offence. However, it would be preferable if the Council was not required to rely on s 217 alone, and if it also had a potential enforcement mechanism under the PDI Act.

An added complication of the approach provided for by the PDI Act amendments to ss 221 and 222 is what occurs with respect to the *ownership* of structures or fixtures installed in, on, under, across or over the road. Under s 209 of the LG Act structures or fixtures installed under an authorisation/permit from the Council under the LG Act remain in the ownership of the holder of the authorisation or permit. There is a question as to whether in the absence of such an authorisation or permit (where one is not required on account of a PDI Act approval), the ownership might devolve to the Council. This matter is further complicated where the land is sold and the owner of the adjacent land is no longer the person who caused the alteration to be made under a PDI Act approval.

This is obviously a highly unsatisfactory outcome and ought be dealt with by legislative amendment. Failing that, a Practice Direction or Design Standard that requires an agreement be reached as to the vesting of the alteration ought to be pursued.

10. A s 221 or 222 permit issued by the Council will state that Council can revoke the permit when necessary to undertake works. How can the Council ensure they can continue to undertake required maintenance and infrastructure works in the absence of this control?

As an extension of our answer to question 9 above, there ought to be a specified condition in a Practice Direction requiring that all reasonable directions of the Council to remove an encroachment (where necessary), or to otherwise make access available where necessary to enable maintenance or other works to take place within road reserves and other Council land (at the expense of the person responsible for the alteration and/or their successors in title to the adjacent land), must be complied with.

Failing that, the Council could rely on ss 212(1) and (2) of the LG Act which provide the Council with the power to “*carry out roadwork in its area*”, and to “*do anything reasonably necessary for, or incidental to, roadwork*”. While not beyond doubt, we consider it reasonably arguable that this power would enable the Council to require encroachments be moved or removed to enable works to be undertaken. Again, however, it would be preferable if the Council did not have to rely on this power alone. There is also a question as to what compensation might be payable by the Council if it were acting under s 212 alone.

11. A s 221 or 222 permit enables Council to coordinate the use of public space. From experience, dates and timings for construction work can change regularly. How can Council effectively manage the coordination of public space (i.e., placement of cranes, hoardings and traffic management, etc) and undertake effective consultation with stakeholders if these matters have been approved as part of development approval? The Council is also required to publicly consult when a road/footpath will be impacted to a material degree. When and how can this be factored in?

As an extension to our answers to questions 9 and 10 above, there ought to be a specified condition specified in a Practice Direction requiring that the developer liaise with, and follow all reasonable directions of, the Council as to the timing of traffic management controls and the placing of items such as cranes and hoarding within road reserves.

Failing that, managing the coordination of public space where no s 221 or 222 permits are required would be a matter for the Council and developer to agree in good faith. In this circumstance, we would recommend that a note be placed on the decision notification form advising the developer that they will need to contact the Council to coordinate these matters. The Council’s by-laws might also be relevant in certain circumstances, including the power of direction under Clause 6 of the Council’s *Roads By-law 2018*.

In relation to the second part of your question, we have assumed that the current requirement that the Council publicly consult when a road/footpath is impacted to a material degree only arises by virtue of s 223 of the LG Act and not because of any specific Council policy.

As discussed in our answer to question 7 above, where the Council is consulted by SCAP pursuant to ss 221(7)(b) or 222(6b)(b) of the LG Act, SCAP itself is under a strict timeframe. Therefore, it is unlikely to be able to give the Council sufficient time to undertake its own consultation. Where the Council’s Assessment Manager is the relevant authority, it may be that consultation with the community can still be achieved, but this might be on a case by case basis.

Having said that, if no authorisation or permit is to be granted under ss 221 or 222 of the LG Act then the consultation obligations that arise by virtue of s 223 of the LG Act will not

be engaged. This leads to an odd public policy outcome where an applicant for approval under the PDI Act can apparently sidestep the clear legislative intent of the Parliament that certain alterations or uses of public roads must be subject to public consultation. This is a matter that ought be pursued with DPTI to avoid creating two incompatible administrative processes – one where PDI Act applicants for certain alterations or uses can avoid public consultation and one where those who must obtain authorisations or permits under the LG Act for effectively the same alteration or use, cannot.

12. If a construction company does not adhere to the work site set up approved as part of their development approval, how can this be regulated by Council and what avenues of enforcement are available to Council?

Where the work site set up is identified in an approved plan (or in a CEMP which is taken to form part of the approved documents), a failure to adhere strictly to it would constitute a breach of a condition of development authorisation (either a specific condition requiring the plan be complied with, or condition 1).

This could then be enforced through the D Act (or the equivalent provisions of the PDI Act when they commence in full). We anticipate that the most common enforcement mechanism under the D Act would be an enforcement notice issued pursuant to Section 84 (and we note that failure to comply with a direction in such a notice is itself an offence under Section 84(12), which can be expiated or the subject of a prosecution).

Even if a work site setup was not enforceable as a condition of consent (i.e. if it was not picked up as an approved plan, or otherwise found to be part of the approved documents), we consider that it would be reasonably arguable that any changes to the setup would not be exempt from the requirement to obtain a s 221 or 222 permit pursuant to the amendments to ss 221(3)(b) and 222(6b) of the LG Act. Accordingly, any such deviations from the setup as submitted by the applicant would require a s 221 or 222 permit.

If no such permit was obtained, this could be enforced through the LG Act. In the case of a s 221 permit, this would be a prosecution pursuant to Section 221(1) of the Act. In the case of a s 222 permit, it could be either an expiation or a prosecution under s 222(1). In addition, the Council could threaten to remove all unapproved encroachments from its road reserve pursuant to s 234(1)(a) of the LG Act or otherwise issue an Order to that effect under s 262 of the LG Act. The Council's by-laws may also be relevant in this situation.

Please don't hesitate to contact us or Joanna Clare or should you have any further queries in relation to these matters.

Yours faithfully

ADELAIDE SA 5001

Attention: Ms Madeline Frew, Technical Specialist PDI Act

Dear Maddie

Planning, Development and Infrastructure Act 2017 – Part 7, Schedule 6 (Amendment to Local Government Act, 1999) – Practice Direction 6

I refer to our previous advice of 20 March 2019 regarding Part 7 of Schedule 6 of the *Planning, Development and Infrastructure Act, 2017 (PDI Act)*, and your recent email of 5 December 2019.

You advise that since receiving our advice, you have had discussions with the Department of Planning, Transport and Infrastructure (**DPTI**) about how proposed amendments to the *Local Government Act, 1999 (LG Act)* – specifically sections 221 and 222 and new section 234AA – will operate in practice, and what additional instruments may be required to ensure that there remains appropriate regulatory control over private development involving, or directly impacting on, public roads.

More specifically, you advise that a view within DPTI is that Practice Direction 6 – Scheme to Avoid Conflicting Regimes 2019 (**PD 6**) addresses the issue/s raised (presumably, in so far as it ensures that the new planning assessment regime does not conflict with the regulatory regime that currently exists under sections 221 and 222 of the LG Act).

You have sought my advice as to whether PD 6 does, or does not, assist to resolve concerns about the proposed amendments to sections 221 and 222 of the LG Act.

Advice

In my view, PD 6 offers no assistance whatsoever to the issues raised by the proposed amendments to sections 221 and 222.

PD 6 has been issued by the State Planning Commission under section 42(3) of the PDI Act, which provides:

“(3) Without limiting subsections (1) and (2), the Commission must, by practice direction to be applied under this Act, establish a scheme with a view to ensuring that planning assessment or controls undertaken or established under this Act (including through the imposition of conditions under this Act) do not conflict with or duplicate matters that may be dealt with or addressed under a licensing or other regulatory regime

under another Act.”

Further, the stated object of PD 6 is contained clause 3, which provides:

“The object of this practice direction is to ensure that, in relation to any planning assessment or controls (including conditions), such assessment of controls do not conflict or duplicate matters dealt with or addressed under licencing or regulatory regimes under another Act. “

As such, the actual and stated purpose of PD 6 is to establish a scheme that will apply in situations where there is potential conflict, or duplication, between the planning assessment regime and another licensing or regulatory regimes. An obvious example is liquor licencing, where there is potential for the planning and licencing regimes to conflict or duplicate consideration of matters such as opening hours, patron capacity, noise emissions and so forth.

In the case of sections 221 and 222 of LG Act, however, potential conflict or duplication will already have been dealt with by the proposed amendments to the LG Act itself. That is to say, the effect of Part 7 of Schedule 6 is to avoid conflict or duplication, by effectively creating a “one stop shop” – wherein proposed alterations to, or proposed business use of, a road are brought into the planning assessment process.

In that sense, Part 7 provides its own mechanism for avoiding conflict or duplication between the two regimes, which makes PD 6 superfluous in this context.

Furthermore, I might add that (at first blush at least) PD 6 appears to be invalid in any case, on the basis that it does not establish “a scheme” (or anything that might be properly identified as a scheme) for avoiding duplication or conflict, as required by s42(3).

The only substantive clauses are clause 5(1) and (3). Clause 5(1) requires that a relevant authority must ensure that a planning assessment does not conflict or duplicate with other regimes (including, but not limited to, those listed in clause 5(2)), which simply re-states the objective of s42(3). Clause 5(3) then requires that a relevant authority which is uncertain about the potential for conflict or duplication must seek advice of the other authority or agency, but without providing any guidance or rules for how actual or potential conflict or duplication is to be avoided or resolved. As such, it is difficult to conceive of how those provisions – as brief as they are – can be said to create “a scheme” for avoiding conflict or duplication.

But in any event, even to the extent that PD 6 can be said to establish “a scheme”, it simply does not apply in the case of sections 221 and 222 of the LG Act for the reasons given above.

For these reasons, we repeat our earlier advice that the State Planning Commission should be seriously considering deploying other instruments – including a specific Practice Direction (with or without an accompanying Design Standard and provisions within the Planning and Design Code) – to ensure that there continues to be proper regulatory and administrative oversight of proposed alterations to public roads.

Yours sincerely
Norman Waterhouse

Peter Psaltis
Principal

Attachment A.8

Detailed analysis of how the State Planning Policies have been captured in the Draft Code

Attachment A.8 follows the high-level table contained with section 3.1 of this submission. This attachment contains a table of detailed analysis of how the State Planning Policies have or have not been captured in the Draft Code.

Alignment of the Planning and Design Code to the State Planning Policies

It is a requirement of the PDI Act that the Planning and Design Code supports the achievement of the State Planning Policies (SPPs).

The below table is a high-level assessment of the extent to which the proposed Planning and Design Code policies for the City of Adelaide contribute to achieving the State Planning Policies, compared to the current City of Adelaide Development Plan. This analysis demonstrates there are many SPPs at risk of not being achieved unless recommendations for improving the Draft Planning and Design Code are incorporated.

	Support of SPPs - Risk Assessment
	High/moderate risk
	Neutral/partially achieved
	Lower risk
	Not applicable to City of Adelaide

State Planning Policies		
Objectives	<i>Do the proposed P&DC policies for the City of Adelaide help achieve the SPPs, compared to the current City of Adelaide Development Plan?</i>	Comments
1 Integrated Planning <i>Integrated planning coordinates the strategic use of land with the necessary services and infrastructure. It can influence how a city or region grows and evolves, which if done well, creates liveable and sustainable places that contribute to our prosperity.</i>	1.1 An adequate supply of land (well serviced by infrastructure) is available that can accommodate housing and employment growth over the relevant forecast period.	Neutral
	1.2 Provide an orderly sequence of land development that enables the cost-effective and timely delivery of infrastructure investment commensurate with the rate of future population growth.	Not achieved
	1.3 Provide an orderly sequence of land development that enables the cost-effective and timely delivery of infrastructure investment commensurate with the rate of future population growth.	Achieved

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	1.4 Protect areas of rural, landscape character, environmental importance, mining or food production significance from the expansion of urban areas, towns and settlements.	Partially achieved - Maintaining the urban growth boundary is important to the City of Adelaide.
	1.5 Protect land corridors for expansion or augmentation of infrastructure.	Not achieved - Linkages to public realm policies have not been included yet and s.221/s222 issues are not yet resolved.
	1.6 Plan for strategic infrastructure that helps to shape the pattern of settlement in a way that enhances quality of life and supports Promote best practice in the design of buildings, places and the public realm by applying the principles of Good Design (Figure 3). long-term sustainability	
	1.7 Regenerate neighbourhoods to improve the quality and diversity of housing in appropriate locations supported by infrastructure, services and facilities.	Reinstatement of key figures, plans, and the introduction of concept plans as needed.
	1.8 Mixed-use development around activity centres, public transport nodes and strategic transit corridors to encourage greater use of active transport options such as walking, cycling and public transport.	The Code is missing vital policy that does not facilitate a coordinated approach to services and infrastructure (in particular – lack of public realm policy; lack of mapping relating to pedestrian and cycle paths – influences public realm infrastructure improvements).
	1.9 Plan neighbourhoods to support walking and cycling, particularly in Greater Adelaide and regional townships.	There is potential to more effectively capitalise on the P&DC in the City of Adelaide.
	1.10 Include performance targets around land supply and demand in regional plans	Not applicable.
	1.11 Include performance targets in regional plans for the creation of walkable neighbourhoods and increasing the number of dwellings close to public transport.	Not applicable
2 Design Quality <i>Good design improves the way our buildings, streets and places function, making them more sustainable,</i>		

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

<p><i>more accessible, safer and healthier. The integration of design within the planning system encourages creative solutions to complex social, economic and environmental challenges including those arising from our changing settlement patterns.</i></p>		
	2.1 Not achieved	Not achieved - Lack of design policy (adaptable housing)
	2.2 Promote best practice in access and inclusion planning in the design of buildings and places by applying the principles of Universal Design (Figure 4), Crime Prevention Through Environmental Design and Access and Inclusion	Insufficiently achieved
	2.3 The development of environmentally sustainable buildings and places by applying Water Sensitive Urban Design and energy efficiency design solutions.	Insufficiently achieved
	2.4 Design advice should be obtained early in the planning process for complex developments, and utilise consistent and credible processes (such as Design Review) to ensure improved outcomes.	Achieved
	2.5 Prioritise performance-based design quality outcomes in Adelaide City, heritage and character areas, places where medium-rise buildings interface with lower-rise development, mixed-use renewal precincts, transit corridors, and iconic locations that attract high levels of pedestrian activity and/or tourism.	Insufficiently achieved
	2.6 Maximise opportunities for the Principles of Good Design and community engagement to inform future policy creation and improve design outcomes.	Partially achieved
	2.7 Promote a culture of good design, creative thinking, innovation and design processes within the planning industry, built environment profession and general public.	Neutral

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

	2.8 Recognise the unique character of areas by identifying their valued physical attributes in consultation with communities	Insufficiently achieved
	2.9 Respect the characteristics and identities of different neighbourhoods, suburbs and precincts by ensuring development considers existing and desired future context	Insufficiently achieved
	2.10 Facilitate development that positively contributes to the public realm by providing active interfaces with streets and public open spaces.	More work is required to address the linkages between the P&DC and public realm via planning instruments and/or legislation.
	2.11 Manage the interface between modern built form of different scales with more traditional dwelling forms, including through the management of streetscape character, access to natural light, visual and acoustic privacy, massing and proportions	Insufficiently achieved
	2.12 Create design solutions for infill development that improves the relationship between buildings and public spaces, and the interface with neighbours	Not achieved
	2.13 Provide a diverse range of high quality green public open spaces and streetscapes, particularly in areas of growth and	
	2.14 Provide public open space that accommodates a range of passive, active and formal sporting opportunities at the state, regional and/or local level.	Partially achieved
<p>3 Adaptive Reuse</p> <p><i>Adaptive reuse of buildings, sites and places in both urban and rural settings can have cultural, social, economic and environmental benefits. It can rejuvenate neighbourhoods and strengthen a sense of place and familiarity with the surrounding environment. A strong link to the past can enhance a sense of place, history and belonging and unlock</i></p>		

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

<i>new opportunities and promote innovation in design.</i>		
	3.1 Remove barriers and encourage innovative and adaptive reuse of underutilised buildings and places to inspire urban regeneration, stimulate our economy and unlock latent investment opportunities	
	3.2 Sponsor models of adaptive reuse that allow flexible access to public spaces and infrastructure.	Linkages to public realm policies are insufficiently incorporated into P&DC
	3.3 Repurpose, adapt and reuse historical buildings and places that recognise and preserve our state's history.	Current CoA Development Plan policy is stronger
	3.4 Prioritise the adaptive reuse of buildings in areas of heritage or cultural value where it will contribute to active and vibrant places, or where it is a catalyst for additional development demand.	Current CoA Development Plan policy is stronger
	3.5 Facilitate the conversion and adaptation of existing commercial office and industrial buildings to new uses that contribute to the local area.	
	3.6 Introduce a range of planning and development incentives and bonus schemes to streamline decision-making processes, provide dispensation on prescriptive requirements that constrain opportunities and capitalise on related regulatory or financial incentives outside of the planning system.	
	3.7 Introduce performance-based building regulations that encourage the adaptability of existing buildings to new uses without compromising health and safety.	
4 Biodiversity <i>South Australia's unique biodiversity contributes to our quality of life, supports our economy and provides life-supporting functions such as clean air, water, sea and land. Maintaining and enhancing a healthy, biologically diverse environment ensures greater resilience to</i>		

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

<i>climate change, increases productivity and supports a healthy society.</i>		
	4.1 Minimise impacts of development on areas with recognised natural character and values, such as native vegetation and critical habitat so that critical life-supporting functions to our state can be maintained.	Partially
	4.2 Recognise the value of modified landscapes and allow appropriately scaled development that can co-exist with and safeguard biodiversity values and critical functions.	Partially
	4.3 Encourage the re-introduction of biodiversity or its components in development areas to provide life-supporting functions at low cost.	Not achieved – nothing is stopping this from occurring now and the P&DC may make it easier to not achieve this objective.
	4.4 Enhance the biodiversity of urban areas and townships through a connected and diverse network of green infrastructure systems along streetscapes, major watercourses, linear parks, open space, the coast and other strategic locations.	Not sufficiently achieved by P&DC
	4.5 Where impacts to biodiversity cannot be avoided, these impacts should be minimised and where possible, offset.	Not sufficiently achieved
	4.6 Encourage nature-based tourism and recreation that is compatible with, and at an appropriate scale for, conserving the natural values of that landscape.	Not specifically achieved
	4.7 Assess and manage risk posed by known or potential biosecurity threats to enable the sustainable development and use of terrestrial and marine environments	Not achieved
	4.8 Development in, or affecting, marine environments is ecologically sustainable	Partially achieved, if provisions relating to water quantity and quality called into the assessment (to the extent that development approved in the City impacts water quality and quantity that interacts with to marine receiving environments).
5 Climate Change		

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

<p><i>Climate change will impact all areas of our society. Our future prosperity, the liveability of our cities and towns, the health and wellbeing of our communities and the resilience of our built and natural environment all depend on how well we adapt to and mitigate the impacts of climate change.</i></p>		
	<p>5.1 Create carbon-efficient living environments through a more compact urban form that supports active travel, walkability and the use of public transport.</p>	<p>5.1 Insufficiently achieved - P&DC reinforces more compact urban form in the City however existing Development Plan provisions that need updating, but which assessment is reliant upon (e.g. pedestrian and cycling mapping) need to be transferred to the P&DC to continue to achieve this SPP.</p>
	<p>5.2 The good design of public places to increase climate change resilience and future livability</p>	<p>5.2 Insufficiently achieved – P&DC has not yet resolved its connection with development assessment and public realm matters which is necessary to effectively achieve this outcomes.</p>
	<p>5.3 Facilitate climate-smart buildings to reduce our demand for water and energy.</p>	<p>5.3 At risk of not being achieved depending on whether policies are called into assessment or not.</p>
	<p>5.4 Mitigate the impacts of rising temperatures by encouraging water sensitive urban design, green infrastructure and other design responses</p>	<p>5.4 Insufficiently achieved – policy settings could streamline requirements to result in more effective on-ground implementation.</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	5.5 Avoid development in hazard-prone areas or, where unavoidable, ensure risks to people and property are mitigated to an acceptable or tolerable level through cost-effective measures.	5.5 Insufficiently achieved relative to other local government areas, some hazard mapping is not yet available for City of Adelaide P&DC policy e.g. flood mapping.
	5.6 Facilitate green technologies and industries that reduce reliance on carbon-based energy supplies and directly or indirectly reduce our greenhouse gas emissions	5.6 Insufficiently achieved via P&DC in City of Adelaide – policy settings could drive further investment in such technologies and industries/circular economy including via water sensitive urban design/green infrastructure/other design responses, as well as more effective incorporation of built form design to implement effective medium and high density waste and recycling pathways (e.g. via existing State Government guidelines)
	5.7 Protect and enhance areas that provide biodiversity and ecological services and maximise opportunities for carbon storage	5.7 Partially achieved via reinforcement of Park Lands zoning.
	5.8 Encourage decision-making that considers the impacts of climate change and that draws on the best available information	5.8 Insufficiently achieved unless development assessment practices professionally take this on-board during decision making
	5.9 Encourage development that does not increase our vulnerability to, or exacerbate the impacts of climate change and which makes the fullest possible contribution to mitigation.	P&DC will not achieve this in its current form.
	5.10 Support the transition of traditional industries that rely on fossil fuels to climate smart initiatives to reduce greenhouse gas emissions.	
	5.11 Regional Plans should include performance targets for urban greening and tree canopy enhancement in Greater Adelaide and regional townships	The P&DC does not demonstrate linkages to regional targets and will not deliver on this SPP.
6 Housing Supply and Diversity		

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

<p><i>Housing is an essential part of people’s health and wellbeing. Our planning system must enable the sufficient and timely supply of land and a variety of housing choices at appropriate locations. With the changing composition of our community and our desire to live more sustainably, our housing supply needs to become more diverse in both metropolitan Adelaide and regional township locations.</i></p>		
	<p>6.1 A well-designed, diverse and affordable housing supply that responds to population growth and projections and the evolving demographic, social, cultural and lifestyle needs of our current and future communities.</p>	<p>Partially achieved</p>
	<p>6.2 The timely supply of land for housing that is integrated with, and connected to, the range of services, facilities, public transport and infrastructure needed to support livable and walkable neighbourhoods.</p>	<p>Achieved</p>
	<p>6.3 Develop healthy neighbourhoods that include diverse housing options; enable access to local shops, community facilities and infrastructure; promote active travel and public transport use; and provide quality open space, recreation and sporting facilities.</p>	<p>Partially – better integration with public realm assessment is needed e.g. resolution of s221/s222 and public realm is needed</p>
	<p>6.4 The growth of regional centres and towns within the existing footprint or outside towns where there is demonstrated demand and the land is serviced with infrastructure.</p>	<p>Not achieved – existing policies which manage appropriately timed staging of land and infrastructure development appear are compromised which may detrimentally affect the viability of the city economy</p>
	<p>6.5 Locate higher density residential and mixed-use development in strategic centres and transport corridor catchments</p>	<p>Broadly achieved.</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

	to achieve the densities required to support the economic viability of these locations and the public transport services.	
	6.6 A diverse range of housing types within residential areas that provide choice for different household types, life stages and lifestyle choice.	Insufficiently achieved – this is enabled but nothing in Code will result in this outcome being achieved
	6.7 Facilitate the provision of Affordable Housing through incentives such as planning policy bonuses or concessions (e.g. where major re-zonings are undertaken that increase development opportunities	Not achieved – However the P&DC doesn't prevent this being achieved.
	6.8 Ensure a minimum of 15% of new housing in all significant developments that meets the criteria for affordable housing	Insufficiently achieved – 15% affordable housing overlay is included but the same policy currently exists and has been functionally impotent.
	6.9 Apply universal and adaptable housing principles in new housing stock to support changing needs over a lifetime, including the needs of those who are less mobile	Not sufficiently achieved – considerable work is required to significantly raise the bar during assessment – noting that it is a fundamental principal of the new PDI Act.
	6.10 Limit the establishment of rural living allotments in areas that impact on the future expansion of townships and result in the inefficient delivery of infrastructure and social services	N/A
	6.11 Residential development that does not fragment valuable primary production land, create land use conflicts or encroaches on sensitive environmental assets and places of high landscape value.	N/A
	6.12 Regional Plans should include performance targets about increasing housing	Regional targets for housing diversity are not embedded in P&DC.
	6.13 Regional Plans should include performance targets related to land supply and demand.	Insufficient rationale and analysis for proposed rezoning to achieve regional performance targets for land supply and demand.
7 Cultural Heritage		

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

<p><i>South Australia's cultural heritage reflects the diversity, unique features and key moments in our state's history and contributes to our community's understanding of its sense of place and identity. The enduring, living, spiritual and cultural connection to the land by South Australia's First Peoples is recognised and acknowledged as an essential part of our cultural heritage.</i></p>		
	<p>7.1 The sensitive and respectful use of our culturally and historically significant places.</p>	<p>Partially achieved – European heritage provisions are included however these require significant changes to maintain effectiveness compared to existing Development Plan provisions. Indigenous culture and historically significant places may be insufficiently recognised in P&DC.</p>
	<p>7.2 Recognise and protect Indigenous cultural heritage sites and areas of significance.</p>	<p>Insufficiently achieved in CoA – mapping has not been transferred to Code.</p>
	<p>7.3 Recognise and protect places and areas of acknowledged heritage value for future generations.</p>	<p>Partially achieved - significant changes are needed to maintain effectiveness compared to existing Development Plan provisions</p>
	<p>7.4 The appropriate conservation, continuing use, and as appropriate, adaptive reuse of our heritage places and heritage areas of value to the community.</p>	<p>Partially achieved - significant changes re: to maintain effectiveness compared to existing Development Plan provisions.</p>
	<p>7.5 Maintain the context of a place or area of heritage value through</p>	<p>Partially achieved</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

	appropriate design guidelines that encourage compatible design solutions.	
	7.6 The interpretation potential of heritage places and areas is enhanced to contribute to the economic and cultural sustainability of the state.	Partially achieved
	7.7 Provide certainty to landowners and the community about the planning processes for heritage identification, conservation and protection.	Insufficiently achieved

<p>8 Primary Industry</p> <p><i>South Australia's agriculture, forestry, fisheries and aquaculture industries are fundamental to our prosperity and identity. Along with their associated tourism and service industries—and the infrastructure that supports their production and marketing—primary industry value chains are major generators of economic activity and employment in each of the regions of the state.</i></p>	8.1 Identify and protect key primary production assets and secure strategic opportunities for future primary industry development.	<i>Not applicable to the City of Adelaide</i>
	8.2 Create local conditions that support new and continuing investment in primary industry while seeking to promote co-existence with adjoining primary industries and avoid land use conflicts.	N/A
	8.3 Enable primary industry businesses to grow, adapt and evolve through technology adoption, intensification of production systems, business diversification, workforce attraction and restructuring.	N/A
	8.4 Equitably manage the interface between primary production and other land use types, especially at the edge of urban areas.	Partially achieved - Maintaining urban growth boundaries supports Primary Industry in South Australia and reinforces achievement

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

		of City of Adelaide land use zoning policies and should be maintained.
<p>9 Employment Lands</p> <p><i>Providing a suitable supply of land for employment uses is critical to support job growth and the economic prosperity of the communities. The planning system needs to support the diversification of our economy and remove barriers to innovation. It is critical that the right signals are sent to the market to attract interest, investment and tourism opportunities across South Australia.</i></p>	<p>9.1 Support the expansion and clustering of key economic growth areas including health; education; tourism; energy and resources; primary industry; defence; and knowledge and creative industries.</p>	<p>The Code policy will open up opportunities out of the city boundaries for retail and commercial uses.</p> <p>However, this may influence potential business owners to locate out of the city (where rent can be cheaper) as opposed to the city premises. This may overtime begin to affect the viability of the city economy.</p>
	<p>9.2 Enable opportunities for employment and encourage development of underutilised lands connected to, and integrated with, housing, infrastructure, transport and essential services.</p>	
	<p>9.3 Support state-significant operations and industries and protect them from encroachment by incompatible and/ or more sensitive land uses.</p>	
	<p>9.4 Adaptable policies that allow commercial and industrial-focused employment lands to support local economies and evolve in response to changing business and community needs.</p>	
	<p>9.5 Promote new, latent and alternative employment types and attract new business investment by enabling a diverse range of flexible land use opportunities.</p>	<p>Some relevant policy relating to adaptability contained in the current Adelaide (City) Development Plan has not been carried across.</p>
	<p>9.6 Protect prime industrial land for employment use where it provides connectivity to freight networks; enables a critical mass or cluster of activity; has the potential for expansion; is</p>	<p>N/A</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

	connected to skilled labour; is well serviced; and is not constrained by abutting land uses.	
	9.7 Encourage appropriate retail development through the implementation of best practice retail planning guidelines (see Figure 5).	Not achieved – P&DC policies do not reinforce and/or protect higher-order centres.
	9.8 Allow for competition within the retail sector by providing an appropriate supply of land for all retail formats in areas that are easily accessible to communities.	
	9.9 Support sustainable tourism where the social, cultural and natural assets underpinning the tourism developments are protected in line with sustainability principles.	
	9.10 Strengthen the primacy of the Adelaide city centre as the cultural, entertainment, tourism and economic focus of South Australia.	Not Achieved - P&DC needs to strengthen the primacy of the Adelaide City centre as the cultural, entertainment, tourism and economic focus of SA.
	9.11 Encourage the development of integrated employment and residential mixed-use precincts where conflicts between uses can be managed.	Achieved but needs improvement
	9.12 Plan for employment and industrial precincts in strategic locations that improve economic productivity; are protected from encroachment; connect to efficient supply chains; and are located to provide transport access and connectivity.	n/a
	9.13 Provide an appropriate supply of land for waste and resource recovery infrastructure and other related green industries to maximise resource use, support economic growth and service our communities.	n/a
10 Key Resources	10.1 Define and protect mineral resources operations, associated infrastructure and	Not applicable to the City of Adelaide.

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

<p><i>Our valuable mineral and energy resources are the property of the Crown and are managed by the state on behalf of all South Australians. The mineral and energy resource sectors will continue to fuel economic development, support the growth and development of our communities, and provide an income stream to help fund infrastructure and support construction affordability.</i></p>	<p>undeveloped mineral resources from encroachment by incompatible land uses.</p>	
	<p>10.2 Plan for and encourage the development of energy resources, energy resources operations and associated infrastructure to ensure their ongoing safe and efficient operation.</p>	<p>P&DC enables carbon neutral energy production and use which supports key City of Adelaide strategic targets to mitigate the impacts of climate change. This could be strengthened and reinforced.</p>
	<p>10.3 Identify and maintain key infrastructure that supports mineral and energy resource activities and supply chains, including strategic transport corridors and pipelines used for energy transportation.</p>	<p>P&DC enables carbon neutral energy production and use which supports key City of Adelaide strategic targets to mitigate the impacts of climate change. This could be strengthened and reinforced.</p>
	<p>10.4 Consider the impacts of mining and exploration on the growth of towns and settlements, and ensure an appropriate form of housing for workers and their families.</p>	
	<p>10.5 Promote decision making that maximises the long term benefits of different land uses to the economy, communities and the environment</p>	<p>P&DC enables carbon neutral energy production and use which supports key City of Adelaide strategic targets to mitigate the impacts of climate change. This could be strengthened and reinforced.</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

<p>11 Strategic Transport and Infrastructure</p> <p><i>The economic and social prosperity of South Australia relies on a transport system that is safe, integrated, coordinated, dependable and sustainable. Transport systems that provide effective connectivity underpin access for business to local, national and international markets; link people with employment, goods and services by providing travel choices; and contribute to a healthier and more connected society.</i></p>	<p>11.1 Facilitate an efficient, reliable and safe transport network that connects business to markets and people to places (i.e. where they live, work, visit and recreate).</p>	<p>From a city context, the Code is missing vital policy that does not facilitate a coordinated approach to services and infrastructure (in particular – lack of public realm policy; lack of mapping relating to pedestrian and cycle paths)</p> <p>Lack of policy – for development that takes advantage of emerging technologies that contribute to liveability, sustainability and economic productivity.</p>
	<p>11.2 Development that maximises the use of current and planned investment in transport infrastructure, corridors, nodes and services.</p>	<p>Missing maps that reflect planned investment</p>
	<p>11.3 Equitable contributions towards the funding and provision of transport infrastructure and services to support land and property development.</p>	<p>neutral</p>
	<p>11.4 Minimise negative transport-related impacts on communities and the environment.</p>	<p>no – increasing carparking rates. No policy which seeks to minimise access points in specific locations throughout the city (where does one start!)</p>
	<p>11.5 Encourage development that supports the increased use of a wider variety of transport modes, including public transport, walking and cycling, to facilitate a reduced reliance on private vehicle travel and promote beneficial community health outcomes</p>	<p>no – increasing carparking rates in the city</p>
	<p>11.6 Allow for the future expansion and intensification of</p>	<p>N/A</p>

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	strategic transport infrastructure and service provision (corridors and nodes) for passenger and freight movements.	
	11.7 Identify and protect the operations of key transport infrastructure, corridors and nodes (passenger and freight) (Figure 6).	n/a
	11.8 Development that takes advantage of emerging technologies that contribute to livability, sustainability and economic productivity, including electric and alternative fuel vehicles, autonomous vehicles and on-demand transport opportunities.	
	11.9 Identify neighbourhoods, main streets and regional and town centres where place is given greater priority than vehicle movement by adopting a 'Link and Place' approach.	Link and Place approach not included
	11.10 Promote the greening of strategic transport corridors to encourage carbon banking.	N/A
	11.11 Encourage housing in metropolitan Adelaide in proximity to current and proposed fixed line (rail, tram, O-Bahn and high frequency bus routes).	
	11.12 Regional Plans (where appropriate) should identify performance targets for encouraging more development close to public transport.	Insufficiently demonstrated linkages between regional plan targets and P&DC
<p>12 Energy</p> <p><i>The provision of sustainable, reliable and affordable energy is essential in meeting the basic needs of communities and ensuring the long-term supply of key services across South Australia. Industries and business rely on energy for their viability while households rely on it</i></p>	12.1 Development of energy assets and infrastructure (including ancillary facilities) where the impact on surrounding land uses, regional communities and the natural and built environment can be minimised.	<i>Not applicable to the City of Adelaide</i>

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

<p><i>daily to support their lives, health and comfort. The production of energy and associated infrastructure also contributes significantly to the state's economy.</i></p>		
	<p>12.2 Facilitate renewable sources of energy supply, such as solar and wind, at the local level</p>	<p>N/A</p>
	<p>12.3 Provide for strategic energy infrastructure corridors to support the interconnection between South Australia and the National Electricity Market</p>	<p>N/A</p>
	<p>12.4 Development in the vicinity of major energy infrastructure locations and corridors (including easements) is planned and implemented to maintain the safe and efficient delivery and function of the infrastructure.</p>	
	<p>12.5 Enable industries to reduce carbon emissions by supporting energy efficient urban and building designs.</p>	
	<p>12.6 Facilitate energy technologies that support a stable energy market and continued energy supply and do not adversely affect the amenity of regional communities</p>	
<p>13 Coastal Environment</p> <p><i>The South Australian coastal and marine environment has high intrinsic, aesthetic, social, environmental and economic values. It includes beaches, oceans, dune systems, tidal waters, wetlands and cliffs. The natural features of the coastal environment also provide vital habitat, contribute to our biodiversity and play</i></p>	<p>13.1 Protect and enhance the natural coastal environment and its resilience to a changing climate, including environmentally important features, such as mangroves; wetlands; estuaries; marine-protected areas; sand dunes; cliff tops; beaches; native vegetation; living creatures; and other important habitats.</p>	<p><i>Although not applicable to city context, it is worth noting that the Code no longer recognises 'regional open space' areas of importance (such as coast park and the protection of these natural assets)</i></p>

Attachment A.8 Detailed Analysis of how the State Planning Policies
have been captured in the Draft Code

<p><i>an important role in protecting development and human occupation from flooding and erosion.</i></p>		
	<p>13.2 Development that is not at risk from current and future coastal hazards (including sea-level rise, coastal flooding, erosion, inundation, dune drift and acid sulfate soils) consistent with the hierarchy of 'avoid', 'accommodate' and 'adapt'.</p>	
	<p>13.3 Balance social and economic development outcomes in coastal areas with the protection of the environment.</p>	
	<p>13.4 Locate development and infrastructure in areas that are not subject to coastal hazards unless the development requires a coastal location and appropriate hazard mitigation strategies are in place, taking into account projected sea-level rise and coastal retreat.</p>	
	<p>13.5 Facilitate sustainable development that requires a coastal site, including eco-tourism, aquaculture, marinas and ports, in areas adjoining the foreshore where environmental impacts can be avoided or mitigated.</p>	
	<p>13.6 Maintain or enhance the scenic amenity of important natural coastal landscapes, views and vistas.</p>	
	<p>13.7 Development that enables and enhances public access to coastal areas with minimal impact on the environment and amenity.</p>	
	<p>13.8 Locate low intensity recreational uses where environmental impacts on the coast will be minimal and can be managed.</p>	
	<p>13.9 Recognise and protect the high carbon storage values of areas such as mangroves and salt marshes.</p>	

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	13.10 Support development that does not contribute to sediment, nutrients and contaminants entering the coast and marine environment.	
<p>14 Water Security and Quality</p> <p><i>Water is one of South Australia's most valuable natural resources. Access to a safe and reliable water supply is essential to support our communities and our diverse economy. Our water dependent ecosystems also rely on access to water so that they can continue to provide cultural, aesthetic, amenity, recreational and tourism benefits. It is therefore vital that we continue to protect and plan for our water now and into the future.</i></p>	14.1 Protect the state's water supply to support a healthy environment, vibrant communities and a strong economy.	
	14.2 Protect and recognise water supply catchments, including: <ul style="list-style-type: none"> • Water Protection Areas under the Environment Protection Act 1993 (including those located in the Mount Lofty Ranges, South East and River Murray) • The River Murray Protection Areas under the River Murray Act 2003 • Prescribed water resources and wells under the Natural Resources Management Act 2004 	
	14.3 Safeguard our water supply and supporting infrastructure to meet the needs of a growing population and economy while maintaining a healthy environment and enabling safe access to alternative water sources for 'fit-for-purpose' use.	
	14.5 (but should be 14.4) Development should incorporate water sensitive urban design	WSUD – neutral – Code attempts to include best practice policies for infill

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	principles that contribute to the management of risks to water quality and other risks (including flooding) to help protect people, property and the environment and enhance urban amenity and livability.	development but could be improved for a city context.
	14.6 (but should be 14.5) Support development that does not adversely impact on water quality.	
	14.7 (but should be 14.6) Improve the alignment between urban water management and planning by adopting an integrated water management approach.	
15 Natural Hazards <i>Natural hazards are an integral part of the South Australian landscape and have the potential to impact on people, property, infrastructure, our economy and the environment. As we continue to grow and develop we need to plan for and mitigate risks from these hazards</i>	15.1 Identify and minimise the risk to people, property and the environment from exposure to natural hazards including extreme heat events; bushfire; terrestrial and coastal flooding; soil erosion; drought; dune drift; acid sulfate soils; including taking into account the impacts of climate change.	
	15.2 Locate and design development in accordance with a risk hierarchy of 'avoid', 'accommodate' and 'adapt'	
	15.3 Avoid locating sensitive developments and communities in areas at high risk of hazards – namely hospitals, telecommunication towers, major transport infrastructure, energy base stations and water services – or ensure that these developments are subject to a higher level of assessment.	
	15.4 Mitigate the impact of extreme heat events by designing public spaces and developments to create cooler microclimates through the use of green infrastructure and water sensitive urban design.	

Attachment A.8 Detailed Analysis of how the State Planning Policies have been captured in the Draft Code

	15.5 Protect key coastal areas and critical infrastructure at risk from sea-level rise, coastal erosion and storm surges.	
	15.6 Avoid development in high or extreme hazard risk areas (such as bushfire risk areas) that will necessitate the removal of native vegetation.	
<p>16 Emissions and Hazardous Activities</p> <p><i>Protecting communities and the environment from exposure to industrial emissions and hazards and site contamination is fundamental to the creation of healthy cities and regions. At the same time, it is critical that South Australia's industrial and infrastructure capacity and employment levels are preserved.</i></p>	<p>16.1 Protect communities and the environment from risks associated with industrial emissions and hazards (including radiation) while ensuring that industrial and infrastructure development remains strong through: a) supporting a compatible land use mix through appropriate zoning controls b) appropriate separation distances between industrial sites that are incompatible with sensitive land uses c) controlling or minimising emissions at the source, or where emissions or impacts are unavoidable, at the receiver.</p>	<p>This SPP talks to hazardous activities associated with noxious industries.</p> <p>However, generally speaking, the Code lacks policy with respect to protecting residents from entertainment and licensed entertainment premises.</p>
	16.2 Assess and manage risks posed by known or potential site contamination to enable the safe development and use of land.	

Attachment A.9

Recommendations for improvement to Part 1 – Rules of Interpretation of the Planning and Design Code

Attachment A.9 provides feedback on Part 1 'Rules of Interpretation' of the Draft Planning and Design Code and makes recommendations of necessary improvements which should be incorporated prior to implementation of the Planning and Design Code.

Draft Code – Part 1 – Rules of Interpretation

The ‘Rules of Interpretation’ need further work

Part 1 ‘Rules of Interpretation’ of the Planning and Design Code is critical to determining the assessment pathway for a development application.

The City of Adelaide has reviewed this section and concluded that there are still many questions and uncertainty associated with the ‘Rules of Interpretation’ that can ultimately undermine a consistent development assessment approach. The table below outlines the questions raised by the currently drafted rules of interpretations and makes recommendations of amendment where possible.

Relevant Heading	Question and Recommendation
Preliminary	<p><i>“Library of classification criteria (Deemed to Satisfy criteria), policies and rules...?”</i></p> <p>This first sentence appears to be unfinished.</p>
Accepted Development This section outlines the rules associated with an ‘Accepted Development’	It would be useful if this section could indicate that no planning consent is required where a development satisfies all applicable Accepted Development criteria.
Deemed-to-Satisfy Development	Desired Outcomes do not apply to DTS Development; this should be stated in this section.
Restricted Development	<p>Are ‘alterations or additions’ to a land use restricted if the land use is identified as restricted?</p> <p>For example, ‘Industry’ is identified as restricted development; however, will a substantial extension to an existing industry (on an abutting allotment) be classified as ‘restricted’?</p>
Application of Policies to Classes of Development	<p>Editorial: Third paragraph, first sentence, should read:</p> <p>“Development that does not fall within one of the specified classes of development in an Applicable Policies for Performance Assessed Development Table is designated in the Table as “All Other Code Assessed Development”.</p>
Relevant Provisions	<p>Classes of development are based on land uses, for example, ‘office’; if an applicant proposes alterations and additions to the office, would the proposed development be designated as “All Other Code Assessed Development”? if so, public notification may also be triggered.</p> <p>Other examples include:</p> <ul style="list-style-type: none"> - Conservation works - External alterations to a building. <p>Note: It is noted that ‘Dwelling Addition’ is identified in the Tables.</p> <p>Overall, the development assessment process or pathway may be more onerous, for what may have been, a minor development.</p>
Policies – Desired Outcomes and	Fourth paragraph relating to ‘DPFs’ (designated performance features) needs re-wording so that the role of a DPF is clear.

Attachment A.9

Performance Outcomes	<p>For example: <i>In some cases the performance outcome has corresponding ‘deemed to satisfy’ or DTS criteria. The ‘deemed to satisfy’ criteria becomes a ‘designated performance feature’ or DPF for development subject to a performance assessed pathway. The DPF provides a guide to the relevant authority as to what is generally considered to satisfy the corresponding performance outcome but does not derogate from the discretion to determine that the outcome is met in another way and does not derogate from the need to assess development on its merits against all relevant policies.</i></p>
Hierarchy of Policies/Modifications of Provisions	<p>Editorial: First paragraph should read: “Where there is an inconsistency between provisions in the library of policies, and for the purpose of section 66(3)(b) of the Act, the following rules will apply to the extent of any inconsistency between policies:</p> <p>(a) the provisions of an Overlay will prevail... (b) a Subzone policy will prevail over a Zone policy ... (c) a Zone policy will prevail over a General Development Policy.</p> <p>There is also a need for some rules on where overlays conflict with each other.</p>
Procedural Matters – Referrals	<p>It would be useful to outline where the referral ‘tables’ are - ie contained within ‘Overlays’ and within Part 9 of the Code.</p>
What is missing from Part 1?	<ul style="list-style-type: none"> - Rules applying to interpreting ‘elements’ of development - There are no rules outlined for ‘Public Notification’ – importantly, if Light Industry is identified as requiring public notification, do alterations and additions to a Light Industry land use also require public notification?
Other General Comments	<ul style="list-style-type: none"> - Ensure that any references to legislation are italicised. - Each heading should be numbered - Include definitions relevant for this Part (for example, ‘classes of development’ definition)

Attachment A.10

Recommendations for improvement to Parts 7 and 8 – Land Use Definition and Administrative Definitions of the Planning and Design Code

Attachment A.10 provides feedback on Part 7 and 8 – Land use Definitions and Administrative Definitions of the Draft Planning and Design Code and makes recommendations of necessary improvements which should be incorporated prior to implementation of the Planning and Design Code.

Part 7 Land Use Definitions

Automotive Collision Repair

Is the collision reference necessary?

Consulting Room

Definition – *'(not being a hospital) ... not involve any overnight accommodation'*

Hospital is not defined. There have been issues with day surgeries and what constitutes a hospital instead of consulting rooms. Not involving overnight accommodation reference is useful. However, better if hospital was defined.

Educational Establishment

What about a definition that includes education facility or a separate definition? There are a lot of education facility applications in the city which do not meet the educational establishment definition nor are they technical institutes.

Indoor Recreation Facility

Good to see a reference to pilates, yoga and dance studio. However, these smaller scale uses have different impacts to larger scale indoor recreation facilities, gyms etc and this could be an issue.

Place of Worship

Excludes 'funeral parlour' but then no definition of funeral parlour.

Restaurant

Café and take-away food premises captured under this as well? Definition suggests yes but would be good to include café and take-away food premises too.

Shop

Includes 'restaurant'. Can restaurant just be its own use separate from shop?

General

Industry definition seems okay as there is a need to define industry and then have different forms of industry defined too. Code differentiates between industry and light industry in terms of light industry not being restricted development in certain zones which helps.

Terms/Uses Recommended to be Included

Note: Similar definitions to the SA Planning Policy Library Terminology List and existing Development Regulations 2008 would appropriate.

- Adult Entertainment Premises
- Adult Products and Services Premises
- Advertisement
- Amusement Machine Centre
- Bakery
- Boarding/lodging houses
- Cinema/Theatre
- Community Centre
- Emergency Services Facilities (Ambulance, Fire, Police)
- Entertainment Centre
- Events
- Health care facilities
- Helicopter Landing Facility
- Hospital
- Informal and Forman Recreation Area
- Funeral Parlour
- Licensed Entertainment Premises
- Licensed Premises
- Motel
- Short Term Accommodation/Service Apartments
- Special events
- Student Accommodation

Part 8 Administrative Definitions

Building Height and Building Level

Seem okay and similar to Development Plan.

Neighbourhood Zone

Confusing, why a separate definition for this? Seems unnecessary.

South & South Facing

Are these definitions necessary?

Total Floor Area

Definition refers to calculations including external walls. Measuring from internal portions of external walls could be better, rather than the external walls too?

Third Party Advertising

Need this defined somewhere.

Attachment A.11

Preliminary commercial advice on impacts of policy introducing increased mixed-use development to residential areas and impacts on Main Streets.

Attachment A.11 provides a preliminary letter of commercial advice the impacts of the Draft Code which introduces increased opportunities for mixed-use development within residential areas and the impact this may have on residential property markets and the economics of our existing main streets.

23 February 2020

Via email:

Dear David,

Re: Draft Planning and Design Code – Adelaide City PO 1.4

Thank you for the opportunity to provide advice about the impact of the proposed City Living Zone in the Planning and Design Code.

I note your advice that the proposed City Living Zone enables up to 50sqm gross leasable area (GLA) of a building, such as a house, to be used for retail, office or consulting. This 50sqm GLA proposal is enabled via a 'Deemed to Satisfy' policy, which in effect, is an automatic or tick box approval.

The City Living Zone proposes that a shop, office or consulting room between 51 and 199 sqm GLA is 'performance assessed', which is akin to 'on merit' in the current planning system. I note your advice that this 51 – 199 GLA sqm commercial space, whilst not guaranteed an approval, has some prospects of approval through performance assessment.

My advice below focuses on the impacts of allowing 'as-of-right' up to 50sqm GLA of non-residential floor area in a residential building within the City Living Zone.

Advice

The proposed provisions in the City Living Zone is a significant change to the way buildings in the City's residential areas can be used, allowing a substantial portion (up to 50sqm) of floor area to be used for non-residential uses by unrelated parties to the residential occupier. Presumably, this restricts the potential of apartments in a large building being changed to non-residential use, or at least limits the opportunity to one apartment of up to 50sqm per building on a 'first in first served' basis.

The City of Adelaide has a number of existing main streets and mixed-use zones that currently provide opportunities for a mix of residential and non-residential uses. These include Melbourne Street, O'Connell Street, Hutt Street, parts of Halifax Street and Sturt Street. Policy areas on other streets (e.g. parts of South Terrace) also provide opportunities for non-residential uses.

Most residents of North Adelaide and Adelaide are within a short walk of these main street / mixed use zones and therefore have good access to a wide range of services. Consulting rooms, retail tenancies and a range of other commercial and community uses are represented in these zones.

We have commenced a strategic review of Melbourne Street, O'Connell Street and Hutt Street on behalf of the City of Adelaide. Preliminary site investigations for that strategic review have revealed the following:

- Relatively high level of vacancy along each street, including the availability of small units of less than 50sqm. These tenancies provide for small businesses to locate in main streets, serving both the surrounding local residential population as well as a larger regional population;
- The majority of existing tenants are less than 200sqm, which suggests that such tenants could relocate to a City Living zone and be assessed 'on-merit';
- The emergence of co-working hubs in or near main streets, including *House of Spaghetti* and *Co Hutt*, both on Hutt Street. These facilities also provide flexible space for small business;

- A broad mix of tenancies including small offices, consulting rooms, retail tenancies, cafes and restaurants are within each main street;
- Real estate agents have revealed that relatively high incentives are offered to secure new tenants. Significant incentives would not be offered if enquiry levels were high. This is a sign that supply is currently outstripping demand.

These factors highlight there is ample opportunities for small business to set up in the City, which in my view, negates the need for such a significant policy change in the City Living Zone. Such changes to the City Living Zone to encourage non-residential uses will directly compete with the existing main streets at a time when there are clearly ample opportunities for further business growth in each street.

I note that with landlords currently providing generous incentives to new tenants throughout Adelaide City and North Adelaide, non-residential uses in residential areas are unlikely to be the highest and best use. The rental return from residential use may be higher than non-residential uses, limiting the take-up for non-residential uses. However, the proposed change may provide an additional income source for larger residences where residents do not require all the residential floor space. This, I believe is where the take-up of this policy change may be greatest.

Furthermore, there are structural changes at play that may impact demand for non-residential space in the future, including:

- Growth in on-line shopping, which is impacting demand for bricks and mortar retail shops;
- Flexible working, with more people working part-time or full-time from home (which is covered by existing 'home activity' provisions);
- Uber Eats and other delivery services disrupting the food catering sector, a major tenant in each of the City's main street zones;
- More efficient workspaces, meaning less space is required per worker, which may reduce demand for office space.

Given these changes, together with the availability of vacant tenancies in existing main street environments, there is limited evidence that such a change to zoning to allow non-residential uses throughout the City Living Zone is warranted.

Should there be moderate take-up of non-residential uses in the City Living Zone, I am of the view that the residential population growth in the City may slow. This is not only due to the potential removal of residential stock from the market to make way for non-residential uses, but the potential loss of amenity that may reduce the appeal of parts of Adelaide's residential areas.

There has been some resistance across Adelaide to mixed-use development. Real estate agents and developers of apartment projects typically avoid mixing non-residential uses with residential uses in the same building with the exception of ground floor retail / commercial tenancies. Where a mix of uses have occurred, it has generally been carefully planned to provide separation between commercial tenants and residents (separate lobbies / lifts etc.) This is much more difficult to control in existing residential buildings.

The proposed changes to zoning could result in an unplanned mix of non-residential uses, negatively impacting the enjoyment of residents either within the same building or on neighbouring sites.

Conclusions

While I understand the desire to provide a range of local services for residents within walking distance of residents, the provisions of the proposed City Living Zone (PO 1.4 together with Deemed to Satisfy criteria) may have unintended consequences that negatively impact both City Living Zones and nearby main streets.

I consider that the current policies relating to home activities provide the opportunity for residents to conduct a small business from home with minimal impact on adjoining property. Expanding this provision to allow the in effect guaranteed DTS approval to change the use of up to 50sqm of gross leasable area for non-residential purposes by unrelated parties is not necessary in the City of Adelaide, given the location of nearby zones within close proximity of residential areas. 50sqm could potentially

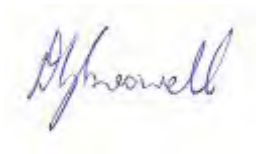

cater for 3-4 employees, plus clients. Potentially extending this to up to 199sqm through performance assessment could further increase the impact on surrounding residential amenity and the viability of the City's main streets.

I consider there are considerable risks in making the changes proposed, including:

- Negative impact on residential amenity caused by businesses operating in residential areas, in particular increased demand for on-street parking;
- Negative impact on the functionality and viability of the main streets, with premises in the City Living Zone competing for non-residential tenants;
- Non-residential uses in areas that are not on public transport routes, increasing private car use;
- Potential loss of multi-purpose trips by encouraging commercial uses outside of main street and other commercial / mixed-use zones (businesses being scattered throughout residential areas rather than clustered together);
- Potential loss of tenants in existing main streets to the City Living Zone, resulting in a decline in patronage, loss of critical mass, and flow-on loss of trade for other businesses as pedestrian traffic declines;
- Decline in residential population growth;
- Potential loss from the market of affordable accommodation. e.g. Smaller dwellings being used solely for non-residential purposes. These dwellings are likely to be at the more affordable end of rental accommodation.

Should you have further queries, please do not hesitate to contact me.

Sincerely,

A handwritten signature in blue ink that reads 'David Snoswell'.

**City of Adelaide Feedback on potential matters to inform the proposed
Miscellaneous Technical Enhancement Code Amendment.**

Policy Wording/Intent	Policy Gap	Tables/Technical/Procedural
<p>Adelaide Park Lands Zone PO 1.3 The policy incorrectly describes the location. Recommend the following correction: <i>Community, cultural, tourism, shop or licensed premises located adjacent to the southern bank of the River Torrens between Montefiore Road and Wye Signal Cabin.</i></p>	<p>Adelaide Park Lands Special Landscape Character Absence of policy protecting areas of special landscape character that contribute to the character of the Park Lands. Recommend identification of areas of special landscape character through a concept plan and appropriate policy.</p>	<p>Adelaide Park Lands Table 1 - Accepted Development The listing and criteria applied to fencing is unsuitable for Park Lands and is better suited for Neighbourhood Type zones. The classification criteria is inappropriate in an open space public Zone that is Nationally Heritage listed. <u>Option 1</u> - Recommend removing fencing, retaining wall structures and shade sails from Table 1 and include within Table 3. <u>Option 2</u> - Recommend the development of a criteria tailored for the Adelaide Park Lands and addresses accessibility and public realm design.</p>
<p>Adelaide Park Lands Zone PO 1.9 PO 1.9 incorrectly seeks the replacement of the Adelaide Aquatic Centre site with recreational sporting clubrooms, facilities and associated administrative functions. Recommend PO 1.9 is deleted and replaced with the following equivalent of previous Development Plan Policy: <i>Extensions to or new buildings at the Adelaide Aquatic Centre should be restricted unless they consolidate and replace existing buildings with structures more appropriate to the Park Lands environment and with no increase in total floor area. Other than this, no additional buildings should be permitted.</i></p>	<p>Adelaide Park Lands Rationalisation of Parking Lack of policy rationalising existing parking in certain areas of the Park Lands. Recommend additional policy that rationalises and reconfigures existing car parking to ensure no increase in parks 1, 2, 13, 14, 16, 17 and 23.</p>	<p>Adelaide Park Lands and City Layout referral trigger No referral trigger within the Schedule 9 Table of PDI Act or within the Code triggering referral to the Federal Environment Minister of an action which has, will have, or is likely to have a significant impact on any matter of National Environmental Significance, including National Heritage values.</p>
<p>Adelaide Park Lands Zone PO 3.2 Refers incorrectly to the National Heritage Listing.</p>	<p>City Main Street Zone – Undercroft Parking</p>	<p>Adelaide Park Lands Zone Table 2 – Deemed-To-Satisfy Development (GDP) Recommend including the following GDPs:</p>

<p>Recommend the following correction: <i>“Development recognises the Adelaide Park Lands and City Layout National Heritage Values.”</i></p>	<p>Recommend additional policy deterring undercroft parking as it is uncharacteristic to the City.</p>	<p><u>Advertisements</u></p> <ul style="list-style-type: none"> All Advertisements GDP DTS/DPFs should be applied.
<p><u>City Main Street Zone DTS/DPF 1.6</u> Consulting rooms, offices and dwellings at ground floor level do not support the intent of PO 1.6 that seeks to contribute to an active and vibrant main street. Recommend - Option 1 Introduce policy that ensures active uses on ground level and only allows offices, consulting rooms and dwellings above ground floor level.</p>	<p><u>Design in Urban Areas - Universal access</u> Recommend additional policy in Design in Urban Areas GDP to ensure the ground floor level of buildings are level with the footpath.</p>	<p><u>Adelaide Park Lands Zone Table 3 – Applicable policies for Performance Assessed Development (GDPs)</u> Recommend including the following GDP’s: <u>Shop</u></p> <ul style="list-style-type: none"> Design in Urban Areas GDP - PO 5.1 Interface Between Land Uses GDP - PO 1.2, 6.2 Transport Access and Parking GDP - PO 1.2, 1.3 <p>Recommend deleting the following GDPs: <u>Shop</u></p> <ul style="list-style-type: none"> Design in Urban Areas GDP - PO 11.5
<p><u>City Living Zone DTS/DPF 8.1(d) – Ancillary Buildings</u> Recommend DTS/DPF is reworked to ensure garages do not exceed 30% of the site frontage to ensure they do not dominate established streetscapes.</p>	<p><u>City Living Zone – Site Coverage</u> A blanket site coverage of 50% for all site in the North Adelaide Low Intensity Subzone and East Terrace Subzone is poorly suited to many established areas within the Zone. Recommend different site coverage requirements are applied to different areas as a TNV in SAPPa to reflect the previous Development Plan Landscaped Open Space requirements.</p>	<p><u>City Living Zone Table 1 - Accepted Development (Overlay exceptions)</u> Recommend including the following Overlays:</p> <ul style="list-style-type: none"> Fence and retaining wall structure – Historic Area Overlay
<p><u>Design in Urban Areas – Environmental Performance PO 4.3</u> Recommend the following is added to the end of the PO: <i>...other decentralised energy generation and embedded networks.</i></p>	<p><u>Melbourne Street West Subzone - Protection of views</u> Recommend additional policy to protect views of the City from Stanley Street and Brougham Place properties.</p>	<p><u>City Living Zone Table 2 – Deemed-To-Satisfy Development (Overlay Exceptions)</u> Recommend including the following Overlays in column 1:</p> <ul style="list-style-type: none"> Ancillary Accommodation – Regulated and Significant Tree Overlay Carport – Regulated and Significant Tree Overlay

		<ul style="list-style-type: none"> • Dwelling Addition – Historic Area Overlay, Regulated and Significant Tree Overlay • Land Division – Historic Area Overlay, Local Heritage Place Overlay, State Heritage Area Overlay, State Heritage Place Overlay • Outbuilding - Regulated and Significant Tree Overlay • Verandah - Regulated and Significant Tree Overlay
<p><u>Design in Urban Areas – Water Sensitive Design PO 5.1</u></p> <p>Recommend additional policy that encourages waste water and stormwater re-use as follows and is called up for all relevant classes of development:</p> <p><i>(d) incorporating waste water and stormwater re-use including the treatment and re-use of grey water.</i></p> <p>The Code is deficient in utilising waste water as a resource.</p>	<p><u>WCH and Memorial Hospital Precinct Subzone</u></p> <p>Recommend additional policy acknowledging the important views of St Peters Cathedral.</p>	<p><u>City Living Zone Table 2 - Deemed-To-Satisfy (Zone DTS/DPF)</u></p> <p>Recommend including the following zone DTS's:</p> <ul style="list-style-type: none"> • Ancillary Accommodation – DTS/DPF 2.1 • Carport – DTS/DPF 2.2, 3.1, 3.2, 3.3 • Land Division – DTS/DPF 4.1 • Outbuilding – DTS/DPF 2.2, 3.1, 3.2, 3.3 • Verandah – DTS/DPF 2.2, 3.1, 3.2, 3.3
<p><u>Design in Urban Areas GDP – PO 12.8 External Appearance</u></p> <p>Recommend the PO is revised to ensure that services, plant and mechanical equipment are screened and/or integrated into the design of buildings and do not dominate street frontages.</p>	<p><u>Envisaged Uses Table 3 Performance Assessed Development – All Zones</u></p> <p>Recommend uses envisaged by the relevant zone are included within the Performance Assessed Development Table e.g. cemetery, community facility, educational establishment, emergency services facility, health care facility, hospital, indoor recreation facility etc</p>	<p><u>City Living Zone Table 2 – Deemed-To-Satisfy Development Classification (GDPs)</u></p> <p>Recommend including the following GDPs:</p> <p><u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • Ancillary Accommodation DTS/DPF 10.1, 10.2 • Carport – DTS/DPF 8.2, 19.1, 19.2, 20.1 • Outbuilding – DTS/DPF 8.2, 19.1, 19.2, 20.1 <p><u>Land Division GDP</u></p> <ul style="list-style-type: none"> • no reference to battle axe development DTS/DTF <p><u>Site Contamination GDP</u></p> <ul style="list-style-type: none"> • should be called up for all sensitive land uses
<p><u>Design in Urban Areas GDP – PO 16.1 Overlooking/Privacy</u></p>	<p><u>Premature Demolition</u></p> <p>Creation of vacant city sites through the premature demolition unnecessarily reduces</p>	<p><u>City Living Zone Table 2 – Deemed-To-Satisfy Development (Overlays)</u></p>

<p>Recommend the inclusion of a DTS/DPF that introduces methods to reduce direct overlooking e.g. setback standards to achieve reasonable distances between buildings, orientation of windows, projecting sills, canopy projections etc</p> <p>PDC 36 of the previous CoA Development Plan was effective in achieving this. Refer to policy and diagrams below:</p> <p>In the event that direct overlooking occurs from proposed upper level habitable room windows, external balconies, terraces, decks and roof gardens to habitable room windows and primary areas of private open space of adjacent dwellings, such direct overlooking should be minimised by:</p> <ul style="list-style-type: none"> (a) setting buildings back from boundaries; (b) screening devices such as: <ul style="list-style-type: none"> (i) canopy projections above windows to minimise viewing down into rooms; (ii) horizontal projecting sills to restrict downward overlooking; or (iii) side window or balcony screens to restrict sideways/oblique overlooking; (c) orientating windows to avoid direct views; and (d) landscaping. <p>Design Techniques (these are ONE WAY of meeting the above Principle)</p> <p>36.1 Direct views from upper level habitable room windows to the habitable room windows or useable private open space of an adjacent residential development restricted (assuming a viewing height of up to 1.6 metres above floor level) by:</p>	<p>opportunities for land to put to an economic use. Recommend research and additional policy to prevent buildings being prematurely demolished without commitment of a replacement building.</p>	<p>Recommend including the following Overlays:</p> <p><u>Land Division</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay DTS/DPF 3.2
---	---	---

 <p>Figure 36.3 - direct view occurs if windows or outdoor areas overlooked are located within a distance of 15 metres from any point of the balcony or deck.</p> <p>Windows and balconies within an upper level habitable room designed to prevent overlooking (assuming a viewing height of up to 1.6 metres above floor level) of than 50 percent of the useable private open space of a lower-level dwelling with building (refer to Figure 36.4).</p>  <p>Figure 36.4 - screening devices to prevent downward overlooking.</p>		
<p><u>Interface Between Land Uses GDP – noise attenuation</u> Recommend Environment Protection (Noise) Policy apply as a DTS for PO 1.1 and 1.2.</p>	<p><u>Capital City Zone – Protection of views</u> Recommend additional policy to protect important views of civic landmarks e.g. Adelaide Town Hall, GPO, St Francis Xavier's Catholic Cathedral etc.</p>	<p><u>City Living Zone Table 3 – Applicable policies for Performance Assessed Development (Zone PO's)</u> Recommend including the following PO's:</p> <ul style="list-style-type: none"> • Carport - PO 2.2, 3.1, 3.2, 3.3, 3.4, 5.1 • Fences - PO 2.3, 3.5 • Outbuilding - PO 2.3, 3.1, 3.2, 3.3, 3.4, 5.1 • Retaining Wall - PO 2.3
<p><u>Beverage Production in Rural Areas GDP</u> Recommend the GDP also applies to urban areas and is renamed to 'Beverage Production' GDP.</p>	<p><u>Capital City Zone – Overlooking</u> Recommend additional policy to address direct overlooking at the City Living Interface.</p>	<p><u>City Living Zone Table 3 – Applicable policies for Performance Assessed Development (GDPs)</u> Recommend including the following GDPs: <u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • Ancillary Accommodation – include all policies relating to residential development • Carport – PO 19.1, 19.2, 23.6 • Detached dwelling – PO 1.1, 1.3, 2.4, 4.1, 4.2, 4.3, 5.1, 35.1, 35.3

		<ul style="list-style-type: none"> • Dwelling addition – PO1.3, 4.1, 4.2, 4.3, 5.1 • Group dwelling – PO 5.1 • Outbuilding – PO 19.1, 19.2, 23.6 • Residential Flat Building – PO 5.1,14.1,14.2, 14.3 • Row Dwelling – PO 1.1, 1.3, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.1, 4.2, 4.3, 5.1 • Semi-detached dwelling - PO 1.1, 1.3, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.1, 4.2, 4.3, 5.1 • Verandah - PO 1.3, 20.2 <p><u>Interface Between Land Uses GDP</u></p> <ul style="list-style-type: none"> • Detached dwelling – PO 4.4 • Dwelling addition – PO 4.4 • Group Dwelling – PO 4.4 • Row Dwelling – PO 4.4 • Semi-detached dwelling – PO 4.4 • Ancillary accommodation - include all policies relating to residential development. <p><u>Site Contamination GDP</u></p> <ul style="list-style-type: none"> • Dwelling addition – PO 1.1 <p><u>Transport, Access and Parking GDP</u></p> <ul style="list-style-type: none"> • All dwelling types include links to PO 3.1, 3.5, 3.6 at the least – or more as per Residential Flat Buildings <p>Recommend deleting the following GDPs:</p> <p><u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • Group dwelling – PO 1.2, 1.5, 11.1-11.5 • Row Dwelling – PO 11.1-11.5 • Semi-detached dwelling - PO 11.1-11.5
<p><u>Local and State Heritage Place Overlays</u> Recommend an additional definition to define the term “complement the heritage value”.</p>	<p><u>Verandahs in Capital City Zone along Pedestrian Routes</u> Recommend additional policy for development to incorporate verandahs along the street frontage along core pedestrian areas, major</p>	<p><u>City Living Zone Table 3 – Applicable policies for Performance Assessed Development (Overlays)</u> Recommend including the following Overlays: <u>Ancillary Accommodation</u></p>

	<p>walking routes, along main pedestrian roads and key public transport routes.</p>	<ul style="list-style-type: none"> • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 <p><u>Carport</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 - 2 <p><u>Detached Dwelling</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2 • Noise and Emissions Overlay PO 1.1 – 3 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2 <p><u>Dwelling Addition</u></p> <ul style="list-style-type: none"> • Noise and Emissions Overlay PO 1.1 – 3 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2 <p><u>Fence</u></p> <ul style="list-style-type: none"> • Historic Area Overlay PO 1.1, 2.1, 2.2, 2.4, 2.5, 4.4 • Local Heritage Place Overlay PO 1.1 – 7, PO 2.1, PO 3.1- 2, 3.4 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 <p><u>Group Dwelling</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 -2 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2, PO 3.1 – 3.2 <p><u>Outbuilding</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 1.1.- 1.5, PO 2.1 – 2.2, PO 3.1 – 3.2 <p><u>Residential Flat Building</u></p>
--	---	--

		<ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2 <p><u>Retaining Wall</u></p> <ul style="list-style-type: none"> • Heritage Adjacency PO 1.1 • Historic Area Overlay PO 3.1, 3.4 • Local Heritage Place PO 1.1, 1.2, 1.3, 1.5, 1.7 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 <p><u>Row Dwelling</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2 • Noise and Emissions Overlay PO 1.1 – 3 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2 <p><u>Semi-Detached Dwellings</u></p> <ul style="list-style-type: none"> • Historic Area Overlay PO 3.1, 3.2 • Local Heritage Place Overlay PO 2.1 - 2 • Noise and Emissions Overlay PO 1.1 – 3 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2 <p><u>Verandah</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 3.1 – 2 • Regulated and Significant Tree Overlay PO 1.1 – 1.4, PO 2.1 • State Heritage Place Overlay PO 2.1 – 2
<p><u>Local Heritage Place Overlay</u> Recommend an additional definition for “revitalisation”.</p>	<p><u>Concept Plan 79</u> Recommend Concept Plan 79 includes the identification of high public transport routes, major walking routes and all important pedestrian routes. Reflect these routes within policy and encourage through-site links.</p>	<p><u>Building height TNV on SAPP</u> Recommend a note reference to building height TNV's to ensure stakeholders understand that catalyst sites policies apply.</p>
	<p><u>High fencing along front property boundaries</u></p>	<p><u>City Main Street Zone Table 1 - Accepted Development (Overlay Exceptions)</u></p>

	<p>Recommend additional policy that deters high solid fencing along front property boundaries to contribute to the activeness of the streetscape and ensure casual surveillance in the City Living Zones, Capital City Zone, City Main Street Zone and Melbourne Street West Subzone. High front fencing is uncharacteristic to the City.</p>	<p>Recommend deleting the following Overlays:</p> <p><u>Shade sail</u></p> <ul style="list-style-type: none"> • Future Local Road Widening Overlay • Future Road Widening Overlay <p><u>Temporary public service depot</u></p> <ul style="list-style-type: none"> • Hazards (Flooding) Overlay • Major Urban Transport Routes Overlay • Traffic Generating Development Overlay • Urban Transport Routes Overlay <p><u>Water tank (underground)</u></p> <ul style="list-style-type: none"> • Coastal Areas Overlay • Hazards (Acid Sulfate Soils) Overlay • Ramsar Wetlands Overlay
	<p><u>Parking in the City Riverbank Zone</u></p> <p>Recommend additional policy that prioritises pedestrian safety and addresses basement parking whilst contributing to activation.</p>	<p><u>City Main Street Zone Table 2 – Deemed-To-Satisfy (Overlay Exceptions)</u></p> <p>Recommend including the following Overlay in column 1:</p> <p><u>Consulting Room</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay • Regulated and Significant Tree Overlay <p><u>Office</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay • Regulated and Significant Tree Overlay <p><u>Shop</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay • Regulated and Significant Tree Overlay
	<p><u>Visual and physical connections in the City Riverbank Zone</u></p> <p>Recommend that Concept Plan 79 is expanded to include visual and pedestrian connections from Figure Rb/1- from the previous CoA Development Plan.</p>	<p><u>City Main Street Zone Table 2 – Deemed-To-Satisfy Development (DTS/DPF)</u></p> <p>Recommend including the following DTS/DPF:</p> <ul style="list-style-type: none"> • Consulting Room - DTS/DPF 2.3, 2.5, 2.7 • Office - DTS/DPF 2.3, 2.5, 2.7 • Shop - DTS/DPF 2.3, 2.5, 2.7

	<p><u>Cultural Institutions Subzone Pedestrian Links</u> Recommend that Concept Plan 79 is expanded to include pedestrian links from Fig I/1 and 2, Fig Rb1-3 from the previous CoA Development Plan.</p>	<p><u>City Main Street Zone Table 2 – Deemed-To-Satisfy Development (GDPs)</u> Recommend including the following GDPs: <u>Advertisement GDP</u></p> <ul style="list-style-type: none"> • Advertisements – All DTS/DPF to apply
	<p><u>Cultural Institutions Subzone – setback from Park Lands</u> Recommend additional policy that seeks buildings to be located away from roads or frontages to the Park Lands.</p>	<p><u>City Main Street Zone Table 3 – Applicable policies for Performance Assessed Development (Zone PO's)</u> Recommend including the following zone PO's:</p> <ul style="list-style-type: none"> • Advertisements - PO 5.2 • Consulting Room - PO 1.7 • Licensed Premise - PO 1.7 • Shop - PO 4.3 • Student Accommodation - PO 3.3 • Tourist Accommodation - PO 3.3
	<p><u>Cultural Institutions Subzone – setback from North Tce</u> Recommend additional policy that maintains the setback pattern from North Tce.</p>	<p><u>City Main Street Zone Table 3 – Applicable policies for Performance Assessed Development (GDPs)</u> Recommend including the following GDPs: <u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • All residential development classes - apply PO 5. <p><u>Interface between Land Uses GDP</u></p> <ul style="list-style-type: none"> • Licensed premises – PO 6.2 <p><u>Transport, Access and Parking GDP</u></p> <ul style="list-style-type: none"> • Licensed premises – PO 1.2 • Shop – PO 1.2 <p>Recommend deleting the following GDPs: <u>Interface between Land Uses GDP</u></p> <ul style="list-style-type: none"> • Consulting rooms – PO 4.5, 4.6, 5.2 • Office – PO 4.5, 4.6, 5.2 • Shop – PO 4.5, 4.6, 5.2

	<p><u>Public Art</u> Recommend additional policy on public art, monuments etc as a separate heading within the Design in Urban Areas GDP.</p>	<p><u>City Main Street Zone Table 3 – Applicable policies for Performance Assessed Development (Overlays)</u> Recommend including the following Overlays:</p> <p><u>Advertisement</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 3.4 <p><u>Consulting Room</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Dwelling</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Licensed Premise</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Office</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Residential Flat Building</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Shop</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1
--	---	--

		<p><u>Student Accommodation</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1 <p><u>Tourist Accommodation</u></p> <ul style="list-style-type: none"> • Local Heritage Place Overlay PO 2.1 - 2.2, 3.1, 6.1 - 6.2 • State Heritage Place Overlay PO 2.1, 2.2, 3.1, 3.2, 6.1
	<p><u>Entertainment Subzone – Activation</u> Recommend additional policy that seeks land uses at ground level that contribute and facilitate activation.</p>	<p><u>Business Neighbourhood Zone Table 1 - Accepted Development (Overlay Exceptions)</u> Recommend including the following Overlays in Column 1:</p> <p><u>Carport</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Outbuilding</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Shade sail</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Swimming pool or spa</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Verandah</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Water tank (underground)</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay
	<p><u>Health Subzone – Building Design</u> Recommend additional policy that seeks buildings to be designed to be viewed from all sides and considers the activation of the Park Lands.</p>	<p><u>Business Neighbourhood Zone Table 2 – Deemed-To-Satisfy Development (Overlay Exceptions)</u> Recommend including the following Overlays in Column 1:</p> <p><u>Ancillary accommodation</u></p> <ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <p><u>Carport</u></p>

		<ul style="list-style-type: none"> • Regulated and Significant Tree Overlay <u>Consulting Room</u> • Hazards (Flooding) Overlay • Heritage Adjacency Overlay • Historic Area Overlay • Local Heritage Place Overlay • Regulated and Significant Tree Overlay <u>Dwelling</u> • Regulated and Significant Tree Overlay <u>Dwelling or residential flat building undertaken by:</u> <u>(a) the South Australian Housing Trust</u> • Regulated and Significant Tree Overlay <u>Office</u> • Local Heritage Place Overlay • Regulated and Significant Tree Overlay <u>Outbuilding</u> • Regulated and Significant Tree Overlay <u>Replacement Building</u> • Regulated and Significant Tree Overlay • Heritage Adjacency Overlay <u>Row Dwelling</u> • Regulated and Significant Tree Overlay <u>Semi-Detached Dwelling</u> • Regulated and Significant Tree Overlay <u>Shop</u> • Local Heritage Place Overlay • Regulated and Significant Tree Overlay <u>Verandah</u> • Regulated and Significant Tree Overlay
	<p>Helipad Operations – Health Subzone Recommend additional policies to protect the operation of the hospital helipad.</p>	<p>Business Neighbourhood Zone Table 2 – Deemed-To-Satisfy Development (Zone DTS/DPE)</p>

		<p>Recommend including the following Zone DTS/DPF:</p> <ul style="list-style-type: none"> • Ancillary Accommodation - DTS/DPF 3.1 - 7 • Carport - DTS/DPF 3.1 - 7 • Consulting Room - DTS/DPF 1.2, 2.3, 3.1 - 7 • Detached Dwelling - DTS/DPF 1.1 • Dwelling Addition - DTS/DPF 1.1 • Dwelling by SAHT - DTS/DPF 2.3, 3.1 - 7
	<p><u>Vehicle Access Points – Health Subzone</u> Recommend additional policy that requires development to be serviced by vehicular access points from North Terrace and Port Road and considers the activation of the River Torrens.</p>	<p><u>Business Neighbourhood Zone Table 2 – Deemed-To-Satisfy Development (GDPs)</u> Recommend including the following GDPs:</p> <p><u>Advertisements GDP</u></p> <ul style="list-style-type: none"> • Advertisements – DTS/DPF 2.1, 2.2 <p><u>Clearance from overhead powerlines GDP</u></p> <ul style="list-style-type: none"> • Dwelling by SAHT – DTS/DPF 1.1 <p><u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • Ancillary Accommodation - DTS/DPF 10.1, 10.2 • Carport – DTS/DPF 8.2, 19.1, 19.2, 20.1 • Outbuilding – DTS/DPF 8.2, 19.1, 19.2, 20.1 <p><u>Site contamination GDP</u></p> <ul style="list-style-type: none"> • Ancillary accommodation DTS/DPF 1.1 • Dwelling addition - DTS/DPF 1.1
	<p><u>Subzones of City Riverbank Zone - Land use</u> Recommend additional policy that lists envisaged uses for each Subzone to ensure clarity and distinguish each subzones differences.</p>	<p><u>Melbourne West Subzone Table 2 – Deemed-To-Satisfy Development (GDPs)</u> Recommend including the following GDPs:</p> <p><u>Clearance from Overhead Powerlines gdp</u></p> <ul style="list-style-type: none"> • Dwelling by SAHT – DTS/DPF 1.1 <p><u>Design in Urban Areas GDP</u></p> <ul style="list-style-type: none"> • Ancillary Accommodation - include all policies relating to residential development. • Carport – PO 19.1, 19.2, 23.6 • Detached dwelling – PO 1.1, 1.3, 2.4, 3.1, 4.1, 4.2, 4.3, 5.1, 35.1, 35.3,

		<ul style="list-style-type: none"> • Dwelling addition – PO 1.3, 4.1, 4.2, 4.3, 5.1, • Group dwelling – PO 1.3, 2.2, 2.3, 2.4, 3.1, 4.1, 4.2, 4.3, 5.1 • Residential Flat building – PO 1.1, 1.3, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.1, 4.2, 4.3, 5.1. • Row dwelling – PO 1.1, 1.3, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.1, 4.2, 4.3, 5.1. • Semi-detached dwelling – PO 1.1, 1.3, 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.1, 4.2, 4.3, 5.1. • Service Trade Premises – PO 1.3, 2.3, 3.1, 4.3, 5.1, 11.1, 42.1, 42.2, 42.3, 43.1. • Store – PO 1.3, 2.3, 3.1, 4.3, 5.1, 11.1, 42.1, 42.2, 42.3, 43.1. • Verandah – PO 1.3, 20.2 • Warehouse – PO 1.3, 2.3, 4.3, 11.1, 42.1, 42.2, 42.3, 43.1. <p><u>Housing Renewal GDP</u></p> <ul style="list-style-type: none"> • Dwelling by SAHT – PO 10.2, 10.3 <p><u>Infrastructure and Renewable Energy Facilities GDP</u></p> <ul style="list-style-type: none"> • Consulting room – PO 12.2 • Office – PO 12.2 • Shop – PO 12.2 <p><u>Interface Between Land Uses GDP</u></p> <ul style="list-style-type: none"> • Ancillary accommodation dwelling by SAHT – include all policies relating to residential development. • Consulting room - PO 6.2 • Office - PO 6.2 • Service trade premises - PO 6.2 • Shop - PO 6.2 • Detached dwelling – PO 1.1, 4.4 • Dwelling addition – PO 1.1, 4.4 • Group dwelling – PO 1.1, 4.4 • Residential flat building – PO 1.1, 4.4 • Row dwelling – PO 1.1, 4.4 • Semi-detached dwelling – PO 1.1, 4.4

Mr Craig Holden
State Planning Commission
PlanSA
GPO Box 1815
ADELAIDE SA 5001

Dear Mr Holden,

Thank you for the opportunity to provide comment on the Miscellaneous Technical Enhancement Code Amendment (MTE Code Amendment). I acknowledge the work of the State Planning Commission in preparing this state-wide Code Amendment.

This letter provides an overview of the City of Adelaide's submission with further detail contained in Attachment 1. Due to the local government election and caretaker period, this response has been prepared by the Administration and is not a formal position of the Council.

We trust our submission is received as constructive feedback towards improving the quality of planning policy in South Australia and the City of Adelaide.

Outstanding matters

The City of Adelaide works constructively with Planning and Land Use Services and has made previous submissions on the Planning and Design Code seeking technical amendments to support high quality design and further streamline processes for stakeholders within the statutory system (Attachment 2 and Attachment 3).

The MTE Code Amendment does not address the majority of Council's previous feedback and we will separately approach Planning and Land Use Service to identify a pathway to resolve outstanding matters.

Consultation process

As one of the first state-wide Code Amendments from the new system, we acknowledge the very detailed analysis provided in over 1000 pages of written documentation. To improve the accessibility of information to broad audiences we would support:

- Provision of Council specific information
- Greater use of the web-based system for communication purposes, including use of the line of enquiry tool (What policies apply to my property address?) to review proposed amendments
- Quicker annual MTE Code Amendments with reduced scope to avoid potential delays for "minor" amendments.

We consider that not all amendments in the MTE Code Amendment are of a minor nature and that amendments of a policy nature warrant more consideration. For example, the change from Restricted Development Pathway to Performance Assessed Pathway.

Procedural risks to Developers, Stakeholders and Assessment Managers

The Code Amendment proposes changes to Public Notification Tables, Assessment Pathways and Referrals which are considered to introduce risk of procedural error and cause unnecessary risk to developers, stakeholders and Assessment Managers.

Some of these changes require an Assessment Manager to make a decision without relevant professional advice such as Heritage Advice (Local and State Heritage), Government Architect Advice and Affordable Housing (SA Housing Authority).

We do not support amendments that reduce procedural steps by devolving powers to Assessment Managers, particularly without supporting Practice Directions. Procedural challenges by stakeholders can cause delays and costs for developers and unnecessary involvement by additional parties.

Affordable Housing Delivery

The City of Adelaide continues to seek the delivery of affordable housing through the development sector and the involvement of the development industry is paramount to achieving shared affordable housing objectives.

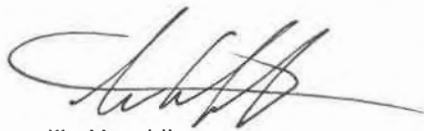

The MTE Code Amendment potentially frustrates this process by removing referral to the SA Housing Authority in the Affordable Housing Overlay. Whilst we appreciate that affordable housing agreements may not be finalised until dwellings are built; we believe the planning system should continue to secure affordable housing delivery by the private sector.

Design Quality and Integrity – Government Architect

We respect the importance of the Government Architect and suggest that more guidance, including a Practice Direction, is needed to support the reduced re-referrals through variations to development approvals. This will assist in ensuring design integrity can be maintained in the circumstance multiple minor variations are processed.

The City of Adelaide would be pleased to discuss our submission in more detail, and I refer you to Matt Field, A/Team Leader, City Policy on _____ or _____

Kind regards

Ilia Houridis
Director, City Shaping

Mr Craig Holden
Chair – State Planning Commission
By email to plansasubmissions@sa.gov.au

Dear Mr Holden

MISCELLANEOUS TECHNICAL ENHANCEMENTS CODE AMENDMENT

Thank you for the opportunity to provide feedback on the Miscellaneous Technical Code Amendment (“Code Amendment”).

We wish to acknowledge the efforts of the State Planning Commission and PlanSA in this Code Amendment, which we understand is the first of what will be a regular review and “tune-up” of technical and operational aspects of the Code.

Given the wide-ranging nature of the Code Amendment, our comments principally relate to aspects considered directly relevant or specific to the City of Mitcham.

This letter sets out common technical challenges we experience in assessment, however, we also enclose a comprehensive table containing comments with respect to change brought about by the proposed Code Amendment more broadly.

DEFINITIONS

Definitions are a key part of the system, for procedural reasons, as well as assessment and application of policy, and for general understanding of the system by the community. While the Code Amendment makes some significant improvements in this area, there are some changes to definitions that would provide significant benefit, these being:

Building Height

While it is acknowledged that the definition seeks to consider the overall height of a building, it is generally confusing, particularly for members of the community. Further, it unnecessarily results in notification of development, including well designed buildings that for all intents and purposes are single storey, but have been designed to managed site constraints e.g. stepped or split level housing on sloping land.

Recommendation: Building Height as a definition should be limited to a height that is measured directly vertically at any point.

MITCHAM

Wall Height

Utilising the top of footings for establishing wall height is likely to have implications when assessing the overall height impact of a building, when those buildings require or use large footings. This change may also result in issues for notification, and neighbours experiencing unreasonable boundary impacts, but with no opportunity to participate in the planning process.

Recommendation: *Wall Height as a definition should be measured from the lower of natural or finished ground levels. This would also provide consistency with Building Height definition.*

Direct Overlooking

In our experience assessing overlooking matters, a distance of 15 metres is not generally acceptable to the community. Similarly, it is considered that at 15 metres it is still possible to make out significant detail (whether direct or indirect) to a level that is detrimental to residential amenity and the enjoyment of one's private open space. It is acknowledged in most cases, this would retain some area with a POS which remained free of overlooking for larger sites, but often not for smaller residential allotments.

Recommendation: *Consider including policies which address the need to manage the balance of the land or proposed built form.*

EARTHWORKS IN HILLS FACE ZONE

The removal of earthworks in the Hills Face Zone from the 'Restricted Development' pathway is generally supported, albeit with concerns. Given the often-sensitive nature of the Hills Face environment, this change should be better supported by policy in the Code that provides more guidance as to how best to manage earthworks over a certain extent, or in certain contexts.

The inclusion of additional performance-based policy to support this change would assist in mitigating subjective conflict between council and an applicant as to what is an acceptable method to manage extent and impact of earthworks in often sensitive hills face locations.

While generally procedural, the restricted pathway established additional constraints on applicants (e.g. the possibility of an early no) which set a high bar for applicants early in the process. Without a high level of policy support in the code, councils assessing earthworks in the Hills Face Zone face significant challenges.

Recommendation: *Consider including policies which address the need to manage the balance of the land or proposed built form such the impacts of earthworks can be reasonably managed / mitigated e.g. through siting and design of built form / design, inclusion of landscaping / plantings, minimising / isolating the location of earthworks, forms of screening or other aesthetic improvements to the land.*

DTS PROVISIONS FOR DECKS

In respect to DTS provisions in relation to decks. We consider that decks with multiple floor levels, but forming one structure, should not be treated / considered as one deck for the purposes of assessing outer perimeter screening. Each floor level for a stepped deck should be considered separately / in its own right for the purposes of perimeter screening provisions.

Similarly, the provisions would benefit from referencing existing site conditions e.g. boundary fence heights or slope to ensure that screening to minimise overlooking will be effective e.g. that a boundary fence would have a relative height of 1.5m's above the FFL of a deck.

Recommendation: Consider whether the definition of a deck should include a reference to continuous finished floor level. Further consider DTS provisions which support this definition and acknowledge existing site conditions such as boundary fence heights and slope of land to mitigate overlooking.

EARTHWORKS AND SWIMMING POOLS

We encourage the commission to consider technical amendments to the Code relating to earthworks required for inground swimming pools within an area or zone where earthworks are specified as development. In many instances, we see inground swimming pools moving out of a Deemed to Satisfied pathway and into Performance Assessment as a result of this. These assessments, except pools requiring large amounts of fill or additional structures, are simple and warrant the retention of a Deemed to Satisfy pathway.

Recommendation: Any excavation required, or filling (with filling being a nominated to a reasonable height (say 0.5m) that is directly required for the installation of an inground swimming pool only, should form part of the swimming pools DTS pathway.

Further detailed comments and suggested opportunities for further review or refinement are attached (*Table – Notes on the Miscellaneous Technical Enhancements Code Amendment*) to this letter.

Please note the comments provided are by the Administration and have not been endorsed by the Council. We would be pleased to discuss our feedback further with you, or answer any queries that you may have arising from our feedback.

Please do not hesitate to contact me on _____ or by email to _____

Yours sincerely

Alex Mackenzie
Manager Development Services

Miscellaneous Technical Enhancements Code Amendment - City Of Mitcham Comments

MISCELLANEOUS TECHNICAL ENHANCEMENTS CODE AMENDMENT - CITY OF MITCHAM COMMENTS

Please note that comments are by Council's Administration staff and have not been endorsed by the Council. The comments relate only to Zones, Overlays and other matters relevant to the City of Mitcham.

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
Part 1 - Rules of Interpretation Application of Spatially Based Policies & Rules	<p>Include explanation and rules on how to determine relevant policy when a spatial layer only applies to part of a site that is the subject of a development application.</p> <p><i>Where a zone, subzone, overlay or technical and numeric variation (TNV) does not spatially apply to the whole of a site that is the subject of the development application, the spatially based rules of the zone (including assessment pathway exclusions), subzone, overlay or TNV are only applicable to the portion of the site to which the zone, subzone, overlay or TNV spatially covers.</i></p> <p><i>Reference to the South Australian Property and Planning Atlas of the SA planning database will be made to determine whether a zone, subzone, overlay</i></p>	<p>Makes sense but will be difficult to show on plans in some circumstances.</p>
Part 1 - Rules of Interpretation Cadastre updates	<p>Include explanation and rules on how spatial layers are updated in order to maintain correct relationships with cadastre or roads</p>	<p>Ok for minor adjustments – what happens with more significant adjustments?</p>
Part 2 – Zones Urban Corridor Zones – Primary Road Corridor – Policy Review	<p>Within the Urban Corridor (Living) Zone, replace reference to: <i>“primary road”, “primary road corridor”, “primary road / public transport corridor”</i></p> <p>with</p> <p><i>“primary road corridor (i.e. a State maintained road)”</i></p>	 <p>Coromandel Parade & Station Road are council, not State, maintained.</p> <p>Implications when assessing Built Form & Character – PO2.1, PO 2.2? It is not clear if the same policies can then be applied to Council maintained roads within these zones where they centre around Council maintained roads and not State maintained roads.</p>
Part 2 – Zones Urban Corridor Zones – Side Boundary Setback – Policy Review	<p>Within the Urban Corridor (Living) Zone PO 2.4, replace the following words:</p> <p><i>Buildings set back from side boundaries (other than street and zone boundaries) to provide separation between buildings in a way that complements the established character of the locality and enables access to natural sunlight and ventilation for neighbouring buildings.</i></p> <p>With</p> <p><i>Buildings are:</i></p> <p><i>(a) sited on side boundaries for parts of the building located towards the front part of the allotment to achieve a continuity of street façade to the street</i></p> <p><i>(b) setback from side boundaries for parts of the building located behind the street facing elements, to enable building separation to provide access to natural ventilation and sunlight.</i></p>	<p>Removes reference to “established character” of an area.</p> <p>Intent of zone to allow for increased density and activity.</p> <p>Areas where U(L)CZ applies are in “transition” – ie zoning has changed but limited uptake</p> <p>Proposed change aligns with intended outcomes and the change in character sought.</p> <p>Requires consistent take up by owners/developers.</p>

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

<p>Restricted Development Classification – New Policy Assoc. Table 4</p>	<p>Within the Hills Face Zone, amend PO 3.1 and DTS/DPF 3.1 with the following:</p> <table border="1" data-bbox="384 275 986 743"> <tr> <td data-bbox="384 275 667 743"> <p>PO 3.1 Excavation and/or filling of land outside townships and urban areas is:</p> <ul style="list-style-type: none"> a) kept to a minimum so as to preserve the natural form of the land and native vegetation b) only undertaken in order to reduce the visual impact of buildings, including structures, or in order to construct water storage facilities for use on the allotment. c) <u>directly required for the portion of a building that is fully underground, an underground dwelling, pool, underground tank, cellar, pipeline or waste disposal and treatment system.</u> </td> <td data-bbox="671 275 986 743"> <p>DTS/DPF 3.1 The depth of earthworks does not exceed:</p> <ul style="list-style-type: none"> a) in the case of excavation, 2m <u>below natural ground level.</u> b) in the case of filling of land, 1m <u>above natural ground level.</u> </td> </tr> </table>	<p>PO 3.1 Excavation and/or filling of land outside townships and urban areas is:</p> <ul style="list-style-type: none"> a) kept to a minimum so as to preserve the natural form of the land and native vegetation b) only undertaken in order to reduce the visual impact of buildings, including structures, or in order to construct water storage facilities for use on the allotment. c) <u>directly required for the portion of a building that is fully underground, an underground dwelling, pool, underground tank, cellar, pipeline or waste disposal and treatment system.</u> 	<p>DTS/DPF 3.1 The depth of earthworks does not exceed:</p> <ul style="list-style-type: none"> a) in the case of excavation, 2m <u>below natural ground level.</u> b) in the case of filling of land, 1m <u>above natural ground level.</u> 	<p>Table 4 Restricted Development to be amended to remove Excavation and Filling (ie no longer restricted development)</p> <p>Agree with the removal of cut and fill from restricted development. Need to ensure wording of policy is strong enough for management of outcomes. Currently State assessed developments can use the entirety of the Code, as such the policies need to be strengthened in Zones.</p> <p>Will support the compliance role of councils as the relevant authority.</p>
<p>PO 3.1 Excavation and/or filling of land outside townships and urban areas is:</p> <ul style="list-style-type: none"> a) kept to a minimum so as to preserve the natural form of the land and native vegetation b) only undertaken in order to reduce the visual impact of buildings, including structures, or in order to construct water storage facilities for use on the allotment. c) <u>directly required for the portion of a building that is fully underground, an underground dwelling, pool, underground tank, cellar, pipeline or waste disposal and treatment system.</u> 	<p>DTS/DPF 3.1 The depth of earthworks does not exceed:</p> <ul style="list-style-type: none"> a) in the case of excavation, 2m <u>below natural ground level.</u> b) in the case of filling of land, 1m <u>above natural ground level.</u> 			

	<p>Within the Hills Face Zone, create new PO 14.1 & DTS/DPF 14.1 and PO 14.2 & DTS/DPF 14.2 to the following:</p> <table border="1" data-bbox="384 831 986 1214"> <tr> <th colspan="2" data-bbox="384 831 986 864"><i>Land Division</i></th> </tr> <tr> <td data-bbox="384 871 667 949"> <p>PO 14.1 Land division does not result in the creation of an additional allotment.</p> </td> <td data-bbox="671 871 986 949"> <p>DTS/DPF 14.1 No additional allotments are created.</p> </td> </tr> <tr> <td data-bbox="384 956 667 1207"> <p>PO 14.2 Land division involving boundary realignments occurs only where it supports the management or improvement of the natural environment including avoiding:</p> <ul style="list-style-type: none"> a) further fragmentation of land that may reduce effective management of the environment or diminishing the natural character of the area </td> <td data-bbox="671 956 986 1207"> <p>DTS/DPF 14.2 Land division involving boundary realignment that will satisfy one of the following</p> <ul style="list-style-type: none"> a) is for the creation of a public road or a public reserve b) is to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures c) is for the management of existing native vegetation </td> </tr> </table>	<i>Land Division</i>		<p>PO 14.1 Land division does not result in the creation of an additional allotment.</p>	<p>DTS/DPF 14.1 No additional allotments are created.</p>	<p>PO 14.2 Land division involving boundary realignments occurs only where it supports the management or improvement of the natural environment including avoiding:</p> <ul style="list-style-type: none"> a) further fragmentation of land that may reduce effective management of the environment or diminishing the natural character of the area 	<p>DTS/DPF 14.2 Land division involving boundary realignment that will satisfy one of the following</p> <ul style="list-style-type: none"> a) is for the creation of a public road or a public reserve b) is to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures c) is for the management of existing native vegetation 	<p>Table 4 Restricted Development to be amended to exclude land division for the purpose of boundary realignment</p> <p>Agree with this change, though the use of the realignment for purposes such as maintaining vegetation, could result in very small allotments being DPF. While it is just a boundary realignment, the creation of smaller allotments and larger allotments, can impact the character of an area. Should not have a DTS pathway within the Hills Face Zone, as Performance Assessment will allow for consideration and negotiation of proposed boundary locations.</p>
<i>Land Division</i>								
<p>PO 14.1 Land division does not result in the creation of an additional allotment.</p>	<p>DTS/DPF 14.1 No additional allotments are created.</p>							
<p>PO 14.2 Land division involving boundary realignments occurs only where it supports the management or improvement of the natural environment including avoiding:</p> <ul style="list-style-type: none"> a) further fragmentation of land that may reduce effective management of the environment or diminishing the natural character of the area 	<p>DTS/DPF 14.2 Land division involving boundary realignment that will satisfy one of the following</p> <ul style="list-style-type: none"> a) is for the creation of a public road or a public reserve b) is to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures c) is for the management of existing native vegetation

Notification Tables - Table 5

Business Neighbourhood Zone	<p>In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, replace the following text in the exceptions column (Column B) relating to clause 2 (in Column A):</p> <p>Except development involving any of the following:</p> <p>1 – residential flat building(s) of 3 or more building levels</p> <p>2 – the demolition of a State or Local Heritage Place</p>
	<p>3 – the demolition of a building (except an ancillary building) in a Historic Area Overlay.</p> <p>With:</p> <p><u>Except development involving any of the following:</u></p> <p>1. <u>residential flat building(s) of 3 or more building levels</u></p> <p>2. <u>the demolition (or partial demolition) of a State or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated).</u></p> <p>3. <u>the demolition (or partial demolition) of a building in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated).</u></p>
Business Neighbourhood Zone	<p>In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, amend clause 3 in Column A by:</p> <p>(a) removing the following classes of development from the list:</p> <ul style="list-style-type: none"> air handling unit, air conditioning system or exhaust fan building work on railway land carport deck fence outbuilding pergola private bushfire shelter retaining wall shade sail solar photovoltaic panels (roof mounted) swimming pool or spa pool verandah water tank <p>(b) renumber list in alphabetical order as required</p>
Business Neighbourhood Zone	<p>In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, amend clause 5 in Column A by:</p> <p>(a) including (in alphabetical order) the following additional classes of development within the list:</p> <ul style="list-style-type: none"> <u>air handling unit, air conditioning system or exhaust fan</u> <u>carport</u> <u>deck</u>

The demolition of a historically significant dwelling (state or conservation zone) is a technical assessment, with the notification of such being a curious trigger. Demolition applications are always supported by the proposed replacement built form, and as such the triggers for notification should relate to any replacement building and not necessarily the demolition. The benefit of notification though is that CAP is the relevant authority, which is the appropriate level of RA.

Verification of demolition of buildings which are not in keeping with the features identified as contributing to the heritage value, is a process question for the SHU – will require an agreement as to how to determine what does not form part of the heritage value at verification stage. This is a relationship building issue around process.

Business Neighbourhood Zone, is it the intending to keep Column B in the PN?

The view is that a relevant authority has capability to assess these without input from neighbours.

These types of developments can impact neighbouring properties more than others and often generate reasonable representations from affected neighbours.

There is additional policy proposed in Design and Design in Urban Areas modules relating to decks to address overlooking – but these are industrial in their application, with no two decks or screening solutions being the same. DTS pathway is not supported for decks which would likely result in desktop assessments for something that is so site specific and as stated above no two scenarios are the same. As such should not have a DTS pathway.

Often without access to a neighbours site it is not possible to understand the true impacts.

Notification Tables – Table 5

Suburban Business Zone

In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, replace the following text in the exceptions column (Column B) relating to clauses 2 and 6 (in Column A):

~~Except any of the following:~~

~~1 – the demolition of a State or Local Heritage Place~~

~~2 – the demolition of a building (except an ancillary building) in a Historic Area Overlay:~~

With:

Except any of the following:

1. the demolition (or partial demolition) of a State or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated)

2. the demolition (or partial demolition) of a building in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes

Supported – comments with regards to heritage places as above

identified in the Historic Area Statement applicable to the area in which the building is situated).

Suburban Business Zone

In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, amend clause 3 in Column A by:

(a) removing the following classes of development from the list:

- ~~air handling unit, air conditioning system or exhaust fan~~
- ~~building work on railway land~~
- ~~carport~~
- ~~fence~~
- ~~outbuilding~~
- ~~private bushfire shelter~~
- ~~shade sail~~
- ~~solar photovoltaic panels (roof mounted)~~
- ~~swimming pool or spa pool~~
- ~~verandah~~
- ~~water tank~~

(b) renumber list in alphabetical order as required

Suburban Business Zone

In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, amend clause 5 in Column A by:

(a) including (in alphabetical order) the following additional classes of development within the list:

- air handling unit, air conditioning system or exhaust fan
- carport
- deck
- fence
- outbuilding
- pergola
- private bushfire shelter
- retaining wall
- shade sail
- solar photovoltaic panels (roof mounted)
- swimming pool or spa pool
- verandah
- water tank

(b) renumber list in alphabetical order as required

Suburban Business Zone

In Table 5 – Procedural Matters (PM) – Notification, in the table that identifies classes of performance assessed development that are excluded from notification, insert the following additional class of development and corresponding exception in a new row immediately after clause 6:

Class of Development	Exceptions
(Column A)	(Column B)
<u>7. Railway line.</u>	<u>Except where located outside of a rail corridor or rail reserve.</u>

8. Railway line.	<u>Except where located outside of a rail corridor or rail reserve.</u>					
Building Height – TNV & Context	<p>Within the Urban Neighbourhood Zone, amend PO 2.2 as follows:</p> <p><i>Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer, and otherwise or positively responds to the local context including the site's frontage, depth, and adjacent primary street width.</i></p>	Support - this would enable a proper performance assessment to occur without being distracted by the numbers but could equally make it harder to adhere to any sense of guidelines with the boundaries pushed further. It also supports the change in character sought in most of these zones.				
Building Height – TNV & Context	<p>Within the Urban Corridor (Living) Zone PO 3, amend as follows:</p> <p><i>Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer and otherwise or positively responds to the local context including the site's frontage, depth, and adjacent primary corridor or street width.</i></p>	In most cases, there will be a shift in the character, due to the uplift in built form, which should be supported further around definitive guidance on what local context extends to.				
Building Height – TNV & Context	<p>Within the Strategic Innovation Zone, amend PO 3.1 as follows:</p> <p><i>Building height is consistent with the form expressed in any relevant Maximum Building Height (Levels) Technical and Numeric Variation layer, Maximum Building Height (Metres) Technical and Numeric Variation layer and any relevant Concept Plan contained within the Concept Plans Technical and Numeric Variations, or otherwise provide provides an orderly transition in scale, increasing from low scale at the zone interface to medium-to-high rise in the centre of the zone to complement the established local character.</i></p>					

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries						
Building Height – TNV & Context	<p>Within the Community Facilities Zone, amend PO 2.1 as follows:</p> <p><i>Building height is consistent with the maximum height expressed in any relevant Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer or otherwise is generally consistent with the prevailing character of the locality and height of nearby buildings.</i></p>							
<p>Building Height, Building Wall Setback and Wall Height – Policy Review</p> <p>Part 8 Administrative Terms & Definitions</p>	<p>Amend 'Building height' in (Column A) by replacing the definition (in Column B) with the following: <i>Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:</i></p> <p><i>(a) flues connected to a sewerage system</i> <i>(b) telecommunications facility tower or monopole</i> <i>(c) electricity pole or tower</i> <i>(d) or any similar structure</i></p> <p>Amend 'Wall height' in (Column A) by replacing the definition (in Column B) with the following: <i>Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) but excluding noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land</i></p> <p>Insert (in alphabetical order) the following new term and definition for "post height"</p> <table border="1" data-bbox="384 1227 1019 1655"> <thead> <tr> <th data-bbox="384 1227 560 1292">Term (Column A)</th> <th data-bbox="560 1227 810 1292">Definition (Column B)</th> <th data-bbox="810 1227 1019 1292">Illustrations Column C</th> </tr> </thead> <tbody> <tr> <td data-bbox="384 1292 560 1655"><u>Post height</u></td> <td data-bbox="560 1292 810 1655"><i>Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land</i></td> <td data-bbox="810 1292 1019 1655"></td> </tr> </tbody> </table>	Term (Column A)	Definition (Column B)	Illustrations Column C	<u>Post height</u>	<i>Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land</i>		<p>Not supported – poorly conceived definition for application and outcomes. This definition appears to be trying to manage two different considerations, 1) Building Height and 2) overall building height.</p> <p>Very confusing definition to apply – what is the measurement point specified by the applicable policy of the Code?</p> <p>Building height definition is not ideal where split level homes work with the lie of the land, are still penalised as being exceptionally high despite the design limiting the impact.</p> <p>Building height should be measured directly above the lowest point at any point across a pavilion or area with the same FFL, and not across the lowest and highest point of the building's entirety. Height across an entire building should be defined separately as 'Overall Building Height'.</p> <p>Support wall/post height is measured up to the eaves.</p> <p>Should be measured from the lower of natural or finished ground to consider the full impact of the wall in real terms.</p> <p>Generally the neighbourhood type zones in the P&DC appear to reference building height and wall height without a measurement point specified and reference post height for ancillary buildings above natural ground level.</p> <p>Measuring wall height from the top of the footing doesn't capture the true impact of a building wall or structures height.</p> <p>DTS pathway could inadvertently apply to a much higher wall height</p>
Term (Column A)	Definition (Column B)	Illustrations Column C						
<u>Post height</u>	<i>Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land</i>

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

Common & Minor Development
 Overlay Relevance – Assessment Pathways
Table 2 – Deemed to Satisfy Development Classification

Insert reference to specified Overlays in **Column 1** – Class of Development in the rows beginning with the following Classes of Development wherever they appear in the identified Zones:

Development Type	Overlays	Zones
Ancillary Accommodation	River Murray Tributaries Protection Area Overlay	All
	Ramsar Wetlands Overlay	
	Significant Interface Management Overlay	
	Interface Management Overlay	
Detached Dwelling	Environment and Food Production Area	All
	River Murray Tributaries Protection Area Overlay	
	Ramsar Wetlands Overlay	
Land Division	Historic Area Overlay	
	Character Area Overlay	General Neighbourhood Zone
Row Dwelling	Environment and Food Production Area	All
	River Murray Tributaries Protection Area Overlay	
	Ramsar Wetlands Overlay	
Semi-detached Dwelling	Environment and Food Production Area	All
	River Murray Tributaries Protection Area Overlay	
	Ramsar Wetlands Overlay	

EFPA seeks to protect food production areas from urban encroachment – appropriate to apply the overlay to these forms of development in Table 2. Query whether it should also apply to Ancillary Accommodation? (although doesn't affect CoM as not DTS pathway in EFPA affected zones)
 Historic/Character Area overlays in CoM apply within Established Neighbourhood and Hills Neighbourhood where land division does not have a DTS pathway.

Common & Minor Development
 Overlay Relevance – Assessment Pathways
Table 2 – Deemed to Satisfy Development Classification

Insert reference to specified Overlays in **Column 5** – Class of Development in the rows beginning with the following Classes of Development wherever they appear in the identified Zones

Development Type	Overlays	Zones
Detached Dwelling Row Dwelling Semi-detached Dwelling	Traffic Generating Development Overlay: DTS/DPF 1.1, 1.2, 1.3	All
	Water Protection Area Overlay: DTS/DPF 5.1, 5.2	
	Gas and Liquid Petroleum Pipelines Overlay: DTS/DPF 1.1	
	Gas and Liquid Petroleum Pipelines (Facilities) Overlay: DTS/DPF 1.1	

Applies to key north-south and east-west routes across CoM.
 In CoM only applies to GN & SN zones which have DTS pathways for D, R & SD Dwellings

Detached Dwellings – Med &-High Rise Development

Within the Business Neighbourhood Zone, General Neighbourhood Zone, Suburban Business Zone, Suburban Neighbourhood Zone, Urban Neighbourhood Zone, Urban Renewal Neighbourhood Zone **Amend Table 3** – Applicable Policies for Performance Assessed Development by **inserting** the following Performance Outcomes for **detached dwelling**:

Design in Urban Areas [Residential Development - Medium and High Rise (including serviced apartments)]:
[Outlook and Visual Privacy] PO 26.1, PO 26.2
[Private Open Space] PO 27.1

Applied to ensure consistency across zones
 Seeks to ensure that elements such as landscaping, RWT & tree planting can be adequately assessed against policy.
 Supported

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

Dwelling Alterations & Building Additions/Alterations – Assessment Pathways – **Table 3** – Applicable Policies for Performance Assessed Development

For all Zones **INSERT** directly following the introductory text for Table 3:
Unless otherwise specified in another class of development, the reference to a class of development includes a reference to a change in the use of the relevant land or building work (including construction of a new building, or alteration/addition of an existing building).

Interface Height – Policy & TNV Part 6 – TNV Index

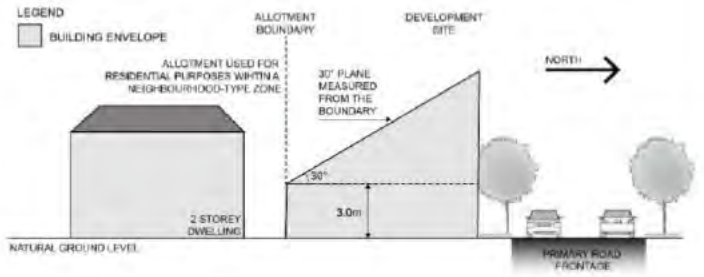

Within **Part 6** – Index of Technical and Numeric Variations, amend the following TNVs & diagrams in Part 6.6 Interface Heights to with the following:

Buildings constructed within a building envelope provided by a:

a. *45 degree plane measured from a height of 3 metres above natural ground level at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a southern boundary or a street boundary):*

b. *in relation to a southern boundary, 30 degree plane grading north, measured from a height of 3m above natural ground at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a street boundary):*

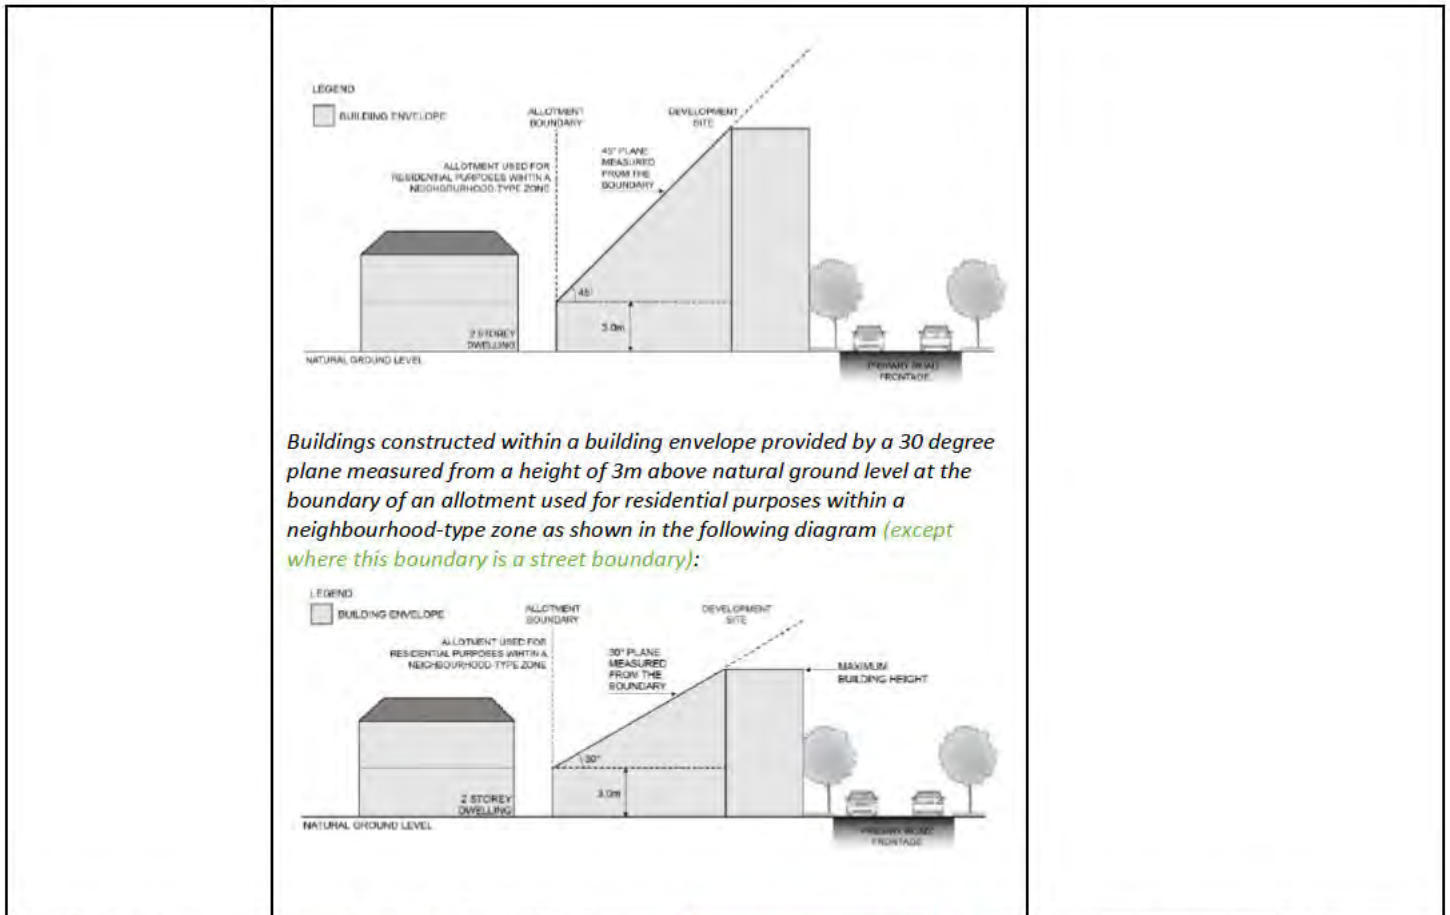

Buildings constructed within a building envelope provided by a 45 degree plane measured from a height of 3 metres above natural ground level at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a street boundary):

Support the amendment and comments below. Furthermore, a larger bulk could be supported on the street boundary side of the allotment due to the separation from the road already existing to residential land across the road – so makes sense. Where there will still be an impact, other policy relating to streetscape and appearance of the building can manage this.

There is typically other policy contained within zones to manage the impact on streetscape.
eg – Suburban Business Zone PO 3.8 – Buildings on an allotment fronting a road that is not a State maintained road, and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.

---	--------------------	--------------------

<p>Interface Height – Policy & TNV Part 2 – Zone</p>	<p>Amend the following DTS/DPF to replace 'primary street boundary' with '<i>street boundary</i>':</p> <ul style="list-style-type: none"> • Community Facilities Zone DTS/DPF 2.2 • Employment Zone DTS/DPF 3.6 • Local Activity Centre Zone DTS/DPF 3.2 • Recreation Zone DTS/DPF 3.1 • Strategic Employment Zone DTS/DPF 4.1 • Suburban Business Zone DTS/DPF 3.2 • Urban Activity Centre Zone DTS/DPF 3.2 <p>Amend the following DTS/DPF to add '<i>(except where this boundary is a street boundary)</i>':</p> <ul style="list-style-type: none"> • Community Facilities Zone DTS/DPF 2.3 • Employment Zone DTS/DPF 3.7 • Local Activity Centre Zone DTS/DPF 3.3 • Recreation Zone DTS/DPF 3.2 • Strategic Employment Zone DTS/DPF 4.2 • Suburban Business Zone DTS/DPF 3.3 • Suburban Main Street Zone DTS/DPF 3.3 • Urban Activity Centre Zone DTS/DPF 3.3 	<p>Support the amendment and comments below. The impacts to a secondary street should be treated the same as a primary street and therefore, relating the policies to all street frontages makes sense. If the impact to the secondary street is negligible, then this can be justified against the PO.</p>
--	--	---

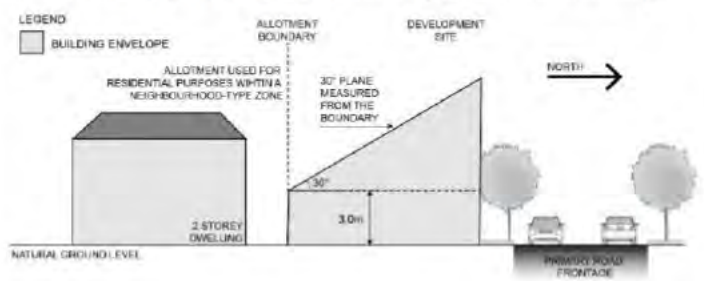

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

Interface Height – Policy & TNV Part 2 – Zone

Within the **Community Facilities Zone DTS/DPF 2.2, Employment Zone DTS/DPF 3.6, Local Activity Centre Zone DTS/DPF 3.2, Recreation Zone DTS/DPF 3.1, Strategic Employment Zone DTS/DPF 4.1, Suburban Business Zone DTS/DPF 3.2** REPLACE the diagram with the following:

Within the **Community Facilities Zone DTS/DPF 2.3, Employment Zone DTS/DPF 3.7, Local Activity Centre Zone DTS/DPF 3.3, Recreation Zone DTS/DPF 3.2, Strategic Employment Zone DTS/DPF 4.2, Suburban Business Zone DTS/DPF 3.3** REPLACE the diagram with the following

Within the **Recreation Zone, CREATE** PO 3.3 which states:

Buildings on an allotment fronting a road that is not a State maintained road, and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.

Within **Recreation Zone, AMEND** Table 3 – Applicable Policies for Performance Assessed Development by applying PO 3.3 to the following classes of development

Shop

Support the amendment. Clarity provided in relation to the neighbouring residential allotment, which looks like it needs to be directly adjoining (figure currently says “closest”. Creation of 3.3 deals with the street frontage impact, which has now been taken out of the figures. **Not sure about 3.3 only applying to Shops though – what about Office, maybe Tourist Accommodation, or clubrooms which may be close to the street.**

Land Division – Table 3 – Applicable Policies for Performance Assessed Development

All Zones
 Amend Table 3 – Applicable Policies for Performance Assessed Development for ‘land division’ (where this Class of Development is identified) by including the following policy linkage:
Part 4 – General Development Policies – Site Contamination – PO 1.1

Supported
 PO1.1 applies when a land use changes to a more sensitive use
 Support including the link at the LD stage to provide greater certainty in assessment
 If there is no CoU proposed at time of LD, ensure there is opportunity to revisit this PO at later stages if CoU does eventuate.

Supported – with comment below

the 1m dispensation can, over time, mean that dwellings could eventually be built to setbacks that are progressively closer and closer to street boundaries.

<p>Part 3 - Overlays</p>	<p>Affordable Housing Overlay - Referral</p> <p>Amend the 'Procedural Matters (PM) – Referrals' section by replacing the following Class of Development / Activity:</p> <p><i>Development for the purposes of the provision of affordable housing (applying the criteria determined under regulation 4 of the South Australian Housing Trust Regulations 2010).</i></p>	<p>Supported</p>
--------------------------	--	------------------

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
	<p>With:</p> <p><i>Except where the applicant for the development is the South Australian Housing Authority (or an agent acting on behalf of the South Australian Housing Authority), residential development or land division (other than land division that reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016):</i></p> <p>(a) <i>that comprises 20 or more dwellings or residential allotments and the development is intending to provide affordable housing</i> or (b) <i>where the applicant is seeking to access one or more of the planning concessions outlined in the Affordable Housing Overlay DTS 3.1, 3.2 or 4.1</i> or (c) <i>that is described in the application documentation as including affordable housing of any number of dwellings or residential allotments.</i></p>	
	<p>Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 Linkages Within all relevant zones, amend Table 3 – Applicable Policies for Performance Assessed Development for Carport, Dwelling addition, Outbuilding and Verandah by including the linkage:</p> <p><i>Hazards (Flooding) Overlay [Flood Resilience] PO 3.5</i></p> <p>Within the Business Neighbourhood Zone, amend Table 3 – Applicable Policies for Performance Assessed Development for Fence by: Removing Hazards (Flooding) Overlay [Flood Resilience] PO 3.5 and Including Hazards (Flooding) Overlay [Flood Resilience] PO 3.6</p>	<p>Supported</p> <p>Some broken linkages that need to be fixed in the application of the Code to some allotments and development.</p>
	<p>Heritage Adjacency Overlay – Referral Within the Heritage Adjacency Overlay, and the Procedural Matters (PM) – Referrals table by replace the following words in the Class of Development / Activity: <i>‘Development that may materially affect the context of a State Heritage Place’</i> With the following: <i>Development which in the opinion of the relevant authority materially affects the context within which the State Heritage Place is situated</i></p>	<p>Supported</p> <p>Support inclusion of words “which in the opinion of the relevant authority” as it clarifies who is making the judgement call. Reduces subjective opinion by others (eg interested community members) and may narrow the opportunity for process review proceedings being initiated where opinions may differ.</p> <p>Reflects wording used in other “heritage” related overlays (eg State Heritage Area Referrals table)</p>
	<p>Major Urban Transport Routes Overlay – Policy & Referral Amend DTS/DPF 3.1 to the following: <i>DTS/DPF 3.1</i> <i>An existing access point satisfies (a), (b) or (c):</i> (a) <i>it will not service, or is not intended to service, more than 6 dwellings</i> (b) <i>it is not located on a Controlled Access Road and will not service development that will result in a larger class of vehicle expected to access the site using the existing access</i> (c) <i>it is not located on a Controlled Access Road and development constitutes:</i> (i) <i>a change of use between an office <500m² gross leasable floor area and a consulting room <500m² gross leasable floor area or vice versa</i></p>	<p>Supported</p> <p>Seeks to ensure consistency across transport related overlays</p> <p>Reduces number of referrals to DIT</p> <p>Change in policy unlikely to result in significant vehicle movements in/out of site (eg 14 carparks required for 250sqm shop)</p>

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

- (ii) a change in use from a shop to an office, consulting room or personal or domestic services establishment
- (iii) a change of use from a consulting room or office <250m² gross leasable floor area to shop <250m² gross leasable floor area
- (iv) a change of use from a shop <500m² gross leasable floor area to a warehouse <500m² gross leasable floor area
- (v) an office or consulting room with a <500m² gross leasable floor area
- (vi) a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with <250m² gross leasable floor area.

Within the Major Urban Transport Routes Overlay, amend DTS/DPF 4.1 to the following:

DTS/DPF 4.1

A new access point satisfies (a), (b) or (c):

- (a) where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network and outside the tangent point shown in the following diagram:

NOTE:

The points marked X₁ and X are respectively at the median end on a divided road and at the intersection of the main road centre-line and the extensions of the side road property lines shown as dotted lines, on an undivided road. On a divided road, dimension Y-Y₁ extends to Point Y₁.

- (a) where the development site is intended to serve between 1 and 6 dwellings ~~and access from a local road (being a road that is not a State Maintained Road) is not available~~, the new access:
 - (i) is not located on a Controlled Access Road
 - (ii) is not located on a section of road affected by double barrier lines
 - (iii) will be on a road with a speed environment of 70km/h or less
 - (iv) is located outside of the bold lines on the diagram shown in the diagram following part (a)
 - (v) is located a minimum of 6m from a median opening or pedestrian crossing
- (b) where DTS/DPF 4.1 part (a) and (b) do not apply and access from an alternative local road at least 25m from the State Maintained Road is not available, and the access is not located on a Controlled Access Road, the new access is separated in accordance with the following:

(a) Provided twice – numbering error

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

Speed Limit	Separation between access points	Separation from public road junctions and merging/terminating lanes
50 km/h or less	No spacing requirement	20m
60 km/h	40m 5m (for development intended to serve between 1 and 6 dwellings) and 20m for all other cases	123m
70 km/h	55m	151m
80 km/h	70m	181m
90 km/h	90m	214m
100 km/h	110m	248m
110 km/h	135m	285m

Amend DTS/DPF 5.1 to the following:

DTS/DPF 5.1

An access point satisfies (a) or ((b) and (c)):

(a) the development site does or is intended to serve between 1 and 6 dwellings and utilises an existing access point

or

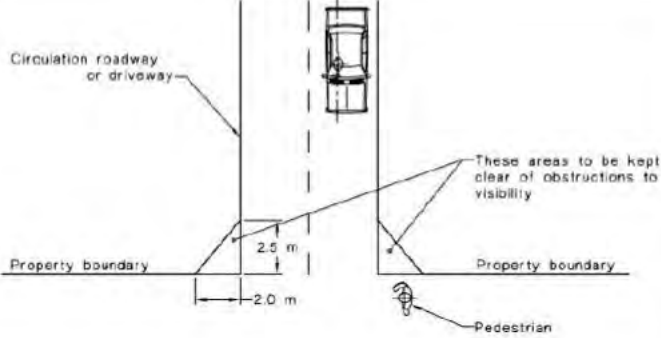

(b) drivers approaching or exiting an access point have an unobstructed line of sight in accordance with the following (measured at a height of 1.1m above the surface of the road):

Speed Limit	Access Point serving 1-6 dwellings	Access point serving all other development
40 km/h or less	47m	73m
50 km/h	63m	97m
60 km/h	81m	123m
70 km/h	100m	151m
80 km/h	121m	181m
90 km/h	144m	226m
100 km/h	169m	262m
110 km/h	195m	300m

and

(c) pedestrian sightlines in accordance with the following diagram:

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
	 <p>Amend DTS/DPF 7.1 to the following: DTS/DPF 7.1 <i>Development does not:</i> <i>(a) decrease the capacity of an existing drainage point</i> <i>(b) restrict or prevent the flow of stormwater to an existing drainage point and system</i> <i>(c) prevent access points becoming stormwater flow paths direct onto the road.</i></p>	
	<p>Character Area Overlay & Historic Area Overlay – Representative Buildings</p> <p>Amend the Historic Area Overlay spatial mapping to show ‘representative buildings’ that currently exist within the spatial extent of the Overlay. Amend the Character Area Overlay spatial mapping to show ‘representative buildings’ that currently exist within the spatial extent of the Overlay.</p> <p>Notes: <i>For the purposes of consultation, and as a result of ‘representative buildings’ being a point in time reference, updated mapping for the Historic Area Overlay and Character Area Overlay hasn’t been produced. Reference to the ‘Representative Buildings’ Planning Reference Layer of SAPPA should be made for the purposes of identifying current ‘representative buildings’.</i></p> <p><i>The final version of this Code Amendment, i.e., the one that is prepared for adoption by the Minister responsible for the administration of the Planning, Development and Infrastructure Act 2016, will include updated Historic Area Overlay and Character Area Overlay spatial mapping showing all ‘representative buildings’ that are identified within the Planning Reference Layer.</i></p>	<p>Support- with list of RB’s also included in Heritage list section</p> <p>Intent is to ensure greater “visibility” of RB without the need for additional resources and investment in ePlanning system and without changing policy position. Ie, does not elevate the importance of the RB, but simply more easily identifies them visually in SAPPA.</p>
	<p>State Significant Native Vegetation Areas Overlay - Referral</p> <p>Amend the ‘Procedural Matters (PM) – Referrals’ section by replacing the row under Class of Development / Activity with the following:</p> <p><i>The following classes of development:</i> <i>(a) land division where a report prepared in accordance with Regulation 18(2)(a) of the Native Vegetation Regulations 2017 in connection with a development application categorises the clearance, or potential clearance, as ‘Level 2 clearance’, ‘Level 3 clearance’ or ‘Level 4 clearance’</i> <i>(b) all other classes of development other than where DTS/DPF 1.1(a) or DTS/DPF 1.1(b) is achieved.</i></p>	<p>Supported</p>

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

	<p>Traffic Generating Development Overlay – Policy & Referral</p> <p>Amend DTS/DPF 1.1, DTS/DPF 1.2 and DTS/DPF 1.3 to the following <i>DTS/DPF 1.1</i></p> <p><i>Access is obtained directly from a State Maintained Road where it involves any of the following types of development:</i></p> <ul style="list-style-type: none"> <i>a) building, or buildings, containing in excess of 50 dwellings</i> <i>b) land division creating 50 or more additional allotments</i> <i>c) commercial development with a gross floor area of 10,000m2 or more</i> <i>d) retail development with a gross floor area of 2,000m2 or more</i> <i>e) a warehouse or transport depot with a gross leasable floor area of 8,000m2 or more</i> <i>f) industry with a gross floor area of 20,000m2 or more</i> <i>g) educational facilities with a capacity of 250 students or more.</i> <p><i>DTS/DPF 1.2</i></p> <p><i>Access is obtained directly from a State Maintained Road where it involves any of the following types of development:</i></p> <ul style="list-style-type: none"> <i>a) building, or buildings, containing in excess of 50 dwellings</i> <i>b) land division creating 50 or more additional allotments</i> <i>c) commercial development with a gross floor area of 10,000m2 or more</i> <i>d) retail development with a gross floor area of 2,000m2 or more</i> <i>e) a warehouse or transport depot with a gross leasable floor area of 8,000m2 or more</i> <i>f) industry with a gross floor area of 20,000m2 or more</i> <i>g) educational facilities with a capacity of 250 students or more.</i> <p><i>DTS/DPF 1.3</i></p> <p><i>Access is obtained directly from a State Maintained Road where it involves any of the following types of development:</i></p> <ul style="list-style-type: none"> <i>a) building, or buildings, containing in excess of 50 dwellings</i> <i>b) land division creating 50 or more additional allotments</i> <i>c) commercial development with a gross floor area of 10,000m2 or more</i> <i>d) retail development with a gross floor area of 2,000m2 or more</i> <i>e) a warehouse or transport depot with a gross leasable floor area of 8,000m2 or more</i> <i>f) industry with a gross floor area of 20,000m2 or more</i> <i>g) educational facilities with a capacity of 250 students or more.</i> <p>Within the Traffic Generating Overlay, amend the Procedural Matters (PM) – Referrals table by replacing Class of Development / Activity:</p> <p><i>Except where all of the relevant deemed-to-satisfy criteria are met, any of the following classes of development that are proposed within 250m of a State Maintained Road:</i></p> <ul style="list-style-type: none"> <i>a. land division creating 50 or more additional allotments</i> <i>b. commercial development with a gross floor area of 10,000m2 or more</i> <i>c. retail development with a gross floor area of 2,000m2 or more</i> <i>d. a warehouse or transport depot with a gross leasable floor area of 8,000m2 or more</i> <i>e. industry with a gross floor area of 20,000m2 or more</i> <i>f. educational facilities with a capacity of 250 students or more.</i> <p>With the following:</p> <p><i>Except where all of the relevant deemed-to-satisfy criteria are met, any of the following classes of development that are proposed within 250m of a State Maintained Road:</i></p> <ul style="list-style-type: none"> <i>a. except where a proposed development has previously been referred under clause (b) - a building, or buildings, containing in excess of 50 dwellings</i> 	<p>Generally Supported</p> <p>Consider – land division for 50+ currently identified but not regarding built form</p> <p>What about egress? Commentary with regards to exiting onto a road that isn't a state-maintained road?</p>
--	--	---

	<p><i>b. except where a proposed development has previously been referred under clause (a) - land division creating 50 or more additional allotments</i></p> <p><i>c. commercial development with a gross floor area of 10,000m² or more</i></p> <p><i>d. retail development with a gross floor area of 2,000m² or more</i></p> <p><i>e. a warehouse or transport depot with a gross leasable floor area of 8,000m² or more</i></p> <p><i>f. industry with a gross floor area of 20,000m² or more</i></p> <p><i>g. educational facilities with a capacity of 250 students or more.</i></p>	
	<p>Urban Transport Routes Overlay – Policy & Referral</p> <p>Amend DTS/DPF 1.1(b)(i) to the following: DTS/DPF 1.1(b)(i) <i>(i) it will not result in more than one access point servicing the development site</i></p> <p>Amend DTS/DPF 3.1 to the following: DTS/DPF 3.1 An existing access point satisfies (a), (b) or (c): (d) <i>it will not service, or is not intended to service, more than 6 dwellings</i> (e) <i>it is not located on a Controlled Access Road and will not service development that will result in a larger class of vehicle expected to access the site using the existing access</i> (f) <i>it is not located on a Controlled Access Road and development constitutes:</i></p> <ul style="list-style-type: none"> <i>(i) a change of use between an office <500m² gross leasable floor area and a consulting room <500m² gross leasable floor area or vice versa</i> <i>(ii) a change in use from a shop to an office, consulting room or personal or domestic services establishment</i> <i>(iii) a change of use from a consulting room or office <250m² gross leasable floor area to shop <250m² gross leasable floor area</i> <i>(iv) a change of use from a shop <500m² gross leasable floor area to a warehouse <500m² gross leasable floor area</i> <i>(v) an office or consulting room with a <500m² gross leasable floor area</i> <i>(vi) a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with <250m² gross leasable floor area.</i> <p>Amend DTS/DPF 4.1 to the following: DTS/DPF 4.1 A new access point satisfies (a), (b) or (c): (b) <i>where the development site is intended to serve between 1 and 6 dwellings, access to the site is from the local road network and outside the tangent point shown in the following diagram:</i></p>	<p>Supported</p> <p>Numbering – typo</p> <p>Reflects policy changes & referral triggers proposed for Major Urban Transport Routes Overlay</p>

NOTE:
 The points marked X and Y are respectively at the median end on a divided road and at the intersection of the main road centre-line and the extension of the side road property lines shown as dotted lines, on an undivided road. On a divided road, dimension E-F extends to Point Y.

- (c) where the development site is intended to serve between 1 and 6 dwellings and access from a local road (being a road that is not a State Maintained Road) is not available, the new access:
 - (vi) is not located on a Controlled Access Road
 - (vii) is not located on a section of road affected by double barrier lines
 - (viii) will be on a road with a speed environment of 70km/h or less
 - (ix) is located outside of the bold lines on the diagram shown in the diagram following part (a)
 - (x) is located a minimum of 6m from a median opening or pedestrian crossing

- (d) where DTS/DPF 4.1 part (a) and (b) do not apply and access from an alternative local road at least 25m from the State Maintained Road is not available, and the access is not located on a Controlled Access Road, the new access is separated in accordance with the following:

Speed Limit	Separation between access points	Separation from public road junctions and merging/terminating lanes
50 km/h or less	No spacing requirement	20m
60 km/h	40m 5m (for development intended to	73m
	<u>serve between 1 and 6 dwellings)</u> and <u>10m for all other cases</u>	
70 km/h	40m	92m
80 km/h	50m	114m
90 km/h	65m	139m
100 km/h	80m	165m
110 km/h	100m	193m

Amend DTS/DPF 5.1 to the following:
 DTS/DPF 5.1
 An access point satisfies (a) or ((b) and (c)):

Affected Part of Code that impacts on CoM	Proposed Amendment	Comments / Queries
---	--------------------	--------------------

- (a) the development site does or is intended to serve between 1 and 6 dwellings and utilises an existing access point
or
(b) drivers approaching or exiting an access point have an unobstructed line of sight in accordance with the following (measured at a height of 1.1m above the surface of the road):

Speed Limit	Access Point serving 1-6 dwellings	Access point serving all other development
40 km/h or less	47m	73m
50 km/h	63m	97m
60 km/h	81m	123m
70 km/h	100m	151m
80 km/h	121m	181m
90 km/h	144m	226m
100 km/h	169m	262m
110 km/h	195m	300m

- and
(c) pedestrian sightlines in accordance with the following diagram:

Amend DTS/DPF 7.1 to the following:

DTS/DPF 7.1

Development does not:

- (a) decrease the capacity of an existing drainage point
- (b) restrict or prevent the flow of stormwater to an existing drainage point and system
- (c) prevent access points becoming stormwater flow paths direct onto the road.

General Development Policies – Part 4

Carport & Outbuilding – Internal Parking Dimensions – Linkages

Amend Table 2 – Deemed-to-Satisfy Development Classification for Carport by including the following linkage:
General Development Policies – Design [Car parking, access and manoeuvrability]: DTS/DPF 19.1
Applicable Zones

- Rural Living Zone

Amend Table 2 – Deemed-to-Satisfy Development Classification for Carport by including the following linkage:

Supported

Seeks to achieve consistent policy between carports, outbuildings and garages that are either stand alone or under main roof in terms of internal dimensions

Steps down or ramps down to a lower level) is this still one deck or multiple decks? This will impact of the perimeter screening effectiveness.</p> <p>Having a DTS pathway for decks off the back of a dwelling, where it is no more than 500mm above ground level does consider the following:</p> <ol style="list-style-type: none"> 1) where land could significantly slope beyond the deck and still result in overlooking but would not require privacy treatment. 2) there is no maximum size for the deck to be considered – it relies on the remaining soft landscaped area to be retained to limit the size? <p>DTS will likely result in a desk top assessment from an Accredited Professional, which has been problematic in the past. Decks are a form of development where their impacts should be assessed on merit, because they can have significant impacts on a neighbour's amenity and enjoyment of their POS.</p> <p>Decks over 500mm with screening are still DTS, regardless of the additional height. Not a fan of this, as if it links back to the Ancillary structures policy, will allow post heights up to 3m and total height up to 5m, while still being DTS.</p> <p>There is no height maximum – for example decking coming off the side of an upper level at 900mm from the boundary should be subject to the same setback requirements and height</p>
<p>POX.1</p> <p>Decks are designed and sited to:</p> <p>(a) complement the associated building form</p> <p>(b) minimise impacts on the streetscape through siting behind the building line of the principal building (unless on a significant allotment or open space)</p> <p>(a) minimise cut and fill and overall massing when viewed from adjacent land.</p>	<p>DTS/DPF X.1</p> <p>Decks:</p> <p>(a) where ancillary to a dwelling:</p> <p>(i) are not constructed, added to or altered so that any part is situated:</p> <p>A. in front of any part of the building line of the dwelling to which it is ancillary or</p> <p>B. within 900mm of a boundary of the allotment with a secondary street (if the land has boundaries on two or more roads)</p> <p>(ii) are set back at least 900mm from side or rear allotment boundaries</p> <p>(iii) when attached to the dwelling, has a finished floor level consistent with the finished floor level of the dwelling</p> <p>(iv) where associated with a residential use, retains a total area of soft landscaping in accordance with (A) or (B), whichever is less:</p> <p>A. a total area is determined by the following table:</p> <table border="1" data-bbox="632 1335 970 1608"> <thead> <tr> <th data-bbox="632 1335 849 1496">Dwelling site area (or in the case of residential flat building or group dwelling(s), average site area) (m²)</th> <th data-bbox="849 1335 970 1496">Minimum percentage of site</th> </tr> </thead> <tbody> <tr> <td data-bbox="632 1496 849 1525"><150</td> <td data-bbox="849 1496 970 1525">10%</td> </tr> <tr> <td data-bbox="632 1525 849 1554">150-200</td> <td data-bbox="849 1525 970 1554">15%</td> </tr> <tr> <td data-bbox="632 1554 849 1608">201-450</td> <td data-bbox="849 1554 970 1608">20%</td> </tr> </tbody> </table>	Dwelling site area (or in the case of residential flat building or group dwelling(s), average site area) (m ²)	Minimum percentage of site	<150	10%	150-200	15%	201-450	20%

Land Use Definitions – Part 7 -

Update the 'Land Use Definitions Table' as follows:

Supported

Land Use Term (Column A)	Definition (Column B)	Includes (Column C)	Excludes (Column D)
Ancillary accommodation	Means accommodation that: a) is located on the same allotment as an existing dwelling; and b) is not a self-contained residence; and c) contains no more than 2 bedrooms or rooms or areas capable of being used as a bedroom; and d) is subordinate to and does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling.		Dwelling; <u>Tourist Accommodation.</u>
<u>Pre-school Child care facility</u>	Means a place primarily for the care or instruction of children of less than primary school age, children with special needs or out-of-school-hours care (including vacation care) and not resident on the site.	Pre-school; Child care centre; Early learning centre; Kindergarten; Nursery.	
Commercial forestry	Means the practice of planting and managing plantation forests that are intended to be harvested for wood products or other commercial purposes, including through the commercial exploitation of the carbon absorption capacity of the forest.		<u>Horticulture;</u> <u>Croping;</u> <u>Farming.</u>
<u>Educational Establishment facility</u>	Means a primary school, secondary school, reception to year 12 school, college, university or technical institute, and includes an associated <u>pre-school child care facility</u> or institution for		
	the care and maintenance of children.		
<u>Function venue</u>	Means premises used for the hosting of events, conferences, conventions, receptions or functions.		
<u>Heavy vehicle parking</u>	Means the parking of any vehicle exceeding 3 000 kg in weight (including the weight of any attached trailer) on land used for residential purposes.		
Indoor recreation facility	Means a building or part of a building designed or adapted primarily for recreation or fitness pursuits.	Bowling alley; Squash courts; Fitness centre; Gymnasium; Pilates studio; Yoga studio; Dance studio; Indoor swimming centre; Indoor trampoline centre; Indoor rock climbing centre; Indoor children's play centre; Indoor skating rink.	
Office	Means a building or part of a building used for administration or the practice of a profession, but does not include a consulting room or premises where materials are stored for sale or manufacture.		Consulting room.
<u>Tourist accommodation</u>	Means premises in which temporary or short-term accommodation is provided to travellers on a commercial basis. <u>This use may also include:</u>	<u>Caravan and tourist park.</u>	<u>Campground;</u> <u>Residential park</u>

Happy with childcare facility definition

Agree with addition of childcare element to educational facility

Happy with additional definition -
Question how cellar door function fits in with function venue?

Dear Code Amendment Team

Miscellaneous Technical Enhancement Code Amendment

Thank you for the opportunity to provide input into the Miscellaneous Technical Enhancement Code Amendment (CA).

At its Ordinary Meeting of 16 August 2022, the Council resolved as follows;

- 1. That the Report be received*
- 2. That Council endorse the submission prepared at Attachment A on the proposed Miscellaneous Technical Enhancement Code Amendment for submission to the State Planning Commission.*
- 3. That Council delegate to the Chief Executive Officer any minor administrative (or technical required) amendments to the proposed submission as needed.*

CARRIED Unanimously

Council has reviewed and considered the CA that has sought to make improvements to the new planning system following input from the industry. Council would like to commend the State Planning Commission for listening to the planning sector and those working within it to continue to improve and evolve the states' planning system.

Overall the amendments are generally supported with the attached submission highlighting those areas that are still of concern to Council.

**District Council
of Yankalilla**

I trust that the submission is clear however should you have any queries please contact Sally Roberts, Manager Strategic Development, Alexandrina Council on

Kind regards

A handwritten signature in black ink, appearing to read "Nathan Cunningham".

Nathan Cunningham
Chief Executive Officer

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

Section	Proposed Amendment	Comment	Recommendation
Part 1 – Rules of Interpretation			
2.3.1.1.	Application of Spatial Policy Relevant to the Site of the Development	Amend Rules of Interpretation to include explanation and rules on how to determine relevant policy when a spatial layer only applies to part of a site that is subject of a development application.	Support Provides further clarity around the spatial application of policy.
2.3.1.2.	Spatial maintenance updates – comprising minor or operational amendments	Amend Rules of Interpretation to include explanation and rules on how spatial layers are updated in order to maintain correct relationships with cadastre or roads	Support
Part 2 – Zones and Sub Zones			
2.3.2.1.	Conservation Zone – land division – PO 2.1 – Policy	Amend PO 2.1 of the Conservation Zone to clarify that land division should avoid creating additional allotments with frontage to the coast or River Murray. Additional policy being introduced into the Conservation Zone to reiterate that newly created allotments (including those that are realigned) should not create new river or coastal frontages.	Support This ensures consistency with existing policies within the Coastal Areas and River Murray Floodplain Overlays.
2.3.2.2.	Conservation Zone – land division – DTS/DPF 2.1 – Policy	Amend DTS/DPF 2.1 (b) of the Conservation to include reference to the River Murray to clarify that land division should avoid creating additional allotments with frontage to the River Murray Additional policy being introduced into the Conservation Zone to reiterate that newly created allotments (including those that are realigned) should not create new river or coastal frontages.	Support This ensures consistency with existing policies within the River Murray Floodplain Overlays.
2.3.2.4.	Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages	Link ‘interface between land use’ policies for dwellings in rural areas. This ensures that the assessment of dwellings consider interface impacts with existing and desired rural land use activities.	Support Ensures more consistent assessment of dwellings in rural areas.
2.3.2.5.	Rural Zone – Detached Dwelling – Linkages	‘Dwelling addition’ design/siting policies are being called up within the Code when assessing new dwellings. This amendment creates a new link ensuring new dwellings are assessed against PO 5.3, which prescribes setbacks, design and scale provisions for dwellings.	Support This has been identified internally as an issue and will improve the

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

			assessment of dwellings in rural areas.
2.3.2.6.	Rural Zone – Land Division / Boundary Realignment - Linkages	PO 11.3, which is a policy that guides land division and boundary realignments, is not currently being called up by the Code for land division applications. This amendment seeks to create a new link ensuring this policy is applied.	Support This will ensure better guidance when assessing dwellings within the Rural Zone.
2.3.2.9.	Restricted Development Classification – Table 4		
2.3.2.9.1.	Industry listed as a restricted development classification	<p>Proposal to remove ‘industry’ from Restricted forms of development across all zones and replace with ‘Special Industry’.</p> <p>Special Industry is a more intensive form of industry where the methods of manufacture adopted or goods used/stored are likely to cause or create significant nuisance (i.e. dust, fumes, vapours smells etc.) or result in the discharge of foul liquid or blood or other substances which are liable to become foul.</p> <p>This amendment results in less impacting forms of industry to be assessed by the local authority rather than the State.</p>	Partial Support Support within the Employment Zones however feel should remain as restricted in the Activity Zones where industrial type activities would not necessarily be appropriate particularly where these types of zones apply within townships.
2.3.2.9.2.	Land Division within the Limited Land Division Overlay	While the assessing policy remains unchanged and land divisions that create additional allotments should not be supported where this overlay applies, it does provide a level of encouragement for developers / landowners to submit applications. It then does open up the ability for appeal rights that Council will need to manage.	Do not support Retain land division as a restricted development within the Limited Land Division Overlay areas.
2.3.2.9.5.	Dwelling and Land Division within the Deferred Urban Zone	<p>Currently within the Deferred Urban Zone, only development that will not result in more than one dwelling on an allotment is permitted. More than one dwelling is currently restricted development.</p> <p>The proposed amendment seeks to remove ‘dwellings’ and ‘land divisions’ from the restricted development</p>	Do not support Not supportive for similar reasons as outlined for the limited land division overlay. At a minimum, retain land divisions in the

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

		<p>category and make all dwellings and land divisions 'performance assessed'.</p> <p>The proposed amendment also seeks to introduce a new policy which states that dwellings should be located on an allotment used and ancillary to primary production, and will not result in more than one dwelling on an allotment.</p>	<p>Deferred Urban Zone as restricted development.</p> <p>Support Agree with introduction of new policy to guide dwellings and additional dwellings in the Deferred Urban Zone.</p>
2.3.2.9.6.	Employment Zone – Various land uses	<p>Proposal to remove 'waste reception, storage, treatment or disposal' and 'wrecking yard' from the restricted development category within the Employment Zone.</p> <p>The Employment Zone supports a diverse range of low-impact light industrial, commercial and business activity land uses.</p> <p>It is considered that there is sufficient policy within the Employment Zone to manage these types of land uses by the local authority.</p>	Support
2.3.2.9.8.	Land Division and Dwellings within the Rural Shack Settlement Zone	<p>The Rural Shack Settlement Zone applies to existing river shack areas including Goolwa Channel Drive and Mundoo Channel Drive, Hindmarsh Island.</p> <p>Within the Rural Shack Settlement Zone, a dwelling is currently restricted other than a detached dwelling that will not result in more than one dwelling on an allotment. Land division is also restricted in the zone except for land division that creates an allotment for an existing dwelling, is for the purpose of creating a public road or reserve or is for a minor boundary realignment to remove a minor anomaly.</p> <p>The proposal is to remove dwellings and land divisions from the restricted table in the Rural Shack Settlement Zone.</p>	<p>Partial support At a minimum, retain land divisions in the Rural Shack Settlement Zone as restricted forms of development.</p> <p>Support removal of dwellings.</p>

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

		It is considered that other forms of dwellings can be adequately managed by the local authority, however the removal of land divisions from the restricted category may result in applications for further division and fragmentation of sensitive coastal land.	
2.3.2.10.	Notification Tables – Table 5 – Procedural Matters (PM)		
2.3.2.10.1.	Notification Tables – Minor Development	<p>Outbuildings, decks and other ancillary structures are proposed to no longer require notification in Neighbourhood Zones (regardless of whether they exceed boundary length or height provisions). This will help reduce the number of Assessment Panel reports and is more consistent with the former Development Regulation requirements.</p> <p>This amendment also proposed to amend the interpretations section of each zone's public notification table, and Part 1 – Rules of Interpretation by inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is minor in nature, in which case the application will not require notification.</p> <p>For example, a building that may marginally exceed a building height policy (i.e. 100mm above) could be determined as minor in the context of the increase above the notified requirement, rather than considering if the development as a whole is minor.</p>	<p>Support</p> <p>The removal of minor structures from the need to be notified will improve assessment timeframes and reduce Assessment Panel reports.</p> <p>The new 'minor' rules of interpretation will assist in staff determining that applications are minor, in the context of what would normally be notified.</p>
2.3.2.10.2.	Notification Tables – Errors and Inconsistencies	<p>This amendment proposes a number of changes to notification, specifically:</p> <ul style="list-style-type: none"> • correct inconsistencies between terminology used in assessment policies and notification triggers • correct inconsistency between notification triggers and on-boundary development within zones 	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

		<ul style="list-style-type: none"> Remove the requirement to place a sign on land in the Productive Rural Landscape Zone (signs are currently exempt in a Rural Zone). Signs in the Productive Rural Landscape Zone are ineffective as a notification tool, given they are only A3 in size and barely visible on country and rural roads. Technical and/or typographical errors. 	
2.3.2.10.3.	Notification Tables – Frost Fans	<p>It has been suggested that frost fans be removed from notification, as they are a form of development which is usually anticipated within horticultural areas.</p> <p>Frost fans are usually a common source of complaint, particularly in areas where dwellings are less dispersed, therefore it has not been recommended to remove frost fans from notification.</p>	<p>Support</p> <p>The local authority still has discretion to determine a frost fan is 'minor' and does not warrant notification, in scenarios where limited frost fans are proposed and they are well setback from sensitive receivers.</p>
2.3.2.10.4.	Notification Tables – Building on railway land / Temporary public service depot	<p>Concerns were raised that all 'building on railway land' type developments are exempt from notification, when they could take any form and nuisance impacts are unknown.</p> <p>It is proposed to amend the notification table so that building on railway land be pared back, such that only 'railway line' and 'building for the purposes of railway activities' are exempt from notification</p>	<p>Support</p>
2.3.2.10.5.	Notification Tables – Demolition	<p>The Code currently prescribes the demolition of Local Heritage Places and State Heritage Places as a form of development which requires notification. Demolition of buildings within a Historic Area Overlay currently require notification.</p> <p>Concern has been raised as 'partial demolition' is not included within the notification clause.</p> <p>The Code is proposed to be amended such that demolition includes 'partial demolition' ensuring that</p>	<p>Support</p> <p>Support the inclusion of 'partial demolition'.</p> <p>Support as the amendment will give the Relevant Authority the power to determine that the building is not in keeping with the historic attributes identified in the Historic Area.</p>

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

		<p>partial demolition of heritage places is captured as a notifiable development.</p> <p>Furthermore, it is proposed that buildings within an Historic Area Overlay are exempt from notification where, in the opinion of the relevant authority, the building is not in keeping with the historic attributes identified in the Historic Area Statement.</p>	
2.3.2.11.	Building Height – TNV and context – Policy refinement	<p>Amendment of Code policies where a PO relating to building height sometime seeks a different outcome as expressed within a TNV.</p> <p>Amendments proposed to ensure consistent terminology is used for TNV's and ensure that PO's only require development to meet one of two building height outcomes (either expressed within the PO or TNV).</p>	Support
2.3.2.12.	Building Height, Building Wall Setback and Wall Height – Policy Review	Amendments to definitions of 'building height' and 'wall height' and inclusion of new definition 'post height'.	Do not support Refer to Part 8, 2.3.8.1
2.3.2.13.	Building Walls and Dwelling Walls – Policy Review	<p>The Code policies reference 'dwelling walls' and 'building walls' and there is inconsistency in the used term across the various neighbourhood type zones, particularly noting that the term 'dwelling walls' then limits the policy to apply to dwellings only, and not other forms of non-residential development which may be envisaged within a particular neighbourhood type zone.</p> <p>The proposed amendment seeks to change reference from 'dwelling walls' to 'building walls' for all side and rear setback provisions within neighbourhood type zones where the policy is specified to residential buildings.</p>	Support
2.3.2.14.	Common and Minor Development – Overlay Relevance – Assessment Pathways	Deemed to Satisfy (DTS) pathway are proposed to be extended to include identified development types in many Overlays. For example, outbuildings and other ancillary structures may now have a DTS pathway in most Overlays (but not in Heritage, Historic or Native Vegetation Overlays).	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.2.17.	Discrete vs Discreet - Garages & Carports - Policy Review	Correction of a typo relating to the spelling of the word discreet/discrete (to use the word 'discreet').	Support
2.3.2.18.	Discrete vs Discreet - Garages & Carports - Linkages	Removal of linkages to PO and DTS/DPF 10.1 for carports and outbuildings as this is replicated in PO and DTS/DPF 11.	Support
2.3.2.19.	Dwelling Alterations and Building Additions/Alterations – Assessment Pathways	An assessment pathway has been added for Dwelling and Building Additions.	Support
2.3.2.20.	Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages	Correct Code to call up all relevant policies relating to horticulture development and remove Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay from the list of Overlay exclusions for Deemed-to-Satisfy Horticulture.	Support
2.3.2.21.	Interface Height – Multiple Zones: Policy and TNV – Policy Review	Minor technical changes to interface height policies for consistent interpretation, and inclusion of a new interface height policy for development in a Township Main Street Zone	Support
2.3.2.22.	Land Division – Site Contamination – Policy Relevance and Linkage	Ensuring that site contamination policies are called up for land division applications, ensuring matters relating to site contamination are appropriately considered during the assessment.	Support
2.3.2.23.	Non-Residential Outbuildings – New Policy and Assessment Pathways	Outbuildings are not just domestic sheds, as an outbuilding by definition is a building ancillary to another building erected on the site. For example, a shed at the rear of a church. The Code does not have any assessment pathway for non-residential outbuildings, and it is proposed to create new policies and assessment pathways for outbuilding, carports and verandahs to allow for the assessment of these types of development where not associated with a dwelling	Support
2.3.2.24.	Outbuildings - Accepted Development Criteria	Removal of duplication of outbuilding accepted criteria policy	Support
2.3.2.25.	Pool Fencing – Accepted Development Pathway	Inclusion of accepted assessment pathway for pool fencing, to avoid pool fencing requiring a planning consent	Support
2.3.2.26	Primary Street Setback – Use of Building Line	Will ensure ancillary buildings are sited behind the building line.	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.2.27	Replacement Building – Overlay Exclusions: Coastal Flooding Overlay	Assessment pathways to exclude Deemed-to-Satisfy Replacement Buildings where they are located within the “Coastal Flooding Overlay”.	Support
2.3.2.28.	Tourist Accommodation – Total Floor Area – Rural Zones	<p>The current wording DTS/DPF 6.3 in the Rural Zone and Productive Rural Landscape Zone is open to interpretation whether the total floor area should be applied per building or across multiple new buildings forming a single integrated tourist accommodation facility.</p> <p>The Commission has noted that the potential interpretation of DTS/DPF 6.3 as applying individually to multiple buildings (i.e. each individual building within an integrated tourist accommodation facility could be up to 100m² without triggering the policy) rather than to the cumulative total floor area in tourist accommodation use associated with a parcel of land is inconsistent with the intent of PO 6.3.</p> <p>It is proposed to amend DTS/DPF to reflect that the intent is to be a cumulative total.</p>	<p>Support with amendment Generally support this interpretation, and noted that this is only a DTS/DPF trigger. However, PO 6.3 should also be amended to include policy around scale. For example:</p> <p><i>PO 6.3 Tourist accommodation is associated with the primary use of the land for primary production or primary production related value adding industry to enhance and provide authentic visitor experiences, and is of a scale that is ancillary to the primary use of the land and maintains the existing pleasant rural character.</i></p>
Part 3 – Overlays			
2.3.3.1.	Affordable Housing Overlay – Referral Trigger	Minor change to remove referral to SA Housing Authority for their own developments.	Support
2.3.3.2.	Coastal Areas Overlay – Policy Intent	Amendments to PO 4.1 and DTS/DPF 4.7 which are policy improvements within the Coastal Areas Overlay to better clarify intended outcomes based on feedback from the Department for Environment and Water.	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.3.4.	Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 - Linkages	Amendment of linkages to flooding policy PO and DTS/DPF 3.5 to ensure all intended types of development are captured and to ensure consistency in application.	Support
2.3.3.5.	Heritage Adjacency Overlay - Referral	Amendment of the referral trigger in the Overlay to clarify that the relevant authority is tasked with the responsibility to determine if a proposed development may materially affect the context of a State Heritage Place, which is consistent with previous legislation.	Support
2.3.3.7.	Major Urban Transport Routes Overlay - Revised policy and referral triggers	Updates to the suite of transport provisions following review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) to provide greater policy clarity and interpretation.	Support
2.3.3.8.	Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent	Amendments to minor duplication of words 'water quality' in PO 2.1.	Support
2.3.3.10.	Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral	Amendments to referral triggers to clarify the intent to capture referrals for second dwellings (other than where the existing dwelling is to be demolished), tourist accommodation and workers' accommodation.	Support
2.3.3.12.	Prescribed Water Resources Area Overlay – Referral	Amendments to the referral triggers to remove the need for a statutory referral for certain classes of development where a lawful water allocation already exists that can service the new development.	Support
2.3.3.13.	Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation	Amendments to the Historic Area Overlay and Character Area Overlay spatial mapping to show 'Representative Buildings' similar to the way they are currently displayed in the 'Planning Reference' section of SAPPA. This will result in better visibility of representative buildings on spatial mapping and in application of the Code.	Support
2.3.3.18.	River Murray Tributaries Protection Area Overlay – Policy intent	Minor amendment to PO 1.2 to expand the range prescribed water resources areas where undue strain on watercourses should not occur from the listed classes of development.	Support
2.3.3.19.	River Murray Tributaries Protection Area Overlay – Referrals	Amendments to the referral triggers to remove the need for a statutory referral for certain classes of development where a lawful water allocation already exists that can service the new development.	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.3.20.	State Significant Native Vegetation Areas Overlay - Referral Trigger	Amendment to the referral triggers to remove the need for a referral to the Native Vegetation Council for 'Level 1 clearance' as categorised in an accredited consultant's report	Support
2.3.3.21.	Traffic Generating Development Overlay – Referral	Currently there is a referral trigger to the Commissioner for Highways where more than 50 allotments are proposed within a Traffic Generating Development Overlay. This amendment seeks to also include '50 dwellings' in the instance that a land division may not be proposed.	Support
2.3.3.22.	Urban Transport Routes Overlay - Revised policy and referral triggers	Updates to the suite of transport provisions following review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) to provide greater policy clarity and interpretation.	Support
Part 4 – General Development Policies			
2.3.4.1.	Aquaculture – General Development Policies – Policy Review	Updates to the suite of aquaculture policies to better allow policies to be satisfied if a licence is already granted under the Aquaculture Act 2001, as well as removal of superfluous policy.	Support
2.3.4.2.	Carport and Outbuilding – Internal Parking Dimensions – Linkages	Inclusion of design provisions to be applicable to carports and outbuildings to provide guidance for the assessment of internal dimensions for enclosed parking spaces.	Support
2.3.4.3.	Commercial Forestry - Forestry General Development Policies – Policy Review	Inclusion of commercial forestry as an envisaged use within the Rural Zone and Productive Rural Landscape Zone, as well as amendments to commercial forestry setback provisions	Support
2.3.4.4.	Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways	Creation of an assessment pathway for decks. This will result in quicker assessment timeframes for decks, which currently do not have an assessment pathway and require assessment against the full Code. The new policy provides better guidance for the assessment of decks.	Support
2.3.4.5.	Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance	Amendments to the Design module PO 19.3 to be consistent with equivalent provisions in the Design in Urban Areas module, and correct policy linkages to avoid conflicting policy.	Support
2.3.4.6.	Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review	Amendment to soft landscaping policies to ensure consistent wording and state common property is included in soft landscaping calculations.	Support

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.4.7.	Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review	Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 relate to the design of driveways. However, the policy can be difficult to interpret, particularly in relation to the angle of driveways relative to a road. It is proposed to amend the wording of the policy to provide clearer interpretation and supported by a figure.	Support
2.3.4.8.	Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review	Currently no policy exists for heavy vehicle parking. It is proposed to create a new definition (discussed in Part 7 below) and create new policy which guides the assessment of heavy vehicle parking. The new policy is designed to discourage heavy vehicle parking in residential areas and ensure environmental/interface impacts are addressed.	Support
2.3.4.9.	Housing Renewal General Development Policies - Policy Review	Creation of a note to state that Housing Renewal General Development Policies are only applicable to Housing Trust / Community Housing proposals	Support
2.3.4.10.	Land Division – General Development Policies – Policy Review	Removal of some duplicated land division policies.	Support
2.3.4.11.	Land Division – General Development Policies – Linkages	Create linkages to land division policies PO 2.8 and PO 3.11 which is not currently linked to land division applications and should be linked.	Support
2.3.4.12.	Transport, Access and Parking – General Development Policy – Fences – Linkages	Application of relevant policies from the Transport, Access and Parking module to performance assessed development applications for fences, particularly for policies which related to development on corner allotments and vehicle sightlines.	Support
2.3.4.13.	Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review	Some car parking rates are listed which fit multiple definitions, for example, car parking rates exist for both a pre-school and a childcare centre which is a type of pre-school. The proposed amendment does not seek to change the parking rates for these developments, but rather re-organise the car parking rate tables to ensure consistency.	Support
2.3.4.14.	Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation	The interpretation of which rates to apply with respect to the tables.	Support

Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission

Part 7 – Land Use Definitions			
2.3.7.1.	Ancillary Accommodation – Amend	<p>The amendment to include ‘is not a self-contained residence’ is supported, however the definition may actually result in unintended impacts for our assessment, particularly around the inclusion of the connection to utilities wording in part (d)</p> <p><i>(d) is subordinate to and does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling.</i></p>	<p>Do not support</p> <p>We often have ancillary accommodation proposals that share the same facilities as the dwelling, but sometimes would have a separate waste control system due to complications with changes or connecting to the existing system, or reluctance to install a singular larger system. It would therefore be better if incorporated into the policy and left as an assessment consideration, rather than being in the definition. This would also then allow for a distinction between water catchment areas, where one system is preferred, and less water sensitive areas.</p>
2.3.7.2.	Caravan and Tourist Park – Amend	<p>Concerns with deletion of this definition and inclusion in the definition of tourist accommodation.</p>	<p>Do not support</p> <p>Could result in unintended consequences, such as proposals for caravan parks in rural areas, as they will be able to be assessed as a form of tourist accommodation. If it is to be included then perhaps additional policy is required to control scale, bushfire requirements and access.</p>

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

2.3.7.3.	Commercial Forestry – Amend	Minor changes to the definition to better accommodate farm-scale forestry.	Support
2.3.7.4.	Educational Establishment – Amend	Changes from the word ‘establishment’ to ‘facility’ to better capture multiple forms of educational facilities.	Support
2.3.7.5.	Indoor Recreation Facility – Amend	It is reasonable to anticipate that an indoor recreation facility may only occupy part of a building, rather than an entire building. This amendment seeks to include the words ‘or part of a building’ to allow flexibility to apply the land use term to partial land use changes (i.e. a personal training gym within a shopping centre complex)	Support
2.3.7.6.	Office – Amend	Similar to the issue with the indoor recreation facility definition, the definition of ‘office’ is proposed to be amended to include ‘or part of a building’ to provide further clarity that suggests a standalone office within a building can be classed as an ‘office’	Support
2.3.7.7.	Pre-school – Amend	Proposal to change the definition from ‘pre-school’ to ‘child care facility’ and include an additional component to allow for out-of-school hour’s care (include vacation care). This addition seeks to capture all forms/places or care for children and provide clearer guidance.	Support
2.3.7.8.	Renewable Energy Facility – Policy Refinement	The current definition for renewable energy facility inadvertently captures domestic scale energy facilities, such as solar panels and battery storage. In a number of zones, renewable energy facilities are listed as ‘restricted’ forms of development, meaning the SCAP is the relevant authority. It is proposed to amend the restricted development tables in all zones, and include exemptions for renewable energy facilities that are for solar panels and battery storage facilities for domestic use only.	Support
2.3.7.9.	Tourist Accommodation – Amend	Concerns with the new definition that includes ‘caravan and tourist park’ for reasons discussed in 2.3.7.2 above. Otherwise supportive of the changes to the definition.	Partial support Do not support the inclusion of caravan and tourist parks within the

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

			<p>definition of tourist accommodation.</p> <p>Support other minor amendments to the definition to capture ancillary onsite facilities and facilities for the management of accommodation.</p>
2.3.7.10.	Workers Accommodation – Amend	Minor changes to the definition of workers accommodation to include additional activities that workers accommodation may be associated with, including bulk handling or freight facilities.	Support with exception Issue with deletion of 'or similar'.
2.3.7.11.	Heavy Vehicle Parking – New Definition	<p>Heavy vehicle parking currently requires approval, unless it meets the exemptions under the Regulations, which include exemptions for vehicles under 3000kg, a caravan/motor home on and used for residential purposes by a person who is an occupant of a dwelling situated on that land or special circumstances which apply due to the previous dwelling being destroyed by bushfire.</p> <p>The new definition in the Code seeks to capture 'heavy vehicle parking' as a defined land use, which includes the parking of any vehicle exceeding 3000kg in weight (including attached trailers) on land used for residential purposes.</p>	<p>Support</p> <p>The definition assists the authority in the assessment of applications of such nature.</p>
2.3.7.12.	Function Venue – New Definition	Function Venue definition included – broad definition to include indoor and outdoor venues.	<p>Support</p> <p>The inclusion of a definition for a function venue provides a broad definition to capture various commercial activities and uses within the Code.</p>

Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission

Part 8 – Administrative Terms and Definitions			
2.3.8.1.	Building Height – Amend	Building Height – changes to the administrative definitions to include natural ground level, although there is still a reference to the lower of the finished level or natural ground level (rather than our preference for natural ground level alone to be the relevant reference for measuring purposes).	Do not support Preference is to use natural ground level alone to be the relevant reference for measuring purposes. This definition does not appear to take into account a dwelling built on stumps or posts, or if there has been any fill put on the site. Therefore, if a dwelling is elevated on posts or the site has been filled then a dwelling can become higher than the zone height provisions. Although aligning with the old Residential Code areas this has caused problems particularly in areas where views are being taken advantage of.
2.3.8.2.	Building Line – Amend	This term is now only going to apply to ancillary structures.	Support.
2.3.8.3.	Wall Height – Amend	Refer to 2.3.8.1	Do not support. Refer to 2.3.8.1
2.3.8.4.	Catalyst Site – New Definition	Reference made to catalyst sites within policy without a clear definition of what this is.	Support
2.3.8.5.	Direct Overlooking – New Definition	Direct Overlooking administrative definition included – radius of 15 metres from a window or balcony included and 45 degree angle from a window only.	Support with exception Support the definition however difficult to apply in areas where distant views are anticipated such as within coastal areas. Additional policy would assist to allow for the

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

			application of distant view considerations.
2.3.8.7.	Post Height – New Definition	This is related to the wall and building height measurements and requires some further investigation as to the impact of this new definition as it refers back to a measurement from the top of the footing and does not necessarily take into account the natural ground level.	Support with exception. Definition supported provided taken from natural ground level.
2.3.8.8.	Gross Density - Delete	Definition being deleted and being replaced with 'net residential density' which is an existing definition and is a more useful measure for where it applies.	Support
Part 9 – Referrals			
2.3.9.1.	Environment Protection Authority Referrals - Review of Interpretation and Referral Triggers	Support the amendments. The amendments to referral triggers to remove class 3 activities from requiring referral are noted to be an administrative error when drafting the Code and were never supposed to be captured. Class 3 activities are considered very low risk and applications for development on sites with class 3 activities do not warrant EPA referral, but are still assessed under the Code.	Support
Part 11 – Local Heritage Places			
2.3.11.1.	Listing of State Heritage Places	Support the inclusion of State Heritage Places list in the Code, and disclaimer that they may not be up to date and to refer to the SA Heritage Register. This provides more visibility of State Heritage Places within the Code, and ensures that Local and State Heritage Places are captured in the same document under separate headings.	Support
Other Comments	Policy Call Up	It has been stated on a number of occasions that there is sufficient policy within the Code to assist with making decisions. This is accepted however it needs to be ensured that this policy is being called up at the right time. For example when calling up the policy for a detached dwelling in a Neighbourhood Zone the environmental performance policies within the General Development Policies - Design in Urban Areas are not called up. These are great policies that should be called up when dwellings are being constructed across all neighbourhood type zones.	

**Miscellaneous Technical Enhancement Code Amendment
DC Yankalilla – Consultation Submission**

	Conservation Zone	There is no assessment pathway for a verandah, whilst there is for other structures such as outbuildings, carports and dwelling addition.	Provide a performance assessment pathway for a verandah.
	Hazards (Flooding – Evidence Required) Overlay –PO 1.1 Linkages	Link PO 1.1 to applications for land division.

[Miscellaneous Technical Enhancement Code Amendment - LRC response - Sept 2022 - Final.pdf](#)

Hi,

Please find attached Council's submission to the Miscellaneous Technical Enhancement Code Amendment that is presently on consultation.

Should you require any further clarification of matters raised within this correspondence, feel free to contact me at any time.

Kind regards,

Darby Schultz | Economic Development Project Manager

Postal: PO Box 72, Kapunda SA 5373

Miscellaneous Technical Enhancement Code Amendment Submission – Light Regional Council

Matters Identified	Opportunities for Improvements	Tables / Technical /Procedural Response
2.3.2.3 Master Planned Zones – Site Dimensions and Land Division	Support – Inclusion of Concept Plan reference will strengthen and better align the code policy with the concept plan content brought across in the planning reforms.	As proposed.
2.3.2.5 Rural Zone – Detached Dwelling – Linkages	Support – Straight forward correction of anomaly to ensure PO 5.3 no longer applies to assessment of a detached dwelling	As proposed.
2.3.2.6 Rural Zone – Land Division / Boundary Realignment - Linkages	Support - Consideration should be given to inclusion of a DTS/DPF at 11.2 of the Table to recognise where boundary realignments are proposed in Rural Zones, a minimum allotment size TNV for the more sensitive use shall apply.	Application of DTS/DPF at 11.2 – outlined in previous column.
2.3.2.9.1 Industry listed as a restricted development classification	Support - The removal of general (including light) industry from constituting 'Restricted' development in the proposed zones is logical.	As proposed.
2.3.2.10.1 Notification Tables – Minor Development	<p>Support – The removal of the listed forms of minor development from requiring notification is welcomed. The amendments proposed to allow the relevant authority to determine that one or more variations from the Column B provisions is minor in nature will also provide assistance to practitioner's in processing these forms of development.</p> <p>Both the above measures should allow for streamlined and efficient approval outcomes, limit unnecessary wider notification for minor structures and potential CAP reporting obligations.</p>	As proposed.

<p>2.3.2.10.3 – Notification Tables - Frost Fans</p>	<p>Support - Given the complexities associated with noise impacts and the propensity for frost fans to be located in close proximity to settlements and edge of township areas, it is considered that public notification for this form of development should remain.</p>	<p>As proposed.</p>
<p>2.3.2.10.5 – Notification Tables - Demolition</p>	<p>Support – Whilst supportive of the change to clarify that demolition includes partial demolition, the layout and structure of the notification table once amended is quite cumbersome and not likely to be easily navigated by a member of the general public.</p>	<p>Reconsider wording. Suggested change to the proposed wording is outlined below:</p> <p><i>2. the demolition including the partial demolition of a State Heritage or Local Heritage Place, other than a building in a State Heritage Area and where the relevant authority is of the opinion that the building is not a building identified within the heritage listing.</i></p> <p><i>3. the demolition including the partial demolition of a building in a Historic Area Overlay, other than where the building(s) is not listed as a Representative Building.</i></p> <p>With regard to the suggested re wording of item 3 above, the intent is to allow the demolition of all buildings that are not a heritage listed item. Demolition of non-listed heritage buildings should not be limited to ancillary buildings such as outbuildings etc but should also allow the demolition of principal buildings such as dwellings, shops etc that are not afforded a heritage listing. This in reality will allow for the 1960's cream brick dwelling to be demolished where located within a Historic Area Overlay without notification.</p> <p>Further to the above, the Light Regional Council's preference is that the demolition whether partial of full of a representative</p>

		building is excluded from public notification.
2.3.2.10.12 – Building Height, Building Wall Setback and Wall Height	Do not support – Proposed change is inconsistent with how historically Council planners have approached these measurements. Utilising two separate/different measurements for a dwelling, as compared to an ancillary building appears unnecessary.	Further consideration be given to this proposed amendment.
2.3.7.9 – Tourist Accommodation	Support changes to tourist accommodation definition.	As proposed.
2.3.7.10 – Workers Accommodation	<p>A PO should be developed that considers the siting/location of workers accommodation in relation to the land that provides the employment opportunities. Where workers accommodation is ancillary to rural seasonal work the policy should require the accommodation to be on the same site where the work is to be undertaken.</p> <p>In practical terms however it is recognised that workers accommodation is often consolidated in a central location and workers may undertake their employment duties on other land in the vicinity, in addition to that of the subject land.</p>	Additional assessment provisions to assess workers accommodation in the Rural Zone.

General Miscellaneous Enhancement Requests for Consideration

Matters Identified	Opportunities for Improvements	Tables / Technical / Procedural Response
<p>Sales Office Definition</p>	<p>Consideration be given to broadening the definition of a sales office to enable a longer period of time for placement on the land (e.g. from 2 years to 5 years). Also, the ability under the definition to use a custom-built building for this purpose rather than the definition allowing only the use of an existing building/premises.</p> <p>The current definition has created an issue where authorities have not been able to utilise the definition of sales office but rather have had to define the sales office where it does not meet the qualifier as a sales centre or other undefined land use triggering a full code assessment. The length of time and use of a purpose-built building should not preclude a sales office from the sales office definition.</p> <p>Furthermore, given that the sales offices are temporary in nature, they should be excluded from public notification.</p> <p>In large residential greenfield developments especially Master Planned Zones, it is becoming more common to construct a sales office upon imminent release of allotments to market and the utilisation of a detached dwelling for the purpose of a sales office is becoming less common given build times. Also, the staged releases of these larger greenfield developments tend to have a construction and civil program being rolled out well in excess of 2 years with developer's</p>	<p>Definition change.</p> <p>The current definition reads:</p> <p><i>"Means the use of an existing building or premises for a temporary period of no more than 2 years to display land parcels or buildings, that are for sale, proposed to be sold, or can be won as a prize in a competition."</i></p> <p>The suggested change to the definition is as follows;</p> <p><i>"Means the use or construction of a building or premises for a temporary period to display land parcels or buildings, that are for sale, proposed to be sold, or can be won as a prize in a competition."</i></p> <p>In relation to the suggested change of the definition, if a defined time period is determined necessary, then the time period shall allow a time frame of up to 5 years.</p>

	requesting an increased length of time to have a physical and corporate exposure on the land.	
Financial Institute Definition	Consider inclusion of a definition for clarity purposes. The land use definition lists 'Financial Institute' as an exemption from the broader 'Personal or domestic services establishment' definition, however it is unclear the exact land use it should fall under.	Inclusion of new definition.
Car Parking Offset Schemes	Consider creation of spatial mapping overlay on SAPPA identifying areas where the scheme/fund applies. This would allow applicants and planning practitioners easier access to information and also clearly illustrates where a car parking fund applies.	Creation of overlay suite for Car Parking Offset Schemes on SAPPA.
Public Notification – Strategic Employment Zone and Employment Zone	A clause should be incorporated into Table 5 for both Zones to allow for the processing of Service Trade Premises without the requirement for public notification. It appears as though this land use has been omitted from the public notification tables when industrial and more intensive land uses are already exempt from public notice.	New exemption clause be provided for Service Trade Premises uses.
Shade Sails in recreation reserves	Consideration be given increasing the size and height of shade sails where on Council reserve land.	New clause be provided in Table 1 – Accepted Development for all reserve land in Neighbourhood Zones.
Light Industry in Rural Living Zones	<p>More policy shall be provided to assess such developments within the Rural living zone.</p> <p>Expand on DPF 1.4 (a) and (b) to include parameters such as setbacks from sensitive receivers, visual impacts, building heights etc.</p> <p>Consideration should be had as to whether a sales/retail component is at all appropriate within this zone.</p>	<p>Additional policy content for assessment purposes.</p> <p>Suggest including similar policy content as outlined within the Home Industry Zone but reflecting a lesser intensity.</p>

	<p>A store land use should be included as an envisaged land use within the Rural Living as its impacts are likely to be less than a light industrial use, where it does not exceed 100 square metres. This would accommodate tradesmen (such as a plumber and electrician) who store all their stock on their premises.</p>	
<p>National Disability Insurance Scheme – development outcomes</p>	<p>Applications are being submitted for a form of supported accommodation via the NDIS or similar schemes where a group of unrelated individuals are provided short term respite care. The short-term accommodation is not in association with a caretaker's residence or similar, where a carer resides on the premises. Council have received applications to place such uses in Rural Living zones. No policy exists to undertake an assessment against. Rural Living zones do not envisage such uses and consideration should be had as to which zones this type of use is best located.</p>	<p>Recommend that this use be specifically anticipated within set zones with policy to assess such proposals.</p>
<p>Special Event Definition</p>	<p>The <i>Development Act 1993</i> provided a definition and pathway for a special event. The PDI Act and P&D Code make no references.</p> <p>A new definition should be included within the P&D Code as a land use definition.</p> <p>A pathway should therefore be provided for a special event that is proposed for more than 3 consecutive days that is exempt from public notification. This would assist Regional Councils where one-off special events may be held and remove the need for notification where they are not an ongoing permanent land use and associated with a lawful winery. This</p>	<p>A new definition should be included within the P&D Code as a land use definition consistent with the former definition provided in Schedule 9 of the Development Regulations 2008.</p>

	<p>would cover events such as "A Day on the Green" that are traditionally held on Winery sites.</p>	
<p>Temporary stages</p>	<p>Consideration should be given as to whether temporary stages should require Development Approval, where associated with events (whether special events as noted above) or one-off events. Council considers that provision should be made to have temporary stages included as Accepted Development from a planning perspective but should require a building rules assessment (subject to a minimum area/height criterion – being greater than 4sqm in area or height exceeding 1m).</p>	<p>Temporary stages should be Accepted Development with aforementioned criteria, requiring building rules consent.</p>

The following matters have been resubmitted for further consideration as they were identified in the Light Regional Council's submission as part of the Miscellaneous Technical Enhancement Code Amendment process in August 2021.

Matters Identified	Opportunities for Improvements	Tables / Technical / Procedural Response
<p>Variation application to alter a condition of a previous development consent.</p>	<p>Under the Development Act, case law was such that an application was processed as a Development Application to vary, but because the application did not involve "development" they did not have a notification category and the application could not be "non complying" as it did not involve "development" There were no relevant authority aspects to consider. The PDI Act and P&D Code have not anticipated this type of development application and as such these applications do not fall into a category or assessment pathway (Section 103), nor is it clear cut as to who should be the relevant authority. A variation application under the PDI Act and P&D Code is therefore required to be assessed against the Code provisions considered to be of relevance and the relevant authority, which could be a CAP or RAP.</p> <p>No pathway currently exists for this type of application. Opportunity to include a new pathway (likely "performance assessed") to ensure that an unnecessary 'all code assessed' pathway is not triggered as the changes are often targeted/specific changes (e.g. operating/trading hours) that don't apply to the broader application of the Code.</p>	<p>Include a "performance assessed" pathway and incorporate some policy parameters where variation applications to vary conditions do not fundamentally change the nature of the development.</p> <p>The resolution of an application to vary operating hours or similar that applied to a previous application therefore requires the following to occur:</p> <ul style="list-style-type: none"> • a designated pathway to be identified, • relevant authority designation; and • public notification resolution. <p>It is considered that these matters need to occur via amendment to the P&D Code, including additions to the rules of interpretation within the Code.</p>
<p>Advertisements in Neighbourhood and Residential type Zones - consideration for "performance assessed" pathway.</p>	<p>At present, Neighbourhood and Residential type zones envisage small scale retail and service uses however do not provide avenues for sensitive advertisements in association</p>	<p>Include a "performance assessed" pathway and incorporate some policy for assessment purposes for minor advertisement proposals, commensurate</p>

	with such uses and therefore they default to an <i>'all code assessed'</i> pathway. This is problematic given advertisements do not require a whole of code assessment approach.	with residential character/scale. Suggestion that policy should be included that an advertisement should not exceed a size of 0.5 m ² and only one (1) such advertisement on the land.
Inclusion of low intensity animal husbandry policy provisions for Rural Living zones.	The Rural Living zones do anticipate low intensity animal husbandry activities however policy parameters for practitioners to assess development against is non-existent unless it relates to horse keeping or kennels. Additional policy guidance should focus on other non-domestic animals such as cows, sheep, alpacas etc. which are common within Rural Living Zones along with possible stocking rates, land management practices, boundary setbacks, pest and vermin management, waste control etc.	Inclusion of low intensity animal husbandry policy provisions, in addition to horse keeping and kennels and incorporation of a <i>"performance assessed"</i> pathway in Rural Living zones.

To whom it may concern,

Miscellaneous Technical Enhancement Code Amendment

Please find attached Council's response to the Miscellaneous Technical Enhancement Code Amendment. Council has addressed issues within the consultation documents and has also raised additional policy enhancements which should be addressed to ensure future development has appropriate policy to be assessed against.

Should you have any questions in relation to Council's submission, please do not hesitate to contact the undersigned.

Yours sincerely

Müller Mentz
Assessment Manager
Director Development Services

Miscellaneous Technical Enhancement Code Amendment

2.3.2.9 – Restricted development classifications

Limited Dwelling overlay - The DPF appears to contradict the PO. The wording should be amended in either the PO or the DPF, in this situation the DTS provision appears to provide the exception to the PO rather than providing one way of achieving the PO.

2.3.2.9 Restricted Development Classification – Table 4

Within the Limited Dwelling Overlay, amend PO 1.1 with the following:

<p><i>PO 1.1</i> <i>Development does not result in the establishment of <u>a new dwelling</u> an additional dwelling</i></p>	<p><i>DTS/DPF 1.1</i> <i>A new dwelling replaces an existing dwelling within the same allotment.</i></p>
--	---

Conservation Zone – Should read more along the lines of ‘any of the following for domestic use (....) (a)..(b)...’

Renewable energy facility	<p style="text-align: center;">envisaged land use.</p> <p>None specified <u>Any of the following:</u></p> <p style="margin-left: 40px;">(a) <u>solar photovoltaic panels (roof or ground mounted).</u> (b) <u>Battery Storage Facility</u></p> <p><u>For Domestic use (i.e. principally used to supply and/or store electricity to the existing use of land).</u></p>
---------------------------	---

Same with rural zone

Renewable energy facility within any of the following: a) Significant Landscape Protection Overlay b) Character Preservation Area Overlay	<p>Roof mounted solar photovoltaic panels. <u>Any of the following:</u></p> <p style="margin-left: 40px;">(a) <u>solar photovoltaic panels (roof or ground mounted).</u> (b) <u>Battery Storage Facility</u></p> <p><u>For Domestic use (i.e. principally used to supply and/or store electricity to the existing use of land).</u></p>
---	--

2.3.2.12 –Building height

Neighbourhood Zone has been excluded from the list of zones which previously had Res Code and now references ‘top of footings’ to be where overall height is measured from. The Neighbourhood Zone should be included in this provision.

However we do query why there needs to be a separate definition? Shouldn't all definitions be consistent?

2.3.2.13 – Building walls and dwelling walls

Clarification on the proposed definition of Building wall (not including ancillary buildings and structures)...’ Does this include alfresco areas under main roof? Clarification on walls vs post.

2.3.2.14 – Common and minor development – Overlay relevance

Query - Is there now going to be additional provisions relating to Retaining Wall and fences within the Accepted pathway?

2.3.3.6 – Key outback & Rural Routes

A similar provision should be included in the Transport, Access & Parking provisions for non-residential uses to ensure protection of Council Roads

<i>Access – Mud and Debris</i>	
<i>PO 6.1</i>	<i>DTS/DPF 6.1</i>
<i>Access points constructed to minimise mud or other debris being carried or transferred onto the road to ensure safe road operating conditions.</i>	<i>Where the road has an unsealed shoulder and the road is not kerbed, the access way is sealed from the edge of the seal on the road for a minimum of 10m or to the property boundary (whichever is closer).</i>

2.3.7 Definitions

Ancillary Accommodation – ‘which is not a self-contained residence’ definition of a self-contained residence has not been included. Further clarification required on what exactly can be defined as a self-contained residence i.e. laundry, services etc.

Additional policy enhancements

Issue: DTS dwellings does not pull through the visible entry door provision Design PO11.2

Discussion: Having a visible entry door is an important element with regards to visible entry especially for emergency services personnel. The assessment of the importance of this provision for a visible entry door is deemed to be an assessment of the merits of the development as the PO is only applicable for performance assessed applications. This should be included in the DTS provisions as a default and be a requirement of DTS dwellings.

Solution: Design DTS11.2 to be included in the DTS dwelling provisions

Issue: Overlooking from sloped allotments / transportable buildings

Discussion: The provisions within the Code that relate to overlooking / visual privacy speak specifically to upper level windows of dwellings or from decks and balconies. Dwellings on sloping allotments / transportable dwellings have potential overlooking issues which are not addressed within the Code, therefore the Relevant Authorities are not able to enforce screening to offending windows. Balconies/decking are addressed within Design PO10.2, however ground floor habitable windows are excluded from Design 10.1. The same provision should be included within Design in Urban Areas.

Solution: Amend the wording of the provision, or include an additional provision specific to sloping allotments / transportable dwellings.

Issue: land divisions to include Interface between Land Uses linkages.

Discussion: Land divisions on land with adjoining land of a different zone does not pull through any provisions which relate to interface issues. Specifically, there needs to be additional guidance with regards to buffer zones and requirements to protect dwellings from authorised developments on an adjoining allotment.

Solution: Include linkage to Interface between Land Uses to the land division policy. Additional provisions within DPF9.6 to include some guidance to what sort of plantings / buffer or separation distance is required. i.e. CCC development plan said 30m. Suggest including a quantitative measure to this for guidance, the performance assessment can determine if that quantitative measure is appropriate.

Issue: Spatial application of the Coastal overlay.

Discussion: A review of the coastal overlay application across the state as there are some areas which do not have the overlay but which may be applicable for development of the allotments.

Solution: Review of the overlay application.

Issue – no provisions for Rainwater tanks

Discussion: Within the neighbourhood zone there is no policy requirements for retention/detention tanks to be provided onsite for new development. Limited stormwater infrastructure in regional townships which can increase stormwater issues in rain events. Additionally, in times of drought there are no water reserves to water plants and gardens which increases dependence on mains water supplies. It should be a requirement that all development provides a minimum rainwater tank on-site.

Solution: Include provisions for minimum RWT capacities for all new developments. Design PO4.3 and Design in Urban Areas PO14.2 could include a DTS/DPF provision which outlines a requirement for RWT

Department for Trade and Investment

via email: plansasubmissions@sa.gov.au

Dear Mr Holden

Submission – Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission

Thank you for the opportunity to provide comment on the Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission, which was considered by Council at its meeting held on 20 September 2022.

We understand that this Code Amendment represents the first of what will be a regular review and tune-up of technical and/or operational aspects of the Code based on stakeholder feedback.

Whilst we have focused our response to the matters within scope of the Code Amendment as contained in the attachment to this letter, on review of the Code Amendment against previous matters we have raised regarding the structure and operation of the Code, we believe there remains a number of outstanding issues as follows:

- **Minor variations**

We seek greater clarification on minor variations. Without direction of what constitutes a “minor variation” this creates uncertainty and is open to interpretation and can prove difficult to defend a refusal of any variation. The Rules of Interpretation refers to variations that “generally meet” the corresponding Performance Outcome (PO). These terms are not defined and potentially introduce inconsistency when consideration of ‘minor’ is at the assessor’s discretion during assessment.

We have further concern regarding the number of times that a variation can be undertaken where a Deemed to Satisfy (DTS) pathway is followed. This lack of clarity creates a system where a series of minor variations could be applied where ultimately the development application fails short in every DTS criteria. There does not appear to be a disincentive to prevent this occurring. In addition, repeated requests and review against the originally approved plans for relatively minor issues is time consuming for assessment practitioners and can ultimately alter the initial application to a point a new development should be warranted.

We request consideration be given to the number of times a variation can occur under the DTS pathway before a performance assessed pathway should be applied.

- Notification

We generally support the proposed refinement to Table 5 – Procedural Matters (PM) – Notification in Part 2 – Zones and Subzones that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed is minor in nature (meaning there is little to no impact) and therefore the application would not require notification. That said, noting there may be more than one variation allowed, we question whether some limitations should be applied to avoid misrepresentation and misinterpretation.

We note the other side to notification in the Code, is that the PDI Act has entirely removed the third-party appeal rights of representors. This is of a significant concern to us as community involvement in the planning process is paramount. This change does not meet community expectations and has created additional angst in response to development occurring throughout our council area. Council staff are now providing a greater mediation role between parties, particularly after a decision has been made, leading to increased requests for review either through complaints via Elected Members or pending a judicial review.

The impending review of the current planning system should involve a comprehensive focus on the loss of local community voices and participation in planning.

- Definitions

We note a number of definitions were not transitioned or introduced into the Code and the continued lack of definitions of 'winery', 'multiple dwelling' and 'glamping' is problematic for assessment.

- Winery

We note the Code introduced an in-policy term 'beverage production facilities' to cover such uses as wineries, distilleries, cideries and breweries, however this is without any further definition under Part 7 Land Use Definitions.

We have concerns how beverage production facilities is defined as it would seem that it can comprise any of 'fermentation, distillation, manufacturing, storage, packaging and bottling activities...' (as per Part 4 - General Development Policies Beverage Production in Rural Areas PO 1.3).

Although storage, packaging and bottling activities could be a component(s) or ancillary operation(s) to a winery (or distilleries, cideries and breweries), they should not be considered as a standalone activity as beverage production facilities (particularly in a Rural zone) in comparison to the primary front end activity i.e. the processing of the raw material.

We have been advised that the 'common' or 'ordinary' meaning of 'winery' would be sufficient however noting the above, it remains open to misrepresentation. We request greater clarity and certainty around this through the application of appropriate definitions.

- Multiple dwelling

We have noted the removal of this definition from the Code based more on the tenure of the building rather than the land use itself. However, applications comprising accommodation for greater than five persons when combined with physical and internal works within a building are still common. Despite displaying some characteristics of a large family living in the same dwelling, the building is occupied in a different way to a family group of otherwise related persons, often resulting in impacts to nearby residential properties in terms of a lack of on-site car parking, waste and insufficient open space.

As an example, we have received an application where there are 10 bedrooms which are proposed to be lockable and a tenancy agreement/lease will be required. We question the need for public notification and possible change in the nature of building classification and associated fire safety issues. As this cannot be categorised as 'student accommodation', there is no definition provided for 'boarding house', nor can it be considered akin to a typical residential dwelling by way of its operation, we recommend further review of this omission and consideration of a new definition for 'shared residential accommodation'.

- Deemed to Satisfy minimum criteria

We are concerned it is now considered that the 'minimums' provided for in DTS have less weight than under the former Development Plan and due to the generic and non-prescriptive nature of the Performance Outcomes, variation in assessment prevails. An example of our concern is, if the PO is assumed to be satisfied, then minimum allotment sizes specified in a DTS provision do not need to be met.

With an emphasis on performance outcomes, there is a reduced emphasis on achieving DTS parameters which has become problematic during assessment. The failure to meet a DTS/DPF leaves assessment open to interpretation and increased subjectivity which can be confusing for the community.

- Hazards (Bushfire - Medium Risk) and Hazards (Bushfire – High Risk)

We reiterate our concerns regarding the conflict with the provisions of the Ministerial Building Standard Requirements MBS 008 – Designated Bushfire Prone Areas – Additional Requirements.

We remain concerned that in the creation of new allotments applicants are not considering dwelling design and siting and configuration on the allotment and location of water storage tanks to meet building compliance with MBS 008 concerning setbacks from boundaries for access to water supply/storage tanks and fittings noting this is significantly impacted by allotment size and width, which is determined at land division stage.

We note the impending Bushfire Code Amendment and will seek that the hazard overlays be appropriately placed and identify these issues.

We understand that a broader review is to be conducted by an external expert panel on the *Planning, Development and Infrastructure Act 2016* and the Planning and Design Code (in addition to the legislated review of the 30 Year Plan for Greater Adelaide Update 2017) as it relates to infill policy, trees, character, heritage and car parking. We are pleased to see this review aligns to the following additional matters we have previously identified, including:

- Tree Protection

We consider urban greening and the retention of tree canopy cover a priority to help address climate change impacts. Council will continue to advocate for increased levels of tree protection, retention and management of significant, regulated and mature trees, and importantly where consideration is given to the economic value of trees. This consideration would treat the tree as an asset for councils and the community.

Policy capturing the economic value of trees is used interstate and upheld in the court system with calculation of a tree's amenity value using a range of criteria including its life expectancy, size, rarity, importance in the landscape and presence of other trees. Adoption of a similar system could ensure that trees are valued as important community assets and we welcome the same approach through the Planning and Design Code.

- Character

We remain concerned with the removal of Desired Character Statements as one of the biggest losses in the transition to the Code. These statements helped to define the historic and/or current character of an area and provided key guidance for future development with greater specificity. Desired Character Statements were created from extensive community consultation and council investment over many years.

The lack of forward-facing policies will inevitably result in a loss of vision for our local areas, which will ultimately affect the character and amenity noting character cannot be limited to just one individual element or feature in isolation. The interrelationship between the various elements of an area and interaction with the landscape creates a 'sense of place' and these features differ from one area to the next and should be referenced and embedded in the Code.

- Heritage

We have previously expressed concern that policy lacks specific design guidance to consider the true local context and built form character which varies between areas not being captured in the Historic Area Statements. We continue to have concern with the lack of forward-facing criteria in Historic Area Statements for new development to be assessed against, rather than merely listing the existing character elements.

We continue to support both the introduction of the Character and Historic Area Overlay Design Advisory Guidelines and the Style Identification Advisory Guidelines to assist an assessment concerning distinct character value. We note however both documents only perform as guides or planning 'tools' with no legislative status, given that they do not form an integral part of the Code. Both documents also rely solely on the voluntary responsibility of the applicant to undertake a detailed 'Contextual Design Analysis' notwithstanding the benefits it may offer in the preliminary stages of an application. It is considered that if these guidelines are important, then this should be reflected by their incorporation into the Code.

One area of outstanding concern is demolition of local heritage places. We note it must be proven that the building is 'irredeemably beyond repair' yet the Code policy simply refers to an unacceptable risk to public or private safety and uninhabitable and beyond repair. We believe that to determine if a structure is 'irredeemably beyond repair', there should be a mandatory requirement for a Heritage Impact Assessment or an economic viability report for justification.

We also note the issue of wilful neglect as a means to attaining demolition approval still occurs and should be strongly discouraged. A review of the penalties applied in this situation to act as a deterrent should form part of the broader Act and Code review.

We look forward to the upcoming opportunities to provide further detailed comments on matters that respond to our Council and community who are calling for us to continue our commitment to respond to the impacts of climate change by reducing emissions and building community resilience. A strong response to climate change and focus on sustainability is key to maintaining liveability in our city, managing risks and reducing future costs.

Should you have any questions or wish to discuss the matters raised above further, please do not hesitate to contact Craig Jones, Development Policy Planner on _____ or _____

Yours sincerely

Simon McMahon
Acting Mayor

Attachment 1

CITY OF ONKAPARINGA COMMENTS

Council's Development Policy team, Planning team, Building and Development Compliance team and Technical Services team (where relevant) have reviewed the Code Amendment and provide the following comments.

Note: Zones, Overlays and other matters not applied or relevant to the City of Onkaparinga have not been listed and no comment provided.

2.3.1 PART 1 – RULES OF INTERPRETATION

2.3.1.1 Application of Spatial Policy Relevant to the Site of the Development

Comment	We support this amendment in principle to apply the policies relevant to the spatial location of a development. That said, we consider there needs to be some strengthening in how the 'Interface between Land Uses' in Part 4 – General Development Policies are called up.
---------	--

2.3.1.2 Spatial maintenance updates – comprising minor or operational amendments

Comment	We support this amendment in principle subject to the work only being undertaken by the Surveyor-General and for routine minor or operational cadastral changes.
---------	--

2.3.2 PART 2 – ZONES AND SUB ZONES

2.3.2.1 Conservation Zone - land division - PO 2.1 – Policy

Comment	We support this amendment.
---------	----------------------------

2.3.2.3 Master Planned Zones – Site Dimensions and Land Division – Policy Review

Comment	We support this amendment in principle but note a Concept Plan's purpose is not to show allotments / sites. In addition, a Master Plan is not a statutory document, so we further question why reference is made to this. For PO 11.3 to have any real effect, we consider further work is required on outlining what can be shown in a Concept Plan and likewise, giving statutory recognition (or definition in Part 7 or 8) to 'Master Plan'.
---------	---

2.3.2.4 Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.2.5 Rural Zone – Detached Dwelling – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.2.6 Rural Zone – Land Division / Boundary Realignment - Linkages	
Comment	We support this amendment.

2.3.2.9 Restricted Development Classification – Table 4	
<p>We have fundamental issues with this part of the Code Amendment and more so how restricted development operates under the Code and Act.</p> <p>We note the Commission’s position to the difference in how non-complying and restricted development are assessed, with the Code drafted to speak to the types of development that are envisaged, not what is discouraged or inappropriate. The reliance of the system on the Code being silent on development that is not envisaged or desired poses significant difficulties in the defence of developments that are the subject of refusal, dispute or appeal.</p> <p>We recognise that no policy or set of policies can ever address all possible scenarios that may arise. We accept that at times that there must be exception to the intent of any policy or set of policies.</p> <p>That said, we consider the Code needs to contain greater guidance providing support to the defence of sound refusals or to guide undesirable proposals in the face of the inevitable exceptions to the rule argument. We suggest wording to the effect of <i>‘kinds of development not envisaged or desired for a zone, subzone or overlay should generally not be approved unless it is overwhelmingly shown to benefit the public interest or definitively supports the desired outcomes.’</i> That would at least place some onus on proponents to demonstrate that the public interest would be served by a development.</p> <p>Noting the Code Amendment commentary “Council Assessment Panels and Managers have the appropriate skills, qualifications and local knowledge to undertake an assessment of this nature”, however maintaining land uses as restricted development rather than performance assessed is a very much second best option to our above desired change.</p> <p>We suggest land uses should remain as restricted until the review of the Code and Act are completed by the Expert Planning Panel.</p>	

2.3.2.9.1. Industry listed as a restricted development classification	
Comment	<p>We support the amendment for the Employment Zone.</p> <p>We do not support the amendment to remove 'Industry' from the restricted development classification in the following zones</p> <ul style="list-style-type: none"> • Suburban Business Zone • Local Activity Centre Zone • Suburban Activity Centre Zone • Suburban Main Street Zone • Township Zone, and • Urban Activity Centre Zone.

2.3.2.9.2. Land Division within the Limited Land Division Overlay	
Comment	<p>We accept this amendment to some extent noting the intent of the Code is that the Overlay will prevail over all other policies.</p> <p>However, without support of reference to the kinds of development not envisaged or desired for a zone, subzone or area should generally not be approved unless it is overwhelmingly shown to benefit the public interest or definitively supports the desired outcomes, the Code poses significant difficulties in the defence of developments that are the subject of refusal, dispute or appeal.</p>
2.3.2.9.5. Dwelling and Land Division within the Deferred Urban Zone	
Comment	<p>We accept this amendment to some extent however we do not support more than one 'dwelling' on a site within our Deferred Urban Zone. Noting the amendment has 'dwellings' not 'dwelling' we question whether this is an error or there is expectation of more than one dwelling on a site?</p>
2.3.2.9.6. Employment Zone – Various land uses	
Comment	<p>We support this amendment.</p>
2.3.2.9.10. Hills Face Zone – Various land uses	
Comment	<p>We support the amendment for 'Excavation' and 'Filling' noting there is suitable policy guidance and some minor exception can be acceptable.</p> <p>We support boundary realignment as Performance Assessed noting this is consistent with the Development Regulations 2008 (ceased) Part 4(17)(6)(c) which prescribed that a Statement of Effect for non-complying development involving a boundary realignment was not required.</p>
2.3.2.10.1. Notification Tables – Minor Development	
Comment	<p>We support this amendment.</p>
2.3.2.10.2. Notification Tables – Errors and Inconsistencies	
Comment	<p>We support boundary realignment being removed from Table 5 - Procedural Matters (PM) – Notification. We note this would be consistent with the approach under Schedule 9 of the Development Regulations 2008 (ceased) which made non-complying boundary realignments, a Category 1 form of development.</p> <p>We do not support the removal of Land Division from Table 5 - Procedural Matters (PM) – Notification of the Hills Face Zone.</p> <p>Land Division is listed in Table 4 of the zone as currently a restricted form of development in the Hills Face Zone and is publicly notified. The application of restricted status reflects the importance of a policy that significantly constrains development of a kind that has the potential to increase population, activity levels, demands on natural resources or contamination of resources natural character of this area of elevated terrain.</p>

	<p>The community, particularly those who reside within or close to it, are familiar with its character and function and the policies that are intended to protect it. They are guided by them and rely upon them. In these circumstances, notification of development that may be contrary to those policies is of community interest is warranted and assists in maintaining community interest, limited participation and engenders some degree of confidence in the planning system.</p> <p>Removal from the requirement to publicly notify is another step that removes community participation and confidence in the planning system.</p>
--	--

2.3.2.10.3. Notification Tables – Frost Fans

Comment	We support this amendment.
---------	----------------------------

2.3.2.10.4. Notification Tables – Building on railway land / Temporary public service depot

Comment	We support this amendment.
---------	----------------------------

2.3.2.10.5. Notification Tables – Demolition

Comment	We support this amendment.
---------	----------------------------

2.3.2.11 Building Height – TNV and context – Policy refinement

Comment	We support this amendment.
---------	----------------------------

2.3.2.12 Building Height, Building Wall Setback and Wall Height – Policy Review

Part 8 – Administrative Terms and Definitions

Comment	We support this amendment.
---------	----------------------------

2.3.2.13 Building Walls and Dwelling Walls – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.2.14 Common and Minor Development – Overlay Relevance – Assessment Pathways

Comment	We support this amendment in principle however we have concerns in relation to the open number of 'minor variations' that can be applied as previously mentioned.
---------	---

2.3.2.15 Detached Dwellings in Master Planned Zones as an Accepted Development Pathway

Comment	We support this amendment.
---------	----------------------------

2.3.2.16 Detached Dwellings - Medium and High Rise Development – Policy Relevance

Comment	We support this amendment.
---------	----------------------------

2.3.2.17 Discrete vs Discreet - Garages & Carports - Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.2.18 Discrete vs Discreet - Garages & Carports - Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.2.19 Dwelling Alterations and Building Additions/Alterations – Assessment Pathways**Table 1 – Accepted Development Classification**

Comment	We support this amendment.
---------	----------------------------

Table 2 – Deemed-to-Satisfy Development Classification

Comment	We support this amendment.
---------	----------------------------

Table 3 – Applicable Policies for Performance Assessed Development

Comment	We support this amendment.
---------	----------------------------

2.3.2.20 Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages

Comment	We support this amendment.
---------	----------------------------

2.3.2.21 Interface Height – Multiple Zones: Policy and TNV – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.2.22 Land Division – Site Contamination – Policy Relevance and Linkage

Comment	We support this amendment.
---------	----------------------------

2.3.2.23 Non Residential Outbuildings – New Policy and Assessment Pathways

Comment	We support this amendment.
---------	----------------------------

2.3.2.24 Outbuildings - Accepted Development Criteria

Comment	We support this amendment.
---------	----------------------------

2.3.2.25 Pool Fencing – Accepted Development Pathway

Comment	We support this amendment in principle however noting fencing can be development (a fence in the Historic Area Overlay) and seek further refinement to where the swimming pool barrier is also a boundary fence.
---------	--

2.3.2.26 Primary Street Setback – Use of Building Line

Comment	We support this amendment.
---------	----------------------------

2.3.2.27 Replacement Building – Overlay Exclusions: Coastal Flooding Overlay

Comment	We support this amendment.
---------	----------------------------

2.3.2.28 Tourist Accommodation – Total Floor Area – Rural Zones

Comment	We support this amendment.
---------	----------------------------

2.3.3 PART 3 – OVERLAYS

2.3.3.1 Affordable Housing Overlay – Referral Trigger

Comment	We support this amendment in principle however the drafting of the revised section has become difficult to read; as such we suggest further refinement to adjust the ease of reading.
---------	---

2.3.3.2 Coastal Areas Overlay – Policy Intent

Comment	We support this amendment.
---------	----------------------------

2.3.3.4 Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.3.5 Heritage Adjacency Overlay - Referral

Comment	We support this amendment.
---------	----------------------------

2.3.3.7 Major Urban Transport Routes Overlay - Revised policy and referral triggers

Comment	We support this amendment noting that council would still assess any new driveway location against the requirements and recommendations of Australian Standard AS 2890.1 Off Street parking which indicates all new access points (including domestic driveways) should be located 6m away from the tangent point unless the property would be otherwise denied an access.
---------	--

2.3.3.8 Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent

Comment	We support this amendment.
---------	----------------------------

2.3.3.9 Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent

Comment	<p>We support this amendment however we note in the proposed DTS/DPF 2.3 (a) the wording should be altered as per below to reflect the same terminology as the South Australian Public Health (Wastewater) Regulations 2013. In addition, it should also capture where there is an 'onsite wastewater management system':</p> <p><i>from</i></p> <p>(a) a sewer or community wastewater management system with sufficient hydraulic and treatment capacity to accept the inflow</p> <p><i>to</i></p> <p>(a) a sewer or an <u>onsite wastewater management system</u> or community wastewater management <u>scheme</u> with sufficient hydraulic and treatment capacity to accept the inflow</p>
---------	---

2.3.3.10 Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral

Comment	We support this amendment.
---------	----------------------------

2.3.3.11 Prescribed Surface Water Area Overlay - Terminology

Comment	We support this amendment.
---------	----------------------------

2.3.3.12 Prescribed Water Resources Area Overlay – Referral

Comment	We support this amendment.
---------	----------------------------

2.3.3.13 Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation

Comment	<p>We support this amendment.</p> <p>On a technical issue, the omission of this information on Form 1s is of some concern given this information is then not passed onto prospective property buyers. By not indicating that a 'representative building' exists on the Title does not alert</p>
---------	---

	prospective purchasers of a property's historical significance and this can prove problematic.
--	--

2.3.3.18 River Murray Tributaries Protection Area Overlay - Policy intent

Comment	We support this amendment.
---------	----------------------------

2.3.3.19 River Murray Tributaries Protection Area Overlay - Referrals

Comment	We support this amendment.
---------	----------------------------

2.3.3.20 State Significant Native Vegetation Areas Overlay - Referral Trigger

Comment	We support this amendment.
---------	----------------------------

2.3.3.21 Traffic Generating Development Overlay – Referral

Comment	We support this amendment.
---------	----------------------------

2.3.3.22 Urban Transport Routes Overlay - Revised policy and referral triggers

Comment	We support this amendment noting that council would still assess any new driveway location against the requirements and recommendations of Australian Standard AS 2890.1 Off Street parking which indicates all new access points (including domestic driveways) should be located 6m away from the tangent point unless the property would be otherwise denied an access.
---------	--

2.3.4 PART 4 – GENERAL DEVELOPMENT POLICIES

2.3.4.1 Aquaculture – General Development Policies – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.2 Carport and Outbuilding – Internal Parking Dimensions – Linkages

Comment	We support this amendment.
---------	----------------------------

2.3.4.3 Commercial Forestry – Forestry General Development Policies – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways

Comment	<p>We support this amendment in principle however noting in DTS/DPF X.1 Decks:</p> <p><i>(a) where ancillary to a dwelling:</i></p> <p><i>(iii) when attached to the dwelling, has a finished floor level consistent with the finished floor level of the dwelling</i></p> <p>We consider further refinement to the policy is needed to address and/or clarify that it is from the 'ground' floor level (single storey, not second storey).</p> <p>We also seek further criteria where a deck is sited on sloping land and is elevated above the natural ground level at a greater height than the associated dwelling as this can result in a substantial and imposing built form. Likewise, a floor area criteria (similar to an outbuilding) should be included to guide appropriate forms of deck development in a residential setting.</p> <p>In addition, we note that in a high bushfire area, the CFS require that decks are enclosed underneath, which can be further visually imposing.</p> <p>We also suggest that in all Zone Table 5 - Procedural Matters (PM) – Notification that there should be criteria where decks exceeding DTS/DPFs trigger the need for notification.</p>
---------	--

2.3.4.5 Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance

Comment	We support this amendment.
---------	----------------------------

2.3.4.6 Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.7 Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.8 Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.10 Land Division – General Development Policies – Policy Review

Comment	We support this amendment.
---------	----------------------------

2.3.4.11 Land Division – General Development Policies – Linkages	
Comment	We support this amendment.

2.3.4.12 Transport, Access and Parking General Development Policy – Fences – Linkages	
Comment	We support this amendment.

2.3.4.13 Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review	
Comment	We support this amendment.

2.3.4.14 Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation	
Comment	We support this amendment.

2.3.5 PART 5 – SPECIFIED MATTERS AND AREAS IDENTIFIED UNDER THE ACT AND REGULATIONS

We note there are no proposed Code changes to Part 5.

2.3.6 PART 6 – INDEX OF TECHNICAL AND NUMERIC VARIATIONS

We note there are no proposed Code changes to Part 6.

2.3.7 PART 7 – LAND USE DEFINITIONS

2.3.7.1 Ancillary Accommodation – Amend	
Comment	We support this amendment.

2.3.7.2. Caravan and Tourist Park – Amend	
Comment	<p>We support this amendment in principle, but we seek further clarification on the definition of 'campground' (noting it is excluded from column B).</p> <p>Using the common definition, we note a campground is defined as 'a place where people on holiday can put up their tents, park their caravan etc, often with toilets, water etc.</p> <p>We note that many caravan and tourist parks also provide spaces for tents; as such we question why campground is excluded and/or does not have a definition within the Code.</p>

2.3.7.3. Commercial Forestry – Amend	
Comment	We support this amendment.

2.3.7.4. Educational Establishment – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.5. Indoor Recreation Facility – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.6. Office – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.7. Pre-school – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.8. Renewable Energy Facility – Policy Refinement

Comment	We support this amendment in principle but are seeking further clarification on the meaning of 'For domestic use (i.e. principally used to supply and/or store electricity to the existing use of land) noting the zones listed will include non-residential land uses - will domestic use include 'all' lawfully approved uses on the subject site?
---------	--

2.3.7.9. Tourist Accommodation – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.10. Workers Accommodation – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.7.11. Heavy Vehicle Parking – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.7.12. Function Venue – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8 Part 8 – Administrative Terms and Definitions**2.3.8.1. Building Height – Amend**

Comment	We support this amendment.
---------	----------------------------

2.3.8.2. Building Line – Amend

Comment	We support this amendment.
---------	----------------------------

2.3.8.3. Wall Height – Amend

Comment	<p>We support this amendment in principle but zone DTS/DPF building and wall height correlation to Table 5 - Procedural Matters (PM) – Notification requires further consideration.</p> <p>For example, in the General Neighbourhood Zone, Building Height DTS/DPF 4.1: Building height (excluding garages, carports and outbuildings) no greater than:</p> <ul style="list-style-type: none"> • 2 building levels and 9m, and • wall height that is no greater than <u>7m</u> except in the case of a gable end. <p>Table 5 - Procedural Matters (PM) – Notification Exceptions (Column B)</p> <p>Except development that:</p> <ul style="list-style-type: none"> • does not satisfy General Neighbourhood Zone DTS/DPF 4.1, or • involves a building wall (or structure) that is proposed to be situated on (or abut) an allotment boundary <p>(b) the <u>height of the proposed wall</u> (or post height) exceeds <u>3m</u> measured from the <u>top of footings</u></p> <p>We note that a wall less than 3m in height, but on top of a 1.4m retaining wall presents less than the building height of 7m however it would result in a total development height of 4.4m on the boundary, however this does not appear to trigger the need for notification.</p> <p>We consider the Code needs to clarify if the retaining wall is or is not considered the footings of the wall. Alternative reference to the 'footings' being a consistent floor height any adjoining structure or natural ground level would provide some guidance.</p>
---------	---

2.3.8.5. Direct Overlooking – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.6. High Frequency Public Transit Area – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.7. Post Height – New Definition

Comment	We support this amendment.
---------	----------------------------

2.3.8.8. Gross Density - Delete

Comment	We support this amendment.
---------	----------------------------

2.3.9 PART 9 – REFERRALS**2.3.9.1 Environment Protection Authority Referrals**

Comment	We support this amendment.
---------	----------------------------

2.3.10 PART 10 – SIGNIFICANT TREES

We note there are no proposed Code changes to Part 10.

2.3.11 PART 11 – LOCAL HERITAGE PLACES**2.3.11.1 Listing of State Heritage Place**

Comment	We support this amendment.
---------	----------------------------

2.3.12 PART 12 – CONCEPT PLANS

We note there are no proposed Code changes to Part 12.

Subject: FW: Miscellaneous Technical Enhancement Code Amendment - consultation

Dear Chair,

Council is reviewing the Miscellaneous Technical Enhancement Code Amendment and preparing a draft submission.

However, the Council meeting to present the report is on Monday 26 September 2022.

I note the consultation closes on Friday before (23 September 2022).

Will the Commission accept Council's submission if provided on Tuesday 27 September following the Council meeting?

Thank you and kind regards

26 September 2022

Craig Holden
Chair
State Planning Commission
Via email: DPTI.PlanningEngagement@sa.gov.au

Dear Mr Holden,

State Planning Commission's Miscellaneous Technical Enhancement Code Amendment - for Consultation

Council wishes to thank the State Planning Commission for the opportunity to comment on the Miscellaneous Technical Code Amendment.

It is acknowledged that the draft Code Amendment proposes a series of technical amendments which aim to enhance the general performance and operation of the Planning and Design Code (the Code), primarily focused on addressing technical and operational elements within the Code, as opposed to changing policy intent or outcomes.

In so far as the Code Amendment, the City of Charles Sturt has taken the opportunity to consider the proposed policy amendments. A table of Council's review of the draft Code Amendment is in Appendix A. The following are key matters taken from Appendix A:

Table 4 – Restricted Development for the following zones

The removal of industry as a restricted land uses in zones such as the Local Activity Centre Zone, Suburban Activity Centre Zone, Suburban Business Zone, Suburban Main Street Zone and Urban Activity Centre Zone is supported and dealt with through a performance assessed pathway, while special industry will be a restricted assessment pathway. The Commission needs to ensure the Code's Interface between Land Uses policies under Part 4 General Development Policies, apply through the assessment pathways to assess against potential impacts to adjacent and more sensitive land uses.

2.3.2.18 - Garages & Carports - Linkages

Performance Outcome (PO) 10.1 and Deemed to Satisfy 10.1 (DTS) and Designated performance features (PDF) below within the Established Neighbourhood Zone desires the design of garages and carports to compliment the appearance of the associated dwelling and not dominate the streetscape. The proposed amendment seeks to remove this policy in Table 3 of the zone for a performance assessed pathway and is not supported as it affects historic areas of Council, whereby policies desire new development to be complimentary to the prevailing streetscape.

2.3.2.19 Dwelling Alterations and Building Additions/Alterations – Assessment Pathways

The proposed policy amendment seeks to provide policy in relation to changes to facades that face a street to not being possible without a performance assessment pathway and is supported.

However, the proposed policy requires amending to ensure part b) is separated so that a proposal does not exceed existing wall height of the existing building and does not exceed the overall building height. By including it in the same part b) with an 'or' one of these criteria may not be considered.

2.3.2.23 Non-Residential Outbuildings – New Policy and Assessment Pathways

The proposed policy seeks to apply standards relating to residential development at present to non-residential uses and this may not be appropriate in neighbourhood zones. If this is intending to allow commercial or non-residential uses to have greater DTS assessment pathways the potential interface impacts could be overlooked and that is not appropriate.

2.3.3 Part 3 – Overlays / 2.3.3.1 Affordable Housing Overlay – Referral Trigger

The proposed amendment was based on feedback to the Commission from the South Australian Housing Authority that the referral mechanism required referral to itself as the agency responsible for the provision of referral advice.

While the amendment is supported Council still has concerns with concession policy currently in the Overlay itself that was raised by Council through the consultation of the draft Planning and Design Code to the Commission.

Council's previous Development Plan Affordable Housing Overlay policy did not contain these potential discounts. Building heights and car parking provisions have been previously considered in past rezoning processes and incremental erosion of existing policy expectations should not be considered further.

2.3.4.13 Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review Within Part 4 – General Development Policies – Transport, Access and Parking amend Table 1 – General Off-Street Parking Requirements

While the proposed policy amendments are supported to consolidate uses without changing parking rates, a further review of the Planning and Design Code's off-street car parking standards is needed to ensure future infill development can provide adequate off-street car parking without having a detrimental effect on the local road system.

This issue has been previously raised by Council. An example is the allocation of only one off-street car parking space for a dwelling comprising only one bedroom. A minimum of two off-street car parking spaces should be required notwithstanding only one bedroom is proposed given the prevalence of car ownership, which has increased based on the most recent Census data.

2.3.4.13 Transport, Access and Parking – General Development Policy – Car Parking Rates Table - Review

The policy amendments in this section are not supported. While the previous Development Plan did provide a lower parking rate for non-residential uses above ground level it was never clear why this was the case as the nature of business drives the likely parking demand not the floor level it is located on. The rate should remain at 3 per 100m² regardless of the associated floor level. Areas of Bowden experience considerable parking shortfall and Council has received numerous concerns about a lack of parking under the earlier approvals.

2.3.7 Part 7 – Land Use Definitions

Council previously raised the lack of a definition for Multiple Dwellings and policy in the Code to address design issues around multiple dwelling proposals. These considerations may include, but not be limited to car parking standards, living area spaces and amenities. A definition for this type of dwelling is still required to be included in the Code.

Key policy amendments proposed that are supported.

2.3.2.10 Changes to Notification Tables

Changes are proposed to the notification tables of most zones, which would have the effect of removing 'performance triggers' for notification of buildings such as sheds, carports, fences, verandahs and the like.

It is acknowledged that the justification provided for this is that it mirrors the situation as existed under the repealed Development Regulations 2008, albeit that there were previously similar performance criteria in the Development Regulations that were later removed by the then State Government.

The proposed amendments are supported because while minor structures will not require notification they will still be assessed against the envisaged length and height provisions within their respective zone eg. General Neighbourhood Zone standards allow a length of 11.5m on the boundary and a height of 3m.

2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways

Support the inclusion of policies in relation to proposed decks associated with residential land uses. Additional policy should be considered to assess interface impacts that may arise where decks are associated with non-residential uses in neighbourhood type zones and in non-residential based zones. Further policy should consider acoustic and lighting impacts from rear facing development adjacent to residential land uses.

2.3.8 Part 8 – Administrative Terms and Definitions

The proposed new administrative definition of direct overlooking is supported for the purpose of assessing visual privacy outcomes across the City on future development applications. This definition applies to elevated decks, upper-level windows and balconies of multi storey dwellings. The proposed definition, including oblique (angled) views into adjoining properties being captured in the definition rather than just straight views from a window, are also supported.

2.3.11.1 Listing of State Heritage Place

The proposed policy amendments provide a link with State Heritage Register with reference to the Code and is supported.

2.3.2.16 Missing Policy for Three Storey Townhouses

Policy amendments are proposed that would include additional policy for the assessment of performance assessed development involving detached dwellings of medium and high rise form and is supported. These additional policies for inclusion on future performance assessment include matters such as the visual outlook at ground level to face the street, raising the floor level of ground level dwellings to achieve privacy from the public realm area, defining minimum private open space requirements, the positioning and size of balconies, staggering of windows and other quality design standards.

2.3.3.13 Identification of Representative Buildings

The proposed policy amendment seeks a proposed change to the location within the South Australian Planning and Property Atlas (SAPPA) in which Representative Buildings are located. This change would mean that finding the mapping for Representative Buildings in SAPPA would move from the 'Planning Reference' layer to the 'Historic Area Overlay' layer. This is supported and will make it easier for persons to see Representative Building locations.

While Council acknowledges the intent of this Code Amendment process Council considers that there are still several matters that require further attention beyond technical enhancements. These matters are raised in Council's submission under Appendix B. Key matters raised in this Appendix include:

- Seeking a Ministerial or Commission led Code Amendment to insert the Hazards (Flooding - Evidence Required) Overlay over areas in Charles Sturt not presently covered by either the Hazards (Flooding-General) Overlay or the Hazards (Flooding) Overlay.
- Addressing policy gaps in the Code to improve the assessment of overland stormwater flow paths.
- Removal the Urban Tree Canopy Off-set Scheme from the Housing Diversity Neighbourhood Zone.
- Amendments to the Code policy for the Waterfront Neighbourhood Zone to strengthen policy around development minimising visual impact on the seaside or waterfront character through design such as reducing bulk and scale.

- Amendments to private open space policy based on a sliding scale depending on the size of the site.
- Amendments to enclosed car parking dimensions to the dimensions that were originally consulted on in the draft Code, to address other uses that a garage commonly incorporates in a domestic situation
- Amendments to the Code policy to strengthen policy. Policy for requirements for structures eg. roof and gutter design that mitigate impacts of the tree on the structure.
- Amendments to the Code policy to provide require quantitative policy to assess future development when adjacent to existing neighbouring solar panels eg. percentage of panels that are shaded for a period of time.
- Correcting Code error to ensure Regulated Tree and Stormwater Management Overlay policy is pulled into the assessment pathways for additions to a dwelling.
- Consideration of additional policy to address minimum dimensions for internal living areas and storage spaces for all types of dwellings.
- Refinements to Historic Area Overlay policies.

I look forward to the Commission's response on how these issues will be addressed through this Code Amendment process or future Code Amendment enhancements.

Should you have any questions, please contact Jim Gronthos, Senior Policy Planner on or by email at

Yours sincerely

Paul Sutton
Chief Executive Officer

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>Accordingly, some applications for ‘demolition’ will fall to the Performance Assessed pathway. Currently ‘demolition’ is listed in zone notification tables as a class of development that is exempt from notification. The exception to this is the demolition of a state or local heritage place or a building within the Historic Area Overlay. Some practitioners have questioned if this exception is meant to apply to the ‘partial demolition’ of a heritage building. The intention was to include ‘partial demolition’ and it is proposed to clarify this position in the exception clause applying to demolition.</i></p> <p><i>Demolition in the Historic Area Overlay / State Heritage Area Overlay</i></p> <p><i>During the development of the Code, several council and community submissions observed that the demolition of heritage items should be notified. The Commission considered this appropriate and resolved to amend the public notification tables.</i></p> <p><i>However, recent feedback from some practitioners suggests that the requirement to notify the demolition of buildings in the Historic Area Overlay is an unnecessary burden in</i></p>

			<p><i>instances where a building is of no heritage value or not in keeping with applicable Historic Area Statement.</i></p> <p><i>Whilst this issue is acknowledged and would benefit from some form of alteration to the notification exceptions in Column B, a degree of caution needs to be applied when attempting to single out some buildings and not others for the purposes of public notification. As discussed in other sections of this report (see section 2.3.3.13 - Representative Buildings – Character Area</i></p> <p><i>Overlay and Historic Area Overlay – Spatial Representation) the identification of ‘representative buildings’ (which could be one way to resolve the notification issue) in a particular area is not intended to imply that other buildings in a historic or character area are not of importance.</i></p> <p><i>Some level of assessment is therefore needed to determine whether a building displays heritage values that are in keeping with the area’s historic values and characteristics. One course of action would be to restructure the notification clause as it relates to demolition to give the relevant</i></p>

			<p><i>minor applications which 'trip' into a performance assessed pathway under the Code. This creates additional work for planning authorities over and above notifications that occurred under the former development system under the Development Act 1993.</i></p> <ul style="list-style-type: none"> • <i>This appears partly due to structural differences between the former and new development systems in how the notification requirements are prescribed.</i> <p>Investigation</p> <ul style="list-style-type: none"> • <i>Under the Development Act 1993, the regulations prescribed public notification requirements which this largely removed the need to notify applications for various minor or ancillary residential developments (e.g. carports, garages, sheds, pergolas, verandahs, fences, swimming pools, spa pools or outbuildings). While individual development plans could override the notification requirements contained in the regulations, most councils opted to rely on the regulations.</i> • <i>The new development system is based on a relationship between the Act and the Planning and</i> 		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>Design Code to manage notification requirements as follows:</i></p> <ul style="list-style-type: none"> <i>• The Act does not require accepted and deemed-to-satisfy applications to be notified – these assessment pathways are determined by the development classes identified in the Code and any associated criteria to maintain the pathway.</i> <p><i>This also means that proposals that do not meet the criteria for an accepted or deemed-to-satisfy pathway could become performance assessed (subject to a ‘minor’ variation decision by the relevant authority) and therefore subject to public notification.</i></p> <ul style="list-style-type: none"> <i>• All performance assessed applications under the Act require an owner or occupier of each piece of ‘adjacent land’ to be notified, unless otherwise exempted by the Code. Table 5 in each zone was formulated for this purpose, and allows any class of development to be excluded from notification (subject to any criteria) and can also identify circumstances (places) where the ‘placement of a notice’ on the subject land need not occur.</i> 		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>Under the Act, ‘adjacent land’ means land that is no more than 60 metres from the other land.</i></p> <p><i>This differs from the old legislation, where only abutting allotments were captured plus any allotments across a public road, watercourse or reserve. The new term for ‘adjacent land’ results in notification to neighbouring landowners within a wider area.</i></p> <p><i>This increase in notification requirements requires additional resourcing by authorities. This is particularly apparent for minor and ancillary developments (like fences and domestic sheds) where the impacts (if any) are limited to an abutting owner of land rather than all other owners within 60 metres. The Commission considers changes to reduce unnecessary notification for applications that have little to no relevance to neighbours generally could be reviewed based on the ERDC letter, and help reduce effort in managing processes under the new development system.</i></p> <p><i>Changes could bring notification requirements into line with those under the former Development Regulations 2008 where relatively minor structures, particularly ancillary residential ones, did not typically require any notification.</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>The Commission’s Engagement Report for the Phase 3 Code recognised the need to carefully balance the impact of public notification of development proposals to support greater certainty in assessment decisions, noting the broader intention to encourage participation in policy making. A recommendation in the Commission’s report (see PT.37, page 31) sought to ‘exclude performance assessed development from notification where envisaged in the zone, in accordance with the following principle’:</i></p> <ul style="list-style-type: none"> <i>(a) an accepted class of development identified in Table 1 of the Zone</i> <i>(b) a Deemed-to-Satisfy class of development identified in Table 2 of the Zone</i> <i>(c) a type of development identified or captured within land uses that are expected in the zone in DTS / DPF 1.1 is not subject to notification, except where:</i> <i>(d) acceptable standards of built form or intensity are exceeded and/or</i> <i>(e) the development is likely to result in substantial impacts on the amenity of adjacent dwellings located on land in another zone.</i> <p><i>The report further recommended amending:</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>Procedural Matters – Notification tables to generally exclude development from notification that is identified as Category 1 in Schedule 9 of the Development Regulations 2008. (see PT.41, page 33)</i></p> <p><i>and</i></p> <p><i>Procedural Matters – Notification’ tables to remove public notification triggers based on a failure to satisfy boundary setbacks. (see PT.42, page 33)</i></p> <p><i>The implementation of these recommendations is a ‘balancing act’ in terms of establishing when notification is a reasonable expectation based on potential impacts on a neighbour or neighbours, including whether notification might apply to development that did not require notification under the Development Regulations 2008.</i></p> <p><i>In hindsight it would appear that the Code has introduced notification requirements that are causing a degree of frustration for planning authorities, and this was communicated by the Environment, Resources and Development Committee of Parliament in its review of the Phase Three (Urban Areas) Code Amendment, post approval.</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>This Code Amendment presents an opportunity to address some of those frustrations.</i></p> <p>Practitioner Feedback</p> <p><i>A workshop was held with representatives from local councils, the Local Government Association and the private sector to gain further insight into the areas of public notification that could be improved within the context of the Commission’s established principles for public notification.</i></p> <p><i>Minor variations to exception criteria</i></p> <p><i>One key issue that come out of the original call for submissions was the lack of ability for a relevant authority to allow minor variations in respect to the exception criteria contained in Column B of the public notification tables. For example, in most neighbourhood zones, dwellings that are proposed to be built on, or abut an allotment boundary are subject to wall length and height exception criteria. If a proposal exceeded these quantitative numbers by even the smallest amount, it would trip into public notification. Currently there is no ability for the relevant authority to deal with this as a minor variation, despite potential impacts being negligible.</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>The option of including additional rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is minor in nature was put to the workshop and was generally supported. Those that were cautious indicated support but with a preference that it be limited to one variation only. Others felt that further guidance on what constituted a ‘minor variation’ would assist. The LGA expressed concern with the overall approach citing the number of concerns they receive through elected members about why certain proposals weren’t notified and that this change would only further compound the issue and place extra pressure on council staff.</i></p> <p><i>Whilst these concerns are acknowledged, the option of allowing a relevant authority to determine minor variations to exception criteria in Column B, is not considered to vary much from the powers currently offered by the following clause in the zone public notification tables:</i></p> <p><i>1. Development which, in the opinion of the relevant authority, is of a minor nature only and will not unreasonably impact on the owners or occupiers of land in the locality of the site of the development.</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>This clause was ‘grandfathered’ over from the former Development Regulations 2008 (Schedule 9, Part 1, clause 2(g)) and is commonly used when a development is not specifically excluded from notification but is considered minor and not likely to impact on neighbouring owners and occupiers. Importantly, a relevant authority can use this provision at its discretion and the same would apply in respect to minor variations to exception criteria in Column B. Allowing minor variations of this nature would provide the flexibility needed to ensure that public notification red tape is not applied to matters that are minor and trivial in nature. Exclusion of minor forms of development from notification</i></p> <p><i>Not surprisingly, given the feedback received post implementation of Phase 3 of the Code, the exclusion of minor forms of development (e.g. fences, retaining walls, pergolas, decks, shade sails, roof mounted solar) from notification exception criteria in Column B was generally supported at the workshop. Some nervousness amongst the group was expressed about some activities including:</i></p> <ul style="list-style-type: none"> <i>• building work on railway land - why is this excluded from notification?</i> 		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<ul style="list-style-type: none"> • <i>rainwater tanks – consider the visual impact on neighbours, particularly those abutting allotment boundaries</i> • <i>retaining walls – in undulating areas where substantial cut and fill may be needed. Consider the combined impact of fence and retaining wall.</i> • <i>decks – where overlooking may be an issue – public expects decks to be notified.</i> <p><i>Some participants felt that decks were not a good example of an activity that warranted notification as there were sufficient policies in the Code to deal with matters of overlooking and that relevant authorities were sufficiently capable of determining applications without input from neighbouring properties. As part of this Code Amendment, it is proposed to include some additional guidance for decks that fall to the performance assessed pathway (refer to section 2.3.4.4 Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways of this report). These policies seek to provide minimum expectations for screening and maximum height above ground level standards. With these additional policies in place, it is considered that decks are a form of development which, in general terms, do not warrant notification. Further, it would</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>be inconsistent to require public notification for decks when dwellings (another form of development where overlooking might arise but is sufficiently addressed by Code policy) are generally not subject to notification.</i></p> <p><i>Outbuildings, a form of development that is generally minor and expected in most (if not all) zones, were also discussed in terms of whether they should be subject to the building on boundary exception criteria that applies to dwellings in neighbourhood zones. There were mixed views on this ranging from ‘outbuildings shouldn’t be notified’ to ‘maybe’ to ‘would need to look at specific zones’.</i></p> <p><i>Under the former development system, an outbuilding, provided that it was ancillary to a dwelling, was exempt from public notification without exception (refer to Schedule 9, Part 1, Clause 2(d) of the Development Regulations 2008). Carports, verandas, fences, swimming pools and spa pools, were similarly exempt:</i></p> <p>Development Regulations 2008 <i>Development exempt from public notification, Schedule 9, Pt 1, Clause (d):</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>the construction of (or of any combination of) a carport, garage, shed, pergola, verandah, fence, swimming pool, spa pool or outbuilding if it will be ancillary to a dwelling;</i></p> <p><i>As existed in Development Plans, the Code contains specific policies to guide the assessment of outbuildings based on their height, bulk and scale. These are contained in the Design General Development Policies (PO, DTS/DPF 13.1 and 13.2) and the ‘Ancillary Buildings and Structures’ section of neighbourhood-type zones. With these policies in place and given that outbuildings are generally an expected minor form of development, it is not unreasonable to maintain the approach of the former development system – that is to exempt outbuildings and other minor structures from public notification.</i></p> <p><i>Zone tailored notification for minor forms of development. During the workshop it was put to the group whether there are any zones that would benefit from a more tailored approach to notification exceptions for minor forms of development. In response, it was thought that exceptions on a zone-by-zone basis might be a good idea with decks in undulating areas presented as one example. The same</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>question was put to planning practitioners via a monthly policy forum held by Planning and Land Use Services. Feedback from this session suggested that provided policy was there to adequately assess minor forms of development there was some comfort that the assessment process could be undertaken without the need for notification. A point was also made that it would be difficult to tailor notification on a zone-by-zone basis because some zones apply to areas that are vastly different in terms of the characteristics in which they display. The Master Planned Neighbourhood Zone is an example of this where in the Mount Barker area for instance, it applies to an undulating area where excavation and fill are usually required to create level sites whereas on the Adelaide Plains, land is generally flat, lessening the need to install retaining walls. It was also put to the forum that there is a real risk of over thinking the issue. Subjecting minor forms of development to notification leads to applications having to go to assessment panels resulting in additional costs to the applicant and time delays. It was felt that practitioners are appropriately skilled and more than capable of making suitable decisions on minor forms of</i></p>		

Row No.	Page No. from the Code Amendment – Attachment A	Section of the Code	Proposed Amendment	Observations	Comments
			<p><i>development. Empowering decisions makers should instead be the focus rather than subjecting minor developments to unnecessary red tape.</i></p> <p><i>Ultimately, the fact that an application for minor development is not subject to notification doesn't mean that it has passed the assessment test. The Code in its current form contains a suite of targeted and general policies that are applicable to the assessment of (or can be used in the assessment of) performance assessed outbuildings, carports, verandahs, swimming pools/spas, fences, retaining walls and solar panel facilities. Such policies address matters of built form, visual amenity, overshadowing, overlooking and noise impacts. In terms of decks, a gap in policy has been identified, however it is proposed as part of this Code Amendment to include assessment policy for decks and provide a Deemed-to-satisfy pathway.</i></p> <p><i>On this basis, it is considered reasonable to exclude minor forms of development from public notification, unconditionally.</i></p> <p>Proposed Code Change</p>

Page 177	2.3.2.26 Primary Street Setback – Use of Building Line	Within each of the following zones, amend the identified DTS/DPF X.X by replace with the following:	Supported as it removes the reference to primary frontage for setting the street setback average which will allow a corner site to also influence the setback of a neighbouring dwelling even if the dwelling on that site faces another street.	No comment.

Employment Zone – DTS/DPF 3.1

PO 3.1
Buildings are set back from the primary street boundary to contribute to the existing/emerging pattern of street setbacks in the streetscape.

DTS/DPF 3.1
Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	3m

For the purposes of **DTS/DPF 3.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Established Neighbourhood Zone – DTS/DPF 5.1

PO 5.1
Buildings are set back from primary street boundaries consistent with the existing streetscape.

DTS/DPF 5.1
Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	no DTS/DPF is applicable

For the purposes of **DTS/DPF 5.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

General Neighbourhood Zone – DTS/DPF 5.1

PO 5.1
Buildings are setback from primary street boundaries to contribute to the existing/emerging pattern of street setbacks in the streetscape.

DTS/DPF 5.1
Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites minus 1m
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site minus 1m
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	5m

For the purposes of **DTS/DPF 5.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Home Industry Zone – DTS/DPF 3.1

PO 3.1
Buildings are set back from primary street boundaries consistent with the existing streetscape

DTS/DPF 3.1
Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	6m

For the purposes of **DTS/DPF 3.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Suburban Business Zone – DTS/DPF 3.4

PO 3.4

Buildings are set back from primary street boundaries to contribute to a consistent streetscape.

DTS/DPF 3.4

Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	6m

For the purposes of **DTS/DPF 3.4**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Suburban Neighbourhood Zone – DTS/DPF 5.1

PO 5.1

Buildings are setback from primary street boundaries consistent with the existing streetscape.

DTS/DPF 5.1

Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
<i>There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>The average setback of the existing buildings on the abutting sites</i>
<i>There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.</i>	<i>The setback of the existing building on the abutting site</i>
<i>There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.</i>	<i>8m</i>

For the purposes of DTS/DPF 5.1:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback*
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table*

Waterfront Neighbourhood Zone DTS/DPF 5.1

PO 5.1

Buildings are setback from primary street boundaries to contribute to the existing/emerging pattern of street setbacks in the streetscape and the waterfront environment.

DTS/DPF 5.1

Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	5m

For the purposes of **DTS/DPF 5.1**:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Strategic Employment Zone – DTS/DPF 3.3

PO 3.3

Buildings are set back from the primary street boundary to contribute to a consistent streetscape.

DTS/DPF 3.3

Buildings setback from the primary street boundary in accordance with the following table:

Development Context	Minimum setback
There is an existing building on both abutting sites sharing the same street frontage as the site of the proposed building.	The average setback of the existing buildings on the abutting sites
There is an existing building on only one abutting site sharing the same street frontage as the site of the proposed building.	The setback of the existing building on the abutting site
There is no existing building on either of the abutting sites sharing the same street frontage as the site of the proposed building.	(a) 8m or more for buildings up to 6m high (b) not less than 10m for buildings greater than 6m high.

For the purposes of DTS/DPF 3.3:

- (a) the setback of an existing building on an abutting site to the street boundary that it shares with the site of the proposed building is to be measured from the closest building wall to that street boundary at its closest point to the building wall and any existing projection from the building such as a verandah, porch, balcony, awning or bay window is not taken to form part of the building for the purposes of determining its setback
- (b) any proposed projections such as a verandah, porch, balcony, awning or bay window may encroach not more than 1.5 metres into the minimum setback prescribed in the table

Council considers that a review of the Planning and Design Code’s off-street car parking standards is needed to ensure future infill development can provide adequate off-street car parking without having a detrimental effect on the local road system. An example for consideration which has been previously raised by Council involves the allocation of only one off-street car parking space for a dwelling comprising only one bedroom. A minimum of two off-street car parking spaces should be required notwithstanding only one bedroom is proposed given the

Ancillary accommodation	Means accommodation that: a) is located on the same allotment as an existing dwelling; and b) is not a self-contained residence; and c) contains no more than 2 bedrooms or rooms or areas capable of being used as a bedroom; and d) is subordinate to and does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling.		Dwelling; <u>Tourist Accommodation.</u>																							
<u>Pre-school Child care facility</u>	Means a place primarily for the care or instruction of children of less than primary school age, children with special needs or out-of-school-hours care (including vacation care) and not resident on the site.	<u>Pre-school, Child care centre; Early learning centre; Kindergarten; Nursery.</u>																								
Commercial forestry	Means the practice of planting and managing plantation forests that are intended to be harvested for wood products or other commercial purposes, including through the commercial exploitation of the carbon absorption capacity of the forest.		<u>Horticulture, Cropping, Farming.</u>																							
<u>Educational Establishment facility</u>	Means a primary school, secondary school, reception to year 12 school, college, university or technical institute, and includes an associated <u>pre-school child care facility</u> or institution for

			and Design Code Amendments' to reflect the amendments to the Code		

Appendix B - Policy Issues Identified in the Planning and Design Code by the City of Charles Sturt for the Commission’s consideration

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
1.	Waterfront Neighbourhood Zone and Housing Diversity Neighbourhood Zone	<p>(2)</p> <p>Former Development Plan Residential Zone Policy Areas 15, 17, 18 and 19 now located in the Waterfront Neighbourhood Zone and Housing Diversity Neighbourhood Zone have TNVs for two storey building height at 8.5m which was carried over from the former Development Plan.</p> <p>The Code Zones seek a general maximum building height of 9m, which creates an assessment pathway issue and requires notification if two-storey development is proposed at 9m.</p>	A Code Amendment is required to address this issue - by removing the existing TNV of 8.5m for two storey development.
2.	Hazards (Flooding - Evidence Required) Overlay	<p>(2)</p> <p>There is a gap in Code policy to address minimum FFL for development on land that is not covered by the Hazards (Flooding-General) Overlay or the Hazards (Flooding) Overlay.</p> <p>Council’s previous submission highlighted this matter outlining that the absence of the Overlay and its policies for the City of Charles Sturt will mean the City will lose a key policy trigger to determine the stormwater management outcome for a development and call upon the current flood mapping information to make an informed assessment.</p> <p>Following the Commission's second round of consultation on the Code a third Hazards Flooding Overlay was introduced into the Code as part of its implementation. This is known as the Hazards (Flooding - Evidence Required) Overlay.</p> <p>This Overlay provides policy directions for areas not identified in the other Hazard Flood Overlays and should be applied to the City of Charles Sturt.</p>	Seeking a Ministerial or Commission led Code Amendment to insert the Hazards (Flooding - Evidence Required) Overlay over areas in Charles Sturt not presently covered by either the Hazards (Flooding-General) Overlay or the Hazards (Flooding) Overlay.
3.	Hazards (Flooding – General) Overlay	The Code requires Finished Floor Level of properties to be 300mm above flood levels for Deemed to Satisfy performance feature (Refer PO 2.1 and DTS/DPF 2.1 below). Whilst this requirement will protect most properties from flooding it may not cover certain properties that are lower than	Address policy gaps in the Code to improve the assessment of overland

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
		<p>road level. There are inherent limitations to flood maps. Flood maps only show where stormwater builds up from generally from sag points such as side entry pits etc and maps may not show where the stormwater is coming from. That is overland flow path may not be obvious in flood mapping. An example of where this occurs is on sloping land where the street frontage is higher and rear of property is lower.</p> <p>Street gutter flows are normally prevented from entering properties by the kerb, crossovers and the verge. Once gutter flow height goes over 100mm – 150mm overland flow will go through properties on the lower side of the road. Overland flow may result in property damage. The problem has been exacerbated in recent times due to side boundary to boundary developments. Stormwater has no way to get to the low spot but through garages and floors. Side set backs in some older houses allowed overland flow to go around the buildings with minimal damage.</p> <p>With current DTS provisions and fence to fence development it is likely flooding of new developments (assessed for 1% AEP and floor levels set 300mm above) could still experience flooding.</p>	<p>stormwater flow paths. Consider the use of PO 2.1 as DTS performance feature.</p>

Part 3 – Overlays

Hazards (Flooding – General) Overlay

Assessment Provisions (AP)

Desired Outcome (DO)

Desired Outcome	
DO 1	Impacts on people, property, infrastructure and the environment from general flood risk are minimised through the appropriate siting and design of development.

Performance Outcomes (PO) and Deemed-to-Satisfy (DTS) Criteria / Designated Performance Feature (DPF)

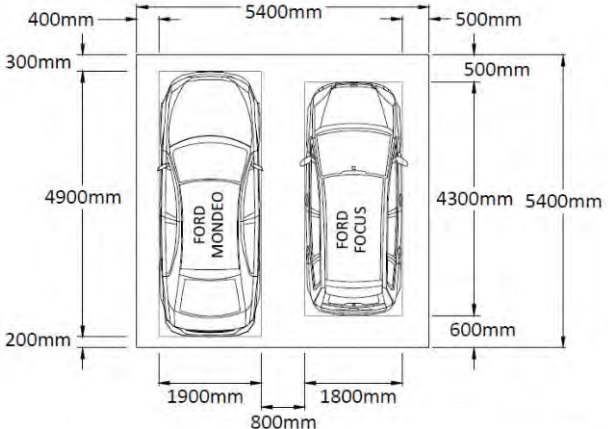

Performance Outcome	Deemed-to-Satisfy Criteria / Designated Performance Feature
Land Use	
<p>PO 1.1</p> <p>Buildings housing vulnerable people, community services facilities, key infrastructure and emergency services are sited away from flood areas enable uninterrupted operation of services and reduce likelihood of entrapment.</p>	<p>DTS/DPF 1.1</p> <p>Pre-schools, educational establishments, retirement and supported accommodation, emergency services facilities, hospitals and prisons located outside the 1% AEP flood event.</p>
Flood Resilience	
<p>PO 2.1</p> <p>Development is sited, designed and constructed to prevent the entry of floodwaters where the entry of flood waters is likely to result in undue damage to or compromise ongoing activities within buildings.</p>	<p>DTS/DPF 2.1</p> <p>Habitable buildings, commercial and industrial buildings, and buildings used for animal keeping incorporate a finished ground and floor level not less than:</p> <p>In instances where no finished floor level value is specified, a building incorporates a finished floor level at least 300mm above the height of a 1% AEP flood event.</p>
Environmental Protection	
<p>PO 3.1</p> <p>Buildings and structures used either partly or wholly to contain or store hazardous materials are designed to prevent spills or leaks leaving the confines of the building during a 1% AEP flood event to avoid potential environmental harm.</p>	<p>DTS/DPF 3.1</p> <p>Development involving the storage or disposal of hazardous materials is wholly located outside of the 1% AEP flood plain or flow path.</p>

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
4.	Urban Tree Canopy Off-set Scheme	(3) The Scheme applies to the Housing Diversity Neighbourhood Zone, which prevails in large parts of Bowden, Brompton, Ridleyton and Renown Park in the CCS. Average site area requirements in this zone are 220-250m ² (ie medium density). Council's heat mapping shows a direct correlation between medium density housing in this area and higher daytime thermal temperatures. This is likely to be exacerbated by climate change. Opportunities for street tree planting and/or more or better planted reserves are also limited. Arguably the tree off-set scheme, combined with these factors, will result in even higher daylight thermal temperatures in this precinct. A more sustainable approach would be to encourage the retention of existing on-site trees and the planting of additional on-site trees.	Remove the Urban Tree Canopy Off-set Scheme from the Housing Diversity Neighbourhood Zone.
5.	Waterfront Neighbourhood Zone	(2) A recent application for a balcony forward of a dwelling close to the boundary fronting the beach (public thoroughfare) has identified a lack of policy direction when the proposal is located forward of neighbouring buildings and considered an unreasonable visible impact on the locality (the beach as the public thoroughfare). The only policy currently in the Code which could be considered included: <ul style="list-style-type: none"> • Zone Section, Waterfront Neighbourhood Zone, DO 1; • Zone Section, Waterfront Neighbourhood Zone, PO 11.3 • General Policies – Design in urban Areas – Desired outcome 1 PO 5.1 and PO 6.1 in the Zone relate to primary and secondary setbacks and development contributing to the existing/emerging pattern of street setbacks in the streetscape and the	Amendments to the Code policy for the Waterfront Neighbourhood Zone to strengthen policy around development minimising visual impact on the seaside or waterfront character through design such as reducing bulk and scale.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation				
		<p>waterfront environment. However similar policy is missing for development adjacent to the foreshore as a 'public thoroughfare'.</p> <p>We consider the coastal boundary to still be a streetscape issue because it was abutting the coast path, which is a public thoroughfare and there should, be specific policy particularly in the Waterfront Neighbourhood Zone to assess future development proposals against.</p> <table border="1" data-bbox="512 639 1659 1315"> <thead> <tr> <th colspan="2" data-bbox="512 639 1659 683">Rear boundary setback</th> </tr> </thead> <tbody> <tr> <td data-bbox="512 683 1086 1315"> <p>PO 9.1</p> <p>Dwelling walls are set back from rear boundaries to provide:</p> <ul style="list-style-type: none"> (a) separation between dwellings in a way that contributes to a suburban character (b) access to natural light and ventilation for neighbours (c) private open space (d) space for landscaping and vegetation (e) a consistent character when viewed from a waterfront. </td> <td data-bbox="1086 683 1659 1315"> <p>DTS/DPF 9.1</p> <p>Dwelling walls are set back from the rear boundary at least:</p> <ul style="list-style-type: none"> (a) where the rear boundary fronts a waterfront, no less than the average rear setback of any existing dwellings on adjoining allotments. No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
6.	Waterfront Neighbourhood Zone	<p>The draft Code also lacks policy to support the assessment of fences for the existing areas contained in former development Plan Policy Areas 18 and Policy 19 within the previous Residential Zone in the Charles Sturt Council Development Plan. Fencing and courtyard walls forward of the face of the dwelling or adjacent to lake/coastal frontage should consider design to address:</p> <ul style="list-style-type: none"> - Open style - Max height of 1.2m - Materials to match associated dwelling - In the case of a courtyard wall setback minimum 2m from the lake or coastal boundary and less than 30% of the site frontage <p>The PDI Regulations has not included the amendments previously sought in Schedule 3 of the Development Regulations, 2008 as approved by the Minister in the Residential City-wide DPA for Charles Sturt to: 'only list lake and coastal frontage fences within Policy Areas 18 and 19 as constituting 'development'.</p>	Amendments to the Code policy to strengthen policy around fencing that requires development approval minimising visual impact on the seaside or waterfront character through design.
7.	Waterfront Neighbourhood Zone Rear boundary setbacks DTS / DPF 12.2.1	The P & D Code does not provide sufficient policy to assess ancillary structures at where the rear boundary is a waterfront.	Some clarity needs to be provided in the policy to guide development outcomes eg. design parameters and scale where the rear boundary is a

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
			waterfront for ancillary structures.
8.	Part 4 - General Development Policies Design in Urban Areas Table 1 – Private Open Space	(2) The provision of private open space based on <301m ² = 24m ² is not considered sufficient given 300m ² is the max site area for most dwelling types in Council’s General Neighbourhood Zone (the most common residential type of zone in the city). The policy consulted on in the original draft Code, as in the current Charles Sturt Council Development Plan, was based on a sliding scale depending on the size of the site and should be retained in addition to the consideration of Council’s original comments as per its previous submission on private open space.	Amend the policies for private open space based on a sliding scale depending on the size of the site.
9.	Part 4 - General Development Policies Design in Urban Areas	(2) Council has concerns relating to potential policy amendments regarding enclosed car parking dimensions from what was originally consulted. Concerns relate to setting a small internal dimension size for garages that only facilitate a small space for vehicles and makes everyday access to cars and the loading and unloading of typical items from vehicles too difficult. It also prohibits the use of this space for other domestic uses that commonly occur in garages, such as laundry facilities and general household storage. This is particularly critical in reduced lot size developments where other additional storage areas are not possible. The following diagram shows the limited space retained around two fairly standard vehicles within a double garage which is 5.4m x 5.4m in dimension and confirms that this will make entering or exiting the vehicle once it is parked in the garage very difficult.	The dimensions originally consulted in the draft Code, should be retained to address other uses that a garage commonly incorporates in a domestic situation.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
		 <p style="text-align: center;">SCALE 1:100</p>	
10.	Car parking requirements	<p>(2) Infill development has steadily grown in Charles Sturt. A key issue for Council that is experienced by its residents in established areas, involves an increase of on-street parking.</p> <p>Through infill development, smaller allotments are created, reducing opportunities for off-street parking. The previous policy in the Charles Sturt Development Plan sought a minimum of two on site car parking spaces, one of which is covered (the second space can be tandem for detached and semi-detached dwellings). The proposed policy in the Code is still considered too much of a variation from the intent of the current policy and amendments should be made to ensure two spaces are provided on-site for detached and semi-detached dwellings, regardless of the number of bedrooms.</p>	Review car parking ratios to ensure two spaces are provided on-site for detached and semi-detached dwellings, regardless of the number of bedrooms.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
11.	Part 4 – General Development Policies – Transport, Access and Parking – PO 5.1	<p>PO 5.1 desires development to provide sufficient on-site vehicle parking to meet the needs of the development or land use, however, allows the consideration of a reduced rate based on the following criteria:</p> <ul style="list-style-type: none"> a) <i>availability of on-street car parking</i> b) <i>shared use of other parking areas</i> c) <i>in relation to a mixed-use development, where the hours of operation of commercial activities complement the residential use of the site, the provision of vehicle parking may be shared</i> d) <i>the adaptive reuse of a State or Local Heritage Place</i> <p>Council’s Planning and Development Unit has experienced on several occasions development applications seeking a reduced rate based on one or a combination of the above criteria. This has resulted in a strain on overall parking within the locality for the approved land uses but also in relation to part a) created parking issues within the surrounding local streets for the wider community. Part b) also creates issues where shared use have similar times of operation and therefore compete for the shared car parking spaces.</p>	The policy should be amended by removing parts a) and b) to reinforce the need for land use proposals to provide the required on-site vehicle parking wholly on their sites.
12.	Regulated tree	(2) Greater design outcomes for development near Regulated trees in DTS policy – CAP	Amendments to the Code policy to strengthen policy. Policy for requirements for structures eg. roof and gutter design that mitigate impacts of the tree on the structure.
13.	Overshadowing policy for solar panels	(2) Overshadowing of solar panels – policy needs DTS quantitative criteria.	Amendments to the Code policy to provide require quantitative policy to assess

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
			future development when adjacent to existing neighbouring solar panels eg. percentage of panels that are shaded for a period of time.
14.	Urban Neighbourhood Zone	(2) The Noise and Air Emissions Overlay that applies to this zone does not adequately address off-site impacts of existing activities (eg Smallgoods factory, which is a EPA licensed activity that generates noise and odour). The associated DTS/DPF only relate to major roads, train corridors and/or noise from music venues. The Interface Management Overlay, which has no DTS/DPF, should apply to this zone.	Apply the Interface Management Overlay to the Urban Neighbourhood Zone OR refine the DTS/DPF for the Noise and Air Emissions Overlay to address off-site impacts on sensitive receivers from existing/proposed non-residential activities. The application of an Interface Management Overlay should be pursued through a Ministerial Code Amendment as the policy in the previous Development Plan has been lost through the transition of the Code.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
15.	Urban Neighbourhood Zone	(2) Concept Plan 34 Bowden-Brompton identifies roads that are subject to road widening, as determined by the previous DPA investigations. Unfortunately, this legitimate requirement is not reinforced by applying the Future Local Road Widening Overlay to this area/zone.	Apply the Local Road Widening Overlay to the Urban Neighbourhood Zone. The application of a Future Road Widening Overlay to the Urban Neighbourhood Zone should be pursued through a Ministerial Code Amendment as the policy in the previous Development Plan has been lost through the transition of the Code.
16.	Suburban Business Zone	(2) Previous development application in this zone did not captured policy seeking landscaping. The Strategic Employment has specific policy requiring 10% of the site as landscaping however there is no such zone requirement for the Suburban Business Zone and can only apply general policies which does not pick up same.	Policy required to seek percentage of landscaping for development within the Suburban Business Zone as is the case in the Strategic Employment Zone.
17.	Strategic Employment Zone and Suburban Business Zone Interface policy	(2) The zones should include a Performance Outcome involving development on land adjacent to another zone which is for residential purposes (which includes loading, unloading activities and waste management) to be designed to minimise off-site impacts by considering appropriate acoustic performance and locating noise sources away from existing sensitive receivers.	Development for non-residential land uses need to bring in PO 1.2 in the Interface between Land Uses provisions to assess potential interface impacts.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
18.	Strategic Employment Zone	(1) The maximum building height is not expressed in the actual zone but is highlighted as a TNV on SAPP. However, the maximum building height TNV does not get pulled in when searching the property in the P & D Code.	Address Code error.
19.	Strategic Employment Zone Table 5 – Procedural Matters (PM) - Notification	(2) The policy sought for a maximum building height (12.0 metres consistent with Charles Sturt) should also be included as an exception to warrant notification.	Insert policy in the zone for maximum building height and include as an exception in table 5.
20.	Suburban Activity Centre Zone DTS / DPF 1.1	(2) Emergency Services Facility is identified in the policy and should have a definition under Part 7 of the draft Code.	Create definition for Emergency Services Facility.
21.	Local Activity Centre Zone PO 1.2	(2) There is insufficient policy to ensure residential land uses do not dominate through location/design non-residential land uses in the zone.	Consideration of a DTS criteria that dwellings should be located only behind or above non-residential uses on the same allotment to ensure the viability of the existing Local Centre Zones.
22.	Stormwater and Regulated Trees Overlay	(1) Regulated trees and stormwater management provisions need to apply to all development for new buildings on the land not just a new dwelling.	Correct Code error to ensure Regulated Tree and Stormwater Management Overlay policy is pulled into

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
		<p>Any additional roof area will add to downstream flooding and the footprint of the addition could be right under a Regulated Tree.</p> <p>Assessment authorities cannot confirm that a Regulated Tree is impacted at verification without doing a site inspection, which is not reasonable, so the policy should come in for all new built form on the land.</p> <p>By not pulling this in we are not able to manage increased run off from dwelling additions using the Code provisions provided which is a serious problem and omission in the compilation of Code rules that should apply.</p>	<p>the assessment pathways for additions to a dwelling.</p>
23.	Minimum room dimensions and domestic storage	<p>(2) Council's CAP has identified that medium and higher density development can compromise room sizes of living spaces in order to deliver more dwellings and there are no provisions to guide what this minimum space should be.</p> <p>In relation to domestic storage there are no provisions for typical dwellings (detached, semi-detached, row and residential flat dwellings). The provisions only apply for multi-storey unit development (greater than 3-storeys).</p> <p>Site coverage is being used to deliver the house and garage without any dedicated storage and no option to add it later because they have already covered the site with built form. Any additional verandahs or storage spaces are compromising private open space and soft landscaping.</p>	<p>Consider additional policy to address minimum dimensions for internal living areas and storage spaces for all types of dwellings.</p>

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
24.	Urban Activity Centre Zone PO 1.1	(2) Question a warehouse as an envisaged land use in this Zone. The previous Development Plan policy in Charles Sturt deems it non-complying. This land use in its own right is more suited to the proposed Employment Zone.	Consider policy to ensure warehouse uses are a subservient use to a primary use such as retail and not envisage as a primary land use.
25.	Table 4 – Restricted Development Classification – Established Neighbourhood Zone	(2) A previous resolution of Council dated 2019, sought that the draft Code includes policy that considers telecommunications facilities (mobile phone towers) to be deemed as “restricted development” within the Established Neighbourhood Zone (formerly proposed during the original consultation of the draft Code as a Suburban Neighbourhood Zone) (areas contained within the Historic Area Overlay) to enable a more rigorous assessment for development of this nature within the City’s current Historic Conservation Area.	Amend Table 4 to include telecommunications facilities as restricted development.
26.	Building Near Airfields Overlay	(2) PO 1.2 seeks to prevent land uses that attract wildlife near the airport.	Development of this nature should be considered as a referral to the aviation safety authority where it hasn’t met the DTS standards.
27.	Historic Area Overlay	(2) Previous submission from Council based on the advice of Council’s Heritage Adviser sought amendment to policy within the Historic Area Overlay.	Suggested policy amendments: DTS 3.1 <i>Alterations and additions are fully contained within the roof space of an existing building or located to the</i>

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
			<p><i>rear with no external alterations made to the building elevation facing the primary street.</i></p> <p>PO 4.1 <i>Ancillary development Ancillary development, including carports, outbuildings and garages, complements the historic character of the area and associated buildings, sited to ensure they do not dominate the primary facade, and employ a contextual design approach.</i></p> <p>PO 6.1 <i>The width and number of driveways and other vehicle access ways are consistent with the prevalent width of existing driveways of the historic area.</i></p>
28.	Historic Area Overlay	(2)	The following amendments are recommended below (in

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
	Demolition Control Policy – PO 7.1	Concerns previously raised by Council with the proposed policy in particular in part (a) the use of the term “front elevation” which may be open to interpretation. The front elevation also includes the roof form, verandah and visible side returns. As an example, what may happen if the originally vertically proportioned windows in the front wall have been widened and aluminium inserted. Can this be an argument based on the proposed policy to demolish the building, when all other key character elements are intact?	<p>highlight) to ensure clarity behind the term front elevation.</p> <p><i>PO 7.1 Buildings and structures, or features thereof, that demonstrate the historic characteristics as expressed in the Historic Area Statement are not demolished, unless:</i></p> <p>a) All the elements that comprise the front elevation including the roof form and side returns up to the roof ridge line visible to the street <i>has been substantially altered and cannot be reasonably restored in a manner consistent with the building's original style</i></p>

			<p><i>or</i></p> <p><i>b) the structural integrity or safe condition of the original building is beyond reasonable repair.</i></p> <p><u>PO 7.3</u></p> <p>Concerns over what is the test for conformity? The proposed policy can lead to a debate as to whether one of the characteristics or elements in the Historic Area Statements do not conform as a justification for demolition. The following amendments are proposed to the policy (in strike through and highlight):</p>

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
			<i>PO 7.3 Buildings or elements of buildings that do not conform with all of the values described in the Historic Area Statement may be demolished.</i>
29.	Key Railway Crossings Overlay	(2) DTS/DPF 1.1 refers to certain distances from railway crossings relative to speed limits, but fails to include 40km/hr.	Amend DTS/DPF to include 40km/hr roads.
30.	Local Heritage Places	(1) Description for Local Heritage Place listing - 227 Esplanade, Henley Beach is missing the words“, cast iron and masonry fence. ”	Correct error.
31.	General Policies Design in Urban Areas Car parking, access and manoeuvrability PO 23.4 – DTS/DPF 23.4	(2) This allows approval to be authorised by third-party certifier without Council’s arboriculture officers having opportunity to provide input or reference to Council’s Tree and Streetscape Policy. The two-metre separation is currently being used as a minimum separation distance between the tree and the crossover however the setback required is determined by the tree species, trunk diameter and for large mature trees, its structural root zone radius which is calculated in accordance with AS 4790-2009 – Protection of trees on development sites. A minimum separation between the subject tree and proposed crossover is to protect the tree and provide space for tree growth and minimise future damage to the crossover.	Recommendation is no change made in relation to Council’s authority in approving works on public land, currently authorised under the Local Government Act (Section 221).
32.	General Development Policy	(2) Supported Accommodation and retirement facilities / PO 37.2:	It is suggested that a suite of minimum requirements for effective measures are specified to provide clear

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
	Design in Urban Areas Universal Design	<p><i>“Universal design features are incorporated to provide options for people living with disabilities or limited mobility and / or to facilitate ageing in place.”</i></p> <p>The scope of this policy should be expanded to apartments 3 building levels or less to increase the number of accessible dwellings due to data from the Liveable Housing Design Guidelines that show it is 22 times more efficient to build in these design features rather than retrofitting them at a later stage, and that there is a 60% chance of a home being occupied by someone living with a disability.</p>	guidance for design and assessment.
33.	General Neighbourhood Zone	<p>(1) A free-standing carport application did not return minimum dimensions for the off-street carpark.</p> <p>Council staff have identified that the Accepted and Deemed to Satisfy assessment pathways do not have this either for General Neighbourhood. However, if you have a garage under the main roof (as part of a dwelling) you do have min requirements.</p>	Correct pathway error.
34.	Environmental Performance	<p>(2) As addressed in Council’s previous submission, the Code has policies that seek to address energy efficiency and climate responsive buildings which are strongly supported in the draft Code. However, within the assessment pathways these policies only apply to a limited number of dwelling types (detached dwelling (battle-axe), group dwelling and residential flat building) but are not captured in the assessment of detached dwellings, semi-detached, row dwellings or dwellings being developed by the SAHT either individually or jointly with other community housing providers, or a registered Community Housing provider.</p> <p>Such policies include but are not limited to PO 4.1 – orientation of building to maximise sunlight, PO 4.2 siting and design of buildings to maximise passive performance, PO 4.3 climate responsive design, PO 14.2 sustainable design techniques.</p>	For future housing to respond to climate change impacts and improve the amenity and well-being of occupants, the application of environmental performance policies should be expanded to include all dwelling types. Proposed policies contained within ‘Design in Urban Areas’ in relation to landscaping, water sensitive design and

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
			environmental performance, should apply to all dwellings to provide a higher level of environmental protection for future residents.
35.	General Neighbourhood Zone	<p>(2) Verandahs on boundaries.</p> <p>Accepted development pathway seeks:</p> <p>8. Length – does not exceed 11.5m if any part of the structure abuts or is situated on a boundary of the allotment.</p> <p>Deemed to Satisfy (DTS) assessment pathway seeks:</p> <p>(e) if situated on a boundary (not being a boundary with a <u>primary street</u> or <u>secondary street</u>), do not exceed a length of 11.5m unless:</p> <p>(i) a longer wall or structure exists on the adjacent <u>site</u> and is situated on the same allotment boundary and</p> <p>(ii) the proposed wall or structure will be built along the same length of boundary as the existing adjacent wall or structure to the same or lesser extent</p> <p>(f) if situated on a boundary of the allotment (not being a boundary with a <u>primary street</u> or <u>secondary street</u>), all walls or structures on the boundary will not exceed 45% of the length of that boundary</p>	Accepted development assessment pathway should have the same standards as DTS ie. 45% length of the boundary.
36.		<p>(2) A verandah development application recently assessed identified this difference in criteria for structure heights.</p>	For a matter of consistency, it would be best if the same term was used throughout, and the numerical value was also the same.

No.	Code Policy Reference	Type of Issue: 1/ Code error (Section 76) 2/ Issue requiring Code Amendment (Section 73) 3/ Issue identified in the Regulations	Recommendation
		<p>The Accepted criteria refers to the undefined term 'post height' whereas the Performance Assessed criteria uses 'wall height'. DTS uses both terms. The numerical value for these heights differs by 200mm as well.</p> <p>Accepted:</p> <ul style="list-style-type: none"> 6. Post height – does not exceed 3.2m measured from natural ground level. 7. Building height – does not exceed 5m. <p>DTS:</p> <ul style="list-style-type: none"> (h) have a wall height or post height not exceeding 3m (and not including a gable end) (i) have a roof height where no part of the roof is more than 5m above the natural ground level <p>Performance Assessed:</p> <ul style="list-style-type: none"> (h) have a wall height or post height not exceeding 3m (and not including a gable end) (i) have a roof height where no part of the roof is more than 5m above the natural ground level 	
37.	Urban Neighbourhood Zone – West development	<p>(1) There are two maximum building height and levels and is difficult to understand where the levels would apply. Should this not be a minimum and maximum and not two maximums?</p>	Correct Code error. The first should be (minimum) and then (maximum).

By email:

Dear Mr Hanlon

Miscellaneous Technical Enhancement Code Amendment – Consultation period 25 July to 23 September 2022

Thank you for your email of 11 August 2022 on behalf of the City of Playford (the Council) requesting an extension to provide a submission on the Miscellaneous Technical Enhancement Code Amendment, which is being led by the State Planning Commission (the Commission).

This Code Amendment has been informed by significant pre-consultation, with the scope and issues addressed within, based on feedback received from the Commission's 'call for issues' in the second half of last year.

In addition, Planning and Land Use Services (PLUS) has undertaken a series of workshops earlier this year with practitioners from councils and industry, along with Accredited Professionals. PLUS has also provided updates at the monthly policy forums to seek feedback on the potential policy directions, which the Commission considered when preparing the Code Amendment

Unfortunately, in light of the above and the need to continue efficient progression of the Code Amendment, the request for an extension to Council's submission of five weeks (to 28 October 2022) is currently not supported.

However, acknowledging the position of Council and its meeting date of 27 September 2022, the Commission can offer an extension of one week (to 30 September 2022) to allow for any subsequent amendments to Council's submission if required.

I appreciate your understanding of the above and can be contacted if required to discuss in further detail.

Yours sincerely

**Craig Holden**
Chair

Adelaide SA 5001

Dear Planning and Land Use Services

Draft State Miscellaneous Technical Enhancement Code Amendment for consultation

Thank you for the opportunity to provide comment regarding the draft State Miscellaneous Technical Enhancement Code Amendment.

The draft amendments to the Code cover a wide range of relevant subjects and the majority of the proposals are acceptable in order to improve the functionality and efficiency of the Planning and Design Code.

Nonetheless, Council have identified seven (7) issues of concern, detailed in the table below.

Five of these issues relate to the removal of forms of restricted development from Table 4 in various zones.

In each case Council supports the change to the relevant authority, as local Assessment Panels and Assessment Managers are best suited to understand the local context in which development is proposed. Playford's concern lies with the absence of policies that strategically protect the intent of zones and overlays.

An example is the Deferred Urban Zone, which controls growth so as not to prejudice orderly development in the future, and primary production type zones where large allotment sizes ensure land is available for viable primary production. Where development will be removed from the restricted development category, we consistently recommend the provision of the below requests.

- A list of development that states (listed) types of development that are strategically integral to supporting the function of certain zones and are not envisaged in relevant overlays:

Munno Para SA 5115

- Policies to ensure assessment panels and managers consider how identified types of development that cumulatively will strategically undermine the intent of certain zones will impact on the strategic intent of zones in their assessment of such development.

An example is a proposal to divide land within a primary production area is assessed as an individual proposal but divisions cumulatively over time will turn large areas non-viable for commercial farming.

- A policy for listed strategic impact types of development as follows; DTS/DPF 1.2 None are applicable.

In relation to the proposal to introduce the new Development Categories of Primary Development (P) and Ancillary Development (A) we feel this should be referred for careful consideration by the review of South Australia's planning system; General application of this change is likely to result in unintended outcomes. Where there are issues, the relevant tables should be amended. Council consider that the introduction of additional development pathway exceeds the scope identified for the Miscellaneous and Technical Code Enhancement and further consideration of potential impacts is required. This could either be achieved as part of the upcoming review of the planning framework, or as a dedicated Code Amendment.

The final issue Council have commented on is the definition of truck parking on residential and rural living allotments. While Council welcome the definition, given the nuanced nature of such assessment, it is suggested that DPF provisions are not appropriate given the implied appropriateness of this, even if completely inappropriate in a locality. This can be a sensitive issue as it has the potential to have ongoing impacts to the amenity of residential streets and undermines the intent of primary production zones.

Please see Councils detailed submission in the table below.

2.3.2.9. Restricted Development Classification Table 4		
Pg. 28 in the document `For Consultation- Miscellaneous Technical Enhancement Code Amendment`		
Proposal	Issue	Submission
<p>AMEND Table 4 – Restricted Development Classification across all relevant zones to align the restricted development classification with either/or both of the new principles. Note: see individual classes of development or specific zones for further detail of proposed changes to restricted development classification.</p>	<p>It is welcome that local assessment managers and assessment panels will be the relevant authority for the types of development subject to this proposal given their knowledge of local context. Notwithstanding this the removal of some types of development from the Restricted Development Classification does create issues where development can undermine zoning.</p> <p>Inappropriate development had been controlled under references in development plans under "prohibited" under the Planning Act 1982 and later as "non-complying" development under the Development Act 1993. Whilst lists of inappropriate development were revised for rezoning and managed under a similar scheme as restricted development in the PDI Act. This listing although not as rigorous as previous schemes made it clear to developers that certain types of development were at high risk of failing and had to demonstrate significant merit to succeed.</p> <p>The removal of the Restricted Development Classification of certain types of development does create issues given the only 'fail safes' to control inappropriate development will rely on overlays and the occasional reference that development should not occur. This can be demonstrated in current zones that have a provision that battle-axe land divisions should not occur. Once an application is lodged there is no justifiable way to refuse the division especially when it meets general requirements albeit not resulting in a good planning outcome.</p> <p>Development which has impacts limited to affecting the character within the zone should be performance assessed as it may not actually adversely impact on the character of the locality.</p>	<ul style="list-style-type: none"> • The change to the relevant authority is supported as Council is best placed to assess the nominated types of restricted development given local knowledge and context, local conditions and likely local impacts. • Concerns that intent and function of zones will be eroded due to lack of policies that reflect the intent and function of zones as once an application is lodged it will fall back on general policies which do not reflect the intent and function of specific zones. • Provide a list of development that states listed types of development that cumulatively will potentially impact on the strategic intent of zones are not envisaged in relevant overlays.

	<p>The provisions within the Code that control character issues should be suitable to ensure in the context of character and only development appropriate in a locality will occur.</p> <p>Those types of development which have the potential to undermine the intent of the zone should be subject to rigorous assessment pathways.</p> <p>These are largely discussed below, however where these are impacted are the same issues.</p> <p>There are no provisions in the code to deal with the cumulative impact of or prevent inappropriate development undermining the intent and function of zones.</p> <p>The issue of high impact, or inappropriate development needs its own assessment pathway not unlike the non-complying system and this is better addressed in the review of the South Australia's planning system. Nevertheless, in the interim until this is addressed in the Act or in the case no changes to the legislation occur, we would like to see the following additions to the Code:</p> <ul style="list-style-type: none"> • Provide a list of development that states listed strategic impact types of development are not envisaged in relevant overlays or zones. • Provide policies to ensure assessment panels and managers consider how listed types of development that cumulatively will potentially impact on the strategic intent of zones in their assessment of such development. • Provide to listed types of development that cumulatively will potentially impact on the strategic intent of zones a DTS/DPF 1.2 None are applicable. 	<ul style="list-style-type: none"> • Provide policies to ensure assessment panels and managers consider how listed types of development that cumulatively will potentially impact on the strategic intent of zones will impact on the strategic intent of zones in their assessment of such development. • Provide to listed strategic impact types of development a DTS/DPF 1.2 None are applicable.

2.3.2.9.2. Land Division within the Limited Land Division Overlay

Page31 in the document `For Consultation- Miscellaneous Technical Enhancement Code Amendment`

Proposal	Issue	Submission
<p>REMOVE land division when the Limited Land Division Overlay applies in Table 4 – Restricted Development Classification in the Productive Rural Landscape Zone, Rural Zone, and Rural Horticulture Zone. Note: while other zones may have the Limited Land Division Overlay applying, this will not need to be amended as land division is not listed within Table 4 – Restricted Development Classification.</p>	<p>It is welcome that local assessment managers and assessment panels will be the relevant authority for land division in the Limited Land Division Overlay given their knowledge of local context.</p> <p>Notwithstanding this, the removal of land division in the Limited Land Division Overlay from the Restricted Development Classification does create issues where this type of development can undermine relevant zones.</p> <p>Historically in Playford the now Limited Land Division Overlay is positioned where the Primary Production and Horticulture Zones were once located. These Zones protected</p> <p>In these previous Zones land division was listed as non-complying. This was to preserve land for viable farming and horticulture and also to prevent such areas as becoming rural living areas.</p> <p>As mentioned above There are no provisions in the code to deal with strategic issues or prevent inappropriate development from carving away at and undermining the intent and function of zones.</p> <p>The above risks are heightened where-overall land division does not require a demonstration of intent of use making it challenging to justify refusal.</p> <p>The issue of dividing land in a rural context requires its own rigorous assessment pathway not unlike the non-complying system and this is better addressed in the review of South Australia’s planning system. Nevertheless, in the interim until this is addressed in the Act or in the case no changes to the legislation occur, we would like to see the following additions to the Code:</p>	<ul style="list-style-type: none"> • Submission • The change to the relevant authority is supported as Council is best placed to assess dwellings within the Limited Dwelling Overlay given local knowledge of local context, local conditions and likely local impacts. • Concerns intent and function of zones will be eroded due to lack of policies that reflect the intent and function of zones as once an application is lodged it will fall back on general policies which do not reflect the intent and function of specific zones. • Provide in a list of development that states dwellings are not envisaged within the Limited Dwelling Overlay. • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones in their dwellings in the Limited Dwelling Overlay.

	<ul style="list-style-type: none"> • Provide in a list of development that states land division is not envisaged within the Limited Land Division Overlay. • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones in their dwellings in the Limited Land Division Overlay. • Provide for Land Division in the Limited Dwelling Overlay a DTS/DPF 1.2 None are applicable. 	<ul style="list-style-type: none"> • Dwellings in the Limited Dwelling Overlay a DTS/DPF 1.2 None are applicable.
--	--	---

2.3.2.9.3. Dwelling within the Limited Dwelling Overlay
Page32 in the document `For Consultation- Miscellaneous Technical Enhancement Code Amendment`

Proposal	Issue	Submission
<p>REMOVE dwelling when the Limited Dwelling Overlay applies from Table 4 – Restricted Development Classification in the Rural Zone and Rural Horticulture Zone AMEND PO 1.1 of the Limited Dwelling Overlay to make it clear that no new dwellings are envisaged.</p>	<p>It is welcome that local assessment managers and assessment panels will be the relevant authority for dwellings in the Limited Dwelling Overlay given their knowledge of local context.</p> <p>Notwithstanding this, the removal of dwellings in the Limited Dwelling Overlay from the Restricted Development Classification does create issues where this type of development can undermine the Zone.</p> <p>Historically in Playford the now Limited Dwelling Overlay is positioned where the Primary Production and Horticulture Zones were once located. These Zones protected Primary Production from encroachment of rural living uses and industrial and commercial uses not directly associated with farming or horticulture.</p> <p>In these previous Zones dwellings located in on land created after certain dates were listed as non-complying. This was to preserve land for viable farming and horticulture and to prevent such areas as becoming rural living areas.</p>	<ul style="list-style-type: none"> • The change to the relevant authority is supported as Council is best placed to assess dwellings within the Limited Dwelling Overlay given local knowledge of local context, local conditions and likely local impacts. • Concerns intent and function of zones will be eroded due to lack of policies that reflect the intent and function of zones as once an application is lodged it will fall back on general policies which do not reflect the intent and function of specific zones. • Provide in a list of development that states dwellings are not

	<p>The location of dwellings in these areas constrain legitimate rural uses on abutting allotments by drawing complaints regarding odours, dust and noise as well as nocturnal harvesting.</p> <p>Where residents are not farming and large areas of land are not used, there is risk of land being used for other uses such as truck parking or storage of goods where it is not necessary in a rural area and prejudices the use of neighbouring land and future use of the land for farming.</p> <p>As mentioned above There are no provisions in the code to deal with strategic issues or prevent inappropriate development from chipping away at and undermining the intent and function of zones.</p> <p>The above risks are heightened where-overall a dwelling on a large allotment will satisfy most general provisions in the Code dealing with dwellings making it challenging to justify refusal and even have amendments so that dwellings are at least located so the land can be used for primary production in the future.</p> <p>The issue locating dwellings in the Limited Dwelling needs its own assessment pathway not unlike the non-complying system and this is better addressed in the review of South Australia's planning system. Nevertheless, in the interim until this is addressed in the Act or in the case no changes to the legislation occur, we would like to see the following additions to the Code:</p> <ul style="list-style-type: none"> • Provide in a list of development that states dwellings are not envisaged within the Limited Dwelling Overlay. • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones in their dwellings in the Limited Dwelling Overlay. 	<p>envisaged within the Limited Dwelling Overlay.</p> <ul style="list-style-type: none"> • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones in their dwellings in the Limited Dwelling Overlay. • Dwellings in the Limited Dwelling Overlay a DTS/DPF 1.2 None are applicable.
--	---	---

	<ul style="list-style-type: none"> • Dwellings in the Limited Dwelling Overlay a DTS/DPF 1.2 None are applicable. 	
2.3.2.9.5. Dwelling and Land Division within the Deferred Urban Zone Page33 in the document `For Consultation- Miscellaneous Technical Enhancement Code Amendment`		
Proposal	Issue	Submission
<p>REMOVE dwelling and land division from Table – 4 Restricted Development Classification within the Deferred Urban Zone.</p>	<p>It is welcome that local assessment managers and assessment panels will be the relevant authority for dwellings in the Limited Dwelling Overlay given their knowledge of local context.</p> <p>While the change to the relevant authority is welcome, the removal of dwellings and land division from the Restricted Development in the Restricted Development Classification within the Deferred Urban Zone will potentially completely undermine the intent of the Zone which is to control development to allow future urban rezoning.</p> <p>As mentioned above There are no provisions in the code to deal with strategic issues.</p> <p>In our Growth Areas there are single allotments zoned Deferred Urban because landowners had not signed infrastructure deeds.</p> <p>These have the potential to attract large unsustainable community divisions and poorly located industrial or commercial uses surrounded by residential areas.</p> <p>It is not justifiable that surrounding landowners must contribute to infrastructure in order to develop their allotments whereas those that had not signed up have a good chance of success as well as exploiting new surrounding infrastructure without contributing to the cost.</p>	<p>Change to the relevant authority is supported as Council is best place to assess these types of development given local knowledge of local context, local conditions and likely local impacts.</p> <ul style="list-style-type: none"> • Concerns intent and function of zones will be eroded due to lack of policies that reflect the intent and function of zones as once an application is lodged it will fall back on general policies which do not reflect the intent and function of specific zones. • Provide in a list of development that states dwellings and land division are not envisaged within the Deferred Urban Zone. • Provide policies to ensure assessment panels and managers consider how dwellings and land division will impact on the strategic intent of the Deferred Urban Zone.

	<p>The Deferred Urban Zone north of the Virginia Township is to prevent growth in a significant flood area. Flood controls on this part of the Gawler River are not planned in the foreseeable future as it will require considerable State funding as well as collaboration across a number of councils. Even if developments can address flooding issues such as raising floor level heights, these may be so high as to impact the character both now and, in the future, when the area is rezoned for urban development. If developments can presently address flooding issues in most cases, they would be isolated in a flood event.</p> <p>The issue locating dwellings or allowing land division in the Deferred Urban Zone needs its own rigorous assessment pathway, not unlike the non-complying system and this is better addressed in the review of South Australia’s planning system. Nevertheless, in the interim until this is addressed in the Act or in the case no changes to the legislation occur, we would like to see the following additions to the Code:</p> <ul style="list-style-type: none"> • Provide in a list of development that states dwellings and land division are not envisaged within the Deferred Urban Zone. • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones in their dwellings in the Deferred Urban Zone. • Provide a DTS/DPF 1.2 “None are applicable” for dwellings and land division within the Deferred Urban Zone. 	<ul style="list-style-type: none"> • Provide a DTS/DPF 1.2 “None are applicable” for dwellings and land division within the Deferred Urban Zone.
2.3.2.9.1. Industry listed as a restricted development classification, pg. 29 in the document `For Consultation- Miscellaneous Technical Enhancement Code Amendment`		
Proposal	Issue	Submission
AMEND Table – 4 Restricted Development Classification within the following zones that have	It is welcome that local assessment managers and assessment panels will be the relevant authority for dwellings in the Limited Dwelling Overlay given their knowledge of local context.	Provide in a list of development Provide a list of development not envisaged in overlays.

<p>Industry listed (with the exclusion of Light Industry) and replace it with Special Industry as a restricted class of development</p> <p>Class of Development Exclusions</p> <p>Special Industry</p> <p>Industry Light Industry</p> <p>Employment Zone</p> <ul style="list-style-type: none"> • Strategic Innovation Zone • Suburban Business Zone • Capital City Zone • City Main Street Zone • Local Activity Centre Zone • Suburban Activity Centre Zone • Suburban Main Street Zone • Township Zone • Township Activity Centre Zone • Township Activity Centre Zone • Urban Activity Centre Zone <p>Note: that Special Industry is not a Restricted Class of Development when located in the Gillman Subzone, National Naval Shipbuilding Subzone or</p>	<p>While the change to the relevant authority is welcome, the removal of industry from the Restricted Development in the Restricted Development Classification within the listed Zones will potentially undermine the intent and function of zones as once an application is lodged it will fall back on general policies which do not reflect the intent and function of specific zones.</p> <p>As mentioned above There are no provisions in the code to deal with strategic issues.</p> <p>Proposals to introduce or expand industry in some of these Zones needs its own rigorous assessment pathway, not unlike the non-complying system and this is better addressed in the review of South Australia’s planning system.</p> <p>Nevertheless, in the interim until this is addressed in the Act or in the case no changes to the legislation occur, we would like to see the following additions to the Code.</p> <ul style="list-style-type: none"> • Provide in a list of development Provide a list of development not envisaged in overlays. • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones. • Provide a DTS/DPF 1.2 “None are applicable” for industry within the more sensitive zones. 	<ul style="list-style-type: none"> • Provide policies to ensure assessment panels and managers consider how listed strategic impact types of development will impact on the strategic intent of zones. • Provide a DTS/DPF 1.2 “None are applicable” for industry within the sensitive zones.

Subject: Adelaide Hills Council request for extension to provide a submission on the Miscellaneous Technical Enhancement Code Amendment

Dear Sir/Madam,

The Adelaide Hills Council is seeking an extension of time to respond to the Miscellaneous Technical Enhancement Code Amendment to allow the submission to be endorsed at the September Council Meeting, scheduled for the 27th September 2022.

To allow sufficient time for staff to finalise the submission following the meeting, we would request a one week extension until the 30th September 2022.

We hope this can be accommodated.

Warm regards,
James

Mr Craig Holden
Chair – State Planning Commission
GPO Box 1815
ADELAIDE SA 5001

Email: plansasubmissions@sa.gov.au

Dear Mr Holden,

Adelaide Hills Council - Miscellaneous Technical Enhancement Code Amendment Submission

The Adelaide Hills Council appreciates the opportunity to contribute to further refinement and improvement of the Planning and Design Code (the Code) via the Miscellaneous Technical Enhancement Code Amendment (the Amendment) led by the State Planning Commission (the Commission).

Since the introduction of the Code Council Staff have been proactively identifying and analysing a range of Code related issues as they arise through development assessment processes and ongoing policy analysis. Many issues relating to this Amendment have been raised in Council's previous submission as part of the scoping phase, while some have been identified in the interim period prior to the release of the draft Amendment.

For those issues that were previously raised and have drawn a satisfactory response – and there are many – we commend the Commission and Agency Staff for their attention to these matters, they will assist in streamlining and improving assessment processes and outcomes.

For the issues that were previously raised and are yet to attract a satisfactory response and for those issues that have been identified more recently, a detailed policy analysis and amendment proposal has been presented below for consideration by the Commission (refer to **Enclosure A**). I would draw your attention to two of those issues, one involving land division in the Adelaide Hills Subzone and the other boundary realignment in the Productive Rural Landscape Zone, where recent development activity has revealed some concerning weaknesses in the policy settings for these two important areas. If it would assist with informing the Commission's view on these matters my staff would be happy to meet to provide further context.

In addition, several key changes have attracted some concern and/or would benefit from additional refinement. For these changes additional commentary has been provided below (refer to **Enclosure B**). There is one change, involving the removal of the Restricted Development trigger in the Limited Land Division Overlay within the Productive Rural Landscape Zone that has been met with additional concern. This response from the Commission is not considered one that is strategically sound with the real possibility to heighten speculation for land in Adelaide's sought-after Peri-urban farmland – particularly 'lifestyle' properties. It is largely on account of this and other pressures that maintaining the procedural rigour of the Restricted Pathway is seen as so critical, particularly the

mechanism which provides the ability to refuse a Restricted Development application without proceeding to make an assessment. It's also viewed more favourably to have SCAP as the relevant authority on these matters to provide a consistent approach across the State, recognising that farmland protection is a State-wide matter. Procedural processes aside there is also a point to be made about what sort of message this sends the agricultural sector more broadly, but particularly in the Peri-urban region.

If the key issues identified within this submission can be addressed the Amendment will have a greater positive impact on development assessment processes and outcomes within the Adelaide Hills Council area – and likely other parts of the region. We trust that suggested changes put forward in this submission are within scope, and that the supporting investigations provide a satisfactory rationale for further analysis and ultimately the adoption of appropriate changes in the final version of the Amendment.

It is also recognised that the Expert Panel Planning System Implementation Review will afford an opportunity for a broader and deeper analysis to address other considerations outside the scope of this Amendment. In this regard Council has taken the opportunity in Section 8 of Enclosure A to raise some issues that could reasonably inform investigations as part of the review, noting that a more formal submission will be forthcoming.

Should you wish to clarify any of the matters raised by this submission please do not hesitate to contact Natalie Armstrong – Director of Development and Regulatory Services on [redacted] or via email [redacted]

We appreciate the opportunity to contribute to the continual enhancement of the Planning and Design Code to support great planning outcomes across the Adelaide Hills Council.

Yours sincerely

Andrew Aitken
Chief Executive Officer

ENCLOSURE A
ADELAIDE HILLS COUNCIL
ADDITIONAL RECOMMENDED INCLUSIONS

1 – Adelaide Hills Subzone – land division – Policy Intent

Issue

Council staff have identified some specific policy refinement for the median land division criteria (also known as the ‘median rule’) within the Adelaide Hills Subzone, that aims to better clarify intended outcomes and ensure greater consistency between land division policy.

Investigation

Council Staff were invited to provide a draft policy framework for the Adelaide Hills Subzone as part of the Phase 3 Code development, the proposal sought to have the median rule policy (as expressed by DTS/DPF 2.1) referenced in both the Desired Outcomes and the Performance Outcomes. The intention was to maximise the weighting of the policy and ensure development outcomes were promoted comparable to those achieved under the Development Plan. Following the release of Phase 3 of the Code however, it was evident that this proposal was not adopted in full and DO 2 and PO 2.1 were given a more generic wording convention with no reference to the median rule, other than by DTS/DPF 2.1.

There has been a consistent view and feedback to the Commission and PLUS Staff through previous submissions that without more direct reference to the median rule in the DO’s and the PO’s there is a fundamental weakness in the policy when applied to a Performance Assessed land division application. Desired Outcome 2 and Performance Outcome 2.1 and DTS/DPF 2.1 read as follows:

DO 2	Land division is sympathetic to the allotment pattern and characteristics within the locality.
------	--

Site Dimensions and Land Division	
<p>PO 2.1</p> <p>Allotments/sites created for residential purposes are consistent with the established pattern of division surrounding the development site to maintain local character and amenity.</p>	<p>DTS/DPF 2.1</p> <p>Development satisfies (a) or (b):</p> <ol style="list-style-type: none"> 1. it will not result in more than 1 dwelling on an existing allotment 2. allotments/sites have an area the greater of the following (excluding the area within the access 'handle' if in the form of a battle-axe development): <ol style="list-style-type: none"> 1. 2000m² 2. the median allotment size of all residential allotments in the

	Adelaide Hills Subzone either wholly or partly within a radius of 200m measured from the centre of the main allotment frontage.
--	---

Concerns regarding the efficacy of the Policy within the Subzone were validated recently by an Environment, Resources and Development Court case (Parkins v Adelaide Hills Council Assessment Manager [2022] SAERDC 12) that has shown that PO 2.1 and by default DO 2 fails to deliver the land division outcomes anticipated. The case has revealed that despite quantum departures from the median allotment size expressed in DPF 2.1, PO 2.1 simply did not provide enough weighting to treat the concept of consistency with the established pattern of division surrounding development sites appropriately – by failing to respond to the median rule.

The decision reveals a disharmony between the PO and DTS/PPF that in our view requires a timely resolution to stem the precedent set by this decision. If left in its current form there is genuine concern that it will inevitably lead to a progressive downward trend in allotment sizes in most localities where there is currently a range of sizes, and subsequently a progressive erosion of the existing character of the Subzone, of which the median rule seeks to preserve.

It is noted that the creation of the Subzone was largely justified on the premise that Council had adopted an innovative approach to land division policy through the introduction of a median rule. The approach provided appropriate guidance for land division proposals by responding to the varying range of allotment sizes within the area defined spatially by the Subzone. It also acted as a non-complying trigger, discouraging those proposals that where under the median rule. These factors were deemed worthy of being transitioned into the Code via the subzone to replicate the outcomes achieved under the Adelaide Hills Development Plan. As demonstrated these outcomes are not being achieved with the current policy setting, and Council strongly suggests Amendments to the Subzone.

Proposed Code Change

AMEND DO 2 to ensure that outcomes seeking a sympathetic or consistent response to allotment patterns and characteristics apply the median allotment size within the locality.

AMEND PO 2.1 to ensure development appropriately achieves consistency with the character of the locality by replicating the median allotment size.

AMEND DTS/DPF 2.1 to remove duplication with comparable Zone criteria.

CONSIDER creating a new clause within the Rules of Interpretation section to better guide the assessment of DPF departures against corresponding PO’s.

Amendment instructions

Refer to Attachment A, and the corresponding Part of the issue/topic identified.

2 – Limited Land Division Overlay and Productive Rural Landscape Zone – land division (boundary realignment) – Policy Intent and Relevance

Issue

Limited Performance Outcome criteria in the Code providing guidance to a Relevant Authority where a boundary realignment is proposed within the Limited Land Division Overlay and the Productive Rural Landscape Zone.

Investigation

It is generally accepted that minimising the fragmentation of primary production land is contingent on discouraging the creation of additional allotments and limiting the scope of boundary realignments. This is particularly important in Adelaide’s sought-after Peri-Urban farmland within the Productive Rural Landscape Zone that is subject to heightened speculation particularly for smaller lifestyle properties. With regards to the Code the objective to minimise the fragmentation of farmland is captured succinctly by the Limited Land Division Desired Outcome which reads as follows:

DO 1	The long term use of land for primary production is maintained by minimising fragmentation through division of land.
------	--

However, the potential policy criteria available to inform an assessment for a boundary realignment in this regard reveals that PO 1.2 of the Overlay has limited application within the Productive Rural Landscape Zone (and possibly the Rural Zone) where no minimum site area TNV designation applies. This leaves a policy gap that is not reconciled by either the Productive Rural Landscape Zone or the Land Division General Development Policies which are both silent on minimising the fragmentation of farmland.

It is noted that under the Adelaide Hills Development Plan, boundary realignments in the primary production zone generally had a very narrow scope, with only minor readjustments of allotment boundaries to correct anomalies or improved management outcomes for the purpose of primary production or conservation generally contemplated. Additional Policy also explicitly discouraged fragmentation of primary production land and provided scope to ensure that any realignment and intended land use would not impede the use of rural land for primary production or value adding industries – giving scope to consider the protection of good agricultural land whether currently in production or not. For comparison, the Adelaide Hills Council Development Plan excerpts below highlight Principles of Development Control (PDCs) relating to boundary realignment that explicitly outline when and how a boundary realignment would be appropriate development:

Watershed (Primary Production) Zone	
PDC 19	Land division in rural areas should not occur where the proposed or potential use is liable to: (a) result in the pollution of water resources; or (b) <u>cause the loss of productive primary production land.</u>

PDC 20	Land division may be undertaken where no additional allotment or allotments are created and the purpose of the plan of division is to: (a) <u>provide for a minor readjustment of allotment boundaries to correct an anomaly in the placement of those boundaries with respect to the location of existing buildings;</u> and (b) <u>provide for a minor readjustment of allotment boundaries to improve the management of the land for the purpose of primary production and/or the conservation of its natural features.</u>
PDC 21	<u>Land division may be undertaken provided that the development of the resulting allotments would not result in a loss of primary production land or in a greater risk of pollution of surface or underground waters than would occur through development of the existing allotments.</u>
Land Division – Council Wide Provisions	
PDC 21	<u>Rural land should not be divided if the resulting allotments would be of a size and configuration likely to impede the efficient use of rural land for any of the following:</u> (a) <u>primary production</u> (b) <u>value adding industries related to primary production</u> (c) <u>protection of natural resources.</u>
PDC 22	Rural land should not be divided where new allotments would result in any of the following: (a) <u>fragmentation of productive primary production land...</u>

Through experience in assessing boundary realignments under the Code and comparing the outcomes achieved under the Development Plan there is a significant shortfall in policy addressing when a boundary realignment appropriate.

It is acknowledged that criteria in the Code reflecting some of the intent of the Development Plan policy above is contained in Mount Lofty Ranges Water Supply Catchment (Area 1 and 2) Overlay by DTS/DPF 5.1, which reads as follows:

Mount Lofty Ranges Water Supply Catchment (Area 1 and 2)	
Land Division	
PO 5.1 Land division does not result in an increased risk of pollution to surface or underground water.	DTS/DPF 5.1 Land division does not create additional allotments and satisfies (a) and/or (b): (a) is for realignment of allotment boundaries to correct an anomaly in the placement of those boundaries with respect to the location of existing buildings or structures

	<p>or</p> <p>(b) is for realignment of allotment boundaries in order to improve management of the land for primary production and/or conservation of natural features.</p>
--	--

It is noted that having the policy in this Overlay within the Code limits its application in supporting the intent of Limited Land Division Overlay (which has a greater spatial extent across rural land – see Figure 1) and clearer a objective to minimise farmland fragmentation from boundary realignment. In addition DTS/DPF 5.1 does not support the outcomes sought by PO 5.1. It is considered that the wording from DTS/DPF 5.1 should be moved to the Limited Land Division Overlay to support/or as a PO addressing boundary realignment.

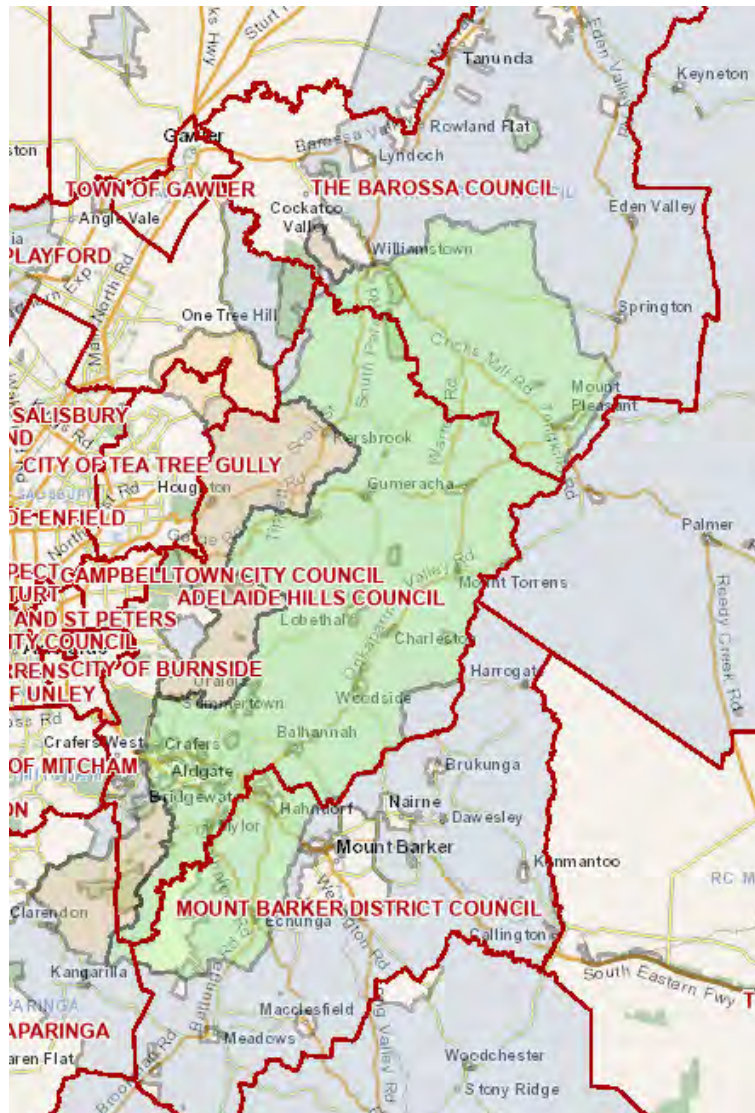

Figure 1 – Spatial extent of LLDO (blue) in comparison to the MLRWA(1&2)O (orange and green)

Proposed Code Change

CREATE new policy (PO 1.3) within the Limited Land Division Overlay to provide guidance of when land division, specifically boundary realignment where no minimum site area is specified in the relevant Zone, should occur.

CREATE new policy (PO 12.3) within the Productive Rural Landscape Zone to provide guidance on when land division, specifically boundary realignment that increases the capacity of the land for the purposes of primary production or conservation, is appropriate.

CONSIDER clarifying through the Rules of Interpretation section whether DO's have a role to play in the assessment of applications where no relevant POs are available to support the outcomes being sought.

Amendment instructions

Refer to Attachment A, and the corresponding Part of the issue/topic identified.

3 - Administrative Definitions – Neighbourhood-type zone – Township Zone

Issue

The administrative definition of a Neighbourhood-type zone in the Code appears to be at odds with the Guide to the Planning and Design Code (the Guide). In particular the Guide identifies the Township Zone as being within the suite of People and Neighbourhood Zones, this appears inconsistent with the range of Neighbourhood-type zones identified by the corresponding Administrative Definition, with the effect having procedural and performance assessment implications.

Investigation

In the Township Mainstreet Zone there are instances where the PO and DTS/DPF criteria refer to 'Neighbourhood-type zone' as a means to define the applicability of certain criteria. The Neighbourhood-type zone administrative definition reads as follows:

Term	Definition
Neighbourhood-type zone	<p>Means any of the following:</p> <ul style="list-style-type: none"> City Living Zone Established Neighbourhood Zone General Neighbourhood Zone Golf Course Estate Zone Hills Neighbourhood Zone Housing Diversity Neighbourhood Zone Master Planned Neighbourhood Zone Master Planned Township Zone Neighbourhood Zone Residential Park Zone Rural Living Zone Rural Neighbourhood Zone Rural Settlement Zone Rural Shack Settlement Zone Suburban Neighbourhood Zone Township Neighbourhood Zone Waterfront Neighbourhood Zone Urban Renewal Neighbourhood Zone

Assessment of certain proposals in the Township Mainstreet Zone has revealed that the adjoining Township Zone is not defined as a Neighbourhood-type zone in accordance with the above, and there are instances where reasonable notification triggers such as (DTS/DPF 3.2 & 3.3) are not applicable and performance criteria relating to visual impact and overshadowing cannot be reasonably applied.

Proposed Code Change

AMEND the Neighbourhood-type zone administrative definition to include Township Zone to address inconsistency with the Guide to the Planning and Design Code.

REVIEW all changes in the Amendment involving Neighbourhood-type Zones to ensure that the Township Zone is reasonably captured.

Amendment instructions

Refer to Attachment A, and the corresponding Part of the issue/topic identified.

4 – Productive Rural Landscape Zone – Detached Dwelling – Interface Between Land Uses

Issue

Feedback previously provided identified that policy provisions relating to matters of interface between sensitive receivers and rural land uses are not being called up for Performance Assessed detached dwellings in Table 3 – Applicable Policies for Performance Assessed Development of the Productive Rural Landscape Zone, and therefore are not available to a relevant authority for a development’s assessment.

It is suggested that PO 9.1 – 9.7 of the Interface between Land Uses General Development Policies and their associated DTS/DPF provisions are relevant to the assessment of detached dwellings within the zone. The issue and outcome being sought is comparative to section 2.3.2.4. Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages of the Amendment. For consistency between the rural suite of zones, this change should be replicated in the Productive Rural Landscape Zone.

Investigation

Investigations have ascertained that policy provisions from the Interface between Land Uses General Development Policies related to Interface with Rural activities, namely PO 9.1 – 9.7 have been applied to the following Deemed-to-Satisfy and Performance Assessed development types:

Deemed-to-Satisfy	Performance Assessed
Tourist Accommodation	Horsekeeping Horticulture Tourist Accommodation

These provisions relate more closely to the location and design of sensitive receivers with respect to an existing rural activity, rather than the design and siting of rural activities as they relate to dwellings. Only PO 9.6 could potentially relate to the development of a rural activity as it requires setbacks and vegetation to minimise spray drift, however this could equally apply to new residential development activities which are being proposed adjacent to existing rural activities. Given these provisions have been applied to tourist accommodation, it is considered appropriate to also apply PO 9.1 – 9.7 to a Detached Dwelling within the Productive Rural Landscape Zone to ensure a generally consistent approach.

Proposed Code Change

ADD the following policy linkages for Performance Assessed Detached Dwelling in Table 3 of the Productive Rural Landscape Zone, including associated DTS/DPF provisions:

- Interface between Land Uses [Interface with Rural Activities]: PO 9.1, PO 9.2, PO 9.3, PO 9.4, PO 9.5, PO 9.6, PO 9.7

CONSIDER it is noted that the Horticulture Deemed – to – Satisfy criteria does not capture any of the Interface Between Land Uses General Development Policies in the Productive Rural Landscape Zone and it is recommended that this be looked at as a separate but related issue.

Amendment instructions

Refer to Attachment A, and the corresponding Part of the issue/topic identified.

5 – Productive Rural Landscape Zone – Agricultural Buildings – Policy Review

Issue

Shortfalls and inconsistencies have been identified in the both the application and intent of the Built Form and Character policy criteria as it applies to Agricultural Buildings within the Productive Rural Landscape Zone (PRLZ).

Investigation

A review of the Accepted Development Classification Criteria, Deemed-to-Satisfy Classification Criteria and Performance Assessed Applicable Polices reveals that these inconsistencies and shortfalls result in different outcomes for the same type of building.

Some observations include:

- No requirement to respond to topography in the Accepted Development Classification Criteria. It is considered that the inclusion of PO 11.1 (c) would improve outcomes across the scenic locations of the PRLZ.
- There is no relevant Deemed-to-Satisfy criteria under DTS 11.1 (i.e. none are applicable) despite it being called up via Table 2. This in effect means that larger Agricultural Buildings can be eligible for DTS consent without having to respond to key outcomes relating to visual impact that smaller accepted development must consider.
- The Performance Assessment Applicable Policies do not call up PO 11.1. The exclusion of PO 11.1 from Table 3 means that Agricultural Buildings exceeding the DPF 13.1 minimum size (i.e. the largest scale), with potential for the most impact, have no applicable criteria guiding materials and finish (i.e. the use of low reflective materials and finishes that blend with the surrounding landscape and important siting considerations), and
- From a land use perspective Table 3 makes no reference to PO 1.1, despite Agricultural Buildings having a Performance Assessed Pathway and being contemplated in the Zone.

Table 1 – Accepted Development Classification criteria reads as follows:

Class of Development	Accepted Development Classification Criteria
<p>Agricultural building Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Area Overlay • Coastal Areas Overlay • Gateway Overlay • Hazards (Flooding) Overlay • Heritage Adjacency Overlay • Historic Area Overlay • Local Heritage Place Overlay 	<ol style="list-style-type: none"> 1. The development will be located on an allotment having an area of at least 10ha 2. The development is set back at least 50m from an allotment boundary 3. Building height - does not exceeding 10m above natural ground level 4. Total floor area - does not exceed 250m²

<ul style="list-style-type: none"> • Ramsar Wetlands Overlay • Significant Landscape Protection Overlay • State Heritage Area Overlay • State Heritage Place Overlay 	<ol style="list-style-type: none"> 5. If clad in sheet metal-is pre-colour treated or painted in a non-reflective colour 6. Does not involve- excavation exceeding a vertical height of 1m; or filling exceeding a vertical height of 1m, and, if the development involves both excavation and filling, the total combined excavation and filling must not exceed a vertical height of 2m 7. Does not involve the clearance of native vegetation 8. The development will not be located within the extents of the River Murray 1956 Flood Level as delineated by the SA Property and Planning Atlas.
--	--

Table 2 – Deemed-to-Satisfy Classification Criteria within the Productive Rural Landscape Zone reads as follows:

Class of Development	Deemed-to-Satisfy Classification Criteria
	Zone
Agricultural building Except where any of the following apply: Character Area Overlay Character Preservation District Overlay Coastal Areas Overlay Gateway Overlay Hazards (Flooding) Overlay Heritage Adjacency Overlay Historic Area Overlay Local Heritage Place Overlay Ramsar Wetlands Overlay Significant Landscape Protection Overlay State Heritage Area Overlay State Heritage Place Overlay The Cedars Subzone	Land Use and Intensity DTS/DPF 1.1 Siting and Design DTS/DPF 2.1, DTS/DPF 2.2 Built Form and Character DTS/DPF 11.1 Agricultural Buildings DTS/DPF 13.1

Table 3 – Performance Assessment Classification criteria within the Productive Rural Landscape Zone reads as follows:

Class of Development	Applicable Policies
	Zone
Agricultural building	Siting and Design PO 2.1, PO 2.2

	Agricultural Buildings PO 13.1
--	-----------------------------------

For reference an excerpt of the siting and design and built form and character criteria within the Productive Rural Landscape reads as follows:

Siting and Design	
PO 2.1 Development is provided with suitable vehicle access.	DTS/DPF 2.1 Development is serviced by an all-weather trafficable public road.
PO 2.2 Buildings are generally located on flat land to minimise cut and fill and the associated visual impacts.	DTS/DPF 2.2 Buildings: <ul style="list-style-type: none"> (a) are located on a site with a slope not greater than 10% (1-in-10) (b) do not result excavation and/or filling of land that is greater than 1.5m from natural ground level.
Built Form and Character	
PO 11.1 Large buildings designed and sited to reduce impacts on scenic and rural vistas by: <ul style="list-style-type: none"> (a) having substantial setbacks from boundaries and adjacent public roads (b) using low reflective materials and finishes that blend with the surrounding landscape (c) being located below ridgelines. 	DTS/DPF 11.1 None are applicable.
Agricultural Buildings	
PO 13.1 Agricultural buildings and associated activities are sited, designed and of a scale that maintains a pleasant rural character and function.	DTS/DPF 13.1 Agricultural buildings: <ul style="list-style-type: none"> (a) are located on an allotment having an area of at least 2ha (b) are setback at least 40m from an allotment boundary (c) have a building height not exceeding 10m above natural ground level

	<p>(d) do not exceed 350m² in total floor area</p> <p>(e) incorporate the loading and unloading of vehicles within the confines of the allotment.</p>
--	--

Based on the above it is recommended that both the criteria applicable to Accepted, Deemed to Satisfy and Performance Assessment pathways be reviewed and revised as well as changes to the applicable policy criteria be considered to ensure consistent and improved outcomes.

Proposed Code Change

ADD new Table 1 criteria to provide additional guidance relating to siting of Agricultural Buildings.

CREATE a corresponding DTS/DPF criteria for PO 11.1 in the PRLZ to inform Agricultural Buildings that are eligible for a DTS pathway.

ADD PO 1.1 and PO 11.1 to Table 3 of the PRLZ to provide policy to guide land use, siting and design, including material and finish guidance for large structures.

CONSIDER whether the floor area thresholds for Acceptable and Deemed to Satisfy development assessment pathways (250m² and 350m² respectively) are appropriate and reasonably support anticipated rural value adding development.

NOTE there may be multiple ways to address this issue and the proposed Code change is the considered the preferred and more holistic approach.

Amendment instructions

Refer to Attachment A, and the corresponding Part of the issue/topic identified.

6 – Design in Urban Areas and Design – General Development Policies – Linkages

Issue

Consistent feedback has been provided since the inception of the Code that has identified that not all the policy provisions relating to Environmental Performance from the Design in Urban Areas and Design general Development Policies are linked to relevant Performance Assessed development (i.e. residential or commercial) within zones.

Investigation

PO 4.1 to PO 4.3 of the Design in Urban Areas and Urban General Development Policies are not linked to Performance Assessed development in Table 3 of relevant zones. The provisions read as follows:

Environmental Performance: PO 4.1: *Buildings are sited, oriented and designed to maximise natural sunlight access and ventilation to main activity areas, habitable rooms, common areas and open spaces.*

Environmental Performance: PO 4.2: *Buildings are sited and designed to maximise passive environmental performance and minimise energy consumption and reliance on mechanical systems, such as heating and cooling.*

Environmental Performance: PO 4.3: *Buildings incorporate climate-responsive techniques and features such as building and window orientation, use of eaves, verandahs and shading structures, water harvesting, at ground landscaping, green walls, green roofs and photovoltaic cells.*

None of the provisions appear in Table 3 – Applicable Policies for Performance Assessed Development in any zone where residential or commercial development appears as a Performance Assessed Development Type. Given all other policy provisions from the Design in Urban Areas and the Design General Development Policies are applied to a Performance Assessed residential and commercial development, it is considered the omission of these polices is a missed opportunity to raise the bar on imperative environmental design outcomes for new buildings and should be applied to all relevant residential and commercial Development types.

Proposed Code Changes

ADD PO 4.1, PO 4.2 and PO 4.3 of the Design in Urban Areas and Design General Development Policies to the Performance Assessed pathway for relevant “residential and commercial” development in all zones to ensure a consistent approach to the application of policy provisions from this module.

Amendment Instructions

Refer to ATTACHMENT A, and the corresponding Part of the Code and issue/topic identified

7 – Additional Recommended Inclusions

Spatial Application of Urban Tree Canopy & Stormwater Management Overlay

These Overlays do not apply to the Rural Neighbourhood or Township Zones in our Council Area, despite these zones displaying a compact residential form. We would suggest that the Commission consider localised application of these Overlays across non-urban areas. This will ensure that built up areas in various locations across the state can benefit from the outcomes sought by the policies within the Overlay.

Heat loading / roof colour

Energy efficiency policies should encourage light coloured roofs to minimise heat loading. Recent heat mapping demonstrates a significant difference between light and dark coloured roofs.

Historic and Character Area Overlay Policies

Most policies in the Historic and Character Area Overlay are worded very generically making them difficult to apply to developments. Additionally, most policies don't refer to the Area Statements which contain more useful policy guidance; PO 1.1 does refer to the Statement but this policy is very general and it would increase the weighting of the statements if other policies also referred to it.

8 – Issues identified in the AHC MTECA ‘call for issues’ but not addressed by the Amendment and other general issues

Desired Character Statements

Consideration should still be given to whether a Desired Character Statement Overlay could be developed with localised statements applied in a similar manner to Historic Area Statements.

Housing Diversity Neighbourhood Zone TNV

The TNV for this Zone in our Council is inconsistent with what Council requested in previous submissions on the Code. It should allow buildings up to 3 storeys to a maximum height of 12 metres.

Township and Township Mainstreet Zones

It is considered that the loss of Desired Character Statements impacted Adelaide Hills Townships disproportionately. It is considered that additional refinement of policy is necessary for promoting and enhancing the existing features of our regional and rural towns and their local context.

Privacy from Ground Level

The Code is lacking policy addressing privacy from ground level dwellings or habitable buildings which are raised above natural ground level or sit substantially higher than a neighbour’s yard.

Ancillary use thresholds

Some forms of uses traditionally considered ancillary (i.e. motorbike trails/parks on rural land) are causing impacts on amenity, could consideration be given to whether the legislation or Code can capture these specific examples as development as a means to mitigate their impacts.

ATTACHMENT A - PROPOSED CODE POLICY – AMENDMENT INSTRUCTIONS

1 – Adelaide Hills Subzone – land division – Policy Intent

Adelaide Hills Subzone

Within the Adelaide Hills Subzone amend DO1 to the following:

Desired Outcome	
DO2	Land division is sympathetic to the allotment pattern and <u>characteristics and is consistent with the median allotment size within the locality.</u>

Within the Adelaide Hills Subzone amend PO 2.1 to the following:

Land Division	
PO 2.1	DTS/DPF 2.1
<p>Allotments/sites created for residential purposes are consistent with the established pattern of division surrounding the development site to maintain local character and amenity. <u>Allotments/sites created for residential purposes achieve the median allotment size in the locality.</u></p>	<p>Development satisfies (a) or <u>and</u> (b):</p> <ol style="list-style-type: none"> 1. it will not result in more than 1 dwelling on an existing allotment 2. allotments/sites have an area the greater of the following (excluding the area within the access 'handle' if in the form of a battle-axe development): <ol style="list-style-type: none"> 1. 2000m² 2. the median allotment size of all residential allotments in the Adelaide Hills Subzone either wholly or partly within a radius of 200m measured from the centre of the main allotment frontage.

2 – Limited Land Division Overlay and Productive Rural Landscape Zone – land division (boundary realignment) – Policy Intent and Relevance

Limited Land Division Overlay

Within the Limited Land Division Overlay create PO 2.3 as follows:

General	
<p>PO 2.3</p> <p><u>Land division involving boundary realignment where no minimum site area is specified in the relevant Zone occurs only to:</u></p> <p>(a) <u>correct an existing anomaly in the placement of allotment boundaries;</u> <u>or</u> (b) <u>alter the boundaries in order to improve the management of the land for the purpose of primary production and/or the conservation of natural features.</u></p>	<p>DTS/DPF 2.1</p> <p>None are applicable.</p>

Within the Productive Rural Landscape Zone create PO 12.3 as follows:

General	
<p>PO 12.3</p> <p><u>Land division involving boundary realignments, which increase the capacity of the land for the purpose of primary production should occur only where:</u></p> <p>(a) <u>the allotments are of a size and configuration to support the existing and proposed land uses</u> (b) <u>water of sufficient quality and quantity is available to sustain the proposed use</u> (c) <u>the use will be compatible with adjacent or nearby uses of land.</u></p>	<p>DTS/DPF 2.1</p> <p>None are applicable.</p>

3 – Administrative Definitions – Neighbourhood-type zone

Within the Administrative Definitions amend the Neighbourhood-type zone definition as follows:

Term	Definition
Neighbourhood-type zone	<p>Means any of the following:</p> <ul style="list-style-type: none"> City Living Zone Established Neighbourhood Zone General Neighbourhood Zone Golf Course Estate Zone Hills Neighbourhood Zone Housing Diversity Neighbourhood Zone Master Planned Neighbourhood Zone Master Planned Township Zone Neighbourhood Zone Residential Park Zone Rural Living Zone Rural Neighbourhood Zone Rural Settlement Zone Rural Shack Settlement Zone Suburban Neighbourhood Zone <u>Township Zone</u> Township Neighbourhood Zone Waterfront Neighbourhood Zone Urban Renewal Neighbourhood Zone

4 – Productive Rural Landscape Zone – Detached Dwelling – Interface Between Land Uses

Within the Productive Rural Landscape Zone, amend Table 3 – Applicable Policies for Performance Assessed Development for a detached dwelling by including following policy linkages:

General Development Policies – Interface between Land Uses [Interface with Rural Activities]: PO 9.1, PO 9.2, PO 9.3, PO 9.4, PO 9.5, PO 9.6, PO 9.7

5 – Productive Rural Landscape Zone – Agricultural Buildings – Policy Review

Within the Productive Rural Landscape Zone, amend Table 1 – Accepted Development Classification criteria to provide additional guidance relating to siting of Agricultural Buildings.

Class of Development	Accepted Development Classification Criteria
<p>Agricultural building Except where any of the following apply:</p> <ul style="list-style-type: none"> • Character Area Overlay • Coastal Areas Overlay • Gateway Overlay • Hazards (Flooding) Overlay • Heritage Adjacency Overlay • Historic Area Overlay • Local Heritage Place Overlay • Ramsar Wetlands Overlay • Significant Landscape Protection Overlay • State Heritage Area Overlay • State Heritage Place Overlay 	<ol style="list-style-type: none"> 9. The development will be located on an allotment having an area of at least 10ha 10. The development is set back at least 50m from an allotment boundary 11. Building height - does not exceeding 10m above natural ground level 12. Total floor area - does not exceed 250m² 13. If clad in sheet metal-is pre-colour treated or painted in a non-reflective colour 14. <u>The development is located below ridgelines</u> 15. Does not involve- excavation exceeding a vertical height of 1m; or filling exceeding a vertical height of 1m, and, if the development involves both excavation and filling, the total combined excavation and filling must not exceed a vertical height of 2m 16. Does not involve the clearance of native vegetation 17. The development will not be located within the extents of the River Murray 1956 Flood Level as delineated by the SA Property and Planning Atlas.

Within the Productive Rural Landscape Zone, create– Deemed – To – Satisfy Classification criteria 11.1 to inform siting and design outcomes for Agricultural Buildings that are eligible for a DTS pathway.

Built Form and Character	
<p>PO 11.1 Large buildings designed and sited to reduce impacts on scenic and rural vistas by:</p>	<p>DTS/DPF 11.1 None are applicable. <u>Large buildings:</u></p>

<ul style="list-style-type: none"> (d) having substantial setbacks from boundaries and adjacent public roads (e) using low reflective materials and finishes that blend with the surrounding landscape (f) being located below ridgelines. 	<ul style="list-style-type: none"> (a) <u>if clad in sheet metal-is pre-colour treated or painted in a non-reflective colour</u> (b) <u>are located below ridgelines.</u>
---	---

Within the Productive Rural Landscape Zone, amend Table 3 – Applicable Policies for Performance Assessed Development for agricultural buildings by including following policy linkages:

Productive Rural Landscape Zone – Land use and Intensity PO 1.1

Productive Rural Landscape Zone – Built Form and Character PO 11.1

6 – Design in Urban Areas and Design – General Development Policies – Linkages

Within all relevant zone, amend Table 3 – Applicable Policies for Performance Assessed Development by inserting the following Performance Outcomes for relevant residential and commercial development:

General Development Policies – *Design in Urban Areas [Environmental Performance] PO 4.1, PO 4.2 PO 4.3*

General Development Policies – *Design [Environmental Performance] PO 4.1, PO 4.2 PO 4.3*

ENCLOSURE B
ADELAIDE HILLS COUNCIL
RESPONSE TO THE MTE CODE AMENDMENT

Code Amendment Section	Summary of Proposed Change	AHC Comments
2.3.2.9.7. Dwellings within the Rural Intensive Enterprise Zone	Review of the restricted classification of a dwelling within the Rural Intensive Enterprise Zone to align with the new principles.	Supported
2.3.2.9.2. Land Division within the Limited Land Division Overlay	Review of the restricted classification of land division in zones where the Limited Land Division Overlay applies to align with the new principles.	Not Supported This approach is considered to be strategically misaligned (as expressed in the covering letter). The restricted pathway provides a better procedural framework to deal with these applications and it sends a strong message about protecting primary production land across the State. By way of comparison the Restricted Development trigger for Land Division in the Hills Face Zone has not been dealt with in the same manner by this Amendment, and we would seek to understand how the circumstances differ and whether the approach should be consistent given the comparative significance of these Zones.
2.3.2.6. Rural Zone – Land Division / Boundary Realignment – Linkages	Feedback has suggested that additional policy guidance is required for the assessment of Land Divisions, including Boundary Realignments within the Rural Zone.	Supported – subject to comments A similar review to strengthen the policy relating to Boundary Realignments in the Productive Rural Landscape Zone should also be considered as outlined in Section 2 of Enclosure A.
2.3.2.9.1. Industry listed as a restricted development classification	Proposal to remove restricted trigger for industry from a range of employment type zones and the Township Zone	Partially Supported – subject to comments While the rationale for this change is understood for employment type zones, it is only cautiously supported for the Township Zone. It is noted that the predominant land use of Adelaide Hills Township Zones is residential. To ensure protection to the amenity of these localities there is a desire for more targeted zone policy regarding industry uses to support this change.
2.3.2.9.10. Hills Face Zone – Various land uses	Review of the restricted classification of all land uses within the Hills Face Zone to align with the new principles.	Supported – subject to comments The changes are supported, however, by way of comparison there are questions as to whether the Restricted Development Trigger for land division is consistent with the

		proposed changes in rural zones relating to land division, as both zones are significant in terms of landscape.
2.3.2.10.1. Notification Tables – Minor Development	Concerns were raised by council planners and accredited professionals about public notification requirements to adjoining landowners for relatively minor applications which 'trip' into a performance assessed pathway under the Code. This creates additional work for planning authorities over and above notifications that occurred under the former development system.	Supported – subject to comments The changes are supported, subject to a strengthening of policies relating to ancillary structures.
2.3.2.10. Notification Tables – Table 5 – Procedural Matters (PM)	Proposing tailored column for minor and anticipated development within zones	Supported Note: The additional inclusion of Minor determinations opens Councils up the potential for more judicial reviews from neighbours that have missed out on notification because of reliance on the new clause. For this reason, there may be some hesitation to apply the clause until there is some clarity on its application, likely via case law etc.
2.3.2.10.3. Notification Tables – Frost Fans	In the call for submissions, frost fans were raised by one Council as a land use activity that was being unnecessarily bogged down by notification. However, as frost fans are common cause for complaint it is not recommended at this time to depart from the position adopted in the Phase 3 (Urban Areas) Code Amendment.	Supported There are many variables that come into play when considering the impact of frost fans on nearby sensitive receivers, including local topographical and climatic characteristics, the type and number of fans used and the way they are operated. For these reasons notification is an important procedural step for this type of development.
2.3.2.10.6.6. Productive Rural Landscape Zone Table 5 - Procedural Matters (PM) - Notification	Exemption - Pursuant to regulation 47(6)(c) of the Planning, Development and Infrastructure (General) Regulations 2017, the requirement to place a notice on the relevant land under section 107(3)(a)(ii) of the Planning, Development and Infrastructure Act 2016 does not apply in the Productive Rural Landscape Zone. Placement	Supported It is considered that this exemption is consistent with the requirements of comparable zones such as the Rural Zone. The effectiveness of having notification signage on 80km/h rural roads was always questioned, particularly where adjoining neighbours will continue to be notified directly in accordance with Practice Direction 3. However, understand that an increase in the 60m notification radius for public notification might be an equitable approach to offset the notice exemption.

<p>2.3.2.11. Building Height – TNV and context – Policy refinement Suburban Mainstreet Zone</p>	<p>Most zones include a policy guiding building heights, some of which require a development to satisfy two outcomes: a building height specified in a Technical and Numeric Variation (TNV) and a positive response to the local context.</p>	<p>Not Supported</p> <p>Medium rise is defined as 3-6 storeys whereas the Suburban Main Street Zone areas in AHC have a TNV of 2 storeys.</p> <p>Note: The policy seeks development which “complement(s)” rather than is “consistent with” the main street character. As such, this policy (as amended) could allow building heights which exceed the TNV and consequently poor development outcomes.</p>
<p>2.3.2.12. Building Height, Building Wall Setback and Wall Height – Policy Review</p>	<p>South facing terminology inconsistencies.</p> <p>Wall height measurement inconsistencies.</p>	<p>Supported</p> <p>Supported subject to comments</p> <p>There is concern about the potential maximum wall heights (particularly boundary walls) which can be achieved where fill up to 1m high, is potentially resulting in boundary walls which are ~4m above neighbouring ground level and 11.5m long. The potential impact of this is not considered reasonable. In addition, ancillary buildings criteria should have a measurement taken from NGL to minimise impacts on neighbouring properties, particularly through DTS pathways.</p>
<p>2.3.2.13 Building Walls and Dwelling Walls – Policy Review</p>	<p>Replace ‘dwellings’ with ‘buildings’ to ensure setback provisions capture all forms of buildings.</p>	<p>Supported</p>
<p>2.3.2.20. Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages</p>	<p>Removal of Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay from the list of Overlay exclusions for Deemed-to-Satisfy Horticulture where it appears in Table 2 of all relevant Zones. Add Overlay DTS/DPF provisions to offset removal of the exclusion.</p>	<p>Supported</p>
<p>2.3.2.21. Interface Height – Multiple Zones: Policy and TNV – Policy Review</p>	<p>To clarify the intent of the interface height building envelopes and create consistency across the Code, it is recommended to add ‘(except where this boundary is a street boundary)’ to the end of the explanation sentence within all interface height policies to provide consistency between the zones and enable streetscape character to be guided by the above PO.</p>	<p>Supported – subject to comments</p> <p>Refer to Enclosure A Section 3 and the need for the Township Zone to be included in the administrative definitions so that development within an adjacent Township Mainstreet Zone adequately responds to this policy criteria.</p>

<p>2.3.2.22. Land Division – Site Contamination – Policy Relevance and Linkage</p>	<p>Part 9.1 of the Code (Referral Body: Environment Protection Authority) specifies that a referral is required for Performance Assessed Land Division in certain circumstances, however, the policy provisions of the Site Contamination General Development Policies are not linked to this development type, which makes it difficult for a user to ascertain whether a referral would be required.</p>	<p>Supported</p> <p>Note: Despite recent refinement Practice Direction 14 is still proving challenging to apply for a range of development types. Further refinement is recommended to improve clarity around when a Preliminary Site Investigation is and is not required.</p>
<p>2.3.2.23. Non Residential Outbuildings – New Policy and Assessment Pathways</p>	<p>While assessment pathways for outbuildings currently exist, relevant policies are typically related to residential outbuildings. As such, non-residential outbuildings will often default to Performance Assessed where they are not ancillary to a dwelling (e.g., a shed for a church or a school in a Neighbourhood-type zone).</p>	<p>Supported – subject to comments</p> <p>It is necessary for the Township Zone to be captured by these changes, can be necessitated by additions to the Neighbourhood Type Zone definition (refer to Attachment A).</p>
<p>2.3.2.25. Pool Fencing – Accepted Development Pathway</p>	<p>Amend Table 1 such that swimming pool safety features associated with a pool are accepted</p>	<p>Supported</p>
<p>2.3.2.26. Primary Street Setback – Use of Building Line</p>	<p>Amend front setback policies to allow dwellings to be the average setback of both adjoining dwellings where one of those setbacks is a secondary street setback and removing clause relating to adjoining dwellings separated by a road.</p>	<p>Supported</p> <p>Note: reference to ‘primary street setback’ criteria for development in the rural context is problematic due to the way buildings typically orientate to take advantage of views and landscape features etc. with limited relationship to the street.</p>
<p>2.3.2.28. Tourist Accommodation – Total Floor Area – Rural Zones</p>	<p>Feedback received expressing concerns with differences in policy interpretation for total floor area of Tourist Accommodation in the Rural Zone and Productive Rural Landscape Zone</p>	<p>Supported – subject to amendment</p> <p>It is positive to see the focus on policy improvement for Tourist Accommodation in rural zones and the change is supported. However, the policy contained within DTS/DPF 6.3 (c) still refers to no more than one ‘facility’. The meaning of the term is ambiguous in this context and should be either refined or deleted.</p> <p>Further discussion regarding these policies has considered whether there is merit in seeking to prevent the conversion of tourist accommodation to private dwellings through appropriate design responses. General Development Policies – Tourism Accommodation PO 3.4 addresses this issue for development in areas constituted under the National Parks and</p>

		Wildlife Act 1972; however, given the sections heading it would not be unavailable for a majority of Tourist Accommodation applications, particularly those within the Productive Rural Landscape Zone. It is recommended that this be reviewed with consideration to expanding the scope of these provisions to apply to all tourist accommodation, particularly those in rural zones.
2.3.3.4. Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 - Linkages	Correct inconsistencies and errors in application of H(F)O policies	Supported
2.3.3.5. Heritage Adjacency Overlay - Referral	Amend referral wording to clarify the Relevant Authority can determine whether development material affects SHP	Supported
2.3.3.8. Mount Lofty Ranges Water Supply Catchment (Area 1 and 2) Overlay - Policy intent	Removing duplication in wording.	Supported
2.3.3.10. Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral	Addresses lack of referral trigger for workers accommodation and to ensure that only applications where two habitable buildings concurrently on the same site are referred.	Supported – subject to amendment For clarity it is recommended that additional wording be included to capture this example through the addition of 'decommissioning' after the word demolition.
2.3.3.12. Prescribed Water Resources Area Overlay – Referral	An error exists in the Procedural Matters (PM) – Referrals table within the Prescribed Water Resources Overlay, whereby the overlay does not include an exemption for developments that have already been granted access to water as is provided in the various other Prescribed Water Overlays in the Code.	Supported This change addresses an anomaly that was resulting in industry development within an Employment Zone connected to mains water being referred to the DEW.
2.3.4.4. Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways	Provide policies and assessment pathways specific to decks in urban, township and rural areas.	Supported

<p>2.3.4.6. Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review</p>	<p>Include minimum dimension for soft landscaping in Design in Urban Areas 19.1. Amend DPF 22.1 to clarify the soft landscaping requirement applies to the whole site, not individual sites for group / Residential Flat Buildings.</p>	<p>Partially supported – subject to amendment The effect of this policy amendment / interpretation is that some dwellings in a group dwelling or RFB could have little or no direct access to soft landscaping which could lead to poor amenity and urban heat outcomes. This should be reconciled with refinement to DPF 22.1(a)</p>
<p>2.3.4.7. Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review</p>	<p>Reword policy relating to driveway angle to clarify how to apply the policy</p>	<p>Supported</p>
<p>2.3.4.8. Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review</p>	<p>Create new policy to address heavy vehicle parking.</p>	<p>Supported</p>
<p>2.3.4.11. Land Division – General Development Policies – Linkages</p>	<p>Include Land Division PO 2.8 and 3.11 in relevant Table 3 (currently missing)</p>	<p>Supported</p>
<p>2.3.7.1. Ancillary Accommodation – Amend</p>	<p>Definition amended.</p>	<p>Supported – subject to amendment The proposed change to the definition involving the addition of ‘is not a self-contained residence’ has limited practical impact and only replicates the dwelling listing in the corresponding exclusion column. A better approach might be to express clearly what functional areas within a building would need to be omitted to avoid being defined a self-contained residence, much like the approach of (c) under this definition. A revised criteria (b) could read as follows:</p> <p style="text-align: center;"><i>excludes functional areas that are generally associated with a self-contained residence such as kitchens and laundries. . .</i></p> <p>In addition, greater clarity should be provided to give distinction between ‘ancillary accommodation’, ‘outbuilding’ and ‘dwelling addition’ for freestanding ‘rumpus room’ or ‘studio’ style development, which are a reasonably common form of development. Currently the approach is clunky in terms of which elements should be selected to process such a development.</p>

2.3.7.2. Caravan and Tourist Park – Amend	Definition amendment to add Tourist Accommodation to the inclusion’s column.	Supported
2.3.7.4. Educational Establishment – Amend	Definition	Supported – subject to amendment There is general support for the changes, one issue that arises is how the difference in car parking rates is to be reconciled in Transport, Access and Parking Table 1 – General Off-Street Car Parking Requirements, as there are currently different rates for childcare centres and preschools.
2.3.7.8. Renewable Energy Facility – Policy Refinement	Amendment to the restricted table within the Conservation and Hills Face Zone to add the exclusion of domestic use for solar photovoltaic panels (roof or ground mounted) and battery storage facility.	Supported
2.3.7.9. Tourist Accommodation – Amend	Definition amended to include caravan and tourist parks and ancillary facilities.	Supported
2.3.7.10. Workers Accommodation – Amend	Definition amended to assist with interpretation.	Supported
2.3.7.11. Heavy Vehicle Parking – New Definition	New definition created to assist with the application of new policy proposed to address this use.	Supported
2.3.7.12. Function Venue – New Definition	Definition	Supported – subject to amendment The new definition is supported. With respect to its application there has been discussion about whether the plural nature of the definition is deliberate and would reasonably afford one off functions as an ancillary activity to the primary use. This definition does not appear to capture a <u>one-off</u> large-scale event (i.e., music concert). If this is the intent could an

		exclusion (Column D) to the definition of Function Venue be included for such events. It is acknowledged that it would likely be more effective to address this in the PDI Regulations as an exempt form of development.

Mr. Craig Holden
Chair SA Planning Commission
GPO Box 1815
Adelaide SA 5001

Dear Mr. Holden

Re: Miscellaneous Technical Enhancement Code Amendment

Firstly, I would like to take this opportunity to congratulate the State Planning Commission (SPC) as well as Planning and Land Use Services (PLUS) on undertaking this review so promptly, following the implementation of the Planning and Design Code (Code). The scale of this inaugural review is significant and seeks to create widespread efficiencies throughout the Code. This is a beneficial initiative and a process, which will allow the Code to be refined as well as respond to changes in the industry overtime.

This response focuses on the concerns previously flagged via a response provided in August 2021. It is noted some of the feedback we provided has been considered which is positive, including:

- Seeking refinements to Overlays to avoid development unnecessarily being kicked out of Deemed to Satisfy pathways
- Catalogue of State Heritage listings
- Greater consistency relative to Referral triggers

Please find below a list of matters previously flagged which have not been addressed. We request the amendment take the below matters into consideration through the post consultation/refinement period.

Public Notification:

- Public notification on the basis of length or height of boundary builds should trigger notification to "adjoining" landowners only, rather than "adjacent" land owners (60metre rule) noting the impact of such development is generally limited only to abutting neighbouring properties.
- Our concerns are noted and the matter has been the subject of debate. The approach taken is to exclude various minor forms of development from requiring notification. This will not specifically address the issue of adjoining versus adjacent and the associated administrative burdens.

- Public notification for retaining walls should be triggered on height rather than length, in particular within Master Planned Neighborhood type zones where associated fence and retaining wall construction to all side and rear boundaries is commonplace.
- **Not specifically addressed – noted that related matters have been addressed.**
- The following public notification trigger is difficult for relevant authorities and applicants alike to interpret:
 - Township Main Street DTS/DPF 3.2** Buildings constructed within a building envelope provided by a 45 degree plans measured from a height of 3 metres above natural ground level at the boundary of an allotment used for residential purposes in a neighbourhood type zone as shown in in the following diagram (except where this boundary is a southern boundary of where this boundary is a primary street boundary).*

The same applies for DST/DPF 3.3:

***Township Main Street DTS/DPT 3.3** Buildings on sites with a southern boundary adjoining an allotment used for residential purposes in a neighbourhood type zone are constructed within a building envelope provided by a 30 degree plane grading north measured from a height of 3m above natural ground level at the southern boundary as shown in the following diagram:*

- Recommend re-wording to “Plain English” for ease of understanding by relevant authorities and applicants.

Further, it is difficult to determine whether the above provisions are satisfied at verification (when public notification is required to be determined) unless the applicant provides a plan clearly demonstrating compliance with these provision.

Additionally, clarification is required regarding whether this provision only applies when a new build is proposed (rather than a change of use of an existing building which may not satisfy the above provisions).

- **Not specifically addressed – Noted that a change to the term Primary Street Boundary is proposed. This is not considered sufficient and requires updating.**
- Concerns that whilst a boundary build exceeding 3 metres may trigger public notification, the construction of a 200-lot land division does not. It is considered that the impact on the public of a land division would arguably have more impact, however land divisions are specifically excluded from requiring public notification across the board by Table 5 for each Zone.
- **Not specifically addressed – Code Amendment appears to focus on reducing the need for ancillary forms of development from requiring notification.**

Assessment Pathways:

- Retaining walls and fences should be a combined element for selection. This is a combined DAP and Code issue, noting that there are inconsistencies in the Code for the provision of assessment pathways for
 - retaining walls vs
 - fences vs
 - combined retaining wall and fence

Whilst there may be an assessment pathway in some instances for a combined fence and retaining wall, there is no option in the DAP to select this as an element.

- **Not addressed.**
- It is requested that if an element of development is listed as an envisaged use within the Zone, there should be a prescribed assessment pathway (Performance Assessed as a minimum) for each of these elements. Envisaged development is frequently defaulting to All Other Code Assessed development.
- **Not addressed – Noted that updates made relative to building alterations and efficiencies made in this regard. However, does not address the matter that all envisaged uses should have a prescribed assessment pathway.**
- If an element does not satisfy an Exempt, Accepted or Deemed to Satisfy Pathway (generally by virtue of the presence of an Overlay, or not satisfying dimension criteria) there should be a prescribed Performance Assessed pathway instead of defaulting to All Other Code Assessed development. Some examples of this area:
 - Decks
 - Undefined dwellings
 - Verandahs
 - Carports
 - Swimming pools
 - Internal fit outs/Building work where alterations are visible from the street
- **Not specifically addressed – noted that related matters have been addressed.**

Definitions Review:

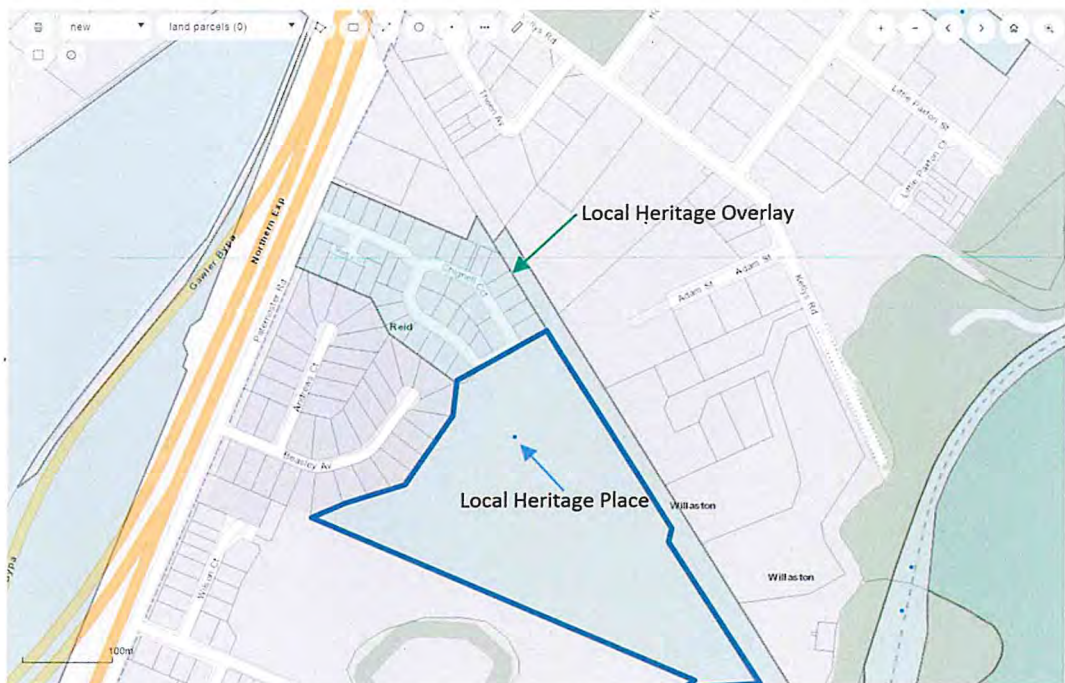

- Any element which has a defined assessment pathway should have a definition. This is frequently not the case, and thus can lead to complications when defining the element of development and thus assessment pathway. Request definitions for:
 - Special events
 - Distillery
 - Brewery
 - “Boundary build” i.e. is a gutter on a boundary a “boundary build” and thus have the potential to trigger public notification? Is a 100mm side setback for a closed structure a “boundary build”, additionally noting that such development may not satisfy the National Construction Code
- **Not specifically addressed – noted that related matters have been addressed.**

Policy refinements:

- Regulated Tree Overlay and Flooding (General) Overlays are not being picked up as relevant policy provisions when land divisions are proposed and therefore can't be considered in the assessment of a land division. However, the wording of the policies suggest they should be considered when assessing land division applications.

In particular, Regulated/Significant Tree provisions (contained within the Regulated/Significant Tree Overlay) are only called up when Tree Damaging Activity is selected as an element of development process. This can result in the creation of allotments which are not necessarily fit-for-purpose due to the location of a Regulated or Significant Tree. Tree Damaging Activity may not occur as a result of the land division proposal itself, but may hinder reasonable and expected development at a later date (i.e. construction of dwelling)

- **Not addressed.**
- Incorrect application of the Local Heritage Place Overlay. It applies to half of the suburb of Reid, rather than just the location of the Local Heritage Place. This in turn effects the application of the Heritage Adjacency Overlay.

- **Not addressed.**

State Heritage:

- A Historic Area Statement for the Church Hill Area should be elevated. It is noted that given the Historic Area Overlay does not apply over Church Hill State Heritage Area (only the State Heritage Area Overlay), there is no Historic Area Statement for the relevant authority to consider in the assessment of applications.

Recommend that the Historic Area Overlay apply over Church Hill which would allow the Light Historic Area Statement (Ga3) or a variation of specific to Church Hill to be called up in assessment provisions.

- **Not addressed.**
- It was understood during the consultation stage of the Planning and Design Code that the application of the Historic Area Statements would not be required as a "Statement of Significance" and other relevant documentation would be published by Heritage SA. It is understood that these documents have not been prepared

for the Church Hill State Heritage Area to date, however it is appreciated that DEW is currently working through a guide in this space.

- We wish to take this opportunity to highlight a need for the Heritage Standards to be treated as a priority.
- It is noted that the definition of a State Heritage Place under the *Planning Development and Infrastructure Act 2016* includes “a place within an area established as a State Heritage Area under the *Heritage Places Act 1993*”. However, the State Heritage Place Overlay does not apply to these places within Church Hill. Only the State Heritage Area Overlay applies to the Church Hill State Heritage Area with the exception of 2 places. The definition outlined within the Code does not appear to reflect the applications of the Overlays within the Code and on SAPPA.
- Not addressed.

Practice Directions

It is noted that amendments to the Practice Directions may be outside the scope of the subject Code Amendment, nevertheless the following matters/recommendations are provided:

- Recommend that the Urban Tree Fund Practice Direction be updated to provide guidance relative to planting trees in easements. Recommend that the potential for payment into the Urban Tree Fund be possible for allotments impacted by the location of easements which would restrict tree planting locations.
- Catchment for public notification is too large in an urban setting, noting the definition of Adjacent Land encompasses 60metres from the subject site. For some minor developments (including boundary build triggers) this is resulting in the notification of a substantial number of unaffected land owners. Notification to ‘adjoining owner’ may be a more appropriate approach in this regard.
- Site Contamination Practice Direction – there is some confusion regarding residential land divisions within Rural Zones where an existing dwelling is located on site. Additionally there is some concern that the requirement for a site contamination auditor to sign the site contamination declaration may be too onerous.
- Not addressed.

If you have any questions that require further clarification, please do not hesitate to contact Chris Hannaford – Senior Strategic Planner on _____ or via e-mail at _____

Yours faithfully

Henry Inat
Chief Executive Officer

My overall view is: I support the Code Amendment

Comments: Just one comment specific to us. I have noticed that Traffic Generating Development Overlay kicks land division out of the DTS Pathway within the General Neighbourhood Zone. Given DTS Land Division in the GN Zone is limited to maximum 5 allotments, there is nil chance of the 50 allotments or greater being created which triggers the requirements of the overlay. Streamlining this would open up a huge potential to approve basic land divisions outside of Council which meet the code requirements which are currently stopped by this issue. At present, I have noticed about 50% of DTS possible divisions are kicked out via this method within the General Zone.

Comments: I currently own land in the shack settlement area of Walker Flat and in particular on Rob Loxton Road. My block is surrounded by residences and my block has a width of 125 meters and a depth to the river of 110 meters. I would like to sub divided the block into 3 parcels which would each have a width of approximately 33 meters to allow 2 new dwellings to be built. There has been subdivision occur at the far end of Rob Loxton Road and i believe a proposal of this nature should not be restricted so long as the environment is protected.It benefits the community and the economy .

Comments: Part 8 Administrative Terms has a definition of neighbourhood type zones. 'Neighbourhood type' is repeatedly referenced in the Code. It is therefore a bit confusing that there is a Business Neighbourhood Zone, however this is not included in Part 8. Suggest either adding this zone to the definition or changing the name of the Business Neighbourhood Zone to eg Business Zone only.

ANCILLARY ACCOMMODATION

Ancillary accommodations confusing for planning officers and the general public in the current and previous planning framework.

A greater level of clarity in definitions and policy is required. The current proposed amendments to the code do not address this.

Currently;

Ancillary accommodation –

Means accommodation that:

- is located on the same allotment as an existing dwelling;
- contains no more than 2 bedrooms or rooms or areas capable of being used as a bedroom; and
- is subordinate to and shares the same utilities of the existing dwelling.

Excludes a dwelling

Dwelling

- Means a building or part of a building used as a self-contained residence.

Relevant Planning and Design Code (design) provisions seeks ancillary development further achieves additional criteria; Ancillary to a dwelling erected on the site; have a floor area not exceeding 60sqm etc.

Applicants are seeking to construct buildings with all the elements of a dwelling and seek to call them ancillary accommodation or other forms of development (studio), but not a dwelling.

Their argument can include description of rooms on floor plans, nature and confirmation it will not be used as a residence, removal of laundry elements or only including kitchenette.

In addition, this is leading to future use of the buildings as accommodation in the form of short stays platforms such as Airbnb. Accordingly the ancillary accommodation/building may be considered to remain (ancillary accommodation) such if only occupied sporadically: let out during holiday periods to short term occupants. This is much like renting a dwelling via Airbnb where this would not constitute development due to the sporadic nature, in essence it remains consistent with the approved use. This is in consideration of the Advisory Notice – Building 04/16.

The proposed amendments to the definition in the code is insufficient.

Additional criteria should be included to ensure that the building will only be used for the purposes of ancillary accommodation and that this can be clearly established.

I would be happy to discuss in more details.

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: Member of the public

Given name: CHRISTINE

Family name: SAPWELL

Organisation: ADJOINING LAND OWNER TO APPLICATION ID 22009490

Email address:

Phone number:

My overall view is: I do not support the Code Amendment

Comments:

I live on Allotment Z, Pt. Section 3879 in the Hundred of Munno Para. I am an adjoining land owner to this Application 22009490 and an earlier application for a similar land use approval on Bain Road. My objection is because of a rat infestation identified by the company who service my vehicle. This vehicle has suffered damage due to rats infesting the material used to buffer road noise in the wheel arches. I took steps baiting both in the car engine bay and areas nearby where bait could be laid without risking other wildlife. I now park my car with the bonnet up to discourage further damage to my car. As I'm aware of many housing developments planned or already in progress near this proposed land use I am not approving of this change of land use because of the increased risk of vermin infestation. I have lived on my property since February, 1969 and never before experienced rat infestation. This has occurred and is still occurring now. I raised this concern when the Bain Road application was sent to me and was reassured that Vermin Control would be part of the requirement for changed land use approval. The reason I have not alerted the Council to this problem before is that I don't know how to prove the rats come from that development. However, in 53 years it has never occurred before. The mechanics who service my car have suggested leaving the bonnet open. That hasn't stopped the problem. These same mechanics have now suggested I spray the engine bay with WD40 and this has also been done. It is very inconvenient for me, approaching 80 years of age, to have to deal with a rat infestation and leaving my car with the bonnet open. My objection to this current application for a change of land use is an increased incidence of vermin infestation if yet another storage yard is constructed near residential homes. It will certainly cause future issues with home owners in the area and devalue the area as a desirable place to build and live.

My overall view is: I support the Code Amendment

Comments: I reside on Chesser Row, Paralowie SA 5108. It is a 1 way street, which does not allow street parking. Many of the residents on Chesser Row, Paralowie SA 5108 park our vehicles across the closest street and it has come to our attention that residential development will be initiating within the next 6-12 months. My concern, as well as many other residents on Chesser Row, Paralowie SA 5108, is that once the development begins and as well as completed, we will no longer have parking close enough to our homes. Unfortunately, our homes do not include a standard drive way where we can park our vehicles and many residents of Chesser Row, Paralowie SA 5108 are families with 2 vehicles to park. Myself and other residents of Chesser Row, Paralowie SA 5108 strongly recommend that the Salisbury Council accommodates us residents to appropriate car park options. Whether a car park permit is available to park on Chesser Row, Paralowie SA 5108 or a designated public car park is developed for us residents. This is going to be a large inconvenience for us residents as well as visitors and contractors once new residential development begins and is completed. It will be an immense safety hazard for residents, contractors and the public if vehicles are not accommodated. Myself and other residents of Chesser Row, Paralowie SA 5108 ask for a resolution in the matter and are extremely grateful if can be resolved as soon as possible. Thank you.

From: [David Bailey](#)
To: [DTI:PlanSA Submissions](#)
Subject: Submission - Miscellaneous and Technical Code Amendment - Ancillary Accommodation
Date: Wednesday, 14 September 2022 7:59:05 PM

Hello

I write with respect to the proposed refinements to ancillary accommodation.

I have several clients interested in this form of development. I acknowledge the intent of the refinements to clarify that ancillary accommodation is not technically a 'dwelling' in so far as the ancillary accommodation depends on sharing utilities. Having experienced some advice at odds with the intent based on the current Code, principally, I support the intent of the proposed clarifications.

I am not a legal practitioner but having been in ERD Court on an appeal this year and written Code policy and being on an Assessment Panel for the last seven years, I wonder if:

1. the Column B should say 'Means accommodation **able to be lived in independently** that:'
2. I question the proposal to add to Column B 'b **That is not a self contained residence**' as is this not what Column D 'Dwelling' does? If 'b' is to continue, which I don't think it should, it should be 'b That is not a dwelling'. Whilst this in effect repeats the purpose of Column D, it uses the same terminology as Column D and thus by not adding a further term - that of 'self contained dwelling' - it does not add confusion.

The main work is done in Column B by (d) being linked to the start that in essence says the ancillary accommodation is subordinate to principal dwelling and must share utilities.

1. I am unsure if I am proposing it but I am wondering if the point on sharing utilities should be about sharing utilities '**on the same site**'? Should these words also be added?

I wonder if along with the Code itself, **explanation in a Practice Direction or other suitable guideline** should be considered as well.

No matter what terminology is settled on, please ensure **review by expert solicitors on these matters**.

Keep up the good work and great to see this kind of matter being tackled in a whole of SA timely manner.

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: State Agency

Given name: Gavin

Family name: Leydon

Organisation: SA Heritage Council

Email address:

Phone number:

My overall view is: I am impartial about the Code Amendment

Comments: Further to the deputation of the SA Heritage Council to the State Planning Commission on 15 September 2022 we write in relation to a matter concerning PO 6.1 in the Local Heritage Place Overlay, being the demolition test. Unlike PO 7.1 in the State Heritage Place Overlay, PO 6.1 presently allows an owner to deliberately neglect their premises in order for it to fall into disrepair & to then contend that the LHP should be demolished on the basis that it is irredeemably beyond repair. This was not the intention of this Performance Outcome as first described in the draft Practice Guideline released by the Commission in October 2019. It is submitted that the test for demolition of a LHP in PO 6.1 should mirror that for a State Heritage Place in the equivalent PO 7.1, that is to say, by providing that the irredeemable structural condition of the place must have resulted from actions & unforeseen events beyond the control of the owner (or any other person). We invite the Commission to consider such an amendment as part of this Code amendment.

Dear Sir / Madam

Submission - Miscellaneous Technical Enhancement Code Amendment – Rural Shack Settlement Zone

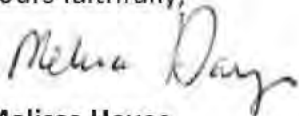

I write to you regarding our submission on the Miscellaneous Technical Enhancement Code Amendment by the State Planning Commission, which is currently on consultation.

In August 2021, Botten Levinson Lawyers acting for this firm Copdale Pty Ltd, submitted our comments and requested amendments to be included as part of the Miscellaneous Technical Enhancement Code Amendment. Our comments related specifically to the River Shack Settlement Zone. A copy of this letter is enclosed.

I take this opportunity to confirm that Copdale Pty Ltd supports the proposed amendments relating to the River Shack Settlement Zone.

Please do not hesitate to contact me if you have any further queries or wish to discuss our submissions.

Yours faithfully,

Melissa Hayes

Dear Sir/Madam

Submission – Miscellaneous Technical Enhancement Code Amendment – Rural Shack Settlement Zone

This firm acts for Copdale Pty Ltd.

Our client owns land within the Rural Shack Settlement Zone at White Sands, namely –

- Allotment 1091 Jervois Road, White Sands being the land comprised in CT 6204/315 (approximately 30,000m² in size);
- Allotment 29 Riverglen Drive, White Sands (approximately 3600m²); and
- Allotment 126 Marina View Road, White Sands being the land comprised in CT 5178/560 (approximately 60,000m² in size).

Additionally, our client is the contracted purchaser of allotment 30 Riverglen Drive, White Sands (approximately 4300m² in size) (together with the three allotments owned by our client referred to in this letter as **the Land**).

Our client has recently become aware of substantive policy changes effected in relation to the Land by the adoption of the Planning and Design Code in March 2021. Land division which was *merit* development under the Development Plan is now restricted development under the Code. These changes have significant consequences for our client.

We are instructed to bring these policy changes to the Commission's attention, and to request that the Commission initiate an amendment to the Code either as part of the upcoming Miscellaneous Technical Enhancement Code Amendment, or as a minor amendment correcting an error in the transition from the old scheme to the new.

Our client submits that the classification of land division in the Rural Shack Settlement Zone as a restricted form of development is a significant and substantive policy change of a kind that the Commission said would not occur in the Code adoption process without being highlighted in policy discussions during the consultation process.¹

¹ See Part 6.1 of the Draft Planning and Design Code, Phase Three (Urban Areas) Code Amendment – Update Report

The change in policy is an irregularity in the transition to the Planning and Design Code which can and should be corrected by the Minister.

Zoning prior to March 2021 (Development Plan)

1. Prior to the commencement of the Code in March, the Land was principally located in the River Murray Settlement Zone (Precinct 8 River Glen) under the recently revoked Murray Bridge Council Development Plan².
2. In the River Murray Settlement Zone land division was *non-complying* "within 50 metres of the River Murray water's edge at normal pool level", but was otherwise *merit* development. The Zone policy provided (*my emphasis in bold*):

24. *The following forms of development are envisaged in the precinct:*

- *boat launching facilities*
- *boat construction, repair and/or servicing within the River Glen Marina*
- **dwelling**
- *the provision of a range of public and private recreation facilities*
- **holiday house**
- *marina and associated service facilities*
- *office in association with the River Glen Marina*
- *recreation areas*
- **residential allotments**
- **tourist accommodation.**

25. *The precinct should primarily be developed for **tourist accommodation, residential development including holiday houses, marina and related service facilities and waterfront recreation areas in accordance with Concept Plan Map MuBr/12 - River Murray Settlement Zone (River Glen).***

3. This Zone was introduced into the Development Plan in 2009 to expressly facilitate the development of land for low density residential and/or tourist accommodation. These envisaged uses are evident from the above extract of the relevant principles of development control under the Development Plan. Further, the area covered by the Zone includes large undeveloped allotments (including our client's land) comprising land more than 50 metres from the River's edge. The division of that land for residential allotments was supported and encouraged by the Zone policy.

² A small portion of allotment 1091 was located within the River Murray Flood Zone. That portion is now located within the Conservation Zone. Our client does not take issue with the new zoning of this small portion of the Land since it is a like for like transition in terms of policy.

4. Our client has held the Land with the intention of developing it in accordance with these envisaged uses.
5. Relevantly, a number of other shack settlement zones along the River Murray and in other coastal parts of the State had similar Zoning policy which included low density residential development and, in some cases, tourist accommodation within already established shack settlements primarily located along inland and coastal waters and which also permitted land division subject to some restrictions either in relation to proximity to water and/or in minimum allotment size.³
6. In the case of a limited number of Coastal Settlement Zones, however, land division was non-complying other than in very limited circumstances.⁴ The non-complying development policy in these limited number of Zones appear to be the basis for the policy in relation to land division that has found its way into the Code affecting all land zoned Rural Shack Settlement Zone, at the expense of the policy for land division which otherwise prevailed in most other shack settlement zones.

Code – Change of Zoning Policy

7. The Rural Shack Settlement Zone is a Zone which envisages and facilitates low density residential development, small-scale tourist and visitor facilities, and home-based business activities consistent with the semi-rural or semi-natural residential character and amenity. Broadly speaking, these policies support similar land uses to those under the preceding Development Plan settlement Zone policies.
8. However, notwithstanding these envisaged uses, land division is Restricted Development in the Zone unless it:
 - (a) *creates an allotment to accommodate an existing dwelling*
 - (b) *[is] for the purpose of creating a public road or reserve, or*
 - (c) *is a minor boundary realignment for the purpose of removing an anomaly in the current boundaries with respect to the location of existing buildings or structures and where no additional allotments are created partly or wholly in the zone.*
9. This policy replicates the *non-complying* policy for land division applicable immediately before the adoption of the Code in the Coastal Settlement Zone in the Kangaroo Island Development Plan. It was not found in the majority of shack settlement zones under other Development Plans.
10. It is evident that the transition to the Code has consolidated the policy from a number of different shack settlement zones across the Development Plans which we accept required some 'blending' of previous policy as was foreshadowed and anticipated by the Commission. However, on any view of the transition, the introduction of the Land Division Restricted Development classification cannot be described as 'like for like' policy translation in respect of the majority of the shack settlement zones to which it now applies.

³ See for examples Mid Murray Council Development Plan, Coorong District Council Development Plan, the Yorke Peninsula Council Development Plan and Alexandrina Council Development Plan

⁴ See Kangaroo Island Council Development Plan

11. Nor can it be explained as being the necessary choice of the Zone most consistent with the previous Zones under the Development Plan. To the contrary, it represents a significant change in policy to most of the shack settlement zones (including the River Glen shack settlement area) while being 'like for like' in a small minority of those zones. We submit that a more appropriate choice in respect of at least some of these areas (including the River Glen shack settlement area) would have been the Rural Settlement Zone.
12. In our respectful submission having regard to the envisaged uses for the Zone and the extent of undeveloped land within the River Glen shack settlement area, this substantive policy change cannot be what is intended for the area, and in any event, should not have been adopted without first conducting a more targeted consultation of affected land owners including, but not limited to, our client.
13. At no point was our client notified of the proposal to implement this substantial policy change.

Impact on our Client

14. Relevantly to our client, land division for the purpose of new residential development (including where more than 50 metres from the River's edge) is now Restricted Development. This is notwithstanding the fact that low density residential development is still envisaged and facilitated under the new Zone.
15. Our client submits that this change in policy in respect of the River Glen shack settlement area is an error in the transition of policy from the Development Plan (River Murray Shack Settlement Zone) to the Code (Rural Shack Settlement Zone) which should be corrected. We suggest that this could be done by any of the following means:
 - 15.1 Removing land division from the Restricted Development classification Table 4 in the Rural Shack Settlement Zone.
 - 15.2 Amending the Restricted Development Table 4 in the Rural Shack Settlement Zone so that land division on the River Murray that is more than 50 metres from the waters edge is excluded from the Restricted Development category. Such an exclusion could also include a minimum allotment size if that were considered necessary by the Commission or the Minister.
 - 15.3 Introducing a sub-zone for the River Glen Shack Settlement Area in respect of which land division more than 50 metres from the River's edge is not Restricted Development.
 - 15.4 Changing the applicable zoning policy in respect of the River Glen shack settlement area to the Rural Settlement Zone.
16. Our client asks that the Commission initiate a Code amendment to give effect to this correction. We suggest that it be considered for inclusion in the Commission's proposed Miscellaneous Technical Enhancement Code Amendment.

Summary

The classification of land division for low-density residential purposes as a restricted form of development in the Rural Shack Settlement Zone represents a substantial policy shift from the River Murray Settlement Zone in the now repealed Development Plan. This is

at odds with the Commission's promotion of the introduction of the Planning and Design Code through the Phase Three Code Amendment as a 'like for like' planning document.

Our client was unaware of the substantive policy change until well after the Code commenced. Had our client been aware of the change, it would have made submissions opposing the change.

Our client has always intended to develop its land which is co-located with other shacks, consistent with the intended land uses for the area. It now finds itself with land that remains located within a shack settlement area and subject to land use policies which envisage the development of shacks (low-density residential development), but which it will be unnecessarily hampered in developing for that purpose by the Restricted Development classification.

In our respectful submission there are strong grounds for the Commission to incorporate an amendment to the Code to restore the policy position on land division in the River Glen shack settlement area to one similar to that which existed under the Development Plan.

Please don't hesitate to contact me if you have any further queries or wish to discuss our client's submissions.

Yours faithfully

Alison Field

21st September 2022

To Members of the Code Amendment Team,

RE: Miscellaneous Technical Enhancement Code Amendment - Submission

I refer to the consultation currently open on the Miscellaneous Technical Enhancement Code Amendment. Opportunities to enhance the general performance and operation of the Planning and Design Code are appreciated and supported. Points of submission are raised below in relation to the planning rules or policies assessed during development approval for marine-based aquaculture (i.e. aquaculture pilot leases/licences) and land-based aquaculture development applications, which are of specific interest to our membership.

Foremost, the South Australian Oyster Growers Association (SAOGA) supports a balanced assessment approach which avoids duplication between PIRSA's Lease and Licencing processes pursuant to the *Aquaculture Act 2001* and matters assessed via the Planning and Design Code for applications necessitated by the *Planning, Development, and Infrastructure Act 2016*. Unnecessary duplication of assessment has the potential to frustrate delivery of aquaculture development and in the past, has resulted in costly reporting in respect to cross jurisdictional issues already assessed in Lease and Licencing applications, and has led to unnecessary delays to aquaculture development.

Unless absolutely necessary, duplicated assessment requirements for aquaculture applications represents an over-regulation and should be removed. Notwithstanding, in instances where there is genuine planning need, a Designated Performance Feature (DPF) should be included that recognises the existence of a lease or licence pursuant to the *Aquaculture Act 2001*, which automatically satisfies the relevant Performance Outcome (PO). Similarly, a DPF should be inserted for all elements of a proposal that do not necessitate planning assessment owing to the specific development proposal, to simplify assessment of the PO. This would remove unnecessary requests for reporting and provide greater certainty for all parties regarding actual matters for assessment.

Aquaculture General Development Policies (AGDP's)

- PO 1.1, 2.1, 2.2, 2.5, 2.6, 2.7, - the existence of the Lease and or Licence should be sufficient to satisfy the PO. Adequate assessment of these matters has already been undertaken as satisfactory and will be subject to ongoing compliance through PIRSA's administration of the Lease and or Licence. Therefore, the insertion of a DPF to this effect is appropriate.
- PO 2.3 2.8, 2.9 and 2.11 – separate development approval would be required for ancillary aspects of development, therefore unnecessarily duplicated in the Aquaculture General Development Policies, and should be removed. At the very least provision should be made to close the matter in the assessment if it does not form part of the proposed development.
- PO 2.11 - enable the matter to be closed if development is located within a Rural Aquaculture Zone or if no onshore facilities are proposed in conjunction with a proposal for marine aquaculture.
- PO 2.4, 3.1,3.2, 4.1, 4.2, 4.3 and 4.4 – marine aquaculture matters are assessed pursuant to the *Aquaculture Act 2001* and should be removed from the Planning and Design Code.
- PO 2.10 – the setback distance should be consistent with of PO's throughout the Code.

Zones and Overlays

- Any duplication of PO's from the AGDP's in other Zones (Rural Aquaculture Zone, Coastal Waters and Offshore Islands Zone) and Overlays (Coastal Areas and Marine Parks (Managed Use) Overlays) should be removed or at the very least include a DPF that enables the matter to be closed if the development is subject to a Lease or Licence issued by PIRSA pursuant to the *Aquaculture Act 2001*.
- PO 1.1 of the Marine Parks (Managed Use) Overlay covers habitat protection and general managed use zones of the *Marine Parks (Zoning) Regulations 2012*. Aquaculture is a permitted activity/development within these zones, is also reflected in the DO for the Overlay. Potential DTS/DPF to exclude aquaculture development (i.e. is a complying development within this Overlay). Creates unnecessary assessment/red tape for a permitted activity/development and should be removed.

SAOGA appreciates the opportunity to provide comments on the proposed amendments. Should it be necessary, please do not hesitate to contact us in relation to the above submission.

Yours sincerely

Lynlee Lowe
SAOGA Executive Officer

Subject: Submission on Miscellaneous Technical Enhancement Code Amendment
Date: Wednesday, 21 September 2022 7:03:38 PM

Dear Presiding Member and Members of the Commission

This submission comments on the specific variations proposed to lists of Restricted Development in two zones relating to renewable energy facilities and energy storage.

HILLS FACE ZONE

In the Hills Face Zone, the Exclusions for a Renewable Energy Facility in the Restricted Development Table are to be altered as below - deleted words in red; proposed in green.

Solar photovoltaic panels (roof mounted)

Any of the following:

(a) solar photovoltaic panels (roof or ground mounted).

(b) Battery Storage Facility

For Domestic use (i.e. principally used to supply and/or store electricity to the existing use of land)

This change is supported.

However, the scope of the exemption is still very narrow.

The Hills Face Zone includes existing electrical substations which, with associated power lines, can have a significant impact on visual amenity and natural character. Overhead power lines converging on a substation can have be quite dominant in an open, rural landscape.

The substation creates opportunity to co-locate battery storage projects on nearby parcels due to lower costs of connecting to the grid via cable. These projects are vital to support transition in the electricity market and network and are supported by various industry and government strategic policies and plans.

A battery storage facility typically requires a significantly smaller area than utility-scale PV solar farms and have less potential for visual impact than a utility-scale wind energy development.

The restrictive approach to renewable energy facilities in the Hills Face Zone pre-dates the move to help firm the national electricity grid with strategically-located battery storage.

Strategic locations include close to a substation. Lumping battery storage with other renewable energy facilities in the land use definitions has a perverse effect if Restricted Development listing is based on higher-impact utility solar or wind facilities.

It is submitted that there should be further exemptions to exempt (stand-alone) battery

storage within say 1km of an existing substation from the listed Restricted Developments in the Hills Face Zone.

RURAL ZONE

It is good to see a parallel change in the Rural Zone where battery storage (being defined as a 'renewable energy facility') is sometimes Restricted, ie:

Renewable energy facility within any of the following:

- a) Significant Landscape Protection Overlay
- b) Character Preservation Area Overlay

Exemption:

Any of the following:

(a) solar photovoltaic panels (roof or ground mounted).

(b) Battery Storage Facility

For Domestic use (i.e. principally used to supply and/or store electricity to the existing use of land)

This warrants expansion of the exemption to include situations where there are existing electrical substations in or on the edge of the Overlay.

An example of this is an electrical substation near the (closed) Neuroodla railway station in the Flinders Ranges Council area and on the edge of the **Significant Landscape Protection Overlay**. The locality is one where there is far lower landscape quality than other parts of the Overlay - even without the impact of the existing infrastructure. The boundaries of the Overlay are open to question but it is appreciated that is well beyond the scope of this amendment.

In the Flinders Ranges, as in other remoter areas, there is potential for solar and storage projects to help the energy needs of pastoral enterprises and/or tourist accommodation and remote communities. Wilpena resort for example already has a standalone PV array and there is also a renewable energy project underway to reduce diesel dependence at Arkaroola resort I understand.

These are opportunities to build local resilience and should not be stymied by undue red tape!

There is also a very real need to manage the decarbonisation of the electricity grid and transport while providing energy reliability and affordability. This can be supported by more co-location of solar and storage facilities with electricity substations, tourism/transport hubs, and the like, than the Planning and Design Code currently support due to classification of such facilities as Restricted Development in some Zones/Overlays.

If such facilities are co-located with existing infrastructure or uses that have already impacted natural character as a substation can do, it is not good policy to deter investment in grid support services as distinct from facilities serving a single land use or premises.

Especially in Regional SA, the philosophical basis of the exemptions proposed is too limiting, and incongruent with current trends in the energy industry involving innovative, localised energy resilience, climate mitigation and regional economic diversification.

There are numerous approved mid-scale solar facilities of up to 5MW in SA now. These help diversity rural landowner's income but may do so more effectively if they can generate income by export to the grid. The current proposed Exemptions are a good start but are too narrow in scope.

Kind regards,

Jim Allen

Code Amendment Team
Planning and Land Use Services
Via email: plansasubmissions@sa.gov.au

Dear Sir/Madam,

Please find below a detailed response to the Miscellaneous Technical Enhancement Code Amendment (MTECA) on behalf of the following Councils in the Eyre Peninsula region:

- District Council of Streaky Bay;
- Lower Eyre Council;
- District Council of Cleve;
- District Council of Elliston;
- District Council of Kimba; and
- District Council of Franklin Harbour.

Future Urban currently provides Local Government development assessment services to the 6 Eyre Peninsula Councils listed above. As a result, our Local Government assessment staff are well versed in understanding the policies which directly impact the Councils that we provide services for, and are acutely aware of where deficiencies exist within the current assessment policies.

As part of our review, we have identified the amendments which we believe will directly affect these Council areas from a development assessment perspective, and have provided commentary as to whether the Councils support, oppose or support with recommended alterations to the Code Amendment (opposition or recommended alterations can be found in red in the 'comments' column of the table).

In addition to the changes outlined in the MTECA consultation document, we have identified other issues with the Planning and Design Code, which we believe can be resolved as part of this amendment. These recommendations are included in the 'recommended additional minor amendments' heading of the table below.

If you have any questions in respect to our submission, please feel free to contact Council.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'J Hunt'.

Jordan Hunt (on behalf of the Councils)
Senior Consultant

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<u>RULES OF INTERPRETATION</u>		
<p><u>Application of Spatial Policy Relevant to the site of the Development</u></p> <p>The Code currently does not have an interpretation around when a zone, subzone, or overlay only partly covers an allotment.</p>	<p>The following to be inserted in Part 1 of the Code:</p> <p>Application of Spatially Based Policies and Rules</p> <p><i>Where a zone, subzone, overlay or technical and numeric variation (TNV) does not spatially apply to the whole of a site that is the subject of the development application, the spatially based rules of the zone (including assessment pathway exclusions), subzone, overlay or TNV are only applicable to the portion of the site to which the zone, subzone, overlay or TNV spatially covers. Reference to the South Australian Property and Planning Atlas of the SA planning database will be made to determine whether a zone, subzone, overlay or TNV is relevant to the site of the proposed development application.</i></p>	<p>This amendment is supported.</p>
<p><u>Spatial maintenance updates – comprising minor or operational amendments</u></p> <p>Version updates are regularly made, generally comprising of minor or operational amendments to the spatial layers.</p>	<p>The following to be inserted in Part 1 of the Code:</p> <p>Cadastral updates</p> <p><i>The zones, subzones and overlays of the Code are referenced to the cadastral boundaries shown in SAPP. In the majority of cases a zone, subzone or overlay boundary is directly aligned with a cadastral boundary. In the case of roads the zone, subzone or overlay boundaries are often aligned with the centreline of that road.</i></p> <p><i>When cadastral boundaries are resurveyed and amended by the Surveyor-General there are often boundaries that are, as a result, found to be</i></p>	<p>This amendment is supported.</p>

		pathway be developed so as to more effectively assess this development type.
<p><u>Notification of small scale developments</u></p> <p>Public notification tables currently notify smaller developments (ie. outbuilding, fence, retaining wall, etc.) where they exceed height or length on a boundary.</p>	<p>AMEND public notification tables removing the need for notification for small scale developments</p>	<p>This amendment is supported.</p>
<p><u>Additional notification trigger in Township Zone</u></p> <p>Currently proposed developments are not notified where they involve building a wall on an allotment boundary that exceeds 3 metres in height or 11.5 metres in length.</p>	<p>AMEND public notification table to include the following for Clause 2, 3 and 4:</p> <p><i>3. involves a building wall (or structure) that is proposed to be situated on (or abut) an allotment boundary (not being a boundary with a primary street or secondary street or an excluded boundary) and:</i></p> <p>(a) <i>the length of the proposed wall (or structure) exceeds 11.5m (other than where the proposed wall abuts an existing wall or structure of greater length on the adjoining allotment)</i></p> <p>or</p> <p>(b) <i>the height of the proposed wall (or post height) exceeds 3m measured from the top of footings (other than where the proposed wall (or post) abuts an existing wall or structure of greater height on the adjoining allotment).</i></p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<u>POLICIES AND LINKAGES</u>		
<p><u>Interface Height</u></p> <p>Within the Township Main Street Zone and Recreation Zone the only policy relating to interface height is the building envelope.</p>	<p>CREATE PO 3.8 in Township Main Street Zone and PO 3.3 in Recreation Zone which states:</p> <p><i>Buildings on an allotment fronting a road that is not a State Maintained road, and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.</i></p>	<p>This amendment is supported.</p>
<p><u>Land Division – Site Contamination – Policy Relevance and Linkage</u></p> <p>Part 9.1 of the Code (Referral Body: Environment Protection Authority) specifies that a referral is required for Performance Assessed Land Division in certain circumstances, however, the policy provisions of the Site Contamination General Development Policies are not linked to this development type.</p>	<p>ADD PO and DTS/DPF 1.1 of the Site Contamination General Development Policies to any Performance Assessed Land Division to ensure that site contamination matters are appropriately addressed.</p>	<p>This amendment is supported.</p>
<p><u>Non-Residential Outbuildings – New Policy and Assessment Pathways</u></p> <p>While assessment pathways for outbuildings currently exist, relevant policies are typically related to residential outbuildings. As such, non-residential outbuildings will often default to Performance Assessed where they are not ancillary to a dwelling (e.g., a shed for a church or a school in a neighbourhood-type zone).</p>	<p>CREATE an additional performance outcome in all applicable zones for Ancillary Structures and Buildings not specifically in association with a dwelling. The policy is written in a similar fashion to where such structures are ancillary to a dwelling.</p> <p>ADD new policy provisions to existing pathways for outbuildings, carports and verandahs to allow for assessment of these development types where not in association with a dwelling.</p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p><u>Pool Fencing – Accepted Development Pathway</u></p> <p>Although an Accepted Pathway exists for a swimming pool or spa pool, at present this does not consider the prerequisite for an associated safety fence. As a result, there is no way to achieve an Accepted Development Pathway for a swimming pool as the associated safety fence must be performance assessed.</p>	<p>AMEND the Accepted Pathway for ‘Swimming pool or spa pool’ across pertinent zones to include ‘and Swimming Pool Safety Features’.</p>	<p>This amendment is supported.</p>
<p><u>Tourist accommodation – total floor area</u></p> <p>Policy interpretation was unclear as whether the DPF was to apply per building or across multiple new buildings forming a single integrated tourist accommodation facility.</p>	<p>AMEND DTS/DPF 6.3(b) of the Rural Zone and Productive Rural Landscape Zone to the following:</p> <p><i>(b) in relation to the area used for accommodation:</i></p> <p><i>i. where in a new building, or buildings, does not exceed a cumulative total floor area of 100sqm</i></p>	<p>We agree that the DPF should be clearer, however the total floor area of 100sqm should not relate to the cumulative tourist accommodation facility but only to a single building. We believe the PO can adequately deal with multiple buildings forming a single integrated tourist accommodation facility.</p>
<p><u>OVERLAYS</u></p>		
<p><u>Coastal Area Overlay</u></p> <p>PO 4.1 - Development will not unreasonably affect the marine and onshore coastal environment by pollution, erosion, damage or depletion of physical or biological resources; interference with natural coastal processes; or the introduction of and spread of marine pests or any other means.</p>	<p>AMEND PO 4.1 to:</p> <p><i>Development will not unreasonably affect the marine and onshore coastal environment by pollution, erosion, damage or depletion of physical or biological resources; interference with natural coastal processes; or the introduction of and spread of marine pests and diseases or any other means.</i></p> <p>AMEND DTS/DPF 4.7 to:</p>	<p>Support these changes as PO 4.1 now include reference to not introducing disease, and DPF 4.7 appropriately reflects the intent of PO 4.7.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>PO 4.7 - Development involving the removal of shell grit, cobbles or sand, other than for coastal protection works purposes, is not undertaken.</p> <p>DTS/DPF 4.7 Development does not involve the removal of shell grit or sand.</p>	<p><i>Development does not involve the removal of shell grit, <u>cobbles</u> or sand.</i></p>	
<p><u>Key Outback and Rural Routes Overlay</u></p> <p>Changes are primarily proposed to align with similar changes in this Amendment in respect to the related Urban Transport Routes Overlay and Major Urban Transport Routes Overlay, to ensure consistency across the various transport overlays in the Code and reflect contemporary requirements and standards:</p>	<p>AMEND PO 3.1 and DTS/DPF 3.1 under a new heading 'Access – Location (Spacing) – Existing Access Points' include a new part (c)(iv) to address a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with less than a 250sqm gross leasable floor area.</p> <p>AMEND PO 7.1 and DTS/DPF 7.1 to include the addition of a new part (c) that ensures development does not prevent access points becoming stormwater flow paths directly onto roads.</p> <p>CREATE a new PO 8.1 and DTS/DPF 8.1 under a new heading 'Building on Road Reserves' to address encroachment of buildings or structures that may encroach onto, above or below road reserves.</p>	<p>The proposed amendments to this Overlay are supported as they bring consistency with the other Transport Overlays. The new policy 8.1 is useful for proposed developments located in road reserve.</p>
<p><u>State Significant Native Vegetation Overlay</u></p> <p>DTS/DPF 1.1(b) in the Assessment Provisions of the State Significant Native Vegetation Overlay currently provides a Deemed-to-Satisfy pathway for development where an application is accompanied by a report prepared in accordance with Regulation 18(2)(a) of the</p>	<p>AMEND the Procedural Matters (PM) – Referrals in the State Significant Native Vegetation Overlay to require that where the clearance is categorised as a 'Level 1 clearance' in an accredited consultant's report, referral is not required to the Native Vegetation Council.</p>	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>Native Vegetation Regulations 2017 that confirms that the clearance is categorised as 'Level 1 clearance'. Notwithstanding this, a referral to the Native Vegetation Council is currently triggered in the overlay for all classes of development (other than land divisions) that involve a Level 1 clearance, which is contrary to the Deemed-to-Satisfy pathway.</p>		
<p><u>Prescribed Water Resources Area Overlay</u></p> <p>An error exists in the Procedural Matters (PM) – Referrals table within the Prescribed Water Resources Overlay, whereby the overlay does not include an exemption for developments that have already been granted access to water as is provided in the various other Prescribed Water Overlays in the Code.</p>	<p>AMEND the referral triggers to remove the need for referral to the Chief Executive of the Department of the Minister responsible for the administration of the <i>Landscape South Australia Act 2019</i> for certain classes of development where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken, ensuring consistency across the various Prescribed Water Overlays in the Code.</p>	<p>This amendment is supported.</p>
<u>GENERAL DEVELOPMENT POLICIES</u>		
<p><u>Aquaculture</u></p> <p>Several matters have been identified in relation to aquaculture policy within the Code including:</p> <ul style="list-style-type: none"> • overlap between the matters covered in a planning assessment and the matters assessed for the purposes of issuing a lease and/or licence under the Aquaculture Act 2001 	<p>It is considered that the procedures undertaken by PIRSA when determining an aquaculture lease/licence adequately attend to the matters sought to be address the relevant PO's. It is proposed to attach a corresponding DPF to each PO.</p>	<p>Support the amendments proposed to the corresponding DPF's, as they now create a clear way of satisfying the corresponding PO.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<ul style="list-style-type: none"> • superfluous policy • duplicated policy. 		
<p><u>Carport and Outbuilding – Design Module</u></p> <p>Policy provisions from the Design General Development Policies relating to garage dominance and the internal dimensions of enclosed parking spaces do not currently apply to applications for carports or garages which are not under the main roof of a dwelling.</p>	<p>ADD PO 19.1 to Deemed-to-Satisfy and Performance Assessed pathways for Carports and Outbuildings is to provide guidance for the assessment of internal dimensions for enclosed parking spaces.</p> <p><i>PO 19.1 - Enclosed parking spaces are of a size and dimensions to be functional, accessible and convenient.</i></p>	<p>Support this amendment as it encourages better design outcomes for Garages and Carports.</p>
<p><u>Commercial forestry</u></p> <p>A small number of matters have been identified in relation to commercial forestry policy within the Code including:</p> <ul style="list-style-type: none"> • status of commercial forestry as an anticipated use in the Rural Zone and the Productive Rural Landscape Zone • planning judgements on scenic quality impacts • setback policies 	<p>AMEND DTS/DPF 2.2 of the Rural Zone and the Productive Rural Landscape Zone to include ‘commercial forestry’ in the list of anticipated land uses within the zone.</p> <p>AMEND PO 1.4 in the Forestry General Development Module to provide greater clarity for the setback reasons:</p> <p><i>Commercial forestry plantations are separated from reserves gazetted under the National Parks and Wildlife Act 1972 and/or Wilderness Protection Act 1992 to minimise potential impacts arising from:</i></p> <ul style="list-style-type: none"> <i>(a) the spread of fires from the plantation into adjacent reserves</i> <i>(b) the spread of pest plants and phytophthora</i> <i>(c) the spread of non-indigenous plants species</i> 	<p>This amendment is supported.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p>(d) excessive nutrient loading of the soil or loading arising from surface water runoff</p> <p>(e) soil compaction</p> <p>(f) chemical spray drift</p>	
<p><u>Decks</u></p> <p>Proposals for decks are deemed development under the circumstances set out in Schedule 4 of the <i>Planning, Development and Infrastructure (General) Regulations 2017</i> and currently require assessment against Code.</p>	<p>CREATE additional policy within the Design, and Design in Urban Areas module specific to decks to include assessment provisions that address overlooking.</p> <p>CREATE a deemed-to-satisfy and performance assessed pathway for decks in neighbourhood-type, residential employment, rural and recreation type zones linking the proposed new decks policy, with overlay applicability and relevant General Development policies reflecting comparable development types such as a verandah.</p>	<p>Support this amendment, but suggest that the following Zones also be included:</p> <ul style="list-style-type: none"> • Township Activity Zone • Township Main Street Zone <p>As some townships within the Eyre Peninsula Region include dwellings within these Zones.</p>
<p><u>Design – Driveways and Access Points</u></p> <p>Feedback has identified that policy provisions related to driveways and access points have been applied inconsistently across some zones</p>	<p>AMEND PO 19.3 - Driveways and access points are located and designed to facilitate safe access and egress while maximising land available for street tree planting, domestic waste collection, landscaped street frontages and on street parking.</p>	<p>Support this amendment as it refines the policy relating to driveways and access points.</p>
<p><u>Heavy Vehicle Parking</u></p> <p>Parking of a vehicle exceeding 3000 kg is classified as development under the PDI Act. However, no formal definition or assessment policy exists.</p>	<p>CREATE a new land use definition for heavy vehicle parking (refer to the definitions section of this Code Amendment for further details)</p> <p>CREATE the following policies:</p>	<p>Support this amendment as it will effectively assist in assessing heavy vehicle proposals. The policies include sufficient grounds for support or refusal.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>PO 11.1 - Heavy vehicle parking only occurs on the same allotment as a dwelling and the vehicle is only owned and operated by a resident of the dwelling.</i></p> <p><i>PO 11.2 - Heavy vehicle parking and access is designed and sited so that the activity does not result in nuisance to adjoining neighbours as a result of dust, fumes, vibration, odour or potentially hazardous loads.</i></p> <p><i>DPF/DTS 11.2 - Heavy vehicle parking occurs in accordance with the following:</i></p> <ul style="list-style-type: none"> <i>a) the site is a minimum of 0.4 ha.</i> <i>b) where the site is 2 ha or more, no more than 2 vehicles exceeding 3,000 kilograms each (and trailers) are to be parked on the allotment at any time.</i> <i>c) where the site is between 0.4 ha and 2 ha, only one vehicle exceeding 3,000 kilograms (and one trailer) are to be parking on the allotment at any time.</i> <i>d) other than minor maintenance, no maintenance of the vehicle will occur on-site.</i> <i>e) the vehicle parking area achieves the following setbacks:</i> <ul style="list-style-type: none"> <i>I. Behind the building line or 30m, whichever is greater;</i> <i>II. 20m from the secondary street if it is a State Maintained Road;</i> <i>III. 10m from the secondary street if it is a local road;</i> 	

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p style="text-align: center;"><i>IV. 10m from side and rear boundaries;</i></p> <p><i>f) parking and access areas (including internal driveways) should be sealed or have a surface that can be treated and maintained to minimise dust and mud nuisance.</i></p> <p><i>g) does not include refrigerated trailers or vehicles.</i></p> <p><i>h) vehicles only enter and exit the property in accordance with the following hours:</i></p> <ul style="list-style-type: none"> <i>i. Monday to Saturday 6:00am and 9:30pm;</i> <i>ii. Sunday and public holidays between 9:30 am and 7:00 pm;</i> <i>iii. the handling or trans-shipment of freight is not carried out on the property.</i> <p><i>PO 11.3 Heavy vehicle parking ensures that vehicles can enter and exit a site safely and without creating a hazard to pedestrians and other vehicular traffic.</i></p> <p><i>DPF/DTS 11.3 - Heavy vehicles:</i></p> <ul style="list-style-type: none"> <i>a) can enter and exit the site in a forward direction; and</i> <i>b) operate within the statutory mass and dimension limited for General Access Vehicles (as prescribed by the National Heavy Vehicle Regulator).</i> 	

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>PO 11.4 - Heavy vehicle parking is screened from views from adjoining properties and the public roads by existing buildings and landscaping.</i></p>	
<p><u>Land Division – Policy Linkages</u></p> <p>It has been identified that not all the policy provisions from the Land Division general Development Policies are linked to Performance Assessed Land Divisions within zones.</p> <p>Specifically:</p> <p><i>Design and Layout: PO 2.8: Land division is designed to preserve existing vegetation of value including native vegetation and regulated and significant trees.</i></p> <p><i>Roads and Access: PO 3.11: Local streets are designed to create low-speed environments that are safe for cyclists and pedestrians.</i></p>	<p>ADD PO 2.8 and PO 3.11 of the Land Division General Development Policies to the Performance Assessed pathway for “Land Division” in all zones to ensure a consistent approach to the application of policy provisions from this module.</p>	<p>Support this amendment as it further expands the assessment criteria for land division proposals.</p>
<p><u>Transport, Access and Parking – Fence Policy - Sightlines</u></p> <p>The policy provisions currently applied to a Performance Assessed fence in various zones do not address matters related to preservation of sightlines between vehicles and pedestrians where fences are located adjacent to driveways or corner sites.</p>	<p>APPLY relevant policy provisions from the Transport, Access and Parking General Development Policy module to Performance Assessed Fences to address matters relating to preservation of sightlines:</p> <p><i>PO 10.1 - Development is located and designed to ensure drivers can safely turn into and out of public road junctions.</i></p> <p><i>PO 2.2 - Walls, fencing and landscaping adjacent to driveways and corner sites are designed to provide</i></p>	<p>Support this amendment as it enables more effective assessment criteria for fencing.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<i>adequate sightlines between vehicles and pedestrians.</i>	
<u>LAND USE DEFINITIONS</u>		
Ancillary Accommodation	<p>AMEND definition to:</p> <p><i>Means accommodation that:</i></p> <ul style="list-style-type: none"> a) <i>is located on the same allotment as an existing dwelling; and</i> b) <i>is not a self-contained residence; and</i> c) <i>contains no more than 2 bedrooms or rooms or areas capable of being used as a bedroom; and</i> d) <i>is subordinate to and does not have separate connection to utilities and services (such as electricity, gas, water, telecommunications, sewerage system, wastewater system or waste control system) to those servicing the existing dwelling</i> <p><i>Definition now excludes tourist accommodation.</i></p>	Support this amendment to the definition, as it makes it very clear as to what criteria need to be satisfied.
Commercial Forestry	<p>AMEND to include:</p> <p><i>Means the practice of planting and managing plantation forests that are intended to be harvested for wood products or other commercial purposes, including through the commercial exploitation of the carbon absorption capacity of the forest.</i></p> <p><i>Definition now excludes horticulture, cropping, and farming.</i></p>	Support this amendment.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
Educational establishment	<p>AMEND definition to Educational Facility and to:</p> <p><i>Means a primary school, secondary school, reception to year 12 school, college, university or technical institute, and includes an associated child care facility or institution for the care and maintenance of children.</i></p>	Support this amendment.
Heavy Vehicle Parking (no definition)	<p>CREATE definition for heavy vehicle parking:</p> <p><i>Means the parking of any vehicle exceeding 3 000 kg in weight (including the weight of any attached trailer) on land used for residential purposes.</i></p>	Support this amendment.
Indoor recreation facility	<p>AMEND to include:</p> <p><i>Means a building or part of a building designed or adapted primarily for recreation or fitness pursuits.</i></p>	Support this amendment.
Office	<p>AMEND to include:</p> <p><i>Means a building or part of a building used for administration or the practice of a profession, but does not include a consulting room or premises where materials are stored for sale or manufacture.</i></p>	Support this amendment.
Pre-school	<p>AMEND definition to Child care facility:</p> <p><i>Means a place primarily for the care or instruction of children of less than primary school age, children with special needs or out-of-school-hours care</i></p>	Support this amendment.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>(including vacation care) and not resident on the site.</i></p> <p>Definition includes a pre-school.</p>	
Tourist accommodation	<p>AMEND to include:</p> <p><i>Means premises in which temporary or short-term accommodation is provided to travellers on a commercial basis. This use may also include:</i></p> <ul style="list-style-type: none"> <i>a) onsite services and facilities primarily for the use by guests;</i> <i>b) facilities for the management of the accommodation.</i> <p>This definition now includes a Caravan and Tourist Park but excludes a residential park.</p>	Support this amendment as it more broadly captures associated elements of accommodation facilities.
Workers accommodation	<p>AMEND to include:</p> <p><i>Means premises used to accommodate workers on a temporary basis while they carry out employment:</i></p> <ul style="list-style-type: none"> <i>a) on the same site as the workers' accommodation; or</i> <i>b) in mining or petroleum extraction; or</i> <i>c) in seasonally intensive rural activities including fruit picking, pruning, animal</i> 	Support this amendment.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
	<p><i>shearing, meat processing, bulk handling or freight handling; or</i></p> <p>d) <i>in the construction of essential infrastructure.</i></p>	
Function venue (no definition)	<p>CREATE definition for Function Centre:</p> <p><i>Means premises used for the hosting of events, conferences, conventions, receptions or functions.</i></p>	Support the inclusion of this new definition.
<u>ADMINISTRATIVE DEFINITIONS</u>		
Building Height	<p>AMEND to include:</p> <p><i>Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like.</i></p> <p><i>For the purposes of this definition, building does not include any of the following:</i></p> <ul style="list-style-type: none"> <i>(a) flues connected to a sewerage system</i> <i>(b) telecommunications facility tower or monopole</i> <i>(c) electricity pole or tower</i> <i>(d) or any similar structure</i> 	<p>This amendment is supported; however, it is recommended that the following additional words (shown in red), be inserted to provide a clearer interpretation outcome:</p> <p><i>Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point on the same vertical plane, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:</i></p> <ul style="list-style-type: none"> <i>(a) flues connected to a sewerage system</i> <i>(b) telecommunications facility tower or monopole</i>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
		<p><i>(c) electricity pole or tower</i> <i>(d) or any similar structure.</i></p> <p><i>A corresponding diagram for measuring the building height on a sloping site would further strengthen clarity of the definition.</i></p>
Gross density	REMOVE definition.	Support this amendment.
Post height (new definition)	<p>CREATE definition for post height:</p> <p><i>Means the height of the post measured from the top of its footings of a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land.</i></p>	Support this amendment.
Wall height	<p>AMEND to include:</p> <p><i>Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land.</i></p>	Support this amendment.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
Direct Overlooking (new definition)	<p>CREATE definition for direct overlooking:</p> <p><i>In relation to direct overlooking from a window, is limited to an area that falls within a horizontal distance of 15 metres measured from the centre line of the overlooking window and not less than 45 degree angle from the plane of the wall containing the overlooking window.</i></p> <p><i>In relation to direct overlooking from a deck, balcony or terrace, is limited to an area that falls within a horizontal distance of 15m measured from any point of the overlooking deck, balcony or terrace.</i></p> <p>Images also included to assist with definition:</p>	Support this amendment.

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
REFERRALS		
<p><u>EPA Referrals</u></p> <p>Under the Development Regulations 2008 (now ceased), schedule 8 required a referral to the Environment Protection Authority (EPA): Development that involves, or is for the purposes of, an activity specified in Schedule 22 (including, where an activity is only relevant when a threshold level of capacity is reached, development with the capacity or potential to operate above the threshold level, and an</p>	<p>The proposed solutions to these issues are as follows:</p> <p>CREATE an interpretation noted for Part 9.1 of the Code to confirm when referrals are required:</p> <p><i>For the purposes of item 9 of the table in clause 3 of schedule 9 of the Planning Development and Infrastructure (General) Regulations 2017, development that involves, or is for the purposes of, an activity specified in the table below, requires a</i></p>	<p>Support these amendments as they enable referrals for the expansion of existing facilities which have a major environmental significance.</p> <p>The removal of class 3 is an appropriate deletion from the site contamination referral criteria.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level).</p> <p>The above ensured that alterations to an activity of major environmental significance required a referral. No similar preamble is included in Part 9.1 of the Code and as a result, the EPA has advised that some activities of major environmental significance are not being referred to them. This has resulted in works being approved that increase the risk of pollution or environmental harm and present challenges for the subsequent EPA licence</p> <p>The EPA has noted that the inclusion of Class 3 activities for referrals appears to be an administrative error as these activities were not identified in any consultation version of the Code. Further adding to this, is that the referral trigger for Site Contamination – Change in the use of land to a more sensitive use only refers to class 1 and class 2 activities with no requirements for a class 3 activity.</p>	<p><i>referral to the Environment Protection Authority, including:</i></p> <ul style="list-style-type: none"> • <i>development that reaches a threshold specified in the table below;</i> • <i>development with the capacity or potential to operate above the threshold level specified in the table below; or</i> • <i>an alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level specified in the table below.</i> <p><i>The above does not apply for the purposes of items 9A and 9AB of the table in clause 3 of schedule 9 of the Planning Development and Infrastructure (General) Regulations 2017, which relate to site contamination and land division.</i></p> <p>AMEND the Class of Development / Activity Site Contamination – Land Division Class to removed class 3 activity needing to be referred and inclusion of the reference to South Australian Property and Planning Atlas.</p>	
<u>RECOMMENDED ADDITIONAL MINOR AMENDMENTS</u>		
<p><u>Agricultural Building – Definition</u></p>	<p>AMEND to include:</p> <p>Means a building used wholly or partly for purposes associated with farming, commercial forestry,</p>	<p>The amendment ensures that a proposed agricultural building be associated with a lawful land use.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>Current definition does not require the agricultural building to be located on the same site/land as the associated land use.</p>	<p>intensive animal husbandry, dairying or horticulture land use, or to support the operations of that lawful use of the land, but does not include frost fans or a building used wholly or partly for any of the following:</p> <ul style="list-style-type: none"> • the processing or packaging of commodities • the housing of animals for the purposes of intensive animal husbandry • the purposes of a dairy. 	
<p><u>Definition of Waste – Administrative</u></p> <p>The definition of waste within Part 8 of the Planning and Design Code defers to the <i>Environment Protection Act 1993</i>.</p> <p>The definition is prescribed by section 4 of this Act and also has exclusions, which are not readily apparent and cannot be readily confirmed by the Environment Protection Authority when a relevant authority is determining the nature of development. The EPA has already received at least two enquiries attempting to confirm whether a use falls within the definition of waste.</p>	<p>ADD the definition of waste to Part 8 of the Planning and Design Code (i.e. copy and paste the definition of waste within section 4(1) of the above Act)</p>	<p>This Amendment would negate the relevant authority having to consider the exclusions to the definition within section 4(2) of the EPA Act</p>
<p><u>Design General Module – Policy Gap</u></p> <p>There is no policy within the Design or Design in Urban Areas General Development Policies (GDPs) that relate to the external materials and finishes of low-rise dwellings.</p>	<p>CREATE new policies to the Design GDPs that apply to dwellings and dwelling additions within neighbourhood type zones which guide external materials and design.</p>	<p>This amendment would result in better design outcomes and provide stronger policy to refuse poorly designed buildings.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>This has resulted in an influx of 'shed houses' in areas which have an established character, such as Coffin Bay, as there are no applicable policies allowing us to consider the materiality and external appearance of the dwelling.</p>	<p>These policies could be adapted from Design in Urban Areas PO and DTS/DPF 12.5 and 12.6 which apply to medium-high rise development.</p>	
<p><u>Rural Living Zone - Side and Rear Setbacks</u></p> <p>The Planning and Design Code applies large side and rear setbacks for dwellings (20 metres) and no side and rear setbacks for ancillary structures such as outbuildings.</p> <p>The setbacks for dwellings are difficult to achieve and the lack of setbacks for outbuildings is resulting in outbuildings being sited in a manner that is inconsistent with a rural character and amenity.</p>	<p>REPLACE Rural Living Zone DTS/DPF 2.1(a) with the following:</p> <p>a) <i>are setback as follows:</i></p> <ul style="list-style-type: none"> i. <i>for allotments with an area of 1ha or more:</i> <ul style="list-style-type: none"> A. <i>20m from the primary street and rear boundaries</i> B. <i>10m from side and secondary street boundaries</i> ii. <i>for allotments with an area less than 1ha:</i> <ul style="list-style-type: none"> A. <i>20m from the primary street and rear boundaries</i> B. <i>5m from side and secondary street boundaries</i> <p>ADD the following to Rural Living Zone DTS/DPF 2.5:</p> <p><i>Have a 5m setback to side and rear allotment boundaries</i></p>	<p>These amendments would reinforce more appropriate setback patterns within the Rural Living Zone.</p>
<p><u>Earthworks in Conservation Zone</u></p> <p>Land within the Conservation Zone is commonly within the Coastal Areas Overlay. Earthworks exceeding 9 cubic metres are development within this Overlay and it is common for earthworks to exceed 9 cubic metres.</p>	<p>ADD the following exclusion to Table 5 of the Conservation Zone:</p> <p>Class of development (Column A): Earthworks</p> <p>Exceptions (Column B): Except any of the following:</p> <ol style="list-style-type: none"> 1. Earthworks that exceed a depth of 1 metre 	<p>This solution would negate a proposal which includes earthworks exceeding 9 cubic metre requiring public notification. It is noted that a wastewater disposal system often requires more than 9 cubic metres of earthworks.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>There are no exclusions for earthworks within Table 5 of the Zone and accordingly, an assessment to determine whether the earthworks are 'minor in nature' is required for each development application including earthworks.</p>	<p>2. Earthworks that are situated within a Hazards (Flooding) Overlay or River Murray Flood Plain Protection Area Overlay</p>	
<p><u>Placement of Notices - Exemptions for Performance Assessed Development within the Conservation Zone</u></p> <p>Nearly the entire coast of the Eyre Peninsula is within the Conservation Zone, with some exceptions to this within coastal townships. Outside of townships, the Zone boundary typically dissects allotments which are partially within the Conservation Zone and partially within the Rural Zone. Generally speaking, the road frontage is within the Rural Zone and the coastal interface is within the Conservation Zone.</p> <p>The following exemption for the placement of notices applies in the Rural Zone:</p> <p><i>Pursuant to regulation 47(6)(c) of the Planning, Development and Infrastructure (General) Regulations 2017, the requirement to place a notice on the relevant land under section 107(3)(a)(ii) of the Planning, Development and Infrastructure Act 2016 does not apply in the Rural Zone.</i></p> <p>The above exemption does not apply within the Conservation Zone. Therefore, it is common for a development to be situated within the Conservation Zone, require notification and the</p>	<p>ADD the following exemption for both performance assessed and restricted development to Table 5 of the Conservation Zone:</p> <p>Pursuant to regulation 47(6)(c) of the <i>Planning, Development and Infrastructure (General) Regulations 2017</i>, the requirement to place a notice on the relevant land under section 107(3)(a)(ii)/ 110(2)(a)(iv) [delete irrelevant section] of the <i>Planning, Development and Infrastructure Act 2016</i> does not apply to development where the entire public road frontage of the relevant land is within the Rural Zone.</p>	<p>This amendment would negate the need for a sign on the land within the Conservation Zone.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
<p>sign is placed on the road frontage in accordance with Practice Direction 3, which is usually within the Rural Zone. This results in an inconsistent 'notification practice' within the Rural Zone.</p>		
<p><u>Stores for Private Storage Purposes (i.e. outbuildings before dwellings)</u></p> <p>In rural areas, it is common for land owners to want a shed prior to a dwelling for a number of reasons, including:</p> <ul style="list-style-type: none"> a) Storage of building materials due to the remote location of building sites b) Collection of stormwater to enable land owners to establish landscaping on the land, before building a dwelling c) Storage of equipment to maintain the land, such as a ride on lawn mower, particularly for large sites in Rural Living Zones <p>A shed, without a main building such as a dwelling, is not an outbuilding and is defined as a store.</p> <p>Each Council had a different view and approach to stores prior to the implementation of the Planning and Design Code and had different policy within their Development Plan. However, the implementation of the Planning and Design Code necessitates the need for a uniform approach to 'stores' given the policy is identical and within a regional setting the relevant</p>	<p>We suggest the introduction of a new land use definition and a new Overlay to accompany this definition, to enable Council's the ability to apply this Overlay as part of a Code Amendment to parts of their Council area. This is a similar approach applied for the Dwelling Excision Overlay, which enables the creation of rural living type allotments within some area where such was previously enabled by the Development Plan.</p> <p>We suggest the following definition could be created:</p> <p><i>Private store</i> - Means a building used for the private storage of items and within or upon which no trade (whether wholesale or retail) or industry is carried on.</p> <p>Policy would then need to be added to the Overlay, outlining the criteria appropriate for a private store. Should the State Planning Commission be interested in this approach, we could suggest these policies for the Commission's consideration.</p>	<p>This amendment would enable specific Council's to be supportive of Store proposals and avoid lengthy assessment timeframes.</p>

CURRENT PLANNING AND DESIGN CODE	MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT	COMMENTS
authority remains the same (i.e. a Regional Assessment Panel).		
<p><u>Township Activity Centre Zone - Low-impact structures</u></p> <p>Many township centres include existing dwellings.</p> <p>The Township Activity Centre Zone does not exclude outbuildings and carports from public notification.</p>	<p>ADD outbuildings and carports to '3' of Table 5 within the Township Activity Centre Zone.</p>	<p>This amendment would resolve minor structure having to be all code assessed.</p>

Submission on the Miscellaneous Technical Enhancement Code Amendment

The Prospect Residents Association supports the submission from the Community Alliance and where we believe the recommendation is particularly significant we have included this in our submission.

Community Alliance (CASA) statement strongly supported

“These proposed changes must be tested for impact upon owners, neighbours, citizens in the street, local area amenity and loss of character and heritage. If these impacts are not considered from a community perspective, but just seen as requirements to make planning decisions easier for planners and Councils, then the changes will further worsen an already appalling destruction of heritage and loss of character in many suburbs.”

Community Alliance submission.

Proposed Code Policy	Response	Comments
2.3.2.7 – Urban Corridor Zone – all policy relating to a ‘primary road’ relates to a ‘State maintained road	Not Supported	<i>Devonport Tce Prospect is zoned Urban Corridor and is not a State maintained road but a minor road. Shoddy buildings have already been built there and this change would serve to make this situation worse. We do not want important setback and interface policy to be removed from rezoned local streets. Minor roads need to remain part of this TVN to protect them from inappropriate developments.</i>
2.3.2.10 Notification tables	We support the CASA comments	<i>CASA: Notification should occur as much as possible, instead of removing notifications. CASA does not believe that minimising public notification should be an active quest of our Planning System. Conversely CASA believes Town Planning is meant to be a consultative process that</i>

		<p><i>seeks to include, rather than exclude public input into decision making. Minimising notifications will not result in any increased economic activity despite what the property lobby may purport.</i></p>
<p>2.3.2.10.5. Notification Tables – Demolition Issue</p>	<p>We agree strongly with CASA statement</p> <p>CASA statements supported as requiring action due to property purchasers not always being aware that the property is local heritage or a representative item and then wanting to demolish the house against council assessment. All aspects of heritage need better protection from demolition</p>	<p>CASA: Demolition should NOT be generally exempt from requiring DEVELOPMENT approval. This is because only 3% of buildings are protected from demolition as either State, Local or Representative Items, which is manifestly inadequate.</p> <p><i>Partial demolition of portions not visible from the street need not be notified.</i></p> <p><i>There is a danger of buildings being demolished that are thought not to be historic being demolished in the thinking that they are not historic when actually they are, such as houses that may have been altered or bastardised in the 1960's.</i></p> <p><i>The clear identification of the Representative Buildings such that they are mapped and listed on the Portal and show up as such on Form 1 Real Estate pre-purchase sale documents is what is really required at this stage.</i></p> <p><i>Not all Councils have surveyed and mapped their Representative (former Contributory) Items and this is a weakness in the Code that needs to be addressed. Councils have no record of demolition. 86% of buildings in the CBD are not listed. 97% of buildings in the state can be demolished.</i></p> <p><i>We recommend the State Govt help fund Councils to pay for surveys of their historic suburbs to identify the presently unlisted historic buildings and include the Representative Items for all Councils in the portal. All pre 1915 and pre 1940 buildings should be listed.</i></p> <p><i>There should be controls on demolition, and also on the vacant land left behind when a demolished building site is left vacant due</i></p>

19/9/2022

	<p>and these examples demonstrate that this provision requires further nuance to achieve its desired outcomes. A 3 metre width laneway does little to manage visual bulk/scale, overlooking or overshadowing impacts that the envelope provision is intended to address.</p> <p>If justification is that setbacks should be capable of managing this issue in relation to street boundaries, then perhaps setback of buildings to laneways or narrow streets is an issue that needs further consideration (for example, PO 2.7 of Urban Corridor Main Street Zone that would allow buildings to be constructed to the boundary of a site with a laneway)</p>	
<p>2.3.2.26. Primary Street Setback – Use of Building</p>	<p><i>We support the CASA comments</i></p>	<p><i>CASA: We agree to the first change regarding bay windows exclusion.</i></p>

<p>Line</p>	<p><i>on this topic</i></p>	<p><i>We do not agree to the other changes regarding placement of houses and building lines. The current policy should be retained unless there is a historic building on the corner that is being retained. Then the policy makes sense.</i></p> <p><i>It is important to ensure conservation of corner heritage properties wherever possible. If a corner building is going to be demolished then we do not agree to this proposal.</i></p>
<p>2.3.3.4 – Design Overlay -Referral Variation to application and gives relevant</p>	<p>Not Supported</p> <p><i>We agree in part with Prospect Councils recommendation that for variations they should be scrutinised by the Government architect</i></p>	<p><i>We are very concerned about continual changes to development applications that completely change the original approval resultant design and build with no opportunity for third party appeal or recourse to the community who originally had concerns about the design and approval as well as changes to amenity and pre-purchased plans for apartments. There needs to be penalties for developers who do not follow approval requirements and who change plans for pre-purchased accommodation after they have been sold.</i></p> <p><i>Many Builders/developers fail to fulfil all or part of the required landscaping. This should result in a consequence such that they are forced to comply.</i></p>
<p>2.3.3.5. Heritage Adjacency Overlay – Referral Issue</p>	<p><i>We agree to this change</i></p>	
<p>2.3.3.13 – Representative Buildings – Character Area and Historic Area Overlays – Spatial Representation</p>	<p>We support the CASA recommendations in relation to this item.</p> <p>We also support the Prospect Council comments on this</p>	<p>CASA: <i>We agree to these changes. We commend the mapping that has occurred where Representative Buildings have been identified. However, there are manifestly not enough identified, with often 25% protected when 65%-70% are original historic housing stock which should be protected in inner historic suburbs.. Different councils have not completed this work or have been prevented by Planning SA and past</i></p>

19/9/2022

	<p>item</p>	<p><i>Planning Ministers, and thus there are resultant inconsistencies across the state depending upon which council had completed their surveys and identified their buildings prior to the transition to the new Code. The root cause of this is that Councils have either not undertaken the preparatory work to identify their Representative Buildings or not have their surveys and listing recommendations allowed by Planning SA in the past. This requires further attention by the Expert Panel.</i></p> <p><i>We strongly recommend that the Government funds Councils to enable them to complete this important work. A terrible example was 17 & 15 Hutt Street, where two bluestone buildings are about to be demolished, despite being submitted for Local Heritage Listing. They could have been Representative Items and have been saved. Thus comprehensive survey work by the State Government could assist councils. This would assist in retaining many beautiful and renowned suburbs such as Colonel Light Gardens, Medindie Gardens, South West corner of Adelaide city and the like.</i></p> <p><i>This survey work need not be an onerous task, examining individual histories of properties. For a Contributory Listing a Heritage Consultation need only identify the buildings that are of the era. We would advocate the identification of pre 1915 (WWI) buildings, predominantly Victorian, Federation and Edwardian cottages and villas, and the identification of pre 1940 (WWII) buildings, predominantly Bungalows, which are clear style identifiers of Historic Character homes in South Australia,</i></p> <p><i>It is not necessary to exclude properties that have been superficially altered such as</i></p>

19/9/2022

	<p><i>those modified in the 1960's and or missing original verandahs etc, as such alterations are readily reversed and not reason to preclude listing and protection. Refer to the numerous before and after examples provided by Sandy Wilkinson as evidence of this.</i></p> <p><i>The Historic Area Overlays should also include prescriptive development rules to ensure that any new buildings built in an historic area are built to a similar height and scale of the heritage buildings in the vicinity and street.</i></p> <p><i>As such, just as setbacks and garage widths are prescribed, ceiling heights should be prescribed, as this is the most consistent parameter of historic houses, and ironically the most consistent failure of infill dwellings, which invariably have a ceiling height noticeably lower than the prevailing historic housing stock.</i></p> <p><i>In areas like Parkside ceiling heights are consistently 3.3m (11 foot) and in areas of larger cottages and villas the ceiling heights are consistently 3.67m (12 foot).</i></p> <p><i>The reference to consistent wall heights is not working and ceiling heights of just 3.0m is being regularly used for infill housing.</i></p> <p><i>In historic areas houses have consistently single width driveways, many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side garage.</i></p> <p><i>Therefore, in historic area overlays, double garages to the street front should be stated as being inappropriate on block 15m (15.24m= standard 50 foot frontage) or less wide with double garages sited to the rear of driveways or only on wider blocks greater than 18m, and then sited more than 6m</i></p>
--	--

		<p><i>behind the front façade.</i></p> <p>Prospect Council</p> <p><i>Agree, noting that it is a more user friendly way of checking data and should resolve the issue we appear to be encountering of not being able to add new Representative Buildings in City of Prospect because the Reference Layer isn't a part of the planning rules that can be changed via Code Amendment</i></p>
<p>2.3.4.2. Carport and Outbuilding – Internal Parking Dimensions – Linkages</p>	<p>We agree with CASA comments on this issue</p>	<p>CASA: <i>In historic areas houses have consistently single width driveways, Many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side garage.</i></p> <p><i>Therefore, in historic area overlays, double garages to the street front should be stated as being inappropriate on block 15m (15.24m= standard 50 foot frontage) or less wide with double garages sited to the rear of driveways or only on wider blocks greater than 18m, and then sited more than 6m behind the front facade.</i></p>
<p>2.3.4.7. Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review</p>	<p>We agree with CASA comments on this issue</p>	<p>CASA: <i>We agree to these changes and support the policy move to tapered driveways for more street car parking. We oppose double garage/side by side with dual driveways to the street frontage and feel this is not appropriate in older suburbs where all other existing homes have single driveway access to the street. Eg in Prospect the single driveway policy has been upheld.</i></p> <p><i>In historic areas houses have consistently single width driveways, many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side</i></p>

Dear Mr Holden

MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

Thank you for the opportunity to provide feedback on the draft Miscellaneous Technical Enhancement Code Amendment ('Code Amendment').

Since the inception of the Planning and Design Code ('the Code'), Holmes Dyer has regularly provided feedback to PLUS regarding any errors or omissions we have encountered as planning practitioners. It is encouraging to see that many of these matters are being addressed in this Code Amendment.

We have reviewed the Code Amendment in its entirety and offer the following feedback.

2.3.2.14. - Common and Minor Development – Overlay Relevance – Assessment Pathways

The Code Amendment document identifies certain overlays that are not relevant to ancillary / minor developments such as carports, swimming pools, verandahs and outbuildings.

'Table 5 - Public Infrastructure and Transport Overlays Applicability' identifies the Future Road Widening Overlay and Future Local Road Widening Overlay as not being relevant in the assessment of minor forms of development (see Figure 1), however the table incorrectly indicates that these overlays are not currently applied to minor development and therefore no amendments to the Code are required.

This is confirmed in 'Attachment A - Proposed Code Policy - Amendment Instructions', which only seeks to remove the application of the Coastal Areas Overlay, Hazards (Acid Sulfate Soils) Overlay, Non-stop Corridor Overlay and Gas and the Liquid Petroleum Pipelines (Facilities) Overlay from minor developments.

A review of the Code indicates that the Future Road Widening Overlay and Future Local Road Widening Overlay currently exclude minor forms of development from the Accepted Development pathway in a number of zones, including most neighbourhood-type zones and the suite of Master Planned Zones.

It is requested that the Code is amended to ensure that these Overlays do not remove the Accepted Development pathway for minor forms of development.

Figure 1. Excerpt from Table 5 – Public Infrastructure and Transport Overlays Applicability

Overlay	Primary		Ancillary	
	Detached, Semi-detached and Row dwellings	Land Division	Ancillary Accommodation and Dwelling Extensions	Garport / Outbuilding / Verandah / Retaining Wall / Swimming Pool
Airport Building Heights (Aircraft Landing Area) <i>The Airport Building Heights (Aircraft Landing Areas) Overlay seeks to ensure building height does not pose a hazard to the operation and safety requirements of aircraft landing areas</i>	Yes	No	No	Yes
Airport Building Heights (Regulated) <i>The Airport Building Heights (Regulated) Overlay seeks to ensure building height does not pose a hazard to the operation and safety requirements of commercial and military airfields</i>	Yes	No	No	No
Future Local Road Widening <i>The Future Local Road Widening Overlay seeks to ensure development will not compromise efficient delivery of future road widening requirements</i>	Yes	Yes	No	No
Future Road Widening <i>The Future Road Widening Overlay seeks to ensure development will not compromise efficient delivery of future road widening requirements.</i>	Yes	Yes	Yes	No

2.3.2.15. - Detached Dwellings in Master Planned Zones as an Accepted Development Pathway

We strongly support the proposed amendments to Table 1 to remove unnecessary Overlays as exclusions from the Accepted Development pathway for Detached Dwellings in all Master Planned Zones where a Building Envelope Plan applies.

However, we are concerned that the Code Amendment does not seek to remove these same Overlays for Row Dwellings and Semi-Detached dwellings in the Master Planned Renewal Zone, which are also contemplated in the Building Envelope Plan process (refer Figure 2).

It is therefore requested that the following Overlays are removed from Table 1 of the Master Planned Renewal Zone for Row Dwellings and Semi-Detached Dwellings.

- Aircraft Noise Exposure Overlay
- Character Preservation District Overlay
- Coastal Areas Overlay
- Future Local Road Widening Overlay
- Future Road Widening Overlay
- Hazards (Bushfire - High Risk) Overlay
- Hazards (Flooding) Overlay
- Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay

- Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay
- Resource Extraction Protection Area Overlay
- River Murray Flood Plain Protection Area Overlay
- Significant Industry Interface Overlay
- Significant Landscape Protection Overlay

Figure 2. Excerpt from PlanSA Building Envelope Plans Fact Sheet

How does the building envelope support construction?

A BEP is called up in master planned zones as a relevant consideration when assessing development applications for buildings. Policy requirements such as building height, street setbacks, positioning of boundary walls, and side and rear boundary setbacks will typically recognise a relevant BEP in the deemed-to-satisfy/designated performance feature criteria.

Further, master planned zones the Code identify some dwelling types as accepted development (i.e. no planning consent required) in Table 1 subject to meeting relevant criteria such as being constructed within the envelope of an approved BEP.

The accepted development classification is available in the following zones and for the following development types:

Zone	Class of Development
Master Planned Neighbourhood Zone	Detached dwelling
Master Planned Renewal Zone	Detached dwelling, row dwelling, semi-detached dwelling
Master Planned Township Zone	Detached dwelling

Recommended Editorial Amendments

2.3.2.8. - Urban Corridor Zones – Side Boundary Setback – Policy Review

It is our view that the proposed rewording of PO 2.4 (and the existing wording for DPF 2.4) is difficult to understand and uses vague language (e.g. ‘front part of the allotment’, ‘parts of the building’, ‘building parts’):

PO 2.4 (proposed by the Code Amendment)

Buildings are:

- (a) sited on side boundaries for parts of the building located towards the front part of the allotment to achieve a continuity of street façade to the street
- (b) setback from side boundaries for parts of the building located behind the street facing elements, to enable building separation to provide access to natural ventilation and sunlight.

DPF 2.4 (existing wording)

Building walls with no window/s or balcony/s fronting the boundary, setback from side boundaries as follows:

- (a) no minimum on the boundary, within the first 18m from the front property boundary for any building level
- (b) no minimum for remaining length for ground level only

- (c) 2m or more for 1st level and above for building parts more than 18m from the front property boundary

The following alternative wording is suggested:

PO 2.4

Buildings set back from side boundaries (other than street and zone boundaries) to achieve a continuous streetscape and provide access to natural ventilation and sunlight between buildings.

DPF 2.4

Building walls with no window/s or balcony/s facing the side boundary set back as follows:

- (a) All levels within 18m of the front property boundary: no minimum
 (b) Ground level >18m from the front property boundary: no minimum
 (c) 1st level and above >18m from the front property boundary: 2m minimum

2.3.7. - Part 7 – Land Use Definitions

It is recommended that clause (a) of the proposed definition for Tourist Accommodation is amended as follows:

Tourist Accommodation - Means premises in which temporary or short-term accommodation is provided to travellers on a commercial basis. This use may also include:

- (a) onsite services and facilities primarily for ~~the~~ use by guests;

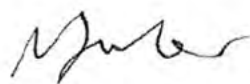

2.3.8. – Part 8 – Administrative Terms and Definitions

The introduction of a definition for direct overlooking is supported.

For consistency and to avoid confusion, it is recommended that relevant references to overlooking in the Code are amended to read direct overlooking. Relevant references are currently found in the Design module (PO 23.5 and 29.6) and Design in Urban Areas module (PO 32.5 and 39.6) and relate to overlooking as an undesirable outcome as opposed to overlooking that is encouraged, e.g. overlooking of the street.

We trust this feedback is of some assistance. Please do not hesitate to contact the undersigned should you require clarification of any of the matters raised.

Yours sincerely

Nitsan Taylor
Principal

Mr Craig Holden
Chair, State Planning Commission
Via email: plansasubmissions@sa.gov.au

Dear Craig,

RE: Miscellaneous Technical Enhancement Code Amendment

1. INTRODUCTION

We make this submission on behalf of, Steve Grace ('client'), the registered proprietor of 9 Regano Road, Flagstaff Hill ('Site'), in relation to the Miscellaneous Technical Code Enhancement Code Amendment ('MTECA'), which was initiated by the State Planning Commission ('Commission').

The *Proposal to Initiate* stated that the focus of the MTECA is to make technical improvements to the Planning and Design Code ('the Code') in line with the key topics detailed below:

- Improve policy clarity and interpretation;
- Improve consistency and alignment with Code drafting principles;
- Improving system efficiency and procedural matters;
- Review classification tables and assessment pathways, in particular for common and minor forms of development;
- Linkages improvements (missing or additional policies);
- Addressing unintended policy consequence;
- Update to the Rules of Interpretations to improve understanding of the Code's operation.

Whilst our client is generally supportive of the intent of the MTECA, and the significant majority of the amendments proposed, we are of the opinion that a number amendments in the MTECA consultation document should be further amended in order to provide improved clarity of interpretation, and to address what appear to be unintended policy consequences.

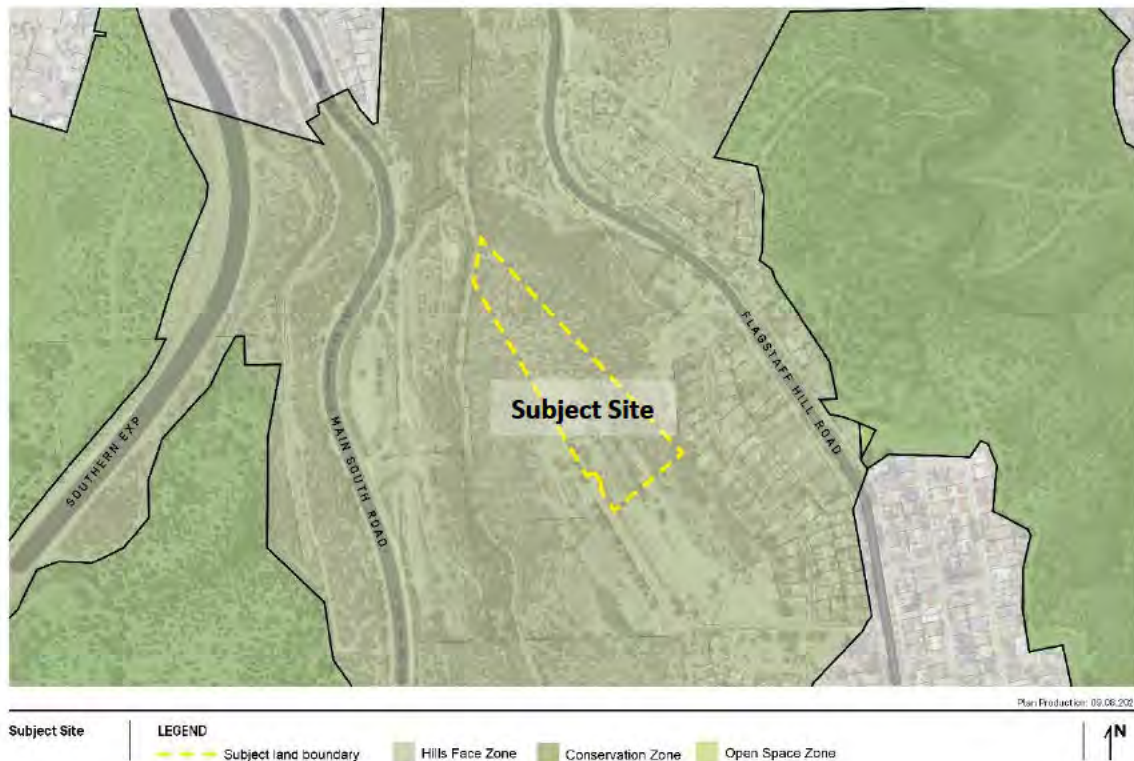

2. CLIENT'S SITE

Our client's Site is comprised of a single allotment formally described as Allotment 9 in Deposited Plan 7945, and commonly known as 9 Regano Road, Flagstaff Hill.

The land contains a total frontage of approximately 90 metres to Regano Road and a site area of 13 acres (5.26 hectares).

The South Australian Property and Planning Atlas ('SAPPA') shows the Land as being within the Hills Face Zone ('Zone'), as shown in Figure 1, below:

Figure 1 Aerial image of the Land

3. Restricted Development Classification (Section 2.3.2.9)

The MTECA states that investigations by the Commission have further highlighted the difference in how non-complying and restricted development are assessed, and as such, there remains certain classes of development listed in Table 4 of various zones that have inappropriately transitioned former non-complying classes of development across as restricted development in the Code.

The MTECA also acknowledges that a number of classes of restricted development do not necessarily require assessment by the Commission and should instead be performance assessed by an Assessment Manager or Council Assessment Panel (noting that the Zone or Overlay typically provides policy to guide the appropriateness or not of these classes of development).

The MTECA establishes the following new principles to inform the Commission as to what classes of development are most appropriately listed as restricted development:

- **Principle 1:** Warrants assessment by the Commission to consider the strategic implications and impacts.
 - » For example, large-scale out-of-centre retail warrants State assessment as it may have a broader impact on the form and pattern of development across a region and could disrupt the role of activity centres in providing equitable and convenient access to shopping, administrative, cultural, entertainment and other facilities.
- **Principle 2:** Requires detailed investigations and assessment beyond that provided through a performance assessed pathway, and may require consideration of other documents outside of the Code.

- » For example, special industry has the potential to endanger or detrimentally affect the health of people and property and would therefore benefit from a more detailed assessment process.

Section 2.3.2.9.10 of the MTECA states the following:

“The intent and outcomes sought for the Hills Face Zone are also considered strong in guiding appropriate potential developments. In this context, this Code Amendment provides further opportunity to align the restricted development principles with those listed land uses of the Hills Face Zone.”

And:

“While there is currently no guiding policy for land division within the Hills Face Zone, this Code Amendment does intend to add new policy to the zone to provide greater clarity and guidance to land division, in particular when a boundary realignment may be appropriate.”

Accordingly, the MTECA proposes the following changes to the Zone:

“AMEND Table 4 – Restricted Development Classification in the Hill Face Zone by removing the following Classes of Development:

- Land Division (exclusion for boundary realignment listed) “

And:

“CREATE new policy (PO 14.1 and PO 14.2) within the Hills Face Zone to provide guidance of when land division, specifically boundary realignment, may be appropriate.”

<i>Land Division</i>	
<i>PO 14.1 Land division does not result in the creation of an additional allotment.</i>	<i>DTS/DPF 14.1 No additional allotments are created.</i>
<i>PO 14.2 Land division involving boundary realignments occurs only where it supports the management or improvement of the natural environment including avoiding: a) further fragmentation of land that may reduce effective management of the environment or diminishing the natural character of the area</i>	<i>DTS/DPF 14.2 Land division involving boundary realignment that will satisfy one of the following a) is for the creation of a public road or a public reserve b) is to remove an anomaly in existing boundaries with respect to the location of existing buildings or structures c) is for the management of existing native vegetation</i>

4. Comments and Recommendations

While we support the exclusion of ‘boundary realignment’ from being restricted development, the inclusion of new policy, specifically Zone PO 14.1, suggests that it is superfluous to list ‘land division’ as restricted development due to the clear intent of Zone PO 14.1.

To further support this opinion, we draw your attention to the following map which illustrates the interaction of the Hills Face Zone with the Environment and Food Production Area (‘the EPFA’):

Regional Context | LEGEND | Plan Production: 09.08.2022

 Subject land	 Hills Face Zone	 Conservation Zone	 Open Space Zone	 Environment and Food Production Areas
--	---	---	---	---

↑ N

As you will note, the areas of the Hills Face Zone that immediately adjoin the urban areas of metropolitan Adelaide are predominantly contained within the EFPA.

Section 7(5)(d) of the *Planning, Development and Infrastructure Act 2016* ('the Act') states:

"if the proposed development will create additional allotments to be used for residential development, the relevant authority must refuse to grant development authorisation in relation to the proposed development."

Having noted the above, we consider the strength of the proposed Code policy (i.e. Zone PO 14.1), coupled with Section 7(5)(d) of the Act, as having the requisite policy and legislative strength to prevent urban sprawl into the most sensitive areas of the Mount Lofty Ranges.

As such, we do not see a need to list 'land division' as restricted development in the Hills Face Zone in order to achieve the stated outcomes in the MTECA.

Notwithstanding, we consider there is an opportunity to amend the wording of PO 14.1 such that in those parts of the Hills Face Zone where the EFPA does not apply, a Technical and Numeric Variation ('TNV') can specify minimum allotments sizes that support the retention and re-establishment of the natural landscape character, coupled with efficient and effective use of land.

To that end, we note that in the Rural Zone and the Productive Rural Landscape Zone, policies envisage horticultural activity on allotments measuring 1 hectare. Horticulture is a use of land that is envisaged by the Hills Face Zone, which suggests that a minimum site area TNV or 1 hectare may be appropriate for the Hills Face Zone.

Accordingly, we suggest the following amendment to proposed Hills Face Zone PO 14.1:

<i>Land Division</i>	
<p>PO 14.1 <i>Land division does not result in the creation of an additional allotment unless:</i></p> <p>(a) <i>The proposed land division is consistent with any relevant Gradient Minimum Site Area (General) Technical and Numeric Variation layer, and maintains the natural landscape character of the Mount Lofty Ranges and preserves biodiversity and locally indigenous vegetation.</i></p>	<p>DTS/DPF 14.1 <i>No additional allotments are created unless: The proposed land division is consistent with any relevant Gradient Minimum Site Area (General) Technical and Numeric Variation layer.</i></p> <p><i>>INSERT TNV< (e.g. 1ha)</i></p>

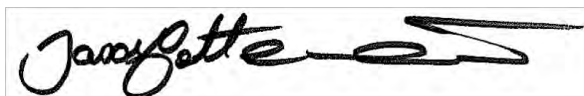

5. Conclusion

The recommendations contained in this submission would ensure that:

- The Commission is not needing to assess development applications that can otherwise be assessed by Council Assessment Panels and Assessment Managers;
- The sensitive areas of the Hills Face Zone and the EFPA remain protected from urban sprawl.
- Relevant authorities and land owners are provided with greater certainty noting the proposed new policy in the Hills Face Zone – PO 14.1 and DPF 14.1.

We appreciate the opportunity to review the MTECA, and would be pleased to clarify any of our identified issues and proposed recommendations directly.

Yours sincerely,

Jason Cattonar
 Associate Director

MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

State Planning Commission

PlanSA@sa.gov.au

Submission issued September 2022
South Australian Chapter

Association of Consulting Architects
The Business of Architecture

Australian
Institute of
Architects

ABOUT US

The Australian Institute of Architects (Institute) and Association of Consulting Architects (ACA) are the peak membership bodies for the architectural profession in Australia.

Architects are a key component of Australia's \$100 billion built environment sector and there are around 13,500 architectural businesses in Australia with around 40,000 employees. Approximately 25,000 people in the labour force hold architectural qualifications (Bachelor degree or higher) and architectural services in Australia in 2017-18 had revenue of \$6.1 billion and generated \$1.1 billion of profit.

The Institute and ACA actively work to maintain and improve the quality of our built environment by promoting better, responsible and environmental design.

PURPOSE

- This submission is made by the Australian Institute of Architects (the Institute) and the Association of Consulting Architects (ACA) in response to the proposed *Miscellaneous Technical Enhancement Code Amendment* published by the State Planning Commission.
- At the time of this submission:
 - ▶ The Institute National President is Shannon Battisson FRAIA, and the SA Chapter President is Anthony Coupe RIAA. The A/Chief Executive Officer is Barry Whitmore.
 - ▶ The ACA National and SA President is John Held. The Chief Executive Officer is Angelina Pillai.

1 INTRODUCTION

The Institute and ACA generally support the State's *Planning and Design Code* Expert Review and aims to "provide South Australians with planning policy that is consistent and clear, making the planning process quicker, simpler and more equitable"¹.

However, we have significant reservations in relation to the proposed *Miscellaneous Technical Enhancement Code Amendment* (Code Amendment) and **the Institute and the ACA do not support the proposed Code Amendment as currently presented.**

Where the Code Amendment relates to correction of inconsistencies and errors in the Planning and Design (P&D) Code, we support the proposed changes. Where the Code Amendment will impact the application and interpretation of planning policy as it applies to applications, the proposed changes are not supported, on the basis that the Code Amendment is too extensive to provide confidence that the impact of the proposed changes can be fully assessed or understood.

We believe there is a strong risk that the proposed Code Amendment will contradict the previously established aims of the P&D Code. Our reasoning is as follows:

- Acknowledge the complexity of the P&D Code requires professional expertise to provide clarity around the development rights of landowners and adjacent landowners. This requires referral to experienced professionals with appropriate expertise where performance assessment is required. These professionals will not necessarily be statutory planners.
- Increase in the discretionary powers of 'relevant authority', which raises the risk of unintended consequences where the decision to consider one or more amendments as 'minor' means that the application is assessed through a DTS pathway without referral for expert opinion. There is a significant likelihood that discretionary decisions will be made by:
 - o Council staff who may not be accredited professionals but less experienced staff working under delegation
 - o Staff working as consultants to Council who are not necessarily familiar with local character and other factors that the Code Amendment assumes are known. We note that the statement, '*It is also acknowledged that Council Assessment Panels and Managers have the appropriate skills, qualifications and local knowledge to undertake an assessment of this nature.*', appears several times in the MTE Code Amendment as justification of the increase in discretionary decision-making powers by the relevant authority.
- Lack of definition in of what constitutes a 'minor amendment'. Determination of what constitutes a minor amendment, and how many should be allowed within one application is at the discretion of the relevant authority.
- Insufficient consideration of the unintended consequences resulting from potential conflicts of interest, inconsistency in interpretation of the P&D Code

¹ <https://dbphilpott.com.au/plan-sa-planning-and-design-code-the-code/#:~:text=The%20Code%20seeks%20to%20provide,or%20progressing%20large%20commercial%20developments.>

and resultant inequity, resulting from accredited professionals, or those staff working under delegation, making determinations on matters outside of their expertise and Professional Indemnity Insurance coverage (e.g., partial demolitions within Heritage Area Overlays).

- The Code Amendment places SA Heritage and Historical Sites at risk. The Institute and ACA recommend that developments impacting heritage sites and/or historic areas are always deferred to Heritage SA². The assessment of significance and impact needs to be undertaken by appropriately qualified professionals with expertise in preparing and assessing Heritage Impact Statements.

We recommend the P&D Code, and any amendments to it, prioritise quality long-term investments in the built environment, not just speed of assessment and administrative efficiencies. We note that Institute members who undertake work nationally consider that the time taken to assess development applications in South Australia already compares well with approval times in other jurisdictions.

We look forward to continuing to support the Department to ensure the best practical outcome that can achieve the aims of the planning reform.

2 DETAILED RESPONSE

2.1 Minor Development

The Code Amendment does not sufficiently define what constitutes a ‘minor development’ and ‘minor amendment’ to a development approval. This lack of clarity has the potential to lead to inconsistent interpretation of the planning framework by the relevant authority, resulting in unintended and inequitable outcomes and eroding public confidence in the P&D Code.

In addition, the P&D Code does not address the cumulative effect of multiple minor amendments and the Code Amendment presents an increase in the number of matters that can be classed as minor amendments by the relevant authority. The effect is a reliance on the discretionary interpretation of the relevant authorities. In practice, the relevant authority (local council) defers this discretion to an accredited planning professional, increasingly engaged on a consultancy basis. Such an arrangement presents several unintended risks:

- Potential conflicts of interests (real or perceived) of the accredited planning professional who may be undertaking work on behalf of applicants and relevant authorities.
- Potential inconsistency in the interpretation of the P&D Code due to deferral of discretionary interpretation by relevant authorities to multiple accredited planning professional, with varied levels of experience and expertise, resulting with inequity of application of the P&D Code.

² Referral of matters concerning State Heritage Listed Places is to the Minister responsible for the Heritage Places Act 1993, with Heritage SA offices acting as delegates for the Minister.

- Risk to accredited planning professional making determinations outside of their expertise and Professional Indemnity Insurance coverage.

The Institute and the ACA recommend that the Code Amendment provide further definition (for example a +/- 5% range) and examples of what is deemed as a minor development and a minor amendment to a development, to alleviate the identified risks. This would also provide increased certainty for applicants and provide clear parameters if dispute resolution is required.

We have observed that applicants are aware of the opportunity that exists to submit multiple minor amendments between gaining approval and completion of construction and, in some instances, take advantage of this. The outcome of cumulative changes to the finished building may include poor environmental performance, negative impact on public amenity, poor response to context and reduced soft landscape.

2.2 Public Notification Tables

Public notification is a vital component of the planning system to ensure that all adjoining landowners can identify potential unintended risks of specific developments and ensure community confidence in the P&D Code.

The adjustment and/or removal of public notification triggers is not supported in the following instances:

- Removal of public notification triggers based on failure to satisfy boundary setbacks
- Building work on railway land, rainwater tanks, retaining walls and decks – we recommend further consideration of public notification requirements due to potential visual impact, overlooking, shading and other environmental impacts caused by such developments.
- Land division in Adelaide Parklands, Conservation Zone and Hills Face Zone – due to the potential for significant impact to these sensitive and highly valued environments
- Excavation and filling notification exception in Hills Face Zone – due to the potentially significant impact on biodiversity, erosion, water management and impact on adjoining landowners due to alteration of the natural ground line.
- Similarly, development of dwellings, swimming pools and access tracks – restricted development application due to excavation / filling can have significant impact on biodiversity, erosion, water management, etc.
- On-boundary development – notification trigger inconsistency is not supported.
- Exclusion of land division from public notification is not supported for all zones.

2.3 Heritage

There is significant risk associated with proposed referral outlined in the Code Amendment in relation to Heritage Adjacency Overlays and Historic Area Overlays, and as written has potential to place Heritage and Historical Sites at risk.

The Institute and ACA recommend that the relevant authority be explicitly stated as being:

- The Australian Government in accordance with the EPBC Act when the development is associated with a national heritage place

- Heritage SA, when the development is associated with a state heritage place
- The Council's local heritage advisor, where this service is provided and when the development is associated with a local heritage place

The assessment of significance and impact of development / demolition needs to be undertaken by appropriately qualified professionals with expertise in preparing and assessing Heritage Impact Statements.

Demolition

The Code Amendment proposes to provide relevant authorities with discretionary power in relation to notification of demolition of buildings in Historic / Heritage areas. Clause 2.3.2.10.5 Notification Tables – Demolition of the *Miscellaneous Technical Enhancement Code Amendment for consultation* states the intention of amendment:

“... to give the relevant authority ability to determine that a building is not of historic value and therefore doesn't warrant notification – example below:

Except any of the following:

- (a) the demolition (or partial demolition) of a State Heritage Place or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated)*
- (b) the demolition (or partial demolition) of a building (except an ancillary building) in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated). “*

We strongly oppose these proposed amendments for the following reasons:

- Relevant authorities (or local councils) may not have access to professional heritage expertise.
- An accredited professional who is not a heritage architect, lack the expertise to provide an opinion as to:
 - o Which building or part of building “is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated”.
 - o Which building or part of building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated.”
- The risk of the impact of potential misinterpretation of the heritage value and/or historic attributes resulting in demolition of a heritage/historically relevant place significantly outweighs any potential administrative and time benefits of circumventing referral to Heritage SA.

2.4 Land use and administrative definitions

There are a series of ambiguities that are not supported throughout the Code Amendment. Specific comments as follows:

- Restricted development classification – the removal of “discouraged or inappropriate” development is not supported, as relies on discretionary judgment of by the relevant authority and does not appropriately provide a framework for assessment.
- Urban corridor zones – side boundary setback is defined as “located toward the front part of allotment”. Further definition is required in metres or expressed as a percentage of lot length.
- Land use and intensity Clause DTS/DPF 1.1 is not supported. This clause allows for the replacement of a dwelling on condition that hazard / emission is ceased, however there is no reference to any potential continued impact of a former hazard or emission.
- Hills Face Zone Clause DTS/DPF 3.1 – a rigorous definition of natural ground level is required. This definition needs to consider the impact of previous site works undertaken and how they have impacted the original ground levels and impacts of land that is built up on one side of boundary and excavated on other side.
- Exclusions - Land division that is a boundary realignment –
 - o According to the common definitions a boundary realignment is not a land division, so this amendment is redundant.
 - o Boundary realignment and land division need to be defined in the Planning and Design Code. Currently they are not, so the common definitions should be applicable.
- Common definitions
 - o A Boundary Adjustment or boundary realignment is a survey to change the boundaries between two or more lots of land without creating a new lot – for example there are two lots initially and the proposal is to change the boundaries between them so that there will be two lots at the end.
 - o Land division – The division of land into at least two or more allotments.
- Inconsistency in the definition of building height, building wall setback and wall height – further articulation and review of how these definitions impact on one another is required. For example, where clause 2.3.2.12 notes that the height of the wall is measured from the top of its footing, the scenario of footing acting as a retaining wall (which could be up to 1 metre in height) has not been considered.
- Clause 2.3.3.1 Affordable housing overlay – the proposed amendment replaces the existing complex set of options with a singular requirement. Such an amendment may have the unintended consequence of discouraging the provision of affordable housing by private developers. The intent of excluding the South Australian Housing Authority from complying with this clause is unclear. Consistent planning framework for the public and private affordable housing developments will ensure there is consistent quality and quantity of affordable housing in SA.
- Clause 2.3.3.4 Design overlay referral – the nature of what is a minor variation to an application is left to the opinion of the relevant authority. We note the previously highlighted issue of consistency and equity with such an approach, and stress that statutory planners are not appropriately qualified to undertake design quality assessments. We highlight the aim of the *Mandatory State Planning Policy 2: Design Quality* and note that a discretionary approach will oppose the encouragement of high-quality design and innovation within the planning framework. We recommend that where a design performance assessment is required it is undertaken by a registered architect and that where an amendment to an approved proposal that has been subject to design review is submitted it needs to be reviewed by a registered architect for design impact.

- Restricted development – there is insufficient clarity in the definitions and examples provided between the principles for assessment (Principle 1 and Principle 2). Further articulation is required to ensure clarity to developers as to which assessment pathway is applicable for their specific development.

2.5 Policy inconsistencies and definitions

There are a series of ambiguities that are not supported throughout the Code Amendment. Specific comments as follows:

- Concept plans – insufficient definition provided for what constitutes a concept plan. It is unclear as to the process undertaken for assessing concept plans (refer to Clause 2.3.2.3).
- Use of subjective terms such as “pleasant character” (refer Clause 2.3.2.5) is discouraged as it does not provide sufficient clarity and consistency in interpretation.
- Statement under Restricted development classification table 4: “dwellings provide a convenient base for landowners...” is a subjective term that does not provide consistency and clarity in interpretation.
- Inconsistency in the definition of and performance outcome of wall heights and boundary wall heights throughout the Code Amendment. Consistent definition and how the height will be measured needs to be applied throughout the Code to ensure clarity in interpretation.
 - o Clarity is required in the application of performance criteria, which (as amended) allow for two building height options, to ensure consistent interpretation of the Code. The current amendment provides options for the development height, which can result in unintended consequences eroding community confidence in the Planning and Design Code.

RE: Miscellaneous Technical Enhancement Code Amendment

Dear Craig

We appreciate the opportunity to make this submission to the Miscellaneous Technical Enhancement Code Amendment, 2022. We understand this is the first of what will become annual review and we support this continuous improvement approach by the State Planning Commission.

Community Alliance SA Inc. (CASA) is an umbrella organisation for over 30 resident associations and community groups from Adelaide and other areas of South Australia. The aim of CASA is 'To Put the People back into Planning and Development in South Australia'.

Since its inception in 2012, CASA has been involved with the planning reform process and has consistently engaged with the State Government as it supports the aims of the process in principle, namely to 'provide consistency, clarity, certainty, transparency and accessibility for all'.

The objectives of CASA as outlined in its Constitution are as follows:

1. To campaign for ethical and transparent governance including the provision of genuine information to communities.
2. To lobby for reform of planning, development and related legislation to ensure participative decision making with real community engagement.
3. To lobby for sufficient resources for reform of compliance and enforcement of relevant legislation, regulations and procedures.
4. To act as an advocate for residents' associations and community groups in South Australia.

General Feedback

Whilst we agree in principle to the following statement and assurances from you that:

'this Amendment focuses on the following technical enhancements rather than issues involving a substantial change in policy position, or the intent of zones, subzones,

overlays or general development policies.

- *improve policy clarity and interpretation*
- *ensure greater consistency and alignment with Code drafting principles*
- *improving system efficiency and procedural matters*

- *review classification tables and assessment pathways, in particular for common and minor forms of development*
- *linkage improvements (missing or additional policies)*
- *addressing unintended policy consequence*
- *update to the Rules of Interpretations to improve understanding of the Code's operation'* (Proposal to Initiate an Amendment to the Planning and Design Code, Craig Holden, Chair, State Planning Commission, 6 December 2021).

these proposed changes must be tested fully for impact upon owners, neighbours, residents living in those affected areas and streets, local area amenity and loss of character and heritage.

If these impacts are not considered from a broader community perspective, but just seen as requirements to make planning decisions and actions easier for Councils, planners, developers and builders, then the changes will further worsen an already appalling destruction of heritage and loss of character in many suburbs across Adelaide and South Australia. We have appreciated the opportunity to express this view to you in person.

In several sections of the PlanSA document, comments are made about practitioner's feedback. This is not consistent throughout the document. In some sections you have made it clear that you have held additional consultations which is a good thing. However, it is unclear whether these proposed changes are all practitioner based or Department based.

We also believe many of these ideas for proposed changes could be tested further with the community through the Expert Panel Review. We are grateful for the opportunity to do this in the coming months.

CASA's consultation approach

CASA undertook its usual consultative approach to preparing our submission. This included the following activities:

- ♦ Two x 1.5 hr meetings with Mr Craig Holden, Chair of the State Planning Commission and three staff from the Dept of Planning and Infrastructure. These sessions were appreciated as we were able to hear the rationale of proposed changes as well as provide CASA's viewpoint back to Mr Holden and the team. We felt this two way exchange of ideas and suggestions helped to inform our submission significantly and recommend such meetings continue wherever possible.
- ♦ Initial high-level review of the document by the CASA committee, to determine areas of focus as the Amendment is lengthy, detailed and highly technical.
- ♦ An online workshop with our members to discuss the key issues, led by our Vice President Sandy Wilkinson, expert Heritage Architect and Planner. This workshop informed the majority of our submission.
- ♦ Preparation of a draft document sent to workshop attendees for amendments.
- ♦ Updates to, and finalisation of our submission.
- ♦ Submitted to PlanSA@sa.gov.au on Friday 23 September 2022

Code Technical Amendment Specific feedback

On the following pages you will find the CASA feedback to the proposed changes. In each section we have copied the issue statement and the proposed code change from your document and provided our responses in *blue font* immediately after each proposed change. If any of our comments are not clear, we welcome the opportunity to discuss these further with you.

2.3.1.1. Application of Spatial Policy Relevant to the Site of the Development

Issue

Feedback received has raised questions about the application of spatially based policy (zones, subzones and overlays) in circumstances where a zone, subzone or overlay only partly covers the site of a development.

Proposed Code Change

AMEND Part 1 – Rules of Interpretation to include explanation and rules on how to determine relevant policy when a spatial layer only applies to part of a site that is the subject of a development application.

‘Application of Spatially Based Policies and Rules

Where a zone, subzone, overlay or technical and numeric variation (TNV) does not spatially apply to the whole of a site that is the subject of the development application, the spatially based rules of the zone (including assessment pathway exclusions), subzone, overlay or TNV are only applicable to the portion of the site to which the zone, subzone, overlay or TNV spatially covers. Reference to the South Australian Property and Planning Atlas of the SA planning database will be made to determine whether a zone, subzone, overlay or TNV is relevant to the site of the proposed development application.’

CASA: This seems logical as long as it does not further weaken the decision making of planners with regard to character and heritage in those zones.

2.3.1.2. Spatial maintenance updates – comprising minor or operational amendments

Issue

Updates comprising minor or operational amendments to the spatial layers of the Code contained within the SA planning database are made on a regular basis in order to maintain a correct relationship between spatial layers and land parcels.

Proposed Code Change

AMEND Part 1 – Rules of Interpretation to include explanation and rules on how spatial layers are updated in order to maintain correct relationships with cadastre or roads.

CASA: This seems logical as long as it does not further weaken the decision making of planners with regard to character and heritage in those zones.

2.3.2.1. Conservation Zone - land division - PO 2.1 - Policy

Issue

The Department for Environment and Water has identified that while PO 2.1 of the Conservation Zone in respect to land division seeks to limit direct property access to 'waterfront areas', which is appropriate, the performance outcome may not limit land division in coastal conservation areas that do not directly abut waterfront areas (e.g. where a Crown reserve may separate the parcels). This could result in intensification of development and environmental impacts in coastal conservation areas such as coastal dune systems and facilitate indirect access to the waterfront, which is not the intent of policy.

Proposed Code Change

AMEND PO 2.1 of the Assessment Provisions (AP) of the Conservation Zone to clarify that land division should avoid creating additional allotments with frontage to the coast or River Murray to capture conservation areas that do not directly abut waterfront areas.

CASA: We agree to this change.

2.3.2.2. Conservation Zone - land division – DTS/DPF 2.1 - Policy

Issue

Land division policy within the Conservation Zone does not currently recognise the location of the zone adjacent the River Murray nor the policy intent to limit land division that results in parcel arrangements that increase direct property access to waterfront areas.

Proposed Code Change

AMEND DTS/DPF 2.1(b) of the Assessment Provisions (AP) of the Conservation Zone to refer to a boundary realignment that does not result in any additional allotments with frontage or direct access to the coast or the River Murray.

CASA: We agree to this change.

2.3.2.3. Master Planned Zones – Site Dimensions and Land Division – Policy Review

Issue

Feedback has raised questions about the wording of Site Dimensions and Land Division policy within the Master Planned Zones relating to:

PO and DTS/DPF 11.3 of the Master Planned Township Zone and Master Planned Neighbourhood Zone	
PO 11.3 Sites for residential purposes are consistent with an authorised plan of division or Master Plan .	DTS/DPF 11.3 Development will not result in more than 1 dwelling on an existing allotment.

PO and DTS/DPF 3.4 of the Master Planned Renewal Zone	
PO 3.4 Sites for residential purposes are consistent with an authorised plan of division, Concept Plan or Master Plan.	DTS/DPF 3.4 Development will not result in more than 1 dwelling on an existing allotment.

Proposed Code Change

AMEND PO 11.3 of the Master Planned Township Zone and Master Planned Neighbourhood Zone to reference Concept Plans in order to achieve consistency with the Master Planned Renewal Zone.

CASA: We agree to this change.

2.3.2.4. Rural Zone – Detached Dwelling – Interface Between Land Uses – Linkages

Issue

Feedback has suggested that policy provisions relating to matters of interface between sensitive receivers and rural land uses are not being called up for Performance Assessed detached dwellings in Table 3 – Applicable Policies for Performance Assessed Development of the Rural Zone, and therefore are not available to a relevant authority for a development’s assessment.

It has been suggested that PO 9.1 – 9.7 of the Interface between Land Uses General Development Policies and their associated DTS/DPF provisions are relevant to the assessment of detached dwellings within the zone.

Proposed Code Change

ADD the following policy linkages for Performance Assessed Detached Dwelling in Table 3 of the Rural Zone, including associated DTS/DPF provisions:

- Interface between Land Uses [Interface with Rural Activities]: PO 9.1, PO 9.2, PO 9.3, PO 9.4, PO 9.5, PO 9.6, PO 9.7

CASA: We agree to this change.

2.3.2.5. Rural Zone – Detached Dwelling – Linkages

Issue

Feedback has identified that irrelevant provisions are being returned for dwellings in the Rural Zone, whereby policy provisions from the Zone relating to dwelling additions are being applied to a Performance Assessed detached dwellings.

Proposed Code Change

APPLY relevant Zone policies to a Detached Dwelling in Table 3 – Applicable Policies for Performance Assessed Development of the Rural Zone.

CASA: We agree to this change.

2.3.2.6. Rural Zone – Land Division / Boundary Realignment - Linkages Issue

Feedback has suggested that additional policy guidance is required for the assessment of Land Divisions, including Boundary Realignments within the Rural Zone. In particular, it has been suggested that PO 11.3 of the Rural Zone should apply to Performance Assessed Land Division as this provision relates specifically to land division including boundary realignment.

Proposed Code Change

ADD PO 11.3 of the Rural Zone to the Performance Assessed pathway for Land Division where it appears in Table 3 of the Rural Zone to ensure consistency with the application of other Zone policies to this development type.

CASA: We agree to this change.

2.3.2.7. Urban Corridor Zones – Primary Road Corridor – Policy Review Issue

Different terminology is currently used to describe the primary corridor – for example primary corridor (i.e. a State maintained road) and primary road corridor.

Proposed Code Change

AMEND policy to ensure consistent use of terminology across the Urban Corridor suite of zones by referring to “primary road corridor (i.e. a State maintained road)”

CASA: We agree to this change in principle although we do not wish to see a correction for consistency lead to greater leniency in decision making and destruction of local communities in areas where this change would not make sense.

The example in Prospect is one which we think necessitates further consideration of this proposed change: the rezoning of Devonport Road as Urban Corridor when it is a minor road next to a railway line with a number of 4 and 5 storey buildings already on a very narrow road. If you change this definition to State owned roads only, then Devonport Tce will end up with even shoddier builds than is already occurring.

We do not wish to see wall to wall buildings on more corridor roads. Whilst the 1-2 storey podium elements of new apartment developments may be appropriate to be built boundary to boundary, apartments above the podium level should be set 3m off the side boundaries to enable windows on the side elevations rather than blank concrete side walls. 3m corresponds with the BCA setback requirement for openable windows for Class 2 Residential Development under the BCA.*

2.3.2.8. Urban Corridor Zones – Side Boundary Setback – Policy Review Issue

The Urban Corridors Zones are intended to allow for increased density and activity along key corridors and transport routes. Despite such policy existing prior to the Code, many of the areas in these zones are still in a period of ‘transition’ and do not have an established character.

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

As a result, the policy contained within these zones needs to balance the desire for urban renewal and the existing built form.

One of the policies that creates confusion in this regard is the Urban Corridor (Living) Zone Performance Outcome (PO) 2.4 and the Designated Performance Feature (DPF) 2.4, noting that:

- The PO anticipates that side setbacks complement the established character; and
- The DPF has no regard to established character and prescribes setbacks of 0 to 2 metres, relative to the building height and proximity to the primary street frontage.

Accordingly, the PO and DPF are seeking different outcomes and the PO is seeking an outcome that is inconsistent with the overall intent of the Zone.

Proposed Code Change

AMEND Urban Corridor (Boulevard) Zone PO 2.6, Urban Corridor (Business) Zone PO 2.6 and Urban Corridor (Living) Zone PO 2.4 to clarify that building from boundary to boundary towards the front of the allotment is envisaged.

CASA: The reference to established character should be retained. Side setbacks should be 3m above a 2-storey podium height to enable windows compliant with BCA for Class 2 Construction rather than blank walls with murals as is currently happening.

Only sites of sufficient width to enable 3m side boundary setbacks should be developed to 6-8 storeys. Setbacks of such development from Main Street frontages above a 2-storey podium level needs to be increased from 2m to 12m.

2.3.2.9. Restricted Development Classification – Table 4

Issue

Review of Restricted Development Classification

Proposed Code Change

AMEND Table 4 – Restricted Development Classification across all relevant zones to align the restricted development classification with either/or both of the new principles.

Note: see individual classes of development or specific zones for further detail of proposed changes to restricted development classification.

CASA: Only egregious forms of Development as listed fall within the Restricted Development Category.

- *Over height, over plot ratio and demolition of State & Local Heritage should be also Restricted Development and subject to 3rd Party Appeal rights.*
- *Over height development provides as much of a windfall to developers on urban sites as a developer buying rural land and being able to develop it for housing.*
- *Restricted Development should be subject to 3rd Party appeal rights as the SCAP have often approved development that does not satisfy planning rules.*

Therefore, the ERD Court should be the ultimate decider not the SCAP.

2.3.2.9.1. Industry listed as a restricted development classification

Issue

Review of Industry being listed as restricted development across all applicable zones to align with the new principles

Proposed Code Change

AMEND Table – 4 Restricted Development Classification within the following zones that have Industry listed (with the exclusion of Light Industry) and replace it with Special Industry as a restricted class of development.

CASA: We agree to this change however over height, over plot ratio and demolition of State & Local Heritage should be also Restricted Development and subject to 3rd Party Appeal rights.

2.3.2.9.2. Land Division within the Limited Land Division Overlay

Issue

Review of the restricted classification of land division in zones where the Limited Land Division Overlay applies to align with the new principles.

Proposed Code Change

REMOVE land division when the Limited Land Division Overlay applies in Table 4 – Restricted Development Classification in the Productive Rural Landscape Zone, Rural Zone, and Rural Horticulture Zone.

Note: while other zones may have the Limited Land Division Overlay applying, this will not need to be amended as land division is not listed within Table 4 – Restricted Development Classification.

CASA: We agree to this change.

2.3.2.9.3. Dwelling within the Limited Dwelling Overlay

Issue

Review of the restricted classification of dwellings in zones where the Limited Dwelling Overlay applies to align with the new principles.

Proposed Code Change

REMOVE dwelling when the Limited Dwelling Overlay applies from Table 4 – Restricted Development Classification in the Rural Zone and Rural Horticulture Zone

CASA: We agree to this change.

2.3.2.9.4. Dwellings within the Employment (Bulk Handling) Zone

Issue

Review of the restricted classification of a dwelling within the Employment (Bulk Handling) Zone to align with the new principles.

Proposed Code Change

REMOVE dwelling from Table 4 – Restricted Development Classification in the Employment (Bulk Handling) Zone

CASA: We agree to this change.

2.3.2.9.5. Dwelling and Land Division within the Deferred Urban Zone

Issue

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

Review of the restricted classification of land division and dwelling within the Deferred Urban Zone to align with the new principles

Proposed Code Change

REMOVE dwelling and land division from Table – 4 Restricted Development Classification within the Deferred Urban Zone

CREATE new PO 2.3 to provide guidance for a dwelling within the Deferred Urban Zone

CASA: We agree to this change.

2.3.2.9.6. Employment Zone – Various land uses

Issue

Review of the restricted classification of all land uses within the Employment Zone to align with the new principles.

Proposed Code Change

REMOVE the following listed land uses from Table 4 – Restricted Development Classification in the Employment Zone

- Waste reception, storage, treatment or disposal; and
- Wrecking yard

CASA: We agree to this change.

2.3.2.9.7. Dwellings within the Rural Intensive Enterprise Zone

Issue

Review of the restricted classification of a dwelling within the Rural Intensive Enterprise Zone to align with the new principles.

Proposed Code Change

REMOVE dwelling from Table 4 – Restricted Development Classification in the Rural Intensive Enterprise Zone.

CASA: We agree to this change.

2.3.2.9.8. Land Division and Dwellings with the Rural Shack

Settlement Zone

Issue

Review of the restricted classification of a dwelling and land division within the Rural Shack Settlement Zone to align with the new principles.

Proposed Code Change

REMOVE dwelling and land division from the restricted table in Rural Shack Settlement Zone

2.3.2.9.9. Significant Interface Management Overlay triggering a restricted development classification

Issue

Review of the restricted development classification for land division within all CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

zones where the Significant Interface Management Overlay applies to align with the new principles.

Proposed Code Change

AMEND policy within the Significant Interface Management Overlay to provide additional clarity that land division for a sensitive use/receiver is not envisaged.

Note: Given the hierarchy of Overlays, this policy would take priority over any zoning policy and would therefore assist any Relevant Authority across the numerous zones where this Overlay applies. Even with the additional policy, development wouldn't be precluded from happening in the strategic growth areas of the Playford and Mount Barker Council areas once the source of hazard has been removed or otherwise.

AMEND the land division policy trigger in Table 4 – Restricted Development Classification within the Rural Zone which restricts land division within areas subject to the Significant Interface Management Overlay to refer to 'sensitive use / receiver' rather than for 'residential' purposes.

Note: the amendment to apply the terms 'sensitive use' or 'sensitive receiver' rather than 'residential' is to provide greater consistency between the Overlay policy and the restricted development classification in the zone. Current wording within the Rural Zone (for example) would not pick up land division for Tourist Accommodation or other forms of sensitive use. The proposed amendment would rectify this issue.

CASA: We agree to this change.

2.3.2.9.10. Hills Face Zone – Various land uses

Issue

Review of the restricted classification of all land uses within the Hills Face Zone to align with the new principles.

Proposed Code Change

AMEND Table 4 – Restricted Development Classification in the Hill Face Zone by removing the following Classes of Development:

- Excavation
- Filling
- Land Division (exclusion for boundary realignment listed)

AMEND policy for excavation and filling within the Hills Face Zone to guide the extent of excavations and fill that is allowed.

CREATE new policy (PO 14.1 and PO 14.2) within the Hills Face Zone to provide guidance of when land division, specifically boundary realignment, may be appropriate.

CASA: Excavation and filling should remain Restricted in the Hills Face Zone as should land division. Large cut and fill to create a level surface to suit a standard project house or whatever motivation to create a level surface damages the visual appearance of the Adelaide Hills.

Boundary re-alignment that does not create additional allotments could be allowed.

We do not wish to see the Hills Zone destroyed as the beautiful backdrop to Adelaide. The view from the city should be to a beautiful landscape free of excess development. This also requires attention in the city to height of buildings in suburbs with a view to the Hills Face Zone.

2.3.2.10. Notification Tables – Table 5 – Procedural Matters (PM)

2.3.2.10.1. Notification Tables – Minor Development

Issue

Concerns were raised by council planners and accredited professionals about public notification requirements to adjoining landowners for relatively minor applications which 'trip' into a performance assessed pathway under the Code. This creates additional work for planning authorities over and above notifications that occurred under the former development system under the Development Act 1993.

This appears partly due to structural differences between the former and new development systems in how the notification requirements are prescribed.

Proposed Code Change

AMEND the interpretation section of each zone public notification table (Table 5) together with Part 1 – Rules of Interpretation by inserting rules into the Code that would allow a relevant authority to determine that a variation to one or more corresponding exclusions prescribed in Column B is minor in nature, in which case the application will not require notification.

AMEND each zone public notification table (Table 5) so that the following minor forms of development are not subject to public notification (or subjected to notification exception criteria in Column B):

- Air handling unit, air conditioning system or exhaust fan
- Carport
- Deck
- Fence
- Outbuilding
- Pergola
- Private bushfire shelter
- Retaining wall
- Shade sail
- Solar photovoltaic panels (roof mounted)
- Swimming pools or spa pool
- Verandah
- Water tank.

CASA: Notification of minor development could be limited to immediately abutting properties, as opposed to the demolition of something and construction of a new dwelling that forms part of a streetscape that would be of interest to a broader extent of neighbours who live in the vicinity.

We believe there could be two types of notifications and that you should not dispense with notifications. The more notifications the better.

2.3.2.10.2. Notification Tables – Errors and Inconsistencies

Issue

To correct identified errors, inconsistencies and repetition that exists within and between zone public notification tables.

Proposed Code Change

AMEND each zone public notification table (Table 5) by correcting any identified errors or notable inconsistencies between zone notification tables of similar theme (e.g., rural zones, neighbourhood zones, activity centre zones which should generally be consistent in the classes of development listed as not requiring notification in Column A and the exception criteria applied [Column B]). Specifically address:

- incorrect reference to 'storey' instead of the defined term 'building level' in the exception criteria applying to development undertaken by the South Australian Housing Trust (SAHT).
- duplication of light industry, warehouse and store in the public notification table of the Rural Shack Settlement Zone
- inconsistency between notification triggers and on-boundary development policy within zones
- inconsistency across zones in relation to the exclusion of land division from public notification
- inconsistency between the Productive Rural Landscape Zone and other rural zones in relation to the placement of public notification notices
- technical and/or typographical errors.

CASA: Notification should occur as much as possible, instead of removing notifications. CASA does not believe that minimising public notification should be an active quest of our Planning System. It should in fact be the opposite!

There must be an intent to notify as much as possible with the objective that more information enables a higher level and quality of decision making for ALL stakeholders, not just the planning and building industries, but the community as well.

A participative and more consultative engagement with your community will enhance building planning developments and ensure that detailed local area knowledge is adequately captured before irreversible and bad decisions are made, particularly with the loss of our history in the form of destruction of heritage buildings.

CASA insists that Town Planning is a truly consultative process that seeks to include, rather than exclude public input into decision making. Minimising notifications will not result in any increased economic activity despite what the property lobby may purport.

2.3.2.10.3. Notification Tables – Frost Fans

Issue

In the call for submissions, frost fans were raised by one Council as a land use activity that was being unnecessarily bogged down by notification red tape.

Proposed Code Change

No changes are recommended.

CASA: Noted

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

2.3.2.10.4. Notification Tables – Building on railway land / Temporary public service depot

Issue

Questions have been raised as to why ‘building on railway land’ is listed as a class of development that is not subject to public notification given that it could take any form and nuisance impacts are unknown.

Proposed Code Change

AMEND all zone public notification tables (Table 5) except that applying to the Remote Areas Zone and Coastal Waters and Offshore Island Zone, by deleting ‘building work on railway land’ wherever it occurs.

AMEND all zone public notification tables (Table 5) except that applying to the Commonwealth Facilities Zone, to include the following additional class of development and corresponding exception:

1. Railway line Except where located outside of a rail corridor or rail reserve.

AMEND the public notification tables (Table 5) of the following zones:

- Employment Zone
- Employment (Bulk Handling) Zone
- Employment (Enterprise) Zone
- Infrastructure Zone
- Strategic Employment Zone

to include the following additional class of development and corresponding exception:

Class

1. Building for the purposes of railway activities - None specified

CASA: We agree to this change

2.3.2.10.5. Notification Tables – Demolition

Issue

Some participants questioned whether the exception applying to ‘demolition’ includes partial demolition, and requested a review of the need to notify demolition of buildings in Historic Areas.

Proposed Code Change

AMEND the exception clause in Column B of the notification table as it applies to ‘demolition’ to also reference ‘partial demolition’.

AMEND the exception clause in Column B of the notification table as it applies to ‘demolition’ to provide a relevant authority with the ability to determine that a building is not of heritage value and therefore does not require public notification.

CASA: Demolition should NOT be generally exempt from requiring DEVELOPMENT approval. This is because only 3% of buildings are protected from demolition as either State, Local or Representative Items, which is manifestly inadequate.

Partial demolition of portions not visible from the street need not be notified.

*There is a danger of buildings being demolished that are thought not to be historic being demolished in the thinking that they are not historic when actually they are, such as **houses that may have been altered or bastardised in the 1960's.***

The clear identification of the Representative Buildings such that they are mapped and listed on the Portal and show up as such on Form 1 Real Estate pre-purchase sale documents is what is really required at this stage.

Not all Councils have surveyed and mapped their Representative (former Contributory) Items and this is a weakness in the Code that needs to be addressed. Councils have no record of demolition. 86% of buildings in the CBD are not listed. 97% of buildings in the state can be demolished.

We recommend the State Govt help fund Councils to pay for surveys of their historic suburbs to identify the presently unlisted historic buildings and include the Representative Items for all Councils in the portal. All pre 1915 and pre 1940 buildings should be listed.

There should be controls on demolition, and also on the vacant land left behind when a demolished building site is left vacant due to changed plans.

It is critical that Councils have a record of what numbers of properties are demolished and what and how to track lost embodied energy. Recording this information is essential.

2.3.2.10.6. Notification Tables - Examples

The following samples incorporate the recommended changes to the public notification sections of the Code as proposed by the Code Amendment and detailed above. They represent only a small cross section of zones and are provided as examples only. Reference to the amendment instructions should be made for full coverage of the amendments proposed to all public notification tables.

2.3.2.10.6.1. General Neighbourhood Zone

Table 5 - Procedural Matters (PM) - Notification

The following table identifies, pursuant to section 107(6) of the *Planning, Development and Infrastructure Act 2016*, classes of performance assessed development that are excluded from notification. The table also identifies any exemptions to the placement of notices when notification is required.

Except any of the following:

1. the demolition (or partial demolition) of a State or Local Heritage Place (other than where the building is a place within an area established as a State Heritage Area under the Heritage Places Act 1993 and the relevant authority is of the opinion that the building is not in keeping with the features of identified heritage value in the State Heritage Area in which the building is situated)
2. the demolition (or partial demolition) of a building (~~except an ancillary building~~) in a Historic Area Overlay (other than an ancillary building or where the relevant authority is of the opinion that the building is not in keeping with the historic attributes identified in the Historic Area Statement applicable to the area in which the building is situated).

*CASA: We argue strongly against this change and the wording suggested in the tables. **This is very dangerous and will depend on planner's interpretation. We need the inclusion of all heritage buildings to be included in the Code.** The preceding comments at 2.3.2.10.5. Notification Tables – Demolition apply here also. We do not support this change.*

2.3.2.10.6.2. Neighbourhood Zone

Table 5 - Procedural Matters (PM) - Notification

The following table identifies, pursuant to section 107(6) of the *Planning, Development and Infrastructure Act 2016*, classes of performance assessed development that are excluded from notification. The table also identifies any exemptions to the placement of notices when notification is required.

CASA: See previous comments at 2.3.2.10.6.1. General Neighbourhood Zone.

We do not support this change.

2.3.2.10.6.3. Township Zone

Table 5 - Procedural Matters (PM) – Notification

CASA: See previous comments at 2.3.2.10.6.1. General Neighbourhood Zone.

We do not support this change in relation to the heritage matters.

2.3.2.10.6.4. Urban Neighbourhood Zone

Table 5 - Procedural Matters (PM) - Notification

CASA: See previous comments at 2.3.2.10.6.1. General Neighbourhood Zone.

We do not support this change in relation to the heritage matters.

2.3.2.10.6.5. Urban Corridor (Main Street) Zone

Table 5 - Procedural Matters (PM) – Notification

CASA: See previous comments at 2.3.2.10.6.1. General Neighbourhood Zone.

We do not support this change in relation to the heritage matters.

2.3.2.10.6.6. Productive Rural Landscape Zone

Table 5 - Procedural Matters (PM) – Notification

CASA: See previous comments at 2.3.2.10.6.1. General Neighbourhood Zone.

We do not support this change in relation to the heritage matters.

We do not agree to the removal of notifications as noted in the tables for Exemptions for Performance Assessed Development or Exemptions for Restricted Development.

Notifications should be increased as much as possible, rather than reduced, to enable more informed decision making by a collective community, not just a sub-set of the community.

2.3.2.11. Building Height – TNV and context – Policy refinement

Issue

Most zones include a policy guiding building heights, some of which require a development to satisfy two outcomes: a building height specified in a Technical and Numeric Variation (TNV) and a positive response to the local context. Other zones require the achievement of only one of these outcomes.

Zones that require a development to achieve both building height outcomes may unnecessarily constrain development to align with the existing context, rather than facilitating urban renewal and increased density anticipated by taller building heights. It is also likely to result in inconsistent application of the same policy.

Proposed Code Change

AMEND the following Performance Outcomes to ensure that they only require development to meet one of two building height outcomes:

- Urban Neighbourhood Zone PO 2.2
- Urban Corridor (Boulevard) Zone PO 3.1
- Urban Corridor (Business) Zone PO 3.1
- Urban Corridor (Living) Zone PO 3.1
- Urban Corridor (Main Street) Zone PO 3.1
- Housing Diversity Neighbourhood Zone PO 3.12
- Local Activity Centre Zone PO 3.1
- Suburban Activity Centre Zone PO 3.1
- Employment Zone PO 3.3
- Township Activity Centre Zone PO 3.2
- Township Main Street Zone PO 3.1
- Urban Activity Centre Zone PO 3.1
- Suburban Main Street Zone PO 3.1

AMEND the following Performance Outcomes to ensure consistent terminology is used for Technical and Numeric Variations:

- Strategic Innovation Zone PO 3.1
- Capital City Zone PO 4.1
- City Main Street Zone PO 3.1
- Community Facilities Zone PO 2.1

CASA: As this largely deals with the translation of the Development Plan to the Code and attention to consistency, we agree with this change.

2.3.2.12. Building Height, Building Wall Setback and Wall Height – Policy Review

Issues

- *South facing terminology inconsistencies*
- *Wall height measurement inconsistencies*
- *Building height measurement inconsistencies*
- *Side and rear setback confusion*

Proposed Code Change

AMEND the definitions for ‘wall height’ and ‘building height’ in Part 8 – Administrative Terms and Definitions to include the option for the measurement point to be taken from a point specified by the policy in which the term is used, rather than from the measurement point specified in the definition.

CREATE a definition for ‘post height’ in Part 8 – Administrative Terms and

Definitions with its meaning to take the same (or similar) form to 'wall height' (as amended above).

AMEND policy that references 'wall facing a southern boundary' (or similar) to refer instead to 'south facing' throughout the Code.

AMEND policy that references 'wall height above top of footings' (or similar) to refer simply to 'wall height.'

AMEND 'building height' DTS/DPF policy (but not for ancillary buildings or structures) in the following zones so that the measurement is taken from 'the top of footings', consistent with the former Residential Code policy for complying dwellings:

- General Neighbourhood
- Housing Diversity Neighbourhood
- Master Planned Neighbourhood
- Master Planned Renewal
- Master Planned Township
- Suburban Neighbourhood
- Urban Renewal Neighbourhood
- Waterfront Neighbourhood

AMEND 'wall height' and 'post height' DTS/DPF policy for 'ancillary buildings and structures' in the following zones so that the measurement is taken from 'natural ground level', consistent with the former Residential Code policy for complying outbuildings, carports and verandahs.

- General Neighbourhood
- Housing Diversity Neighbourhood
- Master Planned Neighbourhood
- Suburban Neighbourhood
- Urban Renewal Neighbourhood
- Waterfront Neighbourhood

AMEND side building wall setback DTS/DPF policy for all neighbourhood-type zones to ensure consistency across zones, improve clarity of policy and consistency with Residential Code policy expression and application.

CASA: As these changes are largely due to consistency improvements, we agree with them.

We note that the second list is missing 'Master Planned Renewal' and 'Master Planned Township'.

2.3.2.13. Building Walls and Dwelling Walls – Policy Review

Issue

Feedback has identified that there is inconsistent wording within the 'Housing Diversity Neighbourhood Zone' rear boundary setback and side boundary setback provisions between 'dwelling walls' and 'boundary walls'. Concern has been raised that use of the term 'dwelling walls' does not capture non residential

built form that is also envisaged within the Zone.

A similar issue has been identified within the Master Planned Neighbourhood and Township Zones where the term 'residential buildings' has been used rather than 'buildings' for the DTS/DPF for building height. Concern has been raised that the use of the word 'residential' will not capture non-residential built form such as 'pre-schools' and 'consulting rooms' which are also envisaged land uses within the zones.

Proposed Code Change

AMEND reference from 'dwelling walls' to 'building walls' for all side and rear setback provisions (excluding ancillary buildings and structures) within Neighbourhood Type Zones except where the policy is specific to residential buildings.

CASA: As these changes are largely due to consistency improvements, we agree with them.

2.3.2.14. Common and Minor Development – Overlay Relevance – Assessment Pathways

Issue

Overlays are, in some cases, preventing a DTS or accepted development pathway and/or applying additional policies where it is unnecessary to do so. This adds complexity, cost and time to the assessment process with no overall community benefit

Proposed Code Change

It is recommended that overlay applicability be applied in accordance with Tables 2-6 as noted. Note, where relevant overlay policy would allow for a Deemed-to-Satisfy Pathway to be maintained, relevant provisions from the overlay will be applied, rather than as an Overlay Exclusion.

CASA: We agree to these changes.

2.3.2.15. Detached Dwellings in Master Planned Zones as an Accepted Development Pathway

Issue

Feedback has highlighted that the Accepted Development pathway for a Detached Dwelling within Master Planned Zones is not available in locations where certain overlays are applied. Although this is expected in most situations, Regulation 19A and Practice Direction 15 enable a Building Envelope Plan (BEP) to be put in place to enable a streamlined development assessment pathway for certain development types, where other related matters have been addressed via the BEP.

Proposed Code Change

AMEND Table 1 – Accepted Development Classification of the Master Planned Zones to enable the return of the Accepted development assessment pathway for a Detached Dwelling where a Building Envelope Plan applies except for where the following overlays apply:

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

- Character Area Overlay
- Heritage Adjacency Overlay
- Historic Area Overlay
- Local Heritage Place Overlay
- State Heritage Area Overlay
- State Heritage Place Overlay

CASA: We agree to these changes.

2.3.2.16. Detached Dwellings - Medium and High-Rise Development – Policy Relevance

Issue

Feedback has indicated that provisions related to medium and high-rise residential developments are not applied to detached dwellings and dwelling additions in Table 3 of the Urban Corridor (Living) Zone, even though the zone allows for medium-rise developments of three storeys. As such, matters related to landscaping, rainwater tanks and tree planting are unable to be adequately assessed against policy provisions specifically related to medium rise development.

Note: Whilst this issue had been raised in relation to the Urban Corridor (Living) Zone, it has been identified that a range of other Neighbourhood-type Zones also allow for various dwelling types at heights of three storeys or above. As such, the investigations and feedback will also take these additional zones into account.

Proposed Code Change

AMEND assessment pathways for all dwelling types within zones where three storey development (and above) is contemplated to ensure that policy provisions relating to medium and high-rise development is applied.

CASA: We agree to this change.

2.3.2.17. Discrete vs Discreet - Garages & Carports - Policy Review

Issue

Feedback has suggested that Performance Outcome 10.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone contains a typo that alters the meaning of the overall provision. The typo relates to the spelling of the word discreet/discrete. It has also been suggested that PO 10.1 needn't be applied to a carport or garage as it duplicates policy that applies to these development types as part of the zone ancillary buildings and structures policy.

Proposed Code Change

AMEND Performance Outcome 10.1 of the Established Neighbourhood Zone and Township Neighbourhood Zone to use the word “discreet” (instead of discrete).

REMOVE linkages to PO and DTS/DPF 10.1 for Carports and Outbuildings within the Established Neighbourhood Zone and Township Neighbourhood Zone.

CASA: We agree to these changes.

2.3.2.18. Discrete vs Discreet - Garages & Carports - Linkages

Issue

It has been suggested that PO 10.1 need not be applied to a carport or garage, given it duplicates policy that applies to these development types as part of the zone ancillary buildings and structures policy.

Proposed Code Change

REMOVE linkages to PO and DTS/DPF 10.1 for Carports and Outbuildings within the Established Neighbourhood Zone and Township Neighbourhood Zone.

CASA: We agree to these changes.

2.3.2.19. Dwelling Alterations and Building Additions/Alterations – Assessment Pathways

Issue

Feedback has highlighted that the Code does not identify ‘building alterations and/or additions as a class of development which is assigned to assessment pathways or can be selected for use using the Line of Enquiry functionality on the Portal. As a result, alterations and/or additions are defaulting to the ‘all other Code assessed’ performance assessed pathway, which requires a full merit-based assessment (and in some cases public notification).

Furthermore, the planning authority is required to consider the whole of the Code and identify the relevant assessment provisions to the proposal. In comparison, ‘dwelling additions’ have a Deemed-to-satisfy pathway within most neighbourhood-type zones, and ‘Internal building work’ is prescribed as accepted in all zones, other than those located within the State or Local Heritage Place Overlays or State Heritage Area Overlay. Part 5, Division 1, Section 57(1)(c) of the Planning, Development and Infrastructure Act requires rules and standards to be proportionate, suited to relevant conditions, and as far as is reasonably practicable and appropriate, minimise regulatory burden.

Further, the Code Drafting Principles promote the use of Accepted or Deemed-to-satisfy assessment pathways for a class of development that is commonly expected in the zone and where it can be assessed solely on quantitative, prescriptive criteria. It is therefore appropriate to consider whether a streamlined assessment pathway could be provided for building alterations/and or additions.

Proposed Code Change

CREATE an accepted development pathway for building alterations where the development does not increase the total floor area and does not exceed the wall height and/or overall building height of the existing building. Include exemptions for State Heritage Places or Areas and Local Heritage Places **and Representative Items**

AMEND the introductory text for *Table 1 – Accepted Development Classification, Table 2 – Deemed-to-Satisfy Development Classification and*
CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

Table 3 – Applicable Policies for Performance Assessed Development to clarify that alterations and additions must be assessed against the same provision as the existing development category, unless alterations and/or additions are listed as a separate class of development.

Portal Changes

CREATE a new development type *Building alterations*

CREATE a note on the PlanSA Portal under ‘What policies apply to a development at an address?’ that provides advice on how to search for alterations and/or additions as follows:

For Alterations / Additions to an existing building (including internal building work), select the associated development type listed below and the Building alterations/additions development type. For example, for an alteration to a shop, select ‘Shop’ and ‘Building alterations

*CASA: We agree to these changes **and ask to also have ‘and Representative Items’ included as noted above in green above.***

2.3.2.20. Horticulture – Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay – linkages

Issue

Feedback has suggested that certain overlay policy provisions are not being called up for Horticulture even though they are specifically related to this development type.

Zone Classification Tables (i.e., Table 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to a relevant authority to use when assessing a proposed development. Only the provisions assigned to a development type in a Classification Table can be used.

Proposed Code Change

REMOVE Prescribed Surface Water Areas Overlay and Prescribed Wells Area Overlay from the list of Overlay exclusions for Deemed-to-Satisfy Horticulture where it appears in Table 2 of all relevant Zones.

ADD the following Overlay DTS/DPF provisions to the Deemed-to-Satisfy pathway for Horticulture where it appears in Table 2 of Zones:

- Prescribed Surface Water Areas Overlay DTS/DPF 1.2
- Prescribed Wells Area Overlay DTS/DPF 1.1

ADD PO1.1 of the Murray-Darling Basin Overlay to the Performance Assessed pathway for Horticulture where it appears in Table 3 of Zones.

CASA: We agree to these changes.

2.3.2.21. Interface Height – Multiple Zones: Policy and TNV – Policy Review

Issue

The Designated Performance Features (and Deemed-to-Satisfy Criteria) (DTS/DPF) relating to interface heights are inconsistent across several zones. For example, some of the interface building envelopes do not apply to the primary street frontage and most zones contain separate policy regarding the interface height adjacent a road. This may result in misinterpretation or inconsistent application of interface heights.

Proposed Code Change

AMEND the TNV Interface Height policies in Part 6.6 of the Code to include '(except where this boundary is a street boundary)'

AMEND the interface height policies within the relevant Zones to replace 'primary street boundary' with 'street boundary' or add reference to '(except where this boundary is a street boundary)'

AMEND all diagrams within Interface Height TNV and policies to ensure consistent wording and interpretation

CREATE a PO 3.8 in the Township Main Street Zone and a PO 3.3 in the Recreation Zone to relate to built form scale adjacent neighbourhood-type Zones

AMEND Table 3 of the Township Main Street Zone to apply new PO 3.8 to the following classes of development:

- Consulting Room
- Dwelling
- Office
- Residential flat building
- Shop
- Store

AMEND Table 3 of the Recreation Zone to apply new PO 3.3 to the following classes of development: Shop

CASA: The interface to adjacent and behind the building is important. The interface with the street is essential to ensure human scale and consistent street scale relationship to historic streetscapes and heritage listed buildings.

2.3.2.22. Land Division – Site Contamination – Policy Relevance and Linkage

Issue

Part 9.1 of the Code (Referral Body: Environment Protection Authority) specifies that a referral is required for Performance Assessed Land Division in certain circumstances, however, the policy provisions of the Site Contamination General Development Policies are not linked to this development type, which makes it difficult for a user to ascertain whether a referral would be required.

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

Zone Classification Tables (i.e., Tables 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to relevant authorities to use when assessing a proposed development. Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

ADD PO and DTS/DPF 1.1 of the Site Contamination General Development Policies to any Performance Assessed Land Division to ensure that site contamination matters are appropriately addressed.

CASA: We agree to this change.

2.3.2.23. Non-Residential Outbuildings – New Policy and Assessment Pathways

Issue

While assessment pathways for outbuildings currently exist, relevant policies are typically related to residential outbuildings. As such, non-residential outbuildings will often default to Performance Assessed where they are not ancillary to a dwelling (e.g., a shed for a church or a school in a neighbourhood-type zone).

Proposals for outbuildings are development under the circumstances set out in Schedule 4 of the *Planning, Development and Infrastructure (General) Regulations 2017* (the General Regulations) and currently require assessment against the Code. However, the Regulations do not specify that an outbuilding must be ancillary to a dwelling, but only that it is ancillary to another building on the site.

To streamline the assessment pathway, there is merit in refining the policy framework to address outbuildings that are not associated with a dwelling.

Proposed Code Change

CREATE an additional performance outcome in all applicable zones for Ancillary Structures and Buildings not specifically in association with a dwelling.

ADD new policy provisions to existing pathways for outbuildings, carports and verandahs to allow for assessment of these development types where not in association with a dwelling.

CASA: We agree to these changes.

2.3.2.24. Outbuildings - Accepted Development Criteria

Issue

Feedback was raised that within the Housing Diversity Neighbourhood Zone, Table 1 – Accepted Development had a duplication for ‘outbuilding’ located on or abutting a boundary (not being a boundary with a primary or secondary

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

street). The duplication essentially repeated the same policy with a slight variation in wording.

Proposed Code Change

REMOVE all instances where a duplication has occurred, remove Outbuilding criteria 10 in Table 1 – Outbuildings.

CASA: We agree to these changes.

2.3.2.25. Pool Fencing – Accepted Development Pathway

Issue

Although an Accepted Pathway exists for a swimming pool or spa pool, at present this does not consider the prerequisite for an associated safety fence. As a result, there is no way to achieve an Accepted Development Pathway for a swimming pool as the associated safety fence must be performance assessed. This slows assessment timeframes as it involves planners in what is ultimately a Building Rules matter. The matter is considered problematic and thus warrants updating to better reflect one of the key goals of the Code, which is to ensure planning policy is consistent and clear, ultimately making the planning process quicker, simpler and more equitable.

Proposed Code Change

AMEND – The Accepted Pathway for ‘Swimming pool or spa pool’ across pertinent zones to include ‘and Swimming Pool Safety Features’.

CASA: We agree to these changes. Another reason to consider this issue is to ensure community safety and bringing the fencing requirements together with the swimming pool development as one application.

We suggest the words are amended to ‘Swimming pool, spa pool or similar’ and include ‘swimming pool and spa fencing, and safety features.’

2.3.2.26. Primary Street Setback – Use of Building Line

Issue

Concerns have been raised with the current definition and policy application of the term ‘building line’ as it is leading to potentially undesirable outcomes.

Proposed Code Change

AMEND the Building line term to reflect the removal the of 1.5m projection Policy.

AMEND the policy for primary street setback across all zones listed at p131 and p132. The removal of the building line reference within policy should provide for clear interpretation of the requirement for the primary street setback.

CASA: We agree to the first change regarding bay windows exclusion.

We do not agree to the other changes regarding placement of houses and building lines. The current policy should be retained unless there is a historic building on the corner that is being retained. Then the policy makes sense.

It is important to ensure conservation of corner heritage properties wherever possible. If a corner building is going to be demolished then we do not agree to this proposal.

2.3.2.27. Replacement Building – Overlay Exclusions: Coastal Flooding Overlay

Issue

The Department for Environment and Water has requested that the Coastal Flooding Overlay be added as an exclusion for Deemed-to-Satisfy Replacement Buildings within all classification tables to which the Coastal Flooding Overlay applies, in order to prevent authorisation of proposed buildings below the standard sea flood risk level and sea level rise allowance.

Proposed Code Change

AMEND assessment pathways to exclude Deemed-to-Satisfy Replacement Buildings where they are located within the “Coastal Flooding Overlay”.

CASA: We agree to these changes.

2.3.2.28. Tourist Accommodation – Total Floor Area – Rural Zones

Issue

Feedback received expressing concerns with differences in policy interpretation for total floor area of Tourist Accommodation in the Rural Zone and Productive Rural Landscape Zone.

Proposed Code Change

Amend DTS/DPF 6.3 in the Rural Zone and Productive Rural Landscape Zone to clarify the total floor limitation in DTS/DPF 6.3, reinforcing the intent of PO 6.3 – that small-scale, ancillary tourist accommodation, sited in a manner which is sensitive to the core purpose of the zone (agricultural pursuits) is supported.

CASA: We agree to this change.

2.3.3. Part 3 – Overlays

2.3.3.1. Affordable Housing Overlay – Referral Trigger

Issue

The following issues have been identified by the South Australian Housing Authority in relation to the Procedural Matters (PM) – Referrals section of the Affordable Housing Overlay:

- Unnecessary referral of development applications by the South Australian Housing Authority to itself as the agency responsible for the provision of referral advice.
- Confusion regarding when an application should be referred.

Proposed Code Change

AMEND the referral trigger to exclude from the referral trigger development applications where the applicant is the South Australian Housing Authority.

AMEND the referral trigger to focus on the three matters submitted by the South Australian Housing Authority in their example above.

CASA: We agree to these changes.

2.3.3.2. Coastal Areas Overlay – Policy Intent

Issue

The Department for Environment and Water has identified some specific policy improvements within the Coastal Areas Overlay to better clarify intended outcomes and ensure greater consistency between Performance Outcomes and Deemed-to-Satisfy Criteria/Designated Performance Features. This includes:

- expanding the range of potential impacts to the marine and onshore coastal environment from development in PO 4.1 to address other potential impacts not currently identified in the Performance Outcome, in particular the spread of diseases
- ensuring the range of potential impacts identified in PO 4.7 aligns with those identified in the accompanying Deemed-to-Satisfy Criteria/Designated Performance Feature (DTS/PDF 4.7).

Proposed Code Change

AMEND PO 4.1 to ensure that development will not unreasonably affect the marine and onshore coastal environment by way of spread of diseases in addition to other listed potential impacts within the Performance Outcome.

AMEND DTS/DPF 4.7 to include reference to ‘cobbles’ in addition to removal of shell grit or sand by development to ensure wording is consistent with the accompanying Performance Outcome (PO 4.7).

CASA: We agree to these changes.

2.3.3.3. Design Overlay – Referral

Issue

The Design Overlay currently contains a clause that exempts a referral to the Government Architect where it relates to a variation of a development application that has either previously been referred to the Government Architect (or Associate Government Architect) or been granted development authorisation under legislation.

Provision should be included in the referral trigger to allow discretion to the relevant authority to refer a variation to the Government Architect (or Associate Government Architect) should they consider it warranted, particularly where the variation may be more significant or could impact on the Office of Design and Architecture South Australia’s Principles of Good Design.

Proposed Code Change

AMEND the exemption clause in the referral trigger in the Overlay to allow discretion to the relevant authority to refer a variation to the Government Architect (or Associate Government Architect) should they consider it

warranted taking into account the purpose of the referral.

CASA: We agree to this change.

2.3.3.4. Hazards (Flooding) Overlay – PO 3.5 and DTS/DPF 3.5 - Linkages Issue

Feedback has suggested that the current wording of PO and DTS/DPF 3.5 of the Hazards (Flooding) Overlay implies that this policy should apply to habitable buildings as well as non-habitable structures such as verandahs, carports or outbuildings. However, it has been identified that this policy has been applied inconsistently for various development types across different zones.

AMEND policy linkages to ensure a consistent approach for the application of PO and DTS/DPF 3.5 of the Overlay to various development types.

CASA: We agree to this change.

2.3.3.5. Heritage Adjacency Overlay - Referral Issue

The current wording for the referral trigger in the Heritage Adjacency Overlay is not explicit in respect to which authority, body or individual determines whether a development may materially affect the context of a State Heritage Place.

Proposed Code Change

AMEND the referral trigger in the Overlay to clarify that the relevant authority should be tasked with the responsibility to determine if a proposed development may materially affect the context of a State Heritage Place and should be referred to the Heritage Minister, as existed under previous legislation.

CASA: We agree to this change.

2.3.3.6. Key Outback and Rural Routes Overlay - Policy consistency with other Transport Overlays Issue

The Department for Transport and Infrastructure (DIT) has revised the Key Outback and Rural Routes Overlay that was introduced as part of Phase 1 of the Planning and Design Code to be consistent with, and align with, policies and criteria in other Transport Overlays introduced as part of Phase 3 of the Code. This includes to reflect relevant technical guideline sources (e.g., Austroads Guide to Road Design) and improvements introduced in Phase 3 based on consultation feedback.

This includes a range of policy amendments and proposed additional policies to align with the updated Urban Transport Overlay framework.

Proposed Code Change

AMEND PO 1.1 and DTS/DPF 1.1 to align with the Deemed-to-

Satisfy/Designated Performance Feature contained in the Major Urban

Transport Routes Overlay and updated Urban Transport Routes Overlay (see separate amendments recommend for the Urban Transport Routes Overlay), and ensure consistency across the various Transport Overlays in the Code.

AMEND PO 2.1 and DTS/DPF 2.1 to align with the existing Deemed-to-Satisfy/Designated Performance Feature contained in the Major Urban Transport Routes Overlay and Urban Transport Routes Overlay, including use of supporting diagrams for greater policy clarity, and to ensure consistency across the various Transport Overlays in the Code.

AMEND PO 3.1 and DTS/DPF 3.1 under a new heading '*Access – Location (Spacing) – Existing Access Points*' to align with the Deemed-to-Satisfy/Designated Performance Feature contained in the updated Major Urban Transport Routes Overlay and Urban Transport Routes Overlay (see separate amendments recommend for the related Urban Transport Overlays in this Code Amendment) and include a new part (c)(iv) to address a change of use from a residential dwelling to a shop or office or consulting room or personal or domestic services establishment with <250m² gross leasable floor area.

AMEND PO 4.1 and DTS/DPF 4.1 under a new heading '*Access – Location (Spacing) – New Access Points*' to align with the Deemed-to-Satisfy/Designated Performance Feature contained in the updated Major Urban Transport Routes Overlay and Urban Transport Routes Overlay (see separate amendments recommend for the related Urban Transport Overlays in this Code Amendment), including

- use of supporting diagrams for greater policy clarity, and
- use of a table to clarify separation between access points and separation from public road junctions and merging/terminating lanes for specific speed limit areas where other access policy requirements do not apply to ensure road safety – with appropriate and tailored quantifiable distances based on Austroads standards.

AMEND PO 5.1 and DTS/DPF 5.1 to align with the Deemed-to-Satisfy/Designated Performance Feature contained in the updated Major Urban Transport Routes Overlay and Urban Transport Routes Overlay (see separate amendments recommend for the related Urban Transport Overlays in this Code Amendment), including the use of:

- supporting diagrams for greater policy clarity
- a table that applies adjusted and tailored line of sight requirements based on Austroads standards for drivers approaching or exiting an access point to ensure road safety on key outback and rural roads.

AMEND PO 6.1 and DTS/DPF 6.1 to align with the Deemed-to-Satisfy/Designated Performance Feature contained in the Major Urban Transport Routes Overlay and Urban Transport Routes Overlay, and ensure consistency across the various Transport Overlays in the Code.

AMEND PO 7.1 and DTS/DPF 7.1 to align with the Deemed-to-Satisfy/Designated Performance Feature contained in the updated Major

Urban Transport Routes Overlay and Urban Transport Routes Overlay (see separate amendments recommend for the related Urban Transport Overlays in this Code Amendment), including the addition of a new part (c) that ensures development does not prevent access points becoming stormwater flow paths directly onto roads.

CREATE a new PO 8.1 and DTS/DPF 8.1 under a new heading *'Building on Road Reserves'* (and renumber subsequent provisions) to address encroachment of buildings or structures that may encroach onto, above or below road reserves, to align with policy provisions contained in the Major Urban Transport Routes Overlay and Urban Transport Routes Overlay and ensure consistency across the various Transport Overlays in the Code.

*CASA: We do not understand the inclusion of these transport/traffic changes in this technical amendment document. We do not agree to all of these changes as being **merely 'technical changes'**. They require much more discussion and rigorous analysis and fit better within the Expert Panel Review's **Terms of Reference**.*

No other change in this document warrants as many amendments as this one. The impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated.

2.3.3.7. Major Urban Transport Routes Overlay - Revised policy and referral triggers

Issue

Following further review, the Department for Transport and Infrastructure (DIT) has suggested several updates to the suite of transport overlays in the Code, including the Major Urban Transport Routes Overlay.

This includes a review against a range of technical guideline sources (e.g., Austroads Guide to Road Design) used by DIT to ensure consistent values are applied within the various transport overlays. The suggested changes aim to provide greater policy clarity and interpretation and achieve the following:

- streamline assessment pathways and reduce unnecessary referrals, in particular for small scale developments that have negligible or minor road network implications
- provide greater opportunities for relevant authorities to assess more common or minor forms of development
- better align policies with legislative requirements and responsibilities
- provide simpler policy criteria that better reflects actual practice
- reflect formal and informal feedback from industry as part of the Code's implementation.

Suggested policy changes (with the exception of some quantitative values) also align with separate but related changes proposed in this Amendment for the Urban Transport Routes Overlay and Key Outback and Rural Routes Overlay, to ensure consistency across the various transport overlays in the Code.

CASA: We do not understand the inclusion of these transport/traffic changes in this technical amendment document. We do not agree to all of these changes as being

merely 'technical changes'. They require much more discussion and rigorous analysis and fit better within the Expert Panel Review's Terms of Reference.

No other change in the document warrants as many amendments as this and others related to traffic management issues. The impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated. We recommend a separate set of consultations be undertaken on this topic.

Proposed Code Change

CREATE a new part (c)(vi) in DTS/DPF 3.1 to address a change in use from residential to a small-scale commercial or non-residential use to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

AMEND DTS/DPF 4.1 part (a) to be more concise and improve policy interpretation.

AMEND the quantitative criteria in respect to the separation between access points in the table in DTS/DPF 4.1 part (c) to include updated requirements for development intended to serve between 1 and 6 dwellings as distinct from other forms of development on a 60 km/h speed limit road, to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

CREATE a new part (a) in DTS/DPF 5.1 that recognises established usage of prior access for smaller scale residential developments (i.e., between 1 and 6 dwellings) with very low traffic generation and network implications to remove the need to justify existing established access for this scale of development, streamline assessment and reduce unnecessary referrals.

AMEND the introductory statement in DTS/DPF 5.1 to ensure the new item (a) above is addressed and that proposed development satisfies either part (a) or both parts (b) & (c), ensuring that development is either minor scale residential development and uses an existing access point or that consideration is given to both vehicular and pedestrian sightlines for other and larger scale forms of development.

AMEND the quantitative criteria in respect to both an 'access point serving 1-6 dwellings' and 'access point serving all other development' in DTS/DPF 5.1 part (b) to align with relevant and contemporary Austroads technical guidelines.

CREATE a new part (c) in DTS/DPF 7.1 to ensure development does not result in access points becoming stormwater flow paths directly onto roads.

2.3.3.8. Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay - Policy intent

Issue

PO 2.1 of the Assessment Provisions (AP) in the Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay includes unnecessary word duplication in

respect to water quality that may cause some confusion.

Proposed Code Change

AMEND PO 2.1 to remove duplication in respect to water quality.

CASA: We agree to these changes to protect the Mount Lofty Ranges Water Supply Catchment.

2.3.3.9. Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay - Policy intent

Issue

DTS/DPF 2.3 in the Assessment Provisions (AP) of the Mount Lofty Ranges Supply Catchment (Area 2) Overlay is considered overly technical as it is intended to address management of winery wastewater within the catchment however, the associated Performance Outcome (PO 2.3) has broader application. Also, the wording for PO 2.3 is confusing due to duplication.

Proposed Code Change

AMEND PO 2.3 to remove duplication and clarify its intent to ensure trade or industrial wastewater is managed to avoid adverse impacts on the quality of water draining into secondary public water supply reservoirs and weirs.

AMEND DTS/DPF 2.3 to improve application to a wider range of developments and activities that may generate trade or industrial wastewater within the catchment.

CASA: We agree to these changes to protect the Mount Lofty Ranges Water Supply Catchment.

2.3.3.10. Mount Lofty Ranges Water Supply Catchment (Area 1 and Area 2) Overlays – Referral

Issue

The Procedural Matters (PM) table within both the Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay and the Mount Lofty Ranges Water Supply Catchment (Area 2) Overlay was originally intended to require referrals for all scenarios where any combination of a second habitable dwelling, tourist accommodation or workers' accommodation is proposed on a development site that is not connected or proposed to be connected to a community wastewater management system or sewerage infrastructure. This is not clearly reflected in the current wording in the table, in particular with respect to workers' accommodation.

In addition, the Procedural Matters (PM) table in both overlays has resulted in unnecessary referrals for developments that do not propose concurrent occupation of two dwellings, tourist or workers' accommodation (e.g. where a second habitable dwelling or accommodation building is proposed and the existing habitable dwelling or accommodation building is proposed to be demolished and the existing on-site wastewater system will be decommissioned). This has resulted in unnecessary referrals to the EPA.

Proposed Code Change

AMEND the referral trigger in the Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay and the Mount Lofty Ranges Water Supply Catchment (Area 1) Overlay to:

- (a) clarify the original intent to require referrals where any combination of a second dwelling, tourist accommodation or workers' accommodation is proposed on a development site
- (b) remove unintended referrals to the EPA where a second habitable dwelling (or tourist accommodation or workers accommodation) is proposed and the existing habitable dwelling is proposed to be demolished and existing on-site wastewater system decommissioned

CASA: We agree to these changes although we would ask whether the EPA agrees that the referrals are unnecessary.

2.3.3.11. Prescribed Surface Water Area Overlay - Terminology

Issue

Terminology used in the referral trigger exemptions for certain classes of development across the various Prescribed Water Overlays is not consistent with respect to development that may require water to be taken in addition to any allocation that has already been granted under the *Landscape South Australia Act 2019*. This includes in the Prescribed Surface Water Areas Overlay, Prescribed Watercourses Overlay and the Prescribed Wells Area Overlay.

Proposed Code Change

AMEND the referral trigger in the Procedural Matters (PM) Referrals table within the Prescribed Surface Water Areas Overlay to use the term 'in addition to' in respect to any water allocation that has already been granted under the *Landscape South Australia Act 2019* to ensure consistency of terminology across the various Prescribed Water Overlays in the Code.

CASA: We agree to this change.

2.3.3.12. Prescribed Water Resources Area Overlay – Referral

Issue

An error exists in the Procedural Matters (PM) – Referrals table within the Prescribed Water Resources Overlay, whereby the overlay does not include an exemption for developments that have already been granted access to water as is provided in the various other Prescribed Water Overlays in the Code.

Proposed Code Change

AMEND the referral triggers to remove the need for referral to the Chief Executive of the Department of the Minister responsible for the administration of the *Landscape South Australia Act 2019* for certain classes of development where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken, ensuring consistency across the various Prescribed Water Overlays in the Code.

CASA: We agree to this change.

2.3.3.13. Representative Buildings – Character Area Overlay and Historic Area Overlay – Spatial Representation

Issue

Feedback has raised the need to improve access to and visibility of 'Representative Buildings' in the Character Area Overlay and the Historic Area Overlay and whether the policies of both overlays should specifically refer to representative buildings to provide a clear purpose and role of these buildings.

Proposed Code Change

AMEND the Historic Area Overlay and Character Area Overlay spatial mapping to show 'Representative Buildings' similar to the way they are currently displayed in the 'Planning Reference' section of SAPPA.

CASA: We agree to these changes. We commend the mapping that has occurred where Representative Buildings have been identified. However, there are manifestly not enough identified, with often 25% protected when 65%-70% are original historic housing stock which should be protected in inner historic suburbs.

Different councils have not completed this work or have been prevented by Planning SA and past Planning Ministers, and thus there are resultant inconsistencies across the state depending upon which council had completed their surveys and identified their buildings prior to the transition to the new Code.

The root cause of this is that Councils have either not undertaken the preparatory work to identify their Representative Buildings or not have their surveys and listing recommendations allowed by Planning SA in the past. This requires further attention by the Expert Panel.

We strongly recommend that the Government funds Councils to enable them to complete this important work. A terrible example was 17 & 15 Hutt Street, where two bluestone buildings are about to be demolished, despite being submitted for Local Heritage Listing. They could have been Representative Items and have been saved. Thus comprehensive survey work by the State Government could assist councils. This would assist in retaining many beautiful and renowned suburbs such as Colonel Light Gardens, Medindie Gardens, South West corner of Adelaide city and the like.

This survey work need not be an onerous task, examining individual histories of properties. For a Contributory Listing a Heritage Consultation need only identify the buildings that are of the era. We would advocate the identification of pre 1915 (WWI) buildings, predominantly Victorian, Federation and Edwardian cottages and villas, and the identification of pre 1940 (WWII) buildings, predominantly Bungalows, which are clear style identifiers of Historic Character homes in South Australia.

*It is not necessary to exclude properties that have been superficially altered such as those modified in the **1960's and or missing original verandahs etc, as such alterations** are readily reversed and not reason to preclude listing and protection. Refer to the numerous before and after examples provided by discipline expert Sandy Wilkinson as evidence of this.*

The Historic Area Overlays should also include prescriptive development rules to ensure that any new buildings built in an historic area are built to a similar height and scale of the heritage buildings in the vicinity and street. As such, just as setbacks and garage

widths are prescribed, ceiling heights should be prescribed, as this is the most consistent parameter of historic houses, and ironically the most consistent failure of infill dwellings, which invariably have a ceiling height noticeably lower than the prevailing historic housing stock.

In areas like Parkside ceiling heights are consistently 3.3m (11 foot) and in areas of larger cottages and villas the ceiling heights are consistently 3.67m (12 foot). The reference to consistent wall heights is not working and ceiling heights of just 3.0m is being regularly used for infill housing. In Historic Areas houses have consistently single width driveways, yet many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side garage.

Therefore, in Historic Area overlays, double garages to the street front should be stated as being inappropriate on blocks 15m (15.24m= standard 50 foot frontage) or less wide with double garages sited to the rear of driveways or only on wider blocks greater than 18m, and then sited more than 6m behind the front facade.

2.3.3.14. River Murray Flood Plain Protection Area Overlay – Outbuildings

- Policy intent

Issue

DTS/DPF 5.4(a) of the River Murray Flood Plain Protection Area Overlay does not currently make it clear that roller doors, removable panels and the like should be located at ‘opposing’ ends or sides to enable the flow through of flood waters in a flood event and is not consistent with the wording used in the referral trigger in the Overlay.

Proposed Code Change

AMEND DTS/DPF 5.4(a) to clarify that roller doors, removable panels and the like should be located at opposing ends or sides to enable the flow through of flood waters, and to align with the wording used in part (j)(iii)(C) of the ‘Procedural Matters (PM) – Referrals’ table.

CASA: We agree to these changes to ensure ongoing protection of the River Murray and its environs.

2.3.3.15. River Murray Flood Plain Protection Area Overlay – Outbuildings

– Linkage

Issue

PO 4.2 of the River Murray Flood Plain Protection Area Overlay does not currently apply to Performance Assessed Outbuildings, even though the provision itself is specifically related to this form of development. At present, PO 4.2 is only applied to Performance Assessed verandahs.

Proposed Code Change

ADD PO4.2 of the River Murray Flood Plain Protection Area Overlay to the Performance Assessed pathway for Outbuildings to ensure provide guidance on the management of visual dominance of these structures from the waterfront.

CASA: We agree to this change to ensure ongoing protection of the River Murray and its environs.

2.3.3.16. River Murray Flood Plain Protection Area Overlay – Water Supply – New Policy

Issue

The Department for Environment and Water has identified the need for new policy in the River Murray Flood Plain Protection Area Overlay that recognises the need for development to have a lawful, sustainable and reliable water supply that does not place undue strain on water resources and the River Murray in addition to existing policies that aim to protect life and property against risk of flooding. The new policy would complement similar policy in the related River Murray Tributaries Protection Area Overlay.

Proposed Code Change

CREATE a new Performance Outcome in the River Murray Flood Plain Protection Area Overlay that specifically requires that development has a lawful, sustainable and reliable water supply that does not place undue strain on water resources in prescribed water areas to complement policies in the River Murray Tributaries Protection Area Overlay and various Prescribed Water Overlays.

AMEND Table 3 – Applicable Policies for Performance Assessment Development for a range of rural and employment type zones to call up the new Performance Outcome in the assessment of particular performance assessed land uses and activities located in the River Murray Flood Plain Protection Area Overlay, including aquaculture, breweries, cideries, distilleries, wineries, industry, light industry, general industry, and horticulture.

CASA: We agree to these changes. You may wish to explain the term 'undue strain' in more detail as this could be interpreted differently (and not as you have intended) by developers.

2.3.3.17. River Murray Flood Plain Protection Area Overlay - Referrals

Issue

The Department for Environment and Water has identified an increase in the number of referrals received by the Minister for the River Murray since the full introduction of the Code, which is not practical.

It has been suggested that additional exceptions for several land uses should be included in the Procedural Matters (PM) – Referrals section of the River Murray Flood Plain Protection Area Overlay to reduce the overall number of referrals (or unnecessary referrals) to the Minister.

Further, it is considered that referrals for some development types are not needed where there is already a lawful water allocation that can service the new development.

Proposed Code Change

AMEND the referral triggers to include additional exceptions for dwellings (or alterations or extension of an existing dwelling) and outbuildings that meet certain criteria, elevated shacks within the Rural Shack Settlement Zone, and

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

transportable dwellings/cabins within an existing caravan or tourist park to reduce the number of referrals, and remove unnecessary referrals, to the Minister for the River Murray.

AMEND the referral triggers to also remove the need for referral to the Minister for the River Murray for certain classes of development where a lawful water allocation already exists that can service the new development, and where no additional water is required to be taken.

CASA: We agree to these changes, although it would seem relevant that the Minister for the River Murray receives some form of regular reporting (eg annually) of the number and type of developments that are impacting on the River Murray.

2.3.3.18. River Murray Tributaries Protection Area Overlay – Policy intent Issue

The Department for Environment and Water has identified that PO 1.2 in the Assessment Provisions of the River Murray Tributaries Protection Area Overlay appears to be limited to surface water while the listed classes of development and activities in the performance outcome are also likely to use prescribed underground and watercourse water resources.

Proposed Code Change

AMEND PO 1.2 to expand the range of prescribed water resources areas where undue strain on watercourses should not occur from the listed classes of development.

CASA: We agree to this change.

2.3.3.19. River Murray Tributaries Protection Area Overlay – Referrals Issue

Referral to the Minister for the River Murray for certain classes of development within the River Murray Tributaries Protection Area Overlay is considered unnecessary where there is already a lawful water allocation that can service the new development, and where no additional water allocation is required. This is similar to the referral issues raised in respect to the River Murray Flood Plain Protection Areas Overlay.

Proposed Code Change

AMEND the referral triggers to remove the need for referral to the Minister for the River Murray for certain classes of development where a lawful water allocation already exists that can service the new development and where no additional water is required to be taken.

CASA: We agree to these changes, although it would seem relevant that the Minister for the River Murray receives some form of regular reporting (eg annually) of the number and type of developments that are impacting on the River Murray.

2.3.3.20. State Significant Native Vegetation Areas Overlay - Referral

Trigger

Issue

DTS/DPF 1.1(b) in the Assessment Provisions (AP) of the State Significant Native Vegetation Overlay currently provides a Deemed-to-Satisfy pathway for development where an application is accompanied by a report prepared in accordance with Regulation 18(2)(a) of the *Native Vegetation Regulations 2017* that confirms that the clearance is categorised as 'Level 1 clearance'. Notwithstanding this, a referral to the Native Vegetation Council is currently triggered in the overlay for all classes of development (other than land divisions) that involve a Level 1 clearance, which is counter to the Deemed-to-Satisfy pathway.

The Department for Environment and Water also does not consider it necessary for Level 1 clearances to be referred to the Native Vegetation Council.

Proposed Code Change

AMEND the Procedural Matters (PM) – Referrals in the State Significant Native Vegetation Overlay to require that where the clearance is categorised as a 'Level 1 clearance' in an accredited consultant's report, referral is not required to the Native Vegetation Council.

CASA: We agree to this change as the Native Vegetation Council has agreed.

2.3.3.21. Traffic Generating Development Overlay – Referral

Issue

A possible anomaly has been identified with respect Traffic Generating Development Overlay – whereby development for over 50 dwellings is currently not addressed, notwithstanding that land division involving the creation of 50 or more additional allotments is.

Proposed Code Change

That DTS/DPF 1.1 – 1.3 in the overlay captures built form applications proposing in excess of 50 dwellings ensures that such applications are assessed against the overlay.

That the referral to the Commissioner of Highways be amended to enable referral of development proposing a building containing more than 50 dwellings to the Commissioner of Highways at the built form stage of the development (add a new clause).

AMEND the existing referral for 'land division creating in excess of 50 allotments to ensure that a development referred under the new clause does not end up being referred twice for the same reasons.

CASA: We agree to this change.

2.3.3.22. Urban Transport Routes Overlay - Revised policy and referral triggers

Issue

The Department for Transport and Infrastructure (DIT) has suggested a number

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

of updates to the suite of transport overlays in the Code, including the Urban Transport Routes Overlay.

This includes a review against a range of technical guideline sources (e.g. Austroads Guide to Road Design) used by DIT to ensure consistent values are applied within the various transport overlays. The suggested changes aim to provide greater policy clarity and interpretation and:

- streamline assessment pathways and reduce unnecessary referrals, in particular for small scale developments that have negligible or minor road network implications
- provide greater opportunities for relevant authorities to assess more common or minor forms of development
- better align policies with legislative requirements and responsibilities
- provide simpler policy criteria that better reflects actual practice
- reflect formal and informal feedback from industry as part of the Code's implementation.

Suggested policy changes (with the exception of some quantitative values) also align with separate but related changes proposed in this Amendment for the Major Urban Transport Routes Overlay and Key Outback and Rural Routes Overlay to ensure consistency across the various transport overlays in the Code.

Proposed Code Change

REMOVE superfluous numbering in DTS/DPF 1.1 part (b)(i) and DTS/DPF 3.1 part (b) to correct an error and improve interpretation.

CREATE a new part (c)(vi) in DTS/DPF 3.1 to address a change in use from residential to a small-scale commercial or non-residential use to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

AMEND DTS/DPF 4.1 part (a) to be more concise and improve policy interpretation.

AMEND the quantitative criteria in respect to the separation between access points in the table in DTS/DPF 4.1 part (c) to include updated requirements for development intended to serve between 1 and 6 dwellings as distinct from other forms of development on a 60 km/h speed limit road, to streamline assessment pathways for this common and minor scale development type and reduce unnecessary referrals.

CREATE a new part (a) in DTS/DPF 5.1 that recognises established usage of prior access for smaller scale residential developments (i.e., between 1 and 6 dwellings) with very low traffic generation and network implications to remove the need to justify existing established access for this scale of development, streamline assessment and reduce unnecessary referrals.

AMEND the introductory statement in DTS/DPF 5.1 to ensure the new item (a) (above) is addressed and that proposed development satisfies either part (a) or both parts (b) & (c), ensuring that development is either minor scale residential

development and uses an existing access point or that consideration is given to both vehicular and pedestrian sightlines for other and larger scale forms of development.

AMEND the quantitative criteria in respect to both an 'access point serving 1-6 dwellings' and 'access point serving all other development' in DTS/DPF 5.1 part (b) to align with relevant and contemporary Austroads technical guidelines.

CREATE a new part (c) in DTS/DPF 7.1 to ensure development does not result in access points becoming stormwater flow paths directly onto roads.

*CASA: We do not understand the inclusion of these transport/traffic changes in this technical amendment document. We do not agree to all of these changes as being **merely 'technical changes'**. They require much more discussion and rigorous analysis and fit better within the Expert Panel Review's **Terms of Reference**.*

No other change in the document warrants as many amendments as this and others related to traffic management issues. The impact of changes that roads and transport routes make in our communities is significant and cannot be underestimated. We recommend a separate set of consultations be undertaken on this topic.

2.3.4. Part 4 – General Development Policies

2.3.4.1. Aquaculture – General Development Policies – Policy Review Issue

Several matters have been identified in relation to aquaculture policy within the Code including:

- overlap between the matters covered in a planning assessment and the matters assessed for the purposes of issuing a lease and/or licence under the *Aquaculture Act 2001*
- superfluous policy
- duplicated policy.

Proposed Code Change

AMEND DTS/DPF 1.1, 2.4 and 2.10 of the Aquaculture General Module to state that the issuing of a lease and/or licence (as applicable) under the *Aquaculture Act 2001* is an alternative way of satisfying the corresponding PO while retaining the existing quantitative separation distances within the current DTS/DPF.

AMEND DTS/DPF 1.2, 1.3, 1.4, 1.6, 2.1, 2.2, 2.6, 3.1, 3.2, 4.1 and 4.4 of the Aquaculture General Module to state that the issuing of a lease and/or licence (as applicable) under the *Aquaculture Act 2001* is a way of satisfying the corresponding PO.

AMEND DTS/DPF 2.3 to enable the matter to be closed if no toilet facilities are proposed.

AMEND DTS/DPF 2.8 and 2.9 to enable the matter to be closed if no new access, launching or maintenance facilities are proposed in conjunction with a

proposal for marine aquaculture.

AMEND DTS/DPF 2.11 to enable the matter to be closed if no onshore facilities are proposed in conjunction with a proposal for marine aquaculture.

CASA: We agree to these changes if the aquaculture industry supports these changes.

2.3.4.2. Carport and Outbuilding – Internal Parking Dimensions – Linkages

Issue

Feedback has suggested that policy provisions from the Design in Urban Areas and Design General Development Policies relating to garage dominance and the internal dimensions of enclosed parking spaces do not currently apply to applications for carports or garages which are not under the main roof of a dwelling. In particular, this relates to the following provisions of the Design in Urban Areas General Development Policies:

- Design in Urban Areas [Residential Development - Low Rise [External appearance]] DTS/DPF 20.1
- Design in Urban Areas [Residential Development - Low Rise [Car parking, access and manoeuvrability]] DTS/DPF 23.1

Note: Whilst this issue has been raised in relation to the Design in Urban Areas General Development Policies, equivalent policies are contained within the Design General Development Policies:

- Design [All Residential development [Garage appearance]] PO 14.1
- Design [All Residential development [Car parking, access and manoeuvrability]] PO 19.1

As such, discussion will also consider these provisions.

Zone Classification Tables (i.e., Tables 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to a relevant authority to use when assessing a proposed development. Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

ADD Design in Urban Areas PO 23.1 or Design PO 19.1 (depending on Zone) to Deemed-to-Satisfy and Performance Assessed pathways for Carports and Outbuildings in to provide guidance for the assessment of internal dimensions for enclosed parking spaces.

CASA: In historic areas houses have consistently single width driveways. Many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side garage.

Therefore, in historic area overlays, double garages to the street front should be stated as being inappropriate on block 15m (15.24m= standard 50 foot frontage) or less wide with double garages sited to the rear of driveways or only on wider blocks greater than 18m, and then sited more than 6m behind the front facade.

2.3.4.3. Commercial Forestry - Forestry General Development Policies – Policy Review

Issue

A small number of matters have been identified in relation to commercial forestry policy within the Code including:

- status of commercial forestry as an anticipated use in the Rural Zone and the Productive Rural Landscape Zone
- planning judgements on scenic quality impacts
- setback policies

Proposed Code Change

AMEND DTS/DPF 1.1 of the Rural Zone and the Productive Rural Landscape Zone to include ‘commercial forestry’ in the list of anticipated land uses within the zone.

AMEND setback policy in the Forestry General Development Module to clarify that the setbacks are not to be read as a cumulative total.

AMEND PO 1.4 in the Forestry General Development Module to provide greater clarity to the reasons for applying the setback in DTS/DPF 1.4.

CASA: We agree to these changes.

2.3.4.4. Decks – Design, and Design in Urban Areas General Development Policies – Assessment Pathways

Issue

Proposals for decks are deemed development under the circumstances set out in Schedule 4 of the *Planning, Development and Infrastructure (General) Regulations 2017* and currently require assessment against Code. A greater number of decks are requiring approval than anticipated, in part, due to the general increase in home improvement activity, which is burdening the planning system with minor matters.

Feedback has highlighted that the Code does not include specific provisions for the assessment of decks and as a result, the planning authority is required to consider the whole of the Code and identify the relevant assessment provisions for the proposal. In addition, decks are defaulting to the performance assessed pathway, which requires a full merit-based assessment (and in some cases public notification).

Part 5, Division 1, Section 57(1)(c) of the *Planning, Development and Infrastructure Act 2016* requires rules and standards to be proportionate, suited to relevant conditions, and as far as is reasonably practicable and appropriate, minimise regulatory burden.

It is therefore appropriate to consider whether there is an opportunity to streamline the assessment pathway for decks that may be attached to a dwelling or other building or stand alone.

Proposed Code Change

CREATE additional policy within the Design, and Design in Urban Areas

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

module specific to decks to include assessment provisions that address overlooking.

CREATE a deemed-to-satisfy and performance assessed pathway for decks in neighbourhood-type, residential employment, rural and recreation type zones linking the proposed new decks policy, with overlay applicability and relevant General Development policies reflecting comparable development types such as a verandah.

NOTE: In order to ensure consistency across different development types within a given Zone, relevant policy provisions from the Design in Urban Areas General Development Policies should be applied to Decks where provisions from this module are called up for other development types within a Zone. In all other cases, the relevant provisions of the Design General Development Policies.

CASA: We agree to these changes.

2.3.4.5. Design – PO 19.3 – Driveway Access General Development Policies – Policy Relevance

Issue

Feedback has identified that policy provisions related to driveways and access points have been applied inconsistently across some zones, as well as cases where multiple equivalent policy provisions from different modules are being called up for a single development type. This issue relates to the following policy provisions:

- Design in Urban Areas [Residential Development - Low Rise [Car parking, access and manoeuvrability]]: PO 23.3
- Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3
- Transport, Access and Parking [Vehicle Access]: PO 3.6

Zone Classification Tables (i.e., Table 1-4) classify various development types to the respective assessment pathways. Relevant provisions are assigned to a development type, which are then available to a relevant authority to use when assessing a proposed development.

Only the provisions assigned to a development type in a Classification Table can be used in an assessment.

Proposed Code Change

AMEND wording of Design [All Residential development [Car parking, access and manoeuvrability]]: PO 19.3 to be consistent with equivalent provisions within the Design in Urban Areas module.

REMOVE linkage to Transport, Access and Parking PO 3.6 and associated DTS/DPF for the following development types in all relevant Zones where they apply in Table 3 – Applicable Policies for Performance Assessed Development to remove conflicting policy from this pathway.

CASA: We agree to these changes.

2.3.4.6. Design in Urban Areas DTS/DPF 19.1 - Soft Landscaping – Policy Review

Issue

Part 4 of the Code - General Development Policies, Design in Urban Areas contains two provisions in relation to soft landscaping for residential development. DTS/DPF 19.1 outlines soft landscaping provisions of ancillary buildings and DTS/DPF 22.1 provides soft landscaping provisions for all lowrise residential development. These provisions contain slightly different wording in relation to the minimum dimension needed for soft landscaping.

Feedback has also highlighted confusion of the application of the soft landscaping polices for group dwellings and residential flat buildings that contain common property as it is not explicit if the common property is included or excluded in the calculations of soft landscaping percentage.

Proposed Code Amendment

AMEND Design in Urban Areas DTS/DPF19.1 and DTS/DPF 22.1 to be consistent in wording and explicitly state that common property is to be included in soft landscaping calculations.

CASA: We agree to these changes.

2.3.4.7. Garage and Driveways – Design DTS/DPF 19.5, and Design in Urban Areas DTS/DPF 23.5 General Development Policies – Policy Review

Issue

Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 relate to the design of driveways. However, the policy can be difficult to interpret, particularly in relation to the angle of driveways relative to a road.

Proposed Code Change

AMEND Design General Module DTS/DPF 19.5 and Design in Urban Areas General Module DTS/DPF 23.5 to provide clarity.

CASA: We agree to these changes and support the policy move to tapered driveways for more street carparking. We oppose double/side by side garages with dual driveways to the street frontage. We believe this is not appropriate in older suburbs where all other existing homes have single driveway access to the street. Eg in Prospect the single driveway policy has been upheld.

In historic areas houses have consistently single width driveways, many historic houses are demolished to replace one run down historic dwelling with a new dwelling invariably with a double side by side garage.

Therefore, in historic area overlays, double garages to the street front should be stated as being inappropriate on block 15m (15.24m= standard 50 foot frontage) or less wide with double garages sited to the rear of driveways or only on wider blocks greater than 18m, and then sited more than 6m behind the front façade.

2.3.4.8. Heavy Vehicle Parking - Transport, Access and Parking General Development Policy - Policy and Definition Review

Issue

The parking of any vehicle exceeding 3,000 kg (including the weight of any attached trailer) on land used for residential purposes is development under the *Planning Development and Infrastructure Act 2016*, unless it is:

- the parking of a caravan or motor-home of any weight on land used for residential purposes by a person who is an occupant of a dwelling situated on that land

or

- a special circumstances which applies due to the previous dwelling being destroyed by a bushfire.

However, there is no policy contained within the Code specifically guiding the assessment of heavy vehicle parking. Similarly, there is no definition contained within the Code regarding this land use.

Proposed Code Change

CREATE new policy within the Transport, Access and Parking General Module to guide the assessment of heavy vehicle parking.

CREATE a new land use definition for heavy vehicle parking (refer to the definitions section of this Code Amendment for further details).

CASA: We agree to these changes.

2.3.4.9. Housing Renewal General Development Policies - Policy Review

Issue

The Housing Renewal General Development Policies were written to apply to Housing Trust / Community Housing proposals. However, there is nothing in the Code to exclude the policies from being applied to 'All Code Assessed Development' – performance assessed development that is not a Housing Trust or community housing proposal. In addition, several of the Housing Renewal policies conflict with the Design and Design in Urban Areas policies.

As a result, some General Development Policies applicable to dwellings are conflicting and, given that no hierarchy applies to General Development Policies, it is not clear which policies should be applied to 'All Code Assessed Development'.

Proposed Code Change

CREATE an interpretation note for the Housing Renewal General Development Policies to confirm that the policies are applicable only to Housing Trust / Community Housing proposals

CASA: We agree to these changes.

2.3.4.10. Land Division – General Development Policies – Policy Review Issue

Feedback received since the inception of the Code has identified policy duplication within the Land Division General Development Policies.

Proposed Code Change

AMEND the Land Division General Development Policies to remove duplicated policy.

CASA: We agree to this change.

2.3.4.11. Land Division – General Development Policies – Linkages Issue

Feedback received since the inception of the Code has identified that not all the policy provisions from the Land Division general Development Policies are linked to Performance Assessed Land Divisions within zones.

Proposed Code Changes

ADD PO 2.8 and PO 3.11 of the Land Division General Development Policies to the Performance Assessed pathway for “Land Division” in all zones to ensure a consistent approach to the application of policy provisions from this module.

CASA: We agree to this change.

2.3.4.12. Transport, Access and Parking – General Development Policy – Fences – Linkages

Issue

Feedback has indicated that the policy provisions currently applied to a Performance Assessed Fence in various zones do not address matters related to preservation of sightlines between vehicles and pedestrians where fences are located adjacent to driveways or corner sites.

From a planning perspective, all development must be assessed against the relevant provisions of the Code (see section 102(1)(a)(i) of the Act. Code content must therefore be directly relevant to the assessment of development.

Proposed Code Change

APPLY relevant policy provisions from the Transport, Access and Parking General Development Policy module to Performance Assessed Fences to address matters relating to preservation of sightlines.

CASA: We agree to these changes particularly as it relates to improved pedestrian safety.

2.3.4.13. Transport, Access and Parking – General Development Policy – Car Parking Rates Table – Review

Issue

Transport, Access and Parking Tables 1 and 2 prescribe the intended car

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

parking rates for various forms of development. The following issues have been identified regarding these tables:

- Some car parking rates are listed which fit multiple definitions. For example, car parking rates exist for both a pre-school and a child-care centre which is a type of pre-school
- Car parking rates in the Urban Neighbourhood Zone at Bowden are more onerous than the car parking rates that existed within the City of Charles Sturt Development Plan, creating challenges for delivering the scale and intensity of development envisaged for the transit-oriented development.

As a result, some of the car parking rates are not easily understood or consistently applied.

Proposed Code Change

AMEND Transport, Access and Parking Table 1 to position all land use classes on the 'class of development' column and all 'sub-classes' within the 'car parking rate' column.

AMEND Transport, Access and Parking Table 2 to update references to the Urban Neighbourhood Zone and add specific car parking rates for the UN Zone within Bowden.

CASA: We agree to these changes.

2.3.4.14. Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation

Issue

Car parking rates applied to development through the Transport, Access and Parking General Development Policies are structured to enable alternative rates to be applied in Designated Areas where reduced car parking rates are appropriate and/or where a car parking fund exists to offset any car parking shortfalls.

However, the interpretation is not readily apparent in some instances, including:

- Which Table is most appropriate for identifying the relevant rate
- Whether the Table 2 – Criteria are applicable to a Designated Area.

This can result in confusion during the assessment of a development and may result in the car parking rates being applied inconsistently.

Proposed Code Changes

AMEND Transport, Access and Parking DTS/DPF 5.1 to provide clarity on when each car parking rate is applicable.

CREATE a definition for a High Frequency Public Transit Area.

AMEND Transport, Access and Parking Table 2 to include reference to the High Frequency Public Transit Area where appropriate.

REMOVE the Table 2 – Criteria within Transport, Access and Parking Table 2.

AMEND the interpretation notes for Transport, Access and Parking Table 2 to reflect the removal of the Table 2 – Criteria.

CASA: We agree to these changes, however, we are concerned at the car parking fund options for when there are insufficient car parks for a development. The payment into a fund does not actually address the issue of where to park all of the cars.

As a community, we should be thinking more laterally about cars, transport, parking, cycling and walking to reduce our carbon impact. This topic, along with those noted in this document addressing transport matters needs to be subject to further broader consultation. We will include this in our submission to the Expert Panel.

2.3.5. Part 5 – Specified matters and areas identified under the Act and Regulations

There are no proposed Code changes to Part 5 of the Code as part of this Code Amendment

2.3.6. Part 6 – Index of Technical and Numeric Variations

There are no proposed Code changes to Part 6 of the Code as part of this Code Amendment

2.3.7. Part 7 – Land Use Definitions

Issue

Improvements to the Land Use and Administrative Definitions in the Code – specifically a review of Part 7 – Land Use Definitions and Part 8 – Administrative Terms and Definitions to provide greater clarity in interpretation and relationship with policy.

Proposed Code Changes

AMEND Part 7 – Land Use Definition in relation to the following definitions or terms:

- Ancillary accommodation
- Caravan and tourist park
- Commercial forestry
- Educational establishment
- Indoor recreation facility
- Office
- Pre-school
- Tourist accommodation
- Workers accommodation

CREATE new definitions for Part 7 – Land Use Definition in relation to the following terms:

- Heavy vehicle parking
 - Function venue
- * See below individual Land Use Definitions for further discussion and proposed Code changes

CASA: We agree to these changes subject to our earlier advice on these specific matters.

2.3.7.1. Ancillary Accommodation – Amend

Issue

Feedback received on the definition of ancillary accommodation sought greater clarity on the use and interpretation of 'utilities'. In addition, this review also considered that further refinement should be provided to make it clearer of the outcomes sought by ancillary accommodation.

Proposed Code Change

AMEND the definition of 'ancillary accommodation' to provide for greater clarity in the intent being sought in the Code for this land use.

CASA: We agree to this change.

2.3.7.2. Caravan and Tourist Park – Amend

Issue

Feedback was received from external stakeholders who queried if the land use term 'Caravan and Tourist Park' is considered a form of 'Tourist Accommodation'. Submissions also advised that this ambiguity may be causing some uncertainty when assessing these forms of activity.

Proposed Code Change

AMEND the Land Use Term for 'tourist accommodation' to the below noting that further refinement to the definition of Tourist accommodation is proposed.

CASA: We agree to this change.

2.3.7.3. Commercial Forestry – Amend

Issue

Submissions have been received requesting further refinement of this definition to better accommodate farm-scale forestry and to allow for initial processing of timber at the site of harvest, in particular where it is conducted with mobile equipment and involves no permanent structures or buildings.

Other comments suggested that the existing definition be further developed to make it clear that includes plantations for wood and paper products, farm scale forestry and commercial exploitation of the carbon-absorption capacity of the forest, as well as in-field wood chipping, spot-sawmilling and firewood processing, but excludes plantings for horticultural, ornamental or revegetation purposes.

AMEND the Land Use Term for 'commercial forestry' to: Means the practice of planting **and managing plantation forests** that are intended to be harvested **for wood products or other commercial purposes**, including through the commercial exploitation of the carbon absorption capacity of the forest.

CASA: We agree to this change.

2.3.7.4. Educational Establishment – Amend

Issue

Feedback was received which suggested a move away from the term ‘establishment’ to a more contemporary term for describing this land use. The definition for ‘educational establishment’ was adapted from the previous definition within the *Development Regulations 2008*.

REPLACE the Land Use Term for ‘educational establishment’ with educational facility.

CASA: We agree to this change.

2.3.7.5. Indoor Recreation Facility – Amend

Issue

Issues were identified relating to the interpretation and the limitations of this definition by just referring to ‘a building’.

Proposed Code Change

AMEND the Land Use Term for Indoor recreation facility to: Means a building **or part of a building** designed or adapted primarily for recreation or fitness pursuits.

CASA: We agree to this change.

2.3.7.6. Office – Amend

Issue

Similar to the discussion on ‘indoor recreation facility’, it would be reasonable to anticipate that an ‘office’ may form part of a mixed-use development and therefore only comprise part of a building rather than the whole building.

Proposed Code Change

AMEND the Land Use Term for ‘office’ to: Means a building **or part of a building** used for administration or the practice of a profession, but does not include a consulting room or premises where materials are stored for sale or manufacture.

CASA: We agree to this change.

2.3.7.7. Pre-school – Amend

Issue

Feedback has been received on the appropriateness of the definition for ‘preschool’ along with the potential for an additional and stand-alone definition of ‘child care centre’.

Proposed Code Amendment

REPLACE the Land Use Term for ‘pre-school’ with ‘childcare facility’ and other amendments as shown: Means a place primarily for the care or instruction of children of less than primary school age, **children with special needs or out-of-school-hours care (including vacation care)** and not resident on the site. It includes: **Pre-school;** Child care centre; Early learning centre; Kindergarten; Nursery.

AMEND Educational establishment to reflect this change from ‘pre-school’ to ‘child care facility’.

REPLACE the term ‘pre-school’ wherever it appears within the Code to ‘child care facility’.

CASA: We agree to this change.

2.3.7.8. Renewable Energy Facility – Policy Refinement

Issue

The Commission has identified potential issues with the definition of Renewable Energy Facility as it would apply in the Conservation, Hills Face and Rural Zones (where certain Overlays - Significant Landscape Protection Overlay and Character Preservation Area Overlay apply), and where Renewable Energy Facilities can trigger a restricted development classification.

Proposed Code Change

AMEND the restricted table within the Conservation, Rural and Hills Face Zone to add the exclusion of domestic use for solar photovoltaic panels (roof or ground mounted) and battery storage facility.

CASA: We agree to this change.

2.3.7.9. Tourist Accommodation – Amend

Issue

Consistent with the advice provided on ‘caravan and tourist park’, recent feedback requested that the definition of ‘tourist accommodation’ also be amended to provide greater clarification around what is meant by this form of development and whether it should also incorporate any other associated ancillary elements.

Proposed Code Change

AMEND the Land Use Term for tourist accommodation to: Means premises in which temporary or short-term accommodation is provided to travellers on a commercial basis. *This use may also include: (a) onsite services and facilities primarily for the use by guests; and (b) facilities for the management of the accommodation.*

CASA: We agree to this change.

2.3.7.10. Workers Accommodation – Amend

Issue

Feedback was received which requested greater clarification and a consistent approach to the assessment of ‘workers’ accommodation’.

Proposed Code Change

REPLACE the Land Use Term for ‘workers’ accommodation’ as shown: Means premises used to accommodate workers on a temporary basis while they carry out employment: (a) on the same site as the workers' accommodation; *or* (b) in mining or petroleum extraction; *or* (c) in seasonally intensive rural activities *including* fruit picking, pruning, animal shearing, meat processing, *bulk handling or freight handling or similar*; *or* (d) in the construction of essential infrastructure.

CASA: *We agree to part of this change. We believe the term 'or similar' should be retained in the definition tables. There is likely to be some creative person who comes up with a term that is not included in the definition and seeks to avoid some of the development requirements.*

We suggest the inclusion of the term 'or similar' will provide planners with some support to ensure developments that are similar to, but not exactly prescribed, have the same development requirements as those prescribed.

2.3.7.11. Heavy Vehicle Parking – New Definition

Issue

The Code does not include policy specifically guiding the assessment of heavy vehicle parking therefore, a review and addition of policy guiding this land use is proposed as part of this Amendment.

Similarly, there is no definition contained within the Code regarding this land use. Absence of a definition could result in the above proposed policy being applied incorrectly or to areas not intended by the policy.

Proposed Code Change

CREATE a new definition for 'heavy vehicle parking' as follows: Means the parking of any vehicle exceeding 3 000 kg in weight (including the weight of any attached trailer) on land used for residential purposes.

CASA: We agree to this change.

2.3.7.12. Function Venue – New Definition

Issue

Following feedback and user experience with the Code, further consideration has been given to the need for an additional definition for 'Function Centre'.

Proposed Code Change

CREATE a new definition for 'function venue' as follows: Means premises used for the hosting of events, conferences, conventions, receptions or functions.

CASA: We agree to this change.

REPLACE the term 'function centre' wherever it appears within the Code to 'function venue'.

2.3.8. Part 8 – Administrative Terms and Definitions

Issue

Improvements to the Land Use and Administrative Definitions in the Code – specifically a review of Part 7 – Land Use Definitions and Part 8 – Administrative Terms and Definitions to provide greater clarity in interpretation and relationship with policy.

As part of the Commission's 'call for issues' in 2021, several submissions were received requesting the following matters be addressed in relation to definitions in the Code:

- consider including ‘explanatory information’ to assist with definition interpretation;
- review certain definitions to improve their clarity;
- include new definitions for land uses;
- include terms that are used in the Code but currently not defined;
- review ‘exclusions’ and ‘inclusions’ lists to eliminate ambiguity;
- review for inconsistent application and use of terms in policy;
- include additional definitions in the Code particularly where a common meaning is unclear;
- reinstate previous Development Regulation/Development Plan land use definitions; and
- provide clarity in relation to definitions such as ‘ancillary accommodation’ and dwellings in a ‘terrace arrangement’.

Proposed Code Changes

AMEND Part 8 – Administrative Terms and Definitions in relation to the following term:

- Building height
- Building line
- Wall height

CREATE new definition Part 8 – Administrative Terms and Definitions in relation to the following terms:

- Catalyst site
- Direct overlooking
- High frequency public transit area
- Post height

REMOVE Gross Density from Part 8 – Administrative Terms and Definitions.

CASA: We agree to some of these changes. See the sub-sub-sub headings for specific details.

2.3.8.1. Building Height – Amend

Issue

Building height: See section 2.3.2.12 Building Height, Building Wall Setback and Wall Height Policy Review for further detail.

AMEND the ‘building height’ term to: Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system
- (b) telecommunications facility tower or monopole
- (c) electricity pole or tower
- (d) or any similar structure.

CASA: We do not agree to this change. We believe that the Code should make reference to ‘Ceiling Heights’ and this should be added into the definition. Using ‘Wall height’ is not

how developers use it in practice. Eg in Parkside for villas, ceiling heights of 3.3-3.67 metres are used; bungalows – 3m ceiling height. The ceiling height is typically associated with buildings of particular eras and types and is a more practical term.

2.3.8.2. Building Line – Amend

Issue

Concerns were raised with the current definition and policy application of ‘building line’ as it is potentially leading to undesirable outcomes.

Proposed Code Change

AMEND the Building line term to: In relation to a building on a site, means a line drawn parallel to the wall ~~on~~ of the building closest to the boundary of the site that faces the primary street (and any existing projection from ~~that wall of the building~~) such as a verandah, porch, balcony, awning or bay window is not to be taken to form part of the building for the purposes of determining the relevant wall of the building ~~provided that the projection is not more than 1.5m.~~

Note: Minor editorial amendments are also proposed. The removal of the additional wording ‘provided that the projection is not more than 1.5m’ is no longer required as this was included to be an allowable projection for the abutting sites when determining the setback. Given building line is proposed to only be for ancillary structures the need to the 1.5m wording is not relevant as the focus of the structure is to be behind the building wall excluding any projections. This wording intent will remain for building setbacks but within policy.

CASA: We agree to these changes with provisos as discussed at 2.3.2.26.

Note: add a closing bracket ‘)’ after ‘wall of the building’.

2.3.8.3. Wall Height – Amend

Issue

Wall height measurement inconsistencies.

Proposed Code Changes

AMEND the ‘wall height’ term to: Means the height of the wall measured from the top of its footings ~~or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency)~~ ~~but excluding~~ noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land.

2.3.8.4. Catalyst Site – New Definition

Issue

Following feedback and user experience with the Code, further consideration has been given to the need for an additional definition for ‘catalyst site’.

Proposed Code Change

CREATE a new definition for ‘catalyst site’ as per the following: Means a site greater than 1500m², which may include one or more allotments.

REMOVE the explanation text for ‘catalyst site’ – for example ‘(sites greater

than 1500m², which may include one or more allotments) – wherever it appears in any policy within the Code.

CASA: We do not agree to this change. We believe the term ‘Catalyst Site’ and description should be removed from the Code. It is an anathema of planning. When clarification is required, using the term ‘greater than 1500sqm’ is clear. However, when using the term ‘Catalyst Site’ it is less clear.

The number of ERD Court appeals is evidence of this confusion. It is consistently abused by developers. The provisions are so vague and ambiguous they should be removed.

We strongly urge the Commission to remove Catalyst Sites from the Code completely.

2.3.8.5. Direct Overlooking – New Definition

Issue

Following feedback and user experience with the Code, further consideration has been given to the need for an additional definition for ‘direct overlooking’.

Proposed Code Change

CREATE a new definition for ‘direct overlooking’ as per the following: In relation to direct overlooking from a window, is limited to an area that falls within a horizontal distance of 15 metres measured from the centre line of the overlooking window and not less than 45 degree angle from the plane of the wall containing the overlooking window. In relation to direct overlooking from a deck, balcony or terrace, is limited to an area that falls within a horizontal distance of 15m measured from any point of the overlooking deck, balcony or terrace. (see diagrams at p47 & 248)).

CASA: We do not agree to this definition. We believe 15 metres is insufficient distance to provide sufficient privacy, particularly to bathrooms. We believe a maximum of 20 metres is required, preferably 30 metres. You will be able to see a stark naked person in a bathroom from 15 metres!!! There should be stipulation for frosted glazing.

Within this definition the issue of noise, as well as vision issues also needs to be considered and is a further need for ‘greater than 15 metres’ distances.

2.3.8.6. High Frequency Public Transit Area – New Definition

Issue

High frequency public transit area. See 2.3.4.14 Transport, Access and Parking – General Development Policy – Designated Parking Areas / Car Parking Rates – Interpretation for further detail.

Proposed Code Change

CREATE a new definition for ‘high frequency public transit area’ as per the Following: A site that is wholly located within Metropolitan Adelaide and satisfies one or more of the following: (a) is within 200 metres of any section of road reserve along which a bus service operates as a high frequency public transit service(2)
(b) is within 400 metres of a bus interchange(1)
(c) is within 400 metres of an O-Bahn interchange(1)
(d) is within 400 metres of a passenger rail station(1)
(e) is within 400 metres of a passenger tram station(1)
(f) is within 400 metres of the Adelaide Parklands.

CASA Submission to the Miscellaneous Technical Enhancement Code Amendment 220923

[NOTE(S): (1) Measured from an area that contains any platform(s), shelter(s) or stop(s) where people congregate for the purpose waiting to board a bus, tram or train, but does not include areas used for the parking of vehicles. (2) A high frequency public transit service is a route serviced every 15 minutes between 7.30am and 6.30pm Monday to Friday and every 30 minutes at night, Saturday, Sunday and public holidays until 10pm.]

CASA: We agree to these changes.

2.3.8.7. Post Height – New Definition

Issue

Post height. See section 2.3.2.12 Building Height, Building Wall Setback and Wall Height – Policy Review for further detail.

Proposed Code Change

CREATE a new definition for ‘post height’ as per the following: Means the height of the post measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the post that is concealed behind an eave or similar roof structure and not visible external to the land.

CASA: We agree to this change.

2.3.8.8. Gross Density - Delete

Issue

Feedback received sought clarification on when the Code references density, in particular whether it is referring to ‘net residential’ or ‘gross density’. The Code currently includes definitions for ‘low’, ‘medium’ and ‘high net residential density’ and also for ‘gross density’. It should be noted that there isn’t a quantifiable definition for ‘gross density’ (in terms of low v medium v high dwellings per hectare).

Proposed Code Change

REMOVE the term ‘gross density’ from Part 8 – Administrative Terms and Definitions.

CASA: We agree to this change.

AMEND Code policy, where appropriate to specifically mention ‘net residential density’ when the policy refers to low, medium or high density.

2.3.9. Part 9 – Referrals

2.3.9.1. Environment Protection Authority Referrals - Review of Interpretation and Referral Triggers

Issue

Under the *Development Regulations 2008* (now ceased), schedule 8 required a referral to the Environment Protection Authority (EPA):

Development that involves, or is for the purposes of, an activity specified in Schedule 22 (including, where an activity is only relevant when a threshold level of capacity is reached, development with the capacity or potential to operate above the threshold level, and an alteration or expansion of an existing development (or existing use) where the alteration or expansion will have the effect of producing a total capacity exceeding the relevant threshold level)

The above ensured that alterations to an activity of major environmental significance required a referral. No similar preamble is included in Part 9.1 of the Code and as a result, the EPA has advised that some activities of major environmental significance are not being referred to them. This has resulted in works being approved that increase the risk of pollution or environmental harm and present challenges for the subsequent EPA licence. Accordingly, the EPA has requested that similar wording be contemplated in Part 9.1 of the Code.

Additionally, Class 3 activities are low risk potentially contaminating activities and do not warrant EPA involvement through the referral process. To assist and provide further clarity, the inclusion of the reference within the South Australian Property and Planning Atlas when land division is proposed to land within a groundwater prohibition area.

Proposed Code Change

CREATE an interpretation noted for Part 9.1 of the Code to confirm when referrals are required.

AMEND the Class of Development / Activity Site Contamination – Land Division Class to removed class 3 activity needing to be referred and inclusion of the reference to South Australian Property and Planning Atlas.

CASA: We agree to these changes if the EPA supports them.

2.3.10. Part 10 – Significant Trees

There are no proposed Code changes to Part 10 of the Code as part of this Code Amendment

2.3.11. Part 11 – Local Heritage Places

2.3.11.1. Listing of State Heritage Places

Issue

As part of this Amendment it is proposed to include a list of current State Heritage Places in the Code, similar to the way Local Heritage Places are listed in Part 11 – Local Heritage Places. This is to improve visibility of State Heritage Place details in the Code to complement the State Heritage Places Overlay.

As State Heritage Places are governed by a separate Act – the *Heritage Places Act 1993* – and that listings can be added and removed at any time under that Act (subject to the processes of that Act), it is considered necessary to also include explanation in Part 1 the Code that State Heritage Places identified in the Code (by the State Heritage Places Overlay, the Heritage reference layer of the SA Planning Database and the list proposed to be added to Part 11 Code) are point in time references and that the State Heritage Register should be relied on in the event of any inconsistency.

Proposed Code Change

AMEND the title of ‘Part 11 – Local Heritage Places’ to ‘Part 11 – Heritage Places’.

AMEND Part 11 of the Code to include the list of current State Heritage Places currently mapped in the State Heritage Places Overlay. It is recommended that the list include the follow details:

- Property address
- Descriptions / extent of listing
- Section 16 Criteria
- State Heritage ID

AMEND Part 1 of the Code to include rules of interpretation that explain that where there is a discrepancy between the Code’s list of:

- State Heritage Places and the South Australian Heritage Register, the **Register** will prevail.
- Local Heritage Places and the South Australian Heritage Register, the **Code** will prevail.

CASA: We agree to these changes. Please refer to previous comments in this submission for further rationale for retaining as many heritage buildings as possible.

The current mapping does not show all Representative Items (previously Contributive Items) due to many Councils’ lack of action on this important matter. Thus if the building is not shown on the map, it does not mean it is not a Representative Item.

We strongly urge that all Representative Items are listed specifically in the Code to afford them the greatest protection as possible.

2.3.12. Part 12 – Concept Plans

There are no proposed Code changes to Part 12 of the Code as part of this Code Amendment

2.3.13. Part 13 – Table of Amendments

Part 13 of the Code – Table of Amendments: Updates to the publication date, Code version number, amendment type and summary of amendments within the ‘Table of Planning and Design Code Amendments’ to reflect the amendments to the Code.

Craig, thank you once again for this opportunity to review the proposed technical amendments to the Code and provide you with CASA’s feedback. We look forward to further engagement on these important matters.

Yours Sincerely

DE van Eck

Hi,

I attach for your consideration a submission on behalf of the Mitolo Group. This submission relates to the Miscellaneous Technical Enhancement Code Amendment and its effect on the Mitolo Group's site in Kent Town (21 – 35 King William Street, Kent Town).

Mr Craig Holden
Chair
State Planning Commission
Via email: plansasubmissions@sa.gov.au

Dear Craig,

MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

We act for the Mitolo Group ('Mitolo').

Mitolo currently owns several contiguous allotments within the confines of the Urban Corridor (Business) Zone in Kent Town, all of which front King William Street. The allotments to which we refer are identified on the first map attached to this submission (Map 1).

Mitolo intends to amalgamate these allotments for the purpose of undertaking a large-scale, mixed-use development. Mitolo is well-resourced and in the process of assembling a team of qualified experts to deliver its exciting vision for this site. The location and size of this site provide a unique opportunity for a significant development that would inevitably contribute to the urban regeneration of this part of Kent Town.

Having carefully considered the Miscellaneous Technical Enhancement Code Amendment ('MTECA'), Mitolo is extremely concerned about the unintended policy-related consequences associated with proposed Amendment 2.3.2.7, and what they might mean for a future application to develop this site.

As you know, the State Planning Commission ('Commission') intends, via proposed Amendment 2.3.2.7, to "replace reference to 'primary road', 'primary road corridor', 'primary road/public transport corridor' with 'primary road corridor (i.e. a State maintained road)'."

If proposed Amendment 2.3.2.7 is authorised in its current form, it will have the following consequences:

- There are, according to our calculations, 136 allotments within the confines of the Urban Corridor (Business) Zone in Kent Town, only four or 2.9 percent of which have frontage to a 'State maintained road' (Fullarton Road). Consequently, 132 or 97.1 percent of the allotments within the confines of the Urban Corridor (Business) Zone in Kent Town, including Mitolo's site, will no longer be able to:
 - » achieve Desired Outcome ('DO') 1 of the Urban Corridor (Business) Zone. For clarity, DO 1 of the Urban Corridor (Business) Zone calls for "A medium rise mixed use zone with a strong focus on employment, which accommodates a diverse range of commercial and light industrial land uses together with compatible medium density residential development oriented towards a primary road corridor."
(Emphasis added)
 - » satisfy Performance Outcome ('PO') 1.4 of the Zone which calls for "Dwellings (to be) primarily developed in conjunction with non-residential uses to support local business, activities and contribute to making the primary road corridor and pedestrian thoroughfares safe, walkable, comfortable, pleasant and vibrant places."
(Emphasis added once again)

- PO 1.5 of the Urban Corridor (Business) Zone, which calls for “Ground floor uses (that) positively contribute to an active primary road corridor”, will no longer apply to 132 or 97.1 percent of the allotments within the confines of the Urban Corridor (Business) Zone in Kent Town, including Mitolo’s site.
- POs 5.1 and 5.2 of the Urban Corridor (Business) Zone, which allow for, and encourage, the amalgamation of contiguous allotments to facilitate coordinated developments that provide an orderly transition to the adjoining Zone to the north-west where buildings of up to 36 metres in height are envisaged, will now only apply to the two ‘book-ends’ at the north-eastern extremity of the Urban Corridor (Business) Zone in Kent Town. This is non-sensical given that the Urban Corridor (Business) Zone in Kent Town is currently centred around King William Street, not Fullarton Road. Further, the aforementioned ‘book-ends’ are situated adjacent to a zone that contemplates buildings of up to, but not exceeding, three building levels.

Indeed, the unintended policy-related consequences associated with proposed Amendment 2.3.2.7, which is nothing more than ill-informed band-aid solution, are pervasive and far more profound for the following Zones, as they currently do not encompass a ‘State maintained road’:

- the Urban Corridor (Business) Zone in Forestville and Keswick – see the second map attached to this submission (Map 2); and
- the Urban Corridor (Business) Zone in Thebarton – see the third and final map attached to this submission (Map 3).

In other words, the authorisation of proposed Amendment 2.3.2.7, in its current form, would render the aforementioned Zones otiose, as DO 1 would then relate to, and revolve around, a road that simply does not exist. This surely cannot be the Commission’s intended outcome, otherwise the aforementioned Zones would not have existed in the first place.

In light of the above and to avoid any unnecessary ambiguity during the assessment of Mitolo’s future application, we respectfully suggest that the ‘significant development site’ policies, namely POs 5.1 and 5.2, should not be constrained to sites that front a State maintained road, particularly not when the Urban Corridor (Business) Zone in Kent Town is currently centred around King William Street, as this would revoke the opportunity for uplift on all but a handful of sites that have already been developed for no sound town planning reason.

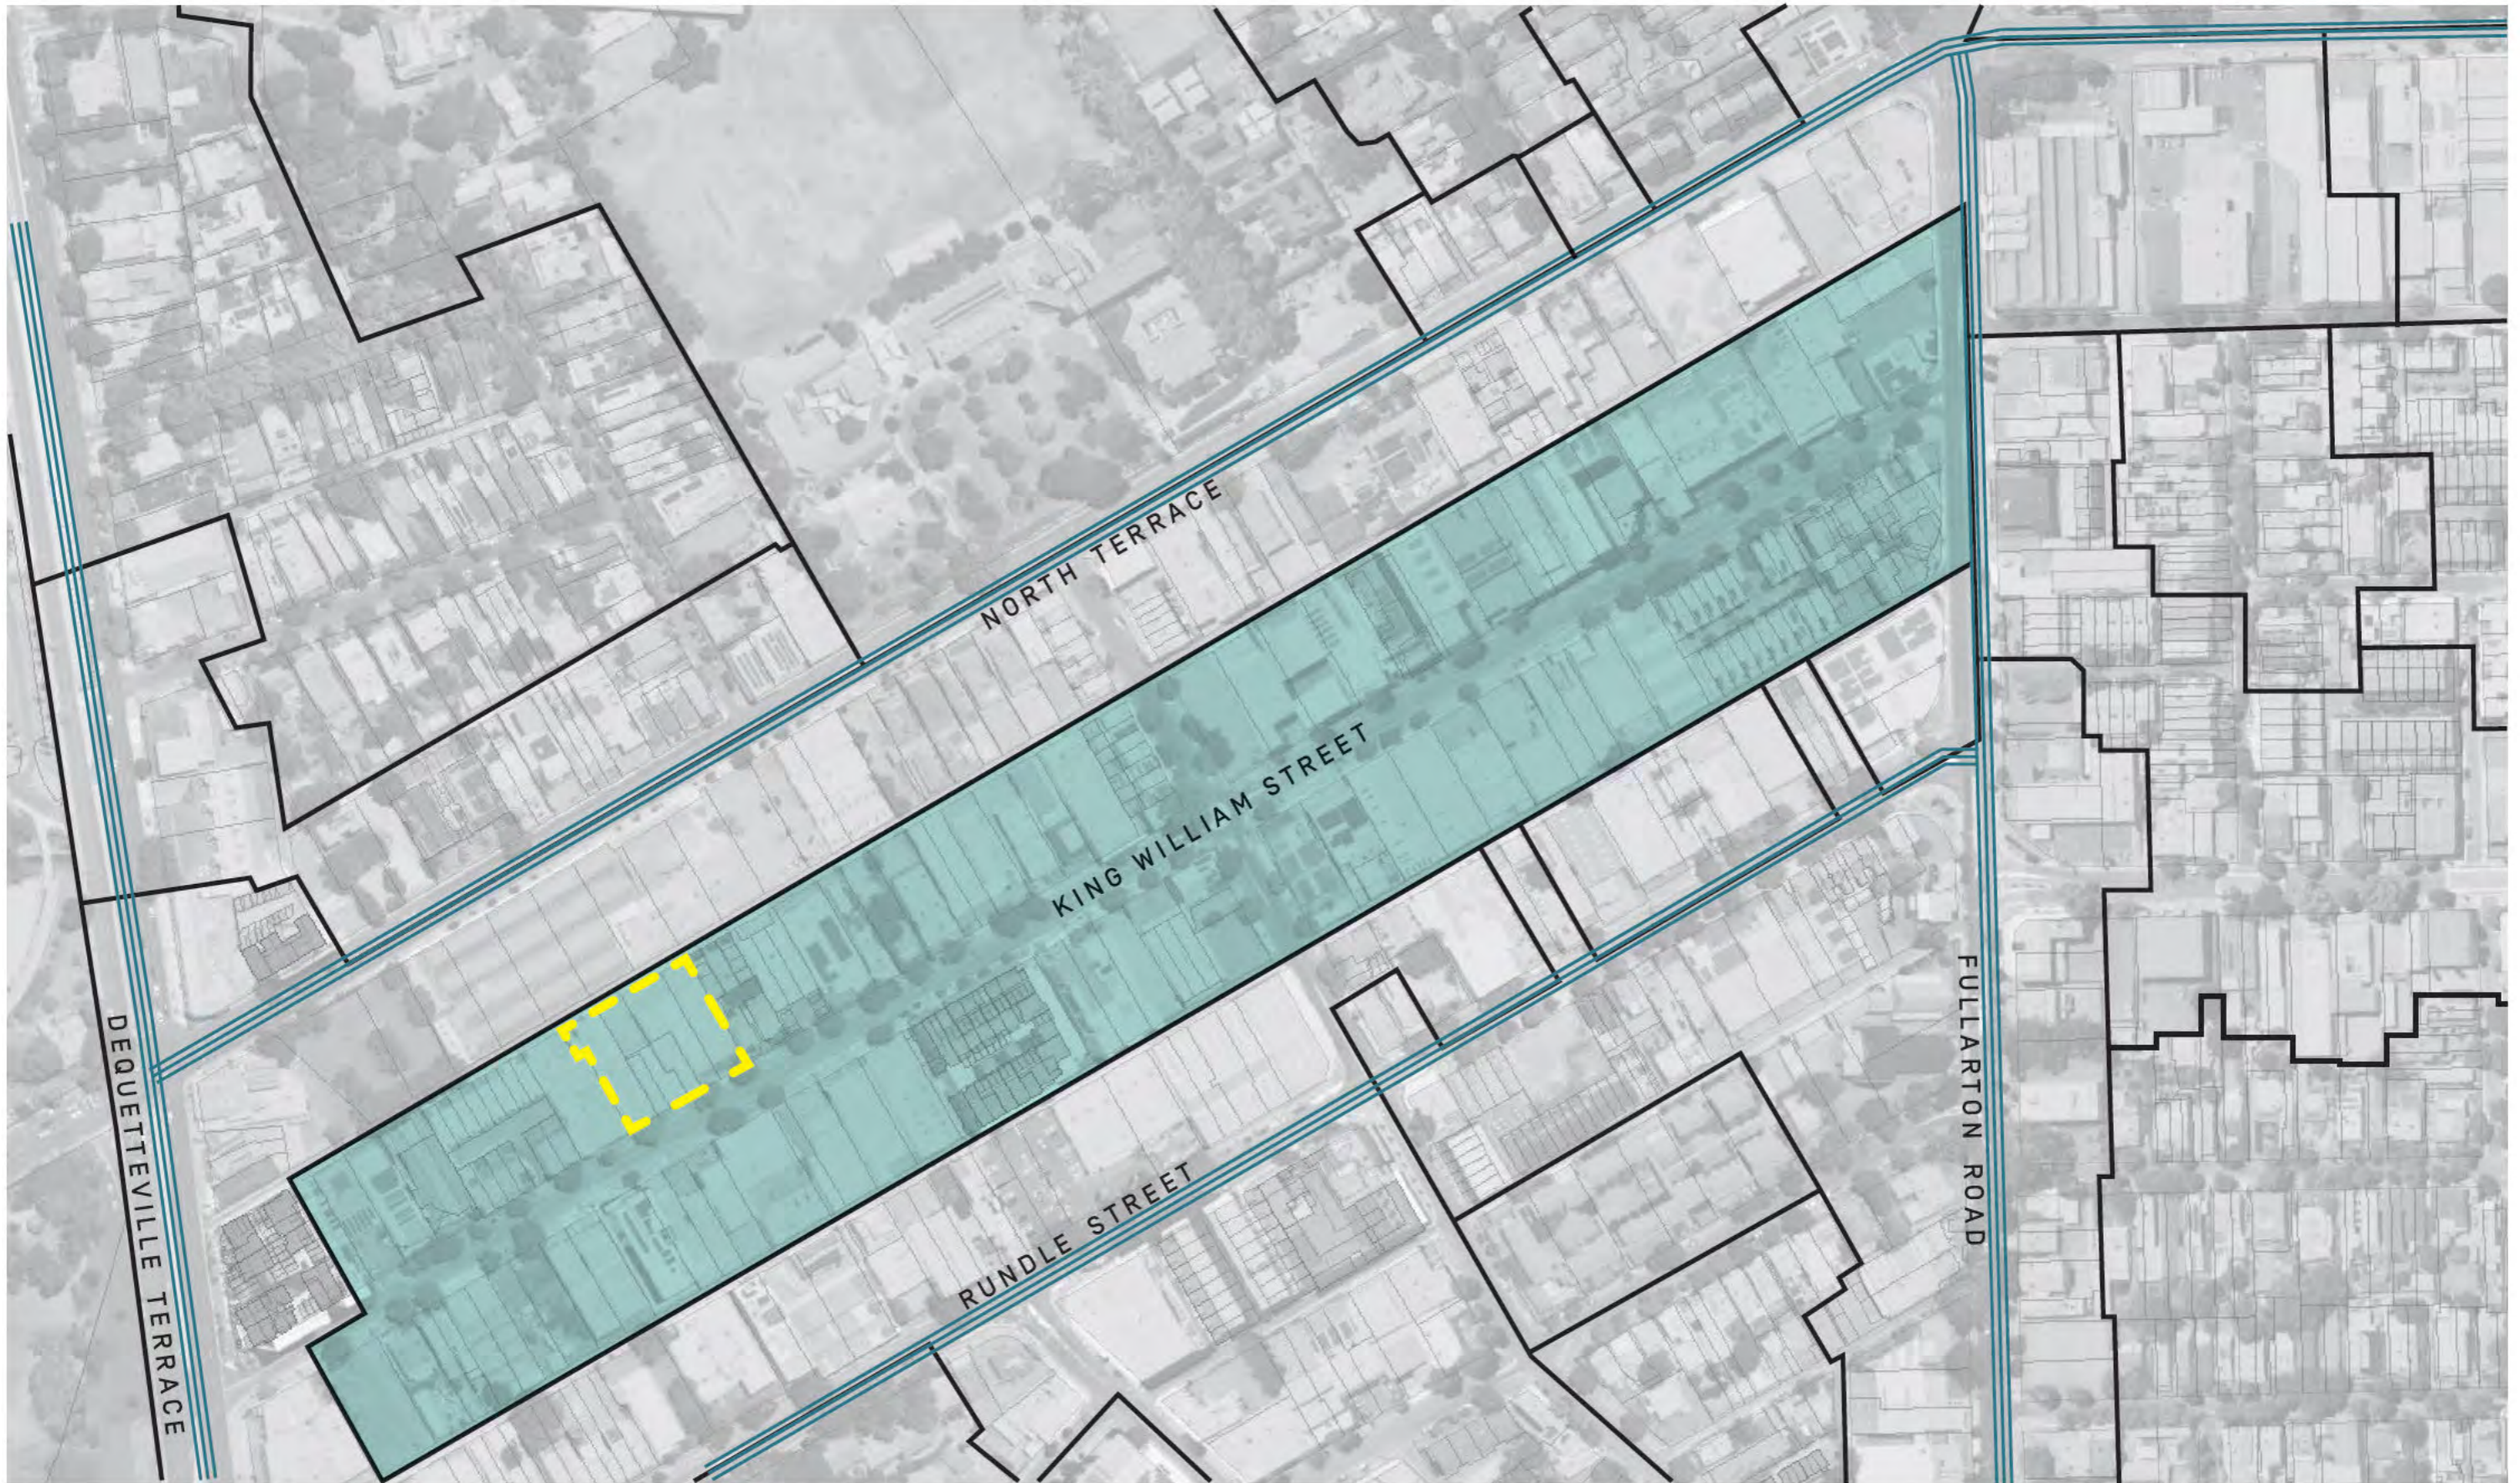

In summary, the purpose of this submission is two-fold in that it seeks to draw the Commission’s attention to the seriousness of this flawed policy change and its negative impact on the development capacity of many sites, including Mitolo’s, whilst tabling Mitolo’s intentions for its site so that an informed decision can be made.

If you have any queries regarding this submission, please do not hesitate to contact our Managing Director, Chris Vounasis, in the first instance.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Fabian Barone', with a small dot at the end.

Miscellaneous Technical Enhancement Code Amendment

Thank you for the opportunity to comment on the proposed amendments. We appreciate efforts to simplify the Code, and to remove clutter, duplication, irrelevancies and (in some cases) inconsistencies. We recognise that these are unduly burdensome for both the applicant and the approval authority.

But some proposed amendments appear to be of a policy nature rather than administrative detail and should be left to the independent review of the Code. So we would prefer to see a number of proposed amendments deferred at this stage.

Following are specific proposed amendments with which we have concerns. These are matters that we have noticed. There may be others that we missed. We found ourselves overwhelmed by the number of amendments proposed, especially as they are typically phrased for professional planners rather than the public. While we realize that this first series of amendments was always likely to be lengthy, given teething issues, we hope that future proposed amendments are more digestible.

We note the Community Alliance of SA is making a more extensive submission. We are a member of the Alliance, have read a draft of its submission, and endorse its recommendations.

Notifications, minor structures, Amendment number 2.3.2.10

Notifying neighbours of a proposed development involves additional time and resources it might not be worth the bother, at least in the eyes of planning staff. Potential conflict might be a further discouragement. In many cases the objections raised by neighbours might be unreasonable.

We also accept that by broadening the definition of "adjacent land" to land within 60m of land on which the development is proposed, more people need to be notified than under the old regime, when only those with land abutting the development needed to be notified.

But while we accept that there should be some sort of delineation of what triggers notifications, we don't accept that they should be necessarily consistent between zones. The length, height and nature of fences are obviously much more sensitive for courtyard gardens than they are for rural zones. Yet on page 52, (under "Technical Errors") we read

that “rural zones, neighbourhood zones, activity centre zones which should generally be consistent in the classes of development listed as not requiring notification in Column A”.

Notifications, demolition, Amendment number 2.3.2.10.5

We are concerned to see the proposal the Notifications for demolition of buildings in the Historic Area overlay be softened.

Norwood has seen the demolition of the old box factory on Fisher Street about ten years ago, with nothing to show for it but graffiti on the walls of the neighbours. This year we have seen two good quality buildings of over 100 years old demolished with notifications only because their proposed replacement buildings were over height.

Demolition is a key issue for residents, which we will be taking up in the independent review of the Code. We are therefore concerned that any relaxation of existing notification requirements for heritage buildings is being considered.

Building heights, Amendment number 2.3.2.11

An important, controversial issue for Norwood residents is the building heights. Most recently this has been revealed in the decision-making over the development at 120 The Parade. Residents have been disappointed to learn that a six-storey building height limit is not really six storeys – there is a fudge factor that allows at least eight storeys,

The proposed new wording of the appropriate building heights in Urban Corridor (Main Street) zones and Suburban Main Street zones will just make this worse. We agree that the wording does need to be clearer, but to give planners discretion to trade off building height limits on a range of factors without specifying what is needed in those factors will further undermine trust in the planning system.

Please do not go ahead with this in this form before the independent review of the Code is completed.

Minor alterations, Amendment number 2.3.2.19

We agree that a separate pathway is appropriate for minor alterations to dwellings, but we are concerned that this may result in assessment provisions that will enable external changes to avoid the planning assessment process entirely.

Norwood has many shops and houses that are not listed as local or state heritage and are not part of an Historic Area Overlay, but which do contribute to the character of the suburb. This contribution was frequently tarnished in the post-war period, when stone walls were rendered over, porticos with columns added and verandas removed. Are these the sort of “minor alterations” that could be waved through under the proposed amendment?

We ask that any external “minor” alterations be assessed for their contribution to neighbourhood character if they are in Historic Conservation, Established

Email: norwoodresassoc@gmail.com
Website: www.norwoodresidentsassociation.com
Facebook: www.facebook.com/NRAso

Neighbourhood, Urban Corridor (Main Street), Business Neighbourhood and Suburban Business zones.

Primary Street Setback – Use of Building Line, Amendment number 2.3.2.26

The impact of using an average between two neighbouring dwellings will have the effect of allowing buildings to be built closer to the road, with reduced front gardens. There are many old houses in Norwood that were built before planning controls on setbacks. Often there is no setback at all.

We have two concerns with as a result: (1) we are concerned that this will encourage the reduction of open space, including space for trees that might shade the footpath, and (2) it will increase pressure to reduce the distance between the property line and the front of a garage. We have frequent case of cars jutting out onto the footpath and blocking the way for pedestrians. This occurs even in modern buildings, where the planners should have known better.

Direct Overlooking, Amendment number 2.3.8.5

We disagree with the proposed definition. It is patently obvious that people can see other people more than fifteen metres away. We accept that there needs to be some compromise, but we believe at least 25 metres is more appropriate.

Yours Sincerely,

A handwritten signature in black ink that reads "Ian Radbone".

Re: Miscellaneous Technical Enhancement Code Amendment

Dear Sir/Madam,

Kensington was one of the first villages settled to the East of Adelaide in 1839 with its unusual diagonal street pattern relative to the surrounding main roads. Fortunately many early colonial and Victorian houses, hotels and commercial buildings have remained. By the 1960s to 1980s the area was generally very run down and many buildings of heritage value were either abandoned or badly neglected. However Kensington has been transformed from a very run down area through the heritage protections introduced in the mid 1990s when Kensington was declared an Historic Conservation Zone.

Kensington Residents Association has represented the interests of Kensington and its residents since 1977, particularly so in protecting Kensington's heritage and historic character. Our Association played a major role with the then City of Kensington & Norwood in securing Historic Conservation Zone status.

Our Association is a long term and active member of the Community Alliance South Australia. Recently, we have participated in a review of the Miscellaneous Technical Enhancement Code Amendment together with representatives of other member groups of the Alliance.

Our Association has been very involved in the current planning reform process since 2013, having made many submissions, attended many consultation sessions and appeared before the Environment, Resources and Development Committee.

In response to the proposed Code Amendment the Community Alliance has prepared a detailed response indicating its position in relation to each of the proposed amendments. Our Association supports the Community Alliance's submission and we request that our Association's support is recognised and noted when considering community responses as part of the consultation process.

Yours faithfully,

Andrew Dyson
Secretary (8331 9654)

cc Community Alliance South Australia

PlanSA,

Submission Details

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: Member of the public

Given name: Charles

Family name: Gilchrist

Organisation:

Email address:

Phone number:

My overall view is: I do not support the Code Amendment

Comments:

- I am deeply concerned about the proposal to exclude the requirement of public notification for buildings in Historic Area Overlays and State Heritage Overlays that are deemed to be of no heritage value. "Heritage value" is an ambiguous term that can be interpreted in a number of ways. I am concerned that by allowing the relevant authority to decide if a building is of "heritage value" or not, that the decisions will be quite subjective. Indeed, what one person deems to be a heritage building, another person may not. Furthermore, I am concerned that buildings that are historic but not deemed to be of "heritage value" may be excluded from public notification. I am also concerned that this provision may be abused. For example, I am concerned that someone who owns a historic building in a Historic Area Overlay and wants to demolish it may pressure the relevant authority to exclude it from Public Notification. This would be deeply unfair. - I am concerned that some minor forms of development such as verndahs, fences, and retaining walls will no longer require public notification. First of all, I think that the public should be able to have a say over these forms of developments both due to their visual impact and the fact that they may impact the privacy of adjoining owners through overshadowing and height. I am also concerned that there may be a development that proposes to demolish a historic/heritage fence or verandah, for example. Under the proposed changes, such a development would be excluded from public notification. I think that the public should be able to oppose such developments as they impact upon the "heritage value" of the property. Lastly, I am concerned about the fact that what counts as meeting "exception" criteria for requiring public notification is quite vague and subjective. - I am concerned that by amending the code to allow developers to meet only one of the building height criteria, this will encourage them to build taller buildings.

Dear Craig,

RE: Miscellaneous Technical Enhancement Code Amendment

1. INTRODUCTION

We make this submission on behalf of 21-25 South Esplanade Pty Ltd ('client'), the registered proprietor of 21-21 South Esplanade, Glenelg ('Site'), in relation to the Miscellaneous Technical Code Enhancement Code Amendment ('MTECA'), which was initiated by the State Planning Commission ('Commission').

The *Proposal to Initiate* stated that the focus of the MTECA is to make technical improvements to the Planning and Design Code ('the Code') in line with the key topics detailed below:

- Improve policy clarity and interpretation;
- Improve consistency and alignment with Code drafting principles;
- Improving system efficiency and procedural matters;
- Review classification tables and assessment pathways, in particular for common and minor forms of development;
- Linkages improvements (missing or additional policies);
- Addressing unintended policy consequence;
- Update to the Rules of Interpretations to improve understanding of the Code's operation.

Whilst our client is generally supportive of the intent of the MTECA, and the significant majority of the amendments proposed, we are of the opinion that a number amendments in the MTECA consultation document should be further amended in order to provide improved clarity of interpretation, and to address what appear to be unintended policy consequences.

2. CLIENT'S SITE

Our client's Site is comprised in 6 contiguous allotments formally described as:

- Lot 253 in Filed Plan 7180 in the area named Glenelg Hundred or Noarlunga
 - » Certificate of Title: Volume 5205 Folio 462
- Lot 254 in Filed Plan 7180 in the area named Glenelg Hundred of Noarlunga
 - » Certificate of Title: Volume 5447 Folio 95
- Lot 255 in Filed Plan 7180 in the area named Glenelg Hundred of Adelaide
 - » Certificate of Title: Volume 5447 Folio 494
- Lot 256 in Filed Plan 7180 in the area named Glenelg Hundred of Adelaide

- » Certificate of Title: Volume 5808 Folio 865
- Lot 257 in Filed Plan 7180 in the area named Glenelg Hundred of Adelaide
 - » Certificate of Title: Volume 5083 Folio 907

The Site has a total area measuring approximately 3,500 square metres, and has primary frontage measuring 80 metres to the Glenelg Beach coastal reserve. The Site is surrounded on the southern and eastern sides by Pier Street and Oldham Street, and a public path to the north. The image below in Figure 1 is provided for context.

Figure 1 Aerial image of the Land

Plan Production: 23.09.2022

Subject Site & Zoning	LEGEND  Subject land boundary	 Zone boundary	
-----------------------	--	---	---

The South Australian Property and Planning Atlas ('SAPPA') shows the Land as being contained wholly within the Urban Neighbourhood Zone ('UN Zone').

3. Building Height Measurement Inconsistencies (Section 2.3.2.12)

The MTECA proposes to amend Part 8 of the Code, where 'building height' is currently defined as follows:

"Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system

- (b) telecommunications facility tower or monopole
- (c) electricity pole or tower
- (d) or any similar structure.”

Comment:

The above amendment retains the measurement approach as being the maximum vertical distance at any point within the building envelope. This is a conservative policy setting which does not adequately deal with large format buildings where existing ground level can vary significantly across the floor area of the building. The method also remains inconsistent with the method of measurement for a wall/post height.

A preferred approach is to consider the maximum vertical distance when measured on the same vertical plane. This method of measurement would be consistent with that used to measure wall/post heights (i.e. on the same vertical plane).

Recommendation:

Accordingly, we recommend that, in Part 8 of the Code, the definition of ‘building height’ be replaced with the following (additional words in *blue*):

“Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point on the same vertical plane, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system
- (b) telecommunications facility tower or monopole
- (c) electricity pole or tower
- (d) or any similar structure.

4. Building Height – TNV and Context (Section 2.3.2.11)

Our client’s Site is subjected to the following Technical and Numeric Variations (“TNV”) in regard to building height:

- Maximum Building Height (Metres) 18.5 metres; and
- Maximum Building Height (Levels) 5-Levels

The above TNVs are referenced in UN Zone DFP 2.2, corresponding to Performance Outcome (‘PO’) 2.2 which states:

“Building height is consistent with the form expressed in the Building Height (Maximum Levels) Technical and Numeric Variation and the Building Height (Maximum Metres) Technical and Numeric Variation, and otherwise positively responds to the local context including the site’s frontage, depth, and adjacent primary street width.”

The issue stated in the MTECA relates to instances where a building height Performance Outcome (‘PO’) seeks two outcomes which may be in conflict: (a) the building height specified by a TNV, and (b) and otherwise positively responding to the local context.

Insofar as this relates to our client’s Site, the MTECA proposes to amend the wording of Urban Neighbourhood Zone PO 2.2 as follows:

“Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer, ~~and otherwise~~ or positively responds to the local context including the site’s frontage, depth, and adjacent primary street width.”

Although not directly relevant to our Client’s Site which is within the UN Zone, we note that the MTECA proposes amendments to a number of other Urban Corridor type zones that have similar Building Height POs.

For this reason, we consider it prudent to highlight the proposed MTECA wording across the suite of Urban Corridor type zones to deliver confidence that our observations and recommendations achieve the Commission’s desired goal of greater consistency across the Code.

Such being the case, in addition to the proposed amendment to the UN Zone PO 2.2, the MTECA proposes, as follows:

Within the Urban Corridor (Boulevard) Zone PO 3.1, Urban Corridor (Business) Zone PO 3.1, Urban Corridor (Living) Zone PO 3.1 and Urban Corridor (Main Street) Zone PO 3.1, amend as follows:

“Building height is consistent with the form expressed in the Maximum Building Height (Levels) Technical and Numeric Variation layer and the Maximum Building Height (Metres) Technical and Numeric Variation layer ~~and otherwise~~ or positively responds to the local context including the site’s frontage, depth, and adjacent primary corridor or street width.”

Comment:

As earlier advised, we support the change in wording from “and otherwise” to “or positively”.

In relation to our Client’s Site in the UN Zone, we consider the phrase “*responds to the local context including the site’s frontage, depth, and adjacent primary street width*” to be problematic for two reasons as follows:

- The phrase ‘responds to local context’ is ambiguous, however we consider it more likely to be interpreted as referring to the existing built form context, and as such:
 - » optimal building height and scale may be compromised in locales that are currently in the early stages of gentrification and transformation, as tends to be the case in Urban Corridor type zones, as well as the UN Zone.
 - » The POs should acknowledge that built form in the zones is envisaged to transition to a considerably larger height and scale than what currently exists, and as such, the local context is more appropriately informed by the height and scale of future built form as envisaged by the zone, whilst also demonstrating some acknowledgement of, and responding to, the existing context.
- The wording ‘adjacent primary street width’ is problematic because our Client’s Site has its primary frontage to South Esplanade which is not a declared public road. Further, Pier Street and Oldham Street are defined as secondary road and rear frontages respectively. Moreover, the northern boundary of our Client’s Site is separated from an adjoining 12-storey building by a public laneway, which provides spatial relief between the adjacent properties, but is not otherwise expressly considered in the POs.

Recommendation:

Accordingly, we recommend that UN Zone PO 2.2 and PO 3.1 of the various Urban Corridor Zones:

“or positively responds to the existing / emerging local context including the site’s frontage, depth, and adjacent ~~primary public road and/or public space~~ widths.”

5. Interface Height – Policy and TNV (Section 2.3.2.21)

The issue stated in the MTECA relates to interface heights being inconsistent across several zones. For example, some of the interface building envelopes do not apply to the primary street frontage and most zones contain separate policy regarding the interface height adjacent a road.

Accordingly, the MTECA proposes amending Part 6.6 Interface Heights with the following:

“a. Buildings constructed within a building envelope provided by a 45 degree plane measured from a height of 3 metres above natural ground level at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a street boundary):”

And:

“b. Buildings constructed within a building envelope provided by a 30 degree plane measured from a height of 3m above natural ground level at the boundary of an allotment used for residential purposes within a neighbourhood-type zone as shown in the following diagram (except where this boundary is a street boundary):”

The MTECA also states that investigations revealed that, to manage the impact on the streetscape, a separate PO is included in most zones to manage the streetscape character. This PO is as follows (or similar):

“Buildings on an allotment fronting a road that is not a State maintained road, and where land on the opposite side of the road is within a neighbourhood-type zone, provides an orderly transition to the built form scale envisaged in the adjacent zone to complement the streetscape character.”

Comment:

The intent behind the amendment is to respond to situations where there was confusion as to whether the 45/30-degree building envelope applies to ‘street boundaries’ where a zone clearly expresses an intent for buildings that ‘frame’ the street, thereby reaching their optimal building heights with zero or minimal setback from the primary road boundary.

We have concerns about this amendment generally, but insofar as it relates to our client’s Site, we have serious concerns given that the ‘Interface Height’ TNV envelopes would no longer apply to the southern boundaries of our Client’s Site.

We consider this loss of envisaged height transition, which was expressed for our Client’s Site in the City Holdfast Bay Development Plan (‘Development Plan’), will continue to be watered down in the Code to the point of complete erosion. To highlight this point, we provide excerpts from the Development Plan below:

The desired character statement for Urban Glenelg Policy Area 15 stated:

“the policy area provides the Council’s premier coastal medium and high-density living opportunities. It includes areas of Glenelg north around the foreshore and the Patawalonga and within Glenelg and Glenelg South along the foreshore and extending into small parts of the suburban landscape and along Colley Terrace”.

It spoke directly to taking advantage of this location where development:

“will capitalise on the highly desirable location through significant scale with built form between 3 and 12 stories in height”.

The desired character statement dealt specifically with Precincts 3, 4 and 5 and stated:

"development within Precinct 4 - five-storey will be predominantly in the form of residential flat buildings, serviced apartments and tourist accommodation up to 5 stories (or 18.5 m) in height."

It then dealt specifically with our Client's Site where it stated:

"development on land fronting the South Esplanade immediately adjacent Precinct 5 Twelve Storey may accommodate additional building height over five stories to achieve a transition in scale from the taller building anticipated in Precinct 5 down to the five-storey scale anticipated in Precinct 4..."

In our opinion, the policies of the Development Plan continue to have not been properly translated into the Urban Neighbourhood Zone because the maximum building height reflected in the Maximum Building Height TNVs are 18.5 metres and 5 levels, and there is no policy in the Urban Neighbourhood Zone that supports a transition from 43 metres (12 storeys) down to 18.5 metres (5 storeys) for our Client's Site.

In our opinion, in the absence of any clear direction in regard to the potential building height across the site (i.e. to acknowledge that a height above 5 storeys could be accommodated) we strongly believe that such could result in a scenario where relevant authorities and/or the community could apply the policies in different ways. Indeed, our experience to date has confirmed such.

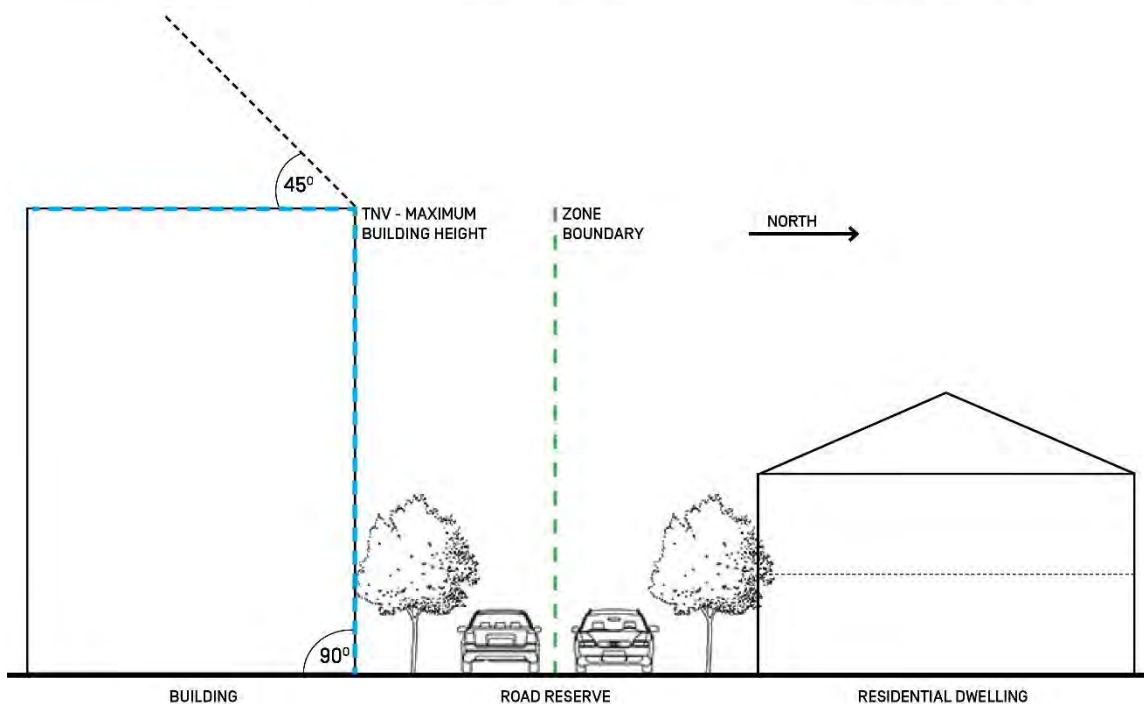

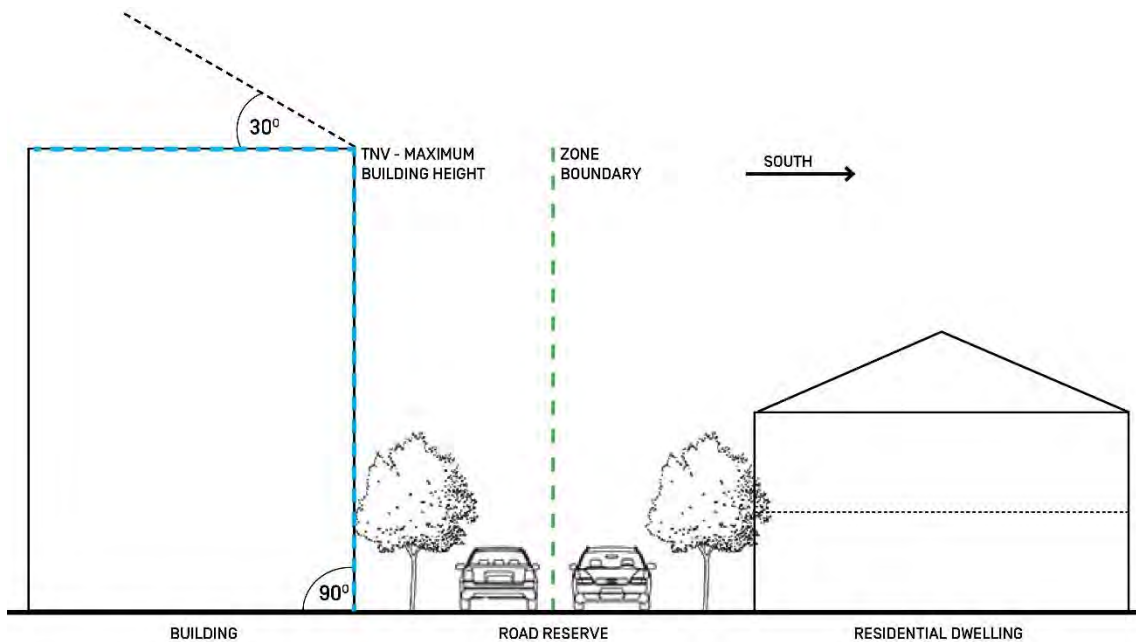

There is simply no sound planning reason for there not to be an expressed building height that reflects the work of the 30-degree angle to make it very clear to relevant authorities and the community that in the particular circumstances of our Client's Site, and also in other instances where a site is bound by a public road that is not a State Maintained Road, that a height above 5-levels (or the building height otherwise envisaged by the zone) is indeed contemplated as a reasonable and appropriate method for managing the mass and scale of larger buildings where the site is separated by a public road from a property used for residential purposes in a 'neighbourhood-type' zone.

Recommendation:

For these reasons, we suggest that the 'Interface Height' TNV should be amended in Part 6.6 to incorporate the proposed amendment to (a), with (b), however, a new clause/diagram should be included to deal with situations where a site has frontage to a public road. We propose the following:

"(c) 90-degree plane measured from a height of 3.2 metres above natural ground level at the boundary of the site where that boundary is a street boundary, up to the height specified in a Technical and Numeric Variation (TNV), and then:

- (i) in relation to a southern boundary, a 30-degree plane grading north.*
- (ii) in all other cases, a 45-degree plane."*

6. Conclusion

The recommendations contained in this submission would simply strike a chord with the key outcomes and benefits of the new planning system however, more importantly, they ensure that there is a consistent interpretation and application of the building height and interface policies across a broad suite of zones, and in relation to our Client's Site, establish a fair and equitable translation of building height limits between the Development Plan and the Code and certainty for the community.

We appreciate the opportunity to review the MTECA, and would be pleased to clarify any of our identified issues and proposed recommendations directly.

Yours sincerely,

A handwritten signature in black ink that reads "Chris Vounasis".

Via email: plansasubmissions@sa.gov.au

Dear Mr Holden,

UDIA SUBMISSION – MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

We write to you in relation to the ‘Miscellaneous Technical Enhancement Code Amendment’ [MTECA] which is on consultation from 25 July 2022 until Friday 23 September 2022.

We thank you for the opportunity to comment on the MTECA and for the informative ‘Industry Leaders Briefing’ session on the Code Amendment that was held by the Department on 9 August 2022.

We note that the MTECA proposes a series of technical amendments which aim to enhance the general performance and operation of the Planning and Design Code [the Code]. The Code Amendment focuses on addressing technical and operational elements within the Code, as opposed to changing policy intent or outcomes.

In particular, the Code Amendment focuses on:

- Technical matters;
- Policy clarity and interpretation;
- Consistency with drafting principals;
- System efficiency and procedural matters; and
- Other Technical Improvements.

Key areas of the Code Amendment include:

• Notification Tables	• Definitions
• Assessment Pathways	• Rules of Interpretation
• Overlays and referrals	• Character and Heritage identification
• Restricted Development	• Classification Tables & Linkages
• Policy Terminology	• Expanded policy

We understand that the scope of the MTECA, including the key issues addressed by the Code Amendment, have been derived from early stakeholder consultation with planning and development professionals, several local councils as well as issues raised via the PlanSA service desk.

The UDIA strongly supports the initiation and implementation of the MTECA which represents the first review and “tune-up” of technical and operational aspects of the Code, based on user and stakeholder feedback. It is an opportune time to review and refine the Code following its first year of operation and this process of review and reform should continue for the life of the Code with regular (annual or bi-annual) amendments that continue to fine tune and refine the technical and operational aspects of the Code.

Planning policy within the Code should also be regularly reviewed and refined (annually or bi-annually) with periodic amendments to ensure a contemporary policy framework.

Undertaking regular, quick, and transparent amendments to the Planning and Design Code is directly aligned with reform Recommendation 9 of the South Australia’s Expert Panel on Planning Reform which was to *‘Make changing plans easy, quick and transparent’*. For the Planning and Design Code to operate effectively, it needs to be consistently and regularly updated. This was reflected in the recommendations of the Expert Panel which recognised that *‘Development plans are the foundation of the day-to-day administration of the planning system. The policies in these plans must be up to date at all times, so that development proposals and assessment decisions can result in the best outcomes for an area’*.

The Commission has previously stated its commitment to regularly reviewing the Code and, where appropriate, initiate amendments to ensure the best development outcomes are being achieved through the Code. Under the Act, the Commission is responsible for preparing and maintaining the Code and therefore has an important role in ensuring the Code is contemporary and responsive to emerging trends. We are pleased that the State Planning Commission has identified in *‘Our priorities for 2022-23’* to *‘update and improve the Planning and Design Code’* as a key priority and area for focus over the next 12-18 months.

Whilst the UDIA strongly supports the implementation of the MTECA, there are several aspects of the proposed Code Amendment that require further attention, amendment and/or refinement. These matters are addressed respectively below.

1.0 Wall Height & Building Height

Section 2.3.2.12 (page 81) of the MTECA addresses *‘Building Height, Building Wall Setback and Wall Height’* and identifies inconsistencies between the defined term ‘wall height’, the defined term ‘Building Height’ and actual policies relating to wall height within the Code. The Code Amendment also seeks to amend wall and building height policy terminology in some neighbourhood-type zones.

Building Height is currently defined in the Code as follows:

“Means the maximum vertical distance between the lower of the natural or finished ground level at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system*
- (b) telecommunications facility tower or monopole*

- (c) *electricity pole or tower*
- (d) *or any similar structure.*

[our emphasis]

Wall height is currently defined in the Code as follows:

“Means the height of the wall measured from the top of its footings but excluding any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land’

[our emphasis]

The Code Amendment seeks to amend the definitions for ‘wall height’ and ‘building height’ in Part 8 – Administrative Terms and Definitions to include the option for the measurement point to be taken from a point specified by the policy in which the term is used, rather than from the measurement point specified in the definition.

The new definition for ‘Building Height’ is proposed as follows:

Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point, ignoring any antenna, aerial, chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (e) *flues connected to a sewerage system*
- (f) *telecommunications facility tower or monopole*
- (g) *electricity pole or tower*
- (h) *or any similar structure.*

[our emphasis]

The new definition for ‘Wall Height’ is proposed as follows:

Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land

[our emphasis]

Determining 'natural ground level'

We note that the definition for 'Building Height' still includes a reference to 'natural ground level', an undefined term which is generally accepted to be the ground levels in existence prior to European colonisation of South Australia. Building Height is not only a DTS and DPF criteria used to assess development applications, but it can also be used to determine the Assessment Pathway of a development application with respect to public notification. Confidence and certainty in relation to the calculation of natural ground level is therefore important, but at present it can be subjective and subject to interpretation.

The challenge is derived from the accurate calculation of natural ground level, particularly where this level is calculated on an adjoining site that cannot be legally accessed by a licensed Surveyor or is otherwise inaccessible (i.e., occupied by an existing building etc). Where ground levels have been disturbed (previous cut and fill) it is also difficult to accurately (and objectively) calculate natural ground level.

Determining natural ground level is something that requires thorough attention and detailing on plans and may require the assistance of a licensed Surveyor and research into past approvals and historical earthworks. Where it is not possible to determine natural ground level the court tends to take the existing ground level as natural ground level, which we see as a sensible approach.

The operation of building height controls would therefore benefit from greater clarity around how natural ground level is to be determined. This could include the adoption of a possible separate definition for 'natural ground level' within the Code or possibly within a new Practice Direction or Guidelines.

Measurement of height on a vertical plane

The proposed definition of Building Height calls for a measurement of the highest and lowest parts of a building regardless of whether they occur in the same vertical plane. This leads to skewed results particularly for stepped buildings on sloping land.¹ There is no apparent planning purpose behind taking the measurement in this way. On this basis, we recommend an amendment to the definition of 'Building Height' as follows:

Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) ~~at any point of any part of a building~~ and the finished roof height ~~at its highest point~~, ignoring any antenna, aerial,

¹ Relevant cases include:

Turner v City of Victor Harbor [2013] SAERDC 49

Greenslade Holdings Pty Ltd v District Council of Yorke Peninsula [2011] SAERDC 17

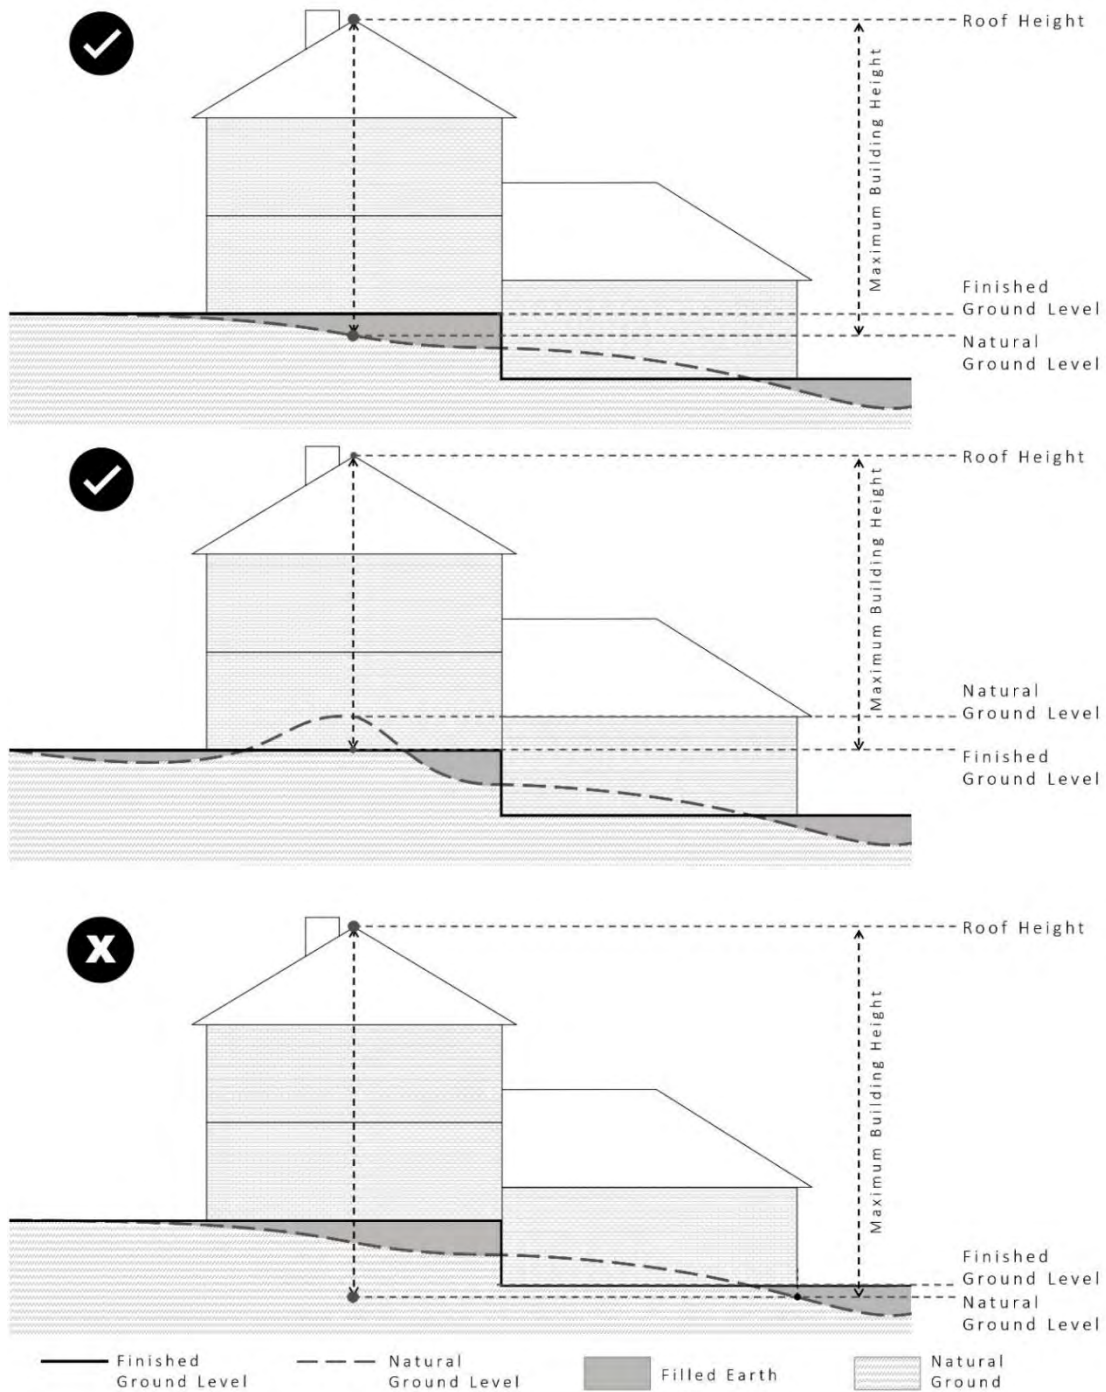

chimney, flagpole or the like. For the purposes of this definition, building does not include any of the following:

- (a) flues connected to a sewerage system*
- (b) telecommunications facility tower or monopole*
- (c) electricity pole or tower*
- (d) or any similar structure.*

In addition, and in any event, consideration should also be given to the inclusion of a diagram to assist with interpretation of the definition of building height particularly relating to the measurement of the vertical distance between the lower of natural or finished ground level (or other measurement point specified by the Code) and the finished roof height. (i.e., refer to example provided in **Figure 1** over page).

Figure 1: Maximum Building Height

(Measurement of vertical distance above the lower of the natural or finished ground level (or other point prescribed by the Code)

2.0 Affordable Housing

Section 2.3.3.1 (page 135) of the MTECA states that Relevant Authorities are presently experiencing confusion insofar as determining when a development application should be referred to the Minister for the purposes of Affordable housing.

On this basis, we understand that the South Australian Housing Authority ('SAHA') has suggested that the referral trigger be amended to read as follows:

Residential development or land division within the Affordable Housing Overlay, and:

- 1. the proposed development or land division comprises of 20 or more dwellings or residential allotments; or*
- 2. the applicant is seeking to access either one or more of the planning concessions as outlined in the Affordable Housing Overlay (PO or DTS 3.1, 3.1 and 4.1); or*
- 3. the proposed development or land division is described as including affordable housing of any number of dwellings or residential allotments.*

The three (3) planning concessions mentioned in point 2 above relate to reduced minimum site areas for dwellings, increases to maximum allowable densities, increases to the maximum specified building height and applicable car parking rates.

Based on the wording proposed by SAHA, all development applications that proposed 20 or more dwellings or residential allotments would be referred to the Minister. Notwithstanding, we note that the Code Amendment does not seek to adopt this approach and states that *'It is however recommended that referrals be limited to proposals that are intending to include 'affordable housing' to maintain a level of consistency with the current referral arrangements and to also exclude land division that is reflective of an approved development'*.

On this basis, the proposed amendment which is currently on public consultation states:

"Except where the applicant for the development is the South Australian Housing Authority (or an agent acting on behalf of the South Australian Housing Authority), residential development or land division (other than land division that reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016):

- a) that comprises 20 or more dwellings or residential allotments and the development is intending to provide affordable housing; or*
- b) where the applicant is seeking to access one or more of the planning concessions outlined in the Affordable Housing Overlay DTS 3.1, 3.2 or 4.1; or*
- c) that is described in the application documentation as including affordable housing of any number of dwellings or residential allotments.*

The UDIA strongly supports this position and the intent that the proponent must demonstrate an intent to provide affordable housing or be seeking to access one of more of the planning concessions as outlined above.

Notwithstanding, while the proposed wording for the referral triggers goes some way to address the automatic referral triggers as suggested by SAHA, we are concerned that the proposed wording remains vague and subject to interpretation (particularly in clause (b)).

The reason we have formed this opinion is that the phrase 'seeking to access' in clause (b) may be construed by a Relevant Authority as an automatic trigger for referral of the application (to the Minister responsible for administering the *South Australian Housing Trust Act 1995*) any development that exceeds any one of the following:

Affordable Housing Overlay DTS 3.1

With the exceptions being development within the Character Area Overlay or Historic Area Overlay, there is a risk that all development applications proposing residential allotments that are less than the minimum site area or exceeding the maximum density per hectare by up to 20% as specified by the relevant zone will be referred to the Minister.

Affordable Housing Overlay DTS 3.2

There is a risk that all development applications that propose a building incorporating dwellings that exceed the maximum building height (within specified zones) will be referred to the Minister (e.g., a 2-level building in the Established Neighbourhood Zone).

Affordable Housing Overlay 4.1

There is a risk that all development applications that propose a shortfall in on-site vehicle parking will be referred to the Minister.

While we suspect that this is not the intention of the Code authors, we suggest that the triggers for referral are drafted to automatically assumed that there is no intention to include affordable housing, unless the application documentation expressly states otherwise. Our recommended wording is set out below:

"Except where the applicant for the development is the South Australian Housing Authority (or an agent acting on behalf of the South Australian Housing Authority), residential development or land division (other than land division that reflects the site boundaries illustrated and approved in an operative or existing development authorisation for residential development under the Development Act 1993 or Planning, Development and Infrastructure Act 2016):

a) that comprises 20 or more dwellings or residential allotments and is described in the application documentation as intending to provide affordable housing; or

b) that is described in the application documentation as intending to provide affordable housing and the applicant is seeking to access one or more of the planning concessions outlined in the Affordable Housing Overlay DTS 3.1, 3.2 or 4.1; or

c) that is described in the application documentation as intending to including affordable housing for any number of dwellings or residential allotments.

3.0 Designated Performance Features (DPF)

Whilst not specifically addressed in the MTECA the application of Designated Performance Feature (DPF) provisions continues to be a source of confusion for some Relevant Authorities, and the community. In some instances, a DPF is viewed as a prescribed criteria which must be met. It is not uncommon to see a DPF listed as a reason for refusal. At the other end there are Relevant Authorities which take the view that a proposal which meets a DPF may still be refused based on a failure to meet the corresponding Performance Outcome.

Further changes to 'Part 1 - Rules of Interpretation' of the Code should therefore be considered to provide clarity to Relevant Authorities, applicants and the community alike.

We recommend an amendment to the Rules of Interpretation for Designated Performance Features as follows:

*In order to assist a relevant authority to interpret the performance outcomes, in some cases the policy includes a standard outcome which will generally meet the corresponding performance outcome (a designated performance feature or DPF). A DPF provides a guide to a relevant authority as to **one way** ~~what is generally considered~~ to satisfy the corresponding performance outcome.*

Where the DPF is met it is unnecessary to undertake an assessment of the merits of the development against the corresponding performance outcome.

Where a DPF is not met a relevant authority must undertake an assessment of the merits of the development against the corresponding performance outcome. The relevant authority retains a discretion to determine that the outcome is met in another way.

~~*but does not need to necessarily be satisfied to meet the performance outcome, and does not derogate from the discretion to determine that the outcome is met in another way, or from the need to assess development on its merits against all relevant policies.*~~

A departure from a DPF is not of itself a reason for refusing planning consent to a development and does not derogate from the need to assess a development on its merits against all relevant policies.

4.0 Reserved Matters

Section 102(3)-(5) of the PDI Act enshrine the power for some matters relating to the assessment of a proposed development to be reserved for later assessment:

- (3) *A relevant authority may, in relation to granting a planning consent, on its own initiative or on application, reserve its decision on a specified matter or reserve its decision to grant a planning consent—*
- (a) until further assessment of the relevant development under this Act; or*
 - (b) until further assessment or consideration of the proposed development under another Act; or*
 - (c) until a licence, permission, consent, approval, authorisation, certificate or other authority is granted, or not granted (by the decision of another authority), under another Act.*
- (4) *A relevant authority must allow any matter specified by the Planning and Design Code for the purposes of this subsection to be reserved on the application of the applicant.*
- (5) *Any matter that is not fundamental to the nature of the relevant development may, subject to the Planning and Design Code, be reserved under subsection (3) or (4).*

The ability for an applicant to nominate certain matters which are not fundamental to the question of whether Planning Consent can be granted is potentially of great utility. It does not avoid assessment of those matters but rather enables an applicant to obtain a decision on whether Planning Consent is warranted without incurring unnecessary costs on matters which are not fundamental to that decision.

The applicant, not the Relevant Authority, bears the risk that the reserved matters cannot ultimately be achieved for some reason.

The planning system contemplates that the Code will specify certain matters which an applicant may request to be reserved for later assessment.

The matters which in our opinion would be suitable to be included in the Code for the purposes of section 102(4) of the PDI Act include:

- Site Contamination;
- Stormwater;
- Wastewater disposal;
- Landscaping;
- Native Vegetation clearance; and
- Final materials and finishes.

Obviously there will be times when an applicant wishes to include matters like landscaping and final finishes in the initial application in order to persuade a Relevant Authority of the merits of a

development. There will be other times when those matters have little bearing on the decision to grant or refuse Planning Consent.

On this basis, we recommend that the MTECA incorporates an amendment to Table 2 of Part 5 of the Code to specify that the above matters are matters that an applicant may request to be reserved for later assessment.

We commend the Commission for undertaking this technical and operational review of the Planning and Design Code and support the amendments that are proposed to be introduced into the Code with the exception of the suggested amendments raised and addressed above.

The UDIA also strongly encourages the Commission to continue with operational and policy reform with regular and consistent updates and amendments to the Code to ensure the Code is responsive to emerging trends with a modern and contemporary policy suite that can be readily interpreted and implemented.

We confirm that the UDIA will also separately engage with the 'Expert Panel' established to undertake the 'Planning System Implementation Review' and will prepare a separate written submission to the panel on our ideas for reform of the South Australian planning system.

We thank you for the opportunity to comment on this important amendment to the Planning and Design Code and would be pleased to provide additional information in support of this submission if/where required.

The UDIA will continue to offer its support to work with the Department and Commission to ensure valuable industry insights from our members are heard.

Yours Sincerely

Pat Gerace

PlanSA,

Submission Details

Amendment: Miscellaneous Technical Enhancement Code Amendment

Customer type: Development Industry

Given name: Amanda

Family name: Price-McGregor

Organisation: Green Light Planning on behalf of SA Independent Retailers

Email address:

Phone number:

My overall view is: I support the Code Amendment

Comments: Comments are confined to 2.3.2.9. Restricted Development Classification – Table 4. Strongly support Principle 1: Warrants assessment by the Commission to consider the strategic implications and impacts in relation to any medium to large-scale out-of-centre retail as it is considered that this must continue to warrants State assessment as it may have a broader impact on the form and pattern of development across a region and could well disrupt the role of activity centres in providing equitable and convenient access to shopping, administrative, cultural, entertainment and other facilities. The current Restricted provisions associated with shop/s in non activity centre zones should remain as it does as present, with no relaxation of the current GLA in all "non-activity centre" zones. In addition, consideration should be given to introducing a restricted trigger for large scale bulky goods(greater than 6,000m²) located in any Employment zones where that employment zone directly abuts a neighbourhood zone, in particular a housing diversity zone, due to the traffic and parking impacts on existing residential neighbourhoods. Recommend Table 4 Restricted Development in the Employment Zone, Restricted Development Shop - Exclusions change part (b) shop that is a bulky goods outlet to read "shop that is a bulky good outlet less than 6,000m²". Reason shops greater than 1,000m² are restricted and therefore bulky good greater than 6,000m² should also be a restricted form of development.

Mr Craig Holden
The Chair
State Planning Commission
Emailed: plansasubmission@sa.gov.au

Attention: Code Amendment Team

Dear Craig

Miscellaneous Technical Enhancement Code Amendment

Thank you for providing the LGA with the opportunity to respond to the Miscellaneous Technical Enhancement Code Amendment (the Code Amendment).

The LGA's submission relates to the structure of the Code Amendment and the engagement process undertaken. It is acknowledged that this is the first significant Code Amendment prepared by the State Planning Commission under the *Planning, Development and Infrastructure Act 2016* and the comments and suggestions provided by the LGA are aimed at improving processes and engagement practices for future Code Amendments undertaken by the State Planning Commission.

The LGA have been provided with the following feedback on the Code Amendment by councils:

1. Many councils actively engaged with the State Planning Commission, during the call for issues on the Code Amendment undertaken in August last year, councils have expressed concern that many of the issues raised in this process have not been included in the Code Amendment and no clear response has been provided as to why issues were both included and excluded.
2. Smaller and regional councils due to a lack of staff resources have not had the ability to fully consider and understand the implications of the Code Amendment for their area and therefore have not had the opportunity to provide a response.
3. The scale and presentation of the document limits the clear understanding of the policy content and the proposed changes. More focussed themes would have assisted in understanding the policy content and proposed changes.
4. Concern has been expressed that the Code Amendment contains potentially significant policy changes, this has been acknowledged by PLUS staff, given the size and structure of the code Amendment it has been difficult to identify and clearly understand the implications of the policy changes proposed.
5. With many of the policy changes proposed there appears to be limited evidence based research to support the amendments proposed, the changes appear to be proposed as a result of anecdotal feedback only.
6. The Code Amendment document is a highly technical document which requires significant analysis to enable councils and the community the opportunity to provide meaningful responses. Given the limited commentary and investigations provided to support some of the policy changes, concern has been expressed as to whether the engagement process undertaken has

been meaningful and achieved the principles of engagement within the Community Engagement Charter.

7. Policy content has been difficult to relate back to the Planning and Design Code and the wording is ambiguous and does not provide policy clarity.

In response to the issues raised the LGA would recommend to the State Planning Commission that the following approach is considered:

1. Work with councils who responded during the call for issues process to identify an approach to address policy issues not addressed through this Code Amendment
2. Test the wording of proposed policy with development assessment practitioners to improve policy clarity and remove ambiguity.
3. Provide detailed responses back councils on the issues raised in submissions providing clear advice as to where councils have raised concerns with proposed policy how these concerns will be responded to. The current approach "what we heard" is not sufficient.
4. With future Code Amendments consider the size and structure of the Code Amendment and develop a consultation and engagement that will enable more meaningful feedback.

Should you wish to discuss these matters further please feel free to contact me at

Yours sincerely

Stephen Smith FPIA
Policy Advisor

ABOUT THE HOUSING INDUSTRY ASSOCIATION

The Housing Industry Association (HIA) is Australia's only national industry association representing the interests of the residential building industry, including new home builders, renovators, trade contractors, land developers, related building professionals, and suppliers and manufacturers of building products.

As the voice of the residential building industry, HIA represents a membership of 60,000 across Australia. HIA members are involved in land development, detached home building, home renovations, low & medium-density housing, high-rise apartment buildings and building product manufacturing.

HIA members comprise a diverse mix of companies including residential volume builders, small to medium builders and renovators, residential developers, trade contractors, building product manufacturers and suppliers and allied building professionals that support the industry.

HIA members construct over 85 per cent of the nation's new building stock.

The residential building industry is one of Australia's most dynamic, innovative and efficient service industries and is a key driver of the Australian economy. The residential building industry has a wide reach into manufacturing, supply, and retail sectors.

Contributing over \$100 billion per annum and accounting for 5.8 per cent of Gross Domestic Product, the residential building industry employs over one million people, representing tens of thousands of small businesses and over 200,000 sub-contractors reliant on the industry for their livelihood.

HIA exists to service the businesses it represents, lobby for the best possible business environment for the building industry and to encourage a responsible and quality driven, affordable residential building development industry. HIA's mission is to:

"promote policies and provide services which enhance our members' business practices, products and profitability, consistent with the highest standards of professional and commercial conduct."

HIA develops and advocates policy on behalf of members to further advance new home building and renovating, enabling members to provide affordable and appropriate housing to the growing Australian population. New policy is generated through a grassroots process that starts with local and regional committees before progressing to the National Policy Congress by which time it has passed through almost 1,000 sets of hands.

Policy development is supported by an ongoing process of collecting and analysing data, forecasting, and providing industry data and insights for members, the general public and on a contract basis.

The Association operates offices in 22 centres around the nation providing a wide range of advocacy, business support services and products for members, including legal, technical, planning, workplace health and safety and business compliance advice, along with training services, contracts and stationary, industry awards for excellence, and member only discounts on goods and services.

INTRODUCTION

The Miscellaneous Technical Enhancements (herein referred to as MTE) is a document aimed at facilitating minor changes to the South Australian Planning and Design Code (herein referred to as the Code). HIA commends the State Planning Commission (herein referred to as the Commission) for undertaking this review and appreciates how important the Code is for development in this state.

We agree the enhancement process is an effective way to ensure continual improvement within the planning realm, it is our belief this document has the potential to create a better planning system for our members and the general public.

It is important such a review understands competing priorities and ensures planning authorities can take a holistic approach when enforcing planning objectives, recognising a balance between economic and environmental factors.

The Code must be robust and developed with sufficient rigor to eliminate unnecessary regulatory barriers for industry and the community. A fully considered system is one that is reasonable for users to comply with and manageable for regulators to enforce.

A review must analyse cost/benefit outcomes for any proposed change, accomplishing sensible planning provisions in line with consumer affordability. The purpose of a review should be to improve Code readability and efficiencies so that changing social patterns and evolving technologies are considered.

This submission will provide comment on aspects of the MTE, clarifying our position on certain topics referenced in the document and matters that are closely related.

1. 'MINOR' VARIATION DECISIONS

A key amendment proposed within the MTE is the introduction of 'minor variation decisions' relating to public notifications. The consultation document highlighted a *"lack of ability for a relevant authority to allow minor variations"*, HIA agrees with this statement and congratulates the Commission on identifying this as an area for rectification.

The MTE proposes decision makers ought to exercise discretion when notification limits have been slightly exceeded, allowing them the option of assessing the application without the need for public correspondence. We note the following additional paragraph is proposed within 'interpretations' listed under notification tables.

'A relevant authority may determine that a variation to 1 or more corresponding exclusions prescribed in Column B is minor in nature and does not require notification.'

Although this will potentially provide flexibility for assessors, HIA believes this discretion will rarely be utilised by those in charge of administering it. The fear of reprisal from despondent neighbours and community members will provide enough discouragement. Many relevant authorities are conservative when making judgement calls, this is especially the case when an individual's name is directly associated with the decision.

A far better solution is to provide a defined term for 'minor variation' that states nominated values specific to allowable tolerances. We believe this ought to be addressed within Part 8 of the Code, rather than other government instruments such as Practice Directions.

Pending zonal requirements, minor variations may include assessment on the following elements

- Maximum building heights,

- wall lengths on boundaries
- Floor configuration and area i.e. referenced under DTS/DPF 1.4 within the City Living Zone shown in Table 5
- building setbacks i.e. referenced under DTS/DPF 2.5 within the Caravan and Tourist Park Zone shown in Table 5
- Building envelope and inclination i.e. referenced under DTS/DPF 3.1 within the City High Street Subzone shown in Table 5

To ensure minor variations are assessed without consequence for the relevant authority, HIA recommends each element has a set **±5% variance value** as a limit.

While we understand values may create a substitute benchmark, industry often works to common dimensions i.e. whole numbers.

Allowing the relevant authority to use minor variations provides much needed flexibility within the Code, **having variance values associated with them will substantially reduce enquiries and lead to quicker assessment turnarounds**. This ultimately saves time and money for all stakeholders.

2. LAND USE/ADMINISTRATION DEFINITIONS AND TERMS

2.1. BUILDING HEIGHT AND WALL HEIGHT

HIA supports initiatives which make the Code more legible and user friendly. The Commission should be commended for reviewing existing terms and definitions, they play a crucial role in assessment and are often closely examined by the relevant authority.

One of the most important amendments listed in the MTE relates to building heights and wall heights. A proposed addendum for each is shown below, highlighted in green.

“Means the maximum vertical distance between the lower of the natural or finished ground level or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) at any point of any part of a building and the finished roof height at its highest point”

“Means the height of the wall measured from the top of its footings or a measurement point specified by the applicable policy of the Code (in which case the Code policy will prevail in the event of any inconsistency) noting that the height measurement does not include any part of the wall that is concealed behind an eave or similar roof structure and not visible external to the land”

Our members place great value on the assessment process being consistent, it aids them in creating working drawings and eases their concerns about biased outcomes.

By extending this definition, the relevant authority is given several options to determine height values. While we understand that may give flexibility in some circumstances, there is no clear point of reference for our members. It is worth reminding the Commission a major objective of the MTE is to *“ensure greater consistency of the Code”*, as stated in the consultation document. We also believe the Code should be user friendly and easy to read.

We have observed that proposed amendments within the MTE provide definitive building heights and levels as *“measured from the top of the footing”* in some zones. This is shown in amendments to DTS/DPF 4.1 within the General Neighbourhood Zone, Waterfront Neighbourhood Zone and Suburban Neighbourhood Zone, DTS/DPF 2.1 within the Urban Renewal Neighbourhood zone, DTS/DPF 3.1 within the Housing Diversity Neighbourhood

Zone, Table 1 for Accepted Development and DTS/DPF 5.1 within the Master Planned Neighbourhood Zone, Master Planned Renewal Zone and Master Planned Township Zone within the consultation draft.

HIA calls on the Commission to remove ambiguity in accordance with MTE objectives and make the “top of footing” a sole reference point when determining building height and wall height throughout the Code. In addition to this, we would also recommend the term “footing” be included under Administrative Terms and Definitions with the following description.

“Means the base which supports a structure or building”

2.2. RELEVANT LAND

The MTE proposes to introduce an explanatory note for Table 1 (Accepted Development), Table 2 (Deemed-to-Satisfy) and Table 3 (Performance Assessed) for all zones as shown below.

“Unless otherwise specified in another class of development, the reference to a class of development includes a reference to a change in the use of the relevant land or building work (including construction of a new building, or alteration/addition of an existing building).”

HIA would like to point out that a parcel of land may be used for more than one activity. For example, an allotment zoned as “farming” will often incorporate residential buildings to house occupants. This can lead to a conflict where ancillary uses may not be in line with zoning requirements.

Such conflicting objectives has previously been dealt with by the government under Practice Direction 14, Part 2, Section 5(5)(f). In this case, the problem of residential land use was resolved by allowing the site-specific activity to be assessed differently from zoning provisions associated with farming.

“if the proposed change in use is the commencement of an additional use, where the existing use is represented in item 6 of table 1 and is a “farming” use only (and that use is continuing), and the proposed use is represented in item 1 of table 1 and is a “domestic residential” use only, the proposed use is not to be regarded as a more sensitive use where the proposed use involves the construction of a building on the land to be used for residential purposes”

In summary, a portion of the allotment could be viewed (assessed) in isolation to the planning policy common with the remainder of the property. This type of assessment is effectively replicated within proposed MTE amendments outlined under ‘Application of Spatially Based Policies and Rules’ (proposed for Part 1).

HIA agrees with spatial differentiation policy and believes it should be broadly applied, whether to changing land uses (for the purpose of exemptions) or through application (excluding overlays). We believe “relevant land” should not only be a defined term, but also have wording which allows for unique activity to be considered. Any new definition ought to read as follows

“Means either a complete parcel of land or a portion of land within an allotment”

2.3. DEDICATED CORRIDOR/HALLWAY

The existing term “habitable room” provides guidance on areas within a building used for domestic purposes. It also provides a description defining non-habitable areas, including the use of “dedicated corridor/hallways”.

What is unclear about this description are the parameters surrounding passageway configurations. Because no dimensional limitations are observed, a corridor or hallway could constitute the same size as a standard room. An

area within a dwelling that provides a pathway from one part to the next might therefore be viewed as a dedicated thoroughfare, even if it is contained only within a portion of a room.

To resolve this issue, HIA recommends a new definition for designated corridor/hallways be included under Administrative Terms and Definitions with the following description.

“Means a passageway with a narrow width that is directly enclosed by walls either side”

3. ADDITIONAL MINOR TECHNICAL ENHANCEMENTS HIA RECOMMEND

3.1. DTS/DPF PROVISIONS

Below are a list of DTS/DPF clauses HIA would like to bring to your attention. We believe making minor amendments to each of these will have a significant impact on the Code’s usability without compromising the performance objectives.

- **General Policy Design in Urban Areas – DTS/DPF 17.2**

**Dwellings with a frontage to a public street have an entry door visible from the primary street boundary*

Having a building that is easy for both occupants and visitors to use is part of good design practices. The function of a dwelling relates not only to the built form but also its position on the property.

While front door legibility (specified in PO 17.2) may seem like a practical solution to provide guidance for people who do not ordinarily enter the premises, it is not the only means in which direction can be provided. As an example, a multitude of buildings can be found within the Adelaide Hills region where visitors are not directed by a visible front door. To our knowledge, this does not create a logistical problem for visitors entering the property.

It is our opinion the wording within this clause should be changed from entry door to **entry “point”**; the intent of the performance outcome is still maintained.

- **General Policy Design in Urban Areas – DTS/DPF 20.2**

**Each dwelling includes at least 3 design features within the building elevation facing a primary street, and at least 2 design features facing any other public road*

Stipulating design requirements within the Code not only has the potential to restrict innovation, but also foster urban amenities with repetitive streetscapes.

HIA objects to planning laws “designing” the appearance of a house. New market products and architectural philosophies ought to drive desirable appearances.

As a compromise, we recommend design features are reduced to 2 for primary streets and 1 when facing other public roads.

- **General Policy Design in Urban Areas – DTS/DPF 22.1**

**Residential development incorporates soft landscaping with a minimum dimension of 700mm.*

Dwelling site area (or in the case of residential flat building or group dwelling(s), average site area) (m ²)	Minimum percentage of site
>200-450	20%

****At least 30% of any land between the primary street boundary and the primary building line.***

HIA are concerned about open space dimensions within medium size residential allotments. It is possible a 450m² parcel of land supporting either a detached or semi-detached dwelling will not be able to accommodate minor domestic structures of medium size where Deemed-to-Satisfy limits (herein referred to as DTS) are applied.

HIA suggests the site coverage and soft landscaping provisions are relaxed to allow greater flexibility in personal choices for outdoor recreation and storage facilities. Analysing the intent of the Code versus the likely delays, we request the DTS be changed with a **5% decrease** in minimum landscaping percentages for sites that are between 200 and 450m².

This decrease should also be applied to the “30%” landscaping requirement in front of residential development, so that the excepted **minimum becomes 25%**.

Furthermore, a minimum dimension of 700 mm width is currently required for soft landscaping. We believe this is excessive, considering a 500mm dimension would likely be accepted under a performance assessed pathway.

HIA calls for the minimum landscape widths to be reduced to 500 mm.

- **General Policy Design in Urban Areas – DTS/DPF 34.2**

***Battle-axe or common driveways satisfy (a) and (b)**

(b) where the driveway is located directly adjacent the side or rear boundary of the site, soft landscaping with a minimum dimension of 1m is provided between the driveway and site boundary (excluding along the perimeter of a passing point).

HIA believes a 1 metre dimension listed in (b) is excessive for battle-axe allotments. Prior to the Code, landscaping widths were known to be approved at **500 mm** alongside driveways leading to rear allotments.

We believe a 500 mm width achieves an appropriate amenity response and should be considered as part of a revised DTS solution within the Code.

3.2. OVERLAYS

The Hazard (flooding - evidence required) Overlay is a major inhibitor for DTS Development. HIA agrees with the principle of creating planning policy that gives regard to potential flooding, however, the Commission should explore ways in which very minor flooding does not trigger a performance assessed process.

Currently, Development Applications that do not have a finished floor level 300mm above the top of kerb or primary street boundary automatically fall outside the DTS pathway; a large portion of Adelaide is captured under this overlay.

Although it is acknowledged the state is currently examining the accuracy of flood mapping boundaries, outcomes from this work may take years to eventuate.

We believe resolutions can be reached within the DTS provisions by having higher thresholds for base compaction (fill) where allotments are below the street level. We suggest the following DTS/DPF criterion be added to Part 3 – Hazard (Flood Evidence required) Overlay, as highlighted in green

Habitable buildings, commercial and industrial buildings, and buildings used for animal keeping incorporate a finished floor level at least 300mm above:

- (b) *the highest point of natural ground level at the primary street boundary where there is no kerb; or*
(c) *the predicted level of flooding*

3.3. TERMS AND DEFINITIONS

Under Part 1 of the Code, guidance is provided to the relevant authority for administration purposes. Within this Part, it makes reference to Section 106(2) of the Act (PDI 2016) and minor variations.

Having already discussed minor variation decisions associated with notifications, HIA strongly encourages a generic term for “minor variations” be inserted into Part 8 so that it can be applied throughout the Code. Further to the elements raised earlier, other parts of a Development Application that may be affected by minor variations include the following.

- Private open space – including communal
- Car parking – including undercroft, off street and driveway (slopes)
- Landscaping
- Allotment sizes
- All Setbacks
- Finished floor levels
- Materials – including window sizes
- Obscured glazing and screening
- room dimensions
- Floor areas – including internal and minor domestic
- Roof pitches
- Fixed plant and equipment
- Storage – including bins, internal
- water storage (tanks)
- Excavation.

The variance limits discussed earlier ($\pm 5\%$) ought to be applied holistically to each element nominated above, this will provide guidance for the relevant authority on any decision that involves the use of a minor variation. The benefits of which (expediting applications and removing ambiguity) have already been discussed.

CONCLUSION

HIA believes the MTE should respond to long term policy principles set by the government. We welcome practical solutions that address policies aimed at facilitating a liveable city with greater housing choice, as identified in the states 30-year strategic plan.

The overarching criteria an enhancement must consider is the community’s capacity to embrace and apply the changes. Our industry, already hurting because of material shortages and a lack of tradespeople, is under enormous pressure. A balancing act must be performed by the government when instigating Code improvements for the purpose of clarity and building productivity.

Above all, the system relies on the speed of delivery and quality outcomes, the points we have raised are an effort to assist both. We implore the Commission come up with appropriate solutions for the Code based on an agreed position between industry and the government.

Principles of a Good Planning System

Policy Background

- In 2001, HIA launched a national position statement on planning systems, known as Better Living Environments. The position statement focused on three core tenants – flexibility, predictability and affordability. Within these tenants, various case studies and examples of good planning practices that would assist in the delivery of new land and housing were identified.
- Following Better Living Environments HIA has developed a series of policy statements that address individual elements of the planning system, covering issues such as ‘truth in zoning’, managing urban land supply, development contributions, subsidised affordable housing and more. Today these planning policy statements form the basis of HIA’s advocacy for an improved planning system.
- It was agreed there would be benefit in creating a statement that concisely sets out the fundamentals of a good planning system that can serve as a foundation statement on the planning system and the delivery of land and residential developments.

Policy Issues

- In the absence of other regulatory levers, the planning system is now seen as the panacea for any matter that governments believe warrants oversight, making the system extremely complex for all parties to navigate.
- Over the last decade, policy makers have sought to address a growing list of social and environmental issues that have not traditionally been matters for consideration in the planning system.
- A planning system must recognise the importance of delivering housing affordable outcomes. This can only be achieved where the planning system manages the zoning of land and the development of that land in a timely manner balancing the social, economic and environmental benefit of the whole community.

HIA’s Policy Position on Principles of a Good Planning System

1. Certainty

- a. The planning system must provide certainty to those utilising it.
- b. Planning codes and policy must be clearly written to provide certainty to the users and planning authorities of the items that are required to be addressed and the available scope for discretion in decision making.
- c. Assessment and determination processes must be reasonable, efficient and relevant to the zoning of the land and other known constraints on the land.
- d. The planning system should seek to eliminate repetition and duplication of information requests and assessments.
- e. Planning application requirements must not overlap or exceed building application requirements.

- f. Planning systems must support truth in zoning by facilitating the development of permitted land uses within each zone.
- g. Planning systems should not permit the retrospective application of 'new' requirements or constraints unless compensation is provided to property owners who lose a development right.
- h. Fees and charges for planning services should reflect the cost of assessment, be readily calculated and be disclosed prior to lodgement of any application.
- i. Planning codes and policies should not incorporate technical building requirements.

2. Consistency

- a. Policies developed to guide planning decisions must be written in concise language and be readily and consistently interpreted.
- b. The planning system should support consistency of outcomes by providing adequate guidance for design development and decision making.
- c. Planning design codes should be applied at the highest level (i.e. state government) to avoid ad-hoc design standards across individual local council areas.

3. Flexibility

- a. Planning codes and policy should include both performance objectives and prescriptive standards to provide a degree of flexibility and support changing housing market trends and innovation in housing design and technology.

4. Transparency

- a. The planning system should be transparent to the community and the development industry.
- b. Planning decisions should be easily understood and have limited potential for real or perceived intervention or influence.

5. Simple, clear processes

- a. The planning system should provide processes that do not create undue regulatory burdens for users.
- b. Information requirements should be concise, with clear obligations, steps and timelines for the provision of details to the planning authority by an applicant.
- c. Planning assessment and determination processes must be reasonable, efficient and relevant to the zoning of the land and type of development proposed.
- d. The planning and building systems must provide a single approval pathway for single dwellings and dual occupancy dwellings on land zoned for residential development.

6. Strategically led planning

- a. The planning system should embed a strategic approach to spatial planning which balances competing priorities and requires planning authorities to take a holistic approach to achieving planning outcomes, recognising a balance between economic, social and environmental factors.

7. Independent, merit based decisions

- b. Planning decisions should be made by informed, independent parties based on the merits of the application, compliance with any relevant statutory requirements and a sound evidence base.

8. Accountability for decisions

- a. Planning system should provide clear accountability for the decision making processes and the decisions made on behalf of the community.
- b. All planning decisions (zoning, subdivision, development) should be provided with a right of appeal to an independent administrative body.
- c. The planning system should not allow multiple planning authorities or agencies to be responsible for overlapping requirements or the duplication of requirements and approval obligations.

9. Outcome oriented decisions

- a. Decisions in an effective planning system must be focused on the outcomes, rather than details that have little bearing on the impact of development on the community.
- b. The planning system should facilitate:
 - i. The development of land in an economically viable manner in accordance with its zoning.
 - ii. The timely zoning of land for residential purposes based on a transparent strategic assessment involving all relevant agencies with clear roles and responsibilities for all stakeholders.
 - iii. Governments managing land supply, in consultation with the residential development industry, to ensure there is an adequate supply of land at each stage of the land supply pipeline.
 - iv. The delivery of public infrastructure that supports residential land zoning and development in a timely manner for the social and environmental benefit of the whole community.

10. Timely decision making

- a. Timely decision making means compliance with statutory timeframes where they exist, recognition of the importance of economic investment that results from development approvals and agreement between decision makers and applicants on a program to decision making.

Dear Mr Holden,

SUBMISSION - MISCELLANEOUS TECHNICAL ENHANCEMENT CODE AMENDMENT

Thank you for the opportunity to provide comment on the Miscellaneous Technical Enhancement Code Amendment (CA), which has sought to address technical and procedural matters, provide policy clarity and interpretation and ensure policy consistency and system efficiency within the new planning system.

The Policy Sub-Committee of the PIA SA Division Committee (the Committee) has reviewed the CA and wishes to commend the State Planning Commission (the Commission) for listening and responding to the industry with a commitment to the continual improvement and timely amendment of the Planning and Design Code.

As the CA is covering off on a broad range of matters that will have varying impacts and positions from across the sector, the Committee has chosen not to make any specific comments but rather to commend the Commission for duly considering those matters brought before them.

Yours sincerely,

Cate Hart RPIA (Fellow)
President
PIA SA DIVISION

Subject: Original MBA submission for Miscellaneous and Technical Code Amendment for discussion

Hi Troy

I have had a look over the draft Code amendment on consultation and note that a lot of the things we have previously highlighted (some of which are in the discussion topics today) have not been tackled in this Code Amendment. We would strongly urge the Department that certain things would fall within the Scope of the Amendment given that such significant procedural changes are proposed with certain items being removed from a restricted pathway (e.g. cut and fill in the HF Zone).

There are certain ways the Code can be adjusted that would be relatively minor changes but would make a world of difference to users.

I have attached the submission from last year that tabled a number of Code issues, many of which I feel could easily be addressed in the Amendment on consultation. Feel free to distribute to the group.

Look forward to catching up shortly.

Cheers

Introduction

This submission is made on behalf of Master Builders Association of South Australian Inc ("Master Builders SA"), established in 1884 as the peak body representing South Australia's building and construction industry.

Master Builders SA is committed to building a productive industry and a prosperous South Australian community and economy.

The South Australian building and construction industry directly employs more than 55,000 South Australians across all sectors, including residential, commercial, civil engineering, land development and building completion services. Indirectly, the industry supports tens of thousands more South Australian jobs.

The industry undertakes about \$15 billion of work every year, contributing more than \$1 for every \$7 of economic activity within the State. Indirectly, more than one-quarter of South Australia's wealth is produced by the building and construction industry.

South Australia's building and construction industry is focused on the development and transfer of skills into a life-long career. Master Builders SA is proud of the industry it represents, the jobs it creates, the thousands of homes it builds and extends for families every year and the offices it has built for South Australian businesses.

Background

South Australia has now fully adopted the *Planning, Development and Infrastructure (PDI) Act 2016* to govern development practices in this state. A suite of new regulations were introduced under the PDI Act 2016, and the final 'phase 3' of the reform of the State planning system was enacted in metropolitan Adelaide and regional areas with major towns on 19th March 2021, through a raft of gazettals, proclamations and the "switching off" of the old system. The Planning and Design Code ('the Code') is the key instrument of planning policy under the PDI Act and Regulations.

Despite being 7 years in the making, the final version of the Code was, in the end, "rushed" together after the last round of consultation in late 2020 and with it came a raft of errors and omissions together with last minute changes the building industry and the general public alike were "blind-sided" by. These include the reduction of site area minimums proposed for row/terrace dwellings in the General Neighbourhood Zone from 250m² to 200m² and the introduction of site "soft landscaping" requirements for all development applications including minor additions and ancillary structures. It seemed that a hand-picked group of Local Government employees were the only ones privy to the final version of the Code prior to the designated day of its rollout. As a result, there were a number of key changes made to the Code derived from "in confidence" working groups involving this select group of people without the proper scrutiny and consultation with industry and the general public.

Even through the formal channels of consultation, many of the policy changes that Councils and industry professionals identified in submissions to the Department of Infrastructure and Transport (DIT) as erroneous in the November version of the draft Code, were not fixed for the final version.

As a result of the above, it is Master Builders SAs' view that the "Miscellaneous Technical Enhancement Code Amendment" needs to go further than the Scope of the proposed amendments suggest. Furthermore, the Code policies introduced between December 2020 and 19 March 2021 require the formal scrutiny that they should have had in the first place, and must be revisited.

The Master Builders SA Submission targets a number of areas in the Code, including land use definitions, administrative terms and explanatory information, notification triggers in Table 5 and corresponding performance outcomes as Technical Improvements, and Policy Improvements targeting some of the areas of concern that emanated from the change of the planning system with removal of the previous "Residential Code". Overall, there is a significant burden placed on proponents seeking to attain a Deemed-to-Satisfy assessment, and Master Builders SA predicts there is a dramatic reduction in the number of applications being channeled down an "as of right" assessment path, than under the former planning system.

The Missing Deemed to Satisfy Development

Dwellings in Masterplanned Areas

Some of our members are reporting issues with dwellings being able to occur "as of right" in areas that previously could have been 'residential code' or complying in the previous Development Plans.

Emerging Activity Centres Subzone

This Emerging Activity Centre Subzone within the Masterplanned Neighbourhood Zone is unrealistic in its ambitions in many cases and problematic for *existing* residential parcels of land that have clearly been earmarked for detached standalone housing stock, rather than mixed uses.

If the Emerging Activity Subzone is to be taken seriously, the Performance Outcomes should focus on larger "development lots" within Masterplanned Neighbourhood Zones, for example, >1500m² allotments reserved for future mixed use, residential flat buildings or social housing development in a masterplan, even if its spatial application extends over wider areas of Masterplanned Neighbourhood Zones.

In some areas the manner in which this subzone has been applied spatially appears to be ad hoc, without specific reference to the plans for master-planned areas.

Where there is a Concept Plan that underpins the Masterplanned Neighbourhood Zone it would be logical to remove the subzone altogether to reduce the layers of policy through consolidating Activity Centre type policy within the Zone and having reference to "where located in an activity centre as delineated on a Concept Plan".

Complexity of Assessment

The layers of policy a person is required to work through within some parts of master-planned areas, just to confirm whether a dwelling on a parcel of land clearly earmarked for a detached dwelling can be assessed as DTS, are unacceptable.

Any site within a masterplanned area where there is no existing character to reference, should have an easy DTS pathway where there are a set of standardised rules that can be navigated by a lay person.

The following example at Andrews Farm is just one of many where the process to assess the application is too convoluted. This example requires review of Zone and Subzone policy, 10 separate overlays and 3 concept plans. The most baffling thing is that Heritage Adjacency overlay appears, which removes any potential DTS pathway altogether. There are no heritage places near the development site.

SAPPA extract showing the example at 17 Sapphire Avenue, Andrews Farm

Dwellings in low Bushfire Prone Areas

Some of our members are reporting that dwellings and dwelling additions in the Hazards Bushfire (General) and Bushfire (Medium Risk) areas are being ousted from potential DTS pathway, despite there being policy within the Code that can theoretically be applied through such an assessment.

This is affecting regional areas more than elsewhere, with vast areas covered by the Hazards-General Bushfire risk area, including whole country townships.

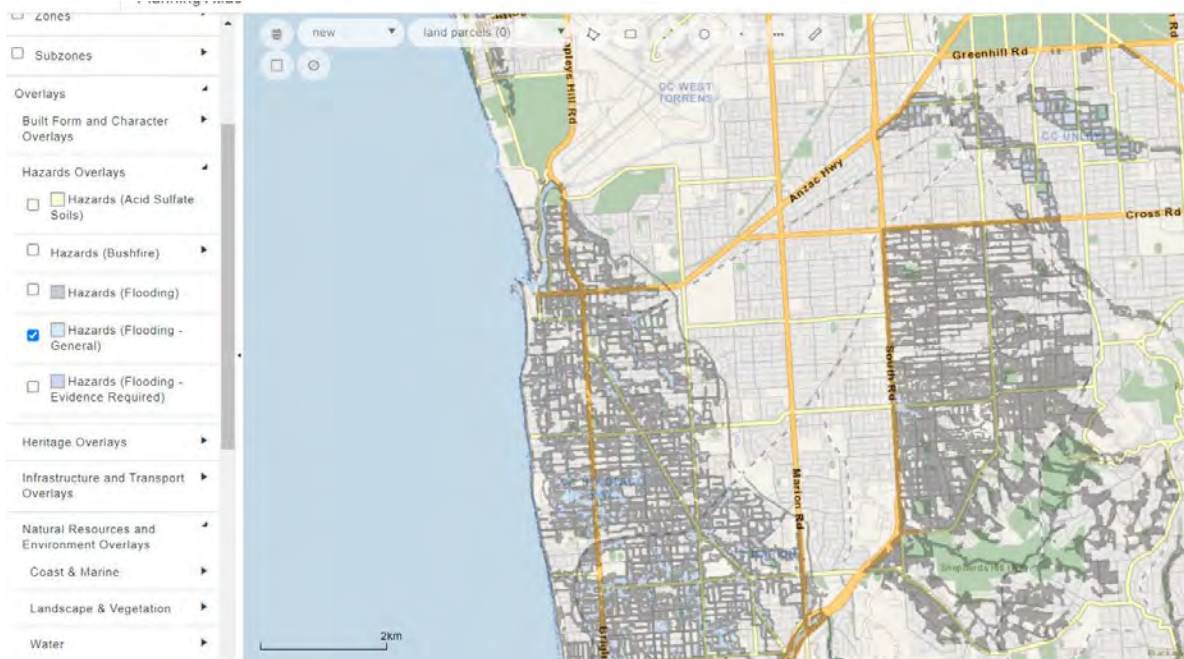

Master Builders considers that there should be a DTS pathway available for development comprising detached dwellings and additions to these, within such areas.

Dwellings & Dwelling Additions in Hazards (Flooding- General) Areas

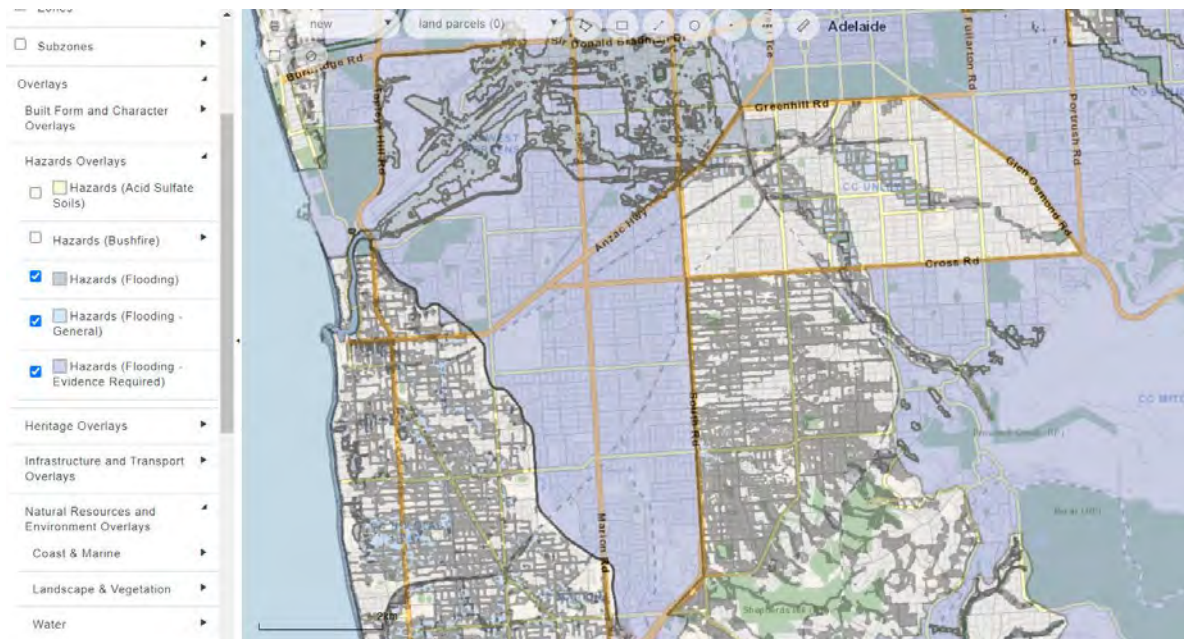

The Hazards-Flooding overlay removes a potential DTS pathway unless it can be shown that the proposed development achieves the necessary freeboard of the 1% AEP flood event. The overlay is generally applied to mapped areas of flooding where the Council had previous flood mapping in the Development Plans.

The Hazards (Flooding – Evidence Required) is applied in areas not previously mapped. This requires development to be 300mm above top of kerb, but does not consider the circumstances for the 'low' side of streets, nor corner sites where the drainage could be achieved through positive fall to a secondary street.

The spatial application of the Overlays can be seen in the following maps:

SAPPA extract showing Hazards Flooding (General) Overlay in inner southern Adelaide area

SAPPA extract showing all Hazards Flooding Overlays in inner southern Adelaide area

The 1% AEP flood level needs to be provided in readily available information to the public for development to be able to be designed in a manner to be clear of this level, and for ease of being able to be assessed as Deemed-to-Satisfy (DTS). The Evidence Required policy should be tweaked to allow dwellings with an alternative legal drainage path available to be DTS (such as secondary street or rear of allotment easement).

Technical Improvements

Designated Performance Features & Administrative Terms / Definitions

Some of our members are reporting that interpretation of the Code's Designated Performance Features (DPFs) by some Council planners has been problematic, with too much rigidity and weight afforded to the DPFs rather than the focus of assessment being the corresponding Performance Outcomes.

The core planning principles of development assessment have not changed, and the message needs to be driven by way of either explanatory information within the Code, or by Practice Direction that the Code is intended to be a "performance based" Code, and a DPF corresponding to a Performance Outcome (PO) is *ONE WAY* to achieve the PO and not the only way, and may not be the best way either. See below as a possible option in the Code:

Part 8 Administrative Terms and Definitions Table:

Term (column A)	Definition (column B)	Illustrations / <u>Explanatory information</u> (column C)
DPF	Designated Performance Feature	<i>ONE WAY to achieve a performance outcome</i> <i>Note: Failure to achieve the quantitative criteria of a DPF does not automatically mean the corresponding Performance Outcome is not achieved.</i>

Further to the above, there are a number of terms within the Administrative Terms and Definitions for which their interpretation would be assisted by "explanatory information", where diagrammatic representation is not possible or would be ambiguous. Hence, Master Builders SA offers a suggestion to include "Explanatory information" as well as Illustrations in Column C and then other terminology could be clarified with similar explanatory text, or a combination of text and diagrams where appropriate.

Hierarchy/Application of Code Policy and Conflicting Provisions

The hierarchy of which policy prevails is quite clear in terms of policy within Overlays taking precedence over Subzone policy over Zone policy, over General Policy Modules. However, there are instances where there are conflicting policies in separate modules of General policy, each of which could theoretically simultaneously be called up in seeking to achieve a Deemed to Satisfy (DTS) assessment pathway for a given type of development, and naturally this creates a problem.

There is conflict in relation to driveway width and on-street parking provision, as an example, between the General, Design in Urban Area DPF/DTS 23.3 or Design DTS/DPF 19.3 and Transport, Access and Parking DPF/DTS 3.6, as below:

Design DTS/DPF 19.3

Driveways and access points on sites with a frontage to a public road of 10m or less have a width between 3.0 and 3.2 metres measured at the property boundary and are the only access point provided on the site.

Design in Urban Areas DTS/DPF 23.3

Driveways and access points satisfy (a) or (b):

- a) *sites with a frontage to a public road of 10m or less, have a width between 3.0 and 3.2 metres measured at the property boundary and are the only access point provided on the site*
- b) *sites with a frontage to a public road greater than 10m:*
 - i. *have a maximum width of 5m measured at the property boundary and are the only access point provided on the site;*
 - ii. *have a width between 3.0 metres and 3.2 metres measured at the property boundary and no more than two access points are provided on site, separated by no less than 1m.*

Transport, Access and Parking DTS/DPF 3.6

Driveways and access points:

- a) *for sites with a frontage to a public road of 20m or less, one access point no greater than 3.5m in width is provided*
- b) *for sites with a frontage to a public road greater than 20m:*
 - i. *a single access point no greater than 6m in width is provided*
or
 - ii. *not more than two access points with a width of 3.5m each are provided.*

Noting that Design in Urban Areas 23.4 is referenced from Zone policy when generating policy for a Land Division within the General Neighbourhood Zone (as an example). Does this mean this takes precedence in this instance over the DTS/DPF 3.6 in Transport, Access and Parking, which is not called up by Zone policy in this instance?

Irrespective of the hierarchy there should not be two directly conflicting provisions that speak to the same aspect of planning policy where these are not spatially applied. The content of the provisions is considered to be restrictive for many forms of infill where there are limited front setbacks but double garaging can potentially occur as close to the street (for example 10m wide sites where the front setback of the garage is 5.5m).

Master Builders SA considers that 3.5m should be the benchmark width of driveway instead of 3.0m to 3.2m at the front property boundary to allow for more orderly vehicle movement from garages less than 7m from the street.

Additional Land Use Definitions

Some additional land use definitions would assist with the interpretation of how certain contemporary land uses may "fit" within the broader scheme of the Planning and Design Code, and Zones in which these are appropriate.

One that has been in the planning vernacular for some time now, but is yet to surface as a defined land use, is a training facility for trade, industry and vocational training. Often, such uses involve the operation in a learning environment of heavy machinery, cutting, finishing, moving or lifting processes or activities that would ordinarily be undertaken on a work site, such as within production line arrangements, building sites, industrial and commercial sites and major food preparation. The type of use is not an educational establishment and is often found wanting with regard to Zones that specifically contemplate this.

Hands-on learning activities may generate noise, fumes, vibration, smell or other externalities akin to industrial processes. Ordinarily, an Employment type Zone would appear to be the most appropriate Zone for such a use.

Master Builders SA believes a *Trade Training Facility*, a term widely known in the industry, is the appropriate definition and could be listed in the exclusions list of "educational establishment" in Part 7 (Land Use definitions) and defined separately. Master Builders SA believes the above considerations should be relevant for appropriately defining the use.

Specific Excluded Land Use Classes (short term stays)

In a time where there is separate legislation tabled to deal with the amenity impacts of so-called "party houses" (places of transient and infrequent occupation for tourism on parts of residential sites) through platforms such as Air BnB & Stayz, there also needs to be specifically excluded land use classification so that this type of accommodation, where provided on a limited basis on a site in which there is prevailing permanent residential occupation (not necessarily being within the same building), does NOT alter the land use. The problematic short term let part of the market is by far the minority, but this is what gets the headlines.

Often land use arguments are dragged before Council Assessment Panels and the Courts due to the inconsistency with regard to how tourist accommodation is defined and applied. The legal position within SA remains unclear and the facts of each individual case will ultimately determine how the land use may be perceived in determining a "change" of land use.

Strictly speaking, without exclusion, the current definition of tourist accommodation in the Code does not consider the length of stays, whether there is residential use that prevails on the site, or total number of days for which a site is used for such purposes in a year. It leaves these elements open to interpretation whether any non-permanent accommodation changes the land use, and reliant on conflicting and ambiguous case law.

Some Councils will take a pragmatic approach, others will take a precautionary approach and some of the most obstructionist Councils are those that contain some of South Australia's greatest tourism drawcards.

Master Builders SA is concerned that the lack of clarity currently around the issue puts SA at a disadvantage once borders open to interstate and international tourism again, and believes now is the perfect time to have the matter settled so proponents can be relatively confident in building and improving their residential properties for such purposes without the fear of falling foul of planning rules.

The following is considered to be a mechanism to deal with the above issue:

Land Use Term (Column A)	Definition (Column B)	Includes (Column C)	Excludes (Column D)
Tourist accommodation	Means premises in which temporary or short-term accommodation is		Campground <i>Use of part of a site for short-term accommodation on a commercial basis in which there continues to be</i>

	<p>provided to travellers on a commercial basis.</p>		<p><i>permanent residential occupancy on site (within the same building or a separate building on site) and such tenure does not involve more persons in short term accommodation at any one time on site than able to be accommodated in the balance of the land for permanent residential occupation; does not exceed total occupancy of 3 months of a calendar year, and no single lease comprises continued occupancy for a period of 28 days or more</i></p>
--	--	--	---

Public Notification / Fences, Retaining Walls and Earthworks

Master Builders SA notes that the Department is aware of an issue with Table 5 in the various Neighbourhood Zones with respect to the wording of “building walls or structures” exceeding 11.5m in length on a boundary triggering public notification. The result of this wording is the trigger of unintentional public notification of fences and retaining walls on boundaries where these constitute development in their own right and exceed the thresholds.

There is also an issue with respect to earthworks constituting development. Where exceeding the relevant volume threshold, this is a type of development that is performance assessed and not specifically excluded from notification.

In many cases earthworks greater than 9 cubic metres (m³) in specific Zones where they in their own right constitute development will have no impact on the boundaries of the site and adjacent properties (e.g. Hills Neighbourhood). It is the associated retaining walls and fences that have the potential visual and overshadowing impact with regard to boundaries.

The approach that Master Builders SA considers appropriate would be to remove fences and retaining walls from Part 3 of Table 5 and have these, together with earthworks placed within their own section of the Table, and thresholds for notification being set for retaining walls and fences in relation to the lower of natural ground levels at *any point*.

Master Builders SA queries the rationale behind 9m³ being the relevant threshold in certain zones for this to be development in its own right. While floodplain environments (captured by Overlays) and in relation to heritage places is understandable, the threshold could be increased for the Hills Neighbourhood Zone (as an example) where the earthworks are ancillary to and associated with a form of development reasonably expected in the Zone. Naturally a regulation change (PDI (General) Schedule 3) would be required to deal with this, and that is outside of the Scope of the amendments but in preparation for this, Code Table 5 of the Hills Neighbourhood Zone could include changing the trigger for notification.

The suggested wording is as follows (using Suburban Neighbourhood Zone as example):

<p>3. Any development involving any of the following (or of any combination of any of the following):</p> <ul style="list-style-type: none"> a) air handling unit, air conditioning system or exhaust fan b) ancillary accommodation c) building work on railway land d) carport e) deck f) dwelling g) dwelling addition h) fence i) outbuilding j) pergola k) private bushfire shelter l) residential flat building m) retaining wall n) shade sail o) solar photovoltaic panels (roof mounted) p) supported accommodation q) swimming pool or spa pool r) verandah s) water tank. 	<p>Except development that:</p> <ul style="list-style-type: none"> 1. exceeds the maximum building height specified in Suburban Neighbourhood Zone DTS/DPF 4.1 or 2. involves a building wall (or structure) that is proposed to be situated on a side boundary (not being a boundary with a primary street or secondary street <u>and not being located on an internal site boundary</u>) and: <ul style="list-style-type: none"> a) the length of the proposed wall (or structure) exceeds 11.5m (other than where the proposed wall abuts an existing wall or structure of greater length on the adjoining allotment) or b) the height of the proposed wall (or post height) exceeds 3m measured from the top of footings (other than where the proposed wall (or post) abuts an existing wall or structure of greater height on the adjoining allotment).
<p>4. Any development involving any of the following (or any combination of any of the following):</p> <ul style="list-style-type: none"> a) fence b) retaining wall c) earthworks 	<p>Except development that:</p> <ul style="list-style-type: none"> 1. involves retaining walls and/or fences that exceed 3m above the lower of adjacent natural ground levels at any point where the works affect a boundary external to the development site; or

	<p>2. <i>involves earthworks ancillary to a class of development in Clause 3 of this table and greater than 9m³ in relation to a local heritage place, or where a Heritage Adjacency Overlay applies</i></p>
--	---

Boundary Walls not affecting external site boundaries

The other issue is that building walls that exceed 11.5m on a boundary where the development is only affecting an “internal” boundary to the development site where there are two or more dwellings proposed, is inadvertently pushing a number of infill applications with development on internal boundaries into the performance assessed pathway and requiring notification. A common example is where there are row / terrace dwellings where walls are not necessarily simultaneously abutting.

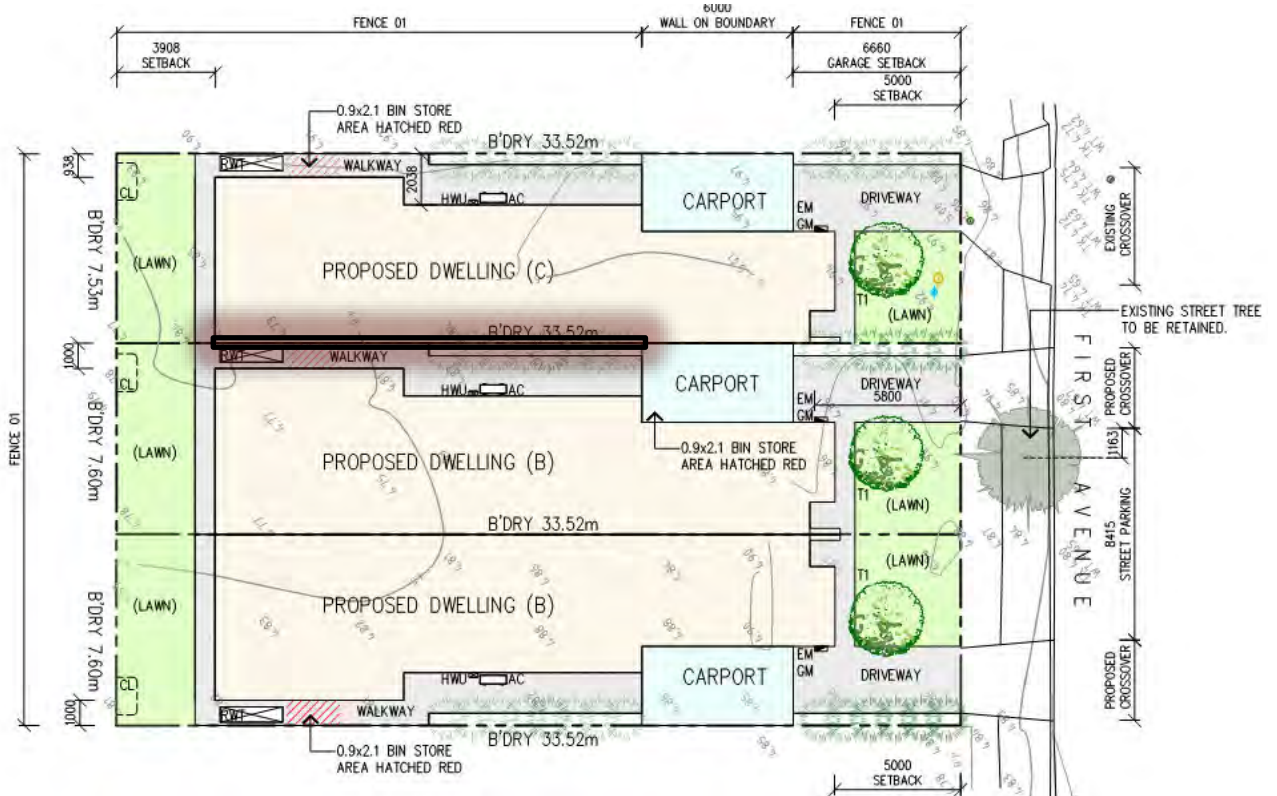

Figure 1: Plan showing common row/terrace type development with walls not simultaneously abutting

Hence, Table 5 Part 3 is also considered appropriate to be amended to cater for this issue as well as relevant DTS/DPF criteria, particularly for the General Neighbourhood Zone. As above, it is not always the case that internal boundaries for development will involve boundary walls that simultaneously abut, and any person purchasing a property will or should be aware of existing or future boundary development within a development site if

the development is approved in the same application, even if there is a staged build process.

The example as follows from General Neighbourhood Zone DTS/DPF 7.1 is how this issue could be resolved:

Boundary Walls	
<p>PO 7.1</p> <p>Dwelling boundary walls are limited in height and length to manage visual and overshadowing impacts on adjoining properties.</p>	<p>DTS/DPF 7.1</p> <p>Except where the a dwelling is located on a central site within a row dwelling or terrace arrangement <u>dwelling boundary wall abuts an internal site boundary</u>, side boundary walls occur only on one side boundary (<u>other than in the case of a central site within a row or terrace arrangement</u>) and satisfy (a) or (b) below:</p> <p>a) side boundary walls adjoin or abut a boundary wall of a building on adjoining land for the same or lesser length and height;</p> <p>b) side boundary walls do not:</p> <ol style="list-style-type: none"> i. exceed 3m in height from the top of footings ii. exceed 11.5m in length iii. when combined with other walls on the boundary of the subject development site, exceed a maximum 45% of the length of the boundary iv. encroach within 3m of any other existing or proposed boundary walls on the subject land.

The term "internal site boundary" needs to be defined and explained in the Administrative Terms and Definitions if the aforementioned approach is taken. One suggestion as to how this can be dealt with is below, and could be accompanied with appropriate diagrams:

Term (column A)	Definition (column B)	Illustrations / <u>Explanatory information</u> (column C)
<i>Internal site boundary</i>	<i>A boundary that is internal to the development site</i>	<i>This terms applies to development involving more than one dwelling in the same development application on a current allotment for which there has been no land division approved and deposited in the Lands Titles Office and a dwelling boundary wall is constructed to abut a boundary not yet formalised by cadastre between future dwelling sites</i>

The term dwelling boundary wall, which appears in numerous places through the Code also needs to be defined. For example, does this include a garage wall if the garage is integral to the form of the dwelling?

One way in which this could be addressed is as follows:

Term (column A)	Definition (column B)	Illustrations / Explanatory information (column C)
Dwelling Boundary Wall	An external wall of a dwelling whether or not that part of the dwelling is habitable	This includes garages, carports and similar structures built under the main roof of the dwelling with a solid external wall on the boundary (irrespective of whether there are other open sides of the relevant part of the building or structure).

Common types of development not having policy generated through the Wizard

There are numerous cases where undertaking the "wizard" search on a property and generating policy for a development type not specifically envisaged in a Zone that no policy is generated for a development that is within the list. This includes land uses that could reasonably be expected in a particular zone.

These are just a few examples:

- Service Trade Premises and Retail Fuel Outlets in a Township Mainstreet Zone
- Student Accommodation in the Suburban / General Neighbourhood Zones
- Shop, Office or Consulting room in a Neighbourhood type zone
- Tourist Accommodation in the Rural Living Zone or the Open Space Zone

Some uses are not located on the list of uses that one can search at all using the Wizard. This includes:-

- Preschool (Child Care Centre)
- Educational Establishment
- [Trade Training Facility](#)

Master Builders SA believes there is an opportunity to identify similar scenarios and improve the policy generation Wizard to consider not only uses specifically envisaged by a Zone (e.g. in PO 1.1), but uses commonly found in certain Zones as well, in pursuit of consistent application of Code policy for what are reasonably expected forms of development in particular zones.

While this does not strictly relate to amending the Code, it will improve the Code's useability having pre-populated policy available for common forms of development in Zones in which they may regularly be found.

Overlay policies that would be better applied in the General Modules

One of the more confusing elements of the new planning system is the excessive number of overlays. There are more than 70 and often Overlays that have little or no relevance to the assessment are called up when undertaking the “Wizard” search on a property and entering the type of development.

There is a greater issue at play here in the fundamentals of how the e-planning system is built, and potentially a future improvement of the system that identifies the *relevant* overlays using the search tools would assist with resolving this.

The more immediate improvements could involve transferring more ‘generalised’ policy within certain overlays into general policy modules.

Noting there is a spatial application of the overlays, another mechanism would be needed to identify where “general” policy applies for the specific aspects of policy. For example, planning policy within the Significant and Regulated trees Overlay could easily be provided in general development policy, as could Urban Tree Canopy, Affordable Housing and Stormwater Management, Prescribed Water Resources and Prescribed Wells Area, however within a subset of planning rules applicable to metropolitan Adelaide and other select locations. After all, apart from the Prescribed Wells Area, these overlays apply mostly within metropolitan Adelaide.

Prescribed Water Resources Overlay and Prescribed Wells Area Overlay

The Prescribed Water Resources Overlay is called up when using SAPPA on any address where this applies, but the types of development applicable to the policy within the overlay are limited to a select range of uses that impact on natural surface flows, such as dams, commercial forestry, horticulture, aquaculture and other activities predisposed to affecting the health and natural flow paths of water resources.

Similarly, the Prescribed Wells Area Overlay is called up for assessment of a range of irrelevant forms of development. Both of these overlays contain policy that is applicable to a very limited subset of land uses and types of development.

Master Builders SA, while acknowledging the spatial application of the policies in these particular areas, raises concern about the confusion that arises from bringing in irrelevant policy for consideration in the assessment of residential and similar land uses.

Fundamentally, the electronic planning system needs to be re-built in a manner that dissects the relevant overlays for assessment from the irrelevant ones, depending on the data input (i.e. type of development). This is something that is naturally outside of the Code review, but an important issue that should be ‘front and centre’ of future system improvements.

Significant & Regulated Trees, Urban Tree Canopy and Stormwater Management

As the significant and regulated tree provisions only apply to metropolitan Adelaide, as do a number of other overlays such as Urban Tree Canopy and Stormwater Management it would make sense to separate the policies applicable to metro Adelaide by simpler means. Those that only apply in metropolitan Adelaide could fall under a separate umbrella of “metropolitan Adelaide” general policy that in some cases is triggered only for the *relevant* forms of development entered in the Wizard.

Significant and regulated trees applies across the whole of metropolitan Adelaide so would be easy to transfer to a metropolitan Adelaide general policy module.

The Urban Tree Canopy is similar, but only applies where there are Neighbourhood type Zones, and could just as easily transfer into an Adelaide metro-based policy module, applicable for residential development comprising new dwellings within Neighbourhood type zones.

The Stormwater Management Overlay commands that a specific amount of retention and detention is provided for new dwelling applications and applies likewise to Neighbourhood type zones and is limited to metropolitan Adelaide. Again, this could apply as general policy within a metropolitan Adelaide based module and the relevant triggers being "new dwellings". The overlay is spatially applied over Neighbourhood type zones generally, but there are some parts of Adelaide not covered by the policy, presumably areas with their own council managed retention and detention schemes such as Aquifer Surface Recharge (ASR) schemes (e.g. parts of Marion and new development at Moana, south of Karko Drive and west of Commercial Road). Policy could be written within a general module to exempt development serviced by such a scheme.

Native Vegetation Overlay

This Overlay applies not only in Hills and regional areas but in areas in which much of Adelaide's future growth is being accommodated at present, and can be found in parts of the Masterplanned Neighbourhood Zone in which there is little or no native vegetation.

The redefinition of the boundaries of the Native Vegetation Overlay should be investigated as part of the Code review to exclude new residential subdivisions in the Masterplanned Neighbourhood Zone (e.g. new parts of Moana) and Masterplanned Township Zone (e.g. Two Wells extension), and built up areas within country townships (e.g. within the Township Zone).

Affordable Housing Overlay

Master Builders SA questions the spatial application of policy for affordable housing policy in principle. There is a growing demand for affordable housing and some of the areas that are not covered by the overlay are perplexing. For example, the almost the whole north-western quadrant of Adelaide including areas such as Seaton, Royal Park, Albert Park, Woodville North and Croydon Park where there are large areas or pockets of social housing, current and former SAHT properties ripe for renewal, not covered by the Overlay. The following map depicts the issue with spatial application:

SAPPA extract showing the Spatial application of the Affordable Housing Overlay

Master Builders SA questions the legitimacy of the Government's commitment to providing for future affordable housing stock when the application of the Overlay appears to be 'ad hoc' missing critical areas in Adelaide, while including some areas in which realistically property sale prices will never be within the value thresholds to meet the affordable housing criteria, such as around Crafers and Stirling.

Affordable housing policy allows for greater uplift in the development potential of land and there are a number of members that are ready and willing to step into this market to provide for the shortage of this type of stock, if financial viability is there.

Quite simply, Master Builders SA sees no rationale for affordable housing policy to be within overlays. It should apply across the board through South Australia.

Traffic Generating Development Overlay

The Traffic Generating Development Overlay is one that Master Builders SA is particularly aware of due to the fact it ousts many simple forms of land division from a potential Deemed-to-Satisfy pathway and has no role to play in assessment of simple forms of residential development.

In fact, the policy applicable in the Overlay has no relevance to most types of development and land uses. Even the land uses that are targeted in the policy are those of a higher 'traffic generating' potential, such as residential land divisions over 50 allotments, industry with a gross leasable area of 20,000m², educational facilities with a capacity of 250 students or more and retail development with a gross leasable area of 2,000m². This applies in metropolitan Adelaide for any land that is located within 250m of a State maintained road.

There is no reason that a specific General policy module could not be provided to specifically deal with traffic generating types of development. The advantage of the General module is that it can be used for a range of development scenarios that the policy may not capture if only spatially applied, and would not be called up for 99% of development applications.

Hazards - Bushfire (Urban Interface Area) Overlay

Similar to the Traffic Generating Development Overlay, this applies to a very small subset of development, yet appears on the assessment “wizard” for a wide range of development in many areas. Its policy concerns larger land divisions catering for “through” access being provided from higher bushfire risk areas via roadways allowing ready escape routes from more hazardous fire prone areas.

The policy could just as readily be transferred to a “General” module that relates specifically to land divisions greater than 9 allotments and abutting more bushfire prone environments. The CFS referral trigger could easily be put into Part 9 of the Planning and Design Code for such land divisions.

Specific Policy Improvements

GENERAL POLICY MODULES

Site Contamination

Master Builders SA firmly believes the premise of the site contamination framework requiring any change of land use to a “more sensitive” use to be fundamentally flawed.

The term *sensitive receiver* is defined in the Code and includes:

1. any use for residential purposes or land zoned primarily for residential purposes;
2. pre-school;
3. educational establishment;
4. hospital;
5. supported accommodation;
6. tourist accommodation

Master Builders SA firmly believes the site contamination framework needs to be refocused to sensitive receivers (or sensitive uses) rather than “more sensitive” land uses.

There appears to be no sound rationale for other land use classes to be brought into an overly costly, risk-averse and nonsensical regime whereby uses such as shops, commercial development, and even retail fuel outlets could be required to have a costly and time-consuming preliminary site investigation (PSI) provided by a site contamination consultant where there is an “increase” in land use sensitivity based on a Land Use Sensitivity Hierarchy (LUSH) table within a Practice Direction containing definitions that are not found in the Code.

The irony of the LUSH is that “light industry” is deemed to be lower on the hierarchy than a retail fuel outlet, which is a land use *known* to be predisposed to causing site contamination. So in essence, proposing to build a retail fuel outlet on a parcel of land that has been previously used as light industry would necessitate provision for a PSI in accordance with PO 1.1 (which refers to site contamination declaration). This is completely nonsensical and just one example.

While Master Builders SA is represented on a working group with respect to the Site Contamination framework, the Code amendment process is able to arrest the

momentum being driven by the Environment Protection Authority and Department driving irrational processes being required for land use changes where there is no sound reason to suggest site contamination is likely and/or exposure to contaminants is even possible, such as completely capped sites.

An important issue is the provision for a new dwelling on a rural allotment that has been used for dryland cropping and/or grazing. Firstly, where there is an existing dwelling on the site it is noted that there is not a land use change and therefore no role to play for PO 1.1 in Site Contamination policy module.

Secondly, the introduction of tourist accommodation in such cases where the risk of exposure to human harm where an occupant will likely spend very few days or several weeks on a site, should not trigger the requirement for a PSI unless there is knowledge of a previous activity likely to have caused contamination. Most "human harm" associated with site contamination results from prolonged exposure.

This is where there needs to be a "common sense" approach that actually puts trust into Assessment Managers, which are Level 1 accredited professionals in the new system. There is no doubt there has been inconsistency in the local government approach to site contamination in the past, we are in a new era where there is supposedly greater professionalism. Let professionals make professional decisions and not be dictated by draconian policy that lacks reason.

If there is a vacant site in the middle of a country township or a vacant shack site in a shack community and somebody wants to build a house on it, which is a common occurrence, there should be no reason to trigger a requirement for a PSI (at a cost of up to \$9000) to justify that a dwelling is appropriate on the site, unless there are known potentially contaminating uses adjacent or there is known or suspected site history of previous contaminating activity.

Traffic Generating Development

As highlighted earlier, the policies relating to traffic generating development could be accommodated in general development policy not spatially applied. This affects the assessment pathways for minor land divisions in many cases, removing a DTS pathway.

Accordingly, Master Builders SA considers this Overlay to be redundant and policies better suited to general policy module that targets these type of developments.

OVERLAYS

Stormwater Management Overlay

One of the profoundly flawed and unnecessary Code policies is DTS/DPF 1.1 Part (b) of the Stormwater Management Overlay with a requirement for the roof area of dwellings to comprise not less than 80% of the impervious area on the site.

The attainment of a minimum 80% dwelling roof coverage to total impervious surfaces for many dwellings is inherently difficult when one proposes a dwelling on a subdivided site and there is a minimum 900mm perimeter pathway *(as required by the Building Code with falls away from footings) and a standard width driveway.

Furthermore, the way to achieve the 80% threshold is often to increase the eaves width and then just vary the applicaiton at building rules consent stage through a Regulation 65

Minor Amendment.

The policy serves no planning purpose not achieved by other policy and does not correlate to the Performance Outcome, seeking to:

PO 1.1

Residential development is designed to capture and re-use stormwater to:

- 1. maximise conservation of water resources*
- 2. manage peak stormwater runoff flows and volume to ensure the carrying capacities of downstream systems are not overloaded*
- 3. manage stormwater runoff quality.*

Part (a) of the DTS criteria outline the size of retention/detention tank dependent on the site area and the percentage of impervious land. The PO is attained by Part (a) without Part (b) being required. Limiting the proportion of the dwelling roof area to overall impervious area does not directly correlate to managing peak flows.

If the planning intent is to limit the amount of impervious area comprised by roof areas on any particular site, the site coverage provisions are already in place to deal specifically with this issue and there is no loophole to avoid these.

Site coverage is designed to limit the total built footprint on sites, presumably to also limit stormwater output from sites, but the Performance Outcome relevant to site cover does not specifically mention this as one of the reasons to limit coverage.

The site coverage provisions are called into the assessment for any additions, sheds and ancillary roofed structures. These are Zone specific and relate to the type of dwelling.

Overall, SW Management Overlay DPF/DTS 1.1 Part (b) serves no purpose other than create complexity in the documentation and assessment. Master Builders suggest removal of this altogether.

It is also highlighted that DTS/DPF 1.1 Part (a) includes an option to plumb rainwater to a hot water service. Having untreated roof water connected to a hot water service conflicts with the plumbing code (NCC Vol 3 and AS 3500.1 (a primary referenced document)) and may void warranties for hot water service units. Where this is an option, it must be reinforced with policy that highlights the risks of this, and how these are to be overcome. Master Builders believes this to be poor policy and is better removed.

River Murray Floodplain Protection Overlay

The limitation of enclosure of the understorey of elevated dwellings to 15m² lacks reference to the previous Development Plan policy, or acknowledgement of the built form character that prevails in most shack settlements. The increase to 60m² for understorey areas for elevated dwellings, with underfloor areas having removable panels and/or roller doors on two sides, is considered to be an appropriate mechanism to achieve the intent of the performance outcomes.

The other issue in this Overlay is the required setback to the River Murray being 50m. In many cases there are shack sites not even 50m deep, such as near Younghusband. The setback in relation to the river should reference adjacent shacks as the previous

Development Plan provisions did.

It is considered that the 1956 floodplain should not necessarily be the sole benchmark to determine propensity for flooding, given this was a 1 in 300 year event, and occurred prior to significant water extraction at the top of the Murray Darling Basin in the form of major cotton and rice production, and additional damming and more advanced locks at the higher parts of the basin. A closer realistic reference for flood risk would be the 1974 level, or 1% AEP, whichever is higher. However, 1% AEP must be mapped and therefore for the interim, the 1974 level may be suitable.

ZONES

General Neighbourhood Zone

The review of the site areas for row and terrace dwellings between the December version of the draft Code and the version as released 19 March 2021 appeared to have been solely undertaken with the views of Local Government taken into consideration. The increase in site areas for this type of development from 200m² to 250m² occurred without the input of industry

The problem with the policy impetus for this form of development is that it does not specifically target areas within the Zone that this is expected, nor where a higher density of dwellings may be expected.

The Desired Outcomes should ideally be shaped in a way that assists in interpretation of the above, with areas located less than 400m from State maintained roads, activity centres, open space or key transport nodes being appropriate for higher than the minimum stated density.

Master Builders SA believes that a reduced site area for terrace/row dwellings could also be provided for applications combining the land use and division which involve two storey dwellings, e.g. 200m² given the criteria of the Code can still be achieved with such dwellings despite a reduction in site area.

Furthermore, the boundaries of the General Neighbourhood Zone should be expanded to target areas that contain large allotments and a high percentage of post-war housing stock in which outdated Development plan policy from yesteryear appears to have been carried over to the Code, stifling development opportunities that thwart housing supply in what are sought after locations. The examples specially includes:

- The whole of St Marys, parts of Daw Park, Melrose Park, lower lying parts of Panorama and Pasadena in City of Mitcham (covered by Suburban Neighbourhood Zone and with outdated policy for infill retained as Technical and Numeric Variations in the Code such as 500m² site areas and minimum 15m frontage requirements for detached housing)
- Some of the "lower" elevated areas south of Seacombe Road that were previously earmarked for Part 2 of the Marion Council's Housing Diversity Development Plan Amendment, where closer to shops, public transport and/or major transport routes, which are currently limited to 700m² minimum site area for sites with gradient 1 in 8 or shallower.

Front setback references

Master Builders SA does not believe the General Neighbourhood policy for front setbacks to be appropriate for areas in which, clearly, a new streetscape character is sought. Reference to “existing” housing stock on adjacent sites facing the same street places limitation on infill and particularly where there is an ad hoc setback pattern in the street and the subject site happens to be alongside one or two remnant post-war dwellings much further from the street than what might be the emerging setback pattern seen in newer dwellings.

DETACHED / SEMI-DETACHED DWELLING CRITERIA

Master Builders SA does not believe there should be separate land size and frontage criteria for detached and semi-detached dwellings where areas containing these differences were previously covered by the Residential Code (Schedule 4-2B of the Development Regulations 2008). There was previously an option to accommodate infill for detached dwellings at the lower of the criteria in such areas. With the change to the new planning system this option has been removed, and with it, infill opportunities have stagnated in some areas.

SITE AREA & FRONTAGE TO GRADIENT CRITERIA

There are many areas where the land sizes and frontage for any given residential form of development is dependent on the gradient of the site. What is not clear is how that gradient is measured, and the wording is counterintuitive in some instances. For example, gradient “less than” 1 in 8 could be interpreted as say, 1 in 6, which is actually steeper. More certainty and rigour built into the relevant policies that apply in this regard would be beneficial for the end user.

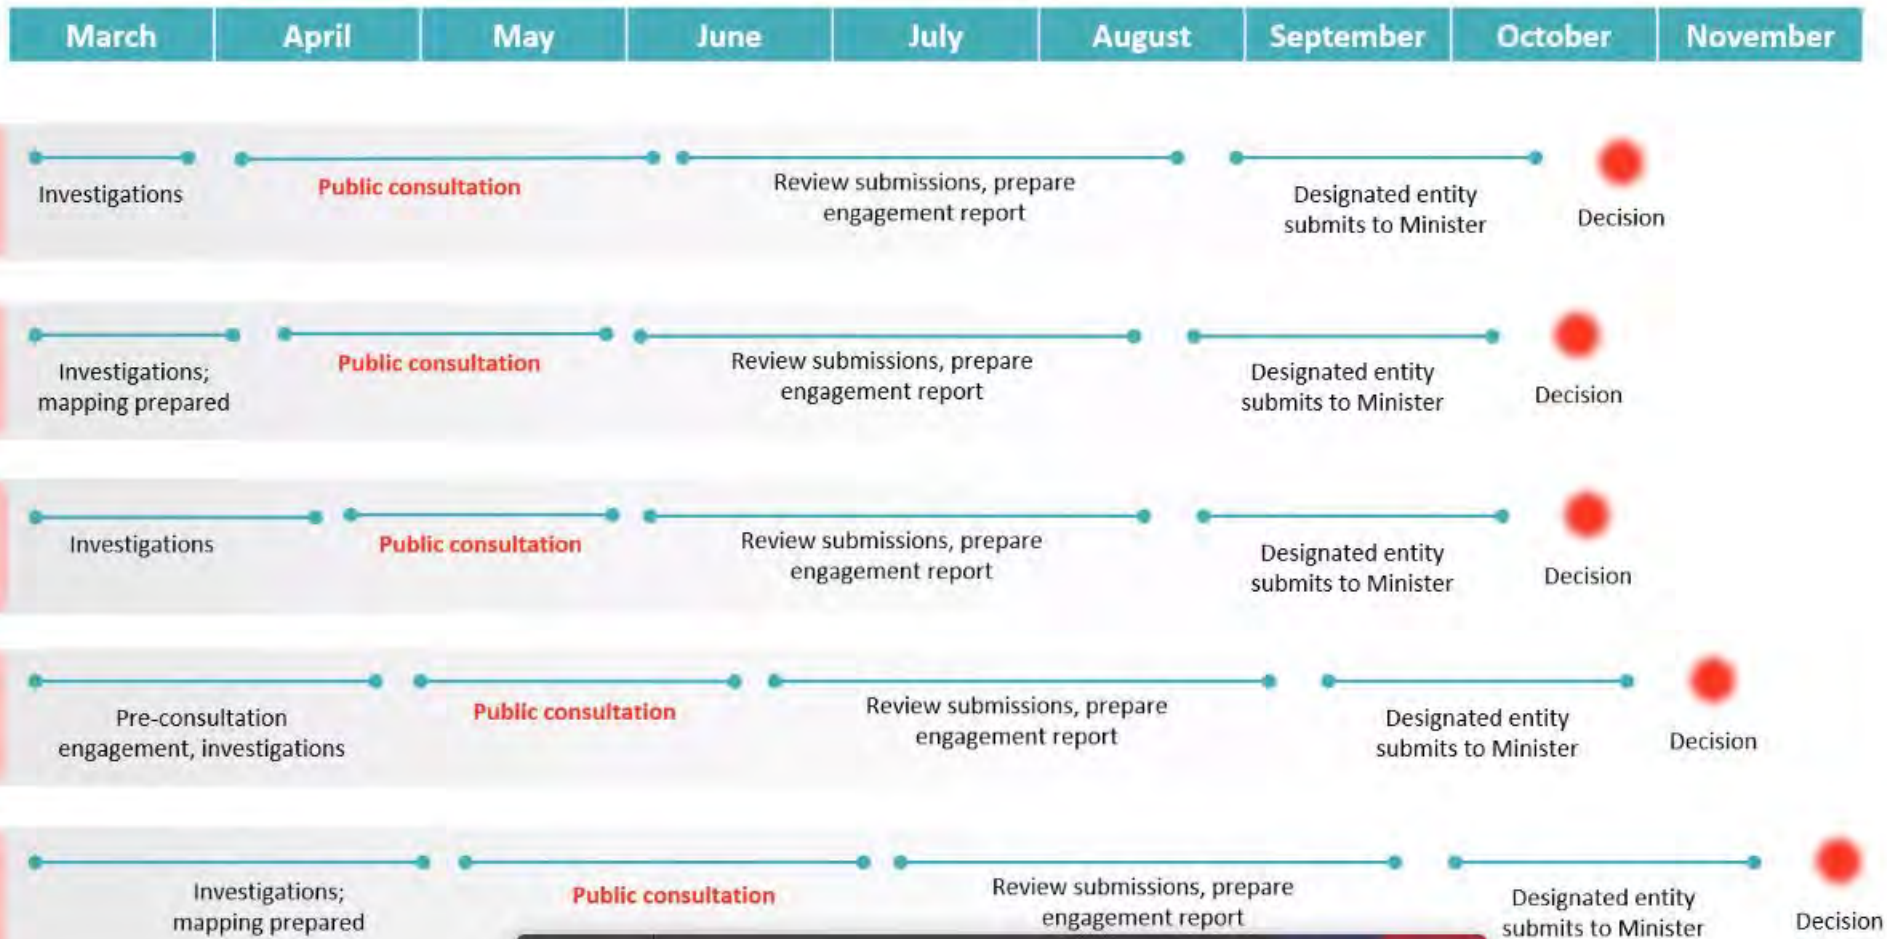

Conclusions

Master Builders SA believes changes to the proposed Planning and Design Code as listed in this submission will provide more clarity to the general public, builders and professionals in the industry as well as improve the performance of the Code.

The timing of the amendment is important as there is a strong demand for property. The carryover of redundant policies from former Development Plans, particularly those that had not changed markedly in over 20 years, has jeopardised the initial thrust of the reform process, in producing a more consistent, streamlined set of planning rules.

The recommended changes to the Code outlined in this submission include some policy mechanisms to provide better development opportunities in inner to middle ring areas that are sought after for housing supply, and reduce the complexity associated with assessment of simple residential types of development.
