Q14 Please enter your general feedback here

Projected population growth of 260,000 over the next 17 years will drive the need for more aggressive urban in-fill and accelerate the loss of green space and trees including many more significant trees. The greatest challenge in urban areas is climate adaptation in the face of a rapidly warming and drying climate. At a time when green space and tree cover should be rapidly increasing to help us adapt, green space/ tree cover is actually rapidly DECREASING. It is therefore difficult to conceive how the urban heat island effect can be mitigated when trying to accommodate a quarter of a million more people and the continuing loss of green space. The challenge of mitigating the historical loss of green space in just the last 10 years, without any further increase in population, is perhaps insurmountable.
