Subject: Future Planning

When walking in the North Eastern parklands it is amazing to see so many immaculately kept ovals that seem to be rarely used. It saddens me to see trees surrounding these well watered and groomed ovals dying of thirst.

Perhaps some of these ovals could be turned into native forests where trees could flourish and we could attract bees butterflies and birds. Maybe our universities could gain from having such an area they could study so close to their land and students

Surely our sports people are well catered for and it's time to give our environment some help, plus these areas are already set up for mechanised watering and once planted the maintenance would be minimised
So this is my suggestion I hope you will give it some thought
Sincerely Coral Osborn
