Appendix F Quality Assurance / Quality Control

2023 (Area 2 and 3)

E.1 Data Quality Indicators (2023)

Specific data quality indicator (DQI) limits were adopted in accordance with the ASC NEPM (NEPC 2013) and standard JBS&G procedures for field sampling and handling.

To assess the usability of the data prior to making decisions, the data was assessed against appropriate DQIs established in relation to precision, accuracy, representativeness, comparability and completeness and sensitivity (PARCCS parameters), as follows:

- **Precision** – measures the reproducibility of measurements under a given set of conditions. The precision of the laboratory data and sampling techniques is assessed by calculating the Relative Percent Difference (RPD) of duplicate samples;
- **Accuracy** – measures the bias in a measurement system. The accuracy of the laboratory data that are generated during this study is a measure of the closeness of the analytical results obtained by a method to the 'true' value. Accuracy is assessed by reference to the analytical results of laboratory control samples, laboratory spikes and analyses against reference standards;
- **Representativeness** – expresses the degree which sample data accurately and precisely represent a characteristic of a population or an environmental condition. Representativeness is achieved by collecting samples on a representative basis across the site, and by using an adequate number of sample locations to characterise the site to the required accuracy;
- **Comparability** – expresses the confidence with which one data set can be compared with another. This is achieved through maintaining a level of consistency in techniques used to collect samples, ensuring analysing laboratories use consistent analysis techniques and reporting methods;
- **Completeness** – is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is set at there being sufficient valid data generated during the study; and
- **Sensitivity** – expresses the appropriateness of the chosen laboratory methods, including the limits of reporting.

The DQIs adopted as part of the assessment are summarised in **Table E.1**.

Table E.1: Summary of Data Quality Indicators

Data Quality Objectives	Frequency	Data Quality Indicator
Precision		
Intra-laboratory duplicate samples	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Inter-laboratory split samples	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Laboratory duplicates[#1]	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Accuracy		
Method blanks	1 per lab batch	Less than the laboratory limit of reporting (<LOR)
Laboratory control samples	1 per lab batch	70-130% or as nominated in the laboratory's QC report
Matrix spikes	1 per lab batch	70-130% or as nominated in the laboratory's QC report
Representativeness		
Sampling appropriate for media and analytes	-	-[#2]
Samples extracted and analysed within holding times	All samples	Samples extracted and analysed within analysis specific holding times
Rinsate samples	1 per day of site work where reusable equipment is used	<LOR
Field blanks	1 per day of site work where samples are analysed for PFAS	<LOR
Laboratory blanks	1 per lab batch	<LOR
Comparability		
Standard operating procedures for sample collection and handling	All samples	Samples collected in accordance with relevant procedure[#2]
Standard analytical methods used for all analyses	All samples	• All samples analysed by a laboratory that is NATA accredited for the analyses performed • Primary laboratory to be consistent for all samples with the exception of inter-laboratory split samples
Consistent field conditions, sampling staff and laboratory analysis	All samples	-[#2]
Limits of reporting appropriate and consistent	All samples	Laboratory LOR is below adopted guideline values and allows relevant

Data Quality Objectives	Frequency	Data Quality Indicator
		comparability between results where more than one laboratory is used (i.e. for analysis of inter-laboratory split samples)
Completeness		
Sample description and COCs completed and appropriate	All samples	-[#2]
Appropriate documentation	All samples	-[#2]
Satisfactory frequency and result for QC samples	All QA/QC samples	As detailed above
Data from critical samples is considered valid	-	Critical samples valid
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted site assessment criteria	All samples	Laboratory LOR is below adopted guideline values

Notes:

#1: Duplicate sample analysis performed by the laboratory as part of their internal QA/QC program for the data.

#2: A qualitative assessment of compliance with standard procedures and appropriate sample collection methods will be completed during the DQI compliance assessment.

E.2 Soil Investigation Data Quality Assessment (2023)

Table E.2 summarises the QA/QC activities undertaken to ensure integrity of the soil data collected for the site (Area 2 and 3), and conformance with the DQIs outlined in **Table E.1**. Any departures from the DQIs are noted in **Table E.2**.

Table E.2: Summary of Soil QA/QC Program – Site (Area 2 and 3)

QA/QC Item	Detail
QA	
Field procedures	Field procedures were undertaken in accordance with the methodologies and guidelines referenced in **Section 5** as well as JBS&G's standard operating procedures.
Decontamination of field equipment	• Downhole drilling equipment (handauger and pushtubes) were decontaminated using an appropriate detergent (Liquinox), followed by rinsing with deionised water prior to the commencement of drilling at each investigation location to minimise the potential for cross contamination. A rinsate sample was collected on every day of fieldwork to validate decontamination techniques. • A new pair of nitrile gloves was used for collection of each sample.
NATA accredited laboratories	The primary laboratory used was Eurofins and the secondary laboratory used was Envirolab. Both laboratories are NATA accredited for the analyses undertaken.
Sample tracking	Chain of Custody (COC) documentation was used for the transport of all samples to the laboratory. COC documents are included in **Appendix G**.
Sample preservation & storage	Samples were collected in laboratory supplied, clean glass or high-density polyethylene jars and samples were stored on ice in eskies during the field works and in transit to the laboratory.
Holding times	All samples were extracted and analysed within the recommended holding times with the exception of the following: • One sample in Eurofins laboratory report 998606-S, where the sample was collected on 30 May 2023 and extracted on 14 June 2023 (14 day holding time exceeded by one day); and • One sample in Eurofins laboratory report 998615-S, where the sample was collected on 31 May 2023 and extracted on 14 June 2023 (7 day holding time exceeded by 7 days). The results of the above analysis have been reviewed, and acknowledging the potential for underestimation in these samples, do not impact on the outcomes of this investigation. It is highlighted that all of the below were from additional analysis requested following receipt of initial laboratory results which results in a delay of extraction.
Equipment calibration	The PID was calibrated prior to the commencement of the field works. Calibration documentation is included in **Appendix D**.
Data transcription	Results are supplied by the laboratory as CSV files, which minimises the chance of transcription errors as the data is directly exported into files using ESdat.
Laboratory LORs	The LORs are presented in the results tables and NATA certificated in **Appendix G**. The LORs are appropriate for this assessment with all LORs being less than the adopted Tier 1 screening levels and offsite disposal / reuse criteria.
QC	
Rinsate samples	A rinsate sample was collected on every day of fieldwork to validate decontamination procedures by running deionised water over the clean hand auger / through the clean pushtube. The following rinsate samples were collected and analysed: • RB01 was collected on 22 May 2023 – analysed for heavy metals, TRH and BTEXN; • RB02 was collected on 23 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS;

QA/QC Item	Detail
	• RB03 was collected on 24 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS; • RB04 was collected on 25 May 2023 – analysed for heavy metals, TRH and BTEXN; • RB05 was collected on 26 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS; • RB06 was collected on 29 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS; • RB07 was collected on 30 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS; and • RB08 was collected on 31 May 2023 – analysed for heavy metals, TRH, BTEXN and PFAS. All results were below the laboratory reporting limits. The rinsate sample results are summarised in the attached **Summary Tables**.
Intra-laboratory duplicates	15 intra-laboratory duplicate sample pairs were collected and analysed as part of the soil investigation for the site (Portion A to W) for a total of 296 primary samples (including 50 primary samples for PFAS). The following intra-laboratory duplicate samples were collected and analysed: • DUP01 was collected with primary sample SB03_0-0.2 – analysed for heavy metals; • DUP03 was collected with primary sample SB26_0.2-0.5 – analysed for heavy metals; • DUP04 was collected with primary sample SB32_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • DUP05 was collected with primary sample SB38_0-0.2 – analysed for heavy metals, TRH, BTEXN and PAH; • DUP06 was collected with primary sample SB08_0-0.2 – analysed for PFAS; • DUP07 was collected with primary sample SB33_0-0.2 – analysed for heavy metals; • DUP08 was collected with primary sample SB60_0-0.2 – analysed for heavy metals; • DUP09 was collected with primary sample SB65_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • DUP11 was collected with primary sample SB87_0-0.2 – analysed for heavy metals; • DUP12 was collected with primary sample SB98_0.4-0.6 – analysed for heavy metals, TRH, BTEXN and PAH; • DUP14 was collected with primary sample SB165_0.7-1.0 – analysed for heavy metals; • DUP15 was collected with primary sample SB153_0-0.2 – analysed for PFAS; • DUP16 was collected with primary sample SB154_0.5-0.7 – analysed for heavy metals, TRH, BTEXN, PAH and OCPs; • DUP30 was collected with primary sample SB74_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH, OCPs and PFAS; and • DUP32 was collected with primary sample SB126_0.8-1.1 – analysed for heavy metals, TRH, BTEXN and PAH. The RPD results for the intra-laboratory duplicate sample for soil were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of 27 RPD values (of more than 580 total RPD values), all of which exceeded the acceptable range for various heavy metals. The elevated RPDs values were attributed to the low concentrations reported and/or heterogeneity in the soil sample. It is noted that where the higher concentration was reported in the intra-laboratory duplicate sample, both concentration (i.e. the primary and the duplicate sample) were below the Tier 1 screening levels and offsite disposal / reuse criteria. The soil intra-laboratory duplicate sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Inter-laboratory duplicates	15 inter-laboratory split sample pairs were collected and analysed as part of the soil investigation for the site (Portion A to W) for a total of 296 primary samples (including 50

QA/QC Item	Detail
	primary samples for PFAS). The following inter-laboratory split samples were collected and analysed: • SPLIT01 was collected with primary sample SB03_0-0.2 – analysed for heavy metals; • SPLIT03 was collected with primary sample SB26_0.2-0.5 – analysed for heavy metals; • SPLIT04 was collected with primary sample SB32_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • SPLIT05 was collected with primary sample SB38_0-0.2 – analysed for heavy metals, TRH, BTEXN and PAH; • SPLIT06 was collected with primary sample SB08_0-0.2 – analysed for PFAS; • SPLIT07 was collected with primary sample SB33_0-0.2 – analysed for heavy metals; • SPLIT08 was collected with primary sample SB60_0-0.2 – analysed for heavy metals; • SPLIT09 was collected with primary sample SB65_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • SPLIT11 was collected with primary sample SB87_0-0.2 – analysed for heavy metals; • SPLIT12 was collected with primary sample SB98_0.4-0.6 – analysed for heavy metals, TRH, BTEXN and PAH; • SPLIT14 was collected with primary sample SB165_0.7-1.0 – analysed for heavy metals; • SPLIT15 was collected with primary sample SB153_0-0.2 – analysed for PFAS; • SPLIT16 was collected with primary sample SB154_0.5-0.7 – analysed for heavy metals, TRH, BTEXN, PAH and OCPs; • SPLIT 30 was collected with primary sample SB74_0-0.2 – analysed for heavy metals, TRH, BTEXN, PAH, OCPs and PFAS; and • SPLIT32 was collected with primary sample SB126_0.8-1.1 – analysed for heavy metals, TRH, BTEXN and PAH. The RPD results for the inter-laboratory split sample for soil were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of 29 RPD values (of more than 540 total RPD values), all of which exceeded the acceptable range for various heavy metals. The elevated RPDs values were attributed to the low concentrations reported and/or heterogeneity in the soil sample. The soil inter-laboratory split sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Field blank samples	A field blank sample was collected on the majority of days of fieldwork where samples were collected for PFAS analysis to ensure PFAS was not introduced via sample handling. It is highlighted that samples for PFAS analysis were collected on two days where field blank samples were not collected (22 and 25 May 2023). The following field blank samples were collected and analysed for PFAS: • FB01 was collected on 23 May 2023; • FB02 was collected on 26 May 2023; • FB03 was collected on 29 May 2023; • FB04 was collected on 30 May 2023; and • FB05 was collected on 31 May 2023. All results were below the laboratory reporting limits. Given that PFAS was reported below the LOR in all soil samples analysed (see **Section 5.6**), the omission of field blank samples on two days where samples were collected for PFAS analysis will not impact on the outcomes of this investigation. The rinsate sample results are summarised in the attached **Summary Tables**.
Laboratory QC	Eurofins (primary laboratory) and Envirolab (secondary laboratory for QC purposes) undertook internal QA procedures and internal QC testing including laboratory duplicate sample analysis, laboratory blank sample analysis and laboratory spike sample analysis. The following was noted:

QA/QC Item	Detail
	• Duplicate samples – The RPD values reported for all internal duplicate pairs within the acceptable range with the exception the following: o 14 RPD values in Eurofins laboratory reports, all of which passed Eurofins Environment Testing's QC - Acceptance Criteria which allow a higher RPD when the concentration reported is a smaller multiple of the LOR; and o Four RPD values in Envirolab laboratory reports, all of which were accepted by Envirolab due to the inhomogeneous nature of the samples. It is noted triplicate analysis was undertaken in each instance and confirmed this. • Laboratory blank samples: All results were below the laboratory reporting limits. • Spike samples: The recoveries from the laboratory control spike samples were within the specified range for each contaminant with the exception of two results in Eurofins laboratory reports. In both cases Eurofins noted an acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.

2024 (Area 1)

E.3 Data Quality Indicators (2024)

Specific data quality indicator (DQI) limits were adopted in accordance with the ASC NEPM (NEPC 2013) and standard JBS&G procedures for field sampling and handling.

To assess the usability of the data prior to making decisions, the data was assessed against appropriate DQIs established in relation to precision, accuracy, representativeness, comparability and completeness and sensitivity (PARCCS parameters), as follows:

- **Precision** – measures the reproducibility of measurements under a given set of conditions. The precision of the laboratory data and sampling techniques is assessed by calculating the Relative Percent Difference (RPD) of duplicate samples;
- **Accuracy** – measures the bias in a measurement system. The accuracy of the laboratory data that are generated during this study is a measure of the closeness of the analytical results obtained by a method to the 'true' value. Accuracy is assessed by reference to the analytical results of laboratory control samples, laboratory spikes and analyses against reference standards;
- **Representativeness** – expresses the degree which sample data accurately and precisely represent a characteristic of a population or an environmental condition. Representativeness is achieved by collecting samples on a representative basis across the site, and by using an adequate number of sample locations to characterise the site to the required accuracy;
- **Comparability** – expresses the confidence with which one data set can be compared with another. This is achieved through maintaining a level of consistency in techniques used to collect samples, ensuring analysing laboratories use consistent analysis techniques and reporting methods;
- **Completeness** – is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is set at there being sufficient valid data generated during the study; and
- **Sensitivity** – expresses the appropriateness of the chosen laboratory methods, including the limits of reporting.

The DQIs adopted as part of the assessment are summarised in **Table E.3**.

Table E.3: Summary of Data Quality Indicators

Data Quality Objectives	Frequency	Data Quality Indicator
Precision		
Intra-laboratory duplicate samples	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Inter-laboratory split samples	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Laboratory duplicates[#1]	• 1 per 20 primary samples (5%) – all chemicals with the exception of PFAS • 1 per 10 primary samples (10%) – PFAS	<30% RPD
Accuracy		
Method blanks	1 per lab batch	Less than the laboratory limit of reporting (<LOR)
Laboratory control samples	1 per lab batch	70-130% or as nominated in the laboratory's QC report
Matrix spikes	1 per lab batch	70-130% or as nominated in the laboratory's QC report
Representativeness		
Sampling appropriate for media and analytes	-	-[#2]
Samples extracted and analysed within holding times	All samples	Samples extracted and analysed within analysis specific holding times
Rinsate samples	1 per day of site work where reusable equipment is used	<LOR
Field blanks	1 per day of site work where samples are analysed for PFAS	<LOR
Laboratory blanks	1 per lab batch	<LOR
Comparability		
Standard operating procedures for sample collection and handling	All samples	Samples collected in accordance with relevant procedure[#2]
Standard analytical methods used for all analyses	All samples	• All samples analysed by a laboratory that is NATA accredited for the analyses performed • Primary laboratory to be consistent for all samples with the exception of inter-laboratory split samples
Consistent field conditions, sampling staff and laboratory analysis	All samples	-[#2]

Data Quality Objectives	Frequency	Data Quality Indicator
Limits of reporting appropriate and consistent	All samples	Laboratory LOR is below adopted guideline values and allows relevant comparability between results where more than one laboratory is used (i.e. for analysis of inter-laboratory split samples)
Completeness		
Sample description and COCs completed and appropriate	All samples	-[#2]
Appropriate documentation	All samples	-[#2]
Satisfactory frequency and result for QC samples	All QA/QC samples	As detailed above
Data from critical samples is considered valid	-	Critical samples valid
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted site assessment criteria	All samples	Laboratory LOR is below adopted guideline values

Notes:

#1: Duplicate sample analysis performed by the laboratory as part of their internal QA/QC program for the data.

#2: A qualitative assessment of compliance with standard procedures and appropriate sample collection methods will be completed during the DQI compliance assessment.

E.4 Soil Investigation Data Quality Assessment (2024)

Table E.4 summarises the QA/QC activities undertaken to ensure integrity of the soil data collected for the site (Area 1), and conformance with the DQIs outlined in **Table E.3**. Any departures from the DQIs are noted in **Table E.4**.

Table E.4: Summary of Soil QA/QC Program – Site (Area 1)

QA/QC Item	Detail
QA	
Field procedures	Field procedures were undertaken in accordance with the methodologies and guidelines referenced in **Section 5** as well as JBS&G's standard operating procedures.
Decontamination of field equipment	• Downhole drilling equipment (handauger and pushtubes) were decontaminated using an appropriate detergent (Liquinox), followed by rinsing with deionised water prior to the commencement of drilling at each investigation location to minimise the potential for cross contamination. A rinsate sample was collected on every day of fieldwork to validate decontamination techniques. • A new pair of nitrile gloves was used for collection of each sample.
NATA accredited laboratories	The primary laboratory used was Eurofins and the secondary laboratory used was Envirolab. Both laboratories are NATA accredited for the analyses undertaken.
Sample tracking	Chain of Custody (COC) documentation was used for the transport of all samples to the laboratory. COC documents are included in **Appendix G**.
Sample preservation & storage	Samples were collected in laboratory supplied, clean glass or high-density polyethylene jars and samples were stored on ice in eskies during the field works and in transit to the laboratory.
Holding times	All samples were extracted and analysed within the recommended holding times with the exception of the following: • Samples collected on 13 June 2024, as follows: o Soil samples – all samples analysed for VOCs, pH and conductivity; and o QC water samples – analysed for TRH. This batch of samples was misplaced by the primary laboratory (Eurofins MGT) on receipt at the laboratory in Melbourne. The results of the above analysis have been reviewed, and acknowledging the potential for underestimation in these samples, this is considered unlikely to have impacted on the outcomes of this investigation.
Equipment calibration	The PID was calibrated prior to the commencement of the field works. Calibration documentation is included in **Appendix D**.
Data transcription	Results are supplied by the laboratory as CSV files, which minimises the chance of transcription errors as the data is directly exported into files using ESdat.
Laboratory LORs	The LORs are presented in the results tables and NATA certificated in **Appendix G**. The LORs are appropriate for this assessment with all LORs being less than the adopted Tier 1 screening levels and offsite disposal / reuse criteria outlined in **Section 5.4**.
QC	
Rinsate samples	A rinsate sample was collected on every day of fieldwork to validate decontamination procedures by running deionised water over the clean hand auger / through the clean pushtube, noting one rinsate sample was lost in transit to the laboratory (RB_12 collected on 12 June 2024). The following rinsate samples were collected and analysed: • RB01 was collected on 22 May 2024 – analysed for heavy metals, TRH, BTEXN and PFAS; • RB03 was collected on 23 May 2024 – analysed for heavy metals, TRH, BTEXN and PFAS;

QA/QC Item	Detail
	• RB04 was collected on 29 May 2024 – analysed for heavy metals, TRH, BTEXN and PFAS; • RB_13 was collected on 13 June 2024 – analysed for heavy metals, TRH, BTEXN and PFAS; and • RB_14 was collected on 14 June 2024 – analysed for heavy metals, TRH, BTEXN and PFAS. All results were below the laboratory reporting limits. The absence of rinsate sample data for one day is not considered to impact the outcomes of this assessment, given no significant contamination was identified in soils at the site. The rinsate sample results are summarised in the attached **Summary Tables**.
Intra-laboratory duplicates	Seven intra-laboratory duplicate sample pairs were collected and analysed as part of the soil investigation for the site (Area 1) for a total of 123 primary samples analysed for any one chemical (heavy metals), noting 34 primary samples were analysed for PFAS. The following intra-laboratory duplicate samples were collected and analysed: • DUP02 was collected with primary sample BH02/1_0-0.2 on 22 May 2024 – analysed for heavy metals, TRH, BTEXN, PAH, OCPs and PFAS; • DUP03 was collected with primary sample BH20/1_0-0.3 on 22 May 2024 – analysed for heavy metals; • DUP06 was collected with primary sample BH37/2_0-0.2 on 29 May 2024– analysed for heavy metals, OCPs and PFAS; • DUP07 was collected with primary sample BH51/1_0-0.2 on 12 June 2024 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • DUP08 was collected with primary sample BH57/1_0-0.2 on 12 June 2024 – analysed for heavy metals, TRH, BTEXN and PAH; • DUP12 was collected with primary sample BH12/2_0.3-0.5 on 13 June 2024 – analysed for heavy metals, TRH, BTEXN and PAH; and • DUP13 was collected with primary sample BH15/2_0.3-0.5 on 13 June 2024 – analysed for heavy metals. The RPD results for the intra-laboratory duplicate sample for soil were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of a total of 19 RPD values (of more than 340 total RPD values) which exceeded the acceptable range for heavy metals (total of 14 RPD values) and TRH (5 RPDs for various TRH fractions from a single sample). The following was noted: • The elevated RPDs values for heavy metals were attributed to the low concentrations reported (close to the LOR). The higher concentrations reported have been adopted for the assessment of soil; and • The elevated RPD values for TRH were associated with relatively high TRH concentrations in the primary sample vs concentrations reported below the laboratory LOR in the intra-laboratory duplicate sample. It is noted that concentrations reported in the inter-laboratory split sample were similar to those reported in the intra-laboratory duplicate sample (which were either below the laboratory LOR, or only slightly above the laboratory LOR). Additional testing was completed on this sample, with TRH result following silica gel cleanup below the laboratory LOR in the primary sample, indicating a biogenic source. Given the above, this was not considered to impact the outcomes of the investigation. The soil intra-laboratory duplicate sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Inter-laboratory duplicates	Seven inter-laboratory split sample pairs were collected and analysed as part of the soil investigation for the site (Area 1) for a total of 123 primary samples analysed for any one chemical (heavy metals), noting 34 primary samples were analysed for PFAS. The following inter-laboratory split samples were collected and analysed:

QA/QC Item	Detail
	• SPLIT02 was collected with primary sample BH02/1_0-0.2 on 22 May 2024 – analysed for heavy metals, TRH, BTEXN, PAH, OCPs and PFAS; • SPLIT03 was collected with primary sample BH20/1_0-0.3 on 22 May 2024 – analysed for heavy metals; • SPLIT06 was collected with primary sample BH37/2_0-0.2 on 29 May 2024– analysed for heavy metals, OCPs and PFAS; • SPLIT07 was collected with primary sample BH51/1_0-0.2 on 12 June 2024 – analysed for heavy metals, TRH, BTEXN, PAH and PFAS; • SPLIT08 was collected with primary sample BH57/1_0-0.2 on 12 June 2024 – analysed for heavy metals, TRH, BTEXN and PAH; • SPLIT12 was collected with primary sample BH12/2_0.3-0.5 on 13 June 2024 – analysed for heavy metals, TRH, BTEXN and PAH; and • SPLIT13 was collected with primary sample BH15/2_0.3-0.5 on 13 June 2024 – analysed for heavy metals. The RPD results for the inter-laboratory split sample for soil were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of 15 RPD values (of more than 320 total RPD values), all of which exceeded the acceptable range for various heavy metals. The elevated RPDs values were attributed to the low concentrations reported (close to the LOR). The soil inter-laboratory split sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Field blank samples	The purpose of the field blank samples was to demonstrate PFAS was not introduced via sample handling. A field blank sample was collected on all days of the soil investigation program with the exception of 14 June 2024 when only three soil boreholes were drilled and sampled. In addition, the field blank collected on 12 June 2024 was lost in transit to the laboratory. The following field blank samples were collected and analysed for PFAS: • FB01 was collected on 22 May 2024 – analysed for PFAS; • FB02 was collected on 23 May 2024 – analysed for PFAS; • TB04 was collected on 29 May 2024 – analysed for PFAS; and • FB_13 was collected on 13 June 2024 – analysed for PFAS. All results were below the laboratory reporting limits. Given that PFAS was reported below the LOR in all soil samples analysed (see **Section 5.6**), the absence of field blank sample data for two days of the soil investigation program will not impact on the outcomes of this investigation. The rinsate sample results are summarised in the attached **Summary Tables**.

Laboratory QC	Eurofins (primary laboratory) and Envirolab (secondary laboratory for QC purposes) undertook internal QA procedures and internal QC testing including laboratory duplicate sample analysis, laboratory blank sample analysis and laboratory spike sample analysis. The following was noted:
	• Duplicate samples – The RPD values reported for all internal duplicate pairs within the acceptable range with the exception the following:
	  o 11 RPD values in Eurofins laboratory reports, all of which passed Eurofins Environment Testing's QC - Acceptance Criteria which allow a higher RPD when the concentration reported is a smaller multiple of the LOR; and
	  o 34 RPD values in Envirolab laboratory reports, which was noted to be attributed to the low concentrations reported (within 10 % of the LOR) and possible sample heterogeneity.
	• Laboratory blank samples: All results were below the laboratory reporting limits.
	• Spike samples: The recoveries from the laboratory control spike samples were within the specified range for each contaminant with the exception of a number of PFAS, TRH

QA/QC Item	Detail
	and PAH results in Envirolab laboratory reports. These were either not appliable (noting the laboratory control sample [LCS] was within the acceptable criteria), or suspected to be associated with non-homogeneity or matrix interference.

***Elevated RPDs are highlighted (an acceptable RPD rnage of 0% to 30 % has been adopted in accordance with the ASC NEPM [NEPC 2013]).**
****Interlab split samples are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory.**

***Elevated RPDs are highlighted (an acceptable RPD rnage of 0% to 30 % has been adopted in accordance with the ASC NEPM [NEPC 2013]).**
****Interlab split samples are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory.**

E.5 Groundwater Investigation Data Quality Assessment (2024)

Table E.5 summarises the QA/QC activities undertaken to ensure integrity of the groundwater data collected for the subject site (Area 1-C), and conformance with the DQIs outlined in **Table E.3**. Any departures from the DQIs are noted in **Table E.5**.

Table E.5: Summary of Groundwater QA/QC Program

QA/QC Item	Detail
QA	
Field procedures	Field procedures were undertaken in accordance with the methodologies and guidelines referenced in **Section 6** as well as JBS&G's standard operating procedures.
Decontamination of field equipment / Use of dedicated equipment	• Downhole drilling equipment was decontaminated using an appropriate detergent (Liquinox), followed by rinsing with deionised water prior to the commencement of drilling at each investigation location to minimise the potential for cross contamination. It is noted that rinsate samples were not collected during installation of groundwater wells, however, this is not considered to have impacted the outcomes of the investigation as the augers were washed at the drillers depot thoroughly, using the same process which is regularly tested in the field by rinsate samples. • Dedicated disposable bailers (i.e. one for each newly installed well) were used to develop the newly installed groundwater wells. • Groundwater sampling equipment used for all groundwater wells (i.e. interface probe and water quality meter) was decontaminated using an appropriate detergent (Liquinox), followed by rinsing with deionised water prior to the commencement of sampling at each well to minimise the potential for cross contamination. A rinsate sample was collected on both days of groundwater sampling to validate decontamination techniques. • Dedicated HDPE tubing (i.e. tubing for each well) was used for groundwater sampling. • A new pair of nitrile gloves was used for sampling at each well.
NATA accredited laboratories	The primary laboratory used was Eurofins and the secondary laboratory used was Envirolab. Both laboratories are NATA accredited for the analyses undertaken.
Sample tracking	Chain of Custody (COC) documentation was used for the transport of all samples to the laboratory. COC documents are included in **Appendix N**.
Sample preservation & storage	Samples were collected in laboratory supplied bottles, with preservation specific to the required analytes. Following sampling, groundwater samples were stored on ice in eskies during the field works and in transit to the laboratory at the end of each day of sampling.
Holding times	All samples were received by the laboratory and analysed within holding time with the exception of the following: • pH which has a very short holding time (6 hours) and hence is also completed as a field test. This was not considered to have an impact on the outcomes of this investigation, given that field pH data is also available; and • TRH following silica gel cleanup, as this was undertaken as subsequent analysis following receipt of initial results. This was not considered to impact the outcomes of the investigation as the elevated TRH results were considered likely to be biogenic based on the site history and results of the soil investigation. Extraction was completed within holding time for all other analytes.
Equipment calibration	The water quality meters were calibrated prior to the commencement of the field works. Calibration documentation is included in **Appendix D**.
Data transcription	Results are supplied by the laboratory as CSV files, which minimises the chance of transcription errors as the data is directly exported into files using ESdat.
Laboratory LORs	The LORs are presented in the results tables and NATA certificated in **Appendix N**. The LORs are appropriate for this assessment with all LORs being less than the adopted criteria outlined in **Section 6.2**.

QA/QC Item	Detail
QC	
Rinsate samples	A rinsate sample was collected on both days of groundwater sampling to validate decontamination procedures by running deionised water over the clean water quality meter probe. The following rinsate samples were collected and analysed: • RB01 was collected on 13 June 2024 – analysed for heavy metals, TRH, BTEXN and PFAS; and • RB12 was collected on 14 June 2024 – analysed for heavy metals, TRH, BTEXN and PFAS. All results were below the laboratory reporting limits. The rinsate sample results are summarised in the attached **Summary Tables**.
Intra-laboratory duplicates	Two intra-laboratory duplicate sample pairs were collected and analysed as part of the groundwater investigation for a total of 15 primary samples. The following intra-laboratory duplicate samples were collected and analysed: • DUP01 was collected with primary sample MW07 – analysed for heavy metals, TRH, BTEXN, PFAS and cyanide; and • DUP02 was collected with primary sample MW06 – analysed for PFAS. The RPD results for the intra-laboratory duplicate sample for groundwater were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of four RPD values (of more than 105 total RPD values), which exceeded the acceptable range for TRH (three fractions) and perfluorobutanesulfonic acid (PFBS). The following was noted: • The elevated RPDs for TRH were due to higher concentrations being reported in the primary sample, noting the intra-laboratory duplicate sample and inter-laboratory split sample reported similar concentrations. The higher concentration (those reported in the primary sample) have been adopted for the assessment of groundwater, noting these concentrations were biogenic with both the primary sample and intra-laboratory duplicate sample reporting TRH below the laboratory LOR following silica gel cleanup. Given the above, this is not considered to impact the outcomes of the groundwater investigation; and • The elevated RPD for PFBS was attributed to the low concentrations reported, noting concentrations of <0.01 µg/L and 0.02 µg/L, respectively were reported in the primary and intra-laboratory duplicate sample. The higher concentration (those reported in the intra-laboratory duplicate sample) have been adopted for the assessment of groundwater. The soil intra-laboratory duplicate sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Inter-laboratory duplicates	Two inter-laboratory split sample pairs were collected and analysed as part of the groundwater investigation for a total of 15 primary samples. The following inter-laboratory split sample pairs were collected and analysed: • SPLIT01 was collected with primary sample MW07 – analysed for heavy metals, TRH, BTEXN, PFAS and cyanide; and • SPLIT02 was collected with primary sample MW06 – analysed for PFAS. The RPD results for the inter-laboratory split sample for groundwater were within the acceptable range of 0 % to 30 % stipulated in the ASC NEPM (NEPC 2013) with the exception of six RPD values (of more than 95 total RPD values), which exceeded the acceptable range for total chromium, TRH (three fractions), naphthalene (and total PAH, due to naphthalene), and perfluoroheptane sulfonic acid (PFHpS) (and sum of PFAS, due to PFHpS). The following was noted: • The elevated RPDs for TRH were due to higher concentrations being reported in the primary sample, noting the inter-laboratory split sample and intra-laboratory duplicate

QA/QC Item	Detail
	sample reported similar concentrations. The higher concentration (those reported in the primary sample) have been adopted for the assessment of groundwater, noting these concentrations were biogenic with both the primary sample and intra-laboratory duplicate sample reporting TRH below the laboratory LOR following silica gel cleanup. Given the above, this is not considered to impact the outcomes of the groundwater investigation; and • The elevated RPDs for total chromium, naphthalene and PFHpS were attributed to the low concentrations reported. The higher concentrations have been adopted for the assessment of groundwater. The soil inter-laboratory split sample pair results and RPD values have been summarised in the attached **Summary Tables**.
Field blank samples	A field blank sample was collected on both days of groundwater sampling for PFAS analysis to ensure PFAS was not introduced via sample handling. The following field blank samples were collected and analysed during the groundwater sampling program: • TB01 was collected on 13 June 2024 – analysed for PFAS; and • TB14 was collected on 14 June 2024 – analysed PFAS. All results were below the laboratory reporting limits. The field blank sample results are summarised in the attached **Summary Tables**.
Laboratory QC	Eurofins (primary laboratory) and Envirolab (secondary laboratory for QC purposes) undertook internal QA procedures and internal QC testing including laboratory duplicate sample analysis, laboratory blank sample analysis and laboratory spike sample analysis. The following was noted: • Duplicate samples – The RPD values reported for all internal duplicate pairs within the acceptable range with the exception of three RPD values in Eurofins laboratory reports, all of which passed Eurofins Environment Testing's QC - Acceptance Criteria which allow a higher RPD when the concentration reported is a smaller multiple of the LOR. • Laboratory blank samples: All results were below the laboratory reporting limits. • Spike samples: The recoveries from the laboratory control spike samples were within the specified range for each contaminant with the exception of two results in Envirolab laboratory reports. In both cases, the laboratory noted this may have been due to suspected non-homogeneity and/or matrix interference effects. In both cases, an acceptable recovery was achieved for the LCS.

Appendix G Site Specific EIL Calculation Spreadsheets

Inputs
Select contaminant from list below
Cr_III
Below needed to calculate fresh and aged ACLs
Enter % clay (values from 0 to 100%)
2.5
Below needed to calculate fresh and aged ABCs
Measured background concentration (mg/kg). Leave blank if no measured value
or for fresh ABCs only
Enter iron content (aqua regia method) (values from 0 to 50%) to obtain estimate of background concentration
or for aged ABCs only
Enter State (or closest State)
SA
Enter traffic volume (high or low)
low

Outputs		
Land use	Cr III soil-specific EILs (mg contaminant/kg dry soil)	
	Fresh	Aged
National parks and areas of high conservation value	#NUM!	95
Urban residential and open public spaces	#NUM!	270
Commercial and industrial	#NUM!	430

Inputs
Select contaminant from list below
Cu
Below needed to calculate fresh and aged ACLs
Enter cation exchange capacity (silver thiourea method) (values from 0 to 100 cmolc/kg dwt)
27
Enter soil pH (calcium chloride method) (values from 1 to 14)
7.5
Enter organic carbon content (%OC) (values from 0 to 50%)
0.1
Below needed to calculate fresh and aged ABCs
Measured background concentration (mg/kg). Leave blank if no measured value
or for fresh ABCs only
Enter iron content (aqua regia method) (values from 0 to 50%) to obtain estimate of background concentration
or for aged ABCs only
Enter State (or closest State)
SA
Enter traffic volume (high or low)
low

Outputs		
Land use	Cu soil-specific EILs (mg contaminant/kg dry soil)	
	Fresh	Aged
National parks and areas of high conservation value	#NUM!	35
Urban residential and open public spaces	#NUM!	65
Commercial and industrial	#NUM!	90

Inputs
Select contaminant from list below
Ni
Below needed to calculate fresh and aged ACLs
Enter cation exchange capacity (silver thiourea method) (values from 0 to 100 cmolc/kg dwt)
27
Below needed to calculate fresh and aged ABCs
Measured background concentration (mg/kg). Leave blank if no measured value
or for fresh ABCs only
Enter iron content (aqua regia method) (values from 0 to 50%) to obtain estimate of background concentration
or for aged ABCs only
Enter State (or closest State)
SA
Enter traffic volume (high or low)
low

Outputs		
Land use	Ni soil-specific EILs (mg contaminant/kg dry soil)	
	Fresh	Aged
National parks and areas of high conservation value	#NUM!	60
Urban residential and open public spaces	#NUM!	330
Commercial and industrial	#NUM!	560

Inputs
Select contaminant from list below
Zn
Below needed to calculate fresh and aged ACLs
Enter cation exchange capacity (silver thiourea method) (values from 0 to 100 cmolc/kg dwt)
27
Enter soil pH (calcium chloride method) (values from 1 to 14)
7.5
Below needed to calculate fresh and aged ABCs
Measured background concentration (mg/kg). Leave blank if no measured value
or for fresh ABCs only
Enter iron content (aqua regia method) (values from 0 to 50%) to obtain estimate of background concentration
or for aged ABCs only
Enter State (or closest State)
SA
Enter traffic volume (high or low)
low

Outputs		
Land use	Zn soil-specific EILs (mg contaminant/kg dry soil)	
	Fresh	Aged
National parks and areas of high conservation value	#NUM!	250
Urban residential and open public spaces	#NUM!	940
Commercial and industrial	#NUM!	1400

Hi Amy,

Please find attached completed COC for samples Jack dropped off to Parimal yesterday arvo. Please note the following:

- Some samples are for SPOCAS analysis (short holding time)
- SPLIT01, SPLIT02, SPLIT03 and SPLIT04 are to be sent to Envirolab for analysis (with copy of the COC please)

Can you please confirm whether the samples arrived in the lab today?

Thanks,
Kate

Sample Receipt Advice

Company name:	JBS & G Australia (SA) P/L
Contact name:	Kate Lough
Project name:	URPS OSBOURNE
Project ID:	64648
Turnaround time:	5 Day
Date/Time received	May 24, 2023 1:00 PM
Eurofins reference	992922

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✓	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

All SB20 samples listed twice on COC.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.
S02	Retained Acidity is Reported when the pHKCl is less than pH 4.5

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	May 25, 2023	7 Days
- Method: LTM-ORG-2010 TRH C6-C40

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Hi All,

Please find attached COC for the JBS&G's samples you will receive tomorrow in **esky #2-3**.

Kind Regards

Parimal Acharya

Hi Parimal and Amy,

Please find attached completed COC for soil samples collected from our office today. Please note the following:

- Some samples are for SPOCAS analysis (short holding time; taken yesterday)
- SPLIT05 and SPLIT06 are to be sent to Envirolab for analysis (with copy of the COC please)

Thanks,
Kate

Sample Receipt Advice

Company name:	JBS & G Australia (SA) P/L
Contact name:	Kate Lough
Project name:	URPS Osborne
Project ID:	64648
Turnaround time:	5 Day
Date/Time received	May 25, 2023 3:14 PM
Eurofins reference	993441

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✓	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Amy Meunier on phone : or by email: AmyMeunier@eurofins.com

Results will be delivered electronically via email to Kate Lough - klough@jbsg.com.au.

Global Leader - Results you can trust

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
SPOCAS Suite			
SPOCAS Suite	Brisbane	Jun 02, 2023	6 Week
- Method: LTM-GEN-7050			
Extraneous Material	Brisbane	Jun 02, 2023	6 Week
- Method: LTM-GEN-7050/7070			
% Moisture	Melbourne	May 26, 2023	14 Days
- Method: LTM-GEN-7080 Moisture			
Per- and Polyfluoroalkyl Substances (PFASs)			
Perfluoroalkyl carboxylic acids (PFCAs)	Melbourne	May 30, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonamido substances	Melbourne	May 30, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonic acids (PFSAs)	Melbourne	May 30, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Melbourne	May 30, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
PFASs Summations	Melbourne	May 26, 2023	
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Eurofins Suite B6: BTEX/TRH/M8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2010 BTEX and Volatile TRH			
Metals M8	Melbourne	May 30, 2023	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Volatile Organics	Melbourne	May 30, 2023	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices (USEPA 8260)			
Polychlorinated Biphenyls	Melbourne	May 30, 2023	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8082)			
Organotins	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2400 Determination of organotins in solid & aqueous samples by LC-ICP-MS			
Cyanide (total)	Melbourne	May 30, 2023	14 Days
- Method: LTM-INO-4020 Total Free WAD Cyanide by CFA			
pH (1:5 Aqueous extract at 25 °C as rec.)	Melbourne	May 30, 2023	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
Eurofins Suite B7			
Polycyclic Aromatic Hydrocarbons	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Suite B14: OCP/OPP			
Organochlorine Pesticides	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8270)			
Organophosphorus Pesticides	Melbourne	May 30, 2023	14 Days
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS (USEPA 8270)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.
S02	Retained Acidity is Reported when the pHKCl is less than pH 4.5

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Hi Parimal and Amy,

Please find attached completed COC for soil samples collected last Thurs (25/5) and sent to Melb last Fri. Please note the following:

- SPLIT07 and SPLIT08 are to be sent to Envirolab for analysis (with copy of the COC please)

Thanks,
Kate

Hi Amy,

Thanks for sending this through – can sample SB62_0.8-1.0 please be analysed in place of SB62_0.6-0.8 (for same analytical suite as was requested for SB62_0.6-0.8)?

Please let me know if any issues.

Thanks,
Kate

Dear Valued Client,

Missing:
SB62_0.6-0.8

Extra:
SB62_0.3-0.5
SB62_0.8-1.0

Please find attached a Sample Receipt Advice (SRA), a Summary Sheet and a scanned copy of your Chain-of-Custody (COC). It is important that you check this documentation to ensure that the details are correct such as the Client Job Number, Turn Around Time, any comments in the Notes section and sample numbers as well as the requested analysis. If there are any irregularities then please contact your Eurofins | mgt Analytical Services Manager as soon as possible to make certain that they get changed.

Regards

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✓	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8			
Metals M8	Melbourne	May 31, 2023	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2010 BTEX and Volatile TRH			
% Moisture	Melbourne	May 30, 2023	14 Days
- Method: LTM-GEN-7080 Moisture			
Volatile Organics	Melbourne	May 31, 2023	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices (USEPA 8260)			
Polychlorinated Biphenyls	Melbourne	May 31, 2023	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8082)			
pH (1:5 Aqueous extract at 25 °C as rec.)	Melbourne	May 31, 2023	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
Cyanide (total)	Melbourne	May 31, 2023	14 Days
- Method: LTM-INO-4020 Total Free WAD Cyanide by CFA			
Organotins	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2400 Determination of organotins in solid & aqueous samples by LC-ICP-MS			
Eurofins Suite B7			
Polycyclic Aromatic Hydrocarbons	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Suite B14: OCP/OPP			
Organochlorine Pesticides	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8270)			
Organophosphorus Pesticides	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS (USEPA 8270)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.

Subject: Completed COC for soil samples collected in the field last Fri (26/5) and sent to Melb today (JBS&G job 64648)

Hi Parimal and Amy,

Please find attached completed COC for soil samples collected last Fri (26/5) and sent to Melb today. Please note the following:

- Some samples are for SPOCAS analysis (short holding time)
- SPLIT09 is to be sent to Envirolab for analysis (with copy of the COC please)

Sample Receipt Advice

Company name:	JBS & G Australia (SA) P/L
Contact name:	Kate Lough
Project name:	URPS OSBORNE
Project ID:	64648
Turnaround time:	5 Day
Date/Time received	May 30, 2023 9:02 AM
Eurofins reference	994339

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✓	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Amy Meunier on phone : or by email: AmyMeunier@eurofins.com

Results will be delivered electronically via email to Kate Lough - klough@jbsg.com.au.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8			
Metals M8	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2010 BTEX and Volatile TRH			
% Moisture	Melbourne	May 30, 2023	14 Days
- Method: LTM-GEN-7080 Moisture			
Organotins	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2400 Determination of organotins in solid & aqueous samples by LC-ICP-MS			
Cyanide (total)	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-INO-4020 Total Free WAD Cyanide by CFA			
pH (1:5 Aqueous extract at 25 °C as rec.)	Melbourne	Jun 01, 2023	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
Volatile Organics	Melbourne	Jun 01, 2023	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices (USEPA 8260)			
Polychlorinated Biphenyls	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8082)			
Eurofins Suite B7			
Polycyclic Aromatic Hydrocarbons	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Per- and Polyfluoroalkyl Substances (PFASs)			
Perfluoroalkyl carboxylic acids (PFCAs)	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonamido substances	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonic acids (PFSAs)	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Melbourne	Jun 01, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
PFASs Summations	Melbourne	May 30, 2023	
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
SPOCAS Suite			
SPOCAS Suite	Brisbane	Jun 07, 2023	6 Week
- Method: LTM-GEN-7050			
Extraneous Material	Brisbane	Jun 07, 2023	6 Week
- Method: LTM-GEN-7050/7070			
Suite B14: OCP/OPP			
Organochlorine Pesticides	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8270)			
Organophosphorus Pesticides	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS (USEPA 8270)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR: RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
S02	Retained Acidity is Reported when the pHKCl is less than pH 4.5

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	May 31, 2023	7 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 31, 2023	7 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	May 31, 2023	7 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Melbourne	May 31, 2023	14 Days
- Method: LTM-ORG-2010 BTEX and Volatile TRH			
Metals M8	Melbourne	May 31, 2023	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Per- and Polyfluoroalkyl Substances (PFASs)			
Perfluoroalkyl carboxylic acids (PFCAs)	Melbourne	May 31, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonamido substances	Melbourne	May 31, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonic acids (PFSAs)	Melbourne	May 31, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Melbourne	May 31, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR: RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Hi Parimal and Amy,

Please find attached completed COC for soil samples collected Tuesday (30/5) and sent to Melb yesterday (should have arrived this morning). Please note the following:

- Some samples are for SPOCAS analysis (short holding time)
- SPLIT12 and SPLIT14 are to be sent to Envirolab for analysis (with copy of the COC please)

Thanks,

eurofins | Environment Testing

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✓	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

SAMPLE SB131_1.3-1.5 RECEIVED WITH NO PFAS JAR

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B6: BTEX/TRH/M8			
Metals M8	Melbourne	Jun 02, 2023	28 Days
- Method:			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2010 BTEX and Volatile TRH			
NEPM Screen for Soil Classification			
Heavy Metals	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
% Clay	Brisbane	Jun 11, 2023	14 Days
- Method: LTM-GEN-7040			
Conductivity (1:5 aqueous extract at 25 °C as rec.)	Melbourne	Jun 02, 2023	7 Days
- Method: LTM-INO-4030 Conductivity			
pH (units)(1:5 soil:CaCl2 extract at 25 °C as rec.)	Melbourne	Jun 02, 2023	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
Total Organic Carbon	Melbourne	Jun 03, 2023	28 Days
- Method: LTM-INO-4060 Total Organic Carbon in water and soil			
Cation Exchange Capacity	Melbourne	Jun 03, 2023	28 Days
- Method: LTM-MET-3060 Cation Exchange Capacity by bases & Exchangeable Sodium Percentage			
% Moisture	Melbourne	Jun 01, 2023	14 Days
- Method: LTM-GEN-7080 Moisture			
Eurofins Suite B7			
Polycyclic Aromatic Hydrocarbons	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Volatile Organics	Melbourne	Jun 02, 2023	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices (USEPA 8260)			
Polychlorinated Biphenyls	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8082)			
Organotins	Melbourne	Jun 06, 2023	14 Days
- Method: LTM-ORG-2400 Determination of organotins in solid & aqueous samples by LC-ICP-MS			
Cyanide (total)	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-INO-4020 Total Free WAD Cyanide by CFA			
Suite B14: OCP/OPP			
Organochlorine Pesticides	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8270)			
Organophosphorus Pesticides	Melbourne	Jun 02, 2023	14 Days
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS (USEPA 8270)			
Per- and Polyfluoroalkyl Substances (PFASs)			
Perfluoroalkyl carboxylic acids (PFCAs)	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonamido substances	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonic acids (PFSAs)	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Melbourne	Jun 02, 2023	28 Days
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			

Description	Testing Site	Extracted	Holding Time
PFASs Summations	Melbourne	Jun 01, 2023	
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
SPOCAS Suite			
SPOCAS Suite	Brisbane	Jun 14, 2023	6 Week
- Method: LTM-GEN-7050			
Extraneous Material	Brisbane	Jun 14, 2023	6 Week
- Method: LTM-GEN-7050/7070

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR: RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.
